Ishizaki-jima; 25,746 acres in Iri-omote-jima; 996 acres in Takitomi-jima; 3,968 acres in Kuhama-jima; 225 acres in Hatoma-jima; and 6,075 acres in Yonakuni-jima. By processes of reclamation this gentleman thinks that the total area available for the purpose may be brought up to 150,000 acres. He calculates that each acre will produce 4,000 lbs. of brown sugar, or about 3,200 lbs. of white sugar, and that the produce of 25,000 acres would supply the whole country. To start such an industry a large capital would be required, but, on the other hand, the *Nichi Nichi* thinks that with expert management successful results would be assured. With regard to the question of labour, the inhabitants of the islands—who number, at present, 13,200—are excellently fitted for such work, and they could easily be supplemented by labourers from the mainland; while information on the subject of sugar growing and manufacturing processes can be obtained in the Sandwich Islands. In regard of this, the Japanese emigrants now working on the plantations in Hawaii would doubtless be very useful. The *Nichi Nichi Shimbun* expresses an earnest hope that, in view of this great industrial project, as well as of the strategic importance of the Islands, the public will pay not less attention to them than it pays to Hokkaido.

CAPTAIN CHEVALIER has published a historical work which throws some new light on the naval contest between England and France in Napoleonic days. The inference generally drawn from the battles of those times is that the British sailor is a fighting machine of incomparable excellence, and that the Frenchman is altogether his inferior. The fact, however, appears to be that France, under the first Republic, was the victim of misfortunes similar to those which befel her under the last empire. It would be as wrong to conclude from the war of 1871 that her soldiers are individually inferior to those of Germany, as it is to attribute innate superiority to British sailors because they came off invariably victorious between 1799 and 1814. One of the earliest results of the Revolution was the complete disorganization of the French navy. The officers were displaced or executed; the trained men were dispersed, and the corps of seamen-gunners was broken up. Captain Chevalier's information is derived entirely from official sources—the confidential reports of superintendents of dockyards, of commanders of fleets and other responsible officers. He shows conclusively that, when the war broke out, the navy was in a state of singular demoralization. Vice-Admiral Morard de Galle describes how, in a gale off Brest, he could not get more than thirty sailors to come on deck. They retired to the lower parts of the ship for safety. In a word, while there can be no doubt that a vast difference existed between the fighting qualities of the British and French fleets, it was not a normal difference but an accidental one, due to quite exceptional conditions. The crews of the ships which were chased off Lorient on the 22nd and 23rd of July, 1795, were about as deficient as it is possible for crews to be in all the qualities essential to a good sailor. Admiral Martin's Toulon fleet had an aggregate personnel of twelve thousand men, among whom seven thousand five hundred had never been to sea before. The fleet that fought Nelson at the Battle of the Nile was altogether undermanned;

the real armanent of the ships was wholly inferior to their nominal armanent, and the vessels themselves were old and rotten. The publication of all these facts takes much of the bloom off English successes, but the disappointment is more than compensated by the knowledge of the truth.

A NEW straw braid factory established at Takashimacho, Kuchome, by Messrs. Kakinuma & Co., import dealers in Yokohama, was opened on Saturday afternoon at two o'clock. The buildings were decorated with flags, and at night a display of lanterns and illuminations took place. A band was present and performed selections of music. Refreshments in European style were lavishly provided, and frequent toasts were drunk to the success of the factory. Among those present were Marquis Nabeshima, Grand Master of the Board of Ceremonies in the Imperial Household, and President of the Nobles' Club; Mr. Oki, Governor, accompanied by the Secretary of Kanagawa Prefecture; Messrs. Arishima, Superintendent of Customs; Mr. Okamura, Chief Judge of Saibansho; Inni, Chief Commissioner of the Industrial Section in the Local Government; Den, Chief Inspector of Police; and Masuda, headman of the Yokohama Division of Kanagawa Prefecture. Mr. Suzuki Shigeharu, chief partner in the firm of Kakinuma & Co., delivered the following speech:—

GENTLEMEN:—In the presence of this company I beg to say a few words of congratulation on the present occasion. The foundation of wealth is rightly found in the increase of a country's products; and in the present case it is being devoted to the manufacture, from what would otherwise be thought useless, of a highly useful article. Messrs. Kakinuma & Co. have been prompted to this venture by the high producing capabilities of Japan. The yield of barley is next to that of rice, and it is needless to say is of the best quality. Our people grew barley only for food in ancient times, without knowing how to use it for other purposes as foreigners did, as for example straw hats or mats. With recent days, however, our countrymen have sent a quantity of straw work abroad, but unfortunately in too many cases the workmanship was so bad that it redounded considerably to our discredit. This was mainly due to want of capital. Messrs. Kakinuma and Co. have established this factory and engaged a number of workmen with the object of supplying straw hats to foreigners, and for the manufacture of mats. It is hoped that the undertaking will be successful in promoting the sale of important and valuable articles made from otherwise useless material. The work of weaving requires many hands, and the company have therefore engaged a number of poor people and will teach them the work in order to enable them to gain a livelihood. It is our hope that the undertaking may be productive of good to the country at large.

We find the following in the *North China Herald*:—"Private advices from well informed persons in Japan say that there is a very strong and increasing feeling against China among all classes, and that there is danger in this being allowed to continue. The Japanese were ready to take a common sense view of the occurrences at Nagasaki, and to treat them as such outbreaks at sea-ports are treated by sensible people. But the despatch of a foreign lawyer from this to Nagasaki, and the delay in the investigation there, together with the spirit shown by the official Chinese and their advisers, have exasperated many Japanese. There is much in the situation to justify the anxiety which Li Hung Chung is showing, and he must regret the departure from the conciliatory and sensible course which he was ready to take soon after hearing of the disturbances at Nagasaki. Every thing done since then, and especially employing foreign legal advice, has been a mis-

take." Our Shanghai contemporary's advices from Japan are sufficiently accurate. But we should like to be able to endorse the statement that the Viceroy Li was "ready to take a conciliatory and sensible course soon after hearing of the disturbances at Nagasaki." His Excellency's intentions may have been excellent, but unfortunately those whose business it was to interpret them, were either clumsy or inappreciative.

THERE ought to be, to an over-worked deputy in the French Chambers, something charming in the idea of local government and decentralization. M. Clovis-Hugues, in describing the amenities incident to a deputy's life, states that he has been tormented by no less than 50 applications for employment in the Postal or Telegraph Departments, while 30 irrepressible soldiers have asked his aid in securing to them furloughs or transfers from one garrison to another. Every quarter of a year he receives on the average 60 applications in which his services in securing permission to open a tobacco shop are asked for, and twice a year he has to deal with about 15 applicants who wish to be recommended by him to the authorities as worthy of being made members of the *légion d'honneur*. Frivolous as are such requests, the inability of Cabinet Ministers to satisfy applications coming through so many deputies does not fail to create among the applicants a sentiment unfavourable to their unfortunate representatives. The deputy may have promised personally to urge the claims of the petitioners on the very first opportunity, but instead of being able to arrange an interview with the minister concerned, he often receives only a lithographed circular the polite phrases of which are painfully familiar to him, and not infrequently he gets no reply at all. M. Clovis-Hugues estimates that among 400 applications urged by deputies only about 20 on the average are granted.

Apropos of this a little incident that is said to have recently occurred at Washington may serve as an illustration of the possible consequences of success or failure in promoting a constituent's wishes. A member of the House of Representatives received an application for a local post office, addressed to him by one of his influential and wealthy constituents. The position of postmaster could not possibly have been of any use to the applicant. Nevertheless the congressman, while wondering at so strange a freak, set vigorously to work to accomplish what was asked of him. At first he was unsuccessful. By and by, however, he received a letter telling him that the applicant was on his way to Washington to urge his claims personally, and, stirred by this news, the congressman succeeded at last in securing for his constituent the desired place before the latter's arrival. When the happy representative informed the petitioner of his success, the latter declined to accept the post-office, stating that he had only asked for it, because a large number of voters had been desirous of knowing whether their representative was really "influential" at Washington, and whether, if some matter of local importance had to be pushed through congress, he could be depended upon.

It is nothing new to find that the telegraphic accounts furnished by the London correspondents of American papers differ very considerably from the facts of a case. A recent

instance is the story of the Afghan Delimitation Commission. We were given a very pretty version of the reasons which led to its recall. Lord Salisbury, the story ran, when he came into power and perused the despatches which had passed between his predecessor and M. de Giers with reference to Batoum, was resolved to "get even" with Russia. Accordingly he conceived the brilliant idea of recalling the Frontier Commission from Afghanistan on the declared grounds that no useful purpose could be served by costly and troublesome efforts to elaborate a treaty with a country which paid no respect to the obligations imposed by such documents. This would have been an exceedingly "spirited" proceeding and at the same time an exceedingly unstatesmanlike one, unless indeed Lord Salisbury seriously sought to provoke an open rupture with Russia. But the fact is that nothing of the kind has taken place. The Commission is recalled because the delimitation of the frontier had been concluded up to a point where there occurred a difficulty incapable of settlement *in situ*. On the Oxus there is a place called Khoja Saleh. English maps generally locate this place in the southern hollow of a certain bend of the Oxus. The Russian Commissioners desire to follow English maps. But the English Commissioners claim that these maps are geographically incorrect, and that Khoja Saleh is really situated twelve miles to the north of the bend. The latter contention is said to be confirmed by a Russian staff map drawn in 1870. Thus each side desires to be guided by the other's map, and since they cannot agree, it has been determined to settle the question in London and St. Petersburg by the aid of the information which the Commissioners have collected.

THE *Yiji Shimpō* refers to the Nagasaki affair in terms with which we entirely sympathise, but which are unfortunately too late to be of practical value. Our contemporary complains strongly of the obstructive attitude assumed by the Chinese Government, and animadverts severely on the fact that a complication which the ordinary processes of naval or consular jurisdiction could have settled without difficulty or delay, has been aggravated and procrastinated to such an extent that popular feeling is gradually becoming excited. The *Yiji* finds it difficult to imagine that the Chinese Government are acting with deliberate purpose in this matter, and is rather disposed to infer that they have been deceived by the representations of their officials and employés who are concerned in the conduct of the negotiations. The obvious interest of these latter is to raise as many perplexing issues as possible so as to prolong a business which from their point of view is neither unpleasant nor without pecuniary attractions. Our contemporary accordingly recommends that the services of foreign lawyers should be entirely dispensed with, and that the affair should be restored to the basis on which it stood before the appointment of the Commission now sitting, the Japanese local authorities adhering firmly to the indictment presented by them to the Chinese Consular Court. It was China, says the *Yiji*, who in the first place diverted the settlement from its normal channels, and she cannot complain if Japan now insists on reverting to the route which ought never to have been abandoned. Such a step would not only be for Japan's

interest, but would also accord with the desire attributed to the Viceroy Li.

This advice would be excellent were it more timely. However regrettable the fact may be, there is no denying that Japan has committed herself to a course from which it would be extremely difficult, if possible, to depart now. Events are confirming the opinion we expressed at the outset; namely, that the appointment of a commission was a great, almost a fatal, error. So far as China was concerned, she was of course at liberty to appoint as many commissioners as she pleased. Such a method of collecting evidence might not have been unwise or inexpedient in her case. But why Japan should have agreed to adopt the same method, we have never been able to discover. The thing is done, however, and there is obvious reason to apprehend that any attempt to go back upon a step so eminently suited to China's convenience might involve further concessions. If Chinese statesmanship were less given to temporizing, and more accessible to practical considerations, there might be hope of establishing the fact that all this needless delay and complication must in the end magnify an utterly paltry business into a new source of international dislike and distrust. But when have considerations of this nature induced China to voluntarily abandon a situation exactly adapted to her drifting, dallying mood?

THE Correspondence between England and Russia with regard to the Port of Batoum has been published. We cannot but think that the former Power comes out of the controversy satisfactorily, and that Lord Rosebery has verified the confident prediction that the accession of a Liberal Government would not disturb the continuity of England's foreign policy so long as the portfolio of Foreign Affairs remained in his hands. We quote a résumé of the correspondence from our last home exchanges:—"In a despatch to Sir R. Morier, the British Ambassador at St. Petersburg, Lord Rosebery announces on July 3 that, in an interview he had had that day, the Russian Ambassador read to him a circular despatch, and handed to him a notice announcing the intention of the Czar to terminate the arrangement embodied in the LIX. Article of the Berlin Treaty constituting Batoum a free port. Lord Rosebery adds:—'I told his Excellency that, in my opinion, the matter though it did not concern this country alone, but affected all the Powers signatory of the Treaty of Berlin, was most grave. Its gravity consisted mainly in this, that Russia, of her own motion and without consulting the other signatory Powers, had declared null one of the principal stipulations of the Treaty of Berlin, and one which had been taken as a set-off against the relinquishment of claims which were considered essential by the British representatives at the Congress.' On July 13 Lord Rosebery again wrote to Sir R. Morier pointing out that he could not accept the view of Russia expressed in the circular despatch that the step it had taken at Batoum did not constitute an infraction of the Berlin Treaty. Lord Rosebery adds:—'Under these circumstances, Her Majesty's Government cannot recognise any amount of commercial inconvenience as furnishing a justification for a peremptory declaration of the Russian Government on its whole sole authority that this portion of the treaty is to be regarded as no longer valid. The question from this point of view is one

which concerns all the Powers parties to the declaration of Jan. 19, 1871, and to the Treaty of Berlin.' Lord Rosebery further says that from a commercial point of view other Powers are more interested in the question than Great Britain. 'One direct, supreme, and perpetual interest, however,' he adds, 'is no doubt at stake in this transaction—that of the binding force and sanctity of international engagements. Great Britain is ready at all seasons to uphold that principle, and she cannot palter with it in the present instance. Her Majesty's Government cannot, therefore, consent to recognise or associate themselves in any shape or form with this proceeding of the Russian Government. They are compelled to place on record their view that it constitutes a violation of the Treaty of Berlin, unsanctioned by the signatory Powers; that it tends to make future conventions of the kind difficult, if not impossible; and to cast doubt at least on those already concluded. It must be for the other Powers to judge how far they can acquiesce in this breach of an international engagement. But in no case can Her Majesty's Government have any share in it. It must rest upon the sole responsibility of its authors.' The correspondence closes with a despatch, dated 10th July, from M. de Giers to the Russian Ambassador in London, M. de Staal, defending the course adopted by the Russian Government. M. de Giers says that Lord Rosebery's despatch had caused him 'painful surprise,' especially the 'accusation made against a Great Power of violating the faith of treaties.' He adds—'Be good enough to tell Lord Rosebery that we adhere to our opinion that the spontaneous declaration of the intention of the Emperor to make Batoum a free port did not constitute an obligation, and that, consequently, the modification of that intention, which circumstances require, could not be considered as a departure from engagements which did not exist.'

THE following are the principal points of the Report of the Telegraph Office for the year ending June 30th, 1885. The length of lines constructed during the period under review was 166 *ri 8 cho 3 ken 4 shaku*, and of lines added to old routes, 78 *ri 7 cho 11 ken 4 shaku*, amounting in the aggregate to 244 *ri 15 cho 15 ken 2 shaku*. By the improvement of lines and the removal of telegraph offices, the entire length was reduced by 32 *ri 3 cho 14 ken 1 shaku*. The estimates for the period were as follows:—expenditure on works, *yen 76,476*, office and similar expenditures, *yen 883,400*, and receipts *yen 888,900*. Comparing the latter two sums, an excess of *yen 5,500* is observable in the estimated receipts over the business expenditure. The actual accounts stand as follows:—expenditure on works, *yen 111,906.139*, or an excess over estimate of *yen 35,430.139*; business expenditure, *yen 845,912.42*; receipts, *yen 907,067.442*. Setting the receipts against the business expenditure, there remains a surplus of *yen 61,155.022*. Expenditure on works and business expenses together amount to *yen 957,818.559*. Compared with the corresponding items for the preceding year, ending June 30th, 1884, the above mentioned sum shows an increase of *yen 46,093.688*. The total amount of money spent during the years preceding that under review, was *yen 8,632,765.861*. Adding to this the present year's outlay, the total expenditure since the establishment of the Telegraph

Office till June 30th, 1885, amounted to *yen* 9,590,494.42. The number of messages transmitted during the year under review was 2,625,862 in the Japanese language, and 26,090 in European languages. Of the former, 2,550,206 were Governmental and private messages, and 75,656 were service messages, while of the latter, the respective figures were 21,918 and 4,172. Telegraph messages sent abroad numbered 43,124, of which 41,273 were Governmental and private, and 1,851 were on service. The aggregate number of telegraph messages thus amounts to 2,695,076; and the receipts to *yen* 887,336.388. Comparing these two items with these of the preceding period, we observe an increase respectively of 95,365 and *yen* 45,376.076. Adding the above mentioned receipts for the year under review to the sum of those for all the preceding years, *yen* 5,591,651.948, the total receipts at the end of the year under review amount to *yen* 6,478,988.336. Similarly adding this year's total number of messages to that for all the preceding years, 16,845,649, the total at the end of this year is 19,540,725. With regard to miscellaneous receipts, the total for all the preceding years is *yen* 750,895.915; and, adding to this *yen* 19,731.054, the miscellaneous receipts for the year under review, the total miscellaneous receipts at the end of this year amount to 770,626.969. The staff at the Central Post Office and at all local offices, numbered on June 30th, 1885, 2,421, inclusive of foreigners; and comparing this with the corresponding figures for the preceding period, a decrease of five is noticed. The number of messages other than telegraphic amount to 32,763 in the Japanese, and 6,503 in foreign languages. Compared with the corresponding figures for the preceding period, there is an increase of 6,378 and 2,539 respectively.—*Official Gazette*.

ALL those who are interested—and who is not?—in the preservation of Japan's relics of antiquity will be glad to learn that a society has been formed with the object of conserving the mausoleums of the Tokugawa Shōguns at Uyeno and Shiba. This excellent movement is due to the exertions of three noblemen, Viscounts Matsui, Sakai, and Itakura, formerly *Daimios* of Kawagoe, Himeji, and Takahashi, respectively. The first-named nobleman is said to have been specially energetic in the matter. Twenty-five years ago he occupied a political position of considerable prominence, and was sent to Europe, in company with the present Marquis Takenouchi, on an embassy which, at the time, attracted some attention, though probably very few now retain any recollection of it. The Ambassadors submitted quite a multitude of petty points for discussion with Lord John Russell, then Secretary of State for Foreign Affairs, but their principal purpose was to obtain a postponement of the Treaty Powers' demands for the opening of additional ports. In this they were successful, and the result, of course, contributed greatly to their reputation. Viscount Matsui has succeeded in starting the Conservation Society (*Shū-on Gikai*) under very favourable auspices. Their Imperial Highnesses Princes Arisugawa and Kitashirakawa and His Excellency Count Ito are patrons; and Messrs. Katsu Awa and T. Yamaoka have been elected President and Vice-President respectively. By the last two gentlemen and the three noblemen mentioned above the business of the association will be conducted.

Funds are to be collected by perpetual donations, constituting hereditary membership; by life membership, and by ordinary contributions. It is to be regretted that this project was not actively started some time ago. The restorations now necessary in the mausoleums cannot be properly accomplished without an outlay which will probably tax the resources of the society severely at the outset.

Mr. GREEN, formerly U.S. Consul-General Kanagawa, appears to have interested himself during his brief but not uneventful tenure of office, in collecting the opinions of local American firms with regard to the means of increasing the demand for American manufactures in Japan. The *London and China Express* gives the following epitome of these opinions:—

Walsh, Hall & Co., of Yokohama, attribute the fact of European manufactures being more saleable to their being better adapted to Japanese requirements, better packed, and cheaper at first cost; and to transportation being quicker, and steam freights lower than from America. They advert to the efforts of official representatives of European Governments to further the commercial interests of their nations, and say that if American interests were "similarly protected and promoted" the result might be similarly advantageous. They especially commend the reports of British Legations and Consulates in China and Japan. In conclusion, they point out that prices of American products must be reduced if the United States is to have its "fair share" of trade, and are of opinion that Congress might increase trade with Japan and other countries by reducing import duties. J. Otis Averill, Junr., Yokohama, also dwells on the cheaper price and special fitness of English and other goods. The causes producing a larger demand for these are thus summarised:—

(1) *Cheap and regular freight opportunities.*  
(2) English and other manufacturers making a special study of, and endeavour to cater to the export demand, while our manufacturers, whose products are "protected" to an extent which places them beyond foreign competition in the home market, are content to meet only the home demand, and while home competition makes them give good value, the highness of price permitted by protection makes the quality of most of the goods too high to export to a poor country like Japan.

Our manufacturers do not seem to care to make a special class of goods to meet the demand, but seem to expect the demand to adapt itself to their goods—a most tedious process, as I know from efforts to introduce the goods here.

(3) The Japanese, as a rule, are quite superficial, and are satisfied with appearance only, as may be seen in nearly all of their manners, customs, and habits.

To illustrate, they prefer to buy a cheap English cotton which lasts well (they seldom wash their clothes), but is heavily sized and artificially made up, to a really good quality of American cotton at a somewhat higher price, but really worth the difference in wearing qualities.

This peculiarity of the Japanese is catered to by the manufacturers of other countries, and, while of course it is a question whether the policy of keeping a really high standard of goods will not in time create here, as it has in China, a demand for a really good article even at a higher price, it seems to me doubtful, as I do not think that Japanese appreciate true worth as well as the Chinese.

No liquidation, he considers, will suffice except a policy of free trade in the United States, which "would cause manufacturers to compete on even terms with foreign countries; subsidies to steamship companies would enable them to take freights at less rates.

Frazar and Co., Yokohama, express much the same views, and declare that American manufacturers as a body "care little or nothing" for the foreign markets, and refuse to adapt their products even in packing to the requirements of other nations. Then, again, Japanese are very exacting as to materials, form, colour, as well as packing, notably as to mousselines-de-laîne, and there must be a succession of styles as native fashions dictate. The firm would have the treaty with Japan so revised as to keep duties on goods imported into Japan as low as possible, and at the same time secure the removal of various oppressive restrictions. It is for more active consular action.

The opinion of Mr. Averill as to the superficiality shown by the Japanese in "nearly all of their manners, customs, and habits" is interesting. It is a pity that this gentleman had not leisure or inclination to be more explicit. As matters stand, we are disposed to think that the "superficiality" is chiefly on the side of his own observation. How can a nation show superficiality in its "manners, customs, and habits?" By changing them repeatedly, we presume, at the impulse of fashion or caprice. Perhaps Mr. Averill would be kind enough to indicate the changes which Japanese "manners, customs, and habits" underwent during, let us say, the fifteen or sixteen centuries that preceded the Restoration. It may be, however, that the universal "superficiality" of the Japanese is infer-

red solely from their preference for cheap English cottons which look well, to dear American cottons which wear well. But that, curiously enough, is the complaint which British manufacturers have been preferring for years against British consumers. The manufacturers say that the public *will* have cheap and good-looking things, and that there is nothing for it but to cater to this false taste by wholesale adulteration. Mr. Averill would no doubt conclude that English people show superficiality in "nearly all their manners, customs, and habits." Of course it is very silly and very short-sighted on the part of the Japanese not to discriminate in favour of American cottons, and now that they know how much their reputation must suffer by this blunder, they will mend their ways, we hope.

Mr. B. BRENNAN, H.B.M. Consul at Tientsin, speaking of the import of old iron into that place, makes the following remarks—which we extract from the *North China Herald*—curiously corroborating what has been said by other Consuls as well as by Mr. Bryce in his excellent Memorandum:—"I am told that the iron is converted into knives and tools. An expert could at a glance say whether these knives and tools could be made cheaper by our manufacturers. The most ordinary pair of English scissors is a piece of finished workmanship by the side of the best Chinese scissors, but Chinese will not use ours because they are not of the right shape. They like scissors with handles into which they can thrust the whole thumb and fore-fingers. An intelligent delegate from the Sheffield Chamber of Commerce could make a more valuable report on this head than all the English Consuls in China. I would recommend Manchester, Birmingham, and Sheffield to consider this suggestion. Their agents would receive every assistance at the hands of Her Majesty's Consuls. Like me, they doubtless all regret not being able to say what information may be useful and what may be superfluous. A new comer observes many things which an old resident sees without noticing, and an expert has the further advantage that when something attracts his attention he can tell at a glance whether there is money in it."

THE *New York Nation* says:—It is not often that anything so amusing in the way of a correspondence appears in print as a letter of Mr. Hubert de Castella to Mr. J. A. Froude, the historian, which we find in the Sydney (Australia) *Morning Herald*. It appears that when Mr. Froude was in Australia Mr. Hubert de Castella entertained him at dinner, and Mr. Froude was delighted with his host, and serves him up as "a most amusing companion" in his last volume, 'Oceana.' In this, Mr. de Castella figures as having served in the French Army, and also as a French detective employed in the Praslin murder case; as having fought behind the barricades in February, 1848, then serving on the police, and as having again fought on the side of the insurgents in June, 1848, and finally, as having married "a Sydney lady, moderately rich, who would have been much richer if she had pleased her friends better in the choice of a husband." Mr. de Castella now says that the only grain of truth in all this is that he did witness the Revolution of 1848, being at the time an art student in Paris, and did join a French cavalry regiment, but all the rest has been "built up" by Mr. Froude's

imagination out of anecdotes told in an after-dinner chat. This would be a serious charge to bring against any man, but brought against an historian it is terrible. How can we trust among "the archives" a man who cannot be trusted to listen to a host's reminiscences at a dinner table?

THE scandals circulated by Colonel Hope with regard to the management of the Ordnance Department remain open. No conclusive reply on the subject has been elicited from the British Government, but it must be confessed that, matters so far as they have gone, do not appear very satisfactory. One of the principal charges, it will be remembered, was that certain officials connected with the Ordnance Department, were also shareholders in a firm of contractors for the supply of guns. Sir W. Crossman, formerly of the Royal Engineers, addressed a question with regard to this point to the Secretary of State for War, and from the latter's answer it appears that Messrs. Gledhill and Leece, of Sir J. Whitworth & Co., and Sir W. Armstrong, Captain Noble and Sir Frederick Abel, partners or shareholders in Sir W. Armstrong and Co., have been associated with the Ordnance Committee either for special or general purposes. This sounds bad enough, and it is rendered worse by the remonstrance of the Secretary of State, for War that "it would be utterly out of the power of any Secretary of State, and, indeed, he has no authority, to lay down any regulations as to the investment of the private property of any officer serving the Crown." Why should it be impossible? There used to be, and there is still, we believe, an excellent and wholesome regulation that the servants of the Crown, whether military or civil, must not engage in trade. Surely it is engaging in trade to invest one's money in an active business undertaking. Suppose it were discovered that the Japanese Vice-Minister of State for the Interior were a large shareholder in the Mitsui Bussan Kaisha or in the Okuragumi, would there be much doubt as to the propriety of the proceeding?

A CORRESPONDENT of *The Times*, who writes as "one that knoweth," gives the following definition of German policy in the East:—"The policy of Germany, broadly defined, is not to place herself in unequivocal opposition to Russia's desire to reach Constantinople. While availing herself of any means of delaying the event, she counts on providing for the new situation by moving Austria forward along a parallel line to the *Ægean*, and satisfying to Austro-Hungarian opinion, with an opening to the sea at Salonica. The event which we regard with anxiety—Russia at Constantinople—Prince Bismarck is preparing to face with complacency, and those who are required to conform to his views declare that Russia will be relatively weaker to Germany and Austria when she has attained her desire of centuries. The policy of Prince Bismarck is necessarily inimical to England. He will not oppose Russia's expansion on lines previously submitted to and approved by him. Russia may do what she likes in Asia. The platonic friendship he has expressed for Turkey, and is now expressing for China, will not induce him to move hand or foot to thwart Russia in Armenia and Central Asia. He has to look after the interests of Germany, not of England. They do not happen to have much in common, and he leaves Eng-

land to look after her own interests alone because he is slightly sceptical of her ability to do so effectually."

This statement is not startling in point of novelty. It embodies virtually the impression that we ourselves have more than once recorded on the same subject. Russia consents to be guided in Europe provided that her hands are left quite free in Asia. The arrangement is convenient. Germany has never been exposed to that most severe of all military tests, the despatch of a large armed force beyond the seas and its maintenance in a foreign country in the face of an enemy. Resistance to Russia's advance in Central Asia need not, of absolute necessity, involve such an effort, because war near home might produce practically the same result. But it might involve it, and for the rest, Germany does not want war. In order, then, to keep the peace in the arena where any serious disturbance would call for an exercise of her strength, she makes a compromise, exchanging her complaisance or neutrality at home against *carte blanche* abroad to one of her most probable and formidable enemies. We do not share Prince Bismarck's scepticism as to England's ability to defend herself against the consequences of this policy, but we trust that one result of the European compact will be an Eastern coalition which will be at least as powerful to preserve peace in the Orient as the coöperation of Germany and Austria.

ONE hears so much that is vague now-a-days of Germany's commercial development, that it is comfortable to find some arithmetical gauge of what she really has done and is doing. In her rapidly increasing population, in the industrious and frugal habits of her people, and in the spirit of enterprise which spurs her to remarkable efforts of colonization and competition, she possesses elements which ought to command success. But she is by no means uniquely endowed, and when one sees that she is coming to be regarded as a species of nightmare destined permanently to disturb the repose of the commercial world, one begins to suspect that the judgment of the age, so far as she is concerned, is a little obscured by the glamour of those wonderful triumphs which an unparalleled coincidence of opportunity and readiness obtained for her armies fifteen years ago. This suspicion is confirmed by the following table, extracted from the *Statistisches Jahrbuch für das Deutsche Reich, siebenter Jahrgang, 1886*:—

FOREIGN COMMERCE OF THE GERMAN EMPIRE.				
YEAR.	IMPORTS.		EXPORTS.	
	Weight of merchandise in Tons of 1,000 kilograms.	Value in Marks.	Weight of merchandise in Tons of 1,000 kilograms.	Value in Marks.
1872 ...	13,352,223	3,464,622,000	10,049,691	2,492,195,000
1873 ...	15,307,573	4,254,642,000	9,914,201	2,415,204,000
1874 ...	15,444,514	3,670,615,000	10,420,920	2,459,640,000
1875 ...	15,278,909	3,573,409,000	11,909,703	2,560,617,000
1876 ...	16,644,498	3,911,462,000	12,982,071	2,664,989,000
1877 ...	17,511,358	3,872,449,000	13,953,202	2,827,019,000
1878 ...	16,623,437	3,715,945,000	15,444,738	2,915,322,000
1879 ...	16,660,120	3,585,004,000	16,416,131	2,826,788,000
1880 ...	14,171,935	2,859,928,000	16,401,311	2,946,180,000
1881 ...	14,848,292	2,909,121,000	16,672,249	3,029,196,000
1882 ...	15,999,010	3,104,007,000	17,208,959	3,244,121,000
1883 ...	16,297,187	3,207,960,000	19,239,591	3,333,000,000
1884 ...	17,777,760	3,284,928,000	19,151,756	3,219,401,000
1885 ...	17,867,330	2,989,960,000	18,814,023	2,915,257,000

There is certainly nothing very startling about these figures. They show that from 1872 to 1880, the development of Germany's commerce was by no means rapid, and that its considerable growth took place between 1880 and 1882, while in 1885 imports remained nearly stationary

and exports showed a marked decline. The fact is that Germany's foreign commerce has still plenty of room for development before it becomes an object of just admiration. It is not yet equal in volume to the foreign commerce of France, though the extent of the latter's territory is much less and her population from eight to nine millions smaller:—

FOREIGN COMMERCE OF FRANCE & GERMANY FOR 1885.

	FRANCE.	GERMANY.
	FRANCE.	FRANCE.
Imports .....	4,215,877,000	3,621,000,000
Exports .....	3,185,031,000	3,518,100,000
Totals .....	7,400,908,000	7,139,700,000

THE trade returns continue to occupy the attention of the American press. During the last five years the exports of the United States have decreased by more than \$200,000,000, while imports have during the same time shown a decline of only \$7,000,000. The exportation of corn, cotton, provisions and raw material has suffered most. The competition of India, and, to a smaller extent, that of Australia, also has been severely felt. Comparing the returns of the fiscal year, ended in June, with those of the previous year, we find that the value of exports sank from \$726,682,946 last year to \$665,950,534 this year, while imports on the other hand increased by \$58,000,000. A reverse process has to be noticed when we come to the imports and exports of money. In 1884-85 such imports in gold and silver amounted to \$43,242,323, and the exports to \$42,231,528, while for 1885-86 the figures are:—imports \$38,593,656 and exports \$72,463,410. For the last half of the fiscal year 1885-86 the figures show a still greater disproportion, if gold only is taken into consideration. The entire gold export during that time was \$32,783,123, while the imports amounted to only \$1,999,754. The excess of exports over imports during that time was greater than the entire gold production of the United States in 1885, amounting, according to the overseer of the mint, to \$30,800,000. This excess of exports over imports in gold and silver is largely due to the corresponding increase of imported manufactures as against the steady decline of exports in corn, cotton and raw material of every kind. Many business men, however, believe that the present depression in the home and foreign trade of the country has reached its lowest ebb, and there are not wanting indications pointing to a renewal of the usual business activity so characteristic of the large industrial establishments of the United States.

THE following are some interesting passages from the memorial lately presented to Lord Salisbury with reference to the silver question:—

The memorial sets forth:—"That there has been a remarkable, severe, and continued fall in the values of manufactures, agricultural produce, land, houses, and of all kinds of property throughout most of the civilized world; that this decline in values still continues, and that no indications are apparent of its coming to an end and of values recovering. That the effects of this are a contraction of credit and a decline of enterprise, which must produce permanently damaging results to the mercantile future of the United Kingdom, and also to other British dominions." The memorialists point out that the Royal Commission on Trade Depression allude to the subject thus:—"But we have also had evidence that the present depression is not confined to this country. If there be in the relation of the precious metals to other commodities or to each other a disturbance which can affect the commerce of the world generally, that would be a cause of depression affecting an area as wide as that over which it would appear the present depression extends." And again the Commissioners say:—"We are strongly of opinion that the question of currency deserves early and separate examination from other points of view than that of our Commission, and that apart from its general connection with the depression of trade it should be treated with reference to our currency as a

whole, and to our monetary system and to its relations to our Colonies, to India, and to foreign countries, and we humbly submit to your Majesty that from the prevailing anxiety expressed on this subject, the necessity for such an inquiry is urgent, and that it would both save time and facilitate investigation if a separate inquiry into the group of questions which relate to the currency were set on foot, and were entrusted to such persons as might seem to your Majesty the most proper to conduct it under an order of reference carefully prepared and drawn so as to include all branches of the subject." The memorialists then proceed:—"That as one reason of many which might be adduced for the necessity of holding the inquiry, recommended by the Commissioners appointed to inquire into the depression of trade and industry, we say the annual value of the cotton manufactures of the United Kingdom is about eighty millions sterling, of which about sixty-five are exported to British possessions and foreign countries, most of which have a silver standard of value, and in which our manufactures are therefore sold for silver; and on account of the continued fall in the value of silver relatively to gold, several departments of the cotton manufacturing industry of the United Kingdom are in a state of great depression, and stand in risk of permanent injury. We further submit that the enormous decline in the value of all agricultural land may on inquiry be shown to be to a large extent produced by the disturbance to our currency equilibrium. Your memorialists would also submit that the increasing variation in the values of gold and silver is producing the most serious derangement to the finances of India. In a special despatch from the Government of India to the Secretary of State, dated Feb. 2, 1886, in which this subject is dealt with, after describing the effects which have been produced, the despatch, which is signed by Lord Dufferin, goes on to say: "This state of affairs would be an evil of the greatest magnitude in any country in the world; in a country such as India it is pregnant with danger." Much doubt and misunderstanding exist as to what the commissioners to inquire into the depression of trade and industry have, for the sake of brevity, called the Currency Question, and great uncertainty also prevails on the subject of the monetary values of gold and silver throughout the world. No Parliamentary inquiry has been held on any subject relating to the precious metals since the Silver Commission of 1876, and little of the evidence then given is now of any value. Your memorialists therefore submit that the recommendation of the Royal Commission on the Depression of Trade and Industry for a separate inquiry into the Currency Question should, by reason of its urgency, be adopted at as early a date as possible.

THE Cesarewitch has been won by Stone Clink, The Cob second, Eurasian third. The winner, one of the useful sort, picked up several races for Mr. Vyner last year, having won the Blankney Stakes at Lincoln Spring, the Third Biennial at Newcastle (after a dead heat), the Durham Handicap, the Canton Handicap, the Scarborough Handicap, the Richmond Handicap, and the Roxburghe Handicap at Kelso. Stone Clink is a chesnut filly by Speculum—Stone Chat. The Cob, owned by the Duke of Beaufort, is a bay colt by Lord Ronald—The Roe, and won a sweepstake at Newmarket over the Brethby Course, but only had one opponent. Mr. J. Hammond's Eurasian ran in the Cesarewitch last year, carrying 6st. 10lb., but was nowhere.

NEITHER Irish affairs, Bulgarian affairs, nor affairs at St. Stephen's appear to affect one institution at home—the turf, the interest in which seems to increase, as the stakes involved certainly grow larger, and phenomenal racing becomes the order of the day. It was only a few weeks ago we recorded the result of the Eclipse Stakes at Sandown Park, where Bendigo romped home in front of a field of twelve, landed by Tom Cannon the winner of the largest stake ever raced for—£10,000—in addition to which the eminent brewer who owns the bonny black son of Ben Baule and Hasty Girl is said to have raked in close upon £50,000 in bets. We now learn from American papers that a race will be run at the Houghton Meeting—a sweepstake of £1,000 each—in which Bendigo will meet Ormonde, Melton, and The Bard. There can scarcely be any doubt that four such horses never met as the quartette named—certainly Or-

monde is the best horse of the present, or perhaps any century, and the race is likely to be the most sensational on record. The distance is a mile and a quarter, but the course is not named, though it will probably be "across the flat," which is a mile and a quarter and 73 yards. The weights are:—Ormonde (3 yrs.), 8st. 10lb.; Melton (4 yrs.), 8st. 10lb.; Bendigo (6 yrs.), 8st. 10lb.; The Bard (3 yrs.) 8st. When ages and weights are considered it appears on paper to be a somewhat open race, but we will nevertheless hazard a prediction as to the result, namely, Ormonde, 1; Bendigo, 2; leaving Melton and The Bard to fight it out for third place.

A MEETING was held on Wednesday of those favourable to the formation of a sailing association. Mr. G. Whitfield was in the chair. There was an attendance of over twenty. It was resolved on the motion of Mr. Beart, seconded by Captain Efford, that those present form themselves into an association for the purpose of promoting sailing and sailing races only; and further, on the motion of Mr. Glennie, seconded by Mr. Curtis, that the name of the Association be "The Yokohama Sailing Club." On the motion of Mr. Marshall, seconded by Mr. White, it was decided that any person should be eligible for election to membership on the written requisition of three members. Messrs. Whitfield, Owston, and Beart were elected a committee to draw up a constitution and rules to be submitted to a future meeting.

JAPANESE papers publish the following telegrams:—

(Mainichi Shimbun.)

Nagasaki, October 6th (Afternoon).

Admiral Ting visited the Chinese Consulate at Nagasaki, and had a conference with Mr. Drummond.

Nagasaki, Oct. 12th, 1 p.m.

Instructions from Count Inouye arrived to-day. Presumably the message urges the conclusion of the Nagasaki affair as soon as possible.

(Yiji Shimpō.)

Nagasaki, Oct. 12th (Afternoon).

To-day's sitting was the 19th of the enquiry. The affair of 13th August was again taken up and Chinese witnesses were examined.

It is impossible to doubt that a man has some innate faculty of imparting caloric to his surroundings if he finds himself in hot water wherever he goes. That is the case with Sir John Pope Hennessy. Trouble attends him everywhere, and one must needs be very charitable to believe that he has not a great deal to do with making it himself. But the curious part of his story is that he always manages to emerge from the mess, if not absolutely victorious, with at least a fair share of credit. His enemies, for example, are busily abusing him for his fracas with Mr. Clifford Lloyd, but it is noticeable that they rest their case rather on the sequence of disorders which have dogged Sir John's official footsteps, than on the merits of this particular quarrel. They show their discretion, for, judging by the published accounts of the affair, Mr. Clifford Lloyd cut a very reprehensible figure. In the presence of the whole Legislative Council of Mauritius he plainly accused the Queen's Representative of garbling the short-hand writer's reports of the Council's Proceedings before transmitting them to London. Sir John appears to have behaved with great calmness under such trying circumstances. He made no reply to Mr. Lloyd's charges, but merely promised that the short-hand writer's reports should be

laid on the table for comparison with those sent home. It is strange that if Mr. Clifford Lloyd's accusations were well founded, they have not been verified by direct reference to these reports. The end of the thing is that Mr. Lloyd is vegetating at Seychelles. Sir John Pope Hennessy may complain with some justice that the Home Government, without consulting him, sent to the island of which he was Governor a Colonial Secretary so notoriously opposed to him in politics as Mr. Clifford Lloyd.

THE international yachting contest has resulted in decisive victory for the Boston sloop *Mayflower*. In the first race, sailed Tuesday 7th September, the *Mayflower* completely outsailed the English cutter, beating her by 12 minutes and 40 seconds, or 12 minutes and 2 seconds corrected time. On September 12th the second race was sailed, ending in an even more overwhelming defeat than the first for the *Galatea*, which was beaten by 13 minutes 40 seconds on the run out twenty miles to leeward, and in returning was outsailed by half an hour.

A JAPANESE girl aged about 12 years, residing at Tokiwacho, Shichome, who, carrying a younger sister on her back, went out on Sunday morning with some playmates to the unoccupied ground at Uchidacho, near the Railway Station, was attacked by five dogs. The unfortunate girl was so severely bitten by her assailants that she died, the infant also falling a victim to their fury. A number of police constables were sent to the place, and the men were successful in killing two of the dogs, but the others escaped.

THE cholera returns for Yokohama during the past week were:—Saturday, 9th instant, new cases, 3; deaths, 3. Sunday, new cases, 2; deaths, 2. Monday, new cases, 3; deaths, 5. Tuesday, new case, 1; death, 0. Wednesday, new cases, 2; death, 1. Thursday, new case, 1; deaths, 2. Friday, new case, 0; death, 0. Total cases, 12; deaths, 13.

THE cholera returns of Tōkyō during last week were:—Friday, 8th instant, new cases, 29; deaths, 25. Saturday, new cases, 30; deaths, 27. Sunday, new cases, 30; deaths, 26. Monday, new cases, 21; deaths, 21. Tuesday, new cases, 20; deaths, 17. Wednesday, new cases, 9; deaths, 7. Thursday, new cases, 15; deaths, 22. Total new cases, 154; deaths, 145.

THE Extradition Treaty between Japan and the United States of America has been ratified. The text has appeared in the *Official Gazette*. In this issue we publish an authorized translation.

THE *Bukka Shimpō*, which has been increased in size, changed its type for a smaller fount commencing with Sunday's issue, with the object of giving more matter to its readers, in addition to a supplement.

SEVERAL alterations in the time-table of the Utsunomiya-Nasu railway came into operation on Sunday.

THE British barque *Sultan*, with kerosene from New York for this port, passed New Anjer the 10th September.

THE American ship *Snow and Burgess*, having received orders from home to proceed to San Francisco, has sailed from Kobe for that port.

Original from

THE EXTRADITION TREATY BETWEEN JAPAN AND THE UNITED STATES OF AMERICA.

WE publish to-day the text of the Extradition Treaty just concluded between Japan and the United States of America. The original Treaty was in English, with the exception of His Majesty the EMPEROR'S ratification, our translation of which is authorized.

The negotiation and conclusion of this Treaty have been marked by a degree of expedition which is not usual in diplomatic proceedings. The subject of a new extradition treaty between Great Britain and America had been under discussion for nine years when the present Representative of the United States in London brought his legal abilities to bear on the question. Yet the treaty is still *res infecta*. The idea of this Japanese Treaty, on the other hand, was conceived last December. It was concluded the 29th of April; ratified the 25th of September, and the ratifications were exchanged the 27th day of the latter month. The whole transaction occupied barely nine months.

The circumstance which led immediately to negotiations for a treaty of extradition between Japan and the United States was the flight to the former country, last fall, of a citizen of the latter charged with forgery and embezzlement. We need not dwell upon the details of that event as they are still fresh in the memory of the public. It will be sufficient to say that, in the interests of justice and for the sake of comity, Japan entertained the request of the United States, caused the fugitive, CALVIN PRATT, to be arrested, and handed him over to officials delegated by the authorities of the State of California to receive him. It was explicitly stipulated by the Japanese Government, at the time, that this unusual exercise of executive power was not to be construed as a precedent, and the United States Government, recognising the inconvenience of leaving the question of extradition in such an indeterminate form, fell in with Japan's suggestion, and proceeded to negotiate the Treaty of which the ratifications have now been happily exchanged.

The affair derives its chief interest from its bearing upon that much discussed and constantly misinterpreted subject, extraterritorial jurisdiction. By treaties concluded twenty-eight years ago, Japan temporarily surrendered to foreign Consular Courts a portion of her jurisdiction. The unique purpose and pretext of this measure were to exempt the persons and properties of foreigners residing or travelling in Japan from the then cruel processes of Japanese law. That, indeed, according to the unanimous verdict of eminent jurists, is the sole *raison d'être* of extraterritorial jurisdiction wherever it has been claimed and permitted. Now, it is manifest that only foreigners who violate the provisions

of Japanese law can be exposed to the risks of its processes. Therefore the intention of extraterritorial jurisdiction cannot concern foreigners who may fly to Japan to escape the consequences of crimes committed beyond her borders in violation of the laws of a foreign State. Such fugitives could not, under any circumstances, be properly tried and punished by her Courts, and therefore she could never have renounced by treaty the power to try and punish them. In a word, she did not, and could not, surrender to foreign Consular Courts any functions not exercised by her own territorial Courts. Such a function is the duty of arresting and extraditing persons fleeing from foreign justice. The power to make these arrests and surrenders belongs primarily to the executive, and in Japan is still retained entirely by the executive; although in some other countries—notably Great Britain—it has been partially delegated to the judiciary. Thus the Treaties of 1858 did not in any way affect the question of extradition, and assuredly the purely *judicial* concessions which they contained could not confer upon their foreign signatories *executive* power to over-ride Japan's sovereign right of asylum. For the great majority of those signatories the question possessed no practical importance. But England was obliged to consider it, owing to the proximity of her territories and the corresponding probability that fugitives from her justice might escape to Japanese soil. She settled the matter very simply by assuming that, under the Treaties, she had acquired the power to pursue and arrest her fugitive subjects within Japanese territory. The assumption was eminently practical and, from England's point of view, not wholly illogical. She held that for all judicial purposes Japanese soil is as British soil; with her the processes of extradition are, in great part, judicial processes; therefore the power to follow and seize her fugitive subjects within Japanese borders was included, she claimed, among the judicial functions delegated to her by the Treaties. The contention will not bear examination. For, in the first place, apart from the reasons we have already stated, if England acquired any such power under the Treaties of 1858, she must also have incurred the obligation to surrender Japanese subjects flying to her territories to escape the consequence of crimes committed in Japan against Japanese laws. But she neither acknowledges, nor could legally acknowledge, any such obligation. And in the second place, she explicitly denied, in 1849, that the Capitulations in Turkey—which confer the same immunity from Turkish jurisdiction as that enjoyed by foreigners in Japan—could bear the construction subsequently placed by herself upon the Japanese treaties.

Considering, then, the attitude assumed and maintained by Great Britain in this

matter, there is much interest in the fact that the United States of America have taken up a wholly different position. Attempts will doubtless be made to construe this into another evidence of America's friendly disposition to Japan, and of her readiness to separate herself from the league of Powers by which this empire has been held in virtual subjection for so many years. We should be the last to withhold from the United States any portion of the credit justly deserved by their kindly and liberal demeanour towards Japan. Happily, too, the time has come when no contrast that may be drawn between the practical goodwill of any one of the Treaty Powers and that of Great Britain, can be to the latter's disadvantage. But in this particular case we would remind Japanese critics that England and the United States were differently circumstanced. The territorial laws of the former lent themselves to an interpretation of the Treaties which could not have been accepted by the latter with any show of propriety. Had not this vital difference existed, it is probable that the United States would not have left themselves the opportunity which has now matured to their own credit and to the satisfaction of Japan.

With regard to the terms of the Extradition Treaty itself, it will be observed that the list of crimes is sufficiently full, but that, owing in part to the amendments proposed in Washington, it does not include any offences which would be beneath the dignity of an international compact, or which, owing to their different definitions and degree under different statutes, might not be readily capable of general interpretation. The 13th clause of Article II. will be read with special interest. It might, perhaps, have been improved by the insertion of the words "or other property" after the words "or other buildings." But as it stands it is a sufficient protection against the outrages of that increasing class of scoundrels who pervert the discoveries of science into instruments of savage crime. This, in effect, is the clause whose insertion in the new Extradition Treaty between Great Britain and the United States is so much desired by the former. Thus Japan's first Extradition Treaty has also the honour of being the first to contain a condition clearly necessitated by the state of modern society, but hitherto rejected by international prejudice.

In some other respects the Treaty exhibits an enlightened view of international law. In previous treaties it has generally been the custom to provide that a fugitive belonging to the country in which the demand of extradition is made, shall not be given up. The effect of this provision is to favour escape from justice. A nation does not try its own subjects for foreign crimes. Thus, while a domiciled person suffers for his offences, and while a traveller is amenable to the laws of the land through which

he passes, the criminal who flies to his own country is beyond the reach of justice. The Treaty now before us does not promise immunity to such fugitives, but makes their surrender discretionary. Again, the common stipulation that if the person demanded has committed crimes in the State where he is arrested, the latter's claim of justice against him shall be first satisfied, is here modified by the proviso that the delay incident to the satisfaction of such claim "shall not prevent ultimate extradition." Well worthy of notice, too, is the last clause of Article V. It is there provided that "the fugitive shall be surrendered only on such evidence of criminality as, according to the laws of the place where he is found, would justify his apprehension and commitment for trial if the crime had been there committed." This, though not an unusual stipulation, is significant as a recognition by a great Western Power of the condition and comprehensiveness of Japanese criminal codes. We heartily congratulate Japan upon the conclusion of this Treaty, and we venture to hope that its success may be an omen of the result which awaits her in the far larger and more important treaty problem now inviting solution.

#### JAPANESE OFFICIALS ABROAD.

CERTAIN incidents connected with the recent passage of H.I.H. Prince FUSHIMI through New York, suggest the inquiry whether the Japanese officials stationed abroad might not advantageously be permitted a little more liberty of speech than is at present accorded to them. It does not now appear as if they were authorized to offer any information, or even to correct any errors of statement, however absurd or mischievous, which it may please the press to promulgate. Without misrepresenting Prince FUSHIMI's position or personality to any harmful extent, and probably without the least intention to offend, the journals of the American metropolis certainly gave a most imaginative portrayal of the distinguished traveller, and invested him and his suite with attributes which, in Japan, would scarcely be recognized as belonging to them. Distortion and confusion in the names and functions of members of the party were perhaps inevitable accidents, but it is difficult to find a reason for describing His Imperial Highness as being six feet and a half in height, or an excuse for designating him the "CROWN PRINCE of Japan," the "embryo monarch" and the "future MIKADO." It is to be presumed that Prince FUSHIMI would neither covet the attentions due to HIS MAJESTY'S successor, nor enjoy the consequences of being heralded as an Oriental giant. The further irregularity of attributing to him habits, occupations and tastes quite contrary to those with which he is credited in Japan, may have been due to some misunderstanding of his

family name. Similar curiosities of newspaper literature were exhibited for the benefit of General SAIGO and his party, during their recent journeys to and fro, in search of the latest novelties in naval science. Some errors of identification might, however, be pardoned in this distinguished officer's case, as, since he first became known to the American public in his peaceful quality of Commissioner to the Centennial Exposition, ten years ago, he has filled the somewhat opposite positions of Minister of War, and Chief of the Department of Agriculture and Commerce, previous to reappearing on Republican soil as Minister of Marine. "A man so various" could not complain at finding himself credited with powers and capacities to which he puts forward no present claim. Among visitors of humbler degree, there are some who are thrust into prominence, probably against their will, but in a way which they might turn to excellent account, if they felt themselves authorized to overstep the bounds of official restraint. Only the other day, a young attaché of the Custom House, on a tour of inspection, was "interviewed" in a good-natured manner, under circumstances which showed that he would have been allowed any amount of space and latitude in telling the story of the Japanese tariff and its anomalies. There were two or three journals willing to give him as many columns as he would have wished to fill, and, apart from the circumstance that the story of Japan's wrongs, in this particular, cannot be too often recited, there would have been a special fitness in presenting them at that particular moment. The reporters evidently tried to draw all they could out of him, and he had only to give a plain statement of facts, to show the manner in which the Customs Department of his country had for years been made the plaything of foreign diplomatic and consular agents, acting in the interest of their respective countrymen, on the pretence that the Treaties justified their proceedings. But all he could be induced to say was that everything was charming, conveying the idea that Japan was perfectly contented with the existing state of things, and actually misstating the true condition of affairs by announcing that the duties collected on exports and imports amounted to five per cent. *ad valorem*. The error may seem trifling, but a concise explanation as to why the duties do not reach even five per cent.—as they are alleged to by those who oppose Japan's right to regulate her own Tariff—might open the eyes of the American officials who have in charge the negotiations bearing upon this topic. Worse than this, the same gentleman said that the annual collection of import duties was four millions, the fact being—as he must necessarily know—that the duties on both imports and exports are only a little over two millions and a

half. The Japanese expedient of meekly turning the left diplomatic cheek when the right is smitten, and providing convenient weapons for their antagonists to use against them, never has worked beneficially and never will. It is not practised in Christian countries, and there is no necessity for Japan to adopt it to her own disadvantage and discredit.

#### MR. FORBES ON SILVER AND THE COTTON TRADE.

MR. F. B. FORBES, formerly of Messrs. RUSSELL & Co., China, and now residing in London, has written a very excellent brochure on the "Causes of Depression in the Cotton Industry of the United Kingdom." Mr. FORBES is a member of the Bi-metallic League. His monograph was prepared at the request of the General Council of the League, and is issued among their Occasional Papers. Its value as a contribution to the great question of the day consists not only in the clearness and logical arrangement of its facts, but also in the circumstance that it deals with one great industry—the greatest of all England's manufacturing industries—alone, thus eliminating the complications and intricacies of a collective review.

Mr. FORBES sets out by a comparative statement of the condition of the cotton trade during the two periods 1871-1875 and 1881-1885. From this it appears that the average annual deliveries of yarns and goods during the first period was 1,128 millions of lbs., and during the second period 1,135 millions. Making due allowances for reductions in the cost of the raw cotton owing to cheapened freights, and in the cost of manufacture owing to improved processes, the final result is a decline of 20 per cent. in the net value per lb. of the manufactured goods. In other words, the margin of profit was 20 per cent. less in the second period than in the first.

In considering how this decline is to be accounted for, the first question which naturally suggests itself is the persistently repeated plea of the monometallists—over production. Has the production of cotton so far exceeded a fair estimate of the world's demands as to explain the great depression now existing in the trade? It is not possible to answer this question with rigid accuracy, but a very close approximation can be made. The population of Europe, North and South America, and Australasia is about 455 millions. Assuming that the people in these parts of the world consume 5½ lbs. per head of cotton manufactures—a considerably smaller consumption than that of the United Kingdom—we have here a demand for 2,502 million lbs. Further, the average annual export of cotton manufactures from Great Britain to Asia and Africa is 708 million lbs. These two items account for 3,210 million lbs. Now the average annual consumption

of raw cotton by the factories of Europe and the United States is 3,616 million lbs. There thus remain 406 million lbs. of manufactures to be disposed of, and from these have to be supplied shipments from Europe and the United States to the West Indies and Oceania; Dutch exports to Netherlands-Java; American exports to India, China, Japan, the Philippines, &c.; French and German shipments to Algeria, Tunis, Egypt, and the Far East; and Russian commerce with Siberia and Central Asia. How is it possible, in the face of these figures, to maintain that the production of cotton manufactures has exceeded the demand; or, at any rate, that the excess is sufficient to account for a decline of 20 per cent. in values and a general depression of the industry?

In examining a special industry, such as that of cotton, apart from its fellows, a difficulty presents itself, namely; that the general fall of prices has reduced the cost of certain staples which are used in the manufacture of cotton, and that allowance must be made for this factor in estimating the margin of profit. It is, indeed, true that the cotton manufacturer can now procure his coal, oil, dyes, &c., at lower prices than those ruling in former years; but, on the other hand, his rent, taxes, and interest on mortgages remain practically the same. Moreover, in that most important element, wages, the reduction has not been by any means proportionate to the fall in the value of the manufactured staple. According to the statistics obtained by the Royal Commission on the depression of Trade, the decline in wages has been 13½ per cent. per lb. of goods. But Mr. FORBES, examining these statistics more accurately, arrives at the conclusion—though he does not state it—that the decline in wages has not exceeded 8 per cent. Whichever figure we take, it is evident that the reduction of wages has not kept pace with the general shrinkage of prices—a feature, it may be observed *en passant*, which is always observable in times of currency contraction.

We cannot do better than quote Mr. FORBES' conclusions in his own language, observing, by the way, that they are, for the most part, the echo of opinions already expressed more than once in these columns:—

If my figures are even approximately correct, more cotton has not been produced than Europe, the two Americas, and Australasia, should have been able to use at a low rate per head of population. I may draw attention to the fact that in this category are all countries with a Gold standard; and if there has been not merely a decline in the rate of consumption, but a serious fall of prices, it is clear that neither can be explained by "over-production."

We are thus thrown back upon the only alternative, and I submit that the appreciation of Gold accounts for the situation in those countries as nothing else can.

During the process of adjusting values, this appreciation acts unequally upon different sets of people. But its pressure is hardest upon the mass of small consumers—upon the wage-earners—who have, at the best of times, only a narrow margin beyond their expenditure for absolute necessities. In their case Gold appreciation is first felt through a reduction of wages, or perhaps more often

through the greater difficulty of finding work at all. But it is some time before the general shrinkage makes any impression on the prices of their quarters loaf, their pint of beer, or their cup of tea. As a rule, rents and taxes are among the last to adjust themselves on the lower level. In this country, rents paid by the working classes have if anything, increased in actual amount, while as to taxation, Mr. Stuttard has informed the Royal Commission that, in the cotton trade, from 10 to 12 per cent. of wages paid are taken by local and imperial rates. Such charges then, during an appreciation of the currency, absorb the product of more labour than before, and in the meantime the margin for all but food and lodging is less than ever.

But the requirements of these toiling millions are what determine the markets for most staple commodities. The general shrinkage of values brings them less economy in the cost of their daily life than detriment in other ways, and it is they who make up "the world," which can no longer afford to pay for cotton goods as before.

When, however, we turn to the great silver-using countries of the East, we find that we have to deal with an entirely different series of facts. Here, at least, there is no appearance of excessive supply, for there has been a steady increase in receipts from the United Kingdom, which alone have been about one-fifth of the total weight of cotton manufactured in Europe and the United States. Nor is there any reason why consumption should fall off, except from the effect of some calamity of war or famine. It may rather be expected to increase, as new markets are opened up by improved communications.

The general theory has been that, with the decline in rupee exchange, prices for both exports and imports must rise proportionately in India, and that the former would be stimulated, while the latter would be checked. It has always seemed that merchants, with this theory in their minds, must have been conscious of a paradox, when they complained that their trade with the East was "hampered by the silver difficulty," while statistics showed that, the greater the difficulty, the more the trade increased. But all paradox disappears when we grasp the fact that there has been no fall in silver where that metal is the standard, but that gold has appreciated.

Mr. Barbour, Financial Secretary to the Indian Government, has tabulated prices for food grains in the interior of India, as well as quantities and values of leading exports and imports, for a long series of years ("Theory of Bimetallism," chaps. xxi.-xxiii.). Working out the percentages and the geometrical mean, according to Jevons' method, I find that the purchasing power of the rupee has been maintained for purely domestic trade in the interior, and practically for Indian exports as well. The fluctuations are only such as might be expected between years of drought and famine and years of plentiful harvests. (See Appendix, Table D.)

As regards imports from Gold countries, the course of prices is significant. Taking 1875-6 as a basis (in preference to the years immediately preceding, when markets were disturbed by inflation on this side, and by local famines in India) there is a general and marked decline in 1884-5. The ratios vary with the commodities; but so far as I have been able to examine the question, they appear to correspond roughly (taking the exchanges into account) to the fall in Gold prices here during the same period. Such, at all events, is the case with cotton yarns and goods, that is more than half the aggregate value of Indian imports, as is shown in the Appendix (Table E).

The local value of silver has, to the best of my knowledge, been equally maintained in China; but the Returns of the Imperial Maritime Customs do not, unfortunately, admit of the same analysis as Mr. Barbour's tables. A decline in the imports from Gold countries to China, analogous to that in India, is also noticeable, but for the same reason the proportions cannot be calculated very closely.

Thus have predictions been falsified. Indian exports have been stimulated by the fall in rupee exchange, but without a rise in prices. Imports have also been stimulated, the shipments of English piece goods, for instance, having averaged 40 per cent. more during 1881-5 than in 1875, notwithstanding a notable growth of manufacture in India itself. Moreover the goods have gone rapidly into consumption; there is no accumulation of stocks, and shipments since the beginning of this year are on a larger scale than ever.

With all this prosperity in India, it might have been expected that prices for cotton goods would at least remain steady, and the actual course of the market, as I have said, is significant. For it points to the fact that prices did not begin to fall there, but have simply responded to the decline which has occurred in Europe.

Where, as in the trade between the United Kingdom and India, action and reaction follow each other so promptly, it is not easy to distinguish cause from effect. But it cannot be doubted that there has always been pressure to sell from this side, as a natural result of anxiety to get quit of each shipment before a further shrinkage of Gold values brought cheaper goods into the market. Nor has the Indian buyer been slow to profit by the scramble for quick sales and returns, and doubtless those shippers have done best who have wasted least time in bargaining.

This is the so-called "Silver difficulty," which, in the every-day working of the Eastern trade, has expressed itself by the falling rates of exchange for commercial bills. Mr. G. Lord, in his evidence before the Royal Commission, has stated that, in his experience (Q. 5,347-5352), a merchant becomes "almost independent of fluctuations" in exchange by forward contracts for bills with a bank. To a suggestion that this was to make himself safe by the speculation of somebody else, Mr. Lord rejoined that there is no speculation, because the bank buys and sells simultaneously. "Of course," he added, "the bank may speculate if it chooses." With all respect to Mr. Lord, it may be questioned whether simultaneous sales and purchases are as general as he supposes, and whether speculation forward is not quite as often a matter of necessity as of choice to the Banks. However, as Mr. Lord also states (Q. 5,358) that "rupee prices in India have risen sufficiently to make up for the depreciation of the rupee," he may have been speaking of some well-protected garden of the trade, the flowers of which he alone has been permitted to gather!

To conclude, we have found in Gold-using countries an appreciating currency; a general shrinkage of values, in which the cotton industry has shared; depression of trade; distress; consequent falling-off in consumption. In Silver countries, on the other hand, we find stable currency prices for home products fluctuating from local causes only; prices for imports from Gold countries following the downward curve of their cost measured in Gold; great expansion in deliveries of goods.

"Over-production" has been in no sense a cause of the general depression of the Cotton Trade. It is a consequence in certain parts of the world, of monetary changes, the effect of which, in another part, has been exactly the reverse.

## CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

### MR. GLADSTONE.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—It must be particularly gratifying to all conscientious Englishmen, and especially to those who have not forgotten home politics, that there is a journal published in Yokohama capable of acknowledging the transcendent abilities of Mr. Gladstone. From a very lengthened and comparatively recent residence in London, I have fully digested the sentiments of the Metropolitan press, and have noticed with what delectation the *St. James's Gazette* sends forth its abuse of the late Premier. From its birth, to the present time, it has consecutively wailed forth terms of bitter spleen for the benefit of its own select circle of readers.

The bulk of the English people have, however, long ago taken the measure of such viperous vapourings, and when the future historian records the achievements of perhaps the greatest statesman of this century, the wild utterances of the journal in question will be swallowed up in sweet oblivion.

Apologizing for offering these remarks, suggested by your short article in your issue of 5th instant,

I am, Sir, yours faithfully,

A GLADSTONIAN.

Yokohama, October 9th, 1886.

# EXTRADITION TREATY BETWEEN JAPAN AND THE UNITED STATES OF AMERICA.

His Majesty the Emperor of Japan and the President of the United States of America having judged it expedient, with a view to the better administration of justice, and to the prevention of crime within the two countries and their jurisdictions, that persons charged with or convicted of the crimes or offences hereinafter named, and being fugitives from justice, should, under certain circumstances, be reciprocally delivered up, they have named as their Plenipotentiaries to conclude a Treaty for this purpose, that is to say:

His Majesty the Emperor of Japan, Count Inouye Kaoru, Jiusammi, His Imperial Majesty's Minister of State for Foreign Affairs, First Class of the Order of the Rising Sun, &c., &c., and the President of the United States of America, Richard B. Hubbard, their Envoy Extraordinary and Minister Plenipotentiary near His Imperial Majesty the Emperor of Japan, who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following Articles:—

## ARTICLE I.

The High Contracting Parties engage to deliver up to each other, under the circumstances and conditions stated in the present Treaty, all persons, who, being accused or convicted of one of the Crimes or offences named below in Article II. and committed within the jurisdiction of the one Party, shall be found within the jurisdiction of the other Party.

## ARTICLE II.

1. Murder, assault with intent to commit murder, and manslaughter.
2. Counterfeiting or altering money, or uttering or bringing into circulation counterfeit or altered money, counterfeiting certificates or coupons of public indebtedness, bank notes, or other instruments of public credit of either of the parties, and the utterance or circulation of the same.
3. Forgery, or altering, and uttering what is forged or altered.
4. Embezzlement or criminal misappropriation of the public funds committed within the jurisdiction of either party, by public officers or depositaries, and embezzlement by any person hired, salaried, or employed, to the detriment of the employer or principal.
5. Larceny, of the value of fifty dollars and upwards, and robbery.
6. Burglary, defined to be the breaking and entering by night-time into the house of another person with the intent to commit a felony therein; and the act of breaking and entering the house of another, whether in the day or night time, with the intent to commit a felony therein.
7. The act of entering, or of breaking and entering, the offices of the Government and public authorities, or the offices of banks, banking-houses, savings-banks, trust companies, insurance or other companies, with the intent to commit a felony therein.
8. Perjury or the subornation of perjury.
9. Rape.
10. Arson.
11. Piracy by the law of nations.
12. Murder, assault with intent to kill, and manslaughter, committed on the high seas, on board a ship bearing the flag of the demanding country.
13. Malicious destruction of, or attempt to destroy, railways, trams, vessels, bridges, dwellings, public edifices, or other buildings, when the act endangers human life.
14. Fraud by a banker, or a trustee, or by an officer or a director of a bank or trust company, made criminal by any law for the time being in force.

## ARTICLE III.

If the person demanded be held for trial in the country on which the demand is made, it shall be optional with the latter to grant extradition or to proceed with the trial: Provided that, unless the trial shall be for crime for which the fugitive is claimed, the delay shall not prevent ultimate extradition.

## ARTICLE IV.

If it be made to appear that extradition is sought with a view to try or punish the person demanded for an offence of a political character, surrender shall not take place, nor shall any person surrendered be tried or punished for any political offence committed previously to his extradition.

## ARTICLE V.

The requisition for extradition shall be made through the diplomatic agents of the contracting parties, or, in the event of the absence of these

from the country or its seat of Government, by superior consular officers.

If the person whose extradition is requested shall have been convicted of a crime, a copy of the sentence of the Court in which he was convicted, authenticated under its seal, and an attestation of the official character of the judge by the proper executive authority, and of the latter by the Minister or Consul of Japan or of the United States, as the case may be, shall accompany the requisition.

When the fugitive is merely charged with crime, a duly authenticated copy of the warrant of arrest in the country making the demand and of the depositions on which such warrant may have been issued, must accompany the requisition.

The fugitive shall be surrendered only on such evidence of criminality as according to the laws of the place where the fugitive or person so charged shall be found, would justify his apprehension and commitment for trial if the crime had been there committed.

## ARTICLE VI.

On being informed by telegraph, through the diplomatic channel, that a warrant has been issued by competent authority for the arrest of a fugitive criminal charged with any of the crimes enumerated in Article II. of this Treaty, and, on being assured from the same source that a request for the surrender of such criminal is about to be made, in accordance with the provisions of this Treaty, each Government will endeavour to procure the provisional arrest of such criminal, and keep him in safe custody for a reasonable time, not exceeding two months, to await the production of the documents upon which the claim for extradition is founded.

## ARTICLE VII.

Neither of the contracting parties shall be bound to deliver up its own subjects or citizens under the stipulations of this convention, but they shall have the power to deliver them up if in their discretion it be deemed proper to do so.

## ARTICLE VIII.

The expenses of the arrest, detention, examination, and transportation of the accused shall be paid by the Government which has requested the extradition.

## ARTICLE IX.

The present treaty shall come into force sixty days after the exchange of the ratifications thereof. It may be terminated by either of them, but shall remain in force for six months after notice has been given of its termination.

The treaty shall be ratified, and the ratifications shall be exchanged at Washington as soon as possible.

In witness whereof the respective Plenipotentiaries have signed the present Treaty in duplicate and have thereunto affixed their seals.

Done at the City of Tokyo, the Twenty-ninth day of the Fourth month of the nineteenth year of Meiji, corresponding to the Twenty-ninth day of April in the Eighteen hundred and eighty-sixth year of the Christian Era.

(Signed) INOUE KAORU, L.S.

(Signed) RICHARD B. HUBBARD, L.S.

Amendments to the foreign Treaty proposed by the Government of the United States of America.

Insert in paragraph I. of Article II. after the word "Murder" where it first occurs, the word *and*; and strike out the words [and manslaughter]; strike out all after the word "depositories" in the fifth line of paragraph 4 in Article II; strike out in paragraph 5 of Article II. the following words: [Larceny, of the value of fifty dollars and upwards, and] so that said paragraph as amended shall read:

5 Robbery.

Strike out all of paragraph 14 in Article II.

Add at the end of Article IV. the words *or for any offence other than that in respect of which the extradition is granted.* Amend Article VI. as follows:

Insert in the second line, after the word "telegraph" the words *or other written communication*; insert in the third line, after the word "a," the word *lawful*; and after the word "authority" in line four, the words *upon probable cause*; and in the fourteenth line, after the word "procure," the words *so far as it lawfully may*, so that said paragraph shall read:

## ARTICLE VI.

On being informed by telegraph, or other written communication, through the diplomatic channel that a lawful warrant has been issued by competent authority upon probable cause, for the arrest of a fugitive criminal charged with any of the crimes enumerated in Article II. of this Treaty, and on being assured from the same source that a request for the surrender of such criminal is about to be made in accordance with the provisions of this Treaty, each Government will endeavour to procure, so far as it lawfully may, the provisional arrest of

such criminal, and keep him in safe custody for a reasonable time, not exceeding two months, to await the production of the documents upon which claim for extradition is founded.

MUTSUHITO, by the Grace of Heaven, Emperor of Japan, and seated on the Throne occupied by the same Dynasty from time immemorial.

To all to whom these Presents shall come; Greeting:

Having seen and examined the Treaty concluded and signed by the Plenipotentiaries of the Empire of Japan and the United States of America in reference to the extradition of criminals, and having seen and examined the amendments to the said Treaty, proposed by the Government of the United States of America, and having found the said Treaty as amended satisfactory and agreeable, We do accept and ratify each and every clause and provision therein contained and, We do declare to enforce the said Treaty as amended in the Empire of Japan.

In testimony whereof We have set our signature and caused the Seal of State to be hereunto affixed. Done at our Palace in Tokyo, this twenty-fifth day of the ninth month of the nineteenth year of Meiji, corresponding to the two thousand five hundred and forty-sixth year from the Recession of the Emperor Jimmu.

[L.S.] [Sign-Manual]

[L.S.] Count INOUE KAORU,

H.I.M.'s Minister for Foreign Affairs.

Whereas the treaty signed at Tokyo, on the 29th day of April, 1886, by the Plenipotentiaries of the Empire of Japan and of the United States of America, concerning the Extradition of Criminals, recites that the ratifications thereof shall be exchanged at Washington;

And whereas it has been agreed between the High Contracting Parties that the ratifications thereof shall be exchanged at Tokyo;

And whereas the said Treaty in concluding reads as follows:—

"Done at the City of Tokyo the twenty-ninth day of April in the eighteen hundred and eighty-sixth year of the Christian Era;"

And whereas it is understood by the High Contracting Parties that the same is intended to read as follows:—

"Done at the City of Tokyo the twenty-ninth day of April in the year 1886 of the Christian Era."

Now the undersigned, having met together for the purpose of exchanging the ratifications of the said Treaty, and the said ratifications thereof having been carefully compared and found exactly conformable to each other, the exchange took place this day in the usual form. In witness whereof, they have signed the present certificate of exchange and have affixed thereto their seals.

Done at the City of Tokyo, this twenty-seventh day of September in the year 1886.

[L.S.] INOUE KAORU.

[L.S.] RICHARD B. HUBBARD.

# CHINA AND JAPAN TREATY OF 1871.

## (JAPANESE VERSION.)

The following translation of the China and Japan Treaty has been kindly placed at our disposal. Its publication will be useful in view of the fact that no authorized English translation of the Treaty exists, and that many doubts have arisen from time to time as to its true contents:—

Art. I.—Henceforth the friendship between China and Japan shall be increased and shall last like heaven and earth for ever. The countries subject to each State shall in like manner treat each other with respect, and shall commit no acts of hostility towards each other, to the end that everlasting peace may be maintained.

Art. II.—Now that friendly relations subsist between the two countries, this friendship shall, without fail, be of an intimate and reciprocal character. Should either State experience at the hands of another country injustice or slighting treatment, on communication being made to the other State the latter shall give assistance or shall use her good offices in mediating between the two countries. Thus friendship shall be increased.

Art. III.—The systems of administration and the laws of the two countries being different each country shall be free to conduct its own administration independently. Neither country shall be permitted to interfere in the concerns of the other and press for the adoption of things prohibited by law. Assistance shall be rendered mutually for the enforcement of laws, and each country shall give orders to its merchants that they must not lead

astray the people of the other country, or commit any offence whatsoever.

Art. IV.—Each country shall send to the other a Minister Plenipotentiary who, together with his family and suite, shall be at liberty to reside either permanently, or for a time only, in the capital, or to travel anywhere in the interior. Each Minister shall defray his own expenses. In all matters such as the renting of land and houses to serve as the official residence of the Minister and his suite, the conveyance of the baggage of the Minister and his suite, the transmission of despatches by couriers, etc. each country shall be careful to grant facilities.

Art. V.—Although in both countries official rank is a thing which is fixed and determined, the duties entrusted to officials in each country are not identical. Accordingly, those persons in each country whose official positions are similar, shall meet and correspond on terms of equality. Those in subordinate positions shall show proper respect to officials of superior rank; in the transaction of public business they shall address themselves to officials of corresponding rank, and transmit their communications through them to the higher officials, and shall on no account correspond directly with the latter. In making ceremonial visits, official cards shall in every case be used. When officials appointed by either of the two countries arrive at their posts they shall present trustworthy credentials, and care shall be taken to prevent falsification.

Art. VI.—In the conduct of official correspondence between the two countries, China will use the Chinese language. Japanese despatches will be written in Japanese, accompanied by a Chinese translation, or in Chinese only, as may be convenient (to the Japanese Government).

Art. VII.—Now that friendly relations have been established between the two countries each country shall fix certain of its ports (as places of commerce) and permit merchants to visit and trade at them. Special trade regulations shall also be established to which the merchants of both countries shall be made to conform for ever.

Art. VIII.—Each country shall in each of the Ports of the other country which are open to trade, station a Consul who will exercise control over the merchants of his nationality. All matters relating to property of all kinds, to business or professions, and to judicial suits, shall be referred for settlement to the Consul, who shall decide them according to the laws of his country. Suits arising between merchants of the two countries shall be brought in the form of petitions; the Consul shall endeavour to settle such cases, and shall do his utmost to prevent them being made the subject of litigation. When a settlement cannot be effected in this manner, the Consul shall communicate with the local authorities, and the officials of both countries shall meet together and decide the case in accordance with justice. In cases of robbery and abduction, (where the aggrieved party is an alien), it will be sufficient for the local authorities of each country to arrest the offenders and take back the stolen property; the Government concerned shall in no case be required to make compensation.

Art. IX.—Should in any open Port of either country no Consul be appointed, the local authorities of the country in question shall exercise control over the subjects and trade of the other country, and render good offices; should an offence be committed they shall arrest and try the offender, and after reporting the facts of the case to the Consul at the nearest open port give sentence according to the law.

Art. X.—The officials and merchants of either of the two countries shall in any open ports of the other country be free to engage for service the people of the place, and may employ them in any kind of work. The employer shall exercise due control over the persons in his employ, and shall not permit them to perpetrate fraud upon anyone under any pretext; he shall be especially careful not to give rise to difficulties by allowing himself to be prejudiced by one-sided statements. Should a person so employed commit an offence, the local authorities shall be at liberty to arrest and try the offender, and the employer shall not protect him.

Art. XI.—The merchants of both countries shall live on friendly terms with each other in the open ports of each country. They shall not wear swords of any kind; those who offend against this rule shall be punished, and their swords shall be confiscated by the authorities. They shall pursue their avocations peaceably, and whether residing permanently, or for a time only, at a port they shall submit to the authority of their Consuls. They shall not be allowed to create confusion by changing their costume, or by becoming naturalized, or by entering the official service of the country in which they reside.

Art. XII.—Should the authorities of one country clearly discover that any of its subjects who have offended against its laws have taken refuge in a public office, or merchant ship, or merchant's office of the other country, or have absconded and concealed themselves in any locality in the other country, and should they make application on the subject to the authorities of the other country, the latter shall instantly arrest the offenders, and shall not overlook the matter. When criminals are surrendered they shall be supplied with food and clothing, and shall not be treated with cruelty.

Art. XIII.—Should the subjects of either country ally themselves at an open port with lawless persons, and commit robbery with violence, or other evil acts, or make their way secretly into the interior of the country, and there be guilty of incendiarism, murder, or robbery, the local authorities shall arrest them without fail, and shall report the facts to the Consul. Should the offenders offer resistance with dangerous weapons, they may be killed by anyone, and no question shall be raised; the circumstances, however, under which they were thus killed shall be investigated by the local authorities acting in conjunction with the Consul. Should such an occurrence take place in the interior, and the Consul be unable to proceed to the spot and investigate the matter, the local authorities shall send a report of the case to the Consul and thus enable the latter to enquire into the facts.

Offenders who have been arrested shall, if the offence has been committed at an open port, be tried by the local authorities and Consul acting conjointly; when the offence has been committed in the interior, the trial shall be conducted by the local authorities alone, who shall make a report of the case to the Consul in order that he may enquire into the facts.

Should the subjects of one country when residing in the other country stir up a revolt and form for this purpose bands of ten or more persons, or should they induce the subjects of the other country to join in a conspiracy with them and thus do injury to the other state, the local authorities of the latter shall arrest them immediately, and shall, if the affair has occurred at an open port, communicate with the Consul, and try the offenders conjointly with him; if the affair has occurred in the interior, the trial shall be conducted by the local authorities, who shall furnish a report of the case to the Consul in order that he may enquire into the facts. In any case the trial shall take place at the place where the offence is committed.

Art. XIV.—The visits of ships of war of either country to an open port of the other being intended simply for the protection of the merchants of the country in question, such vessels shall not enter unopened ports, or any rivers, lakes or river-ports in the interior. Any vessels violating this prohibition shall be detained and a penalty shall be exacted. Ships which enter such places through stress of weather do not of course come under this rule.

Art. XV.—Should either country be at war with another country and issue a notification to this effect in its open ports, trade and the entry and departure of vessels may be temporarily suspended in order that injury through some mischance may be avoided. Again in cases where either of the two countries is at peace (with all other powers, if that country be China), Japanese subjects shall not engage in hostilities with the subjects of a country with which they are at war either in the open ports of China or in Chinese waters; and, (if that country be Japan), Chinese subjects shall not engage in hostilities with the subjects of a country with which they are at war either in the open ports of Japan or in Japanese waters.

Art. XVI.—The Consuls of both countries shall not be allowed to engage in trade, nor shall they be allowed to act as Consuls for a Power not connected by treaty with the country in which they are residing. Should substantial proof be furnished that the action of any Consul is generally unacceptable the Government of the country interested shall communicate in writing with the Minister Plenipotentiary of the Consul's nationality, and the latter shall, when he has ascertained the truth of the facts alleged, remove the Consul from his post, and thus prevent the friendly relations of the two countries from suffering detriment through the misconduct of a single individual.

Art. XVII.—The flags carried by the ships of the two countries are in each case of a fixed design. Should a ship of the one country falsely assume the colours of the other country and commit an illegal act, both ship and cargo shall be confiscated; should the colours have been given by an official, representations shall be made to the authorities concerned, and the official shall be dismissed from his post.

Should the officials of either country desire to study the books of the other they shall be at liberty to buy them.

Art. XVIII.—The foregoing articles have been discussed and agreed upon between the two countries in order that they may serve as a safeguard for the prevention of any unforeseen misunderstanding, and that sincere and friendly relations may thus be maintained. In testimony whereof the Ministers Plenipotentiary of the two contracting Powers have now signed the same and have affixed their seals thereto.

So soon as this Treaty shall have been ratified, and ratified copies of it shall have been exchanged, it shall be printed and circulated throughout the dominions of each Power, with a view to its observance by the officials and subjects of both countries, and to the end that there may be a good understanding between the two countries for evermore.

Dated the 29th day of 7th month of 4th year of Meiji.

Dated the 29th day of 7th month of 10th year of Tung-chi. (September 13th, 1871.)

Acting Japanese Secretary, H.B.M.  
Legation, Tokyo.

### LADIES' BENEVOLENT SOCIETY.

A meeting was held on Wednesday afternoon in the rooms of the Chamber of Commerce for the purpose of discussing the advisability of holding an Art Exhibition with the object of augmenting the funds of the Ladies Benevolent Society.

On the motion of Mr. LOWDER, Mr. Brooke took the chair.

Mr. WIRGMAN asked the Chairman what he proposed to do.

The CHAIRMAN said Yokohama meetings were rarely numerously attended or at all punctual, and the present meeting was no exception to what he might call the universal rule. This meeting was called of those who were favourable to the holding of an exhibition of works of art. It was sought by the promoters of the exhibition to make the net as wide as possible so as to embrace within the exhibition all those objects which might be said to be of art rather than of utility. In a larger community where there was no want of painting they might have called it an exhibition of paintings, or if there were plenty of amateurs, they might have had an exhibition of amateurs. But the community was a small one, and although there were several amateurs and collections of paintings if they could induce all those who could paint and draw and all those who had works of art to send their articles forward, an exhibition might be got up. It seemed to him that it was desirable to secure the co-operation of Japanese gentlemen, and Mr. Oki, having been spoken to, expressed himself to be in favour of the object and said Mr. Mitsuhashi would attend the preliminary meeting as his representative.—(Applause.) It was thought that after the expenses had been defrayed the surplus should be handed over to one of the most deserving charities of the town, the Ladies' Benevolent Society. All were aware that in this as in other communities there were always waifs and strays, and there was no provision here as at home where there were poor rates, so that here the charitable members of the community had to subscribe for the relief and assistance of destitute persons. There was an hospital in the settlement, but the funds of that institution were in a prosperous condition and it was in no need of assistance. The Ladies' Benevolent Society's funds were low and it was necessary that they should be augmented in some measure. They were aware that different plans had been resorted to in order to raise funds; they had had balls and flower shows and other arrangements with the view of reaching the purses of the community. It seemed to a number of gentlemen that of all the plans that had been put forward an art exhibition was one that might achieve success if a certain number of persons would combine together and exhibit such articles as they had. It was necessary, however, at the outset that this question should be submitted to a meeting of the community, and that was the object of the meeting. But those who were disposed to act in the matter must act with promptitude and decision. In the past such undertakings had gained success largely by the efforts of the ladies, and he augured success in the present case from the large number of ladies present.

Rev. E. C. IRWINE, proposed:—"That an Exhibition be held in Yokohama of pictures, curios, and art objects under the management of a joint committee of ladies and gentlemen willing to act to secure that object, and that after defraying expenses any surplus be handed to the Yokohama Benevolent Society." He thought the idea was an excellent one. Removed as the community was from home and the great works of art which abounded in so many galleries in Europe and America, they were apt to forget a great deal of what art consisted in and the necessity of art as a means of education. If this alone had been the object of the undertaking it would have been an important one, but when it was coupled with the support of benevolence and charity it must be a worthy combination.

Mr. WIRGMAN seconded the motion, and expressed the fervent hope that no chromo-lithographs would be admitted—nothing but real paintings done from nature.

Mr. LOWDER remarked that the Ladies' Benevolent Society was deservedly one of the most popular institutions in Yokohama. He commended the gentleness and discretion of the method in which the funds had been distributed, and said any scheme brought before the community designed to benefit or supplement or augment the funds of the Society was deserving of the support of the whole community. On the question whether the present proposal was calculated to effect the object in view he said the scheme was a very taking one, and if carried out would be credited to the Chairman, with whom it had originated. But he had no hesitation in saying that he was in no way satisfied that it would result in a financial success. Among other items of expense he enumerated the rent and decoration of the room, and pointed out as the greatest expense of all the provision of glass-cases for the reception of those works of art that might be contributed. He found from enquiries that he had made that it would be impossible to hire such cases in Tokyo, and he doubted whether any would be lent in Yokohama. He thought he was right in saying that the flower show was not a success, there being either a deficit or an insignificant balance, and the expenses amounting to no less than \$500. In the present case to raise \$300 would require the attendance of 1,000 persons at 30 cents, and he entertained serious doubts whether there would be as many as 1,000 persons paying 30 cents. Was there any gentleman in the room—were there any half dozen, who were willing to come forward and finance the scheme, who would provide the funds, bear any loss, and hand over to the Ladies' Benevolent Society any surplus? If there were, he would be very happy to offer them his support. It was possible they might get the Public Hall on credit, but there were various expenses that had to be met daily. He was prepared to subscribe to the funds of the Benevolent Society and then he would have the satisfaction of knowing that the whole of the sum had been spent in promoting the object of the Society. This idea was expressed in a letter addressed to him from Tokyo by a gentleman who enclosed him a cheque for \$25 for the society, remarking that he was sorry to think the scheme should be financially a failure. If a contribution were taken up at the meeting and lists taken round to those who could not be present he thought the result would be beyond the conception of those who attended meeting. He did not wish to throw cold water on the exhibition; he had no doubt it would be very novel and interesting but he doubted its success.—(Applause.)

Mr. F. S. JAMES agreed entirely with what Mr. Lowder had said.

Mr. E. B. WATSON thought the outer room in the Public Hall Buildings might be devoted to objects of art to which the leading art dealers might send articles of art interest either to be exhibited simply or also for the purpose of sale. The large room might be devoted to pictures and *akemono*, which would be highly decorative, and during the stay of the squadron here he had no doubt a band would be placed at their disposal and they might have dancing.

After some discussion, the motion was carried by 18 against 5.

The CHAIRMAN said the following committee had been suggested:—

Ladies—Mrs. Brooke, Mrs. Dodd, Mrs. Han-  
non, Mrs. Howard, Mrs. Habbington, Mrs. St.  
John, Mrs. Mullion, Mrs. Neyt, Mrs. Positano,  
Mrs. Reimers, Mrs. Thomas, Mrs. Wheeler,  
and Mrs. Linsley. Gentlemen—Messrs. Watson,  
Brooke, Irwine, Wigram, Mitsushashi, Dadds,  
Read, and Shand; both committees having power  
to add to their number.

Mr. KIRBY and Mr. MOLLISON thought a provisional committee should be appointed to ascertain what prospects the affair had.

The CHAIRMAN said that would form part of the work of the committee whom he had suggested.

Some discussion took place, after which,  
Mr. LOWDER said he was careful not to oppose the proposal, the object of which was he understood to get funds for the Society. He asked whether the Society required funds.

The CHAIRMAN said the primary object was the holding of an Art Exhibition. While the funds of the Society were not excessive, he believed they had still money in hand, but contingencies might arise to draw upon their resources.

A vote of thanks to the Chairman and to the Chamber of Commerce brought the proceedings to a close.

## FINANCIAL ADMINISTRATION.

### A HISTORY OF THE CURRENCY.

(Continued from 2nd October.)

On the 17th of December, 1859, he sent an official despatch to the Ministers of State, Manabe and Wakizaki, offering them friendly advice with regard to the reform of our monetary system. At that time the Government also began to perceive that the opening of the ports to trade had caused a great change in the market prices of our gold and silver, and that, whereas according to the existing monetary system the relative value of gold to silver was as 1 to 10, amongst the people, and more especially at the open ports, the relative value of gold to silver was as 1 to over 15, and that the evils created by this state of things were getting worse every day. They accordingly, on the one hand, instructed the Governors of the open ports to establish some system for putting an end to the export of *kobans*, and on the other hand they lowered the standard of the 1 *bu* silver piece and coined and issued new 1 *bu* silver pieces of the same standard of fineness as the dollar. From the inferiority of these new 1 *bu* silver pieces as compared with the 1 *bu* pieces coined prior to 1858, the new coins were known as *doro* (dollar silver). The coining and issuing of the *doro* silver began in 1859 and was ceased in 1867. Between those dates the amount coined and issued was about 28,480,900 *ryō*, which, computed in the currency of to-day, amounts to about 36,275,382 *yen*.

Four of these *doro* silver pieces, or 1 *bu* pieces, were equal to 1 *ryō*; this *ryō* being equivalent to 1 *yen* and 14  $\frac{1}{2}$  *sen* of the present currency.—(See "Table of old coins.")

The Government also recoined *kobans* and 1 *bu* gold pieces of a lower quality, and also coined and issued new 2 *bu* and 2 *shu* gold pieces. The coining of these new 2 *bu* and 2 *shu* gold pieces was begun in 1860, and from that year up to 1869 the amount coined and issued was about 53,240,576 *ryō*, equivalent in the present new coinage to 59,035,972 *yen* and 41  $\frac{1}{2}$  *sen*.

The difference in the actual values of the *kobans*, 1 *bu* gold pieces, 2 *bu* and 2 *shu* gold pieces and 1 *bu* silver pieces (the *doro* silver) coined under the new system of 1859 and those of the pieces coined prior to that year is as follows:—

Denomination of Coin.	Currency in and prior to A.D. 1859 value stated in <i>ryō</i> converted into present new coinage.	Recoining and issue in and after 1859 value stated in <i>ryō</i> converted into present new coinage.
<b>GOLD:</b>	<b>Yen. Sen.</b>	<b>Yen. Sen.</b>
<i>Koban</i> .....	3 50.051	1 30.043
2 <i>bu</i> pieces.....	1 90.006	1 08.880
1 <i>bu</i> pieces.....	3 50.051	1 30.043
2 <i>shu</i> pieces ...	2 91.060	1 08.880
<b>SILVER:</b>		
1 <i>bu</i> pieces.....	1 38.800	1 24.680
1 <i>shu</i> pieces ...	1 05.600	1 18.400

These important changes in the currency were made by the Shogunate in order to meet a temporary emergency, and in order to put a stop to the export of gold coins, but the expedient adopted was only a half-hearted measure, and did not strike at the root of the evil. Consequently not one of the plans for the recoinage of the currency subsequent to A.D. 1859 was attended by any good or practical results. Nor did the mischief end here. The Government, by arbitrarily debasing the coinage only increased the confusion already existing, and while, on the one hand, in Japan itself the prices of commodities in all parts of the empire were disturbed, the people were greatly distressed, and, finally, the poverty of the country gradually increased, on the other hand, the outflow of gold to foreign countries from each of the open ports, and especially from Yokohama and Nagasaki, continued incessantly; and, as a result, all the gold and silver coins disappeared from circulation, while in each of the clan territories the issue of clan paper increased in quantity, until eventually in the periods of Genji and Keio (1864-67) the confusion in our financial administration reached

its climax. This was the last phase in the decay of the financial administration of the Shogunate.

The letter of advice which, as we have stated, was sent on the 17th December, 1859, by Mr. Townsend Harris, the American Envoy, to Manabe Shimosa no Kami and Wakizaka Awaji no Kami, Councillors of the Shogunate, on the subject of the evil caused by the disproportion in the relative values of the gold and silver coinage of the period of Ansei, is still in existence. We therefore insert it for convenience of reference.

"I have the honour to transmit to Your Excellencies, together with this letter, a table which gives a comparison between the relative values of Japanese coins and the coins of the various countries of Europe and America.

"This comparative table of values has been thoroughly examined by competent scientific experts and there cannot be the slightest doubt as to the correctness of the assay and the calculations founded upon it.

"From this table of relative values it appears that the circulating value of the gold coins now current in Japan is lower by one-third than it would be in Europe or America. This is a great evil for Japan. It would be a good thing if a speedy reform were instituted and the values of the gold currency of Japan were made identical with that of the gold in use all over the world. An assay of Japanese coins made at the mint of Philadelphia City, United States, shows that the intrinsic value of the 1 *bu* silver pieces now current in Japan is equivalent in American currency to 37 cents; the intrinsic value of a Japanese 1 *bu* gold piece to one American gold dollar and 11 cents; and the intrinsic value of the Japanese gold *koban* now current to four American gold dollars and 44 cents. Hence the Japanese 1 *bu* gold piece has really an intrinsic value equal to three of the Japanese 1 *bu* silver pieces, while it is clear that a gold *koban* has actually an intrinsic value equal to twelve 1 *bu* silver pieces. Therefore, whenever the Japanese gold coinage is compared with those of Europe and America, we find that its legal value (as fixed in Japan) is one-third less than its intrinsic value."

"There are both large and small American coins, but the standards are all the same. If Your Excellencies desire to examine the standard of the various American coins, it will be sufficient if you have one of the twenty dollar gold pieces assayed, for the proportions of pure metal and alloy in the various other coins are exactly the same as in the twenty dollar gold piece."

"In order to enable American money to circulate freely all over Japan, I think it would be advisable to have their denominations stamped on them in Japanese characters. After a consultation with Mr. Alcock, the British Consul-General, and M. Bellecourt, the Consul-General of France, we have arrived at the decision that on the face of the dollar the words 'equivalent to three 1 *bu* silver pieces' should be stamped. But there can be no doubt that, whenever Japanese and American monies are exchanged, the weight of the coins should be estimated, irrespective of the face values.

"I sincerely trust that Your Excellencies will have the above stamps made immediately and have them sent to Kanagawa, Nagasaki, and Hakodate without delay."

The disordered state of our coinage and the confusion existing in the *Han* paper money were unbearable even in the times of peace and quiet, when our country was closed to foreigners; how much more so was this the case when, after the period of Ansei, we were obliged, on the one hand, to open our ports and carry on intercourse and commerce with all foreign countries, and when, on the other hand, at home the entire constitution of the country underwent a complete transformation, affecting the mode of living of the people and their ordinary pursuits, as well as military matters, commerce and everything else, and when, in consequence, we had to conform to the spirit of daily progress which prevailed throughout the world? Hence it was that a reform in our currency in the periods of Bunkiu (1861-1863) and Keio (1865-1867) truly became a matter of urgent concern that could not be delayed for even a day.

The Ministers of the various Treaty Powers, therefore discussed with the Shogunate the extremely bad system in force in regard to currency, and requested it to institute a policy of reform. The Government, too, distressed by the succession of evils, resulting from the confused monetary system, finally came to regard a reform as absolutely necessary. It was probably due to this remonstrance that in Article VI. of the Tariff Convention, concluded on June 25th, 1860, with the four coun-

\* Mr. Harris can hardly be right in this statement, for it is a well known fact that the intrinsic value of currency declines as the denominations decrease; and that according to this rule subsidiary coins are not really so valuable as those of higher denominations.

tries, England, France, America, and Holland, there is an engagement with regard to the reform of our coinage to the following effect:—

"Article VI.—In conformity with those articles of the Treaties concluded between Japan and Foreign Powers, which stipulate for the circulation of foreign coin at its corresponding weight in native coin of the same description, dollars have hitherto been received at the Japanese Custom House in payment of duties at their weight in *Ban* (commonly called *Ichibu*), that is to say, at a rate of 31 *bu* per 100 dollars. The Japanese Government being, however, desirous to alter the practice and to abstain from all interference in the exchange of native for foreign coin, and being also anxious to meet the wants both of native and foreign commerce by securing an adequate issue of native coin, have already determined to enlarge the Japanese mint so as to admit of the Japanese Government exchanging into native coin of the same intrinsic value, less only the cost of coinage, at the places named for this purpose, all foreign coin or bullion, in gold or silver, that may at any time be tendered to them by foreigners or Japanese. It being essential, however, to the execution of this measure, that the various Powers, with whom Japan has concluded Treaties, should first consent to modify the stipulations in those Treaties which relate to the currency, the Japanese Government will at once propose to those Powers the adoption of the necessary modification in the said stipulations, and on receiving their concurrence will be prepared from the 1st of January, 1868, to carry the above measure into effect."

It stands to reason that, when once our country had made an agreement of this kind with the various Treaty Powers, it should have at once proceeded to carry it out, but the Shogunate had been steadily declining and was on the eve of its fall; it therefore postponed everything it could and contented itself with attending only to such matters as were brought directly under its notice. This agreement to recoin the currency came to be considered as waste-paper, and, as the fulfilment of the stipulations thereof was at last found to be impossible, the Government was overthrown.

From the above summary of the various changes in the gold and silver coinage made by the Shogunate a general idea of the subject may be obtained. As the details are given in full in the "History of Japanese Currency" we have simply extracted the most important facts, and have not entered into minute particulars.

## CHAPTER II.

### PROVISIONS FOR THE REFORM OF THE MONETARY SYSTEM IN THE BEGINNING OF THE PERIOD OF MEIJI.

In our first chapter we gave a description of the most important features in the condition of the currency during the Shogunate, and subsequently up to the beginning of Meiji. We will now give a brief history of the reform which took place in our currency in the beginning of the period of Meiji.

The commencement of the Government reform in our coinage took place in the beginning of Meiji. At that time our Government, in spite of the fact that the finances of the country were exhausted, energetically discarded all former bad customs, and set to work to reform the affairs of the nation, at the same time not neglecting to make provisions for a reform in our monetary system. Instructions for a recoinage of the money were given in February, 1868, to Mitsuoka Hachiro and Ohara Niheiye, two Treasury officials of the Sanyo rank, and on the 30th of March the Government appointed Kuze Jisaku to superintend the investigations which had for their object the recoinage of the currency. The first step taken was the establishment of an assaying laboratory in the gold mint in Nijo street, Kyōto, where an assay was made of all the gold and silver coins coined at various times subsequent to the period of Keichō (1506-1614) and of all the various gold and silver coins current between the periods of Ansei and Meiji (1824-1868). At the same time over fifty kinds of European and American coins were assayed, and their standards, weights, and quality were thoroughly examined. Jisaku wrote out the results of his assay, and compiled a book of comparative tables of the intrinsic values of foreign and Japanese coins, both old and new, which he had carefully calculated. This book of coins he forwarded to the Council of State. (These money tables were printed and published by Mitsuoka Hachiro, an official of the Treasury.)

By this means the Government gradually came to understand how very debased and confused were the standards and weights of the gold and silver coins hitherto in circulation, how very inferior our system was as compared with those adopted by the countries of Europe and America, and how utterly unsuitable it was for the purposes

of general commerce. They therefore made up their minds to make a clean sweep of the old system, and to introduce a new coinage which should be based upon the good features of every foreign system, modified to meet the requirements of Japan, and should be uniform and pure. This was in April, 1868. Having made this resolve, the Government on the 12th of May, 1868, established a Currency Bureau in the Treasury for the management of currency matters, and gave orders for the coinage of gold and silver coins at the gold mint at Nagabori, Osaka, and at the gold mint in Tōkyō. These coins were made on the pattern of the inferior gold and silver coins—2 *bu* gold pieces, 1 *bu* and 1 *shu* silver pieces, etc.—coined by the Shogunate subsequent to 1859. In the *seni* mint in Tōkyō they had *Tōhiyaku* cash coined. The amount of the money thus coined is not known.

The Government had not as yet had time to give their attention to the very imperfect way in which the Currency Bureau managed affairs, but on the 17th of March, 1869, they established a new mint under the control of the Council of State. The instructions given to the mint by the Council of State were briefly to the following effect:—

"On the numerous occasions hitherto when the coinage has been recoined under the Shogunate, corrupt officials have perpetrated frauds, and at every recoinage they have continued to debase the coins more and more. This has not only been the cause of a rise in the prices of commodities, but has also perverted men's hearts, and has injured the national morality. In the present minting of new coins you will bear in mind the gracious will of our Sovereign on His restoration to power, and strictly and zealously avoid the bad practices of former corrupt officials, and, being careful to issue pure metal in the coining of money, you will, by securing accuracy of quality and weight, succeed in reforming public morality."

From the above notification of the Council of State we can see that the principal intention of this new coinage was to correct the harm done by the disordered monetary system of the Shogunate, which had accumulated during all the years subsequent to the period of Genroku (1688 to 1703), and to cause the currency of our country to return to one uniform standard of purity.

In a Notification of the Council of State, dated the 7th of July of the same year, the following statement occurs:—

"In a Council of all the *daimios* of the Empire a basis of future finance was decided upon, and it was resolved, from the commencement of this next winter, to issue new coins, and by 1872 to redeem the paper money."

From this notification we can imagine how deeply the government regretted the continued harm done by the disordered nature of our former monetary system, and how earnestly they desired a thorough reform of the coinage.

As soon as the Government had entered upon the work of reforming the monetary system, the particular points upon which they concentrated their attention were the shape of the new coins, their denominations, and their standards. When, however, the Government established the mint in March, 1869, and issued instructions for the minting of new coins, their first object was the reform of the standard. The shape and denomination of the coins were left as before and were not changed; that is to say the shape was chiefly square and the denominations of *shu*, *bu* and *ryo* were employed. However, Okuma Hachiro, Councillor, and Kuze Jisaku, Superintendent of the Mint, considered it essential that the shape of the new coins should be round, and that in their denominations the decimal system should be used. If this were not done the utility of the coinage would, for practical purposes, they considered, be impaired. They accordingly sent in a memorial giving their views with regard to a reform in the shape and denominations of the new currency. This memorial, dated 16th of March, 1869, was briefly to the following effect:—

"The general shape of our gold and silver coins has hitherto been square, but this shape, as compared with the round shape which is used in every country in the world, and is convenient for carrying about, is found to be very inconvenient. It would, therefore, be advisable, when the new coins are made this year, to discard the shape used under the old system and change it to round."

"The denominations of *shu*, *bu*, and *ryo* hitherto employed for gold and silver coins in our country, are very inconvenient for purposes of calculation, and it would be advisable, therefore, when the present new coinage is issued, to abolish the old denominations of *shu*, *bu* and *ryo*, and to adopt the decimal system."

In the Government councils there were some who held contrary views. They spoke as follows:—

"In our country when gold and silver coins are

stored away they are wrapped up in paper and put away in square boxes, and as this method is different to that employed by foreigners, of putting away money in canvas bags, we cannot do better than follow the old system and keep to the square shape."

The two, in arguing against this, said:—

"It is not so. The custom of making our coins square is of recent date. In old times the shape of *Kōshū* gold was round. Afterwards, from the period of Keichō (1506-1614) it was changed to oval. The proverb, too, says of the good circulation of money, that it 'circulates round.' A man makes a circle by placing the tip of his forefinger against the tip of his thumb and, when he shows this to another person, the latter at once understands him to indicate money. Again, a square thing is difficult to handle, and is liable to injury by friction with other objects; a round thing, on the other hand, loses little by friction and is easy to handle. The use in all countries in the world of round coins is based on rational principles, and in so far as convenience of carrying is concerned, the square cannot for a moment compare with the round. Now that the commerce carried on with all countries is gradually increasing in extent, we ought to discard entirely the bad practices which are the relics of old times, and make good our defects by adopting the best features of foreign systems; for, if we do not institute a thorough reform of this kind, how can we establish the foundation of a prosperous country? We ought therefore, also, in the matter of this new currency to follow the system which obtains in all foreign countries and make the shape of the coins round."

The suggestions made by these two officials were finally adopted by the Government, and it was decided to make the new coins round.

In the Councils of the Government there were some, again, who held opposite views on the question of the denominations. "The use," these persons said, "of the denominations *shu*, *bu*, and *ryo* for our coinage is of long standing. If we change this all at once, it will be difficult to avoid arousing suspicion and confusion in the minds of the people, and it will be better to adhere for some time to the old system."

The two argued against this and said: "The use of the term *ryo* to denominate one of our coins probably began with the *Keichō koban*. The origin of this lay in the fact that in the Chinese system of weights, a measure a little over four *momme* (233 grains Troy) was called a *ryo*, and, as the weight of the *Keichō koban* was just a little over 4 *momme*, the name of *ryo* was found to be suitable. Afterwards, however, as the weight of the *ryo* was changed and diminished at every one of the successive recoinages that took place under the Shogunate, the change that it underwent from the true weight was enormous and it became useless as a monetary standard. The *bu* was the fourth part of the weight called *ryo*, and the word *shu* was adopted from the character which represented the sixteenth part of the weight called *ryo*. This being so, *shu* and *ryo* were originally the names of Chinese weights and were not the denominations of coins. Denominations based on the decimal system are the same in all countries. Therefore, in establishing the values of the new coins, it would be a good thing to abolish the bad system handed down to us from old times, and to imitate the system in use in every country. If we fix upon 100 *sen* as the basis and call  $\frac{1}{10}$  of this '10 *sen*' and a tenth part of  $\frac{1}{10}$  *sen* one 'rin,' we shall get rid of the complications such as 3 *momme* 7 *fun* 5 *rin*; or 11 *momme* 2 *fun* 5 *rin*, that we have hitherto experienced in our calculations, and in the course of a few years the convenience of reckoning in all monetary transactions carried on by the people will be doubled." In the end, the suggestions of the two officials were adopted by the Government, and it was finally resolved to use the decimal system in the new coinage.

In the matter of coining these new, improved coins there was still a question of far more importance than the reform of the shape and denomination; this was the decision which should be arrived at with regard to the standards, the comparative values (i.e. the true relative values of gold and silver), and the kinds of coins, for it was upon this decision that by far the most important question in the matter of the coinage of our money hung, namely, whether our monetary system was to improve or deteriorate. Our Government on this occasion took warning from the accumulated evil caused by the confusion which took place in the monetary system of the Shogunate subsequent to the period of Genroku (1688-1703), and especially by the debasing of the gold and silver during and after the period of Ansei (1854-1859), and, seeing the daily progress made abroad in the monetary systems of Europe and America, they

was foretold six years ago by a Rev. W. Harrison, who is said to have been a chaplain to Congress. The reverend prophet kindly adds that the Charleston earthquake is to be followed by a similar catastrophe on this coast, in which San Francisco will be destroyed. San Franciscans are particularly sensitive on the subject of earthquakes. Indeed, it is not good taste to speak of them in general society. This city has never been afflicted by a disaster like the recent shock at Charleston, but slight earthquakes occur every year, and in 1868, there was a tremor which cracked a good deal of plaster, and shook people up smartly. We all profess to deride the Rev. Mr. Harrison, and his plagiarism from Mother Shipton, but in their heart of hearts, a good many of our people are horribly frightened.

### TREATY REVISION IN JAPAN.

The following article appeared in the leading columns of *The Times* on August 28th:—

A correspondent at Tokio, to whom we have been indebted in past times for various interesting letters on the treaty question in Japan, this morning relates the course which the very important deliberations of the interested Powers have lately taken in the matter, and the conclusions to which their representatives have arrived. The Conference which has been sitting in Japan was adjourned till October 5th, to give time to the various representatives to receive instructions from their Governments; but it is believed in Japan that the difficulties in the way of a revision of the treaties have been practically removed. It will be remembered, by those who read the letters and articles which we published in August and in March last, that the Japanese have long entertained the very reasonable desire to free themselves from the treaties which have bound them ever since the Revolution. Those treaties, which drew a hard-and-fast line between certain ports and the rest of Japan, and which established consular jurisdiction for the trial of all cases against foreigners, were all very well a quarter of a century ago when Japan was only just emerging from barbarous isolation, but they are felt to be both inconvenient and humiliating now. They have been a bar put in the way of the development of Japan. They have crippled its trade and have offended its dignity. Japan is a country which has advanced in the path of civilization at an unprecedented rate, and the treaties have been found to be as much out of place as would be a set of rules that would keep a very clever boy in the lowest class at school because he happened to be younger than his companions. What Japan has long desired almost all the seventeen interested Powers have been willing to grant, with the important exception of England. Moved chiefly by the resistance of the English merchants at the privileged ports and cities, successive English Governments declined to abandon the treaties; and then, when English policy changed, the course of proceedings adopted was so cumbrous that many persons urged Her Majesty's Government to withdraw altogether from the treaties, leaving other nations to follow or not, as they might choose. Fortunately, this invidious course has been rendered unnecessary. The Conference appears to have paved the way; and the harmonious co-operation of the English and German Ministers has done the rest. That matters are yet settled it would be rash to say, but it is, at all events, plain that the high Japanese authorities believe them to be so. The Mikado, at all events, has invited Sir Francis Plunkett, our Minister, to an audience, has addressed him in the very satisfactory words which our correspondent quotes, and has ended with an announcement that will cause widespread curiosity and interest throughout this country. He has announced his intention of sending the Prince of Wales the Imperial Order of the Chrysanthemum. This poetically-named decoration is the highest that the ruler of Japan can bestow; and it is worn by none but a few Royal personages and Prince Bismarck. No doubt, the mark of the Mikado's friendship will be as welcome to the Court as to the people of Great Britain.

The settlement of the thorny question of the treaties—if we are to assume that it is a settlement—is the work of our Minister, Sir Francis Plunkett, and of the recently appointed representative of Germany, Baron von Hillebrand. The latter came out with liberal instructions, and has throughout shown himself as anxious to work well with the British Representative as could be desired. The result has been the preparation of a plan closely resembling the rejected Japanese plan of 1882. After a certain number of years the jurisdiction clauses of the treaties are to be allowed to lapse, but up to that time new courts are to be established

for the trial of foreigners in serious cases. These are to be under the Japanese authorities, and the Judges are to be appointed by them; but half the Judges are for the present to be foreign. Except for this distinction, the position of foreigners all over Japan is to be assimilated to that of natives in all matters affecting civil status—that is to say, they can hold land and houses, can reside, and trade as freely as the subjects of the Mikado. But at the treaty settlements, nothing is for the present to be altered. Those Europeans and Americans who choose to reside there and to do their business on the old lines will be at liberty to do so; and for them the present consular jurisdiction will be kept up. This "dual status," however, is only to last three years. After that foreigners and Japanese subjects will be equal in all respects, except that the special courts will continue to work for twelve years more. In return for the large advantages thus conferred on foreigners, the Japanese Government asks to be allowed to reform its tariff; and the request is not unnatural, since the expense of the new arrangements, of the appointment of 25 foreign Judges, and of the training of many subordinate officials will be considerable. There is a difference of opinion as to the time when the new tariff is to come into operation. The Japanese want to begin at once; England answers that the tariff and the new jurisdiction should begin simultaneously—that is, at the beginning of 1889. The Japanese plea is that her expenses incurred under the treaties have been so great that she should not be forced any longer to hold her hand in fiscal matters. "Interminable negotiations," says our correspondent, "complicated by the terrible difficulty of reconciling the conflicting interests of a host of treaty Powers, have barred her title so effectually that, after spending millions of dollars upon an extensive system of lighthouses, lightships, buoys, and beacons, she has not been allowed to levy a cent in the shape of tonnage dues upon foreign vessels entering her ports." There seems to be a good *prima facie* case for the immediate grant of permission to revise the tariff. The Japanese Minister in London will doubtless do his best to establish his country's claim to the satisfaction of Lord Iddesleigh.

Our correspondent speaks emphatically of the good that has been already done to the position of England in the affections of Japan by the course which the negotiations have taken. We have recovered, it would seem, all the influence that we possessed in old times, before we began to pose as the sole and immovable opponent of treaty reform. The Japanese, naturally inclined to be friendly with us, have eagerly taken advantage of our concessions, and are now in a fair way to follow the lead of England in all the important matters in which our common Oriental interests may involve the two nations. But, of course, it must not be all at once assumed that the amended regulations that we have described are certain to be ratified. England, Germany, and the United States, the three nations most largely interested in the trade of Japan, are fully agreed; and it appears probable that Austria, Italy, and many of the smaller Powers will follow in their train. But there may be difficulties with one or two other Powers, notably with Russia and France. Political considerations will guide their action; and just now it is eminently uncertain which way those considerations will lead. Will Russia, adopting the same position of antagonism to England in Japan that she has adopted in Afghanistan and elsewhere, refuse to abandon the old treaties? Will France, irritated by the *rapprochement* of England and Germany and anxious to conciliate Russian favour, act in the same way? It is impossible to say; but, if these nations do adopt such a course, it will be necessary to proceed without their co-operation. The probability is that Japan would proceed to make treaties with the larger group, and would leave with the two malcontents the responsibility of taking advantage, under the favoured-nation clause, of Japan's concessions without giving in exchange the equivalent to which their fifteen associates had agreed. It can hardly be supposed, however, that two self-respecting nations would consent to incur the odium of such a course; and, if they do not, there seems to be nothing to prevent Japan's finally emerging, a little more than two years hence, from the restraints imposed by those who have kept her so long in *statu pupillari*.

### TREATY NEGOTIATIONS IN JAPAN.

The following letter from the Tōkyō correspondent of *The Times* appeared in that journal on August 28th:—

Tokio, July 21st.

After repeated postponements, extended over a period of about two years, the long-talked-of Conference for the revision of Japan's treaties with foreign Powers began its labours in this capital on the 1st of May. The second meeting took place three weeks later, and thenceforward the representatives met weekly in full Conference, the details of the tariff being considered in the intervals by a special committee. At the close of the seventh session, on the 27th ultimo, the Conference was adjourned until the 5th of October, to give time for the foreign representatives to obtain further instructions from their respective Governments. It will, therefore, be opportune at this moment to relate the history of the negotiations up to the important stage that has now been reached.

As was fully explained in *The Times* of the 6th of March, the basis upon which the Conference began its work was deplorably unpractical and unstatesmanlike. It was, in fact, merely the shapeless and unrecognizable residue of a Japanese proposal which, after being pared down to a condition of extreme tenacity before its original presentation, in order to accommodate it to the crochets and rival interests of the 17 Treaty Powers, had been yet further disfigured and mutilated during two years of preliminary consideration by the Powers themselves. In its last state, after this course of treatment, the scheme had reached a form so clumsy and grotesque as to forbid all hope of success for negotiations conducted upon its lines. It needed no very keen perception to see that, in any system erected on such a foundation, the opening of Japan could only be a piece-meal process, corresponding in its epochs with a series of conventions, each of them subject to difficulties and complications not less formidable than those which have already stamped the whole question of treaty revision in Japan, as hitherto handled, with the character of an international farce. The scheme, moreover, failed utterly in other cardinal objects which dictate revision. For, on the one hand, it held out to Japan no prospect of relief within any reasonable period from the stigma of isolation and distrust that so sorely vexes her; and, on the other, it provided no appreciable relaxation of trade restrictions which, while crippling the Empire's foreign commerce and hindering its development, condemn European and American residents to a state of ostracism, and place them virtually at the mercy of a ring of Japanese monopolists at the treaty ports. It is no wonder, then, that those who were behind the scenes and those who knew something of the gravity with which the whole Japanese people regard the treaty question foresaw from the outset that a statesman like Count Inouye would never assent to the crude arrangement which the Conference had in view when it began its sittings.

In order to recognize fully the unfitness of the foreign proposals, it is only necessary to contrast for a moment the condition of things that existed outside of the Council Chamber with the nature of the scheme which was gravely discussed within it. Without was to be seen a fair and extensive country, covered with a network of telegraphs, having many of its principal towns connected by railways either finished or in course of construction, possessing a respectable army and navy, growing dockyards and arsenals, excellent postal and police services, and a very complete and extensive system of education; its coasts well lighted, and visited at every point by steamers flying its own flag; a country inhabited by 37 millions of intelligent and progressive people, among whom, from end to end of the Empire, foreigners might travel in absolute safety, sure of a kindly welcome; a country in the remotest parts of which congregations of native Christians worship in churches built and maintained by themselves; and a country offering many solid prospects to foreign enterprise and capital. Within, at the Conference table, sat a group of diplomatists seeking to devise the slowest possible means of admitting their nations to free residence in that country and free intercourse with its inhabitants, and seeking to maintain as far as possible the exceptional processes of jurisdiction and arrangements for isolated residence which had been deemed necessary in the days when Western ignorance classed Japan with barbarous nations, and when her own anti-foreign traditions lent strength to that misconception. The force of this contrast must have been painfully evident to the members of the Conference themselves. Their

intelligence cannot but have been shocked by the consciousness that they were deliberating with eyes virtually closed to the actual state of things beyond the walls of the Conference chamber. At all events, they made no progress. Week by week their minutes grew into an ever-swelling record of fruitless wrangling and tedious polemics. The only too evident fact that they were taking part in a solemn farce oppressed their minds and paralyzed their counsels. Clearly nothing short of a radical change of basis could place them on ground of practical debate. The question was how could such a change be brought about? As long ago as 1882 the Mikado's Government had proposed a broad reasonable measure, providing that the opening of the country and the removal of commercial restrictions should proceed *parsi passu* with the abolition of Consular jurisdiction, and at the same time offering ample safeguards for the rights and interests of foreigners during the progress of the change. This measure, with its scheme of Special Territorial Courts, described in *The Times* of the 9th of June, 1884, was ultimately rejected, at the instance chiefly of the late British Minister. On its ashes rose another proposal, meagre only, it is true, as compared with the former one, yet afterwards subjected to the ordeal of European paring with such effect that after two years it emerged therefrom in an attenuated state which barely embodied the shadow of a resolve to abolish the system of Consular jurisdiction, and therefore left no room for any substantial modification of the trade restrictions which are inseparable from that system. But to even this fragment of reform, the shortcomings of which were described in *The Times* of the 6th of March and referred to at the beginning of this letter, the Governments of Europe had with difficulty consented. Was it, then, to be expected that under these circumstances Japan would put forward a new scheme on broader lines? Having begun with a practicable proposal which the Treaty Powers had cut down to the paltriest dimensions, it was more likely that she would say now, as in effect she did say, "Build whatever edifice you can on the narrow foundation of your own construction. But, if the task prove impossible, it will be for you to suggest a broader basis."

Happily, at the crisis which had thus been reached, there was one among the leading foreign representatives sufficiently statesmanlike to grasp the situation and sufficiently courageous to apply the remedy. The present British Minister, the Hon. Sir Francis Plunkett, had already done much, by his uniformly liberal and sympathetic demeanour in Japan, to soften the impression that England wilfully barred the way to any full recognition of this country's international claims. He had also thoroughly appreciated the fact that, until Great Britain should boldly take the initiative in a just and practical policy, the league of Powers under which her own interests were suffering severely, and by which Japan was bound hand and foot, could never be moved out of conservative grooves. There were not wanting many among the abler watchers of events on the spot who held that the only effective way of resolving the situation in this wise was for England to separate herself from her associates, or at least to set out alone and let those follow her who would. This, indeed, was the view which until quite lately found the best support, and which might have continued to do so but for a fortunate coincidence of recent date, to be presently described. That America wished to join us if we should secede was certain; she, indeed, was ready to go beyond us. But America does not play an active part in European politics; and it will be easily understood that such a matter as treaty revision in Japan is affected perhaps as much by the attitudes of the Powers of Europe towards one another as by their sentiments towards Japan or their views of commercial interests in the far East. If, then, some powerful association of Great Britain with one or more European States should come within the horizon of possibilities, England would be relieved from the strong step of seceding, and would be in a position to end the deadlock at less risk of diplomatic complications with her European friends. Obviously, for such a purpose, joint action with Germany, which, of the European Powers, has interests in Japan that are second only to those of Great Britain, would be the most powerful and effective. And here we come to a second happy and unlooked for conjuncture, which is destined to have a very important bearing on the speedy solution of the treaty problem. The new German Minister, Baron von Holleben, who reached Tokyo at the end of last March, was soon found to share the liberal views of Sir Francis Plunkett. He also quickly became his close friend. Prince Bismarck, moreover, was known to be well disposed towards Japan. Accordingly, the German and British representatives in due course came together, and, working in perfect harmony and with admirable tact, elaborated

a scheme which at length offers a rational exit from the miserable deadlock of the past seven years.

The scheme of Sir Francis Plunkett and Baron von Holleben is in its main features a replica of the Japanese proposal of 1882, already referred to. It contemplates a dual *status* for foreigners in Japan. Those residing in the seven present treaty settlements, and choosing to conduct their business on the old lines and under the old restrictions, will continue to enjoy extra-territorial immunity from Japanese jurisdiction. These residing, owning real property, or doing business outside of the settlements will be amenable to Japanese jurisdiction in every respect, with the one exception of capital crimes. For the protection of the latter class of foreigners special guarantees are provided. Thus, whether in civil or criminal cases, they will at once come before the higher tribunals, and will there find upon the bench a due proportion of foreign Judges. These tribunals will not be "Mixed Courts," as that term is commonly understood, for the foreign Judges will be Japanese officials, appointed by the Japanese Government, whose right of free selection is to be limited only by a proviso that the Judges shall be men competent to exercise corresponding functions in their own countries. In short, the Japanese judiciary will include a number of foreign experts, who will sit with their Japanese colleagues and deliver final verdicts in all cases affecting foreigners. As for the laws to be administered by these tribunals, penal codes, modelled after the best European systems and highly commended by the most renowned European jurists, have already been in force in Japan's Courts for nearly six years. Civil codes, similarly found on Western principles and embodying the latest features of Western jurisprudence, are now nearly ready, and the new treaties will not be enforced until those codes have been promulgated and brought into operation. It will be seen, therefore, that the essential principle of the scheme is to leave undisturbed all foreigners who may wish to remain undisturbed, and at the same time to remove every restriction upon trade, travel, and residence in the case of those who may be content to submit themselves to Japanese jurisdiction under the safeguards named above. The liberal section of the foreign residents will thus be in a position to reap the full advantage of their enlightened views, while the conservative section will be able, for a time at least, to watch the working of the Japanese tribunals before being brought, or placing themselves, under Japanese jurisdiction. This dual *status*, however, is only to last for three years, at the end of which period foreigners and Japanese will enjoy equal privileges everywhere in Japan, and be everywhere amenable to Japanese jurisdiction, though the special guarantees for the protection of foreigners will continue in force for a further period of 12 years, or 15 years in all. If the new system thus outlined meets with the concurrence of all the Treaty Powers—and there is good reason to believe that it will do so, under the leadership of England, Germany, and the United States—the treaties embodying it will probably be concluded before the end of this year, and will go into force at the beginning of 1889, by which time the civil codes will have been completed, together with all arrangements for the establishment of the new Courts of Law.

With regard to the Tariff, it may be said that virtual agreement has existed for some time, though certain details remained to be adjusted. Upon one point only is there still a want of unanimity. At the instance of Count Inouye, Minister of State for Foreign Affairs, the Japanese Government have consented that the stipends of the foreign Judges and the other expenses entailed by the proposed arrangements shall be a first charge upon the increase of revenue arising out of the revised tariff. The outlay under the above heads will be very considerable; for, in addition to the high salaries of about 25 foreign Judges, it will be necessary to provide for the translation of the codes—which, it is stipulated, must be published in English—and for the training of a special class of Japanese Judges, lawyers, and interpreters, all possessing a knowledge of English, which is to be the official language of the Courts. It is not surprising, therefore, that the Mikado's Government is anxious to bring the revised tariff into operation as soon as possible. Sir Francis Plunkett, on the other hand, guided, doubtless, by his instructions, stipulates that the new tariff shall only come into force simultaneously with the new jurisdiction—that is to say, about two and a-half years hence. Against that it is urged on Japan's part that her unquestionable rights to exercise in fiscal matters a latitude which the Treaty Powers have long and persistently denied to her ought to weigh in her favour under the peculiar circumstances of the present time. She was entitled 14 years ago to claim a revision of

the tariff; but interminable negotiations, complicated by the terrible difficulty of reconciling the conflicting interests of a host of Treaty Powers, have barred her title so effectually that after spending millions of dollars upon an extensive system of lighthouses, lightships, buoys, and beacons, she has not yet been allowed to levy a cent in the shape of tonnage due upon foreign vessels entering her ports. Japan is not rich, and the strict economy demanded from her statesmen makes them hesitate before incurring any fresh obligation. The costly system of guarantees described above is chiefly a concession to foreign misgivings. And it would be at least an act of grace, as it certainly would be one of justice, that the accession of revenue which may be expected from the revised tariff should not be needlessly deferred. The Japanese Minister in London has been instructed to approach Downing-street on this subject, and to urge the hope of his Government that England will yield a point the decision of what rests wholly with her, and which, if not conceded, will, it must be owned, somewhat mar the excellent effect of her liberal attitude in other directions.

Of that effect it is hardly possible to speak in exaggerated terms. Slowly and reluctantly the Japanese public had been driven during the past decade to the conviction that Great Britain stood, implacable and immovable, in the way of their long-sustained efforts to gain a fair footing among the nations of the West. Other Powers might relax their stiff and exclusive attitude and assume a friendly tone. But as long as England turned her face away the position was unchangeable. And in this unbending attitude of ours on one particular point there was something strangely out of harmony with the part which England had all along played in furthering Japanese progress. At every step of that progress English co-operation, incentive, and aid had always been forthcoming. No Power should have been more familiar with what Japan had accomplished, or more desirous of her further progress. No Power was as much interested in her commercial development. Yet, of the whole array of treaty Powers, Great Britain had seemed hitherto the most distrustful and unsympathetic on the question of revising the treaties. The Japanese people could not understand this, and, failing to find a reason for it, they undoubtedly had begun of late to feel some resentment towards us. It seemed only natural, and it has all along been their most cherished desire, that England should take the lead in recognizing efforts which she had assisted and even inspired, and in emancipating Japan from the harsher terms of the covenants of 28 years ago. Yet, not only did she abstain from taking the lead, but her immobility effectually paralyzed all movement on the part of others. America had long ago declared liberal sentiments. Germany also had recently promised her friendship. But without England's assent there could be no hope of a better state of things. When, therefore, after all these years, Great Britain at length openly abandoned her old posture in favour of a line of policy so amicable and enlightened as that initiated last month by Sir Francis Plunkett the satisfaction of the Japanese Sovereign and his Cabinet was, as may be supposed, unbounded. It is true that they were not, and are not yet, altogether out of the wood. The proposals of England and Germany must first be assented to by the rest of the Powers, and cannot be embodied in treaties before next October. There were, therefore, many considerations in favour of preserving silence in the interim. But it was not in the nature of the Japanese to coldly withhold their expressions of gratitude, except under imperative restraints. The intention to treat their country as an equal had at least been manifested, and, however long it might take to give effect to that intention, they were instantly resolved upon leaving no doubt as to its warm appreciation by themselves. Accordingly, the Mikado invited Sir Francis Plunkett to a private audience on the 16th inst., and addressed him as follows:—

I have learned with much satisfaction from my Minister of State for Foreign Affairs that the work of revising the treaties has progressed satisfactorily at the present Conference, owing to the friendly efforts and sentiments of yourself and your colleagues; and that at the sixth meeting you and the Imperial German Minister jointly put forward a proposal under which my whole Empire may be thrown freely open to foreign intercourse, and extraterritorial jurisdiction be brought to an end.

It is highly gratifying to me to know that, by the aid of the Governments of Great Britain and Germany, I may now look forward to the early removal of all those obstacles which have hitherto stood in the way of the establishment of full and cordial intercourse between Japan and the Western Powers. And I trust that your further efforts and sympathy may be successfully directed to the carrying out of a proposal which is so well calculated to promote the interests of the Treaty Powers and the well-being of my Empire.

I have taken an early opportunity of receiving you, for the purpose of conveying my acknowledgments of your favourable attitude in this matter, which I have so much at heart. In order to manifest my sense of obligation to Her Britannic Majesty's Government, I desire to present the Grand Cross of the Imperial Order of the Chrysanthemum to his Royal Highness the Prince of Wales. His Imperial Highness Prince Komatsu,

Original from

was foretold six years ago by a Rev. W. Harrison, who is said to have been a chaplain to Congress. The reverend prophet kindly adds that the Charleston earthquake is to be followed by a similar catastrophe on this coast, in which San Francisco will be destroyed. San Franciscans are particularly sensitive on the subject of earthquakes. Indeed, it is not good taste to speak of them in general society. This city has never been afflicted by a disaster like the recent shock at Charleston, but slight earthquakes occur every year, and in 1868, there was a tremor which cracked a good deal of plaster, and shook people up smartly. We all profess to deride the Rev. Mr. Harrison, and his plagiarism from Mother Shipton, but in their heart of hearts, a good many of our people are horribly frightened.

### TREATY REVISION IN JAPAN.

The following article appeared in the leading columns of *The Times* on August 28th:—

A correspondent at Tokio, to whom we have been indebted in past times for various interesting letters on the treaty question in Japan, this morning relates the course which the very important deliberations of the interested Powers have lately taken in the matter, and the conclusions to which their representatives have arrived. The Conference which has been sitting in Japan was adjourned till October 5th, to give time to the various representatives to receive instructions from their Governments; but it is believed in Japan that the difficulties in the way of a revision of the treaties have been practically removed. It will be remembered, by those who read the letters and articles which we published in August and in March last, that the Japanese have long entertained the very reasonable desire to free themselves from the treaties which have bound them ever since the Revolution. Those treaties, which drew a hard-and-fast line between certain ports and the rest of Japan, and which established consular jurisdiction for the trial of all cases against foreigners, were all very well a quarter of a century ago when Japan was only just emerging from barbarous isolation, but they are felt to be both inconvenient and humiliating now. They have been a bar put in the way of the development of Japan. They have crippled its trade and have offended its dignity. Japan is a country which has advanced in the path of civilization at an unprecedented rate, and the treaties have been found to be as much out of place as would be a set of rules that would keep a very clever boy in the lowest class at school because he happened to be younger than his companions. What Japan has long desired almost all the seventeen interested Powers have been willing to grant, with the important exception of England. Moved chiefly by the resistance of the English merchants at the privileged ports and cities, successive English Governments declined to abandon the treaties; and then, when English policy changed, the course of proceedings adopted was so cumbrous that many persons urged Her Majesty's Government to withdraw altogether from the treaties, leaving other nations to follow or not, as they might choose. Fortunately, this invidious course has been rendered unnecessary. The Conference appears to have paved the way; and the harmonious co-operation of the English and German Ministers has done the rest. That matters are yet settled it would be rash to say, but it is, at all events, plain that the high Japanese authorities believe them to be so. The Mikado, at all events, has invited Sir Francis Plunkett, our Minister, to an audience, has addressed him in the very satisfactory words which our correspondent quotes, and has ended with an announcement that will cause widespread curiosity and interest throughout this country. He has announced his intention of sending the Prince of Wales the Imperial Order of the Chrysanthemum. This poetically-named decoration is the highest that the ruler of Japan can bestow; and it is worn by none but a few Royal personages and Prince Bismarck. No doubt, the mark of the Mikado's friendship will be as welcome to the Court as to the people of Great Britain.

The settlement of the thorny question of the treaties—if we are to assume that it is a settlement—is the work of our Minister, Sir Francis Plunkett, and of the recently appointed representative of Germany, Baron von Holleben. The latter came out with liberal instructions, and has throughout shown himself as anxious to work well with the British Representative as could be desired. The result has been the preparation of a plan closely resembling the rejected Japanese plan of 1882. After a certain number of years the jurisdiction clauses of the treaties are to be allowed to lapse, but up to that time new courts are to be established

for the trial of foreigners in serious cases. These are to be under the Japanese authorities, and the Judges are to be appointed by them; but half the Judges are for the present to be foreign. Except for this distinction, the position of foreigners all over Japan is to be assimilated to that of natives in all matters affecting civil status—that is to say, they can hold land and houses, can reside, and trade as freely as the subjects of the Mikado. But at the treaty settlements, nothing is for the present to be altered. Those Europeans and Americans who choose to reside there and to do their business on the old lines will be at liberty to do so; and for them the present consular jurisdiction will be kept up. This "dual status," however, is only to last three years. After that foreigners and Japanese subjects will be equal in all respects, except that the special courts will continue to work for twelve years more. In return for the large advantages thus conferred on foreigners, the Japanese Government asks to be allowed to reform its tariff; and the request is not unnatural, since the expense of the new arrangements, of the appointment of 25 foreign Judges, and of the training of many subordinate officials will be considerable. There is a difference of opinion as to the time when the new tariff is to come into operation. The Japanese want to begin at once; England answers that the tariff and the new jurisdiction should begin simultaneously—that is, at the beginning of 1889. The Japanese plea is that her expenses incurred under the treaties have been so great that she should not be forced any longer to hold her hand in fiscal matters. "Interminable negotiations," says our correspondent, "complicated by the terrible difficulty of reconciling the conflicting interests of a host of treaty Powers, have barred her title so effectually that, after spending millions of dollars upon an extensive system of lighthouses, lightships, buoys, and beacons, she has not been allowed to levy a cent in the shape of tonnage dues upon foreign vessels entering her ports." There seems to be a good *prima facie* case for the immediate grant of permission to revise the tariff. The Japanese Minister in London will doubtless do his best to establish his country's claim to the satisfaction of Lord Idlesleigh.

Our correspondent speaks emphatically of the good that has been already done to the position of England in the affections of Japan by the course which the negotiations have taken. We have recovered, it would seem, all the influence that we possessed in old times, before we began to pose as the sole and immovable opponent of treaty reform. The Japanese, naturally inclined to be friendly with us, have eagerly taken advantage of our concessions, and are now in a fair way to follow the lead of England in all the important matters in which our common Oriental interests may involve the two nations. But, of course, it must not be all at once assumed that the amended regulations that we have described are certain to be ratified. England, Germany, and the United States, the three nations most largely interested in the trade of Japan, are fully agreed; and it appears probable that Austria, Italy, and many of the smaller Powers will follow in their train. But there may be difficulties with one or two other Powers, notably with Russia and France. Political considerations will guide their action; and just now it is eminently uncertain which way those considerations will lead. Will Russia, adopting the same position of antagonism to England in Japan that she has adopted in Afghanistan and elsewhere, refuse to abandon the old treaties? Will France, irritated by the *rapprochement* of England and Germany and anxious to conciliate Russian favour, act in the same way? It is impossible to say; but, if these nations do adopt such a course, it will be necessary to proceed without their co-operation. The probability is that Japan would proceed to make treaties with the larger group, and would leave with the two malcontents the responsibility of taking advantage, under the favoured-nation clause, of Japan's concessions without giving in exchange the equivalent to which their fifteen associates had agreed. It can hardly be supposed, however, that two self-respecting nations would consent to incur the odium of such a course; and, if they do not, there seems to be nothing to prevent Japan's finally emerging, a little more than two years hence, from the restraints imposed by those who have kept her so long in *statu pupillari*.

### TREATY NEGOTIATIONS IN JAPAN.

The following letter from the Tōkyō correspondent of *The Times* appeared in that journal on August 28th:—

Tokio, July 21st.

After repeated postponements, extended over a period of about two years, the long-talked-of Conference for the revision of Japan's treaties with foreign Powers began its labours in this capital on the 1st of May. The second meeting took place three weeks later, and thenceforward the representatives met weekly in full Conference, the details of the tariff being considered in the intervals by a special committee. At the close of the seventh session, on the 27th ultimo, the Conference was adjourned until the 5th of October, to give time for the foreign representatives to obtain further instructions from their respective Governments. It will, therefore, be opportune at this moment to relate the history of the negotiations up to the important stage that has now been reached.

As was fully explained in *The Times* of the 6th of March, the basis upon which the Conference began its work was deplorably impractical and unstatesmanlike. It was, in fact, merely the shapeless and unrecognizable residue of a Japanese proposal which, after being pared down to a condition of extreme tenuity before its original presentation, in order to accommodate it to the crochets and rival interests of the 17 Treaty Powers, had been yet further disfigured and mutilated during two years of preliminary consideration by the Powers themselves. In its last state, after this course of treatment, the scheme had reached a form so clumsy and grotesque as to forbid all hope of success for negotiations conducted upon its lines. It needed no very keen perception to see that, in any system erected on such a foundation, the opening of Japan could only be a piece-meal process, corresponding in its epochs with a series of conventions, each of them subject to difficulties and complications not less formidable than those which have already stamped the whole question of treaty revision in Japan, as hitherto handled, with the character of an international farce. The scheme, moreover, failed utterly in other cardinal objects which dictate revision. For, on the one hand, it held out to Japan no prospect of relief within any reasonable period from the stigma of isolation and distrust that so sorely vexes her; and, on the other, it provided no appreciable relaxation of trade restrictions which, while crippling the Empire's foreign commerce and hindering its development, condemn European and American residents to a state of ostracism, and place them virtually at the mercy of a ring of Japanese monopolists at the treaty ports. It is no wonder, then, that those who were behind the scenes and those who knew something of the gravity with which the whole Japanese people regard the treaty question foresaw from the outset that a statesman like Count Itohye would never assent to the crude arrangement which the Conference had in view when it began its sittings.

In order to recognize fully the unfitness of the foreign proposals, it is only necessary to contrast for a moment the condition of things that existed outside of the Council Chamber with the nature of the scheme which was gravely discussed within it. Without was to be seen a fair and extensive country, covered with a network of telegraphs, having many of its principal towns connected by railways either finished or in course of construction, possessing a respectable army and navy, growing dockyards and arsenals, excellent postal and police services, and a very complete and extensive system of education; its coasts well lighted, and visited at every point by steamers flying its own flag; a country inhabited by 37 millions of intelligent and progressive people, among whom, from end to end of the Empire, foreigners might travel in absolute safety, sure of a kindly welcome; a country in the remotest parts of which congregations of native Christians worship in churches built and maintained by themselves; and a country offering many solid prospects to foreign enterprise and capital. Within, at the Conference table, sat a group of diplomatists seeking to devise the slowest possible means of admitting their nations to free residence in that country and free intercourse with its inhabitants, and seeking to maintain as far as possible the exceptional processes of jurisdiction and arrangements for isolated residence which had been deemed necessary in the days when Western ignorance classed Japan with barbarous nations, and when her own anti-foreign traditions lent strength to that misconception. The force of this contrast must have been painfully evident to the members of the Conference themselves. Their

intelligence cannot but have been shocked by the consciousness that they were deliberating with eyes virtually closed to the actual state of things beyond the walls of the Conference chamber. At all events, they made no progress. Week by week their minutes grew into an ever-swelling record of fruitless wrangling and tedious polemics. The only too evident fact that they were taking part in a solemn farce oppressed their minds and paralyzed their counsels. Clearly nothing short of a radical change of basis could place them on ground of practical debate. The question was how could such a change be brought about? As long ago as 1882 the Mikado's Government had proposed a broad reasonable measure, providing that the opening of the country and the removal of commercial restrictions should proceed *pari passu* with the abolition of Consular jurisdiction, and at the same time offering ample safeguards for the rights and interests of foreigners during the progress of the change. This measure, with its scheme of Special Territorial Courts, described in *The Times* of the 9th of June, 1884, was ultimately rejected, at the instance chiefly of the late British Minister. On its ashes rose another proposal, meagre only, it is true, as compared with the former one, yet afterwards subjected to the ordeal of European paring with such effect that after two years it emerged therefrom in an attenuated state which barely embodied the shadow of a resolve to abolish the system of Consular jurisdiction, and therefore left no room for any substantial modification of the trade restrictions which are inseparable from that system. But to even this fragment of reform, the shortcomings of which were described in *The Times* of the 6th of March and referred to at the beginning of this letter, the Governments of Europe had with difficulty consented. Was it, then, to be expected that under these circumstances Japan would put forward a new scheme on broader lines? Having begun with a practicable proposal which the Treaty Powers had cut down to the paltriest dimensions, it was more likely that she would say now, as in effect she did say, "Build whatever edifice you can on the narrow foundation of your own construction. But, if the task prove impossible, it will be for you to suggest a broader basis."

Happily, at the crisis which had thus been reached, there was one among the leading foreign representatives sufficiently statesmanlike to grasp the situation and sufficiently courageous to apply the remedy. The present British Minister, the Hon. Sir Francis Plunkett, had already done much, by his uniformly liberal and sympathetic demeanour in Japan, to soften the impression that England wilfully barred the way to any full recognition of this country's international claims. He had also thoroughly appreciated the fact that, until Great Britain should boldly take the initiative in a just and practical policy, the league of Powers under which her own interests were suffering severely, and by which Japan was bound hand and foot, could never be moved out of conservative grooves. There were not wanting many among the ablest watchers of events on the spot who held that the only effective way of resolving the situation in this wise was for England to separate herself from her associates, or at least to set out alone and let those follow her who would. This, indeed, was the view which until quite lately found the best support, and which might have continued to do so but for a fortunate coincidence of recent date, to be presently described. That America wished to join us if we should secede was certain; she, indeed, was ready to go beyond us. But America does not play an active part in European politics; and it will be easily understood that such a matter as treaty revision in Japan is affected perhaps as much by the attitudes of the Powers of Europe towards one another as by their sentiments towards Japan or their views of commercial interests in the far East. If, then, some powerful association of Great Britain with one or more European States should come within the horizon of possibilities, England would be relieved from the strong step of seceding, and would be in a position to end the deadlock at less risk of diplomatic complications with her European friends. Obviously, for such a purpose, joint action with Germany, which, of the European Powers, has interests in Japan that are second only to those of Great Britain, would be the most powerful and effective. And here we come to a second happy and unlooked-for conjuncture, which is destined to have a very important bearing on the speedy solution of the treaty problem. The new German Minister, Baron von Holleben, who reached Tokyo at the end of last March, was soon found to share the liberal views of Sir Francis Plunkett. He also quickly became his close friend. Prince Bismarck, moreover, was known to be well disposed towards Japan. Accordingly, the German and British representatives in due course came together, and, working in perfect harmony and with admirable tact, elaborated

a scheme which at length offers a rational exit from the miserable deadlock of the past seven years.

The scheme of Sir Francis Plunkett and Baron von Holleben is in its main features a replica of the Japanese proposal of 1882, already referred to. It contemplates a dual *status* for foreigners in Japan. Those residing in the seven present treaty settlements, and choosing to conduct their business on the old lines and under the old restrictions, will continue to enjoy extra-territorial immunity from Japanese jurisdiction. These residing, owning real property, or doing business outside of the settlements will be amenable to Japanese jurisdiction in every respect, with the one exception of capital crimes. For the protection of the latter class of foreigners special guarantees are provided. Thus, whether in civil or criminal cases, they will at once come before the higher tribunals, and will there find upon the bench a due proportion of foreign Judges. These tribunals will not be "Mixed Courts," as that term is commonly understood, for the foreign Judges will be Japanese officials, appointed by the Japanese Government, whose right of free selection is to be limited only by a proviso that the Judges shall be men competent to exercise corresponding functions in their own countries. In short, the Japanese judiciary will include a number of foreign experts, who will sit with their Japanese colleagues and deliver final verdicts in all cases affecting foreigners. As for the laws to be administered by these tribunals, penal codes, modelled after the best European systems and highly commended by the most renowned European jurists, have already been in force in Japan's Courts for nearly six years. Civil codes, similarly founded on Western principles and embodying the latest features of Western jurisprudence, are now nearly ready, and the new treaties will not be enforced until those codes have been promulgated and brought into operation. It will be seen, therefore, that the essential principle of the scheme is to leave undisturbed all foreigners who may wish to remain undisturbed, and at the same time to remove every restriction upon trade, travel, and residence in the case of those who may be content to submit themselves to Japanese jurisdiction under the safeguards named above. The liberal section of the foreign residents will thus be in a position to reap the full advantage of their enlightened views, while the conservative section will be able, for a time at least, to watch the working of the Japanese tribunals before being brought, or placing themselves, under Japanese jurisdiction. This dual *status*, however, is only to last for three years, at the end of which period foreigners and Japanese will enjoy equal privileges everywhere in Japan, and be everywhere amenable to Japanese jurisdiction, though the special guarantees for the protection of foreigners will continue in force for a further period of 12 years, or 15 years in all. If the new system thus outlined meets with the concurrence of all the Treaty Powers—and there is good reason to believe that it will do so, under the leadership of England, Germany, and the United States—the treaties embodying it will probably be concluded before the end of this year, and will go into force at the beginning of 1889, by which time the civil codes will have been completed, together with all arrangements for the establishment of the new Courts of Law.

With regard to the Tariff, it may be said that virtual agreement has existed for some time, though certain details remained to be adjusted. Upon one point only is there still a want of unanimity. At the instance of Count Inouye, Minister of State for Foreign Affairs, the Japanese Government have consented that the stipends of the foreign Judges and the other expenses entailed by the proposed arrangements shall be a first charge upon the increase of revenue arising out of the revised tariff. The outlay under the above heads will be very considerable; for, in addition to the high salaries of about 25 foreign Judges, it will be necessary to provide for the translation of the codes—which, it is stipulated, must be published in English—and for the training of a special class of Japanese Judges, lawyers, and interpreters, all possessing a knowledge of English, which is to be the official language of the Courts. It is not surprising, therefore, that the Mikado's Government is anxious to bring the revised tariff into operation as soon as possible. Sir Francis Plunkett, on the other hand, guided, doubtless, by his instructions, stipulates that the new tariff shall only come into force simultaneously with the new jurisdiction—that is to say, about two and a-half years hence. Against that it is urged on Japan's part that her unquestionable right to exercise in fiscal matters a latitude which the Treaty Powers have long and persistently denied to her ought to weigh in her favour under the peculiar circumstances of the present time. She was entitled 14 years ago to claim a revision of

the tariff; but interminable negotiations, complicated by the terrible difficulty of reconciling the conflicting interests of a host of Treaty Powers, have barred her title so effectually that after spending millions of dollars upon an extensive system of lighthouses, lightships, buoys, and beacons, she has not yet been allowed to levy a cent in the shape of tonnage due upon foreign vessels entering her ports. Japan is not rich, and the strict economy demanded from her statesmen makes them hesitate before incurring any fresh obligation. The costly system of guarantees described above is chiefly a concession to foreign misgivings. And it would be at least an act of grace, as it certainly would be one of justice, that the accession of revenue which may be expected from the revised tariff should not be needlessly deferred. The Japanese Minister in London has been instructed to approach Downing-street on this subject, and to urge the hope of his Government that England will yield a point the decision of what rests wholly with her, and which, if not conceded, will, it must be owned, somewhat mar the excellent effect of her liberal attitude in other directions.

Of that effect it is hardly possible to speak in exaggerated terms. Slowly and reluctantly the Japanese public had been driven during the past decade to the conviction that Great Britain stood, implacable and immovable, in the way of their long-sustained efforts to gain a fair footing among the nations of the West. Other Powers might relax their stiff and exclusive attitude and assume a friendly tone. But as long as England turned her face away the position was unchangeable. And in this unbending attitude of ours on one particular point there was something strangely out of harmony with the part which England had all along played in furthering Japanese progress. At every step of that progress English co-operation, incentive, and aid had always been forthcoming. No Power should have been more familiar with what Japan had accomplished, or more desirous of her further progress. No Power was as much interested in her commercial development. Yet, of the whole array of treaty Powers, Great Britain had seemed hitherto the most distrustful and unsympathetic on the question of revising the treaties. The Japanese people could not understand this, and, failing to find a reason for it, they undoubtedly had begun of late to feel some resentment towards us. It seemed only natural, and it has all along been their most cherished desire, that England should take the lead in recognizing efforts which she had assisted and even inspired, and in emancipating Japan from the harsher terms of the covenants of 28 years ago. Yet, not only did she abstain from taking the lead, but her immobility effectually paralyzed all movement on the part of others. America had long ago declared liberal sentiments. Germany also had recently promised her friendship. But without England's assent there could be no hope of a better state of things. When, therefore, after all these years, Great Britain at length openly abandoned her old posture in favour of a line of policy so amicable and enlightened as that initiated last month by Sir Francis Plunkett the satisfaction of the Japanese Sovereign and his Cabinet was, as may be supposed, unbounded. It is true that they were not, and are not yet, altogether out of the wood. The proposals of England and Germany must first be assented to by the rest of the Powers, and cannot be embodied in treaties before next October. There were, therefore, many considerations in favour of preserving silence in the interim. But it was not in the nature of the Japanese to coldly withhold their expressions of gratitude, except under imperative restraints. The intention to treat their country as an equal had at least been manifested, and, however long it might take to give effect to that intention, they were instantly resolved upon leaving no doubt as to its warm appreciation by themselves. Accordingly, the Mikado invited Sir Francis Plunkett to a private audience on the 16th inst., and addressed him as follows:—

I have learned with much satisfaction from my Minister of State for Foreign Affairs that the work of revising the treaties has progressed satisfactorily at the present Conference, owing to the friendly efforts and sentiments of yourself and your colleagues; and that at the sixth meeting you and the Imperial German Minister jointly put forward a proposal under which my whole Empire may be thrown freely open to foreign intercourse, and extra-territorial jurisdiction be brought to an end.

It is highly gratifying to me to know that, by the aid of the Governments of Great Britain and Germany, I may now look forward to the early removal of all these obstacles which have hitherto stood in the way of the establishment of full and cordial intercourse between Japan and the Western Powers. And I trust that your further efforts and sympathies will be successfully directed to the carrying out of a proposal which is so well calculated to promote the interests of the Treaty Powers and the well-being of my Empire.

I have taken an early opportunity of receiving you, for the purpose of conveying my acknowledgments of your favourable attitude in this matter, which I have so much at heart.

In order to manifest my sense of obligation to Her Britannic Majesty's Government, I desire to present the Grand Cross of the Imperial Order of the Chrysanthemum to his Royal Highness the Prince of Wales. His Imperial Highness Prince Komatsu,

Original from

who is to leave shortly for Europe, will be charged to carry out my intention, which in the meanwhile I beg that you will be good enough to communicate to Her Majesty's Government.

It may be mentioned that this Order is practically bestowed on Royalty alone, Prince Bismark being the only one of its few possessors who does not wear a crown.

Upon the British Government will now depend the further development of the close and friendly relations which have been thus auspiciously inaugurated between England and Japan. Space forbids my dwelling, in this already long letter, on the commercial and other benefits that are likely to result from the new course on which we have embarked. But the military advantages that may be anticipated from cordial co-operation with Japan are of an importance which calls for a few words of comment. There can be little doubt that in the great struggle which unfortunately must be apprehended, sooner or later, between England and Russia, Japan's natural inclination will be to throw in her lot with the former. Her alliance, to whichever side it might be given, would undoubtedly be of great value. Not only has the attractions of fine harbours, a well-lighted coast, excellent coaling stations, and an agreeable climate, combining to constitute a most advantageous base of operations for any conflict in this region of the globe, but her compact and well-trained army, her rapidly growing navy of effective ships, and the high courage and fighting qualities of her troops and seamen, would form adjuncts of no mean order for offensive operations. Japan's statesmen foresee that, in the event of an Anglo-Russian struggle on the Asian seaboard, it would be hardly possible for them to maintain neutral; and, if England only takes care to preserve and foster the very strong public feeling in her favour which is certain to grow out of a happy settlement of the treaty problem, the voice of the Japanese nation would undoubtedly be raised in behalf of a British alliance. There is no ground for any misgivings that the feelings of the Japanese on the treaty question have been here set forth in too high a strain. From a foreign standpoint, no doubt, the scheme explained in this letter seems to concede very little to Japan. She is ready to do what we have long been urging her to do—what, indeed, we and our associates forced her to begin doing some 30 years ago—namely, to throw open her territory freely to foreign intercourse. She at the same time agrees to impose upon herself the costly and troublesome task of providing special safeguards for the protection of foreigners within her realm. Thus, the balance of gain seems to be largely on the foreign side. Yet to the Japanese the prospective change means a good deal more than we can easily appreciate. They are an intensely patriotic and high-spirited people, and they have long chafed bitterly at the position of national inferiority to which the Western Powers condemned them 28 years ago. But at length, first among the peoples of the East, they now see themselves about to cross as equals the threshold of the great family of Western nations, freed from the isolation and stigma of semi-barbarity which have so long oppressed them. Probably there never was a race more capable of welcoming and appreciating this change; and the Power which maintains the lead in effecting it may count with confidence on their lasting gratitude.

#### IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN, Esq., Judge.—MONDAY,  
October 11th, 1886.

#### THE "GLAMORGANSHIRE" CASE.

This case came up to-day on the following petition and answer:—

The defendants make the following objections to the Registrar's report:—

1. To the item of United States gold \$39,757.92 for the value of the *Clarissa B. Carter*, on the grounds that:—

(a.) Evidence as to her value was improperly admitted, namely exhibits 1, 2, and 3.

(b.) Evidence offered as to her value was improperly rejected owing to the Registrar refusing to grant an adjournment for the purpose of taking the evidence of Captains Efford and Martin.

(c.) The value of the ship was improperly calculated, being based on her probable value at the end of the voyage irrespective of her value at the time of the collision, when from the evidence she would have been worth much less.

(d.) The reduction of 1/3th of her value for depreciation during the first 5 years, as well as ten per cent. for fall in market between 1876 and 1885 are insufficient.

2. To the rate of interest all used on the ground that the Registrar had no power to allow any such rate and that such is an improper rate.

3. To the conversion of the amounts allowed in United States gold into Mexican dollars at the rate of 76, on the grounds

(a.) That the rate to be taken should be the rate at the

time of the collision, or if not then that it should be the rate at the time the claim was brought.

(b.) That the Registrar cannot award more than the amount claimed, namely: \$92,031.42 which he in fact does it after taking off the sums disallowed he converts at the rate of 76 instead of 80.

(c.) That he cannot alter the plaintiffs' claim to the prejudice of the defendants.

(d.) That there was no evidence that the current rate was other than the rate on which the claim was made up.

(e.) That all claims in this Court must be made in Mexican Dollars; that this claim was so made, and that the subsequent rate of exchange cannot be considered in ascertaining what were the value of articles forming part of such claim at dates prior to such claim being brought.

The defendants therefore pray this Honourable Court upon these grounds and such others as may be adduced at the hearing, as well as upon further evidence to be then adduced, to order that the Registrar's report may be amended

1. By reducing the value of the ship to \$35,000 Mexican.

2. By reducing the rate of interest to 4 per cent per annum.

3. By calculating the rate of exchange at 80 instead of 76;

4. By making such other amendments as to this Honourable Court may seem fit; and they further pray this Honourable Court to order

That the costs of the reference and of this petition in objection to the report therein be paid by the plaintiffs.

In answer to the petition of the defendants in objection to the Report of the Registrar the plaintiffs say as follows:—

1. They dispute all the reasons in support of the objections.

2. As to Paragraph 1, sub-paragraph (a) they say that the plaintiffs' Exhibits 1, 2, and 3 were properly admitted in evidence; and that the facts alleged in the said exhibits were proved *non est* at the reference by the witness Leroy Dow, whose testimony was unshaken on cross-examination.

3. As to paragraph 1, sub-paragraph (b) they say that the Registrar properly refused to allow an adjournment to enable the defendants' counsel to call Captains Efford and Martin as witnesses before the Registrar and merchants because no notice of any intention to call the said witnesses had been given prior to the application for such adjournment; neither had the said witnesses been subpoenaed to attend and give evidence; nor was the defendants' Counsel in a position, at the said reference, to assure the Registrar that the said witnesses could or would give evidence relevant to the inquiry, but on the contrary when asked as to the nature of the evidence he was instructed the said witnesses would be able to give, he was unable to answer the question. Lastly because the evidence of the said witnesses might have been taken by affidavit in time to be filed by the defendants and used at the reference; but the defendants' Counsel neglected so to do.

4. As to paragraph 1, sub-paragraph (c) they say that the value of the ship was properly based on her probable value at the end of the voyage, and that there was no evidence that she would have been of less value at the time of the collision.

5. As to paragraph 1, sub-paragraph (d) they say that the deductions for depreciation and for fall in market therein referred to were more than sufficient.

6. As to paragraph 2 they say that the rate of interest allowed by the Registrar was the proper rate and that the Registrar had power to allow the same.

7. As to paragraph 3 they say that the rate at which the amounts allowed in United States gold were converted into Mexican dollars was the rate of the day of the date of the Registrar's report for the purchase of such drafts on New York; and that the said rate if any was proper to be taken as the rate at which payment might be made on that day; but that since that day the rate has altered in favour of the plaintiffs from 70 to 73 1/2 which latter is the rate at this date. They say that a portion of their claim was made in United States gold; that before the reference was entered upon, they by their Counsel applied to the Registrar and merchants to report in gold as to the amounts claimed in gold, because the rate for conversion into Mexican dollars was a varying rate; and that no objection to the said application was made either by the Registrar or by the defendants' Counsel; and that the amounts allowed in United States gold should be so paid, irrespective of the date when they are paid. They deny that the Registrar awarded more than the amount claimed, or that he altered the plaintiffs' claim to the prejudice of the defendants. They say that the items of their claim which originally appeared in United States gold were converted into Mexican dollars at the rate of the day on which the claim was filed, not for the purpose of altering the amounts claimed and payable in gold but for the purpose of showing what sum in Mexican dollars the plaintiffs would accept in satisfaction of their claim if paid on that day; and that if the rate had altered in the meantime to the prejudice of the plaintiffs and in favour of the defendants, the defendants would have been entitled to the benefit thereof. The plaintiffs deny that all claims made in this Court must be made in Mexican dollars; and that their claim was so made.

8. The plaintiffs object to the defendants being allowed at the hearing to adduce further or other reasons, or further evidence, for the amendment of the Registrar's report.

9. The plaintiffs propose at the hearing hereof, to take the decision of the judge on the concluding paragraph of the Registrar's report, in which the opinion is expressed that the parties should each bear their own costs of the reference; and the plaintiffs will contend that the defendants should pay the costs thereof.

And the said plaintiffs pray the Court to reject the petition of the defendants and to condemn them in costs; also to confirm the report of the Registrar, except as to the incidence of the costs of the reference, and except as to the rate at which such portions of the claim of the plaintiffs as were stated in United States gold were converted into Mexican dollars by the Registrar, and to confirm the report of the Registrar as to the amounts payable by the defendants to the plaintiffs in United States gold and in Mexican dollars respectively.

Mr. Kirkwood said this was an objection to the report of the Registrar in the case of the *Clarissa B. Carter* against the owners of the steamship *Glamorganshire*, which report was dated 29th July last. He desired to amend one part of his objec-

tion: he did not insist on the evidence of Captain Martin mentioned in subsection B of paragraph 1. His first objection was as to the item for the value of the cargo on the grounds that evidence as to the value of the ship was improperly admitted and that other evidence as to her value was improperly rejected. With reference to the fourth objection in paragraph B, he would apply now to be at liberty to call Captain Efford as a witness. In Pritchard's Admiralty Digest, volume 2, page 608, reference was made to the question of taking new evidence. Mr. Kirkwood then went on to say that the evidence he wished to adduce was directed to what had been before the Registrar and was the evidence of a witness for the presence of whom he asked for a postponement. Captain Efford was then at Nagasaki, for which he had left at two or three hours' notice. Counsel wished to call the evidence of Captain Efford, and tried to ascertain when he would come back, but no one, not even Captain Efford himself, could tell. He left on July 4th and returned on July 22nd, which was after the evidence had closed and before the Registrar's report was made. Captain Efford's evidence seemed to him, as he stated to the Registrar, to be of the utmost importance, not only because Captain Efford was Lloyd's Surveyor, and therefore a most competent man presumably to give evidence as to the value of the ship, but he also had surveyed her just before she left on the voyage on which she was lost. That was the very best evidence that could be obtained and keeping in view the scanty nature of the evidence adduced, he submitted that, having regard to the very large amount of the claim, it was certainly within the discretion of the Registrar to postpone the examination, and he should have done so.

Mr. Lowder said it was true that at the hearing of the reference Mr. Kirkwood applied for an adjournment in order that he might call the evidence of Captain Efford and Captain Martin, but at that time Counsel opposed the application on the ground that defendants should have been ready at the time, and if they were not so ready they should have made an application according to the rules of the Court for a postponement prior to the hearing. He asked Mr. Kirkwood whether he could state to the Registrar the nature of the evidence that would be given by the two witnesses he proposed to call, and he was unable to say what the nature of the evidence would be. The evidence must be produced in a certain way, in illustration of which he referred to Roscoe's Admiralty Law and Practice, pages 170 and 171. The Registrar found—although it was not in the report it was in the minutes—that by the exercise of proper diligence this evidence might have been produced. Counsel went on to contend that this application should be supported by affidavits stating precisely the nature of the evidence to be produced. He submitted with great confidence that the evidence of Captain Efford could not be taken now.

Mr. Kirkwood submitted that this evidence could not have been taken before by the exercise of proper diligence. Had Counsel known that Captain Efford was going away he should have taken his affidavit. He quoted order 56 of the Judicature Act, rule 12, which showed that the proceedings under this petition and answer had from the beginning been treated as connected with an ordinary petition, and the rules of the Court must be followed.

The Judge said he thought he ought to refuse the application on the ground that plainly the introduction of fresh evidence must be in the discretion of the Court. That discretion, of course, was a judicial one, and in considering whether he ought to allow fresh evidence or not he must be guided by the practice of similar Courts at home. His Honour was not satisfied that this evidence could not have been produced before the Registrar, and the application was not supported as required by affidavits stating precisely the character of the new evidence. He must therefore refuse the application.

Mr. Kirkwood then proceeded to argue in support of his objection that the exhibits 1, 2, and 3 had been improperly admitted. He contended that these exhibits did not comply with the requirements of the Court, laying stress on the fact that in more than one instance the affidavits contained no description of the person giving evidence. On all these grounds he submitted that the documents were improperly received. As to the second objection he remarked that it was admitted that Captain Efford had surveyed the vessel just before leaving.

Mr. Lowder said no such admission was made.

Mr. Kirkwood said Captain Efford was on board shortly before the vessel left. As to the third point he said the Registrar seemed to consider himself bound to follow the case of the *Northumbria*. It was most unreasonable to conclude

that the owner of a ship should gain by her value being taken at the time of her arrival. He quoted from Pritchard, volume 2, page 606, the case of the *Ironmaster*, which provided that in the case of total loss it was the duty of the Court to award the full market value of the vessel just before the collision. The Registrar, he held, should have taken the value of the vessel just before the collision, and then deducted therefrom a fair sum for deterioration during the time of the voyage irrespective of her market value just before she could have got there. There were no witnesses as to the value except Captain Walker and Captain Pearson, and both gave evidence contrary to the finding of the Registrar. He submitted that an allowance of 10 per cent for depreciation was perfectly ridiculous, and that 40 or 50 per cent. would have been a more reasonable figure to represent the deterioration of sailing ships during the last nine or ten years. He argued on the question as to the rate of interest that the rate should have been calculated at the current deposit rate of 4 per cent. instead of 8 per cent., and in reference to the rate of conversion from gold into Mexican dollars held that there was no evidence taken as to the rate current at the time, or to show that it was 76.

Mr. Lowder contended that the affidavits came under rule 235 of the Court and that they complied with all the requirements. He submitted that they complied with the requirements of rule 235. He then quoted a case cited in Pritchard, volume 2, page 217, and submitted that the affidavits were properly submitted to the Court, supported as they were by the evidence of Captain Dow, which was not shaken. He contended that the Registrar was rightly guided, in calculating the value of the vessel as at the date of her arrival by the case of the *Northumbria*, and held that the *restitutio in integrum* was carried out by taking the value of the ship at the end of her voyage if she were earning freight; if not at the date of the collision. He held that Mr. Kirkwood had no authority for the contention that it was for the defendants, the parties who were in the wrong, to elect which they would take—the value of the vessel at the time of her arrival or at the time of the collision. He said the Registrar was perfectly justified in going not entirely on the evidence of Captain Walker but also on the rule laid down by Dr. Phillimore in the case of the *Ironmaster*. Mr. Kirkwood had stated that there was not one tittle of evidence as to value other than that of Captains Walker and Pearson. But Mr. Lowder pointed out that Captain Dow was also put into the box and swore that the vessel would have been worth \$10,000 in gold when she completed her voyage, and that she was as good as ever she was. As to the rate of interest, he stated that previous to the reference it was admitted by both Counsel that the bank rate was 8 per cent., which was the rate his clients would have to pay if they borrowed money to place themselves in the position in which they were at the time of the collision. On the question of interest Counsel quoted from Pritchard, vol. 2, page 725, and other authorities. As to the rate of conversion, he pointed out that cases were brought here every day in *yen*, and might very well be in pounds sterling. The claim he pointed out was for American gold. Mr. Kirkwood had wished to amend the petition by putting the rate at 80 instead of 76, and said it was obviously a mistake. But it obviously was not a mistake; and for this reason, that the third paragraph of the prayer was based on sub-paragraph B of paragraph 3 of the petition which said that the Registrar could not award more than the amount claimed if it were converted at the rate of 76 instead of 80. It was an afterthought, and he should certainly object to any amendment being allowed on that point. Mr. Lowder recalled that at the outset he asked the Registrar and merchants to find in gold for that which was claimed in gold and in silver for what was claimed in silver, and pointed out that in the report the Registrar had complied with this application which was not objected to by Mr. Kirkwood at the time, though in the schedule, which was merely a memorandum, not a part of the report, it was given in Mexican dollars. He concluded by asking that the amounts claimed in gold should be paid in gold, and said he would be willing to take the risk of exchange being against him on the date of payment. Counsel then quoted from Pritchard, volume 2, page 608, as to the general principles that should guide the Court in dealing with the report of the Registrar, and cited Roscoe's Admiralty Law and Practice pp. 170 and 171 to show that the assumption was strongly in favour of the report in such cases as this.

After hearing Mr. Kirkwood in reply, the Judge reserved decision.

TRAINS LEAVE YOKOHAMA Station at 6.35, 8.00, 9.50,\* 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50,\* 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

TRAINS LEAVE TOKYO (Shimbashi) at 6.35, 8.00, 9.15,\* 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50,\* 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

FARES—First Single, *yen* 1.00; Second do., *sen* 60; First Return, *yen* 1.50; Second do., *sen* 90.

Trains marked with \* run through without stopping at Tsurumi, Kawasaki and Utsunomiya Stations. Trains marked \* are the same as above with the exception of stopping at Kawasaki Station.

## TOKYO-MAVEBASII RAILWAY.

TRAINS LEAVE TOKYO (Uyeno) at 5.25 and 9.25 a.m. and 12.25 and 4.50 p.m.; and MAVEBASII at 5.25 a.m. and 12.25 and 4.50 p.m.

FARES—First-class (Separate Compartment), *yen* 3.80; Second-class, *yen* 2.28; Third-class, *yen* 1.14.

## TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.25 and 11.30 a.m., and 2.40 and 5.45 p.m.

## UTSUNOMIYA-NASU RAILWAY.

TRAINS LEAVE UTSUNOMIYA at 9.50 a.m. and 4.37 p.m.; and NASU at 8.00 a.m. and 3.10 p.m.

FARES—First-class, *yen* 1.10; Second-class, *sen* 74; Third-class, *sen* 37.

## TOKYO-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYO (Uyeno) at 5.25 a.m., and 12.25 and 4.50 p.m.; and UTSUNOMIYA at 9.35 a.m., and 12.25 and 5.00 p.m.

FARES—First-class, *yen* 3.50; Second-class, *yen* 2.10; Third-class, *yen* 1.05.

## SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 8.49 and 11.49 a.m., and 2.44 and 6.20 p.m.; and AKABANE at 9.55 a.m., and 12.50, 4.05, and 8.35 p.m.

FARES—First-class, *sen* 70; Second-class, *sen* 46; Third-class, *sen* 23.

## OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

FOR EUROPE—The P. & O. Company's steamer sails fortnightly on Thursday, via Inland Sea Ports, making connection with the English mail at Hongkong, for Marseilles and Plymouth. The Messageries Maritimes Co.'s steamer sails fortnightly on Saturday, carries the French mail, and makes connection at Hongkong with the mail-boat for Marseilles.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatohi daily at 8.30 a.m., and 12.00 m., and 4.15 p.m.; and leave Yokosuka at 6.30 and 11.00 a.m., and 4.00 p.m.—*Fare, 20 sen.*

## MAIL STEAMERS.

## THE NEXT MAIL IS DUE

From Hongkong, per P. M. Co.	Tuesday, Oct. 19th.*
From Shanghai, Nagasaki, & Kobe, per N. Y. K.	Friday, October 22nd.
From America, per O. & O. Co.	Friday, October 22nd.†
From America, per P. M. Co.	Friday, October 29th.‡

The *Claymore* (with English mail) left Hongkong on October 9th, and was due on Thursday, October 14th. \* City of Sydney left Hongkong on October 12th. † *Galle* left San Francisco via Honolulu on September 30th. ‡ City of New York left San Francisco on October 9th.

## THE NEXT MAIL LEAVES

For Shanghai, Kobe, and Nagasaki, per N. Y. K.	Tuesday, October 19th.
For America, per P. M. Co.	Thursday, Oct. 21st.
For Europe, via Hongkong, per M. M. Co.	Saturday, Oct. 23rd.

## LATEST SHIPPING.

## ARRIVALS.

## REPORTS.

The American steamer *City of Rio de Janeiro*, Captain Wm. B. Cobb, reports:—Left San Francisco the 21st September, at 2.45 p.m.; had moderate to strong winds from S.W. and N.E., most of the passage. Arrived at Yokohama the 12th October, at 7 a.m. Passage, 19 days and 22 hours.

The British steamer *Kent*, Captain Michael, reports:—Left Nagasaki the 9th October, at midnight and experienced light northerly winds to Kii Channel; thence to Sagami strong N. and N.E. winds; and thence to port light northerly winds and fine weather. Arrived at Yokohama the 12th October, at 9 p.m.

## LATEST COMMERCIAL.

## IMPORTS.

Cotton Yarn has again been the one article of attention in the Market, and a considerable quantity has been sold at very full prices, but the amount of business in other articles has been either small or nothing at all. For most descriptions of Piece Goods there is almost no demand at present, dealers are avoiding operating, but we quote prices unaltered though nominal.

YARN.—About 1,200 bales of English Spinnings have been sold, and the Market closes firm with good demand; only 50 bales Bombays are reported sold, and they are very dull at the moment.

COTTON PIECE GOODS.—Sales comprise 500 pieces 7 lbs. T. Cloths, 1,000 pieces 8½ lbs. Shirtings, 2,000 pieces Indigo Shirtings, and 2,000 pieces Prints.

WOOLLENS.—800 pieces Mousseline de Laine, 200 pieces Italians, 2,000 pairs Blankets, and 150 pieces Silk Satins are all the sales reported.

Blankets—Scarlet and Green, 6 to 4 lb, per lb.....	0.37½ to 0.45

## METALS.

Prices generally are the turn lower, for dealers are pretty well stocked, and recent arrivals have been heavy. Exchange also works in buyers' favour.

IRON.—Some fair sales of Bar and Sheet at easy rates. Arrivals of Bar have been particularly large of late, and the Stock in this department is heavy. Pig has been sold fairly well, but the recent top quotation has not been maintained.

WIRE NAILS.—Here also arrivals have been much in excess of deliveries, and ordinary assortments would not fetch over \$5 per keg.

TIN PLATES.—These hold their value fairly well, the Stock in this department not being excessive.

	PER PICUL.
Flat Bars, ½ inch.....	\$2.50 to 2.55
Flat Bars, 1 inch.....	2.60 to 2.65
Round and square up to 1 inch.....	2.50 to 2.65
Nailrod, assorted.....	2.40 to 2.50
Nailrod, small size.....	2.60 to 2.70
Wire Nails, assorted.....	4.50 to 5.50
Tin Plates, per box.....	5.00 to 5.80
Pig Iron, No. 3.....	1.20 to 1.22½

## KEROSINE.

A good enquiry for Petroleum generally, and a fair amount of business has resulted. Top quotations are hard to get, but considerable sales of Dewe have been made at \$1.77½, with Comet and equal thereto at \$1.72½. Deliveries are good, and the prospect of fresh arrivals in the near future does not alarm buyers. Present stock of sold and unsold Oil—about 470,000 cases.

	PER CASE.
Dewe.....	\$1.77 to 1.80
Comet.....	1.72 to 1.75
Stella.....	None

## SUGAR.

Only 1,000 piculs of Sugar have been sold during the interval, consisting principally of Formosa descriptions. Quotations remain nominally unchanged. Stocks consist of 80,000 piculs of all kinds.

	PER PICUL.
White, No. 1.....	\$7.25 to 7.50
White, No. 2.....	5.90 to 6.50
White, No. 3.....	5.60 to 5.70
White, No. 4.....	4.95 to 5.40
White, No. 5.....	4.60 to 4.85
Brown Formosa.....	4.05 to 4.10

## EXPORTS.

## RAW SILK.

Our last issue was of the 8th instant, since which date we have seen a strong and advancing Market with large daily business. Settlements by foreign hongs reach 1,750 piculs, distributed thus:—Hanks 200 piculs, *Filatures* and *Re-reels* 880 piculs, *Kakeda* 46 piculs, *Oshu* 12 piculs, *Sundries* 12 piculs. Purchases by the Japanese export kwaisha have amounted to 350 piculs, making a total business for the week of 1,500 piculs.

As reported a week ago, the demand for Europe continued, and when, on the 10th, better news came in from the States, our Market at once felt the impetus; prices began to advance and holders are firmer than ever. Foreign exchange also shows a steady rise, thus adding to the difficulty of filling orders at limits. Quotations generally must be raised; but in some cases are nominal, for holders will not always offer their Silks even at the highest figures now current. Supplies come in freely, but have not quite kept pace with the large sales, and the Stock on offer is reduced to 8,700 piculs of all descriptions.

There have been two shipping opportunities—French mail of 9th and American mail of 13th inst. The former (*Tanais*) carried 1,040 bales, all for France, a few only being "optional" for London. The *San Pablo* on the 13th had a similar quantity (1,043 bales) for the New York trade. Total Export from 1st July is now 6,293 piculs, against 4,402 last year and 7,863 at same date in 1884. The P. and O. steamship *Teheran*, leaving port this day at 10 p.m., should also have a fair amount for Europe, as much of the business done this week has been in sorts suitable for that quarter.

Hanks.—A few large parcels have found buyers at quotations, and the market is active with continued good enquiry. In spite of some rejections early in the week, Settlements reach 200 piculs, Good *Jushu* being done at from \$665 to \$650 and *Hachoji* at \$580.

*Filatures*.—Plenty of trade in these, all grades participating, with values appreciating almost daily. Nothing has been actually booked at over \$820, but dealers are asking fully \$800 for Silks which are a long way below "extra" grade. Some "filatures" have withdrawn their Silk from the Market entirely; others will only sell part of their holdings at current rates. Among the reported sales are the following chops:—*Utsunomia* and *Yonezawa* at \$820, *Kokkusha* \$805, *Tokushusha* \$775, *Hakusuru* \$770, *Shinyosha* \$760, but it is doubtful if any of these could be repeated now under \$20 advance. A parcel of *Gakusha* is reported at \$790, and several lots of *Kushu* fil. have been taken up by native speculators at \$725 or thereabouts.

*Re-reels*.—Active market, resulting in large settlements of *Joshu* and *Bushu* kinds, although the better class of recognised chops have not been freely bought. Prices are advanced; \$740 has been paid for Good *Shinshu* quality, and the same figure is reported to have been refused for *Five Girl* or *Tortoise*.

*Kakeda*.—Again no business in new staple; one purchase in old silk reported at \$675.

*Oshu*.—A trifle done in fine-sized *Hamatsuki* at about \$630.

*Taysam* kinds.—Some trade in *Nagahama* at \$460 and *Akita* at \$550. Nothing passing in *Sodai*.

## WASTE SILK.

Business continues in full swing, and the Settlements again approach 1,000 piculs, besides 200 piculs *Noshi* shipped by the Boyeki-kaisha. Purchases by foreigners are distributed thus:—*Cocoons* 450 piculs, *Noshi* 100 piculs, *Kibiso* 350 piculs, *Mawata* 15 piculs, *Sundries* 50 piculs.

*Cocoons*.—Business in the lower grades continues, *Najiko*, *Tama*, and *Waste Cocoons* coming to hand in quantity. *Pierced Cocoons* of prime quality are apparently finished for the present.

*Noshi*.—Not very much done this week; among the few purchases made are *Bushu* \$160, *Mino* \$150, *Josho* \$124. The 200 piculs of Direct Export were also of *Josho* staple.

*Kibiso*.—Demand has revived, and a large amount of business has taken place, chiefly *Josho* sorts at from \$65 to \$75. A few small parcels of *Filature* taken into godown at from \$145 to \$155 for *Kosho* and *Shinsu* respectively.

*Mawata*.—The long figure of \$270 has been paid for a few bales reported extra-superfine.

*Sundries*.—Several parcels various *Neri* done at the high price of \$27½, uncleaned.

Shipments for the week have been confined to the French mail steamer *Tanais*, which vessel had no less than 440 bales various *Waste* and *Cocoons* for Marseilles and beyond. Total Export to date is now 6,087 piculs against 1,579 piculs last year and 6,590 piculs at same date in 1884. The canal boat *Antonio* now in port has on board some 75 bales *Cocoons* and *Mawata* for New York.

## QUOTATIONS.—(NEW WASTE.)

Pierced Cocoons—Good to Best .....	\$130 to 150

## NOW READY,

In 3 Parts, Demy 16mo, limp,

A ROMANIZED JAPANESE READER; consisting of JAPANESE ANECDOTES, MAXIMS, &c., in easy Written Style, with an ENGLISH TRANSLATION and NOTES. By BASIL HALL CHAMBERLAIN, Professor of Japanese and Philology in the Imperial University of Japan; author of "A Simplified Grammar of the Japanese Language," &c., &c.

PART I.—JAPANESE TEXT.

PART II.—ENGLISH TRANSLATION.

PART III.—NOTES.

PRICE, \$2.50.

The *Hingo News* thus refers to the work:—

We have to acknowledge the receipt of "A Romanized Japanese Reader," consisting of Japanese anecdotes, maxims, conversations, &c., by Mr. B. H. Chamberlain, the author of the Grammar of the Japanese Language which was published a few months ago. The Reader is in three parts of convenient size, well bound, and the typography reflects much credit upon the *Japan Mail* office, where the work was printed. Part I. contains the Japanese text of the anecdotes, &c., Part II. an English translation, and Part III. is devoted to copious notes intended to give information concerning the persons and places mentioned in the Reader, to explain allusions, and in certain cases to bring out the literal meaning in a clearer manner than was possible in the translation. Mr. Chamberlain is such an acknowledged authority upon everything connected with the Japanese language, and has always been so thoroughly painstaking and conscientious in the preparation of his various publications, that students may well accept with confidence his latest work. In conjunction with the "Simplified Grammar" the "Reader" ought to prove of great benefit to all persons engaged in studying the language of Japan, and indeed to any foreign resident who wishes to speak correctly when venturing upon the vernacular.

LONDON: TRÜBNER & CO. YOKOHAMA: KELLY & WALSH, Limited.

Yokohama, June 4th, 1886.

KEATING'S POWDER.  
KEATING'S POWDER.  
KEATING'S POWDER.  
KEATING'S POWDER.

KILLS BUGS,  
FLEAS,  
MOTHS,  
BEETLES.

THIS POWDER is quite HARMLESS to ANIMAL LIFE, but is unrivalled in destroying FLEAS, BUGS, COCKROACHES, BEETLES, MOTHS IN FURS, and every other species of insect. Sportsmen will find this invaluable for destroying fleas in their dogs, as also ladies for their pet dogs.

THIS ARTICLE has found so GREAT a SALE that it has tempted others to vend a so-called article in imitation. The PUBLIC are CAUTIONED that packages of the genuine powder bear the autograph of THOMAS KEATING. Sold in Bottles.

KEATING'S WORM TABLETS.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

**ATKINSON'S ENGLISH PERFUMERY.**

Renowned for nearly a century, surpassing all others for its lasting and natural fragrance. **ROSE SHIRAZ**—PARIS, 1875; **ORANGE**, 1884, for the eminent excellence of quality.

**JOCKEY CLUB**—**WATER**—**SPRING FLOWERS**—**ATKINSON'S RENOWNED ENGLISH LAVENDER WATER**—and other well-devised and lasting odors.

**ATKINSON'S ORIENTAL TOOTH PASTE.** Unrivalled for cleansing, beautifying and preserving the teeth and gums.

To be had of all Dealers, and of the Manufacturers—**J. E. ATKINSON,** 94, OLD BOND STREET, LONDON.

Observe Trade Mark—A white horse on a golden globe.

"FAIS CE QUE DOIS; ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 23RD, 1886.

### BIRTH.

At No. 7, Kaga Yashiki, Tôkyô, on the 19th instant, the wife of Dr. CARGILL G. KNOTT of a Daughter.

### DEATH.

On October 18th, Mr. HINRICH AHRENS, aged 44 years

### SUMMARY OF NEWS.

H.I.H. PRINCE HARU, visited the Koishikawa Arsenal the 15th instant.

THE Oriental Painting Exhibition was opened the 15th instant at Denbôin, Asakusa.

A NUMBER of distinguished officials have established a Sporting Club in the capital.

JAPANESE gentlemen residing in Yokohama propose to establish a female school in Honcho.

A SUDDEN change in the temperature at Shinano on the 4th inst. ended in a gale and a fall of snow.

THE opening ceremony of the Kyôto Merchants and Manufacturers' Bank took place the 17th instant.

THE Conference on Treaty Revision resumed its sittings at the Foreign Office in Tôkyô, the 20th instant.

MR. TSUJIMOTO, of the Japanese Legation at Korea, died on the 6th inst., in the Nagasaki Hospital.

THE Autumn Meeting of the Nippon Race Club will take place on Tuesday next and two following days.

A MEETING was held in the Naval Department the forenoon of the 18th instant. Vice-Admirals Kabayama, Maki, Nirici, and Nakamura, and

Rear-Admirals Hayashi, Yanagi, Ito, Aiura, and Matsumura, were present.

A CRICKET match was played to-day, Yokohama Club v. The Fleet.

GENERAL TAKASHIMA, commanding the Osaka District, inspected the Otsu Garrison on the 13th instant.

THE Government contemplates establishing a Japanese Consulate at Liverpool and appointing an honorary Consul.

It is stated that the Nippon Railway Company propose the construction of a line from Kobe to Shiomonoseki.

An amateur dramatic performance was given last night at the Public Hall in aid of the funds of that institution.

COUNT KORODA, who arrived at St. Petersburg the 1st instant, proposes to start for Germany about the 25th instant.

MR. YOSHIKAWA, vice-Minister of State for Home Affairs, left the capital the 16th instant for Toyama Prefecture.

MR. YAMADA TADAZUMI, a clerk in the Foreign Office, has been appointed to a post in the Japanese Legation at Paris.

OWING to the abatement of cholera, the sanitary offices established in the Barracks will be closed about the 15th instant.

AN athletic meeting, under the auspices of the Yokohama Cricket and Athletic Club, will take place on Saturday next.

THE annual ceremony of the *Gakushu-in* (or Peers' School) took place the 18th instant in the institution, Mr. Otori presiding.

THE total number of applicants for shooting licences to the Metropolitan Police Office from the 5th to 18th instant, was 219.

THE Law Consultative Committee met the 18th instant in the Judicial Department, Mr. Ozaki, President of the Taishin-in, presiding.

CHOLERA having virtually disappeared in Tôkyô, the restrictions hitherto imposed upon places of public amusement have been removed.

A SECOND consignment of silkworm eggs (1,229 cards) arrived in the warehouse of Mr. Shibusawa, the 12th instant, from Yanagawa.

A PROPOSAL for a further extension of the Osaka-Sakai Railway will be laid before the shareholders at a meeting shortly to be held.

A MAN has been convicted at the Kobe Saiban-sho of opium smoking, and sentenced to two years' imprisonment with hard labour.

VICE-ADMIRAL R. V. HAMILTON, C.B., arrived here on Saturday last, with the Fleet from the North, and is at present at Miyanoshiba.

THE Temporary Construction Bureau has re-

quested H.E. Viscount Shinagawa, Japanese Minister to Berlin, to engage a number of German workmen.

MR. HINRICH AHRENS, head of the firm H. Ahrens and Co., of Yokohama, died of cholera on the 18th inst., after a few hours' illness.

MR. B. H. CHAMBERLAIN has been appointed one of the members of a committee for the compilation of Japanese educational books.

MR. MASUDA, of the Mitsui Bussan Kaisha, will leave next month on a tour of inspection of the Company's European and American branches.

COUNT OYAMA, who proceeded to Nasu the 16th instant, to inspect the reclaimed lands in the locality, returned to the capital the 17th instant.

THE Osaka-Sakai Railway Company have decided to construct an iron bridge over the Yamatogawa at an estimated cost of yen 30,000.

A BATCH of workmen from a match factory at Kobe have been engaged by a foreigner to go to Amoy, where he is about to start in that business.

THE first snow of the season fell on Asamayama and other peaks in Shinshu the evening of the 14th instant, lying to a depth of about four inches.

THERE has been but a small demand for subsidiary silver in exchange for notes up to the present time, people evidently preferring paper money.

GENERAL KATSURA, Vice-Minister of State for War, accompanied by a number of military officers, visited the Koishikawa Arsenal the 15th instant.

THE cholera returns from Okinawa show that, from its appearance on the 10th of September to the 4th inst., 239 cases occurred, resulting in 175 deaths.

REGULATIONS for the issue of Redemption Public Loan Bonds, under Imperial sanction, and rules of procedure for the same, have been published.

ON objections raised to the Registrar's Report in the *Clarissa B. Carver-Glamorganshire* case, judgment has been given in favour of the *Carver*.

CHINESE in Kobe have purchased timber on an extensive scale, with the object, it is stated, of exporting it to China for purposes of railway construction.

MR SHIBUSWA EIICHI proposes to hold a meeting shortly in the Tôkyô City Government offices to discuss the question of raising funds for the Orphan Asylum.

H.I.H. PRINCE ARISUGAWA, commanding the Imperial Body-guards, visited the Barracks of the Cavalry and Engineers of the Body-guards, the 15th instant.

A REGATTA promoted by the naval officers of the *Suikosha*, which had been postponed owing to

the prevalence of cholera in the capital, will come off about the middle of November next on the Sumida river.

COUNT KURODA, who is at present staying in St. Petersburg, has intimated to the authorities that he had been invited to an audience by H.I.M. the Czar.

THE British Squadron arrived here on Saturday last from the North. It consists of the *Audacious* (flagship), *Cleopatra*, *Constance*, *Leander*, and *Wanderer*.

APPLICATIONS for admission to the Doshisha at Kyôto have become so numerous that additions have had to be made to the buildings for the accommodation of students.

CHIARINI'S circus will remain open on the present site until the 24th instant, when it will be removed to unoccupied ground at the old Naval Department in Tsukiji.

COUNT INOUE proposes, it is said, to invite a distinguished party to witness a *no* performance on the occasion of H.I.M. the Emperor's Birthday the 3rd proximo.

THE Government contemplates forming another Park at Yushima, Tôkyô, by joining the ground in the enclosure of the Kanda Myôjin and the site of the Tôkyô Library.

It is stated that the Asiatic Exposition, which it was proposed to open in Tôkyô in 1889, has been given up, and a National Industrial Exhibition will be held instead, in 1890.

MR. W. GOWLAND, Chemist and Metallurgist of Osaka Mint, whose term of service was to expire in February next year, will, it is said, be réengaged for another three years.

CHIEF Inspectors of Police in Cities and Prefectures will assemble in Tôkyô before the end of this month, to attend a meeting which will be held shortly in the Home Office.

THE actors of Osaka are inaugurating a movement for reform in theatres, and for the establishment of a training institution for aspirants to fame on the boards.

THE total number of cholera patients in Kyôto and neighbourhood since the first appearance of the disease to the 12th instant was 2,837, of whom 527 recovered and 2,215 died.

It is stated that the receipts of the Nippon Yusen Kaisha for freight for the twelve months ending the 30th ult., were *yen* 3,700,000, the net profit on which was *yen* 700,000.

THEIR IMPERIAL HIGHNESSES PRINCE AND PRINCESS KACHÔ, Mr. Takezoye, late Japanese Minister to Korea, and other gentlemen, numbering about 300, are at present staying at Atami.

ADMIRAL ENOMOTO, Minister of State for the Communications Department, gave an entertainment the 16th instant to the higher officials of his Department at his country residence at Mokuajima.

A MEETING was held the 19th instant in the meeting hall of the Bankers' Club, at Sakamotocho, to discuss the question of raising funds to reform the present system of Japanese theatres. Messrs. Shibusawa Eitichi, Okura Kihachiro, Komuro Shinobu, Masada Takashi, Fukuchi

Genichiro, Yasuda Zenjiro, Hara Zenzaburo, Iwasaki Yanosuke, Kawada Koichiro, Ijuin Kanetsune, and Kawasaki Hachiemon were present.

THE business of the Kyôto Weaving Company has become so extensive that the proprietors have found it necessary to employ steam. Machinery costing *yen* 30,000 has just been erected.

PRINCE SHOTAI, the former chief of Riukiu, has applied to the Nobles' Bureau for permission to reside at Shuri for two years with the object of making arrangements for the promotion of agriculture in the island.

MR. TANABE, Governor of Kochi *Ken*, has arrived in Tôkyô for the purpose of soliciting assistance from the authorities for the sufferers by the recent typhoon and disastrous floods which occurred in his prefecture.

THE regatta of the Yokohama Amateur Rowing Club took place yesterday. The weather was dull and rather cold, but fortunately the rain, which all day threatened to come down, held off until the conclusion of the programme.

THE Prefect of Hyôgo and Mrs. Uchimi have issued invitations to a distinguished company to a dinner which will be given in the hall of the Hyôgo Government Offices, the 3rd proximo, in honour of H.I.M. the Emperor's Birthday.

CHINESE merchants, taking advantage of the reduced freights, are shipping unusual quantities of Japanese goods, in reference to which a vernacular journal remarks:—"The demand has increased the price of our manufactures, but still orders keep pouring in."

MR. KOYANAGI SANTARO, residing at Mayasakimura, Kanbaragori, Echigo, has discovered a silver mine in that neighbourhood, and Messrs. Seki, Abe, and Shida are now making preliminary arrangements with the intention of commencing mining operations.

MR. MASUDA MASANA, a proprietor of vine-yards in Banshu, who is a well-known agriculturist, planted some time ago 18 kinds of Manila tobacco brought from America, in Settsu and neighbourhood. The plants are said to have been cultivated with good results this year.

MESSRS. KASE SHOTARO and YAMADA, graduates of the Tôkyô Mechanics' School, who have been ordered to proceed to Germany to investigate the condition of architecture in that country, will leave Japan about the beginning of next month. It is said they are to remain abroad for four years.

IMPORTS require but small notice, business having been light all round. For Yarns and textile fabrics the demand has been small, though a long list of articles have been sold in small lots, a condition of the market said to be the forerunner of more enquiry. Nothing of note has been done in Metals, except in Wire Nails, which have had a fair turn. Kerosene is apparently not wanted, the market having been unusually quiet all the week, and Sugar has only been dealt in in a retail way. In Exports, Silk has been strong at advanced prices, and more would have been bought but buyers seem to have reached the end of their ability to rise. Very much the same may be said of Waste, and both Raw and Waste have come in in such

volume on account of the high prices ruling—quite—25 per cent. higher than at same time last year for Raw—that the stock of each has risen to about 10,000 piculs. Tea was somewhat neglected early in the week, but a spurt at the latter end brought the total sales up to a moderate figure. Prices are a little harder for the sorts in request—common and medium—and shipments have been heavy. Foreign Exchange, which has fluctuated slightly, closed firm at a shade under last week's rates.

#### NOTES.

AN Imperial Ordinance recently promulgated announces the issue of a new form of public loan bonds. They are to be called Redemption Bonds, and the declared purpose of their issue is to substitute them gradually for all loan bonds at present in existence which bear interest at the rate of six per cent. and upwards. The total amount of the Redemption Bonds is limited to 175 million *yen*, and they are to carry interest at 5 per cent., payable at intervals of six months. Nothing is determined as to the time when their issue shall commence, or the quantities in which they shall be issued. These and other essential details are left to the discretion of the Minister of Finance. The Bonds will be payable to bearer, but it is provided that, if desired, they may be registered in the name of their owner—a provision doubtless intended for the convenience of persons who derive their income from this species of investment. During a term of five years after issue the Bonds are to remain undisturbed in the hands of the public. They will then be redeemed by lot, the redemption spreading over a period of fifty years. The Ordinance contains nothing to show by what process an exchange is to be effected between these Bonds and the similar securities which they are intended to replace. We infer, therefore, that the operation will simply amount to the purchase, on Government account, of whatever old bonds—satisfying the prescribed conditions—are offered for sale in the open market, and that the funds to cover these purchases will be obtained by selling the new Bonds. It may be mentioned here that the Ordinance embodies a clause sanctioning the exchange of existing loan bonds for the new five-per-cent. securities at the request of the owners of the former. Evidently the object of this is to enable nobles and other holders of Pension Bonds to convert their scrip into the new securities at market rates, without any intermediate process of sale or purchase.

A RUSSIAN staff officer, whose name when written with the Japanese syllabary reads Rasooanoff, published, three years ago, a brochure entitled "The Future of an Island." The nature of the contents of this book would certainly have attracted attention at once but for the language in which it is written. The author, after describing the position and resources of Tsushima, and commenting at length on its immense value as a naval station, strongly advocates its annexation by Russia. The *Nichi Nichi Shimbun* recently translated this brochure, and now makes it the text of an editorial, vehemently condemning the apparently apathetic attitude of the official and public mind with regard to such a vital matter. In support of his scheme of annexation, M. Rasooanoff, if that be his name, dwells on the absorbing desire of

Germany to become a great naval Power and to secure a firm footing in the Far East. He even quotes from a German journal statements pointing to a project on the part of the Cabinet at Berlin to obtain possession of Tsushima. The *Nichi Nichi Shimbun* refuses to believe that any such design exists in Germany, but thinks that the importance of the subject dictates its discussion. "The possession of Tsushima by a hostile Power," says our Tōkyō contemporary, "signifies to Russia the effectual closing of the shortest passage for her war vessels to the China Sea, and the conversion of the Sea of Japan into a sort of Black Sea or Baltic Sea; while to the Power holding it, the island would furnish an excellent basis of operations against the eastern coast of Russia, Wladivostok, and the districts about the southern Usuri. It is on this account that Russia naturally feels uneasy about Tsushima, and considers that her security in the event of war would be furthered by Japanese neutrality. The British occupation of Port Hamilton—which, it may be observed *en passant*, bears a close resemblance to the attempt made by Russia, several years ago, to appropriate a naval station in Tsushima, in anticipation of a similar proceeding on England's part, in no way detracts from the importance of Tsushima. Indeed, we are disposed to think, that the value of the latter place has been enhanced by the fate of the former. Where, if not at Tsushima, is there to be found a position that grips, as it were, the throat of the passage between Russia, Korea, Japan, and China? Japan has reason to congratulate herself heartily that her dominions include such a position. But how can the defences of the country be considered complete so long as this vital point is left uncared for? Now that troublous times in the Far East are at hand, no hesitation should be shown in developing to their highest pitch the strategical capacities of Tsushima."

The *Nichi Nichi Shimbun* is scarcely just when it asserts that Russia's operations at Tsushima in former years were dictated by the desire of anticipating similar action on England's part. It remains to this day quite uncertain whether Russia had really conceived, at that time, any intention of annexing Tsushima, and there is nothing whatever to show either that she suspected England of such a design, or that England entertained it. For the rest, it must be remembered that, thirty years ago, all the islands lying at any considerable distance from the coasts of China, Japan, and Korea, were regarded by Western Powers in the light of "unconsidered trifles," to be snapped up by anyone who wanted them. Things have assumed a very different complexion now. The ownership of such islands is well established, and the relations between their owners and Western States render it scarcely possible for any self-respecting Power to attempt a deliberate act of forcible annexation, except on the eve, or during the course, of an international crisis. M. Rasoanoff's (?) brochure is less excusable, from this point of view, than Captain St. John's recommendations with regard to certain Korean islets and Commodore Perry's urgent suggestions about the Riukiu group. It is wisest, however, to include all such writings in the same category. They impose no responsibilities on Governments, and serve only to arouse the attention of the Powers whose interests are threatened. At the same time, we

cannot think that any European State, possessing a post of such immense strategical importance as Tsushima, would have left it, so long as it has been left by Japan, virtually unprotected, in the face of contingencies which grow yearly more imminent.

We have no newspapers in Japan like the *Shen-pao* of China. If we had, there might be wigs on the green, to use a vulgar but expressive phrase. The *Shen-pao* opines that the "murder" of Chinese sailors at Nagasaki is a link in the long chain of indignities which Japan has lately been putting upon her big neighbour. They began, did these indignities, in Formosa, when China deemed it wiser to purchase the departure of the Japanese troops than to essay the task of thrusting them out by force. They went on in Riukiu, which was appropriated and converted into a Japanese prefecture. They were continued at Tientsin, where Japan induced China to sign away her exclusive claims in Korea; and they culminated at Nagasaki, where twenty constables environed 400 Chinese man-of-war's men and cruelly broke them up. The time has come, therefore, when China should take the *Shen-pao's* advice and teach Japan a lesson. Nothing could be easier. Here is the programme:—"There are some 100,000 troops in Chihli and Shingking; let 20,000 or 30,000 of these be despatched with fifteen vessels of war under an energetic Commander-in-Chief. Station two vessels at Nagasaki and two at Kobé to protect our nationals; let the strait between Korea and Japan be guarded by six more, while the remaining five watch the coast. We shall thus have Japan in our grip, and the voice of our negotiators will be strengthened in the debates to follow. They have sensible statesmen even in Japan who will appreciate our attitude and will see that the day for bullying and talking big is past. They will return Riukiu, they will repent of their wrong-doing in Korea, they will punish condignly the peccant Governor of Nagasaki and his brutal police, they will compensate our ill-treated sailors, and defray the expenses of our diplomatic negotiators; the recent treaty will be amended clause by clause to suit the requirements of justice, and peace between the two countries will be assured for thousands of years." Excellent advice this, but we cannot fully agree with the results which the *Shen-pao* predicts when these fifteen ships and thirty thousand braves appear upon the scene. Instead of returning Riukiu, repenting of her wrong-doing in Korea, punishing condignly the peccant Governor of Nagasaki and his police, compensating China's ill-treated sailors, defraying the expenses of the Celestial diplomats, and amending the Li-Ito Treaty clause by clause, Japan will proceed quite differently. She will annex the fifteen Chinese ships and add another big link to the chain of indignities.

Devout Japanese having been accustomed for centuries to believe in manifestations of divine power, we are not surprised to find that the singular good fortune enjoyed by the congregation of the Christian Church at Asakusa has been construed, in some quarters, into an evidence that heavenly tutelage is extended to followers of the Western faith. The congregation numbers three hundred persons, many, if not the majority, of whom are of very lowly position, and live in extremely unsanitary

districts of the city. Yet among the whole three hundred, only one fell a victim to the recent epidemic of cholera. It would be as erroneous, we imagine, to ascribe this to mere accident as to place it to the credit of a kind Providence. The probable explanation is that these Christians, whose adherence to the doctrines of Christianity either bespeaks or has produced exceptional faith in all Western systems, were careful above their fellow-residents to observe the hygienic instructions issued by the authorities and recommended by their religious teachers. Even on this hypothesis Christianity earns some vicarious reputation.

The incident reminds us of a conversation which took place, some years ago, between a prominent Japanese statesman and a missionary more zealous than discreet. The latter asked the former, point blank, whether he, the statesman, was favourable to the spread of Christianity in Japan. While the question was being translated into Japanese, more than one of the bystanders pondered the old problem whether precipitancy or procrastination is responsible for the greater number of failures in life. At that particular time, any official declaration of support might have been almost fatal to the cause of Christianity, while a hostile avowal would have been scarcely less embarrassing. The statesman was fortunately equal to the occasion. "Tell the reverend gentleman," he said, "that the Christian subjects of His Majesty the Mikado pay their taxes regularly, never give any trouble to the police, and lead lives which we would gladly see imitated generally." The Christian congregation in Asakusa justify this panegyric. It is probable that if the other citizens of Tōkyō had been equally careful to observe the behests of "those that are set over them," the sanitary record of the capital during the cholera epidemic might have been much better than it was.

THE name of Duleep Singh has of late been repeatedly mentioned not only in English but also in continental, especially French, papers. His undeniable defection both from the English cause and the Christian faith has given rise to the most various comments. When but seven years of age, Duleep Singh succeeded to an empire embracing the entire Punjab, conquered and subdued by his valiant ancestors and their numerous Sikh followers. But it was the boy's misfortune to be placed under the regency of his mother, then a restless and ambitious woman, who was not averse to testing England's strength and found herself in consequence soon involved in war. The British, after battles such as had never previously been fought by them on Indian soil, overran the Punjab, and seized Lahore with all its treasures, among them the famous Kohinoor, now the best known of England's crown jewels. Duleep Singh was taken captive, and Dr. Login was entrusted with the Prince's education. Dr. Login had received strict instructions not to influence the Prince in religious matters, but the latter, becoming acquainted with the Christian religion through a Brahmin friend, asked permission to attend Dr. Login's family prayers. This request was referred to the authorities in India and permission was granted. His baptism afterwards was, somewhat it seems against his will, deferred till his sixteenth year, when according to Indian usage he became of age. In 1854, the Prince removed

to London and resided there permanently. His aged mother wished to see her son once more before her death. Disregarding all prejudices of caste, she set out on the voyage and met her son only to die on British soil. Her last wish was that her bones should rest with her ancestors and that her son should attend the funeral in India. In consequence of this he visited India. Passing through Egypt he met a lady teacher in a Mission School, Miss Bamba Mueller, through her father of German, and through her mother of Coptic, descent, and being strongly impressed by her beauty and ability, he married her, bestowing valuable gifts upon her friends and giving a large sum of money to the American Mission in Egypt. After this, that is since 1864, Duleep Singh led a retired life in England and his activity seemed to spend itself during the last twenty years in exclusively benevolent pursuits. Two years ago, unexpected to all and surprising to his best friends, the news was floated through India and Europe that Duleep Singh, for thirty years a Christian living in the midst of a Christian nation, desired to return to the teachings of Nanaka, and that already a "guru" or teacher was on the way to England to explain to him the mysteries of the Holy Book of the Sika faith. It is difficult to say what exactly produced so sudden and startling a change. Some think that, moving in a society partly affected by materialism, his religious convictions underwent a complete change; while others with greater probability look for the cause in the Prince's financial difficulties and his consequent dissatisfaction with the British Government. At any rate, when he found himself in straitened circumstances, he remembered the ancient glory of his ancestors; opened up old questions which had been settled long ago, and dwelt with emphasis on what under the circumstances he easily persuaded himself to believe; namely, that Great Britain had but shabbily rewarded him for the loss of a crown. Russia was at once suspected of having influenced the Prince, not by the British Government, but by the English press; and when Duleep Singh declared his intention of returning to India, many voices were raised against the project. But the Government, generous and strong, allowed him to depart in the *Verona*, assigning him residence in Southern, instead of Northern, India. Before his departure he issued a proclamation which was to be forwarded to his future co-religionists. In it he incidentally complained of being forbidden to reside in the Punjab, "a noble reward indeed for my unchanging loyalty to the Empress of India." The result of this proclamation, when it became known in England, was the detention of the Maharajah at Aden.

\* \* \*

The consequences of Duleep Singh's defection are not likely to be what a sensational report of the *Journal des Débats* anticipates. If, as the Paris journal claims, great events are imminent in central Asia, they will scarcely be of Duleep Singh's making. The Prince has been too long away from India to exert an appreciable influence upon the masses. Among 23 millions of Bengalees, according to the last Indian census, only 850,000 have yet adhered to the teachings of Nanaka, and these are by no means the war-like fanatics who in 1849 compelled the Company to annex the Punjab in order to protect the then British India against the annoyances invariably caused by

half independent and desperate border tribes. Since then the old religious ardour of the Sikh race has cooled, and their valour has found abundant scope under the flag of Great Britain. The danger apprehended from the Native States of India is exaggerated, and their rulers are as well aware as any one else that any movement on their part against Great Britain, before Russia has entered India, would be the inauguration of a suicidal policy, exposing them to the most serious dangers. Many of them are sincerely loyal, and many more seem to discern clearly that their continuance in power is dependent on the permanency of British rule, very much in the same way as the Princes of the German confederation find that the maintenance of the Empire is the surest guarantee of the undisputed possession of their own rights and privileges. During the recent Afghan scare the Indian princes professed their loyalty without reserve, and so long as their interests coincide nearly with those of Great Britain, little danger need be apprehended. Only a great disaster, it would seem, could array them against their Suzerain, and in that case also their motives and interests would be identical with those they entertain at present; namely, the maintenance of their present half independent position. England's strength will be her safety. In no part of the world do English interests appear safer than in India, and hence most men will be disposed to agree with Baron von Huebner's dictum, who having grown old in the service of Austrian diplomacy, summarized his impressions of British rule in the words: "In India England has nothing to fear but herself." In his opinion British rule in India could be overthrown only by England's own mistakes, while in the absence of such errors the power of all her enemies combined to this end would be exerted in vain.

According to the *Yiji Shimpō*, the conference at Nagasaki is not devoid of sensational incidents. It had been arranged that at the sitting on the 9th instant Chinese witnesses should be examined, but when the representatives met on that date the Japanese commissioners suggested that the evidence adduced up to this point should be reviewed and discussed. The Chinese representatives assented to this on condition that the letters of indictment prepared by the Japanese officials be made the basis of the discussion. To this condition, however, the Japanese commissioners refused to accede, pointing out that as the conference had already committed itself to the proposition that the evidence of witnesses of both nationalities should be taken in order to punish the guilty persons, no documents compiled by one side only before the sitting of the conference could be made the subject of discussion. At the next conference, on the 11th instant, the Chinese Consul, Mr. Tsai, proposed himself as a witness on behalf of his countrymen, upon which Mr. Denison asked the question: "Who are you?" "I am a Consul," was the reply. Mr. Denison again asked, "Of what country?" The Chinese Consul was much annoyed by these questions, and replied as follows:—"You must be perfectly aware, Mr. Denison, that I am the Consul of Great China. You insult me, when you put such questions to me in language that is barely polite. Henceforward, I shall only speak to Messrs. Kusaka and Hatoyama; I shall never again have anything to do with you."

Mr. Denison said: "You surprised me by your own proposal to become a witness, and I was forced to ask you these questions. If you are, then, a Chinese Consul and Commissioner, you cannot appear in the character of a witness. That is evident from your own words. With such a person I do not care to have anything to do in the present negotiations." The conference hall is said to have rung with passionate language, a great deal of which, we (*Japan Mail*) suspect to have had no reality outside the imagination of an enterprising news monger.

It is gratifying to notice the success of the L.L.A. scheme of the Scottish University of St. Andrews. Started in 1879 with the view of furnishing a much-needed test of the qualifications of lady-teachers, it has grown in popularity until it has centres all over the world and a yearly roll of nearly 400 candidates. The Universities of London and the University Colleges of Liverpool, Bristol, and Leeds open their doors to the scheme; Paris, Coblenz, and Pietermaritzburg are French, German, and South African centres. The standard is pitched high, as high as for the men's degree of M.A. Twenty-four subjects of examination are offered, to pass in five of which secures the title of L.L.A. (Literate of Arts). These 24 subjects are arranged in five groups as follows:—

- (a) The department of *Language*, including English, Latin, Greek, French, German, Italian.
- (b) The department of *Philosophy*, including Logic, Moral Philosophy, Political Economy, Education, and History.
- (c) The department of *Science* (No. I.), including Mathematics, Natural Philosophy, Chemistry, Astronomy, and Comparative Philosophy.
- (d) The department of *Science* (No. II.) including Physiology, Zoology, Botany, and Mineralogy.
- (e) The department of *Theology*, including Church History, Systematic Theology, Biblical Criticism, and Hebrew.

Seventy-five candidates have gained the honourable distinction in 1886. We see no reason why Tōkyō should not become a centre. The Japanese "girl graduate" would then rank on the same intellectual platform with her English, French, and German sisters. Seeing that we have the pleasing innovation this winter of a lady undergraduate obtaining admission to one of the colleges of the Imperial University, it does not seem idle to hope that our suggestion may bear fruit.

We should have thought that the Japanese Educational Society would have been among the very first to assist the objects of the Romaji-kai by adopting the latter's carefully elaborated system of transliteration. Or, even supposing that the Society shrinks from pledging itself to the possibility of substituting Roman letters for ideographs, might it not at least pay the Romaji-kai the compliment of employing the methods of spelling which have received the endorsement of nearly all Japanese and foreign scholars who make a specialty of this subject? It is plain, however, that the Educational Society pays no attention whatever to the Romaji-kai's system, else we should not find among its Romanized lists of officials such names as "Sinji," "Kana-ye," "Tamotsu" and so forth. What a pity it is that greater unanimity and co-operation cannot be secured with regard to this important reform. If such a body as the Educational Society remains outside the pale, the success of a movement which would contribute more than anything else to Japan's intellectual progress will be seriously deferred.

Original from

THE *St. James's Budget* has a good deal to say, and says it very well, about the Pope's consent to appoint a Minister President at Peking. The meaning of this step is that the Government of France abrogates its long claimed and stoutly exercised right to protect the Chinese Christians, and, "while glorying above all things in having no religion and no care for religion," appears to be very indignant at the prospect of this loss of power. Strong pressure is brought to bear on the Pope from Paris, and he is threatened with the abolition of the Concordat unless he agrees to some compromise. But, as the *St. James's Budget* justly points out, it is at Peking not at Rome that France should make her representations. Chinese statesmen are utterly weary of the authority asserted by the French Minister over the Christian subjects of the Celestial Throne, and are resolved to get rid of it. "One thing is quite certain," writes the *St. James's*, "from the account we have been able to give of the 'objects and reasons' of the Chinese overtures to the Pope. A Papal Legation being once constituted at Peking—under what style and title the Ambassador may come being quite immaterial—the Ministers of the Empire will hereafter refuse point-blank to recognize any other authority whatever in relation to the affairs of the Christian population. The representative of the French Republic will have no more right or opportunity than the representative of any other foreign Power to interfere with the domestic concerns of China or to pose as champions and guardians of any section of the people. If the Quai d'Orsay prove wise enough to acquiesce in this wholesome supersession of its influence, the change must make for peace. It was right and necessary that by some means freedom of worship and immunity from persecution should be secured to the Christian communities of the East. But the Power that accepts the duty of protection exposes itself to the temptation of abusing the opportunities which the discharge of the duties implies. No one who knows China will pretend that France has shown moderation and discretion in the assertion of her position. The question—and it is one of urgent and vital moment in the politics of Eastern Asia—is whether France will accept the graceful release which the ingenuity of the Peking Cabinet has arranged. M. de Freycinet has to understand that what is required is not that the privilege of interference shall be disguised, but that it shall wholly disappear. Will he have the courage to submit; or will he enter once again on the struggle with Celestial statecraft from which the Republic only lately emerged with so plentiful a lack of credit? Looking at the matter as a purely Asiatic one, and putting aside the distracting issues of European politics and the possibilities of European combinations, it is certain that the Republic, if it attempt to thrust a fresh quarrel on the Court of Peking, will have little sympathy and less support from any of the Western Powers. Russia—which has its own eternal difficulty on the Amoor and its more recent design on Port Lazareff to think of—may think it worth while to connive at a diversion. But England, Germany, America—the nations most largely interested in the commerce of Eastern Asia—will view with impatient displeasure any fresh disturbance of the calm that has happily been restored. Naples sins: Portici suffers. The Chinese mobs who do the work of massacre

and pillage in the Settlements at times of anti-foreign ferment are not nice to distinguish between foreigner and foreigner. France may give the offence; but the outburst French menace will provoke may submerge the unfending communities, whose only 'aspiration' is to be permitted to carry on their trade in peace."

In a portly volume, handsomely printed and embellished by photographs taken by himself, M. Hugues Kraft has published his "Souvenirs de notre Tour du Monde." Like all travellers who make the "grand tour," he found Japan the most delightful among the countries visited, and in deference to this impression, he devotes more than 100 pages out of the 386 which his book contains to a record of what he saw in the Land of the Rising Sun. He is a traveller of a type unfortunately too uncommon. Instead of filling his journal with large deductions founded on mere fragments of evidence, he sets down faithfully and unaffectedly the things he actually observed and heard. The result is that, within the beaten tracks of tourists in Japan, he has compiled a record valuable to foreign readers as a trustworthy account of the people and their ways. It is inevitable that for persons actually resident in the country such a record should not contain much that is interesting or novel. We must except, however, from the latter verdict the inferences which M. Kraft draws from a comparison of what he found in China and Japan. "In Japan," he writes, "the country is everywhere traversed by lines of telegraphs, and several railways have been in use for some years, principally between Kobe and Kyôto, *via* Osaka, and between Yokohama and Tôkyô. In China, the Government hastened to purchase, in order to destroy it, the little iron-road constructed in 1876 between Shanghai and Woosung, and has not yet been able to make up its mind to authorise the establishment of the line which would unite its capital with the rest of the world. What a volume of antitheses might not be written about these two neighbouring nations, so different from one another!" And again:—"If the enviroing beauties of nature influence the character and physiognomy of a people, the Japanese have certainly taken from their bold mountains, as from their smiling valleys, their manners, at once proud and independent, gentle and blithe. When one recalls the Chinese, with their sneering looks and their mein so often unfriendly, one greets with pleasure, at two paces from the Middle Kingdom, a nation modelled on such a different type, whose manners, hospitable, courteous and agreeable, charm from the first moment."

Of course M. Kraft was a little startled when he first found himself in face of that spectacle growing daily less common in Japan—the mixing of the two sexes in a mineral bath. What he says about this is worth quoting:—"Do not veil your face like an austere Englishman, who is scandalised when he sees fairly respectable people dispense with the barriers prescribed by our customs. Wonder rather with us at the decorum which presided at this most original reunion, where men, women and children amused themselves without noise, as without any indecorous pleasantry, plunging into the beneficent douche, or engaging in minutiae of toilette which were incomprehensible to us. What satisfaction it would have given me at that moment to have

a Chinaman by the pig-tail and to plunge him in the waves of the Nuno-biki-no-Taki! I had almost forgotten to mention that the male bathers were, for the most part, runners whose *jinrikisha* were stationed at the foot of the cascades. Ought one to conclude that our coachmen and carters are more or less civilized than these poor coolies?"

We cannot refrain from translating another passage of M. Kraft's work. It contains an allusion to a well known resident of Tôkyô as well as an entertaining critique on foreign life in the settlement of Yokohama:—"On our theatrical tours we were often accompanied by an American, Dr. W. S. B——, of Boston, with whom we became great friends. Almost as Parisian as '*les vrais enfants de Lutèce*,' he conceived while in Paris a love of curios which makes of him a philo-Japanese of the first force, whom this charming country will long retain possession of. Having spent already a year in Japan, he was our fellow-lodger in the Yaami Hotel, in Kyôto, and spoke then of his approaching departure for China and India. But his passion for Japan got the better of him, and he decided to remain there an indefinite time, giving himself the trouble, even, to obtain in Tôkyô, through the assistance of his Legation, a Japanese *maisonette*, where he can abandon himself at his ease to his tastes as a collector. He has adopted a description of life to which few Westerns could lend themselves, but which alone is admissible for one who desires to remain in daily contact with the national civilization of the country. Entirely independent; holding himself apart from the enjoyments of the 'foreign' world; only going to Yokohama on business, he has become more and more initiated into the custom and traditions of Japan. He takes pleasure in discovering things of which ordinary travellers have no conception, and in gaining an insight into delicacies which many others trample under foot, as unconsciously or with the same prejudice as the Japanese thirsting for progress who return from Europe and America imbued with too subversive ideas. The desire for isolation which influences this ardent virtuoso becomes less astonishing to one who observes that, on the hills of the Bluff, in the midst of a society essentially European, the residents and foreign merchants concentrate their activity within an extremely limited circle, avoiding every point of contact with the indigenous world. The English element, which here as everywhere predominates, appears to affect, even more than any other, absolute indifference in this respect—indifference which cannot but surprise and even grate upon the traveller longing for novelty. Outside the relations which business necessarily creates, the majority of the foreign residents do not seek any *rapprochement* with the Japanese, not even by studying their language, which no one gives himself the trouble to acquire, and which has been replaced by a patois as incoherent as it is incomprehensible. This patois is a pendant of the pidgin of the Chinese ports, with this difference that the Japanese, house servants, coolies and merchants have abandoned their idiom to the bad treatment of the stranger, while the Chinese, more exclusive, have taken the English language and distorted it to suit themselves. The residents of Yokohama consecrate to all the worldly amusements of Europe the leisure which the clemency of the weather enables them

to enjoy at all seasons. They dance; they have picnics; they play farces; they organize riding and walking parties; they are passionately addicted to shooting and lawn tennis, in which latter pastime the ladies shine in the first rank. In a word, they do everything that can possibly make themselves or others forget that they are in Japan; in that country so much talked of and in such extraordinary repute that many an European would give months of his life to spend a few weeks there. Do they imagine, these enthusiasts, that to find the true Japan, or what remains of it, the first essential is to get away from Yokohama? If one chooses to follow the European current, one must be prepared to meet at every step the portrait of English sociability, of which the *summum bonum* consists in ceremonial dinners where everyone is 'en grande tenue.' One thus becomes a victim of the delusion that one is always at the same table, adorned with greenery and with flowers in glass vases. The *menu* is invariably the same, from fish with shrimp sauce to pheasant with bread sauce, and the same stilted conversation repeats itself eternally. The ladies rise from table majestically, amid the rustling of silk trains, while the men lounge on their chairs, light manillas and send the bottle round. After the usual imbibing of sherry, port and claret, the elements momentarily separated meet again in the salon, and soft conversations are resumed over a photographic album or the last number of the local Punch, a humorous publication by a draughtsman of talent. The mistress of the house then solicits the inevitable performance; for the hypocritical phrase 'Oh, do give us a song,' is not wanting here any more than in old Albion. The request is immediately followed by melodies such as 'In the gloaming,' 'I am weary,' &c., adored by all the songstresses, who, though otherwise very charming, are often without either voice or ear. If a song does not please, the remarks elicited by the performance are always limited to these words, pronounced with an air of indifference:—'What a very sad song'; while the most enthusiastic admiration never goes beyond:—'Oh! thank you so much!' which phrase is uttered essentially with the lips and is accompanied by the same ineffable smile which greeted the false notes of Mrs. X., the purring of Miss Y., and the melodious reverie of Mrs. Z. These ladies are truly very good-natured to make spectacles of themselves for one another's benefit. But they do it with such perfect resignation that one cannot but feel grateful to them for adding their songs to the programme of the evening, with no other purpose than to provide a subdued accompaniment for the various conversations which are in progress. I do not desire, by these innocent criticisms, to offend the hospitable people whose acquaintance I had the pleasure of making in Yokohama. I wish simply to show once more how squarely and conservatively John Bull transplants into the most distant countries the smallest details of his English home. In that faculty lies the true secret of his genius for colonizing; genius which all we French lack, and without which we shall doubtless remain always."

It is evident that one chief purpose of Mr. Parnell's Bill—the second reading of which was refused by the House on the 22nd of September—was to unite the sections of the Liberal Party;

or, at any rate, to bring about some defections in the ranks of Lord Hartington's followers. The latter object seems to have been achieved, but only to the extent of inducing several of the Unionists to abstain from voting. We are not yet in possession of information as to the numbers in the division on the second reading, and cannot, therefore, say by how much Lord Hartington's strength was temporarily diminished. So far as Mr. Parnell's Bill itself is concerned, the remarkable point about it is that its author and his followers and political associates committed themselves to a prediction which a very short time must either verify or falsify, with a corresponding effect on the credit of the Irish Party. Their prophecy virtually amounts to this—that unless rents are reduced and evictions stopped, Ireland will be the scene of a social war during the winter, and that outrages involving coercion of the severest type will compel the Government to convoke a special session of Parliament, and to legislate in the presence of highly disturbing circumstances. The Government, on the contrary, deny that any such danger is imminent: or that the evidence in their possession proves the tenants to be menaced with ruin and unable to pay rent because of the fall in the prices of agricultural produce. In this attitude the Ministry has the support of *The Times* and other leading journals, all of which declare that no crisis exists such as would justify urgency legislation of the nature of Mr. Parnell's Bill. The Parnellites have one advantage, or disadvantage, in this business. They can very easily bring about outrages which will partially fulfil their prediction; while, on the contrary, any tendency on the part of the Government to overstep the limits of the ordinary administration of the law, will surely be construed as evidence against the soundness of their judgment in rejecting the Bill. Ireland is indeed about as puzzling a problem in statesmanship as could possibly be conceived. One is almost driven to think that over-tinkering is mainly responsible for the miserable condition of the vessel.

*THE London Economist* is a persistently anti-silver organ, being apparently unable to disabuse itself of the suspicion that the efforts and arguments of bimetallicists all the world over are influenced solely by a desire to restore prosperity to the silver mines of the United States and Mexico. From these mines issue fully two-thirds of the world's silver, and the canny *Economist* "readily understands how anxious they are in America that Europe should back them up in replacing that metal upon its old level." We might, therefore, expect to find the *Economist* stoutly supporting the grand theory of the gold monometallists; namely, that the remarkable fall in the gold-value of silver is due, in the main, to over-production. That, it will be remembered, was the position taken by several gentlemen who recently corresponded with this journal on the subject; we, on the contrary, maintaining that the change in the price of the white metal is chiefly attributable to its demonetization, and that, in point of fact, the annual production of gold has shown much greater variations than that of silver. It may interest our correspondents to know that their most doughty champion, the *Economist*, disagrees *in toto* with them and agrees entirely with us on this particular phase of the discussion. Here is what it says in one of its latest issues

to hand:—"But though in the past quarter of a century the gold yield has decreased, and that of silver increased, if we carry back the comparison to a date prior to 1850, it will be found that the gold supplies have increased the more considerably. Over the longer periods, therefore, we may affirm that there have been no such violent variations between the rates of production of the two metals as might be supposed. The increase in both gold and silver has been very nearly equal. Their consumption, however, is an equally important consideration. Since 1876, the United States have increased their coinage of silver by full 5,000,000*l.* a-year (one-fourth of the world's production), and the world's consumption in the forms of plate, jewellery, the arts and sciences is undoubtedly as great as ever. Great Britain has, on the average, coined more silver since 1871 than she did before, and the export of silver to the East has been as follows:—

	TOTAL.	ANNUAL AVERAGE.
1885	.....	8,011,000
1880-84	23,391,000	6,478,000
1875-79	44,514,000	8,903,000
1870-74	70,536,000	14,107,000
1865-69	10,065,000	2,121,000
1860-64	39,912,000	7,982,000

This does not look like any material curtailment of the consumption of silver in the East. There have been fluctuations; but certainly, in the eleven years from 1875, the shipments of silver to the East have been more than double what they were in the previous eleven years, and coupled with the extra coinage in America, the increase in the world's production has been more than absorbed. No; if we seek to know how it is that silver has fallen, we must look for the explanation to the countries forming the Latin Monetary Union. Bi-metallic though they are, in name, they have not had the courage of their opinions, as the following figures clearly prove:—

SILVER COINAGE OF PRINCIPAL COUNTRIES FORMING THE LATIN MONETARY UNION.				
	FRANCE.	BELGIUM.	ITALY.	TOGETHER.
1884	1,050,000	nil.	85,000	80,000
1883	nil.	nil.	250,000	250,000
1882	40,000	nil.	25,000	87,000
1881	200,000	4,000	33,000	237,000
1880	nil.	31,000	nil.	31,000
1879	nil.	nil.	800,000	800,000
1878	73,000	nil.	360,000	433,000
1877	600,000	nil.	882,000	1,482,000
1876	2,106,000	432,000	1,278,000	3,816,000
1875	3,000,000	590,000	2,000,000	5,590,000
1874	2,424,000	470,000	1,400,000	4,294,000
1873	2,251,000	4,468,000	1,091,000	12,410,000
1872	1,073,000	408,000	1,424,000	2,905,000
1871	1,035,000	950,000	1,440,000	3,425,000
1870	2,762,000	2,093,000	1,194,000	6,049,000

For years these countries afforded an important outlet for the steadily growing production of silver, but they became nervous, because the world would not back them up in a fallacy; and now, casting their theories aside, they are in reality more mono-metallic than England or Germany."

In colloquial Japanese there is a pithy expression, *nido bikkuri*. It is generally used of a person who, seen from a distance, looks very attractive, but who when viewed closely, is found to be startlingly homely. We are reminded of this by the advertisement which recently appeared in the local press with regard to a meeting to organize an art exhibition, and by the result of the meeting. The advertisement ran thus:—"A meeting of those favourable to the holding in Yokohama of an exhibition of pictures, curios, and other art objects for the benefit of the funds of the Ladies' Benevolent Association will be held," &c. This was in itself a surprise. The Ladies' Benevolent Association is a thoroughly popular charity, and did its funds stand in need of replenishment, there

would surely be no lack of liberal subscriptions. The general impression hitherto had been that the Association was well supported—an impression founded on the fact that no public appeals were made on its behalf, and that it showed no particular alacrity in collecting the subscriptions of its members. Under the circumstances, the notion of an art exhibition as a means of raising money appeared more than doubtful. Such exhibitions have never proved profitable in Tôkyô, although circumstances—as regard expense, availability of specimens, and the nature as well as the size of the public to be appealed to—are incomparably more favourable there than in Yokohama. However, there was the advertisement. An exhibition “for the benefit of the funds of the Ladies’ Benevolent Association” was projected. Of that there could be no doubt. But when “those favourable” to the scheme met at the Chamber of Commerce Rooms on the 13th inst., another surprise was in store for many of them. They learned that “the principal object of the projectors was to have an exhibition” and that “the motive was not purely philanthropic.” They also learned that, whereas their co-operation had been solicited in the cause of the Ladies’ Benevolent Association, “the Association was not in immediate need of money; its funds were not excessive, but it was able to pay its way.” Indeed, one report of the meeting ascribes to the chairman a statement that “the present appeal was not on behalf of the Association, but on behalf of holding an exhibition.” Such a statement would have been quite consistent with the chairman’s previous utterances, but we question whether anything so ingenuous was openly said. At all events it seems to come to this—that the name of the Ladies’ Benevolent Society has been adroitly employed to give popularity to a scheme which could scarcely have obtained much support on its own merits. The ladies, however, with their proverbial good nature, do not appear to object. Several of them have consented to serve on the Committee. And, indeed, we see no reason why the affair should not provide a certain measure of diversion. It has been reduced to its true dimensions by the discussion which took place at the meeting. There will be nothing like a representative art exhibition. The Public Hall will simply be decorated in an unusual, and doubtless very attractive, manner, and will then be employed for purposes of dancing and singing. A dance or two, and “a song or two,” are not exactly the sort of entertainment which old fashioned people have been accustomed to associate with art exhibitions; but the world is happily growing careless of precedent. We think that we are right in giving this description of the plans evolved at the meeting; though it must be confessed that the whole thing is still a little hazy. First, the Ladies’ Benevolent Association was thrust into the foreground; then an art exhibition was declared to be the principal object, and finally it was announced that “as to the necessity of glass cases, the owners of fragile objects would protect themselves by not exhibiting them.” This last declaration practically excludes all objects of Chinese or Japanese art, except, perhaps, works in iron or bronze. The owners of valuable pictures, lacquer, porcelain, pottery, ivories, wood carvings, and so forth, will hesitate before they consent to expose such things on open shelves or on the walls of a ball-

room and concert-hall. If all this is realized, there will be no disappointments and the scheme may contribute something to the general amusement as well as to the funds of the Ladies’ Benevolent Association. We venture, however, to suggest that the name “art exhibition” will be a little incongruous, and might be changed with advantage for something less pretentious and more accurate.

THE Tôkyô correspondent of *The Times* has supplied to that journal a more detailed account of the progress of Treaty Revision than any previously published. The facts which he describes have, however, been familiar to a considerable section of the community for some time. As long ago as July 31st, the *Tôkyô Independent’s* leading columns contained the following *resumé* of the labours of the Conference:—“Briefly put, matters stand thus:—Mixed residence will be permitted throughout Japan within a certain date after the ratification of the treaties. Foreigners may freely travel and reside in the interior, subject to Japanese jurisdiction. But the law of the country will be administered by courts composed of Japanese and foreign judges; the foreigners to be employed by the Government, and to administer Japanese law only. On the other hand, for a few years after ratification, extraterritoriality will prevail within the present treaty limits. Beyond these, only Japanese law will be administered. Within a stated period after ratification, the Japanese Government will in all probability prepare and promulgate Civil and Commercial Codes, etc., which will therefore be in force and practically tried several months before the establishment of mixed residence and the opening of the country.”

\* \* \*

The information embodied in this extract extends, it will be seen, to all the main points set forth by the correspondent of *The Times*. It is information which was always accessible, we believe, to persons who could be trusted not to make a mischievous use of it. Naturally some discretion has been exercised, especially with regard to journalists who deal only in abuse and devote themselves to distorting the truth and disturbing the public mind. Such persons repel confidence everywhere, and it is inevitable that their presence in this Settlement should impose a restraint which diplomats would not otherwise feel. For the rest, complaints about the reticence of the Foreign Representatives have been entertaining, in view of the fact that the new basis of the Conference’s deliberations was accurately described in the columns of a local English journal more than two and a half months back.

On the subject of commercial rivalry between England and Germany, and in reply to a query forwarded by a gentleman in Japan, a first-rate London authority has written the following:—

In replying to your enquiry with respect to the assertion that of late years rail and bridge work from Germany have gone to England, I may at once say that the statement regarding rails is absolutely without foundation, whilst as to bridge work, from an experience extending over the last five years, I am almost as certain that the assertion cannot be supported by facts. At any rate, I have never heard of such a transaction. The International Rail Makers’ Association—or Syndicate, as it has been more frequently called—being now defunct, little need be said respecting it, beyond remarking that the co-operation of English railmakers in its establishment was primarily an act of folly. By countenancing and supporting it, English manufacturers, instead of checking the

competition of German makers, have actually fostered it. They have by their action helped to open up markets to German rail producers hitherto closed to them, and thus jeopardised, instead of protecting, their own interests. And, after all, they have only postponed the crisis, for, as we now see, with the collapse of the Syndicate, rails have gone down rapidly; I have no doubt whatever but that matters will right themselves as soon as low prices have induced the demand to grow. Now, buyers have their innings; it will be the turn of the makers next.

People are very apt to believe statements put forth by interested parties, the latter very frequently making them, knowing that those they wish to convince are unable either to verify or contradict such statements, on account of their being beyond their own sphere of observation. Many buyers have a preference for English manufactures, English work and English producers, probably knowing from long experience that, in dealing with respectable and well-known English firms, they can thoroughly rely upon being conscientiously served, a good repute being cherished by the latter quite as much as any commercial gains they may make. More harm has been done to English trade by the malpractices of foreign manufacturers and traders, (connived at in too many cases, if the truth must be known, by unprincipled British dealers and even makers,) who have practised false branding or marking of inferior goods of foreign manufacture, and palmed them off afterwards as English products.

It is generally admitted that the manufacturers of the continent of Europe in general, and of Germany in particular, are constantly introducing improvements; but the same is equally true of English manufacturers. If the Japanese Railway Department, therefore, is accused of being partial to everything English, its detractors ought to be made to point out where the Germans have out-distanced the English in improvements, more especially those relating to railways. It is perfectly true that the Germans have succeeded in replacing English manufacturers in certain articles in some quarters; but this has not been on account simply of their products being superior to those of English makers, but partly because they sell more cheaply—and short-sighted buyers too often prefer cheapness to quality—and partly because they are more persevering in “pushing” their manufactures.

The assertion that the Germans have actually produced more rails than the English is absurd on the face of it. Those making it must be totally ignorant of the far greater metallurgical resources of Great Britain compared with those of Germany, a superiority too well known to require elaborate evidence in its support, and can never have seen statistics exhibiting the production of the two countries. But to counteract probable mischief arising from such wild assertions, and to convince doubters, a few tables are appended to this memorandum, which set this forth clearly.

Notwithstanding this superiority and ascendancy, however, Englishmen are not so blind as not to know that there is room for improvement. Here is what one of them says:—“Our manufacturers are not as well educated as the Germans generally. They do not know as many languages, for example, and they do not take the trouble to study the needs of their foreign customers. They rely too much upon the superiority of England already acquired, and take too little trouble to perpetuate their superiority. The Germans, on the contrary, feel their inferiority, and endeavour to make up for it by cultivation of skill and knowledge.” This sound advice is appreciated here, and beginning to be acted upon.

As to underselling English manufacturers, the Germans, as has been stated, have been successful in various products, and more particularly in the hardware trade. They have also done so in isolated instances, when contracts to foreign governments for steel rails have been taken at ruinously low prices by German makers. It may be enquired how they are able to do this? The enquiry may be answered very briefly. Owing to the ample protection accorded to German manufacturers by a prohibitive import duty on rails, as on other metallurgical products, preventing foreign competition at home, they are able to sell dearly at home, and, by means of the large profits thus realised, to tender for foreign contracts at prices at which they would be unable to offer if they had not this reserve of large profits on home-consumed products to fall back upon. Their exact position may be illustrated by a single example. During 1885 the selling price to home users of steel rails was £7 a ton on trucks at makers’ works. The average price during the same time, delivered f.o.b. Hamburg, for export was £4 14s. per ton. They have been selling lately even cheaper than that. The result of this beautiful protective system is this, as has been pointed out again and again, that the German people have to recoup, indirectly, their rail manufacturers for losses the latter sustain over their foreign business. This ought to be a warning to other nations against countenancing protection; and yet, owing partly to misrepresentation, and partly to popular apathy, protection has been gaining ground during the last decade. However, there have been signs recently of an approaching reaction, and there is a prospect of this evil of protection, like other evils, curing itself, by the mischief it causes and the burdens it imposes.

As to the facts desired, they will be supplied by the few figures given below. Those figures, taken from reliable sources, although they are not so complete as I should have liked to make them, are yet ample

enough to carry conviction to all, and refute misrepresentation:—

PRODUCTION OF PIG IRON, 1876-1885.

Years.	ENGLAND. Tons.	GERMANY. Tons.
1876	6,555,997	1,324,339
1877	6,608,604	1,421,667
1878	6,300,000	1,508,061
1879	6,000,434	1,588,076
1880	7,223,833	1,650,000
1881	8,377,304	2,941,000
1882	8,493,287	3,170,427
1883	8,496,324	3,280,728
1884	7,524,066	3,573,155
1885	7,250,647	3,757,775

PRODUCTION OF MANUFACTURED IRON, 1876-1885.

Years.	ENGLAND. Tons.	GERMANY. Tons.
1876	—	1,077,747
1877	—	864,813
1878	—	975,134
1879	—	902,500
1880	—	1,100,800
1881	2,681,190	1,349,018
1882	2,841,531	1,400,408
1883	2,730,504	1,449,694
1884	2,237,535	1,757,751
1885	1,911,125	1,971,999

\* No returns available for 1876-1880.  
† The quantities stated for England include bars only, whilst for Germany they comprise all descriptions of manufactured iron.

PRODUCTION OF BESSEMER STEEL INGOTS, 1876-1885.

Years.	ENGLAND. Tons.	GERMANY. Tons.
1876	700,000	340,083
1877	750,000	301,110
1878	857,527	403,507
1879	834,511	460,406
1880	1,046,382	680,500
1881	1,441,719	720,000
1882	1,673,649	993,000
1883	1,553,380	970,000
1884	1,300,676	1,136,100
1885	1,304,127	1,145,500

PRODUCTION OF STEEL RAILS, 1879-1885.

Years.	ENGLAND. Tons.	GERMANY. Tons.
1879	340,000	140,000
1880	—	335,238
1881	—	407,731
1882	—	504,122
1883	1,235,785	595,113
1884	1,007,173	473,602
1885	784,098	400,242

† These figures include rail accessories.

EXPORTS OF IRON AND STEEL RAILS, 1880-1885.

Years.	FROM ENGLAND. Tons.	FROM GERMANY. Tons.
1880	604,200	230,000
1881	716,132	350,000
1882	781,783	250,000
1883	728,414	176,178
1884	543,216	144,453
1885	497,343	154,791

In submitting the foregoing remarks for your consideration, I am fully aware that they embody only the expression of individual opinions. But I may claim for the latter that they have been formed during a number of years, during which I have had exceptional opportunities for observation. As to the facts quoted, I am content to let them speak for themselves.

How do our American friends like this, from the *Liverpool Daily Post*:—"The Government, as advised by its most potent friend in the Press, is not to run away from 'mere bluff.' Since when the expression 'bluff' borrowed, if we mistake not, from a low American game of chance, has been adopted into the quasi classical English of *Times* leading articles we do not know." A "low American game of chance"! What sacrilegious language! This is another proof of that dreadful insular prejudice which makes such porcupines of Englishmen in their intercourse with the outer world. The *Liverpool Daily Post* has never risen, probably never could rise, to the level of poker; and so, like the connoisseur who said that an object of *virtu* could not be good because he had not seen anything of the sort before, this "provincial" newspaper applies the term "a low American game of chance" to a pastime which in reality educates all the faculties that are essential to success in a world without a hereafter.

We publish in this issue some telegrams of which two are unintelligible. The messages dated London, October 9th, reached us some days ago, and were returned to Reuter's agent with a request that he would take steps to render them comprehensible. Similarly with the message dated October 13th. Reuter's agent answers our request by saying that we must clearly point out what words puzzle us. He

professes entire willingness to do everything in his power to render the messages clear, but at the same time reminds us of the following charmingly arbitrary condition under which Reuter's business is conducted:—

Neither the Company nor its Agents are to be held in any manner responsible for the correct transmission or due delivery of this Message, nor for any Losses or Expenses which may be incurred, either by the Senders or Receivers thereof, whether from Mutilations, Mistakes, Delays, or Non-delivery or otherwise from whatever cause arising, or (if Coded in the Company's Code) from Errors in Coding it, or in the Interpretation of the Code Words; but in case of Non-delivery by the fault of the Company or its Agents, the actual Sum paid for the Transmission of the Message will be paid to the Sender when Demanded.

Our readers will agree, we imagine, that the unintelligible portions of the messages in question sufficiently indicate themselves, and that we were justified in assuming their plainness. We have now, however, been more explicit; but we deem it well to publish the telegrams as they are, not only for the sake of what is intelligible, but also because the obscure portions may convey some meaning to quicker wits than ours.

With regard to Bulgaria's protest, its explanation is doubtless furnished by the following telegram:—

London, October 7th.

M. Kaulbars has ordered the Commandant at Rustchuk to release the plotters against Prince Alexander, offering a reward to the commandant of the consular troops which was refused.

Here, too, there appears to be some blunder about the word "Consular." The one fact which emerges clearly enough from the fog is that the Bulgarian stew is still seething, and that the fat may fall into the fire at any moment.

We observe that a scheme is an foot for getting up a ball to be given, some time in the month of December, by the Yokohama community to the Japanese, of whose hospitality we, in this Settlement, are so often the recipients. The movement is to be welcomed, not only on account of its immediate object, but also because it indicates a desire to promote that social intercourse which is still so meagre between foreigners and Japanese. An entertainment of this kind is, perhaps, the only means available to a considerable section of the community for returning the hospitalities of Tōkyō officials, and we do not doubt that the scheme will be heartily supported. As yet the outlines only of the project are made public, and there appears to be some doubt as to the advisability of including the foreign residents of Tōkyō among the entertainers. We imagine that the general tendency of opinion will be against such inclusion. The Tōkyō residents have daily opportunities for receiving Japanese at their homes or elsewhere, and the chief reason for their coöperation is thus removed. This point, as well as other details, will, however, remain to be discussed and determined at the first meeting held so soon as the scheme shall have received assurance of sufficient support. In the meanwhile, it is to be distinctly understood, we believe, that those who promise to coöperate commit themselves to nothing until the whole affair shall have been submitted for public deliberation.

The *Engineering and Mining Journal* gives some interesting statistics of the mining industry of the United States. Of 266 gold, silver, and copper mines in the country only 136 have ever been sufficiently remunerative to allow of dividends being paid to the shareholders. The nominal capital of the various mining

companies is stated to be \$1,358,180,000, of which \$679,400,000 belong to the companies that have been able to pay dividends. The rest of the capital appears to be quite unproductive. The amount of dividends paid by all the companies from the first is said to be about \$157,325,000, or somewhat less than 12 per cent. of the original capital invested, or 23 per cent. of that part of the capital which from the beginning has been yielding dividends. Against this have to be placed large sums of money paid by the members of the various companies in the form of "assessments." The total amount of these is reported to have been \$79,788,846, thus reducing the net profits on the capital sunk to about 6 per cent. Most of the mining companies of the United States are by no means of recent origin, and it is stated that since 1880 scarcely any additional capital has been invested in gold or silver mines. Of the 136 mines that had hitherto paid dividends, only 39 were able to pay such last year, and a still larger number of them have yielded no profits since 1871. Many of these mines shortly after their opening were extremely remunerative, and for a time large dividends were declared, but during recent years mining enterprise has yielded no profits commensurate to the outlay involved, and the entire industry has suffered from a marked depression.

SIR CHARLES DILKE has only one more chance of recovering a fragment of his respectability; namely, a prosecution for perjury. The recent trial was in one respect most unsatisfactory. Its result merely established that no evidence was forthcoming to upset a decree which was obtained, in the first place, on the strength of a confession deemed by the law insufficient to criminate its principal object. The ends of true justice were not accomplished at all, though the requirements of the law were satisfied. The issue involved, as the *Spectator* well puts it, was this:—"Either Mrs. Crawford had of malice prepense made Sir Charles Dilke an object of something like public loathing without any guilt on his part so far as she was concerned, or Sir Charles Dilke had been guilty of about the basest and most malignant perjury that the world ever heard of in trying to hold up his own victim and the partner of his own guilt to infamy for deliberately charging him with what he himself knew to be true." Is it not very difficult to conceive that Sir Charles Dilke should challenge the public trial of such an issue after the law had offered him an easy path to comparative vindication? We find it much easier to imagine a chain of circumstances by which Mrs. Crawford may have been drawn into making a false confession and subsequently pursuing it to its gravest consequences. She was unhappy with her husband, and ardently desired to be separated from him. She was, according to her own admissions, a woman of utterly depraved disposition, with scarcely any sense of shame and none of virtue. She had fallen once at least through sheer incontinence, and probably oftener. She believed that in former years the relations between her mother and Sir Charles Dilke had been of such a character that he must of necessity avoid appearing in a court of law. She believed, also, that Sir Charles' high political station would deter her husband and friends from exposing him to public disgrace. Sir Charles, in short, was in her power. With this knowledge, and seeing

that her sins were persistently threatening to emerge into the daylight, she made a statement to her husband. But things did not eventuate as she had expected. The matter was carried into court, and thenceforth she had to choose between adhering to her words or adding perjury to adultery. Of course she chose the former. And now comes the singular part of the affair. Not one witness could be produced to corroborate her assertions of repeated criminal acts with Sir Charles Dilke. Her story was that she visited his house some 15 or 16 times during 1882 and 1883, yet not one of the servants saw her. She swore that a woman called Sarah let her in and out and helped to dress her, but Sarah denied all this on oath. We have then nothing beyond the unsupported and in many respects very unlikely statements of a woman so singularly conscienceless that she could commit adultery with the avowed seducer of her own mother, a woman whose title to veracity—if anything resembling truth could be supposed to coexist with such vices—was completely destroyed by her falsehoods with regard to another lover, Captain Forster. It seems hard that the tales of such a woman should have prevailed against such a man as Sir Charles. He has, as we have said, only one chance of vindicating himself, and that is likely to be denied to him. Yet we cannot but think, judging by the published evidence, that he is paying the penalty of his sin, not with Mrs. Crawford, but with her mother.

We have alluded more than once to the enterprise and perseverance shown by graduates of the former Imperial College of Engineering, who have made their way to America, and there, by laborious and patient effort, succeeded in attaining independence. A case in point is that of Mr. M. Kurizuka—or Crizuka, as he spells his name to assist foreign pronunciation—who, having graduated with considerable distinction some years ago at the Engineering College, set out for the States, taking a steamer passage, and accepted employment at sixty cents per diem in the Baldwin Locomotive Works of Philadelphia. Of course it was employment of the roughest character. But for that very reason it served Mr. Kurizuka's purpose; namely, the acquisition of a thoroughly practical knowledge. One day, when the ex-graduate was hidden in the recesses of a boiler which it was his task to scrape, he was greeted by an Irishman, who looked in and observed:—"Sorrah a one av me doubts thin but you'll be the little Jap they're writing about in the papers." Further enquiry disclosed the fact that Mr. Kurizuka had indeed attracted the attention of the ubiquitous reporter. He soon learned the value of a journalistic paragraph, for his employers took notice of him and offered him a greatly improved position as draughtsman. This, however, he declined to accept, being anxious to persevere with his practical education in the works. The upshot of it all is that he has now returned to Japan as the "Agent of the Baldwin Locomotive Works, Philadelphia," and that his friends are offering him well-merited congratulations.

We have much regret in announcing the sudden death, on Monday morning, of Mr. H. Ahrens, head of the well known firm of Ahrens & Co. Mr. Ahrens had been dining in Tōkyō in Japanese style, Sunday night, and on Monday morning

he was attacked by an illness which quickly showed itself to be cholera. The best medical aid was immediately summoned, but Mr. Ahrens sunk rapidly and died in a few hours. The deceased gentleman was one of the most successful and enterprising foreign merchants that ever visited Japan. From the very outset of his career he stepped out of the conventional groove of the open-port trader, and cultivated the friendship of many Japanese, the result being that he secured a large business, and is said to have made an ample fortune. His death will be an irreparable loss to the firm of which he was the head, and will be most sincerely regretted by a large circle of both Japan and foreign friends.

THE poetasters of the *Saturday Review*, and the *St. James's Budget* are so prolific and persistent in their rhyming attacks upon Mr. Gladstone and the Home Rulers that the following verses from the *Spectator* have at least the charm of novelty:—

EDINBURGH AND ILWICK.

Gone in the moment when victory was shouted!  
Gone just when the fierce strain of battle was done;  
When the friends of disunion and discord were routed;  
Lost when the cause they had fought for had won.  
What was their crime, then? Too well they remember  
Past pledges: they knew not how fickle your sky:  
That was only last year in the month of November,  
And now it is only the month of July.  
What do men say of them? Vanquished, defeated?  
Spurn, laugh, or even them, crase from the roll?  
Nay, the cause wins though its chiefs be unseated:  
Write them up victors, the heads of the Poll!  
Failure? What failure? If failure, they choose it:  
The mob's fickle vote is as dust in the scale:  
Proud was it to win, but still prouder to lose it:  
To give up dear honour, that—*that*—were to fail.  
Yet failure! Yes, here! All in vain the resistance:  
We yield, not to reason; outnumbered we fail.  
But hark! Did ye hear? Far away in the distance,  
'Twas the glad shout of victory borne on the gale,  
From county, from town, from a people decided:  
Dear Ireland, your wrongs in the past we will own;  
But we cannot believe you can prosper divided,  
Or flourish, dear sister, cut off and alone.  
And what shall our friends do? Go, hang their heads beaten,  
Retire to their woodlands, sink, sulk in the shade?  
Read Plato, write verses, like schoolboys from Eton,  
Play tennis, lull, lounge, in their elms' colonnade?  
Ah, no, gallant leaders! for England is grateful:  
She owes you a debt, she can pay, and she will;  
While Union is dear, and Disunion hateful,  
Your strength, wit, and wisdom, she needs them all still.  
To the artist yield art, to the student leave letters;  
Yours be it in stife of the Senate to vie!  
To make Ireland find friends, where she only feels fetters,—  
Ah! that were a cause both to live for and die.  
And, O fickle Scotland! your loss yet unknowing,  
To-morrow is theirs, though for you is to-day:  
For the tide that there ebbs, here in England is flowing,  
And the last in the Foll shall be first in the fray.

A. G. B.

We translate the following from the columns of the *Nichi Nichi Shimbun*:—

The *Romaji Zasshi* of the 10th inst. has the following letter from Professor Toyama in answer to the *Japan Mail*, and as we (*Nichi Nichi Shimbun*) had served as a medium for the latter journal, we now do the same for the Professor, for the benefit of our virtuous readers:—

TO THE EDITOR OF THE "ROMAJI ZASSHI."

In my recently published pamphlet called *Engeki Kairiya Ron Shikō*, I discussed the advisability of excluding from plays all allusions to brothel-houses and *geisha*, and in saying that prostitutes and *geisha* ought in future to be looked upon with as much contempt as possible, I referred to the admission of *geisha* to the concert given by M. Remenyi in the Rokumeikan, which was attended by a Prince of the Blood, and by Japanese and foreign ladies and gentlemen, and laid the blame upon the managers of the concert. The *Japan Mail* seems to have had some connection with the managers, for that journal defends their conduct in its issue of the 22nd inst. and ridicules my opinion with regard to *geisha*. Some persons may suppose that I propose to refute the *Japan Mail's* remarks; but, on the contrary, I have to thank that journal for correcting my mistaken notions by the light of its transcendent wisdom.

Firstly, I had thought it a disgrace to His Royal Highness and to foreign gentlemen and ladies of quality to sit in company with *geisha* in such a place. But, according to the instructions of the journal in question, it appears that foreign gentlemen are willing to sit with *geisha*. If so, my anxiety has been lightened so far as foreign gentlemen are concerned, and for that I must thank the *Japan Mail*. But I feel sorry that it has not given me any instructions as to whether foreign ladies are also fond of keeping company with *geisha* or not.

Secondly, I had thought I used enough discretion in advocating that anything relating to prostitutes and *geisha* should not be acted on the stage, and that women of those disreputable classes should not be allowed to make their

appearance in the respectable presence of gentlemen and ladies of high position. But the *Japan Mail* teaches me that thoughtful people do not shun the society of "these refined and modest-looking artists," but are on the contrary willing to show them respect. I must thank that journal for its definition of thoughtful people.

Thirdly, I had believed that the musicians of the Imperial Household, the lands of the Military and Naval Departments, and private musicians, like Yamase and Nakanoshima on the *koto*, Kodō on the *shakuhachi*, and Enji-tayu and Kanai-tayu on the *kiyomoto*, were special artists in this country. But I thank the *Japan Mail* for its instructions that *geisha* are also entitled to be called artists.

Fourthly, I remember to have criticized the admission of *geisha* to a concert given in such a building as the Rokumeikan, but have no idea of having advocated the exclusion of women of that class from theatres and circuses. Even I am aware of the difference between these two things. Is it not a curious piece of logic to ask, upon hearing that *geisha* must be refused admittance to a concert given in a building of the character of the Rokumeikan, if censors of morals are to be stationed at the doors of Chiari's circus so as to prevent women of that class from gaining admittance? The *Japan Mail* obliges me very much by affording me an example of such logic.

Fifthly, I had thought that it was Western education that taught me to look with contempt upon women of the standing of *geisha*. But I must acknowledge my indebtedness to the *Japan Mail* for the information that even a man born in the West and grown up in the West may, on coming to this country and residing here for several years, bring his mind to such a miserable state as to suppose that females, however disgraceful be their position, if only their demeanour is refined and modest may be permitted to keep company with Royal princes and the wives of missionaries.

Yours, etc.,

TOYAMA SHOICHI.

Tōkyō, September 24th, 1886.

TO THE EDITOR OF THE "NICH NICH SHIMBUN."

SIR,—In his pamphlet *Engeki Kairiya-ron*, Professor Toyama animadverted severely on the fact that among the audience at M. Remenyi's concert in the Rokumeikan some *geisha* were present. As editor of the *Japan Mail*, I criticised the Professor's strictures, and observed that at entertainments where admission is by payment, it is impossible to distinguish between individuals. All who are willing to pay the stipulated sum can claim the right of admission, and except in the case of persons whose conduct is disorderly or their dress indecent, the managers cannot exercise any discretion. I further added that such discretion would be particularly impossible in the case of *geisha*, who, so far as their appearance is concerned, are perfectly modest and lady-like.

Professor Toyama appears to have been seriously offended by this criticism of mine. He published, in the last issue of the *Romaji Zasshi*, a letter on the subject, and as this letter has been reproduced in the *Nichi Nichi Shimbun*, I beg that you will grant me a little space to reply.

I think your readers will agree with me as to the utter impossibility of exercising any arbitrary discretion with regard to the persons who are permitted to take their places among the audience at theatres and other public entertainments. No attempt to exercise such discretion has ever been successfully made in any part of the world. It is not made in England, and the consequence is that not only the highest nobles, but even the sovereign and her family frequently attend theatres and concerts at which the most depraved women in London are among the audience. Professor Toyama lays much stress on the fact that a Prince of the Blood, as well as foreign ladies and gentlemen, were present at the Rokumeikan. I have the fullest respect for Japanese Princes of the Blood, but I venture to think that they need not be offended by circumstances far less offensive than those which the Queen of England and all the great sovereigns of Europe endure with equanimity. It is true that Professor Toyama seeks to draw a distinction between a concert given at the Rokumeikan and an ordinary theatrical performance. It is not the place, however, but the manner of admission which determines the nature of an entertainment. From the moment that people are admitted on payment of a fixed sum at the door, the right to say who shall enter and who shall not is never exercised except in the cases I have indicated above. Professor Toyama, though by repute an advanced liberal, appears to retain some highly conservative prejudices. He would not have Princes and nobles attend theatres and concerts unless the audience is carefully sifted; and in the case of the lower orders, he would curtail the personal liberty which belongs to every individual. I fear that these old-fashioned prejudices are out of date. If Princes and nobles shrink from the contamination of mixed audiences, they had better remain in their palaces and mansions, and not frequent places of public entertainment; and if respectably dressed persons of quiet demeanour are not to be allowed to procure with their money the same diversions as other people, we had better go back to the days of the *Yeta* and *Kawara-mono*.

I wish to ask Professor Toyama one question. How many persons among the audience at a theatre or a concert are likely to be offended by

the presence of a few *geisha*? Not foreigners certainly, for I can assure Professor Toyama that to our eyes the difference between the appearance of a *geisha* and that of a Japanese lady is wholly indiscernible. I am assured by many Japanese friends that they also cannot observe this difference. It seems, then, that the only persons capable of detecting the presence of *geisha* in a mixed audience are gentlemen whose acquaintance with females of this class is extended and intimate. Are these the gentlemen whose sensibilities Professor Toyama would guard against offence?

With regard to the remaining contents of Professor Toyama's letter, your readers will no doubt have perceived that he writes in jest. No other hypothesis will explain the extraordinary misconstructions he has put upon what I said. He accuses me of asserting that "foreign gentlemen are willing to sit with *geisha*," and that "females, however disgraceful their position, if only their demeanour is refined and modest may be permitted to keep company with royal princes and the wives of missionaries." Nothing that I have ever written can possibly bear these constructions, and Professor Toyama, being a competent English scholar, is perfectly well aware that it cannot. The Professor alludes to what he has learned from Western civilization. I hope, for the sake of his reputation and for the sake of the good work he is doing, that he has not learned a controversial device too common in the West; namely, the device of seeking to discredit an opponent by attributing to him monstrous opinions which he never professed, and which are diametrically opposed to the tenor of all his writing. I prefer to conclude that the Professor's wit got the better of his gravity on this occasion.

But I am sorry, Sir, that he should think this a fit subject for jesting. In my opinion the social problems now presenting themselves for solution in Japan are of the gravest and most interesting nature. This question of the admission of *geisha* to public entertainments is a petty corollary. The allusions I made to it in the columns of the *Japan Mail* were not for its own sake but for the sake of the inference which its manner of treatment by Japanese writers, and especially by Professor Toyama, seemed to suggest. From what these gentlemen say, one would suppose that, in order to improve the status of Japanese women, the principal method should be to reform the women themselves. Consider the case of the *geisha*, for a moment. Professor Toyama paints these females in the blackest colours. He writes as though they were shameless and most depraved persons. I do not venture to pit my own knowledge and experience in this particular matter against the knowledge and experience of Professor Toyama, but I do venture to assert without fear of contradiction that in ninety-nine cases out of every hundred the motive of the *geisha* is noble and unselfish. She sells herself into a life of hardship and suffering, often of bitter shame, not for her own sake, but for the sake of supporting her parents or relatives. I believe that the consciousness of this devoted sacrifice is generally present with her, and that it effectually saves her from the moral degradation which is an almost invariable trait of women of doubtful character in the West. Thus and thus only is it possible to explain the gentleness, refinement, and I might almost add modesty which the *geisha* and *yujo* of Japan manage to preserve among circumstances of a naturally demoralizing tendency. I myself can recall the times before the Restoration when, owing to much stricter codes of social etiquette than those now prevailing, the *geisha* was enabled to lead a virtuous life, and to gain a tolerable income by the exercise solely of her wit and her accomplishments. I need not remind your Japanese readers how completely the rigid decorum of the *yashiki* was subsequently replaced by a species of semi-military license, and how officialdom exchanged its stiff exclusive demeanour for one which combined Occidental freedom with Oriental autocracy. If the *geisha* had to bow before the change; if she was compelled to yield to the masterful caprices of those upon whose favour her means of livelihood depended, it is not for these now to point the finger of scorn at her, or to imply that their own libertinism is the outcome of her submission. The spirit which inspires this crusade against the *geisha* ought, in my opinion, to be the first object of reform. For it is only one aspect of the spirit of unsympathetic and inconsiderate dominance which has for centuries directed the attitude of men towards women in Japan. The *geisha* are what their patrons have made them. That men cry out now against these unfortunate girls is much as though a painter were to try to excuse his want of skill by abusing the faults in his own pictures. I do not wish to follow Professor Toyama's example by perverting his opinions. So far as he is concerned, it is probable that his

principal purpose is to improve the position of virtuous women by widening the gulf between them and their frail sisters. With such an aim every one must sympathize. But instead of trying to accomplish it by seeking to make women of doubtful virtue the objects of a disdain which men will never feel for them so long as there are two sexes in the world, would it not be more honest and more rational to educate in the minds of Japanese men proper consideration for the feelings of their wives and sisters, and an active sense of the fact that they have no right to subject these to trials and humiliations which they would not consent to suffer for a moment themselves? I do not address myself to Professor Toyama alone or even chiefly, but to others who have written on this subject in the Japanese press. And I hope neither he nor they will imagine that I am actuated by any desire to oppose the urgent reform they have in hand. On the contrary, I seek to advance that reform when I venture to suggest that they are beginning at the wrong end, and that neither by preaching to their pure women nor railing at their impure will they effect their aim. So far as concerns the better education of women, their freer admission to social circles and the enlargement of their sphere of moral and physical enjoyments, there is doubtless much that invites reform in Japan. But with regard to the position of the woman *vis-à-vis* the man, the whole ability to effect a change, not less than the duty of setting about the work at once, rests with the man. Speaking as a stranger whose field of observation is necessarily limited, I venture to say that in all truly womanly qualities there is very little to improve in the Japanese woman; whereas, in the most manly of all manly qualities—respect and consideration for the weak—there is everything to improve in the Japanese man. Will not Professor Toyama devote his great abilities and large influence to that important reformation, instead of wasting his time in frivolous persiflage, and instead of injuring his reputation by caricaturing the opinions of those who admire him and heartily wish him success?

Your obedient servant,  
Tôkyô, October 15th.

F. BRINLEY.

A "WONDERFUL discovery," according to the *Nichi Nichi Shimbun*, has been made in the heart of Tôkyô—perhaps we ought to warn the readers of Chiarini's advertisements that no allusion to that popular entertainment is intended. A policeman, named Okubo, while on his beat in Kôbaicho, Surugadai, observed that a path had been trodden among the grass at the back of the shrine of Ota-Inari. The constable's suspicions were aroused. He followed the mysterious track. It led him to the bank of the river Kanda, which flows behind Surugadai. Peering about, he detected the opening of a cave, within which was "a hairy old beggar," named Yamada Sukijiro, a native of Echu, who had inhabited that agreeable hole for five years. When Mr. Yamada first established himself there, he led a solitary life; but by and by other members of his fraternity joined him, and dug caves for themselves, until a bee-hive of seven cells with twenty inmates had been formed. The little colony vehemently protested against the intrusion of the myrmidon of the law, declaring that the extent of their wrongdoing was the excavation of lairs—a privilege not denied even to wild beasts. They were nevertheless peremptorily invited to a lodging in the nearest station-house.

THE sketch which we recently gave of the terms of the Hongkong opium convention does not please the *North China Herald*. "The *Japan Mail's* article," writes our Shanghai contemporary, "says that no sort of preventive service is to be established in the colony, and this looks very like the old trick of preparing the Hongkong public to hear something to its disadvantage, by explaining that things might have been much worse than they are." The *North China Herald* must have been in a singularly suspicious humour when it imagined that this journal was

engaged in a trick to throw dust in the eyes of the Hongkong community. At all events, it would have been more prudent on the part of our contemporary to await the publication of details, instead of exciting itself over chimeras of its own creation. To unsophisticated people it will seem a little strange that the coöperation of Her Majesty's officials to prevent the defrauding of the Chinese Customs by persons under British jurisdiction should be regarded as a proper ground for demanding substantial concessions from China. The history of the intercourse between the East and the West has familiarized us with various "vested interests" which have grown out of the abuse of arbitrarily extorted privileges, but we have yet to learn that the Queen's Government can persuade itself to found a prescriptive right on the successful practice of smuggling by Her Majesty's subjects to the detriment of a friendly Power's revenues. If diplomacy has succeeded in getting the Hongkong Administration rewarded for simply performing its duty, it will be a trifle ungracious on the part of the Hongkong community to criticise the nature of the reward.

NOTHING could better illustrate the difference between the feelings with which the foreign public regards China and Japan, than the excitement caused in the former country by the proposal to hand over the postal service to native officials. Letters have been written, speeches made, and articles published on the subject, but we have not yet come across one utterance thoroughly favourable to China's wishes. At a public meeting of the residents of Shanghai, a discussion took place which, so far as concerned want of confidence in the ability and good faith of Chinese officialdom, may be said to have been absolutely monochromatic, and which ended in a vote unmistakably expressive of conservative resolve. A gentleman who writes to the *Hongkong Daily Press* at great length on the matter, delivers himself of the most emphatic opinions as to the competence and trustworthiness of Chinese officials. "Let the Chinese Government," he says, "establish confidence amongst its own people, and then it will be time enough to take into consideration whether we can trust our most valuable property into its hands." Yet, further on, this same writer expresses himself thus with regard to Japan:—"It was all very well to make the concession in the case of Japan, as the Government of that country had previously proved its trustworthiness and its ability to carry out such duties." Whether this be true or not, it is at all events certain that the proposal to hand over the postal service entirely to Japanese hands, met with no serious opposition at the time and has since been shown by experience to have been perfectly sound.

SINCE the destructive earthquake at Charleston, people living east of the Rocky Mountains in the United States have lost the sense of security which they formerly enjoyed, and not a few large property owners in cities like New York and Philadelphia regard the extreme height of their buildings and business structures with a feeling of uneasiness and consternation. The scarcity of ground and its consequent high price have been a great inducement to erect tall structures and to gain as much space for occupancy as possible the chief object aimed at was to make the buildings fire proof and to supply as many

places of exit as were deemed necessary in case of fire. But earthquakes have not been specially provided against, as will now be undoubtedly the case, since faith in *terra firma* has so rudely been shaken by the Charleston calamity. Investigations, such as these conducted by Prof. Milne and others, will at once gain greater significance and will win wider appreciation, since their value has been so strongly emphasized by the decline of rents in buildings once the pride of their constructors and an unfailing source of revenue to their owners. The effect of the distrust entertained for very tall structures will, of course, be felt more severely in the case of those intended for domestic purposes than in the case of similar business buildings occupied only in the day time. Earthquakes have occurred at Charleston at various intervals before this, the first on record having taken place in May, 1754, while the last, but one, consisting only of a few and slight shocks, occurred in 1857. Few of the shocks felt during the period between these dates aroused general attention. Thus the recent calamity at Charleston is really the first emphatic warning to Eastern cities not to continue the erection of very high buildings on the principles and methods pursued since about 1864, when such buildings began to come into vogue.

THE *Spectator* has the following preliminary notice of Dr. W. Anderson's work on "the Pictorial Arts of Japan:—

On the completion of this sumptuous work, we shall endeavour to form an estimate of Japanese art as a whole, based mainly upon the materials furnished by these handsome portfolios. Meanwhile, we can only briefly notice the contents of the second and third parts, just published. In these, the history of Japanese art is brought to a close, and its applications, methods, and characteristics are described and considered. The subject is entirely new: there does not even exist any native work upon it, and it was from a variety of sources, hunted out with great patience, that the abundant and valuable information now presented had to be gathered, and methods and aims altogether unknown in Europe explained and illustrated with a fullness that leaves little to be desired. To the European student of art almost every page is a revelation, and it may very well be doubted whether the work will not be found equally instructive by the Japanese themselves. The admirable reproductions—woodcuts, photographures, and chromo-lithographs—contained in these portfolios reveal the gradual emancipation of Japanese Art from the conventional classicism of the Middle Kingdom, and its entrance upon a stage of truthful realism which brings it into possible comparison with the Art of the West. It is in the natural schools that the highest and most characteristic expression of the pictorial genius of the Japanese must be sought; and as the nineteenth century is approached, the grotesqueness of imperfect realisation is replaced by the vigour and vitality seen in the productions of men like Hokusai and Kikuchi Yosai, which, regarded, as they ought to be, rather as studies or sketches than as finished pictures, both merit and sustain judgment according to the canons of Western criticism applied with a certain liberality. But the curious impersonality characteristic of the languages and literatures of Mongoloid peoples, veiled human beauty and spirituality from their ken, and among these examples of Far-Eastern Art, excepting a composition of Kikuchi's not wholly successful, we find only a single instance of an attempt to delineate those forms of grace and loveliness which were so dear to the Greeks. Nor is the instance referred to—a chromoxylograph, by Shunso, of Japanese beauties, admirably lithographed in colour by Grebe—of any great merit as a work of art. But it is interesting as showing what the Japanese ideal of female beauty was. A slim form, a swanlike neck, a pointed, oval face, well-marked eyebrows, long, narrow eyes, an aquiline nose, long and slender, if not finely chiselled, and a small mouth, were the charms that led Genji upon his many adventures, the poets of Old Japan to indite their thousands of "uta" (short sonnets) in praise of real or imaginary Lauras, as well as guided the brush of the artist through ten centuries of production.

THE publication has been commenced in Haiphong of a bi-weekly French journal entitled *Le Courrier d'Haiphong*. The first number is before us. The leading article, though written in simple and unpretending language, sets forth

a programme of considerable ambition. The *Courrier* promises not to confine itself to purely local interests, but to be the representative of the whole of Tonquin, Annam, Cambodia, and Cochinchina, as well as of every place in the Orient where French interests are at stake. It will also embrace home politics, and will publish telegraphic bulletins of important events in the West. The editor further promises to avoid everything in the nature of barren opposition and personal attacks—an engagement which we sincerely wish him sufficient resolution to observe. So far as we are in a position to judge, such a journal may fairly promise itself a prosperous career. At all events, we wish it the most complete success, and welcome its appearance for the sake of the growing interest inspired by Haiphong and the whole of France's new acquisitions in that quarter.

MOST of our readers will have observed in our notes from Japanese journals that Mr. Tatsugoro Nossé, Superintendent of the Settlement Police Station, is about to be transferred to the Japanese Consulate at Fusan, as Assistant-Judge. Mr. Nossé has acted as chief of the Settlement Police Station since February, 1883, and during his incumbency has won the respect and esteem of all who have been brought into contact with him. He leaves the force of which he has had charge in a high state of efficiency, the ability of the detective staff specially having been admirably developed under his direction. Mr. Nossé will be succeeded by Mr. Jiro Hirabe, formerly of the Japanese Consulate at Hongkong. According to the *Diario de Manila*, M. Remenyi has been very successful in his visit to the Philippines, large and appreciative audiences having been the rule. M. Remenyi recently gave a concert in aid of the funds of the Hospital of San Juan de Dios, and half the net proceeds were forwarded to that institution.

THE *North China Herald* commits itself to the following curiously rash statement with regard to the Nagasaki riot:—

We are glad to hear that there is no truth whatever in the story that the brawl at Nagasaki has weakened Admiral Lang's position with the Chinese. Impartial observers who were at Nagasaki at the time of the row are convinced that the Chinese sailors were not to blame at all for the second, which was the important, riot. The men were quite unarmed when they went ashore, and were laid in wait for by the Japanese police, who were aided by the Japanese people, who had armed themselves in readiness; and the best proof of this is the small number of casualties among the Japanese as compared with those among the Chinese. The enquiry now going on, if the details are ever published, will show if this account is correct. Unfortunately we get most of our information on the subject from newspapers published in Japan, which show a natural partiality towards the people among whom the writers live. There is an ineradicable animosity between the lower orders of the Chinese and Japanese, which is very embarrassing to their respective governments.

We have all heard the story of the Irishman who, being asked how he managed to dispose of a party of three local enemies whom he boasted of having vanquished, replied that he "just surrounded them and strewed the place with them." The Nagasaki police must have been strongly imbued with this Hibernian's spirit if twenty of them—for no larger number was at first available—undertook to "lie in wait for" some four hundred Chinese man-of-war's men. Even if our Shanghai contemporary's silly story were not contradicted by this manifest absurdity, it would still be necessary to show that the police had some motive for the undisciplined and vindictive conduct attributed to them. But they could not have had any motive. Nothing had previously occurred except the arrest of a disorderly China-

man by a Japanese constable under circumstances which did great credit to the latter's pluck and determination, and after a struggle in which both were wounded. It is, however, established beyond all question that from the very first—that is to say, days before any collision took place—the behaviour of the Chinese liberty men in the streets of Nagasaki had been of the grossest and most lawless character. When, therefore, the final fracas occurred, we can very well imagine that the civilians taking part in it had not much disposition to spare the uncivilized roughs who had been disturbing the peace of the town and insulting every woman they met. As to the conduct of the Japanese police on this trying occasion, it has elicited the unqualified approval of foreign officials who, both at the time and subsequently, had full opportunities of judging. The contention that, because the Chinese went ashore unarmed, they cannot have contemplated any outrage, is grotesque, in view of the fact that liberty men never carry arms. We do not say that any outrage was contemplated, but we do say that such reasoning is of a piece with the whole of the defence advanced on behalf of the Chinese. Finally, while we should be glad to think that our Shanghai contemporary is right about Commander Lang, we have no difficulty in choosing between the *ipse dixit* of a newspaper and the statements made, to our certain knowledge, by responsible Chinese officials.

THE cholera returns of Tôkyô during last week were:—Friday, 15th instant, new cases, 19; deaths, 21. Saturday, new cases, 12; deaths, 10. Sunday, new cases, 6; deaths, 8. Monday, new cases, 4; deaths, 9. Tuesday, new cases, 5; deaths, 6. Wednesday, new cases, 5; deaths, 7. Thursday, new cases, 5; deaths, 4. Total new cases, 56; deaths, 65.

THE cholera returns for Yokohama during the past week were:—Saturday, 16th instant, new cases, 0; death, 0. Sunday, new case, 0; death, 0. Monday, new cases, 3; death, 1. Tuesday, new cases, 3; deaths, 2. Wednesday, new cases, 4; deaths, 4. Thursday, new cases, 1; deaths, 2. Friday, new cases, 2; death, 0. Total cases, 13; deaths, 9.

MR. ALBERT MOSSE, a German gentleman employed by the Japanese Government, has received permission from his own Government to wear the decoration of the 4th class of the Order of Merit, conferred upon him by H. M. the Emperor of Japan.

HIS IMPERIAL MAJESTY THE MIKADO has signified his intention to accept the invitation of the Stewards of the Nippon Race Club, and will probably be present at the forthcoming Autumn Meeting on the second day.

It is scarcely necessary to say that the rumours published by the vernacular press with regard to a proposal by Great Britain to conclude an extradition treaty with Japan are groundless.

THE *Nichi Nichi Shimbun* publishes the following telegram:—

Nagasaki, October 18th, 3.30 p.m.

The 24th sitting of the enquiry was held to-day.

H.I.J.M.S. *Takachiho Kan* (14), Captain Matsumura, left the anchorage on Wednesday for Tatayama Bay.

H.B.M.'s sloop *Wanderer* (4), Commander O. Churchill, left here on Friday for Hongkong, *via* Port Hamilton.

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

### THE SOCIETY FOR THE REFORM OF THE JAPANESE STAGE.

IN a pamphlet called *Engeki Kairyō Ron Shikō*, or private suggestions for Stage Reform, Professor TOYAMA endeavours to correct some erroneous impressions which have been formed with reference to the objects of the Stage Reform Society. He does not pretend to speak in the name of the Society, but we may assume that his opinions are shared by most of his associates. He is emphatic with regard to changes in theatrical construction. Solid brick buildings, decorated, furnished and heated in western style are his ideal. The only features he would preserve of Japan's present theatres are the *Hana-michi* and the *Mawari-butai*. The former is the long lateral path by which the actors, in certain scenes, pass to and from the stage. In point of fact it is a relic of the days when theatres were of the rudest nature. Its original intention was to render the stage accessible to persons who desired to give presents (*hana*, literally, a flower) to the actors. Subsequently, it came to be used by the latter also, and there can be little doubt that it is a valuable addition to the resources of the stage. For it enables an exterior and an interior scene to be acted simultaneously. Only in Japan can one see the inmates of a house engaged in their various occupations, and their friends or enemies approaching from without. The *mawari-butai*, or revolving stage, needs no comment. Its advantages are too obvious. These, then, Mr. Toyama would retain. But the reforms he suggests in everything that concerns theatrical methods are most radical. Before all he recommends reducing the time occupied in representations from 15 or 16 long weary hours to 4 or 5 at most. He would also do away with the parasitical establishments which owe their *raison d'être* to the present protracted representations. When a person has to spend the whole day at a theatre, he wants some place for occasional retirement and for procuring food. Hence the numerous tea-houses which cluster about a Japanese play-house, and in which the audience squander three times the cost of their tickets. If these were abolished, the price of admission might be raised. *Apropos* of this, Professor Toyama points out the great inconvenience of being obliged to hire a whole box in order to get a good place. He then passes on to the actors. Of their abilities he speaks guardedly. BOOTH and IRVINGS, he says, cannot be expected in Japan any more than DISRAELI and GLADSTONES. On the whole, however, Japanese actors need not be ashamed of their capacities. But they are too fond of details. They do not realize the distinction between a drama and a novel, or understand that life and general movement are the essentials of the former, not the minute and over-studied depicting

of special incidents. An actor must subserve himself to the scheme of the piece he is acting, and must not, as is common in Japan, seek occasions to display his own idiosyncracies or specialties without regard to their congruity. Neither must he be too realistic. There is much in every-day life which cannot be properly included in the sphere of art. All this should be avoided. Need we say that Professor TOYAMA is very earnest about the reform of actors' morality. He reminds them that they have a place to win in society and that it depends on themselves whether they win it. This is a hobby with the distinguished Professor and we wish him all success in riding it. But we doubt, greatly doubt, whether his imagination has not clothed the life of the Western actor in a too rosy glamour. However, it would be an ungrateful task to throw cold water on his enthusiasm as a regenerator of morals. He is all in favour of female actors. Their prohibition forty years ago has in no way served its purpose—the improvement of public morality—and has seriously hampered histrionic development. He thinks that their presence on the stage would refine the character of the acting, and that if they should unfortunately lead immoral lives, they will merely replace other Cyprians who are still more objectionable. We are glad to find that his radicalism does not go so far as to recommend the total rejection of the plays which Japan already possesses. Among the hot-headed reformers of recent times it has been urged that the historical dramas now acted are a relic of feudal times, and that they recall phases of life from which Japan should desire to dissociate herself entirely. The same objection applies with equal force to all the noblest dramas of Europe. The great dramatist will never seek inspiration among the smooth conventionalities and smirking decencies of modern life, so long as he has access to the annals of times when the world was ruled by the weight of men's arms and the strength of their passions. Professor TOYAMA truly observes that the really valuable element of a drama is, not that it should be a photograph of the age in which its scenes are cast, but that it should faithfully portray the impulses and emotions of human nature amid those scenes. Besides, we must be sure that our new well has water in it before we close the old. Just as in England the Elizabethan era glowed with a constellation of incomparable dramatists, and as in France the days of Molière, Racine and Corneille shine without reflection, so in Japan none have been found worthy to wear the mantle of CHIKUMATSU and TAKEDA. The ore of the ancient mine is still the richest. But in one respect it is not the purest. The plays of Marlowe, of Congreve, and sometimes even those of Shakespeare require expurgation before they can be put on a modern stage. So too of the most

celebrated Japanese dramas. A little pruning may be unavoidable, but the plays themselves deserve to be preserved and acted as long as the nationality of Japan endures.

We do not follow Professor TOYAMA into the minor reforms which he suggests—as for example, the abolition of the stage demons (*Kurombo*) who resuscitate dead bodies and perform other *naïvetés*, and the substitution of good music for the curious performance (*Chobō or gidayū*), half libretto, half accompaniment, which has always been a feature of the Japanese drama. Enough has been said to show that the aim of the Professor, and presumably of the Association which he has been so instrumental in forming, is the complete remodelling of the Japanese stage upon European lines. It will be a work of time and much labour, but that it is worth the expenditure of both cannot be doubted by any one who is familiar with the wonderful power of the Japanese actor in both tragic and comic lines.

### A GLIMPSE OF WHAT IS PASSING AWAY.

THE festival at Ikegami on the 12th and 13th instant was attended by a ceaseless throng of people not only throughout the day but during a great part of the night also. It is said that the copper cash thrown into the *saisen-bako* at this festival generally aggregate from fourteen hundred to fifteen hundred *yen* daily. Assuming that the average contribution per head is 2 *sen*—a liberal assumption—this would show that the number of worshippers at the shrine during the two days of the festival is about one hundred and fifty thousand. A statistician might infer from these figures that the religious sentiment of the inhabitants of Tōkyō is more active than people generally imagine. But we doubt, on the whole, whether religious sentiment has very much to do with the matter. A festival at a big temple is a sort of gala day with the Japanese. If the weather be fine and the temple easily accessible, everyone goes there who can spare time for an outing. Thus, if the tiny band of devout folks who listen to the sermons at the Ikegami temples, be compared with the gay multitudes who roam about the beautiful woods, enjoy the view, and frequent the various entertainments provided for their diversion by itinerant showmen, the ratio of fanaticism to frivolity will be found a little startling. Thoroughly characteristic of the national disposition are these festivals. Imagine the precincts of an European cathedral on a Saint's day occupied by acrobats, jugglers, travelling menageries, performing dogs, and so forth, while the business of prayer and preaching proceeds vigorously within the walls of the building. Even then you have but a partial conception of the Japanese reality; for in this country

temple buildings stand open throughout the whole of one side, so that the people who happen to be praying within are practically a part of the audience enjoying the penny shows without. And in this you have an example of perhaps the most prominent trait of Japanese character. Sham is unknown in this country. At a theatre, for example, all the details it may be of a duel to the death, it may be of a determined suicide, are acted with the utmost fidelity. But when the victim falls, no further attempt is made to perpetuate the delusion. The manner of disposing of the corpse is not in the play. Very well then: let the corpse take itself off as best it can, either at the touch of a stage devil with a crape-covered face, or under the flimsy shadow of a fragment of cloth held between it and the audience. What is the use, argues the Japanese, of attempting any delusion in such matters? Every one knows that when DANJURO cuts himself open, or when KIKUGORO slaughters SADANJI, the same actors will perform the same rôles to-morrow and the day after. Up to the point of falling, apparently lifeless, on the stage, the conditions of the tragedy must be observed, but to carry the pretence any farther would be fruitless. In the West canons of histrionic art have become so strict that an actor is no longer permitted to respond to a call and come before the curtain between the acts. The audience must never be reminded that he is only an actor until the last word of the play has been spoken. Such sustained realism is not yet appreciated in Japan. Therefore, even at a religious festival, no effort to dissimulate the traits of which humanity can never divest itself is encouraged or expected. The great majority of the people come for the sake of the holiday as much as of the worship. Let them, therefore, amuse themselves. Religion, in this part of the Orient at all events, does not prescribe austerity of manners or asceticism of life. The Gods are not shocked because a monkey turns summersaults under the eaves of their sanctuaries, or a rope-dancer balances himself in the shadow of their shrines. And the rope-dancer, also, is an instance of this practical spirit. In Europe a female gymnast of this class dresses in flesh-coloured tights and seeks to place her womanhood as much as possible in suggestive evidence. In Japan, nothing of the kind. The business is rope-dancing, not meretricious posturing. The latter may be all very well in its way, but it has nothing to do with poisoning one's body on some strands of plaited hemp. The girl who undertakes to exhibit skill in the art of equilibrium wears garments which, while they are excellently suited to her performance, are even better qualified to divert your attention from the sex of the performer. There, too, is a priest complacently watching the manœuvres of the performing birds. Why not? They are

jaunty, saucy little chaffinches as ever exhibited themselves in public; and to see them skip out of their cages, bow to their trainer and the audience, ring bells, count coins, pound rice, and do the wood-pecker business against every convenient post, is to feel that even POLL SWEEDLEPIPE's water-drawing sparrow was a comparative infant in point of intellect. So the praying goes on, and the rattling of cash against the bars of the money-chest, and the burning of incense, and the chattering of monkeys, and the shouting of showmen, and the perpetual rippling of laughter and cheery talk as the great, good-humoured multitude flows to and fro, not a bit nearer to hell or farther from heaven because its units have studied no hypocritical mien of sanctimoniousness, or been trained to deceive their deity by putting a veneer of puritanism over the instincts which he has implanted in their breasts. Is this civilization or is it barbarism? Whichever it be, we cannot but regret that foreign teaching and exotic customs are beginning to alter its character. Will Japan find herself better off as she becomes more and more fully versed in the science of dissimulation? Will she be approaching a higher ideal when she has covered her artlessness with the sackcloth of false sanctity, and scattered ashes of suggestive conventionalism over her unconscious candour?

#### THE LAW AND MARINE INSURANCE.

VERY interesting particulars are published by *The Times* with regard to the evidence collected by the Royal Commission of Inquiry on the Mercantile Marine, appointed after MR. CHAMBERLAIN's unsuccessful legislation when he filled the post of President of the Board of Trade. Public opinion was pretty evenly divided in respect of the subject which mainly occupied the attention of the Commission. It was mentioned, on one side, that the number of lives lost by shipwreck had increased greatly of late years, and an explanation of this was said to be furnished by the habit of insuring to the full value vessels, their cargoes, freights, and profits. On the other side, it was vehemently denied that any connection existed between insurance and shipwreck, or even that statistics furnished grounds for uneasiness, inasmuch as, although the loss of life at sea in 1881 had been great, it was nevertheless below the average of former times, due allowance being made for the increase in the number of ships concerned. Some of the most trustworthy evidence elicited by the Commission goes to support the latter view. The experience of insurance companies, we are told, is contrary to the theory that insurance conduces to the casting away of vessels. Fraudulent attempts of this nature have reference generally to the cargo rather than to the ship. It has to be remembered

that the operation of bringing about the loss of a vessel is one of much risk and trouble. It involves the complicity of a great number of persons, all of whom must be recompensed and their safety provided for. Moreover, the magnitude of the crime is quite out of proportion to the difficulty of proving it. Above all, the fact that rates of insurance exhibit a steadily downward tendency shows that a feeling of stronger confidence is being established between insurers and insured. Comparing the rates charged in 1874 and 1884, it appears that between London and Calcutta, London and New Zealand, London and Melbourne, and London and New York, there were reductions amounting, in the case of steamers, to 50 per cent., 35 per cent., and 33 per cent., 33 per cent., respectively. The inference justly suggested by these figures is that underwriters do not share the suspicions so strongly urged in some quarters. The Commission elicited from one witness a recommendation that the law should impose stricter obligations on shipowners to prove loss; but this testimony was immediately followed by that of an expert who declared that the best repaired and best found vessels are invariably those most fully insured. There was also a noteworthy consensus of opinion hostile to the methods of the Board of Trade. Some witnesses found fault with the system of marine enquiries conducted by the Board, or under its instruction, in cases of shipwreck; others insisted that its administration should be entirely remodelled, and that a number of marine experts should be included in its personnel; others were of opinion that the rôle of the Board should be limited to inspection and verification, and that it should not exercise any juridical function except that of prosecuting before the public tribunals. To this last suggestion the Board justly replied that it is often necessary to conduct enquiries with the utmost promptitude, and that grave inconveniences would result from reliance on the tardy and formal processes of the law courts. Upon one point there appears to have been virtually universal agreement; that, in order to avoid over-loading, a line of flotation must be more rigidly fixed. It was even urged that this principle should be extended to foreign vessels frequenting English ports. But the Board of Trade traversed the latter recommendation, on the ground that such a step might provoke reprisals, and that it would be more prudent merely to direct the attention of foreign Governments to the course adopted in England, and to invite them to consider the possibility of arriving at an uniform practice in a matter so important. Briefly, then, the probable outcome of the exhaustive enquiry conducted by this Commission is that no attempt will be made meddle with the business of insurance; that stricter measures will be adopted with regard to the load-line, and that some reform will be

effected in the Board of Trade. The Board of Trade owes its origin to the Protector. In 1655, he appointed a Board, consisting of his son, RICHARD CROMWELL, several members of the Privy Council, together with some Judges and prominent merchants, to consider how the traffic and navigation of the Republic might be promoted and regulated. Nothing special seems to have been accomplished by this body, and in 1660 CHARLES II. instituted another Board to collect information with regard to imports and exports, and for the improvement of trade. He also instituted a Colonial Board. In 1672 the two bodies were united, but three years later both were abolished and their functions entrusted to the Privy Council. WILLIAM III. resuscitated the Board of Trade and of the Colonies in 1659, and JOHN LOCKE was one of the Lords Commissioners. In 1768, the creation of a Colonial Department deprived the Board of its most interesting duties, so that, in 1780, BURKE denounced it in the House as "a closed chamber in which eight members of Parliament received annually a thousand pounds sterling each, for the sole purpose of acquiring the right to ask for two thousand a short time afterwards." On his motion the Board was abolished, as was also the Colonial Department, the functions of the latter being transferred, first to the Home Office, and afterwards (1801) to the War Office. The Board of Trade, however, was reconstituted by an Order in Council, in 1786, under the form of a Permanent Committee. The Committee comprised the Archbishop of CANTERBURY, Primate of all England, the First Lord of the Treasury, the First Lord of the Admiralty, the principal Secretaries of State, the Chancellor of the Exchequer, and the Speaker of the House of Commons, besides several other notable functionaries. This august body had no real functions of any kind to perform. Its rules never even fixed the dimensions of a quorum, and the President seems to have taken on his own shoulders the whole responsibility of deliberating and deciding. Indeed, it was not until some years after the office of President had existed in practice that Parliament formally created it and endowed it with a salary of two thousand sterling. The same is true of the Vice-President, who was, however, replaced by a Parliamentary Secretary in 1867. The last step converted the conventional Committee into a veritable Department, and the President of the Board of Trade is now almost invariably a prominent politician with a seat in the Cabinet. It is easy to conceive that a body whose character has varied so much from time to time, may offer a rich field to the active reformer.

#### COMMERCIAL CHANGES.

THE following article, written some years ago, but not published, by a gentleman well acquainted with the conditions of foreign trade in China and Japan, has been placed at our disposal. It will be seen, that it not only furnishes an independent corroboration of what has been said in these columns on the same subject, but is also an evidence that the aspects of that trade, which recently elicited so much comment, have long been evident to careful observers:—

At a time when complaints are rife as to the general dulness of English business in the Far East, it may be well to glance at some of the causes which—apart from occasional ups and downs due to war or rebellion, speculative mania, or the operations of nature—have been long and steadily at work in the East itself to bring about the present depression. In the earlier days of our trade with China facts fully warranted the popular notion that this commerce was a certain road to riches. Time was, not very long ago, when to be a China merchant was to be a veritable nabob. Japan too, in a less degree, quickly filled the coffers of foreign traders during the first period of her intercourse with the West. That Englishmen reaped the lion's share of the rich harvests of those palmy days was the natural result of causes too obvious to need precise relation. In China especially, fabulous fortunes were soon and easily amassed by the few British "hongs" which, though now dead or dying, still live in memory as embodiments of power, luxury, and wealth, and which for years enjoyed a virtual monopoly of this colossal and lucrative commerce. Wars and revolutions only swelled the profits of the "fire-eating merchants" at the ports of China and Japan, and were even declared to be not altogether unwelcome. Great Britain's policy was moulded to their desires; treaties and tariffs, ministering to the growth of their trade and of their gains, were forced upon helpless and unwilling nations; and in China, by the complacency of the Chinese themselves, foreign merchants slipped into a highly remunerative coasting trade, which was not authorised by treaty, and which, though of great service in the development of commerce, caused considerable loss to thousands of seafaring natives.

An incidental but not little curious feature of the traffic of this prosperous era, and one which may perhaps be held to account in some measure for its gradual decline under later and less favourable circumstances, is the fact that all the business was—as it indeed continues to be—really carried on by native middlemen. Principals seldom if ever meet. Whether from exclusiveness, laziness, race-antipathy, indifference, or ignorance, our mercantile men as a body have never concerned themselves to learn anything of the language, history, culture, or habits—scarcely even of the character and modes of thought—of the Eastern races with which they have had such extensive and intimate dealings. Neither years nor circumstances have in any perceptible degree pierced that seemingly impassable barrier which PALGRAVE, with his usual graphic power, years ago described as separating the Oriental from the Englishman. Of the gentlemen in our Eastern hongs who speak as

with authority of China and the Chinese, Japan and the Japanese, not one in ten, if the truth were known, has ever so much as read a book about the country he lives in—about those ancient and interesting peoples whom, with the spirit proper to the average Englishman in the East, he views with suspicion, contempt, and dislike, and consigns to the vague and general limbo of barbarians and "niggers." The foreign press, with one or two brave and honourable exceptions, panders to the popular sentiment. Men cannot, as "Chinese" GORDON wrote, run counter to public opinion in the East and exist there; and the press is wise in its generation and reviles to order. Perhaps in China the native himself contributes in some degree to the maintenance of the gulf of separation. But this cannot be said of Japan, where even the Government has set a fine example of friendly efforts to bridge it over. Whatever the causes, the facts remain that the two classes, native and English, are thus wide apart from one another, that they have made no successful mutual approach to social or domestic intercourse, and are content to carry on their daily work under the miserable system of Chinese "compradors" and Japanese "banto," speaking the vile jargons known in the East as "pidgin."

More prominent, however, among the causes of the decline of British commercial supremacy in China and Japan is the great and growing tide of competition which late years have witnessed. Amongst Western rivals, Germans in particular, not a few Dutchmen and Americans, and a sprinkling of French, Portuguese, and others, now effectually jostle our own merchants in the race for wealth. The old palatial English hongs have collapsed, withdrawn, split up, or otherwise fallen from their former high estate. Smaller firms, of more recent origin, with difficulty hold their own. Such, in fact, has been the overgrowth of the numbers and rivalry of foreign business houses in Far Eastern ports that their present mode of existence readily recalls the traveller's story of the precarious livelihood which the Shetland Islanders gain by washing one another's clothes. And all of them have now to face a yet more formidable class of opponents—the native merchants. These, having learned from us, on the spot and elsewhere, our language and methods of business, and bringing to their task acute minds, great natural aptitude for trade, cheaper methods of conducting it, and a thorough knowledge of their countrymen's requirements, are the commercial antagonists whom our Eastern men of business have most to fear. The Californian lament of being "ruined by Chinese cheap labour" bids fair to find its echo in the mercantile circles of the Far East, not alone in China, but in Japan. Already this opposition has been fairly well established, and no earthly power is likely to really break it down. In China's coast and river carrying trade especially, wealthy Chinese firms participate to a large extent. The very class whom Europeans first taught and employed have entered the lists against them. Nor is this movement limited to China. In the Bornean Archipelago, as in Singapore, Malacca, and Penang, Chinese lead the merchant host; Japanese have until now had Korean trade all to themselves, and are making a respectable show in Hongkong and other ports, besides maintaining—what they have never yet relinquished—the monopoly of

Original from

their own coast trade. No competitors could be more dangerous or more unwelcome to foreigners in the East. Their strength and numbers are great, their local knowledge and advantages overpowering, and, if in commercial standing and morality they are nominally inferior to their Western rivals, time and experience are fast eliminating the difference. While foreign trade with the East is on the whole increasing steadily, the foreign communities, especially in Japan, are fast dwindling. Many merchants are leaving; those who remain are disintegrated. Yokohama traders, many of them men of high abilities and practised knowledge, while struggling stoutly against the tide by which they are being overwhelmed, are prone to set it down to the machinations of the Japanese Government, to fluctuations in silver, in fact to every cause but the true one. Hongkong colonists cry out as of old that the Chinese Customs "blockade"—a matter in which the Chinese have all along been absolutely in the right—is destroying their business. None of these seem to admit the real cause of the great changes of latter days—that local trade is gradually moving out of its old artificial and temporary grooves into healthier, cheaper, and more natural channels, in which it will be freer to develop and prosper. If, however, this movement be fraught, as it seems to be, with more or less of disaster to English and other resident traders, it is something to know that on the whole it must prove a source of benefit to the merchants and manufacturers of Europe and America. Orientals will go on buying from the West all that they require, no matter who conduct the business of the ports. Lancashire and Yorkshire cannot but gain by any change that brings them within easier and cheaper reach of their Eastern customers.

## REDEMPTION LOAN REGULATIONS.

### IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance relating to the Redemption Public Loan Regulations and order it to be promulgated.

[His Imperial Majesty's Sign-Manual.]

[Privy Seal.]

Dated the 16th day of the 10th month of the 19th year of Meiji.

Countersigned by Count ITO HIROBUMI,  
Minister President of State.

Count MATSUGATA MASAYOSHI,  
Minister of State for Finance.

### IMPERIAL ORDINANCE NO. LXVI.

#### THE REDEMPTION PUBLIC LOAN REGULATIONS.

Art. I.—The Redemption Public Loan shall be raised to redeem, and settle the accounts of, Domestic Public Loan Bonds hitherto issued and bearing interest above six per cent. per annum.

Art. II.—The Redemption Public Loan shall be limited in amount to yen 175,000,000, and shall be raised by degrees by the Minister of State for Finance, according to financial convenience.

Art. III.—The rate of interest of the Redemption Public Loan Bonds shall be five per cent. per annum.

Art. IV.—The Bonds to be issued for the Redemption Public Loan shall be unregistered and provided with coupons, and shall be of five denominations—yen 5,000, yen 1,000, yen 500, yen 100, and yen 50. But the Bonds may be made name-bearing at the request of the owner.

Art. V.—The conditions of the Redemption Public Loan Bonds shall be fixed by the Minister of State for Finance, and by him publicly announced beforehand.

Art. VI.—When the Redemption Public Loan is to be raised, the Minister of State for Finance shall determine the amount and value of the Bonds to be issued, the date of application, the mode of payment, etc., and shall make them known to the public some time in advance.

Art. VII.—When the amount applied for at any particular period exceeds that of the Redemption Public Loan Bonds to be issued for that period, the Minister of State for Finance shall issue the Bonds, beginning with the highest bidder and stopping when the required amount has been obtained. When applications are similar in amount, the quantity of Bonds applied for shall be reduced in equal proportions.

Art. VIII.—In case the payment is to be made in several instalments, any person who does not complete his payment within the fixed period, shall pay, from the day following the last day of the fixed period of payment until the day of actual payment, interest at the rate of seven per cent. per annum.

When, in the above case, payment is not made within three months after the fixed period of payment, Bonds shall not be granted, and the amount of money already paid shall be forfeited.

Art. IX.—The principal of the Redemption Public Loan shall be left unredeemed for five years after the year in which it is to be raised; and after these five years, it shall be redeemed in fifty years by drawing lots. The amount to be redeemed each time shall be fixed by the Minister of State for Finance, and by him publicly announced some time beforehand.

Art. X.—When lots are drawn for redemption of the principal of the Redemption Public Loan, the process shall be performed at the head office of the Nippon Ginko, in the presence of more than three officials of the Department of State for Finance, more than two officials of the Board of Audit, and not less than two officials of the Nippon Ginko. Persons who possess Redemption Public Loan Bonds amounting to more than yen 300,000 face value, may be present at the drawing of lots.

After the drawing, the Nippon Ginko shall be ordered to advertise the number, kind, and amount of the Bonds drawn.

Art. XI.—Interest on the Redemption Public Loan shall be paid in June and December each year.

Art. XII.—When the principal has been paid before the 15th of any month, interest on the Redemption Public Loan shall be calculated from the latter half of that month; and when payment has been made after the 15th, interest shall be computed from the next month. For the year in which the principal is redeemed, interest shall be calculated according to the number of months previous to the month in which redemption takes place.

Art. XIII.—When interest is received, the owners of the Redemption Public Loan Bonds shall cut the coupons and present them at either the Nippon Ginko, its Branch Offices, or Agencies.

Art. XIV.—When payment of either principal or interest of the Redemption Public Loan is not applied for, such payment will not be allowed, in the case of principal, after fifteen full years from the month of redemption, and, in the case of interest, after five full years from the month of payment. But when payment of principal or interest has been deferred on account of the loss, defacement, or injury of Bonds, or when the request for such payment cannot be made on account of a law suit, the extent of the delay shall not be taken into account.

Art. XV.—When an unregistered Bond is to be changed into a name-bearing bond, an application, signed by the Headman of the District, should be sent with the Bond to the Department of State for Finance, through the Nippon Ginko, its Branch Offices, or Agencies.

Art. XVI.—In case of the sale, purchase, or transfer by gift of a name-bearing Bond, an application signed by both parties should be sent together with the Bond to the Nippon Ginko, its Branch Offices or Agencies, in order that the name may be changed.

Art. XVII.—In case the owner of name-bearing Bonds dies, his heir should go through the process mentioned in the preceding Article, by presenting an application accompanied by a document signed by the Headman, proving that the claimant is the proper successor.

Art. XVIII.—When name-bearing Bonds are left by the will of a deceased owner to a person who is not his proper heir, the process of changing the name on the Bonds, as described in the foregoing Article, should be gone through, with the proper heir as witness. When there is no heir, not less than two of the relatives of the original owner should act as witnesses.

Art. XIX.—In case of the transfer of owner-

ship of name-bearing Bonds on account of bankruptcy of the original possessor, the new owner should go through the process of changing the name on the Bonds, by presenting in conjunction with the latter a document of proof to the local law court.

Art. XX.—When Redemption Public Loan Bonds or coupons have been lost by fire, flood, or other accidents, a grant of new Bonds or coupons or payment of interest may be applied for, with more than two witnesses, to the Department of State for Finance, through the Nippon Ginko, its Branch Offices, or Agencies. In such a case, when the Department of State for Finance deems proof of the loss sufficient, new Bonds or coupons shall be immediately granted, or interest paid, as the case may be.

Art. XXI.—When a Redemption Public Loan Bond or its coupon has been lost, the fact should be reported to the Nippon Ginko, its Branch Offices, or Agencies. The same process should be observed in the case of recovery.

On receiving such a report, the Nippon Ginko shall advertise the circumstance in the public papers at the expense of the owner who has forwarded the report.

Art. XXII.—When the loss of Bonds or coupons has been reported, the Nippon Ginko, its Branch Offices, or Agencies should suspend payment of the lost Bonds or coupons.

Art. XXIII.—When Bonds or coupons, the loss of which has been reported, are brought to the Nippon Ginko, its Branch Offices or Agencies, the recovered documents shall be kept by the Bank, and the fact intimated to the owner who has reported their loss. The disposal of the Bonds or coupons shall be resolved upon after the right of ownership has been established by a proper process gone through by the person who brought the articles and the person who reported the loss.

Art. XXIV.—When one period of payment of interest has elapsed by after the reporting of the loss of any name-bearing Bonds, a grant of new Bonds may be applied for, with two witnesses, to the Department of State for Finance, through the Nippon Ginko, its Branch Offices, or Agencies.

Art. XXV.—When six full years have elapsed after the reporting of the loss of unregistered Bonds, or when four full years have elapsed after the period for payment of interest in the case of lost coupons, and the documents still remain missing, either new Bonds shall be issued or interest paid to the reporter of the loss. After those periods of time, any person who finds the lost Bonds or coupons shall have no right except that of instituting a law-suit against the reporter of the loss.

Art. XXVI.—When a lot drawn falls upon a lost Bond it will be without effect.

Art. XXVII.—When Redemption Public Loan Bonds have been injured or defaced, new Bonds may be applied for, by sending in the old Bonds to the Department of State for Finance, through the Nippon Ginko, its Branch Offices, or Agencies. When the genuineness of the Bonds is established, the Department of State for Finance shall issue new Bonds, and in the case of those Bonds the genuineness of which is not altogether apparent, their disposal shall be the same as in the case of lost Bonds.

Art. XXVIII.—In the cases of a change of Bonds, according to Art. XV.; of a change of the name of the owner, according to Art. XVI., Art. XVII., Art. XVIII., and Art. XIX.; of issue of a new Bond, according to Art. XX., Art. XXIV., Art. XXV., and Art. XXVII.; and of a change of the office for disposing of name-bearing Bonds, the Nippon Ginko, its Branch Offices, or Agencies may levy reasonable commission from the owner of the Bonds.

Art. XXIX.—The witnesses mentioned in Art. XX. and Art. XXIV. shall be such as will give satisfaction to the Nippon Ginko, its Branch Offices, or Agencies.

Art. XXX.—Redemption of the principal of any of the Public Loan Bonds hitherto issued with interest above six per cent. per annum, may be accomplished at the request of the holder of the Bonds and according to the convenience of the Department of State for Finance, in Redemption Public Loan Bonds.

Art. XXXI.—The expenses of the manufacture and issue of Redemption Public Loan Bonds, and interest on the same for the year of their issue, may be paid out of the amount raised by their issue.

Art. XXXII.—The rules of procedure with regard to the raising and redemption of the Redemption Public Loan, the payment of interest, the modification of Bonds, etc., shall be fixed by the Minister of State for Finance, and all business connected with these matters shall be conducted by the Nippon Ginko.

## THE REDEMPTION LOAN BONDS.

## ORDINANCE No. XXX. OF THE DEPARTMENT OF STATE FOR FINANCE.

It is hereby notified that, in accordance with Art. XXXII. of the Redemption Public Loan Regulations, proclaimed by Imperial Ordinance No. I.XVI. of this year, the undermentioned rules of procedure have been established.

(Signed) Count MATSUGATA MASAYOSHI,  
Minister of State for Finance.

Dated the 12th day of the 10th month of  
the 12th year of Meiji.

## RULES OF PROCEDURE FOR THE REDEMPTION PUBLIC LOAN.

## SECTION I.—ISSUE OF BONDS.

Art. I.—Applicants for Redemption Public Loan Bonds should notify the amount and value they desire allotted, to the proper office (meaning either the head-office of the Nippon Ginko or any of its branch offices or agencies) within the time fixed by the Minister of State for Finance.

Those applicants who, in terms of the last portion of Art. IV. of the Redemption Public Loan Regulations, desire the issue of name-bearing Bonds, should state so to the proper office at the time of sending in the above mentioned application.

Art. II.—Applicants for Redemption Public Loan Bonds should pay, at the time they send in their applications, a sum of money as security, at a rate to be fixed by the Minister of State for Finance. Applicants will receive from the proper office a receipt for the security money so paid.

Art. III.—Applicants for Redemption Public Loan Bonds should, within a period fixed by the Minister of State for Finance, pay the amount of their application, minus the security money. The receiving office will give applicants a receipt for the money so paid.

Art. IV.—When an applicant dies, after receiving receipts for security money and for the portion of the amount of his application already paid, but before completing the payment, the heir of the deceased should give notice to the receiving office of the fact of the transfer of the Bonds, and of his intention to pay the remaining portion of the amount of the application.

Art. V.—Applicants are not permitted to sell, purchase, or otherwise effect any transfer of, receipts for security money or for the amount applied for, except as security to the receiving office where the original application has been made.

Art. VI.—The Minister of State for Finance will determine the denomination of the Redemption Public Loan Bonds that are to be issued to applicants, and will send them to the head-office of the Nippon Ginko.

Art. VII.—Bonds shall be delivered to each applicant at the receiving offices in exchange for the receipts for security money and for the successive payments. But at the last time of payment, the Bonds may be delivered in exchange for cash and other receipts, without giving a receipt for the last payment.

Art. VIII.—When the amount applied for is reduced, according to Article VII. of the Redemption Public Loan Regulations, the security money shall be returned, and interest shall be paid on it according to the number of days it has been retained.

Art. IX.—At the time of the raising of the Redemption Public Loan, applicants may use, instead of cash, old bonds bearing interest above six per cent. per annum. In such case, except as to the last payment, the amount may exceed that fixed by the Minister of State for Finance.

The exchange of old bonds for Redemption Public Loan Bonds will be effected by taking the face value of both. The variety of old bonds exchangeable will be on each occasion determined by the Minister of State for Finance, and by him publicly announced.

Art. X.—The amount applied for to exchange with old bonds shall not be reduced even if exceeding the fixed amount; and as interest on the old bonds will be paid until the day of the issue of the Redemption Public Loan Bonds, no interest on security money or on payments for successive periods will be paid.

Art. XI.—After the issue of the Redemption Public Loan Bonds, any person who desires, according to Art. XXX of the Redemption Public Loan Regulations, to have his principal in the shape of old bonds bearing interest above six per cent. per annum, exchanged for Redemption Public Loan Bonds, should give notice of his desire to the receiving office. The Redemption

Public Loan Bonds to be given out in such a case shall be counted by their face value.

Art. XII.—When receipts for security money or for payment of the principal have been lost or defaced, new receipts may be applied for on proving the fact at the receiving office by means of more than two witnesses.

## SECTION II.—PAYMENT OF INTEREST.

Art. XIII.—The period for the payment of interest shall be from the 1st to the 25th of the months of June and December each year.

Art. XIV.—Interest on the Redemption Public Loan Bonds shall be paid to the bearer at any of the authorised offices in exchange coupons. But in the case of name-bearing bonds, the payment of interest shall be made only at that office where the name of the owner is registered, and to the person in whose name the bonds are registered.

Art. XV.—When the interest to be paid at the time of any issue of Redemption Public Loan Bonds, at the time when the lots are drawn, or at the time of redemption after the full period, is less than the amount in the coupons, it shall be paid at an authorised office in exchange for a receipt.

Art. XVI.—When an application is made for the payment of interest, according to Arts. XX. and Art. XXV. of the Redemption Public Loan Regulations, such payment shall be made at an authorised office in exchange for receipt.

## SECTION III.—REDEMPTION.

Art. XVII.—When, in pursuance of the latter portion of Art. IX. of the Redemption Public Loan Regulations, the amount of the bonds to be redeemed is publicly announced, the Nippon Ginko shall, with the sanction of the Minister of State for Finance, fix the date for drawing lots, and advertise it for not less than three days in the *Official Gazette* and more than five newspapers.

Art. XVIII.—When the process of drawing lots has been completed, the Nippon Ginko shall, in the same way as in the case provided for by preceding Article, advertise the amount, kind, mark, number, and quantity of the bonds on which the lots have fallen.

The authorised offices in various places shall in like manner publish a similar advertisement, each in its own district, by a suitable method.

Art. XIX.—The period of the payment of the principal of Redemption Public Loan Bonds should not exceed fifteen days, counting from the day following that on which the principal is delivered to the authorised offices.

Art. XX.—The principal of Redemption Public Loan Bonds shall be paid to the bearer at any of the authorised offices in exchange for the bonds. But in the case of name-bearing bonds, the payment of principal shall be made only at that authorised office where the name of the owner was registered, and to the person in whose name the bond is registered.

Art. XXI.—When a Redemption Public Loan Bond, which has been lost and duly reported, is drawn, the payment of the principal and interest may be applied for, in the case of an unregistered bond, according to Article XXV. of the Redemption Public Loan Regulations, after six full years have elapsed from the time of reporting the loss; and, in the case of a name-bearing bond, after thirty days have passed since the period of payment mentioned in Art. XIX. of the present Rules. Payment, in such a case, shall be made at an authorised office in exchange for a receipt.

Art. XXII.—In case a lot falls on a bond corresponding to the specifications of Art. XX. of the Redemption Public Loan Regulations, and in case a bond, on which a lot has fallen, has since come within the category specified in the above quoted Article, new bonds shall not be granted; but the principal and interest shall be paid at an authorised office in exchange for a letter of application signed by the claimant and his witnesses, and a receipt.

## SECTION IV.—TREATMENT OF BONDS.

Art. XXIII.—In applying for the grant of new bonds, or coupons according to Art. XX., Art. XXIV., and Art. XXV. of the Redemption Public Loan Regulations, the applicant should make his wishes known to a commissioned office, which will deliver to him the new bonds or coupons in exchange for a receipt.

When proof of the loss is not sufficient in the case of Art. XX. of the Redemption Public Loan Regulations, a name-bearing bond shall be treated according to Art. XXIV., and an unregistered bond according to Art. XXV., of the same Regulations.

Art. XXIV.—The new bonds, granted on account of such destruction, loss, injury, or deface-

ment of the original bonds, shall be provided with the coupons which belonged to the former bonds. The new bonds may differ in kind from the original bonds.

Art. XXV.—In delivering a name-bearing bond, an authorised office should affix its seal to the bond, and also check it with a registry-book by stamping one seal over the edges of both.

Art. XXVI.—On receiving an application to change an unregistered bond into a name-bearing bond, the authorised office should give the applicant a receipt for the bond. The head-office of the Nippon Ginko (and though it) its Branch Offices and Agencies should then apply to the Department of State for Finance for the stamping of the registry seal on the bond; and on receiving the stamped bond and a registry-paper, should deliver them to the owner of the bond in exchange for the receipt.

Art. XXVII.—On receiving an application for a change of name on a name-bearing bond, according to Art. XXVII., Art. XXVIII., and Art. XII. of the Redemption Public Loan Regulations, the authorised office should affix its seal to the bond, and return it after checking it with a registry-book by stamping a seal over the edges of both.

Art. XXVIII.—When the owner of a name-bearing Redemption Public Loan Bond desires to register at a new office, he should first report to the original office and then apply to the new office for registration of his bond in its registry book.

Art. XXIX.—When the sale, purchase, or transfer by gift, of a name-bearing Redemption Bond is effected between parties under the jurisdiction of different offices, the processes mentioned in Art. XXVII. and Art. XXIV. should be gone through.

Art. XXX.—The owner of a name-bearing bond, should deposit at his local office a stamped specimen of his seal, with a confirmatory document by the Headman of the district. The same process should be gone through in the case of a change in his seal or his name.

Art. XXXI.—The amount of commission mentioned in Art. XXIV. of the Redemption Public Loan Regulations should be fixed by the Nippon Ginko and approved by the Minister of State for Finance.

## ASIATIC SOCIETY OF JAPAN.

A general meeting was held in the Library, No. 33, Tsukiji, Tokyo, on Wednesday, October 13th, 1886, at 4:30 p.m., N. J. Hannen, Esq., President, in the Chair.

The minutes of the last general meeting, having been published in the *Japan Mail*, were taken as read.

A paper on "Japanese," by E. H. Parker, Esq., H.B.M. Vice-Consul, Chemulpho, Korea, was presented and read by the Corresponding Secretary. The purpose of the paper was to discuss comparatively the philological import of the Japanese pronunciation and *kana* spelling of the Chinese characters. This was entered into historically as well as phonetically, and a large number of detailed comparisons made between Japanese, Korean, and various Chinese dialects. In a future paper, the author intends to apply the principles here established to the tracing of modern Japanese words back to pre-historic Chinese, or to the same source as pre-historic Chinese, his view being that a great part of the Japanese language—apart from its *kan, go, and fō* importations made during the last 2,000 years—has a common linguistic origin with the modern dialects of China. His general theory is indeed that, just as English, although enriched by direct borrowing from Latin, was in its early Saxon form a language claiming a common ancestry with Latin, so Japanese can be proved by purely philological tests to stand on a common footing with Chinese as a derivative from the same ancient stock.

The President, acknowledging the indebtedness of the meeting to Mr. Parker for his contribution, suggested that, as the paper was of a preliminary character, it might be advisable to postpone discussion until all the matter had been presented. He would call therefore on Mr. Chamberlain to read his paper on "the Quasi-Characters called *Fa-jirashi*."

Mr. CHAMBERLAIN began by apologising to the members for introducing them, already so afflicted with syllabaries and ideographs, to yet another

class of symbols, called ordinarily *Ya-jirushi* or "house signs." These were quite familiar to all who had eyes to see, although their use in Tokyo had somewhat decayed. In other parts of Japan, especially in Yezo, these *Ya-jirushi* were the distinctive marks of shops or business houses. They were made up from two distinct sources: (1) from the syllabaries and Chinese characters in common use; (2) from a stock of rude ideographic symbols invented for the occasion. Over 40 of these latter were shown drawn on a large sheet; they formed, so to speak, the alphabet of the signs, from which by combination in pairs, or by combining with one or more a *kana* or Chinese character, a great variety of signs could be built up. These 40 rude symbols of group (2) were, in themselves, a worthy subject of study. They illustrate how the Japanese mind tends to represent ideas conventionally, as, for example, representing a star by a circular disk, a fish's scale by a triangle, and so on. They show how a system of writing may be developed. They also contain little bits of history. Thus the square with drawn diagonal, known as *masu*, is the form of instrument still used for measuring rice and oil. The sign called *kane* is simply the carpenter's square. *Zoni* is figured as the coin punched with a square hole. The rarely used hexagonal sign *kikko*, more properly *ki kō*, represents the shell of a turtle. The signs which go with these to make up the *Ya-jirushi* are borrowed from the ordinary syllabaries or characters in common use, and are usually of the simplest form. The reasons which prompt their adoption are multitudinous, and can be discovered only in a comparatively small number of cases. Sometimes a portion of the name of the owner or of his native province is used, either in its true form or with a simpler character substituted having the same phonetic value. Again, a special character might become popular because of its supposed inherent good luck—or the merest accident of the moment might be the most powerful determining factor. Euphony, superstition, and chance not only would determine what particular character would be adopted, but also what characters could never be admitted. Thus *shi* (four) was almost of necessity tabooed, being suggestive of an homonymous character signifying death.

The discussion which followed was mainly in the form of queries put by those present as to the significance of some of the many *Ya-jirushi* which were figured on a large chart.

The PRESIDENT thanked the author for a paper which had given so much instruction and entertainment to the members who had come to hear it. The meeting then adjourned.

## CRICKET.

### MARRIED V. SINGLE.

The match on Saturday between the married and single included some visitors from the Fleet, and one of the most extraordinary games ever played on the ground has to be recorded. The "single" went in first and remained there all day, though nine wickets were down when the stumps were drawn. This was mainly due to Sutter, who made 128 not out, the side being assisted in compiling the big score of 269 by Edwards contributing 60, and Playfair 37, not out. There is no disguising the fact, however, that the bowling was weak, though it must be admitted that the condition of the ground was against the bowlers, and notwithstanding that Hearne, Strange, Wheeler, Bush, and Christian tried their hands in succession, they could not remove Sutter, who, with hand and eye both in, made a splendid defence against all the assaults brought to bear upon him. It must be related, however, that the cry of "butter fingers" was heard in the Pavilion more than once during the play, and that several not difficult catches were missed. Sutter should certainly have been held before he had made ten, and he was let off more than once afterwards. The latter remark applies also to Edwards and Playfair, who, though displaying correct cricket, had between them several "lives." The following is the score:—

SINGLE.	
Mr. Wileman, c. Dodds, b. Strange	2
Mr. Edwards, c. Lowdell, b. Strange	60
Mr. Sutter, not out	128
Mr. Wilson, l.b.w. b. Hearne	1
Mr. Eagles, R.N., b. Hearne	1
Mr. Kenny, c. and b. Wheeler	5
Mr. Collins, R.N., c. Lowdell, b. Hearne	2
Mr. Osborne, R.N., run out	12
Mr. Playfair, not out	37
Mr. Brewer, b. Bush	2
Mr. Bagallay, c. Moss, b. Christian	6
b. o. l. b. z. w. 6	14

## PREVALENCE OF THE ENGLISH LANGUAGE.

(Translated from the *Fiji Shimpō*).

Twenty years ago, at the time of the Restoration, it was the fashion in this country to use the most difficult Chinese words in conversation as well as in writing. It was then thought that a man had no claim to respect and esteem who could not use high sounding Chinese phrases; and scholars were very proud of their command of such expressions. Naturally enough there were some conservative persons who inferred from this circumstance that the work of the Restoration was to restore society to its old conditions. But this was merely a superficial view, and exactly the reverse was the case. It was the desire to inaugurate a new state of things, and not to restore society to its former condition that motivated the work of the Restoration, and this desire agitated not the old but the young, not the high or the rich but the boldest and most enterprising among the students of that time. Their desire moved the whole country, undermined the Tokugawa Government, abolished the feudal system, and spared nothing in its iconoclastic operations. These students were not accustomed to observe the polite etiquette of the society of those times; were ignorant even of the polite forms of salutation, and in their letters they used those Chinese expressions alone with which they were familiar from their exclusive study of Chinese; and delighted to write in the wild, running style of the old Chinese masters of penmanship. In a society in which order is rigidly maintained, such an anomaly would never be tolerated; but at that period of this country's history students were the most influential factor in the national life; no one who was not either a student or an imitator of the students' doings was able to retain the respect of the public. It was due to this circumstance that the first years of the new era witnessed the extraordinary prevalence of Chinese expressions in conversation and writing.

Chinese words and phrases have now gone entirely out of fashion, and any one who imitates the students of old is made an object of ridicule. The place of the Chinese language has been usurped by the English tongue. Englishmen are cosmopolitan, and live by commerce. Wide as the world is, there is not a land where Englishmen do not go, and where they settle business is instantly created. Every one, therefore, who has any connection with trade, feels the necessity of speaking the language of Englishmen, and the sphere of the use of that language is daily widening over the surface of the globe. Japanese especially must understand it; for the nearest civilized country of the West is peopled by English-speaking persons, and the most influential Power in the East in England, whether we view her position from a commercial or a political standpoint. We, therefore, have to meet Englishmen and Americans more frequently than any others. From these circumstances, everybody in this country who at all pretends to usefulness understands more or less English, and those who do not understand it are looked upon as lacking in civilized qualifications, however admirable their capacity may be in other respects. Specially of late, the intercourse between this country and the West having become more and more close, those people who do not understand English are daily subject to inconvenience whether in private or public business, while those who go abroad must before every other thing study English. At this point the near prospect of the opening of the country for mixed residence has stimulated every class of people to study that language. In the event of the granting of mixed residence, foreign residents will of course more or less endeavour to speak the language of this country, but that must necessarily be within narrow limits. We ourselves must study some European tongue, if we desire to carry on intercourse with foreigners successfully. It is conceivable therefore that ultimately it may become necessary to allow the use of an European language in contracts and in law courts, where any dispute arises between Japanese and foreigners. As it is impossible to use all foreign languages in such cases, we shall have to make a selection. In our own opinion, the selection will inevitably fall on the English language, for that is the natural sequence of events. In the event of the adoption of that tongue as a second national language, its prevalence will be a hundred times more general than at present; and further, we may predict that the day of its adoption is already near at hand. It is, therefore, of vital importance for any one who has the least ambition to be prepared for this certain contingency.

## NOTES FROM NIKKO.

Once upon a time Nikko was at the end of a heart breaking two day's journey from Tokyo, by *basha* or *jinrikisha*; now it is only five hours by the same conveyance from Utsunomiya. You go by rail to Utsunomiya, and you are careful to grumble that the trains are not run frequently enough, and that the convenience of the public is not consulted on this line, though you were probably meek enough in a *horiai basha* last year.

Arrived at Utsunomiya, you engage a *kuruma*, and begin to hope the road is not too bad. A few seasons back, some one in authority caused all the roads in Tochigi *ken* to be covered two feet deep with loose gravel. From a height, say from a balloon,—this must have had a pleasing effect; but upon the temper of the traveller, if I can trust my memory, the effect was quite otherwise, and the curses showered upon the head of the road-maker were both deep and loud. But, if the general result is as satisfactory as upon the Nikko road, the much maligned one may be forgiven. For, although the nine and a half *ri* from Utsunomiya is a very composite track indeed, made up, as it is, of sections covered with boulders, gravel of all sizes, mud, sand, &c., yet by dint of constant rolling and the employment of large gangs of convicts, the way is kept fairly smooth. During the first, or gravel period, the road was actually impassable, and *jinrikishas* were dragged over the roots of the big trees of the avenue. Anyone who had that experience won't care to repeat it.

There is a section of the road, about two *ri* in length, that is actually macadamised, or has got a top-dressing of macadam, and this is evidently the source of much local pride. It is kept in first-rate order, and the *jinrikishas* bowl along right merrily, their occupants sitting upright once more, and losing that brutalized expression common to the over-tired *jinrikisha* traveller. Yes, brutalizing is the only word which properly describes the effect of this mode of travelling. It brutalizes the rider and it brutalizes the drawer. At the beginning of a journey of this sort, you feel ashamed to see two men in front of you, toiling on mile after mile, every muscle straining, the burning sun full upon their unprotected bodies, the perspiration running in streams from every pore. Your heart is wrung with pity. Yet, such is the degrading effect of the fatigue, upon mind and body, that before the journey is done, you find yourself inclined to revile the poor wretches who have dragged you twenty miles for not going faster, or for jolting you unnecessarily.

After a long and weary day you reach Hachishi at even-song, and if you are wise you won't stop there. You will leave Suzuki-ya, marked G. in the Guide Book, with its horde of half clad hangers on, and, crossing the river Dai-ya-gawa, which divides Nikko and the everlasting hills from the under world, will seek shelter within the temple precincts; or, failing that, in the village of Imachi beyond.

In this neighbourhood are a dozen or more houses, the dwellings of the priests—the Cathedral Close in fact—whose owners willingly let them for the season. Besides these, there are a few new houses,—flimsy structures,—recently put together with a view to the good time in store. The rents used to be moderate enough, but this year the demand exceeded the supply, with the result that one house had managed to stow away three separate parties, and to squeeze a hundred *ren* a month out of each. So the story goes. Prices, the superiority of Nikko compared with Ika, Hakone, &c., are absorbing topics of conversation. Of this superiority we were all fully persuaded. There is no Hakone Lake, to be sure; but don't you think the neighbourhood of a lake is always damp? No hot springs; but at Nikko we all preferred cold baths, so much more invigorating, don't you know. We were certainly confirmed in our preference when the Kunai-sho officials arrived to choose a site for a summer palace, the Emperor not liking Hakone well enough. When the Ministers' and rich bankers' country residences (for which the sites are already chosen, and the leases drawn up) are finished, and when the esplanade by the river is laid out, and the naval band is playing twice a week: when the ladies change their toilettes three times a day, and the men wear tall hats—*Ichabod*.

No, the palmy days are over, when the few foreigners who spent their summer there were looked upon as intruders, the only other visitors being a few men clad in pyjama suits, *kiaban* and *waraji*, who staid a day or two only, and left with their faces turned towards the Hida Shinshiranges, and were heard of no more till the late Autumn, when they reappeared tanned and lean, full of heights and distances, looking as if they had fed on nothing else since. One of these turned up at Nikko this summer, but was evidently uncomfort-

able from the fact that, with a view of correcting his ordinary country costume, he had surmounted it with a white necktie, and tried to feel ready for any emergency. But he lurked in unfrequented corners; was so afraid of being asked out to dinner, he said: his expression daily became more furtive, and finally he disappeared, and has not been heard of since. It is generally whispered that the discovery that a washerman had established himself in Nikko, proved too much for the old timer; the dairyman, and the butcher and baker he forgave, but the washerman he considered a sacrilege.

If I wished to prove to the folks who went to other places the indisputable popularity of Nikko, I should give you the total number of resident visitors as eight hundred and fifty—women, women, and children, and I should neglect to add that eight hundred of them were sailors from Yokosuka, sent up for a change. It has been suggested that a cruise outside the Bay might have been more complete as a change; but, be that as it may, they were welcomed gladly—they brought a butcher and bootmaker in their train and became a constant source of happiness to the children, and, after all, the bugles were not so very much out of tune.

The sailors were billeted all over the place, and their quarters were readily distinguished from those of foreign residents by the difference in the shape of the garments drying in the breeze. Their discipline was perfect, and an unvarying routine was carefully followed during the whole of their stay. In the forenoon they washed their clothes; in the afternoon they dried them; and in the evening they prepared for the next day's wash. Very early in the morning, squads marched off in different directions, armed with bundles, and soon every quiet pool and brook was occupied with indefatigable scrubbers, and upon every available flat rock a pair of sailors',—not to put too fine a point upon it,—trousers were extended. Sailors are great in these articles, both in the washing and wearing of them. I was glad to be able to study them,—the trousers, I mean,—so closely, as it settled once for all, what has been for me, in common with others of the uninitiated, an oft vexed question. Why do sailors wear such queer shaped garments? Evidently the sailor is naturally æsthetic, and this characteristic influences the shape of his clothes as well as other surroundings of his everyday life. With this class of people it is held as a very tenet of their faith that "garments should clothe but not conceal the human form divine." Now, in the case of the article I am discussing, this condition is pre-eminently fulfilled, at least in part. Further, the sailors' trousers are emblematic, for if viewed *en profil* they give a correct picture of a ship's rudder, not the modern innovation rounded at the bottom, but the old-fashioned one, broad and cut square.

Engendered, I suppose, by sanguine visions of the blessings to follow the revised treaties, a perfect land lust took possession of the community, and many spent much time in prospecting for suitable house-building lots in the neighbourhood. As soon as an eligible site was found, complicated negotiations were opened, lasting for the rest of the season. And, although the negotiations invariably ended in an *impasse*, they served to delude the one side into the notion that they were busy, and to give the proprietors an exaggerated idea of the value of the land. The temple authorities, who are the principal owners, said:—"Foreigners we don't want, missionaries and mission churches we won't have at any price." As to the secular landowners, they were less prejudiced but more shrewd, perhaps. "No, no, wait till our railway is finished, then we will talk to you about selling our land."

The whole of the capital for the proposed Nikko railway has been subscribed, and in great part by small local capitalists, who seem to see a whole world of possibilities opened out to them. The line is to run from Utsunomiya to Inaichi, the terminus to be two *ri* from Nikko. A branch line is to connect with the Ashiwo Copper Mine.

This railway promises to be at once the bane and the boon of Nikko. For those who, like myself, prefer to spend the whole live-long summer with the sole companionship of unsophisticated villagers, the railway is an evil which forces them to seek fresh fields and pastures new. But for others, less fortunate in their leisure, it means Friday to Monday a long way from their hot and stifling offices, and a ready escape for wives and children from the miseries of a summer in the town. For the unsophisticated villagers themselves it means a closer connection with the world at large, a widening of interests, civilization indeed, not altogether an unmixt blessing. It also means a plentiful supply of rice, &c., instead of the meagre diet of *umami* and *umami*.

Nikko is hot in summer, this year, in common with the rest of Japan, exceptionally so, as vouched for by the oldest inhabitant. The thermometer

followed closely on the heels of the Tokyo register: the day it was 96° in Tokyo, it rose to 90° in Nikko, and so on. We sat and looked at each other in blank amazement, and tried to console ourselves with repeating that the air was pure at any rate. To keep below 80° you must rise to 4,000 feet; Chiuzenji, for instance, is always cool, and at night it is absolutely cold; but Chiuzenji is 4,370 feet above the sea level. At Karuizawa, I am told, the temperature did not rise above 80° all the summer. At Karuizawa they had the cholera; Nikko is as yet uncontaminated. How long it will remain so after the railway is opened is another question.

I won't repeat here "Walks in the neighbourhood," some are faithfully chronicled in the Guide Book; there are many others equally desirable, but the Guide Book description covers them all.

Walking in fine weather, and reading in wet,—as much walking, and as little reading as possible,—is recommended by the faculty for people seeking to recruit their mental energies. Reading to be of the lightest description; perhaps *Oceanica*, where you learn that Mr. Froude amused himself with Horace, Pindar, Sophocles, &c., in the original, and begin to understand his contempt for the "New Abelard." We made shift with the "New Abelard" and a few more of its kind. However, two months of light literature and tinned provisions were more than sufficient, and we were not sorry to say good-bye to both for a season.

### LETTER FROM LONDON.

(FROM OUR SPECIAL CORRESPONDENT.)

London, August 15th.

I am glad for once to have but little domestic political news to give. The Ministers have all been re-elected, the opposition in Birmingham, which at one time seemed serious, to the re-election of Mr. Henry Matthews, having collapsed at the last moment and shown that the Radical Unionists and Gladstonians are as far apart as ever. The *Pall Mall Gazette* has hunted up in old newspapers of 1868 and 1874 proofs that Mr. Matthews was a Home Ruler then, and that he even subscribed £20 to the original Home Rule League. No doubt Mr. Matthews will reply that Butt's Home Rule is one thing and Gladstone's and Parnell's Home Rule another; or he might reply as Lord Randolph Churchill did on a somewhat similar occasion "True; I did say something different ten years ago, but, then, I have altered my mind." In a speech at the Mansion House, Lord Salisbury spoke guardedly on the subject of Ireland, but the dreadful riots in Belfast, which, *The Times* said, almost amounted to civil war, gave him an opportunity of expressing the resolution of the Government to maintain order in Ireland in terms which have been interpreted to mean coercion. In another speech on the same day, the Prime Minister spoke with much effect on the subject of Imperial Federation to a number of influential colonists. This speech has been applauded by all parties as eminently judicious and sympathetic.

No further news has been received about the reported occupation of Port Lazareff by Russia, but the St. Petersburg journals discuss it as an accomplished fact. The *Nova Freya* talks of an alliance between Russia and Japan, to counterbalance the alleged *rapprochement* between this country and China. France, it says, can be easily induced to join the alliance, for she is the enemy of England everywhere and also of China. It is a pretty combination on paper; but the amusing point about it is that the wishes of Japan are not asked; she, it appears, is to jump at a Russian alliance against England and China. The manner in which European journalists form vast combinations between European and Eastern nations without troubling themselves about the views of the latter is simply amazing.

China is filling a pretty large space in the public mind of Europe just now, in connection with quite a number of questions. First of all we have Burma. A settlement, the bare terms of which I had only time to mention in my last, has been reached. It was wholly unexpected, for every one thought that what with the change at the Chinese Legation, and the changes at our own Foreign Office, negotiations were at a standstill, and there was some outcry at the neglect of this important question, for it was said that the incidents were fighting on in the hope of aid from China, and that they would continue to do so until an arrangement with the latter destroyed that hope. Certainly no negotiations whatever were going on in London, and I am inclined to think that the Chinese Legation here knew nothing at all about them. Possibly Lord Rosebery thought the Marquis Tseng too large in his demands, and resolved to try what

could be done at Peking. *The Times* groans in spirit over the vast concessions we have made, and finds a morsel of consolation in the hope that China will see in this great moderation of ours a further example of our extreme friendliness and desire to go to all lengths to maintain our alliance or understanding (or whatever else it may be called) with her. But I cannot see what we have given to the Chinese. From the beginning the sovereign rights of China over Burma were acknowledged, and the only question was how we were to carry out our duty in this respect. Lord Salisbury proposed one method, Lord Rosebery prefers another. The Chinese Government accepted the first, as they now accept the second. The decennial presents are to be carried to Peking by Burmese, and the French papers are making merry over Great Britain appearing as the vassal of China. But ten years is a long time; and events travel fast now-a-days. The Eastern criminal who got ten years' respite from hanging by promising to teach the Vizier's favourite donkey to speak in the interval, and who cheered himself with the reflection that before the time had expired, the Vizier might die, or the ass might die, or he might die himself, was wise in his generation. We have other work to do in Burma now, and the main point is to get China out of the way for the present. The frontier is to be delimited by a joint commission, but we are not told whether any general rules or limits are laid down for this body. Now, it is beyond any doubt that Lord Rosebery himself informally offered China the Tapeng river, which enters the Irrawaddy a little to the north of Bahmo, as a boundary. This gave them some territory on the Irrawaddy, and an independent outlet to the sea,—obviously a most important matter; but nothing is said of this in the new arrangement. As for the delay in despatching the Thibet mission, this is wholly due to the mismanagement of the Indian Government, which insisted on sending a large embassy with a considerable body of troops, where two or three men only should have been sent. The Thibetans appear to have become alarmed at the large preparations being made, and until that feeling is allayed, it would be dangerous to proceed with the business. I venture to think notwithstanding *The Times* and Mr. Punch's cartoon the diplomatic victory does not rest, so far, with the Chinese.

The proposed representation of the Vatican at Peking has also become an accomplished fact, much to the irritation of the French. The main features of a Concordat have been arranged, the details remaining for settlement by the Legate with the Chinese Government. The Chinese are to accredit a representative to the Vatican, while the Legate is to be a Minister of the second class, ranking with his colleagues according to the date of his arrival at Peking. A name which has been frequently mentioned in connection with the negotiations by newspaper correspondents from Rome is that of a certain Monsignor Dann, who is said to be the Chinese agent. His movements are watched with much interest, and regularly chronicled. This morning I read in *The Times* a telegram from its correspondent at Rome that this gentleman was now at Naples taking a rest after the toils of the past few months. Some of your readers may recognize in this high ecclesiastical dignitary an old resident of Yokohama. It is the polite Italian way to give people high titles, *Illustrissimo*, &c., and no doubt this accounts for Mr. Dann's sudden elevation.

Meantime the Marquis Tseng is wandering about the continent, dining with princes, interviewing statesmen, and received with high honour everywhere. What he is doing really appears to be a subject of interest here, although little is known about it; but, I believe, he wants to secure for China the benefits of a telegraphic convention between Russia and Germany recently concluded, by which it is said the cost of telegraphing to or from China would be largely reduced. The Marquis is understood to hold some strong views with regard to the position which the Great Northern Company has been allowed to assume in China, and to the desirability of getting rid as soon as may be of certain contracts between the Government and the company. He does not think that the close relations between the latter and the Russian Government are altogether advantageous to China, and that the sooner China regains a position of complete freedom, with regard to her telegraphs, the better. Needless to say, the Marquis will not have far to seek in London for assistance in this direction.

In my last, I quoted a passage from a London journal on Sir John Pope Hennessy in Mauritius. The day after my letter was posted a telegram appeared in *The Times* stating that there was a dispute between His Excellency and his Lieutenant-Governor, Mr. Clifford Lloyd, and that he threa-

tened to suspend the latter. This was a fortnight ago, and nothing farther has been heard of the matter, but as there is no telegraph line to Mauritius, and *The Times* has no correspondent there, the message appears to have been sent either from Cape Town or Aden, and the matter must therefore have created much excitement in the island. I think in a letter written at the time of Mr. Lloyd's appointment, I ventured to predict trouble. The Governor's views about Ireland are well known to be strongly nationalist, and Mr. Lloyd was ever regarded by nationalists as one of their arch-enemies. It did not require any great acumen to predict a row. I doubt, however, whether His Excellency ever met with a tougher or warrier opponent than Mr. Lloyd; the latter is an official who does his duty without question or hesitation. It was only when he had left his Irish appointment that it became known, to the surprise of all men, that he thought the Castle Government a bad one,—the Castle which he had served so faithfully under so much difficulty and obloquy for a number of years. He has a host of friends in high places in England, who admire his pluck, and it is very unlikely, come what will, that he will suffer. It is to be hoped that the difficulty will be arranged; but if it is not, and if it becomes a subject of public discussion, it will be amusing to watch the attitude of *The Times* between its two favourites. One cannot help thinking of the donkey between the two bundles of hay. Perhaps the editor will follow the editorial axiom; when in doubt, say nothing. As a well known London editor once said to me on a somewhat similar occasion, you never can go wrong by letting a thing alone.

A parliamentary paper has been published respecting the demands of the mercantile bodies for an improvement in the position of Ministers and Consuls (and indeed of the Foreign Office itself) in respect to trade. The subject no doubt is one of great importance and interest to your readers, but I need not dwell upon it in view of the full details published by *The Times*.

I presume some echoes have reached your readers from time to time of the doings of a certain Mr. Ross Winans in the far north of Scotland. This gentleman is an American who has made a vast fortune in, I believe, the construction of railways, mainly in Russia, and he is spending his money in converting a considerable area of Scotland into a deer forest, in other words into a solitude. He has ousted crofters and cotters all over the estates which he rents, and has fought case after case in the Edinburgh law courts in defence of the strict letter of his rights. So tenacious has he been of even the smallest matters in this respect, that it has been suggested he is really a philanthropist in disguise, who seeks to remedy the land laws of these islands by showing to what absurd extremes they may be carried. Year by year he has gone on adding to his territory, until now, it is said, his shootings stretch from the Beaulieu Firth on the east to Kintail on the shores of the Atlantic. The rent which he pays amounts to £17,000 per annum, and he could not, if he would, shoot over a fifth part of his domains. He has reduced game preservation to a system; his keepers are drilled and patrol the preserves as regularly as sentinels in a camp. His doings are again coming into prominence with the shooting season, for he is ruining the neighbouring estates. The game is rarely disturbed by him, and consequently fly to his lands from more troubled neighbourhoods. Shooting lodges and inns all around are standing empty and desolate, and Mr. Winans appears to live in a semi-regal state like an ancient Highland chieftain.

London, August 28th.

By far the most important event of the fortnight, so far as foreign residents of Japan and those here interested in that country, are concerned, is the publication in *The Times* this morning of a long and extremely able letter from its Tokyo correspondent on the practical settlement of the treaty problem in Japan. I need not refer in detail to the letter. Regarded merely from the point of view of effect, it is very skillfully constructed, and may be divided into what in ancient narrative poetry were called Pythies. First, the very dolorous condition of affairs up to a recent period is painted in dark colours; second, a light is thrown on the scene by the proposals of the German and British Envoys; third, the acceptance and effect of these proposals is related, and, fourthly, we have the narrative of the Mikado's private audience with Sir Francis Plunkett. *The Times* in a leader (this correspondent is rather fortunate in working Printing-House Square up to the point at which alone leaders are written) rejoices over the news with exceeding great rejoicing. Indeed nothing has been more curious than the manner in which during the past eighteen months *The Times* has, without any of its usual reservations and modifications, its very careful and cautious "ifs" and "buts," thrown its enormous weight into the

scale with Japan. In such matters its tone is generally like that of Lord Melbourne: "Can't you let it alone?" The difficulties and obstacles are usually more apparent to it than the mode by which they can be avoided or overcome. The correspondent dwells with great and legitimate satisfaction on the change that has come over the attitude of the British Government on the question (we do not need an angel from Heaven to explain the reason). The hearty and energetic support of *The Times* is perhaps the most prominent outward and visible sign of this. Whether Lord Salisbury will give way in the matter of advancing the date of the new tariff or not, I am sure he will give the representations of the Japanese Minister here a most favourable consideration. If Sir Francis Plunkett finds himself able to support it, no doubt the Foreign Office will not object greatly.

Mr. G. P. Ness, whom many of your readers will remember as a successful barrister in Yokohama, has published in the number of the *Law Magazine and Review* which has just appeared, an article on "Foreign Jurisdiction in Japan." As this magazine has probably not three readers in all Japan (it has of late years but few readers in England), and as Mr. Ness has certainly a right to be heard on this question, I shall analyse his article briefly. After a rapid sketch of the state of affairs in Japan before and at the time of the first treaties, Mr. Ness sketches shortly the reforms which have taken place under the new régime. It might perhaps be possible to cavil at one or two of Mr. Ness's details (I do not think, for example, that there was any kind of analogy between Japan under the Shōguns and Britain in the time of the Heptarchy) but the general outline is perfectly accurate. He then goes on to say that when a people have progressed as the Japanese have done, it is not a matter for surprise that they should manifest much impatience under treaty restrictions which still brand their institutions as unfit for a foreigner to live under, or that the removal of these restrictions should now be a central object of national policy. Mr. Ness then states in a perfectly fair and moderate way the arguments of the Japanese against the extra-territorial clauses of the treaties. These he sums up under three heads: (1) that the Consular Courts are inefficient even as Consular Courts, (2) that the system, even at its best, is defective, (3) that the privilege of extra-territorial jurisdiction has been extended to the withdrawal of foreigners from the operation of all Japanese laws not sanctioned and even re-enacted by the foreign representatives. He then states at more length, but with equal fairness, the objections of foreigners to becoming subject to Japanese laws and amenable to Japanese Courts. Then comes a statement of the propositions made by the Japanese Government for special Courts, free trade and residence and the surrender of the extra-territorial privileges. He thinks that this plan, with some securities and modifications, offers a golden bridge which will probably be adopted ultimately. But there must be a delay until the laws to be administered in the new Courts are known, and also on account of the negotiations having to be conducted with so many different Powers. It should be noted parenthetically, with reference to the policy suggested to Great Britain of making her own treaty with Japan, Mr. Ness remarks:—"Japan might fairly have looked for such an expression of England's friendship and hoped for the favourable results likely to follow her example, had her own Legislature been more active in supplying the uniform system of law necessary to take the place of the various foreign systems which must cease to be in force on the abolition of the foreign Courts." It is refreshing, at any rate, to find one writer whose objection is that Japan does not go fast enough. When we find such a *rara avis*, let us note it carefully. Now, in order to obviate the delay above mentioned, Mr. Ness winds up his article with a proposition of his own, which, he says, would form an amicable approximation to the desire of the Japanese Government, without exciting the apprehensions of foreign residents. His plan is that Japan should extend to foreigners the right to hold real property outside the present treaty limits, and everyone taking advantage of such a provision would become amenable to Japanese Courts so far as such property was concerned, and would hold it subject to the taxation and the laws and customs affecting the enjoyment and alienation of all similar property in the country. Japan might then (pursues Mr. Ness) open the whole of the country to foreign trade and residence, getting in return a jurisdiction over foreigners of which the main features are these: (1) foreign residents and traders in the interior to be subject to Japanese magistrates in respect of all rights of property, when the cause of action has arisen beyond the open ports, where the amount in dispute does not exceed 5,000 yen, and beyond that amount only

when they have consented in writing to the jurisdiction of the Japanese tribunal. (2) In all offences punishable otherwise than by fine, foreigners to be amenable only to their own Courts [e.g. Brown at at Norioka is guilty of an aggravated assault on Tanaka of the same place; Brown must be conveyed to Hakodate or Yokohama for trial]. (3) Control, revision and appeal from the Japanese Courts exercising this jurisdiction to a Court composed of judges of whom a majority should be foreigners. (4) Inalienable right of appeal, suspension of execution pending appeal, publicity of hearing, right of defence, efficient interpreting and the inviolability of dwellings. This arrangement, says Mr. Ness, would leave untouched the authority of the Consular Courts, would give the Japanese jurisdiction, and generally would be an advance all round. I must leave to others the task of criticising Mr. Ness's plan; the mere statement of it has occupied quite enough of my space.

The details of the quarrel between Sir John Pope Hennessy and his Lieutenant-Governor, Mr. Clifford Lloyd, to which I have referred in previous letters, have now reached this country from a correspondent of *The Times* in Mauritius, and have caused some excitement. The quarrel is being discussed in the papers, and notice of a question on the subject has been given in Parliament. The facts are quite clear, but the correspondent (who is evidently hostile to the Governor) enters into matters which have no immediate connection with the threatened suspension of Mr. Lloyd. He describes, for instance, how the official members of the Council were coerced into voting for a resolution of confidence in and thanks to the Governor by the latter himself. The storm, however, arose on May 18th. It appears that certain minutes of the proceedings at the Council are sent from time to time by the Governor to the Secretary of State. These are compiled from the shorthand writer's notes; and after the Governor had explained this to the Council, the Lieutenant-Governor enquired whether, as these notes were official or quasi-official documents, members would have an opportunity of correcting them and of seeing that there was no mistake. This is the rule not only in Hansard, but in the reports of evidence given to Committees of both Houses at home. The Governor fenced slightly with the question; he said a committee was considering the matter. Then Mr. Lloyd asked this question:—

"I understood Your Excellency to say that these reports taken down by the shorthand writer had already been sent to England as an official record with regard to a reference made to the Secretary of State. I wish to know whether that is the case or not? If that is so, I have not seen the reports of the speeches on the table."

This question was put three times to the Governor, but the latter made no reply. Five members supported Mr. Lloyd in requesting an answer, but still none came. Then Mr. Lloyd rose again, repeated the question a fourth time, and added:—"I can only say that I happened to see a report of a speech that I had the honour of delivering here; no doubt, on account perhaps of my having spoken low, or from some other cause, but it was not the fault of the shorthand writer, the report as a matter of fact entirely misrepresented what I said, and made it appear that I said exactly the reverse of what I did say," and he again asked that the shorthand writer's report of the proceedings on the question referred to the Secretary of State should be laid before the Council. (It appears that this incident of May 18th passed away, and nothing was heard of it until the end of July, when the Governor called on Mr. Lloyd to explain the attitude he had assumed in the Legislative Council, and informed him that if his explanation (which was to be made in six days) was not satisfactory he would suspend him from office. On this *The Times* correspondent at Mauritius sent off the telegram to which I referred in my last letter, and *The Times* in a leader suggests that the Secretary of State in consequence of this message stopped his subordinate's hand. The charge made by Mr. Lloyd against somebody was that of cooking documents; the Governor at the last meeting of the Council stated that he edited the minutes before they were fair copied for the printer, "and that he had used his discretion in substituting the name of one member for that of another as secondor to an important motion, the name of the actual secondor not appearing at all" (these are the correspondent's words). Other charges are made, which my space will not allow me to detail, especially as they involve many figures, and are merely subsidiary to the main point which I have stated here. *The Times* in a leader throws the Governor over; it says the scandal in Mauritius cannot continue; the Government can easily find a place for a man of Mr. Lloyd's experience and ability, and concludes thus:—"We commend the problem of finding a

post where Sir John Pope Hennessy can do no mischief, and can find scope only for the amiable side of his character, to Mr. Stanhope and the Colonial Office. It is one which will tax their resources to the utmost." I think I have given here a faithful account of the matter as it has reached England up to the present. It must be remembered that the writer in Mauritius is a partisan, and that the whole story may bear a very different complexion when the Governor's side is heard, as no doubt it soon will be. The only wonder is that *The Times* did not get the story first from a pro-governor writer. I do not know what the Colonial Office rules are, but I believe His Excellency has almost earned a pension, in which case I have no doubt he will soon cheerfully snap his finger at the Colonial Office and Mauritius both, and go into Parliament to plague his enemies. His buoyant and sanguine Irish temperament carry him over worries and troubles that would weigh down other men. Meantime, we shall see how he will come out of this latest squabble—ugly as it looks. I have faith enough in his navigation in troubled waters to believe that he will turn up smiling after the clouds roll by.

It appears that we have not yet heard by any means the last of the recent treaty between the French and the Hovas. The first clause of that treaty reads as if it were intended that France should have control of the foreign relations of Madagascar. In the original treaty a note signed by the Hova plenipotentiaries, by M. Patrimonio and Admiral Miot, on behalf of France, was appended providing that this clause meant that the Hovas would cede no part of the island or its adjacent dependencies to any foreign power without the consent of France. These notes, as many of your readers will be aware, are very common devices, when any particular clause of a treaty is doubtful. Indeed, scarcely a single treaty is signed now-a-days without one; they help to make clear the meaning affixed by the negotiators to the clauses in question, and as such are as much integral parts of the treaties to which they are attached, as any other provision in them. The French Government, however, when laying the treaty before the Chambers, refused to add this important, and in the judgment of the Hovas, vital note. It therefore remains unratified, while in the treaty itself the Hova Government is made to agree to that to which they never agreed, and which the French Plenipotentiaries in the most solemn manner say they never agreed. General Willoughby, an English officer in the Hova service, and their organiser and leader in the late war (a kind of Madagascar Gordon apparently) has been sent to Europe to try and have the matter put to rights. He saw M. de Freycinet yesterday, but without securing anything. The French Minister said he had no intention of allowing a country under French protection (the very point in debate) to walk independently, and will accordingly oppose the establishment of a Government Bank in Madagascar, which was to be worked by British financiers, and which would lend the Hovas the money to pay the indemnity to France. The first stage of the Madagascar business is, it would therefore appear, to end with the same bad faith, the same cynical breach of ordinary right, as that in which it commenced. I call it the first stage, for there are others to come. The Hovas say they were the victors in the late war, and I am told by one who knows more about them than any man in Europe, and who, moreover, is in their political councils, that war will soon break out again if the French carry their present notions into action.

A very amusing volume which has lately been published by Messrs. Chatto and Windus with a gorgeous yellow cover, and which stares from all the railway book stalls, is "Facts and Fictions about the Colonies," by Mark Kershaw. I have read it, and think it probable that some of the many colonial visitors now in London who are sure to read it also, will open their eyes with amusement at the stories told about their respective countries. There are half-a-dozen or more "facts" in it that would do credit to *Truth's* "Queer Stories." I specially mention the volume because Mr. Mark Kershaw is, I believe, well known in Japan; he is called by a different name there, and is generally supposed by his friends to pursue with devotion the truths of exact science. In this new book of his, he has made a wide excursion in another field where truth is not known, or, if known, is avoided, and where exact science is contemned. The excursion in question has apparently been a great success.

Amongst the advertisements of new books, I notice one by Dr. Shosuke Sato, Special Commissioner of the Colonial Department of Japan, and fellow by courtesy of the John Hopkins University of Baltimore. The subject is the history of the land question in the United States, and as the work appears to be published by the University, it

must be one of sterling worth. Most people were under the impression that the United States never had a land question, and were not likely to have one until the end of the next century, when, as imaginative statisticians say, there would be a population of six hundred millions. As this appears to be a mistaken notion, it is a plucky venture of a young Japanese to write a history of such a matter, and it is to be hoped the work may prove a success. If Mr. Sato on his return to Japan will turn his attention to the subject and write a history of land tenures in Japan, he should produce an interesting book. Sir Harry Parkes once remarked in my hearing that such a work, if written with ordinary care, would prove a great success, on account of the peculiar political history of Japan, and the attention which such subjects are receiving from students all over the world since the publication of Sir Henry Maine's works, beginning with that on ancient law about twenty-five years ago.

P.S.—Since the paragraph relating to Sir John Pope Hennessy was written, Mr. Stanhope, in answer to a question in the House, stated that he had informed the Governor that the present state of affairs was detrimental to the administration of the Colony, that the fault was not on one side only, and that Mr. Clifford Lloyd was transferred to the Seychelles. Mr. Stanhope indicated that the question could not stop here. He is waiting for all the facts before coming to a final decision, and he could not yet say what further steps, if any, it might be necessary to take in the interests of the people of Mauritius.

### LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, September 21st.

We are rapidly drifting into deep water in the Sea of Behring. Lieut.-Commander Lewis of the *Pinta* reports that the cutter *Corwin* had seized one American and three British schooners for taking seal unlawfully in Behring's Sea; that the British schooners were left at Onalaska, while their captains, crews, and cargoes were brought to Sitka; that all arms and ammunition found on board have been confiscated; that the captain and mate of the British schooner *Thornton* have been tried and fined, and imprisoned one month; that the captain of the American schooner *San Diego* has been tried, fined, and imprisoned for two months; that the captain of another British schooner which was seized has committed suicide; that the captain of the third will be tried in a day or two. Captain Abbot of the *Corwin* reports that he has landed at Nanaimo, in British Columbia twenty-two seamen taken from the schooners seized. The offence for which these seamen have been deprived of their liberty and this property has been confiscated was catching seals in Behring's Sea. How this naturally lawful act came to constitute a crime is a curious story.

I think I mentioned in a previous letter that in the treaty of delimitation by which the Russian possessions in America were divided from the British possessions, in 1825, it was insisted by the Russians that the whole Sea of Behring, or the Sea of Kamtskatka, as the Russians called it, extending from the continent of America on the one side, to Siberia in the continent of Asia on the other, was a closed sea, in which no fishing was permissible without authorization from St. Petersburg. This pretension was not admitted by the English, but neither was it debated to a final issue. The matter was passed over. When, in 1867, Russia sold Alaska to the United States, the territory came to us with all the easements and appurtenances thereto belonging, including, according to the Russian view, exclusive control over the waters of Behring Sea. Again Great Britain protested. The United States could not deny the soundness of the protest for they had maintained the identical doctrine in their controversy with England over the Bay of Fandy, and in Denmark over the Sound Dues. But, as in 1825, the controversy was not pressed on either side, and its adjustment was postponed for future consideration.

This being the condition of affairs, a syndicate of speculative merchants in San Francisco, styling themselves the Alaska Commercial Company, applied to General Grant's administration for twenty years' lease of the exclusive right of fishing and hunting in Alaska, and offered to pay a rental equivalent to a fair annual interest on the seven millions which the Government had paid for Alaska. The argument on which the Company chiefly relied to obtain this astonishing grant was derived from the rapid extinction of the fur seal. It was shown that wherever seal fishing was unrestricted, the rapacity of seal fishers ex-

terminated the animal in a few years, and it was argued that unless some limit were set to the catch on the islands in Behring's Sea, they would soon become as barren of seals as the islands in the South Pacific which formerly swarmed with them. This reasoning proved conclusive, and, without stopping to consider international law, or the well settled tradition of this nation on the question of closed seas, General Grant gave the Alaska Company the lease they wanted, and congress ratified the lease in an act passed in July, 1870. There was at the time a good deal of scandal about the transaction—to which it is not now necessary to refer.

Under this lease, the Alaska Commercial Company has realised an enormous fortune, and the United States Treasury Department has policed Behring's Sea for their benefit with a Revenue Cutter. The practice has been to consider all vessels found in that sea as presumably engaged in the unlawful business of taking seal, to seize them, and send them to San Francisco for trial. Once here, the District Attorney has been in the habit of declaring the evidence of unlawful acts insufficient to convict; upon which the vessels have been released, but the owners have lost their voyage, and they have generally had to look up their cargo at Sitka or Onalaska. One experience of this kind has generally satisfied shipowners that it does not pay to interfere with the Fur Company's monopoly. The new feature of the case now presented is that the vessels seized are foreign, not American. Whatever wrong the United States Government may commit on American citizens with impunity, it cannot impair the rights of foreigners; and it does not require more than a few minutes' study of Mr. Adams' and Mr. Laurence's despatches on the subject of closed seas, to say nothing of Mr. Webster's exhaustive paper on the subject, to satisfy any candid person that this Government would stultify itself if it attempted to argue to-day that one of the high seas of the globe was an exclusive American preserve. It happens, curiously enough, that Canada is in a measure estopped from claiming damages for the seized sealers by the course she is pursuing with regard to the New England fishermen. At this very day, the American schooner *David J. Adams* is being tried at Halifax for the crime of luring bait in a Nova Scotian port, in contravention of the treaty of 1818. Canada cannot protest very loudly against the operation of an antiquated and absurd rule on the Pacific while she is enforcing another antiquated and equally absurd rule on the Atlantic. But the American schooner *San Diego*, which was seized by the *Corwin* in Behring's Sea, will naturally lay a protest before Congress, and the British Minister will of course make the cases of the seized English schooners the subject of a diplomatic communication. In this way the whole subject will be brought before Congress, and eventually it will of course be settled in accordance with the principles for which Mr. Webster contended, and which Lord Aberdeen conceded forty years ago. The English owners will get damages, and the Alaska Commercial Company—whose lease expires in 1890—will find that their rapacity has curtailed their dominion. What excuse Mr. Cleveland's Secretary of the Treasury will make for the seizure of three foreign vessels in direct contravention of the well-established American reading of international law, remains to be seen.

Another international dispute, which promises to lead to another demand upon our Government for damages, is about to grow out of a blunder committed by Mr. Warren Green, ex-Consul-General to Japan. You are, of course, familiar with the case of Fullert, the master of the fishing schooner *Arctic*, who is now undergoing a term of imprisonment in the Consular jail at Yokohama. This man was arrested by virtue of a warrant issued by Consul General Green, tried, and convicted of having aided the escape of the defaulting Paymaster Watkins; though it was proved on his trial that he was a German subject, over whom the Consular Court had no jurisdiction, and that at the time of his trial and conviction, Watkins had not been proved guilty of any offence. The pretence of the Consular Court that Fullert became subject to its jurisdiction by taking the command of a Japanese vessel which was the property of an American citizen is of course not worth discussion. Mr. Green exceeded his authority; Fullert was wrongfully arrested and sentenced, and when he is set free, which must shortly happen, he will have a claim against the U.S. Government which the German Minister to Washington will probably take pleasure in urging. If it were not for the blunders which Mr. Bayard's consular and diplomatic agents are constantly committing, there would be no fun going in the diplomatic world.

The summer season is at an end, and pleasure seekers are trooping back to town after their holi-

day at the seashore and in the mountains. The President still lovingly lingers among the Adirondack trout. But politicians generally are busy with the fall conventions, and the country villages resound to the clang of brass bands, and the bawling of brassier stump speakers. Mr. Blaine has carried his own State; that there should ever have been a question on the subject shows how the stock of the tattooed statesman has declined in the market. In various States there are mutterings of revolt by the rank and file of the Republicans against their leaders. There is a good-sized rebellion in Pennsylvania. Many steadfast Republicans refuse to support General Beaver, and the Republican Mayor of Philadelphia has been impeached. In Nebraska, where Senator Van Wyck is having a life and death grapple with the Union Pacific, Republican newspapers threaten to bolt the party ticket if the railroad controls the nominations for Congress. In this state, the *Chronicle*, the leading Republican paper, bolts the ticket, and proposes to support the Democratic nominees. The conviction appears to be spreading that loyalty twenty years ago, does not excuse corruption to-day; the only stumbling block in the path of the Democracy is the incurable stupidity of their party leaders. As politicians, they cannot hold a candle to the Republicans; if they win, it is in spite of themselves.

The yacht race terminated, as every one expected, in the utter defeat of the Englishmen. The *Galatia* is a pretty boat, but, as the boys say, she can't sail worth a cent—at least in American waters. If the English want the cup back, they will have to go to work this winter and build a yacht on another model.

Lieut. Schwatka, who commands the *Times* expedition to the North Pole, has got as far as the Elias Range, and has succeeded in effecting the ascent of Mount Elias, 19,500 feet high, a feat never before accomplished. He also discovered a river, he says, which he named the Jones River, after the proprietor of the *Times*; whether he discovered it on the top of the mountain or elsewhere does not appear. The coast line near Mount Elias has been pretty thoroughly surveyed—well enough to make it certain that no great river disembogues into the ocean at that point.

### IN H.B.M. COURT FOR JAPAN.

IN ADMIRALTY.—October 18th, 1886.

#### JUDGMENT ON THE PETITION OF THE OWNERS OF THE STEAMSHIP "GLAMORGANSHIRE" IN OBJECTION TO REGISTRAR'S REPORT.

I have come to the conclusion that the Registrar's report should be confirmed; the amounts stated in gold to be confirmed in gold, and those in silver to be confirmed in silver.

As to the affidavits, I think that they should not have been admitted, on the ground that there was no evidence upon which the Court could be satisfied that their form was in accordance with the law and custom of the place where they were sworn (see Rule 235). I think, however, that Captain Dow's evidence, unshaken as it was on cross-examination, proved all that was necessary to support the finding of the Registrar and Merchants with respect to the first cost of the *Clarissa B. Carter*.

With regard to the other objections to the report, it is to be remembered that the petitioners must satisfy me that the Registrar's conclusions are clearly wrong. This they have not done. I think the Registrar was right in refusing an adjournment for further evidence upon the grounds given by him in the minutes. With regard to the value of the ship being reckoned at her market value upon the termination of the voyage. I am of opinion that under the circumstances of the case this was a proper method of computing her value; and the petitioners have not satisfied me that the Registrar and Merchants arrived at a wrong value.

As to the rate for depreciation, I am not satisfied that the Registrar was wrong. As to the rate of interest allowed, I think that the case of *Ekins versus E. J. Comp.*, cited in Pritchard, vol. II., p. 725, shows that the Registrar had power to allow the rate of interest ruling here, and this was admitted to be 8 per cent.

As to the conversion of the amounts fixed in gold, I think the Court has power to give judgment in a coin other than Mexican dollars. The Registrar was directed to ascertain what damage had accrued to the owners of the *Clarissa B. Carter*. He has reported that this damage was 40,004.88 dollars gold currency of America, and this finding I confirm. How that will work out in exchange at the time of payment is a matter with

which neither the Registrar nor the Court has at present anything to do.

As to the costs, I do not see any reason for disagreeing with the opinion expressed by the Registrar that each party should bear his own.

The petitioner must pay the costs of the present proceedings in objection to the Registrar's report.

NICHOLAS J. HANNEN.

### LATEST TELEGRAMS.

["SPECIAL TELEGRAM" TO "JAPAN MAIL."]

London, October 9th.

Consular Read consulted Lord Randolph Churchill gone to the Continent.

Bulgaria has addressed a note to the Powers, protesting against the action taken by M. Kaulbars.

The basis of a scheme of local government for Ireland has been published, as embodying the plans of the Conservative Cabinet. The "fortation" (? proposition) is that four national councils should be found to represent the four provinces of Ulster, Munster, Leinster, and Connaught.

London, October 13th.

The Irish scheme is not credited *party government elected by an overwhelming majority denied statement.*

London, October 17th.

FRANCE AND ENGLAND.

The French press, in reply to attacks by the London papers, deny that France is seeking war with England.

London, October 18th.

LORD RANDOLPH CHURCHILL.

Lord Randolph Churchill has left Vienna for Paris.

RUSSIA AND TURKEY.

The Porte is trying to reconcile Bulgaria and Russia.

London, October 19th.

RUSSIA AND BULGARIA.

It is semi-officially stated that a Russian occupation of Bulgaria is not intended unless some unforeseen circumstance compels that course.

London, October 20th.

RUSSIA AND THE POWERS.

England and the other Powers have been assured that Russia would disapprove of the reelection of Prince Alexander.

London, October 22nd.

RUSSIA AND TURKEY.

The statement that Turkey is supporting Russian demands in Bulgaria has caused considerable apprehensions amongst the Powers.

Later.

The Bulgarians contemplate yielding.

Total ..... 437 — 437

Per British steamer *Teheran*, for Hongkong via Kobe and Nagasaki:—Silk, for France 419 bales; for Milan 14 bales; Total 433 bales.

Per French steamer *Volga*, for Hongkong via Kobe:—Silk for France 266 bales.

## REPORTS.

The British steamer *Gaelic*, Captain Pearne, reports:—Sailed from San Francisco the 30th September, at 2.50 p.m.; had light variable winds to Honolulu where we arrived the 7th October, at 10.42. Left the same day, at 11.15 p.m.; and had variable winds and fine weather to Yokohama where we arrived the 20th October, at 6.36 a.m. Time, 18 days, 8 hours, and 45 minutes.

The British steamer *Thibet*, Captain W. G. Mudie, reports:—Left Hongkong the 14th October, at 1.26 p.m. and experienced strong monsoon and N.E. winds, with considerable head sea. The wind subsided as the Japanese coast was approached. Arrived at Nagasaki the 18th, at 6.55 p.m.; and left at 4 p.m. the 19th; had moderate E.N.E. winds, and overcast weather to Simonski; thence to Kobe fresh variable winds and cloudy weather. Arrived at Kobe the 21st, at 3.32 a.m.; and left at 11 p.m. the 22nd; had fresh N. and N.W. winds and cloudy weather throughout the passage. Arrived at Yokohama the 23rd October, at 1 a.m.

## LATEST COMMERCIAL.

## IMPORTS.

The market has not been positively dull, but the aggregate of business has been very small, though distributed over a numerous list of articles, which may be taken as an indication of fresh demand to be followed by transactions on a large scale.

**YARN.**—Sales for the week amount to 500 bales, almost entirely English spinnings, which maintain their steadiness, while Bombays appear for the moment to be neglected and difficult of sale except at low rates.

**COTTON PIECE GOODS.**—Sales have been reported of 1,500 pieces, 10 lbs. Shirtings, 500 pieces 7 lbs. T. Cloths, 1,400 pieces Shirting Reds, 2,500 pieces Twills, 1,000 pieces Silestans, 400 pieces Indigo Shirtings, and 330 pieces Velvets.

**WOOLLENS.**—2,000 pieces Mouseline de Laine, 550 pieces Italian Cloth, 1,500 pairs Blankets, 100 pieces Plain Orleans, 300 pieces Silk Satins, and a quantity of Flannel have been disposed of.

## COTTON YARNS.

Blankets—Scatlet and Green, 6 to 4 lb, per lb	0.37 1/2 to 0.45

## METALS.

Market dull for all kinds except Wire Nails, which move off currently at quotations. Prices for all else in Iron especially are more or less nominal; and buyer appear to have made up their minds to a waiting policy for the present. Meanwhile stocks are large in nearly every department.

Flat Bars, 1/2 inch	\$2.50 to 2.55
Flat Bars, 3/4 inch	2.60 to 2.65
Round and square up to 1 inch	2.50 to 2.65
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.60 to 2.70
Wire Nails, assorted	4.50 to 5.50
Tin Plates, per box	5.60 to 5.80
Pig Iron, No. 3	1.20 to 1.22 1/2

## KEROSENE.

Market quiet at last rates. Holders are full apparently for the present. Quotation unchanged, deliveries fair; present stock about 450,000 cases; fresh arrivals expected shortly.

Devoe	\$1.77 to 1.80
Comet	1.72 to 1.75
Stella	None

## SUGAR.

There has been hardly anything done during the past week in Sugar, and consequently prices remain unchanged and weak at the close.

White, No. 1	\$7.25 to 7.50
White, No. 2	5.90 to 6.50
White, No. 3	5.60 to 5.70
White, No. 4	4.95 to 5.40
White, No. 5	4.60 to 4.85
Brown—Formosa	4.05 to 4.10

## EXPORTS.

## RAW SILK.

Our last issue was of the 15th instant, since which date we have seen a strong Market with fair

demand and good amount of business, the Settlements reaching 640 piculs distributed thus:—Hanks 240 piculs, *Filatures* and *Re-reels* 320 piculs, and *Taysam* sorts 80 piculs. The *Doshinsha* shipped also 65 bales for New York, making the total business this week 700 piculs.

The enquiry for Europe has continued on a fair scale, and prices of Silk suitable for that destination continue strong. Demand for the United States has, however, been checked by the very long figures which holders ask. Quotations generally may be left unchanged, they have been higher during the interval, but most dealers would show themselves current sellers now; while here and there a weak holder will even make some concession. The state of the Market and prices current give a strong contrast to the conditions of trade at the same time last year. Then we were dragging along with a dull, depressed Market, and prices averaging \$200 per picul below those current to-day.

As might be expected, present rates are giving producers a handsome profit, and Silk is rushed down to this port in all haste. Some days this week the arrivals have exceeded 400 piculs, and, notwithstanding the good amount of trade passing, the Stock-list now stands at 10,000 piculs.

There have been three shipping opportunities. English, German, and American mails. The P. & O. S.S. *Teheran* (15th) carried 433 bales for Europe, the P.M.S. *City of Sydney* (21st) had 303 bales for New York, the *Stettin* took nothing. These shipments bring the present Export up to 7,034 piculs, against 4,722 piculs last year and 9,187 piculs at same date in 1884.

*Hanks*.—Considerable trade passing for Europe, chiefly in sorts grading from 2½ down, at full rates. Business done is 240 piculs and more reported to be under consideration. The following prices are noted, *Shimonita* \$665, *Maribuso* \$660, *Buso* \$640, *Annaka-Takasaki* \$625, *Bushu* \$600 to \$590.

*Filatures*.—Not a large business in this department but the prices paid for known chops have been high. Among the transactions we notice *Cakusha* \$810, *Miyata-gumi* \$780, *Meijusha* \$780, *Hasegawa* \$785. One parcel fine size *Uen* reported at \$820, but nothing done beyond that figure. *Rokkoshu*, for which a fancy price was asked a week ago, is now held firm at \$830 without finding a buyer.

*Re-reels*.—Some large parcels taken into godown on the 15th, but are not yet weighed, the purchaser trying to get a "cut" in the price. Advices from the United States Markets do not seem to warrant such high prices being paid here, and some rejections are probable.

*Kakeda*.—This class hangs fire wonderfully, and no settlements worthy of the name have been made since 1st July. Holders are, however, very strong, in sympathy with high prices current in the producing districts.

*Taysam* sorts.—Quite a demand for these for Europe, and 80 piculs have been settled on basis of \$460 for *Nagahama* and \$510 for *Kitahama*.

QUOTATIONS.—(NEW SILK.)	
Hanks—No. 1	\$680 to 700
Hanks—No. 2 (Shinshu)	660 to 670
Hanks—No. 2 (Joshu)	650 to 660
Hanks—No. 2½ (Shinshu)	640 to 650

Export Tables, Raw Silk, to 22nd Oct., 1886:—

	SEASON 1886-87.	1885-86.	1884-85.
Bales			
Europe	2,881	1,047	4,523
America	4,130	3,852	5,351
Total	7,011	4,899	9,874
Piculs	7,034	4,722	9,187
Settlements and Direct			
Export from 1st July	8,600	5,100	9,800
Stock, 22nd October	10,000	9,500	6,850
Available supplies to date	18,600	14,600	16,650

## WASTE SILK.

Rather less doing in this branch of the trade: at the same time Settlements reach the respectable figure of 750 piculs divided thus:—*Cocoons* 270 piculs, *Noshi* 230 piculs, *Kibiso* 215 piculs, *Sundries* 35 piculs. The Export *Kwaisha* have done nothing this week, but are reported to be preparing fresh shipments.

The business has been pretty equally divided between *Cocoons*, *Noshi*, and *Kibiso*. Prices are strong, and it is with the greatest difficulty that buyers can get the smallest concession. In some classes the ideas of holders appear quite prohibitive. Arrivals come in to a good tune, and the stock is reckoned at 10,000 piculs of all descriptions.

All the mail steamers of the week took something: the *Teheran* 215 bales, *Stettin* 47 bales, *City of Sydney* 5 bales, and the Canal-boat *Antonio* for New York is also credited with 114 bales *Cocoons*. Total shipments 1st July to date are now 7,167 piculs, against 1,579 last year and 7,764 at same date in 1884.

*Cocoons*.—All kinds have had a share in the trade. Pierced (of Good Medium quality) at \$130 *Tama* \$70, *Yamamai*, \$37½, *Waste* \$33.

*Noshi*.—Transactions amount to about 230 piculs, ordinary assorted *Joshu* fetching \$121, *Shinshu* \$130 to \$150, *Mino* \$155.

*Kibiso*.—Fair demand for *Joshu* sorts at or near \$65. A little *Filature* reported as done at \$150 to \$152½, with seconds at \$135. Other descriptions quite neglected.

*Sundries*.—One purchase of *Oshu Tama* entered at \$265, with several small parcels of *Neri* (uncleaned) at from \$25 to \$30 per picul.

## QUOTATIONS.—(NEW WASTE.)

Pierced Cocoons—Good to Best	\$130 to 150
<i>Noshi</i> — <i>Filature</i> , Best	150 to 190
<i>Noshi</i> — <i>Filature</i> , Good	160 to 170
<i>Noshi</i> — <i>Filature</i> , Medium	—
<i>Noshi</i> — <i>Oshu</i> , Good to Best	100 to 200
<i>Noshi</i> — <i>Shinshu</i> , Best	150 to 160
<i>Noshi</i> — <i>Shinshu</i> , Good	130 to 140
<i>Noshi</i> — <i>Shinshu</i> , Medium	—
<i>Noshi</i> — <i>Hushu</i> , Good to Best	160 to 170
<i>Noshi</i> — <i>Joshu</i> , Best	150 to 160
<i>Noshi</i> — <i>Joshu</i> , Good	120 to 130
<i>Noshi</i> — <i>Joshu</i> , Ordinary	110 to 115
<i>Kibiso</i> — <i>Filature</i> , Best selected	150 to 160
<i>Kibiso</i> — <i>Filature</i> , Seconds	130 to 140
<i>Kibiso</i> — <i>Oshu</i> , Good to Best	130 to 140
<i>Kibiso</i> — <i>Shinshu</i> , Best	100 to 110
<i>Kibiso</i> — <i>Shinshu</i> , Seconds	90 to 95
<i>Kibiso</i> — <i>Joshu</i> , Good to Fair	85 to 90
<i>Kibiso</i> — <i>Joshu</i> , Middling to Common	70 to 85
<i>Kibiso</i> — <i>Hachoji</i> , Good	60 to 50
<i>Kibiso</i> — <i>Hachoji</i> , Medium to Low	50 to 40
<i>Kibiso</i> — <i>Neri</i> , Good to Common	30 to 25
<i>Mawata</i> —Good to Best	250 to 260

Export Table, Waste Silk, to 22nd Oct., 1886:—

	SEASON 1886-87.	1885-86.	1884-85.
Piculs			
Waste Silk	5,415	1,318	6,330
Pierced Cocoons	1,752	231	1,434
	7,167	1,579	7,764
Settlements and Direct			
Export from 1st July	10,050	3,100	12,030
Stock, 22nd October	10,000	8,900	6,020
Available supplies to date	20,050	12,000	18,050

*Exchange*.—Foreign has fluctuated somewhat (in sympathy with the movements of the silver market in London) and closes firm at the following rates:—LONDON, 4 m/s., Credits, 3/3½; Documents, 3/3½; 6 m/s., Credits, 3/3½; Documents, 3/3½; New York, 30 d/s., G. \$78½; 4 m/s., G. \$80½; PARIS, 4 m/s., fcs. 4.13; 6 m/s., fcs. 4.16. *Kinsatsu* against Mexicans are at par.

Estimated Silk Stock, 22nd October, 1886:—

RAW.	PICULS.	WASTE.	PICULS.
Hanks	2,100	Pierced Cocoons	400
<i>Filature</i> & <i>Re-reels</i> , 5,625		<i>Noshi</i> — <i>ito</i>	4,500
<i>Kakeda</i>	1,375	<i>Kibiso</i>	4,000
<i>Sendai</i> & <i>Hamatsuki</i>	700	<i>Mawata</i>	400
<i>Taysam</i> Kinds	200	<i>Sundries</i>	100
Total piculs	10,000	Total piculs	10,000

## TEA.

Transactions have been on a small scale during the five days of the interval, but the last two days' business brought the total to 1,750 piculs, making 193,085 piculs for the season, against 160,720 piculs in 1885. Quotations for Common to Medium are not so easy as last week, these descriptions being in better demand than all others. Tea shipments from Kobe and Yokohama are as follows:—The bark *Eudora*, which sailed from here on the 13th October took 74,429 lbs. for New York, 387,415 lbs. for Chicago, and 405,314 lbs. for Canada making a total of 867,158 lbs. from Kobe. The Yokohama shipments by the same vessel is 77,154 lbs. for New York, 78,752 lbs. for Chicago, 35,059 lbs. for Saint Paul, and 81,026 lbs. for Canada, aggregating 271,991 lbs. The O. &

O. steamer *San Pablo* took from Kobe 104,112 lbs. distributed as follows:—65,557 lbs. for New York, 37,395 lbs. for Chicago, and 1,250 lbs. for San Francisco. The same steamer (sailed on the 13th instant) took from this port 48,448 lbs. for New York, 86,459 lbs. for Chicago 56,993 lbs. for San Francisco, 824 lbs. for Saint Paul, and 4,800 lbs. for Boston aggregating 197,524 lbs.

Common	\$13 & under
Good Common	14 to 16
Medium	16 to 18
Good Medium	19 to 20½
Fine	23 & up'ds

## EXCHANGE.

Foreign Exchange which saw slight fluctuations during the week, is firm at quotations.

## NOW READY,

In 3 Parts, Demy 16mo, limp,

A ROMANIZED JAPANESE READER; consisting of JAPANESE ANECDOTES, MAXIMS, &c., in easy Written Style, with an ENGLISH TRANSLATION and NOTES. By BASIL HALL CHAMBERLAIN, Professor of Japanese and Philology in the Imperial University of Japan; author of "A Simplified Grammar of the Japanese Language," &c., &c.

PART I.—JAPANESE TEXT.

PART II.—ENGLISH TRANSLATION.

PART III.—NOTES.

PRICE, \$2.50.

The *Hioyo News* thus refers to the work:—

We have to acknowledge the receipt of "A Romanized Japanese Reader," consisting of Japanese anecdotes, maxims, conversations, &c., by Mr. B. H. Chamberlain, the author of the Grammar of the Japanese Language which was published a few months ago. The Reader is in three parts of convenient size, well bound, and the typography reflects much credit upon the *Japan Mail* office, where the work was printed. Part I. contains the Japanese text of the anecdotes, &c., Part II. an English translation, and Part III. is devoted to copious notes intended to give information concerning the persons and places mentioned in the Reader, to explain allusions, and in certain cases to bring out the literal meaning in a clearer manner than was possible in the translation. Mr. Chamberlain is such an acknowledged authority upon everything connected with the Japanese language, and has always been so thoroughly painstaking and conscientious in the preparation of his various publications, that students may well accept with confidence his latest work. In conjunction with the "Simplified Grammar" the "Reader" ought to prove of great benefit to all persons engaged in studying the language of Japan, and indeed to any foreign resident who wishes to speak correctly when venturing upon the vernacular.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Baker that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 30TH, 1886.

### DEATH.

At the General Hospital, Hakodate, on the 22nd October, THOMAS BELL, late Chief Engineer, Nippon Yusen Kaisha steamship *Ise Maru*.

### SUMMARY OF NEWS.

THE steamer *Satsuma Maru* will shortly leave for Honolulu with emigrants.

THE construction of the Japanese Legation at Peking was completed the 20th instant.

KORE papers report a remarkable increase this year in the number of screens exported.

THE total sum required this year as the sanitary expenditure of Toyama Prefecture is *yen* 130,000.

A MONUMENT has been unveiled at Sakurano-miya, Osaka, to commemorate the floods of last year.

VICE-ADMIRAL HAMILTON, commanding H.B.M. Asiatic Squadron, left for Miyazaki the 21st instant.

THE Ladies of Yokohama gave a most successful ball at the Public Hall, the evening of the 29th instant.

JUDGE DENNY, who went to Tientsin to have an interview with Li Hung-chang, left the 7th instant for Korea.

IT has been decided by the Hakodate Urban Assembly to raise a fund of *yen* 150,000 to construct an aqueduct.

THE total number of bales of raw silk remaining in stock the 15th instant at Yokohama was 20,538, of which 11,547 were filature *Zaguri*,

4,851 Hanks, 2,485 Kakeda, 877 Oku-Sen Hamatsuki, and 788 miscellaneous kinds.

AN old lady, grand-mother of a rice merchant in Kyôto, is said to have attained the age of 106 years and 11 months.

THE first issue of the new Redemption Bonds, amounting to ten million *yen*, is announced to take place next month.

THE total number of applicants for admission to the Kyôdôdan School this year was 4,121, of whom 1,843 were admitted.

THE Shimada Company, in Kyôto, have received permission to establish a private bank with a capital of *yen* 100,000.

THE second instalment of the Naval Bonds will, it is said, be used for the construction of war-vessels and the manufacture of arms.

THE second of the renewed sessions of the Conference on Treaty Revision was held at the Foreign Office, Tôkyô, the 28th instant.

MR. ARIYOSHI was appointed the 20th instant to the office of chief director in charge of the new Redemption Bonds in the Nippon Ginko.

THE total value of exports from Osaka during September last was *yen* 103,532, of which *yen* 1,574 was direct export by Japanese merchants.

OWING to the abatement of cholera in the capital, all the cholera hospitals will be closed in a few days, except the special hospital at Atagoshita, Tôkyô.

THE autumn meeting of the Nippon Race Club came off at Nigishi the 26th, 27th, and 28th instant. His Majesty the Emperor was present the 27th.

MR. SUZUKI, Japanese Consul at Jinsen, reports that the crops in Korea promise an abundant harvest this year, the barley yield being particularly large.

IT is stated that the Osaka Shipping Company have applied to the Government to grant an annual subsidy of *yen* 150,000 to open a regular line to southern ports.

MR. HASEGAWA, a counsellor of the Tôkyô Court of Appeal, who is at present staying in Berlin, has been ordered to report on the condition and customs of Mixed Courts in Egypt.

IN Osaka and the neighbourhood cholera shows an access of virulence and a notification has been issued by the Governor warning the people against eating mushrooms, string beans, &c.

MESSRS. YASUBA, Prefect of Fukuoka, and Kanada, Prefect of Saga, with other gentlemen, arrived at Kumamoto the 23rd inst. to make arrangements as to the proposed Kiushu Railway.

THE total number of passports issued to foreigners in Hyogo Prefecture during last month to visit Kyôto and neighbourhood was 62, of which 27 were to Englishmen, 11 to Frenchmen, 7 to

Americans, 7 to Germans, 4 to Austrians, 3 to Chinese, 1 to a Belgian, 1 to a Dutchman, and 1 to a Dane.

ACCORDING to official investigations made in July last, the total number of Japanese residents at Jinsen was 741, of whom 501 were men and 240 women, the total number of houses being 114.

THE construction of the barracks for the Kyôdôdan School will be completed about the middle of next month, and Count Oyama will preside at the opening ceremony, the 15th November.

THE total traffic receipts from the special trains run from Shimbashi to Omori on the 13th instant, the day of the festival of Honmonji, Ikegami, were *yen* 1,085, the number of passengers being 7,604.

A TELEGRAM received by the Government states that the *Unebi Kan*, which was launched some time ago, from a French yard, left for Japan the 18th instant, and may be expected here in December next.

THE construction of an iron bridge over the Kisogawa (on the Nagoya-Ogaki line) under plans by Mr. Noda, of the Railway Office, has been almost completed. The total estimates are stated at *yen* 250,000.

THE Government, it is said, contemplates establishing shortly a Bureau of Fine Arts in the enclosure of the Engineering College at Toranomon. Mr. Sano, Court Councillor, will be appointed to the office of President.

LIEUT.-GENERAL VISCOUNT MIYOSHI, commanding the Tôkyô Garrison, was ordered the 26th instant to assume command of the troops to take part in the Imperial review which will be held the 3rd November next in honour of H.I.M. the Emperor's Birthday.

CORRESPONDENCE from Izugahara, dated the 15th instant, states that a number of military and naval officials arrived there the 1st instant and left the following day for Takeshikemura to survey the coast. A naval office will shortly be established at Takeshikemura. Cholera is still raging on the island. The *Tsukushi Kan* is at present stationed at Umegimura.

ACCORDING to investigations made by the sanitary officials in Osaka, the total number of cholera patients reported in that city since the first appearance of the disease in 1877 was as follows:—1,536 patients in 1877, 17 patients in 1878, 14,746 in 1879, 112 patients in 1880, 208 patients in 1881, 2,604 patients in 1882, 81 patients in 1883, 85 patients in 1884, 2,215 patients in 1885, and 20,192 patients (from 1st January to 22nd October) in 1886.

THE principal lines of the Import trade have been unusually quiet, and there can be no doubt that the heavy transactions of the summer are now leaving their mark on the autumn trade. It is early yet, however, to complain, and the

reference above, combined with the fact that the rice crop is being harvested, will continue to be factors in the dulness that must follow for the next few weeks. Yarns, Cotton Piece-goods, and Woollens have all been in small demand, almost without exception. In Metals, Pig, Bar, and Rod have all been more or less neglected, and the sales that have taken place have been at lower rates. Wire Nails and Tin Plates, have, however, sold fairly. Considerable sales of Kerosene have been effected, but at buyers' prices, and the demand is fully satisfied for the time. Sugar has been in better demand, and Tea has been dealt in to a moderate extent, but at prices a shade below those of last week. In Exports, there has only been a small enquiry and a quiet market in the Silk trade, both Europe and America holding aloof from the figures demanded here. In Waste there has been but a slight falling off, but supplies are ample, and the stock has increased. Foreign Exchange has steadily risen, and is very firm at the close.

#### NOTES.

THE Theatrical Reform movement is assuming a practical aspect. Several prominent residents of the capital—including Messrs. Shibusawa, Okura, Yasuda, Kawata, Nishimura, Chiba, Ishûin, Hozumi, Fukuchi, and Suematsu—met by appointment, the 19th instant, at the Tōkyō Bankers' Club, in Sakamoto-chō, Nihonbashi District, to discuss the best method of raising funds for the purposes they have in view. We learn from the *Nichi Nichi Shimbun* that all those present intimated their willingness to subscribe liberally. Meanwhile Mr. Yoda Hyakusen, one of the members of the Association, has composed a historical drama in which the principles of reform advocated by the Association are carefully obeyed. Mr. Yoda has already distinguished himself as a writer and critic, and ranks among the ablest Chinese and Japanese scholars of the day. In this dramatic effort he was assisted by the advice of Mr. Kawaji. The piece is entitled "*Yoshino Shûi*" *Meika no Homare*, or a drama in honour of the renowned poems of the *Yoshino Shûi*. The *Yoshino Shûi* is a historical work which describes the events of the stormy time of Godaigo Tenno and his immediate heirs, whose valiant struggles to recover the supreme power from the hands of military usurpers constitute one of the most chequered pages of Japanese annals. The Kusunosuke family were the Emperor's most loyal supporters throughout that troublous period, and it is recorded that his Majesty at one time desired to reward Kusunoki Masatsura by bestowing on him the hand of Benno Naishi, the daughter of a Court noble. But the General, who was a poet as well as a warrior, replied in a still remembered couplet to the effect that a soldier's life is too short for love (*Totemo yo ni nagarô beku mo aranu mi no kari no chigiri wo ikade musuban*). The same Masatsura, on the eve of a campaign in which he foresaw his own death, deposited with the keepers of the mortuary tablets at the temple of Nyo-i-rindô the following lines

*Kaeraji to karete omoeba azusa-yumi  
Naki kasu ni iru na wo so todonuri*

(knowing that I shall return no more, I add my name to theirs who are not). It is to these two couplets that allusion is made in the title of Mr. Yoda's new drama. The scene is laid at Yoshino, in the province of Yamato, whither

the Imperial residence had been temporarily removed at the time of the events related. The principal characters are Masatsura, Masanori, Benno Naishi and Igano Tsubone. The drama was read by Mr. Yoda, the 16th instant, at the Daichiuro restaurant, Tsukiji. Among those present were Count and Countess Ito, Countess Yamagata, Miss Ito, Miss Matsugata, Miss Shimoda, the President of the Imperial University, Professor Toyama, Mr. Ito Myoji, Messrs. Suematsu, Shigeno, Hattori, Professor Yatabe, Messrs. Fujita, Shimada and others. Portions of the composition were greatly applauded, but on the whole it does not seem to have satisfied the critics' idea of what is required at the present juncture.

THE third edition of Hepburn's Japanese-English and English-Japanese Dictionary, published by Messrs. Maruya and Company, gives many proofs of the care which its author has bestowed upon it during the fourteen years that have elapsed since the second edition appeared. We learn from the preface that no less than ten thousand words have been added to the Japanese and English part of the work. The author has, however, refrained from inserting technical terms, and "has limited himself to such words only as are in popular and general use." Doubtless there were good reasons for this course, but we cannot agree with Dr. Hepburn that "technical terms belonging to the various branches of medicine, chemistry, botany, &c., should each have a separate work devoted to them." Dr. Hepburn may not have possessed either leisure or materials to make his dictionary quite comprehensive, but we nevertheless look forward to the time when such a work will be forthcoming. It is not too much to say that as yet there is no Japanese-English dictionary by the aid of which an ordinary newspaper or a Government Ordinance may be read. The book now before us, though the Japanese-English part ranks above anything yet published, still leaves much to be desired, and we trust that it will be supplemented ere long by a vocabulary of the numerous terms which, though of Chinese origin, have become absolutely essential to the intelligent intercourse of modern Japan. From a critical point of view it is not to be denied that Dr. Hepburn might have made a better use of the information at his disposal. His third edition shows, almost in an equal degree, the very fault which disfigured his first. The English-Japanese portion is quite unworthy of the Japanese-English. The latter occupies 770 pages of the dictionary; the former only 190. It need scarcely be said that, under these circumstances, an immense number of words embodied in the Japanese-English part are not to be found in the English-Japanese. And indeed, strange as it may seem, the converse is occasionally the case. Had the author bestowed similar care on both parts of the work, the result would have done fuller justice to his own reputation, and would have greatly increased the already large debt of gratitude which students owe him. These criticisms, however, do not annul the dictionary's title to stand, as a whole, at the head of all works of the kind in Japan. So far as the Japanese equivalents of English words are concerned, the Vocabulary of Satow and Ishibashi is unquestionably preferable. But if one wants a book to tell him the English equivalent of a Japanese word, Hepburn's Dictionary has no peer. The present

edition is printed in smaller type than the last, and is altogether handier and more compact. The typography does great credit to the printers, Messrs. Meiklejohn & Co.

PROFESSOR ED. MORSE, Director of the Peabody Academy of Science, has struck out a novel and interesting line of research, the first results of which are embodied in a pamphlet, republished from the *Bulletin of the Essex Institute*. The pamphlet is entitled "Ancient and Modern Methods of Arrow-release;" a strange subject to choose for scientific research, but one which in Professor Morse's hands acquires evident ethnological value. The Professor's attention was first directed to this matter by his observations in Japan. This is how it came about:—

My interest in the matter was first aroused by having a Japanese friend shoot with me. Being familiar with the usual rules of shooting as practised for centuries by the English archers, and not being aware of more than one way of properly handling so simple and primitive a weapon as the bow and arrow, it was somewhat surprising to find that the Japanese practice was in every respect totally unlike ours. To illustrate: in the English practice, the bow must be grasped with the firmness of a smith's vice; in the Japanese practice, on the contrary, it is held as lightly as possible; in both cases, however, it is held vertically, but in the English method the arrow rests on the left of the bow, while in the Japanese method it is placed on the right. In the English practice a guard of leather must be worn on the inner and lower portion of the arm to receive the impact of the string; in the Japanese practice no arm-guard is required, as by a curious fling or twirl of the bow hand, coincident with the release of the arrow, the bow (which is nearly circular in section) revolves in the hand, so that the string brings up on the outside of the arm where the impact is so light that no protection is needed. In the English method the bow is grasped in the middle, and consequently the arrow is discharged from a point equidistant from its two ends, while the Japanese archer grasps the bow near its lower third and discharges the arrow from this point. This altogether unique method, so far as I am aware, probably arose from the custom of the archers in feudal times shooting in a kneeling posture from behind thick wooden shields, which rested on the ground. While all these features above mentioned are quite unlike in the two peoples, these dissimilarities extend to the method of drawing the arrow and releasing it. In the English method the string is drawn with the tips of the first three fingers, the arrow being lightly held between the first and second fingers, the release being effected by simply straightening the fingers and at the same time drawing the hand back from the string; in the Japanese method of release the string is drawn back by the bent thumb, the forefinger aiding in holding the thumb down on the string, the arrow being held in the crotch at the junction of the thumb and finger.

These marked and important points of difference between the two nations in the use of a weapon so simple and having the same parts,—namely, an elastic stick, a simple cord, a slender barbed shaft,—and used by the two hands, naturally led me to inquire further into the use of the bow in various parts of the world, and to my amazement I found not only a number of totally distinct methods of arrow-release with modifications, or sub-varieties, but that all these methods had been in vogue from early historic times. Even the simple act of bracing or stringing the bow varies quite as profoundly with different races.

The simplest Japanese method of release is called by Professor Morse the *Primary Release*. He then proceeds to describe four other fashions of release, all of which may be regarded, he thinks, as modifications of each other. But his fifth method is entirely independent. "In this release the string is drawn by the flexed thumb bent over the string, the end of the fore finger assisting in holding the thumb in position." Those of our readers who have closely observed Japanese archers will recognise this as the method of release uniformly adopted with the *daikin*, or large bow, the *Primary Release* noticed by Professor Morse being confined to the *yokin*, or small bow. The Professor finds that the former release is "characteristic of the Asiatic races, such as the Manchu, Chinese, Korean, Japanese, and Turk." He says that the Persians also practise the same release. It entails the use of some form of thumb-guard, which, in the case of the

Manchu, Chinese, Turk, and Persian, consists of a thick ring worn near the base of the thumb, but in the case of the Japanese, of a glove having two fingers and a padded thumb. Many interesting details with reference to Assyrian, Egyptian, Grecian and other methods of release will be found in the Professor's pamphlet. Without following him into these, we conclude by quoting his remarks on Japanese archery, a pastime which promises to come largely into vogue again:—

Concerning Japanese archery methods in past times, what little evidence we have on the subject points to a Mongolian form of release. The archers have always formed a favorite study for the Japanese artist, and many details of the bow and arrow and attitudes of the archer may be got from old paintings and drawings. The representations of the hand in shooting, though often drawn conventionally, are easily interpreted as releasing the arrow after the Mongolian method. In the Shinto temple at Miyajima is a picture over two hundred years old, in which the archer's hand is shown in the attitude of the Mongolian release. A picture of Taniu, painted one hundred and fifty years ago, and supposed to be a copy of a Chinese subject six or seven hundred years old, shows plainly the Mongolian release. In a picture by Keion, seven hundred years old, the archer is represented in the act of wetting with his tongue the tips of the first two fingers of his hand; and this certainly suggests the Japanese form of the Mongolian release.

Among the Emperor's treasures at Nara is a silver vessel supposed to be of the time of Tempei Jingo (765 A. D.), upon which is depicted a hunting-scene. Here the release, if correctly depicted, suggests the Mediterranean form. The bow is Mongoloid. The vessel is probably Persian: it is certainly not Japanese. The earliest allusions to Japanese archery are contained in "Kojiki, or Records of Ancient Matters," of which its translator, Mr. Basil Hall Chamberlain, says: "It is the earliest authentic literary product of that large division of the human race which has been variously denominated Turanian, Scythian, and Altaic, and even precedes by at least a century the most ancient extant literary compositions of non-Aryan India." These records take us back without question to the 7th century of our era. In this work allusion is made to the heavenly feathered arrow, to the vegetable wax-tree bow and deer bow, and also to the elbow pad. It is difficult to understand the purpose of the elbow pad in archery, assuming the same practice of the bow in ancient times as in present Japanese methods. It is difficult to believe that a pad on the elbow was needed to protect that part from the feeble impact of the string. If the pad was a sort of arm-guard surrounding the elbow, then one might surmise the use of a highly strung bow of Mongolian form held firmly and not permitted to rotate as in the Japanese style.

The peculiar twist given the bow by the Japanese archer is, so far as I know, unique in archery practice. In Siam, a bow of curious construction is used for throwing clay balls. The ball is held in a netting, the string of the bow is double, the bow-hand has the thumb braced vertically against the inside of the bow, so that it may not interfere with the flight of the ball. A peculiar twist is given the bow, so that the ball passes free from it.

I know of no record to show that the Japanese ever used a bow of this nature; in the Emperor's treasure-house at Nara, however, is preserved a curious bow nearly a thousand years old, and this is undoubtedly a bow used for throwing clay or stone ball. Instead of a netting to hold the ball there is a perforated leather piece. This piece is adjusted to the cord a third way down the bow, at about the point from which the Japanese archer discharges the arrow. Whether the Japanese archer acquired this curious twist of the bow to protect the feathers from rubbing against its side, or to escape the painful impact of the string, or, which is not improbable, acquired this novel twist from using the ball-throwing bow, it is difficult to determine.

ONE of the most disquieting features of the Eastern Question in its present aspect is the apparent *rapprochement* between Russia and the Porte. It is still well remembered how persistent the rumours of a meeting between the Czar and the Sultan at Livadia were at a time when such a meeting could have meant nothing but disaster to Prince Alexander. Russian efforts since then have been pretty steadily directed to the establishment of an *entente cordiale*; efforts which, from reasons sufficiently transparent, have met the hearty support of France. The Porte has up to this time fallen back on a waiting policy, and, as must be admitted, with a good deal of success. Under strong pressure applied by ardent friends, Turkey has contrived to look

fairly well after her own interests. But she is now labouring under specially unfortunate circumstances. She is required to believe that Austria, Russia, France, and Great Britain are her friends, but the recollection of names like Bosnia, Bulgaria, Tunis, and Egypt suggests ideas not quite consistent with the belief. If obsequiousness to France and Russia could dispel the storm that is gathering on the Danube, and if subservience to these Powers would only result in reopening the diplomatic campaign about Egypt with no worse result to the Porte than the evacuation of the banks of the Nile, then, no doubt, the Russian and French Ambassadors at Constantinople would have long ago carried their points. But Russia and France enjoy no greater confidence at Constantinople than any other Power of similar antecedents or inclination, and as the Sultan cannot possibly be sure that by sowing the wind in Egypt he may not reap the whirlwind on the Balkans, he will be very wary before committing himself to any policy so outspokenly anti-English. In fact, if he yield at all, it will be to persistent pressure combined with the most positive assurances rather than to any conviction of the intrinsic correctness of such a policy. He cannot be unaware of the fact that one great British statesman is pledged to evacuation, and that, as is evident from Mr. Campbell's questions in Parliament, the Liberal party still adhere to their former programme. To use, or to threaten, force now, might permanently defeat the object of the Sultan's most earnest desire, for to him Egypt, as the centre of the Muhammedan world, is as important as it is to Great Britain on account of its geographical and commercial position. It is as much in the interest of the Sultan as it is in that of Great Britain to come to an agreement with regard to Egypt, for the fact that the question has been and is still being kept open is a great source of diplomatic embarrassment to England and a serious present and prospective danger to Turkey.

ONCE or twice we have had occasion to comment on the perfect security enjoyed by foreigners travelling in this empire. During the past fifteen years we do not remember to have heard of a single outrage committed against the person of a stranger touring through the interior, and troubles with the police have been almost as conspicuous by their rarity. This is a remarkable record; far better than that of most Western countries. It is especially striking as a comment on the farcical apprehensions which some persons profess to entertain with regard to the treatment likely to be experienced by aliens when the interior is thrown open under Japanese jurisdiction. We are reminded of the admirably friendly conduct of the Japanese people in their intercourse with foreigners by the following incident, which might easily be supplemented from European annals, and which, did it occur in the East, would be the signal for an universal outcry against Oriental arbitrariness and barbarity:—"Intelligence has been received in Wales of the arrest in France of Mr. George Farren, J.P., of Carnarvon, late Unionist Candidate for the Southern Division of Carnarvonshire. Mr. Farren had been cruising in his steam yacht *Lady Bessie*, along the French coast, and on the 5th instant was off Perrosquiere, Brittany, when all on board were placed under arrest. The owner and some of his friends were taken under guard to Lannion,

and Mr. Farren was subjected to a long examination. Refusing to enter the prison van, the party were allowed to hire a conveyance, and although every courtesy was shown them, they were for some time refused permission to communicate with their friends. After examination, and upon the urgent representations of Baron de Cosson, with whom Mr. Farren had been staying, the prisoners were set at liberty on parole, but are still at Lannion, and the vessel is under arrest, the local authorities awaiting instructions from Paris. Suspicion was excited that Mr. Farren and his companions were spies—German or Russian; and probably the suspicion was supported by the fact that the crew spoke Welsh instead of English. The yacht is a large vessel, about 300 tons burthen. The party consists of Mr. Farren, Dr. Taylor Morgan, and two sons, Mr. Lionel Clark, and Dr. Hardlet; and the commander of the vessel is Captain Roberts, who with the engineer and sailors, are also under guard."

WE were recently taken seriously to task by the leading English journal published in Shanghai for attempting to throw dust into the eyes of the public with regard to the Burmah concession. Commenting on the terms of the agreement, we had said that the clause referring to the decennial despatch of Burmese produce to Peking had no political significance, and was such an obviously transparent device to save China's face at the expense of her pretensions, that no real importance could be attached to it. With this view the *North China Herald* emphatically disagreed, claiming also, if we mistake not, that our interpretation was quite opposed to that of British officialdom. A very positive corroboration of our rendering and contradiction of our contemporary's criticism has not been long coming. The Under Secretary for Foreign Affairs, in reply to a question asked by a member, stated in the House of Commons, August 31st, that "the agreement does not recognise the suzerainty of China over any part of Burmah, and in no way affects the status of Chinese subjects in Burmah." Apparently Her Majesty's Government take the same view of the Convention as we did, for Sir James Fergusson went on to say:—"As practical advantages, we have obtained the fullest recognition by the Chinese Government of the establishment of British rule in Upper Burmah; we have retained freedom of action with reference to our boundaries; we have secured the frontier trade between China and Burmah and opened up South-West China to our commerce; China has undertaken to promote and stimulate trade between India and Thibet, which was the sole object of our intended mission to the latter. The cost of the preparations for the Thibet mission is not yet known; it will be borne by Indian revenues. The negotiations were conducted throughout in communication with the Government of India, and the terms of the Convention had their entire approval before they were approved by Her Majesty's Government."

WE are glad to see that Mr. Sugiura Buntaro, writing in the last number of the *Romaji Zasshi*, strongly advocates the use of the simplest possible language in that journal. By simple we mean language not laden with Chinese words and idioms. The grand difficulty lying in the path of the promoters of the Romaji reform is that the Japanese language has assimilated a

number of homonyms which owe the possibility of their employment to the ideographs. To parade this obstacle by freely using Chinese words ought to be the first thing avoided by a writer who seeks to show that the Japanese language is capable of phonetic expression. Unfortunately this axiom has been frequently neglected by the gentlemen who contribute to the columns of the *Romaji Zasshi*, the natural consequence being that valuable and interesting articles are often laid aside on account of the difficulty of identifying the signification of the *Kango* with which they are freely interspersed. Mr. Sugiura emphatically condemns such a manifest neglect of principles which every one should recognise, and himself writes a long letter delightfully free from the fault which he condemns. We are disposed to think that Mr. Sugiura's suggestion has occurred to other writers also, and been put into practice by them. For in the same number of the *Romaji Zasshi* there is an article, entitled "Guide to Philosophy," in which Mr. Inouye Enryō discusses and explains some of the principles of logic in language perfectly intelligible to people of the most ordinary intelligence.

THE agitation with reference to the Franco-Chinese Treaty of Commerce continues. It is pointed out, in the first place, that only two places are to be opened for trade between Tonquin and China. These places have not yet been definitely fixed, but it is understood that they are to be between Langson and Laokai. For the present, there is not to be any Customs station established on the frontier, so that the once fondly entertained expectations of tapping the commerce of South-western China *via* Tonquin are said to offer no prospect of being realized. But this view of the case partakes plainly of pessimism. In two words, what the Treaty provides is that the taxing of goods imported to Langson and Laokai shall be carried out in conformity with the rules observed at all the treaty ports of China, the duties, however, being one-fifth less at the former places. If it is desired to send these goods forward into the interior of China, a new declaration of value must be made and the usual transit dues must be paid in full. Thenceforth the goods are not to be subject to any manner of customs or transit tax whatsoever on the part of the provincial authorities. It is manifest that if these stipulations be honestly observed, the opening of the south-western districts of China to foreign commerce may be considered an accomplished fact. Under such circumstances, we are not surprised to find the *Courrier d'Haiphong* characterising the Treaty as one which, from a commercial point of view, "does credit to the wisdom and foresight of the French negotiators." It will rest with the French merchants themselves to profit by the advantages it offers. If, as the *Courrier* remarks, the reduction of one-fifth in customs dues is almost annulled by difficulties of transport, that certainly cannot be laid to the charge of the treaty makers. What surprises us is that the *Courrier d'Haiphong*, after pronouncing in favour of the commercial aspects of the Treaty, and condemning only its political aspects—no reasons for the condemnation being, however, given—should nevertheless call on the Haiphong Chamber of Commerce to follow the example of the Hanoi Chamber, and vigorously endeavour to prevent the ratification of the Treaty. It is difficult to believe that

the two following paragraphs should occur in the same article of the same journal:—

Au point de vue commercial, le traité de commerce du 25 avril 1886 fait honneur aux négociateurs français, qui, en général, ont fait preuve de sagesse et de prévoyance.

Il nous semble, et beaucoup sont de cet avis, que le devoir de tous est de s'élever avec énergie contre cette convention malencontreuse, et de parler bien haut ici pour que la voix des intérêts du Tonkin soit entendue au milieu des préoccupations et des luttes politiques de nos deux assemblées.

THERE is a curious difference between the reports that come from the agricultural districts in Ireland and the statistics compiled by politicians in England. According to the former, great and rapidly spreading distress prevails. Heavy and continuous rains have seriously damaged the crops; the potato-blight is unusually virulent, and applications for relief are received in growing numbers by all the Poor Law Boards. But economists assert that such things cannot be, or at least ought not to be. For, say they, though agricultural produce has fallen in value, the difference is more than compensated by an increased yield. Thus the yield of potatoes in 1885 was 67 per cent. greater than in 1882; that of wheat 13 per cent. greater; that of rye 16 per cent. greater; that of peas 12 per cent. greater, and that of barley 10 per cent. greater; whereas, the average fall of market prices for these commodities was only 11 per cent. There was thus, other details being included, an increase of 12 per cent. in saleable value of Irish farm produce during the period in question—a calculation which means that the position of the Irish farmer is distinctly better now than it was when the judicial rents were fixed. The Government also have collected figures which go to show that the generally supposed connection between evictions and outrages by no means exists. It is found that in Ulster, during 1885, there was only one outrage to every seventeen evictions, while in Connaught there was one for every six, in Leinster one for every five and in Munster one for every two. It is also shown that, during the first quarter of 1886, three-fifths of all the outrages in Ireland occurred in Munster whereas only one-fifth of the total evictions were made in that province. Another contribution to this arithmetical discussion is made by the *Standard*, which shows that, during the six months ended last August, the subscriptions to the Irish National League aggregated \$337,030, while the sums granted by the League to evicted tenants during the same period only amounted to \$12,120. If the Irish question could be decided by figures, there would be very little trouble about the business.

THE *Nichi Nichi Shimbun* has the following:—Fearing that there may be more or less ignorance on the part of the public as to the southern islands, on the importance of which we lately dwelt at length, we now offer the following information for the benefit of our readers. It must be understood that, by the southern islands we mean those included in the Sakishima group. For administrative purposes, Okinawa Prefecture is divided into six parts, Nakagami (with 189 villages), Shimashiri (162 villages), Kuigami (134 villages), Kerama (9 villages), Kumeshima (19 villages), and Sakishima (87 villages). As the Chishima group forms the northern extremity of the Empire, so the Sakishima group forms the southern extremity, the one connecting this country with Kamchatska

and the other with the Taiwan. The Sakishima contains nineteen islands, among which the chief are Ishigakijima, Iriomotejima, Taketomijima, Kubamajima, Hatanajima, Shinjōjima, Haterumajima, Yonokunijima, Miresshima, Moresshima, Kurojima, and Kayamajima. According to a book called the *Okinawa Shi*, the aggregate circumference of the nineteen islands is put down at 87 *ri* 25 *cho*, while according to recent explorers it is estimated at over a hundred *ri*. The work above referred to estimates the number of houses at 2,641 and the population at 13,783. Ishigakijima is the largest of all; from its centre rises a thickly wooded mountain, sloping on all sides down to the sea level. As the inhabitants are contented with merely sustaining life, the land is left uncultivated, but is well adapted to the production of rice, sweet potatoes, cotton, flax, tobacco, grass, and grain. There are many cattle to be seen feeding on the natural grass; they are much like the foreign breeds in appearance, plump and large. But the horses are very small, and seem to be unfit for hard work. Among the trees growing on this island, the most important are the *shitan*, *kokutan*, mulberry, *sendan*, *shinoki*, oak, and *holō*. The *shinoki* are mostly of the red kind, and their bark is valuable for the dyeing substance extracted therefrom; while the mulberry-trees are the so-called insular variety, much prized on the main-land. It will thus be possible, with due protection of the forests, to work the timber profitably. Iriomotejima is round in shape and has several ranges of densely wooded mountains. Besides its vast quantity of valuable timber the island is a coal field of considerable thickness. More or less closely adjacent to Ishigakijima and Iriomotejima, are found the fertile islands of Kubana, Taketomi, Hateruma, Hatoma, Mire, More, Kuro, and Yanakuni. Miyakojima has few mountains, and is wanting in wood, but hemp, millet, tobacco, sweet potatoes, etc., grow well. Miyakojima also has eight dependent islands of great fertility of soil. They are Hira, Raiman, Ikema, Okami, Minna, Erabu, Shimaji, and Tarama. This is a brief description of the nineteen islands of the Sakishima group. There is one thing which deters people from going there, and that is the prevalence of the Manila fever, especially on Miyakojima. But it should not be difficult to stamp out this disease by clearing the forests and draining off the stagnant water.

An entertainment was given on Wednesday, in the hall of the Seaman's Mission, to a large contingent of men from the various ships of the British squadron at present in port. The Rev. E. C. Irwine presided, and there was a good attendance of ladies and gentlemen, residents of the port. An address was delivered by Mr. Irwine, in which he expressed the pleasure with which he and the other residents availed themselves of this opportunity to meet the sailors and marines from the ships. He also pointed out their indebtedness to Mr. Thomson, who, with Mrs. MacArthur and Mr. Brown, had been mainly instrumental in making the preliminary arrangements for the meeting. A programme consisting of various vocal and instrumental pieces, contributed partly by men from the squadron and by residents, was then entered upon, and with an interval for supper, carried through very successfully. M. Sauvlet attended carefully to the difficult duties of accompanist. The band of the *Audacious* was present and greatly enhanced the enjoyment of the proceedings.

THE French merchants of Hanoi are greatly discontented with the terms of the Treaty of Commerce concluded last spring at Tientsin. We are not surprised that such should be the case. Commenting on the Treaty five months ago, we arrived at the conclusion that, with the exception of certain tariff concessions, the advantages it secured to French commerce were of a very trifling character. The Hanoi Chamber of Commerce has addressed a vigorous protest on the subject to M. Paul Bert, in the somewhat vain hope that the Commission appointed by the Chamber of Deputies may be induced to report unfavourably to the ratification of the Treaty. The objections of the Chamber are set forth very succinctly. The first has reference to the appointment of Chinese Consuls at Hanoi, Haiphong, and elsewhere in Tonquin. The Chamber asks whether England permits anything of the kind at Hongkong or Singapore, and, while purposely avoiding any explanation of the political inconveniences of the measure, claims the right to protest against it in view of the progressive monopoly of trade which the Chinese are acquiring. The second objection is based on the fact that while the citizens or *protégés* of France who settle at frontier towns open to commerce must comply with all the conditions contained in the Treaty of 1848, Chinese will be free to establish themselves there in the full enjoyment of the most extensive privileges. Other objections have reference to the method of levying transit dues and to the question of transit passes. The memorialists then pass to the clause which interdicts all passage of opium into China across the Tonquin frontier. Opium, they say, represents one third of the total value of China's import trade, and yet French merchants in Tonquin are forbidden to deal in this important staple. Finally, there is the clause which provides that the Treaty shall be liable to revision in the event of a convention being concluded between another Foreign Power and China. In this clause the memorialists profess to detect the hand of Sir Robert Hart. "It is," they say, "a clause full of dangers for us. We are to be permitted to demand free trade in salt and opium so soon as England shall have acquired a similar privilege *vis-à-vis* Burma. And during the years occupied in this negotiation, British commerce will have succeeded in establishing for its products a route and relations lost for ever to us."

The memorialists conclude with these words:—"Permit us, Monsieur Resident-General, in concluding this brief exposition, to make a painful avowal. Not only has the commerce of Tonquin not been consulted in the drafting of a treaty the principal clauses of which mean ruin for the colony and the colonists, but it has not even been thought necessary to submit the text of the document *in extenso* to the representatives of that commerce. In order to obtain information, in order to prepare this protest, we have been obliged to have recourse to French and English newspapers. Nevertheless, the cursory study which we have been able to make, suffices to justify us in declaring that the maintenance of the *status quo ante* and the absence of a treaty altogether would be a thousand times preferable to a convention so much opposed to French interests."

THE *Nichi Nichi Shimbun* of the 21st instant had another long article on the Redemption Bonds.

Our contemporary points out that the present is the best time for the conversion of the old bonds of high interest into new and cheap bonds, for people are willing to invest their capital in public bonds even at a very low interest. At present Japanese domestic debts are made up of various loans under different names and bearing different rates of interest, thus creating great confusion in their treatment. No small benefit is therefore to be obtained by changing them into one sort. To the objection that the Government will injure its own credit by redeeming its bonds before the end of the period of redemption, the *Nichi Nichi* answers that it is entirely within the Government's power (as is evident by referring to any of the regulations applicable to public bonds) to redeem them at any time within that period. Moreover, it is more reasonable to conclude that a debtor's credit will be enhanced by speedy payment, than to say that his credit will be injured by a prompt fulfilment of his obligations. It is also wholly within the sphere of the Government's right to determine the amount of bonds to be redeemed in a particular year, and therefore it may happen in times of special difficulty that the redemption will be stopped for one year. Still, as it is the duty of the Government to pay back the national debts, the *Nichi Nichi Shimbun* doubts not but that, after the issue of the Redemption Loan, the Treasury will do its utmost to fulfil that duty each year. For this purpose the Government will have ample means, as the conversion of the old bonds of high interest into new bonds produces a considerable amount of profit. When there is a surplus in the Treasury, there are three methods of using it; (1) development of administrative affairs, (2) decrease of taxes, and (3) redemption of national debts. The *Nichi Nichi* cannot predict which line the Government will take, but hopes that they will use judgment in each year in the disposal of the surplus created by the new financial measure. With regard to Pension Bonds, there are some people who maintain that they are different in character from other bonds, because they were issued to *shizoku* in exchange for their hereditary possessions. The *Nichi Nichi* replies that, although such an objection might have had force before the granting of permission for the sale of those bonds, it has now no force at all. For it is not *shizoku* who now possess them but rich merchants and farmers. This is evident by referring to the distribution of these bonds. The total amount of Pension Bonds of all sorts is about yen 164,000,000. Of this sum yen 81,000,000 are in Tōkyō, yen 10,000,000 in Osaka, yen 6,000,000 in Kyōto, yen 5,000,000 in Aichi Prefecture, yen 3,000,000 in Hyōgo Prefecture, yen 2,000,000 to yen 3,000,000 in each of the Prefectures of Niigata, Mie, Shiga, etc., and the remainder in other Prefectures. To the complaint of capitalists that the Government is pressing too hardly upon them in depriving them of a profit of 2 per cent. in interest, the *Nichi Nichi* answers that they do not understand great questions of economy, and further that they forget that the rise in the market price of public bonds is virtually lowering the rate of interest. In defence of the measure adopted by the Government, the *Nichi Nichi* quotes similar measures undertaken by other Governments, the English, American, and French, in the present century. Everywhere

in the world, trade is dull; but the case of Japan is of a specially depressing nature. While the capacity to spend is in a miserable state, the necessities (military and naval and otherwise) for expenditure are yearly increasing. Under these circumstances, we must avail ourselves of every opportunity, however small, of economizing the outlay of money. The nature of the measure itself, and the circumstances under which it has been adopted, combine to make the issue of the new loan a step of great benefit to the country at large. The *Nichi Nichi Shimbun* concludes by expressing a hope that the Minister of State for Finance will use all necessary caution and judgment in carrying out the great measure he has decided upon, so as to avoid disturbing the economical condition of the market.

The *Fiji Shimpō* of the 18th instant expresses doubt as to the carrying out of the provision in Art. XXX. of the Redemption Public Loan Regulations. The provision refers to the redemption of old bonds by means of the new Redemption Bonds according to their face value. From recent experience in reference to the Naval Loan, it is evident that the new bonds will command a premium of four or five yen, and in view of the immense profit that can be obtained by issuing the bonds at such a premium, it is extremely improbable that the Government will exchange them for the principal of old debts at face value. Supposing that the new bonds are issued at a premium of three yen, a profit of yen 5,250,000 is secured by simply issuing them; while the difference of the rates of interest enables the Government to economize over three million yen. The disappointment and consternation of the possessors of the old high interest bonds, says the *Fiji Shimpō*, is past all description. They feel as if they had been robbed of a good deal of their property in the course of a single night. In the evening they thought their bonds were worth about 100 yen a piece, with interest of 6-7 per cent.; but they awoke to find the value of their property diminished by 10 per cent. But, as it was originally stipulated that the Government should have the right to redeem its debts at any time at face value, holders have nothing for it but to get their old bonds redeemed at face value and buy the new bonds by paying a premium of 3 yen. Conservative capitalists in this country had thought public bonds the most valuable and unchangeable form of treasure, but they have awakened to the fact that bonds also are nothing more than human devices and not free from change.

In its issue of the 21st, the *Fiji Shimpō*, classifies the opinions entertained by the public as to the issue of the new bonds into two kinds. One party maintains that the probable success of the Redemption Bonds must not be inferred from the case of the recently issued Navy Bonds, for in the present instance the amount is, not ten and some odd millions, but over 150 millions. Whatever may be the inclination of Japanese capitalists to invest their money in bonds, they will not be so rash as to apply for the new bonds at a premium; but will wait the return of trade activity, when the rate of interest on capital will again rise to 10 or 12 per cent. There are already indications pointing to this probability. Should such a time arrive, the new 5 per cent.

bonds will be 90, 80, 70, or even 60 *yen* per 100 *yen* face value. The other party holds that, however unwilling capitalists may be to buy the 5 per cent. bonds, they will be compelled to do so from sheer necessity. For, in the first place the securities of national banks and the Agricultural Distress Relief Fund are in public bonds. Besides, the regular contracting merchants to the Government and other individuals who owe debts to the Government, will be under some necessity to hold public bonds. The total amount of bonds required on this account will reach 40 or 50 million *yen*. As to the rest, let the Government at once redeem old bonds to the amount of 10 or 20 million *yen* from the reserves in the Treasury. In the present state of business, the capital thus suddenly let free will find no safe investment, and the consequence will be a rush for the new bonds. Moreover, the character of the people who represent the rich families throughout the country, is highly favourable to the success to the new 5 per cent. bonds; for they are conservative to the last degree, are afraid of attempting a departure from the old groove of things, and are thus strongly inclined to prefer 5 per cent. interest guaranteed by the Government to the profit realisable on dangerous enterprises of a private nature. The *Fiji Shimpō* does not attempt to decide which of these two opinions is likely to be correct, but prudently leaves the decision to the turn of events themselves.

The *Hochi Shimbun* desires the Government to use judgment in carrying out the new financial scheme, for, it says, whether this oft-resorted-to redemption of high interest bonds by the issue of a low interest loan will achieve the desired result or not, depends upon the mode of procedure. Should the mode of procedure be faulty, the original object of the Government will not be attained; or, if it is, great inconvenience will be occasioned to private individuals by disturbing the circulation of money; or, in order to accomplish its object, the Government will be compelled to undergo great financial difficulties. Supposing that the new bonds are to be all issued in five years, over 30 million *yen* must yearly be withdrawn from the market for a longer or shorter period of time; or if ten years, the amount will be 17 millions. The collection of the revenue alone (amounting to about *yen* 70,000,000) already exercises a considerable effect upon the circulation of capital, and the additional withdrawal of 17 to 13 million *yen* must seriously affect the market. The result may be a rise of interest, and a consequent falling off in the demand for the new Redemption Bonds. The *Hochi* proposes to prevent such an undesirable occurrence by first ascertaining the amount of applications for the new bonds at each period, and then by redeeming old bonds to that amount, after which the payment of the amount of the applications may begin. But the *Hochi* confesses that this plan is not easy to carry out in practice, for the Government may not have enough reserve to effect the redemption of old bonds before receiving payment for the new ones. The only feasible plan will be, to permit the present holders of the old bonds to apply for the new bonds in exchange for their old ones. [The *Hochi's* article appeared on the morning of the 19th, so that the writer could not have seen the Rules of Procedure, in which

the provision desired by him is inserted, and which were published in that morning's *Official Gazette*].

Writing on the extradition treaty between Japan and the United States of America, the *Nichi Nichi Shimbun* says:—This is the first treaty of the kind we have ever concluded with any Western Power, and as it will form the basis for any other similar treaty that may hereafter be negotiated with other countries, it behoves us to carefully peruse the document, and consider whether any of the provisions therein contained do not depart from the usages and principles of international law. Briefly, it was necessary that led to its negotiation. As our readers may remember, it was but last year, late in the autumn, that an American citizen, Calvin Pratt, fled to this country, after committing the crimes of forgery and embezzlement. There being then no extradition treaty between the two countries, the United States Secretary of State had to apply, through the Governor of California, for his arrest by the Government of this country purely as a matter of comity. The request was complied with, on the understanding that it should form no precedent. Shortly afterwards the American Government was again obliged to make a similar request to this country, with equal success. Now, the United States are a great distance from Japan but they form practically a neighbouring country, and there is consequently no assurance that criminals will not pass from this country as well as from American shores. It is thus evident that, without explicit diplomatic arrangements between the two countries, there is danger not only of the ends of justice being defeated, but also of the relations between the two nations being disturbed, in case of the flight of criminals from one country to the other. On the question of the extradition of criminals, various opinions have been maintained by ancient and modern writers, and all the extradition treaties now in existence show more or less points of difference from one another, but in essence they are based on certain well established principles. It seems to be commonly agreed that ordinary criminals are to be handed back to the country where the crime was committed; while in the case of political offenders, their extradition is not to be compelled with. With this topic we once dealt at length in speaking of the case of the Korean refugees, Bok-ki-ko and Kim-yo-kun, in February, 1885, and we refer our readers to the articles then published. The treaty just concluded with the United States has no points at variance with this principle of international law. Art. II. enumerates various offences which are all of an ordinary character, and in Art. IV. express exception is made of crime of a political character. We thus observe that the treaty under review compares well with similar treaties between the civilized countries of the West, and that it is in conformity with the principles of international law in Christian countries. Its conclusion with the United States, therefore, amounts to a public recognition by the latter of Japan's status of equality with civilized Christian States. The American Republic has ever been willing to accord us that status, but the present is the first instance of a public announcement of its good will to deal with our country on an equal footing; and we feel grateful for the impartiality that country has always shown to us, particularly

on the present occasion. European countries are also on the point of manifesting their spirit of impartiality in the revision of treaties now proceeding. We hope that the day will soon arrive when we shall be able to thank them as we now thank our good neighbour across the Pacific.

We feel that it is almost a hopeless task to comment any further on the unwise aspect of the movement now rapidly gaining ground in favour of foreign dress for Japanese ladies. But if consensus of opinion possesses any weight, the following extract from the *North China Daily News* may be of interest to our Japanese readers:—

We touched lightly in a note last week on the reasons given by a Japanese lady for the recent adoption by herself and her sisters of foreign dress, and as we find that the correspondence on the subject has been continued in the leading English journal published at Yokohama, it is worth considering at greater length. The Japanese lady was on her defence originally, for we have never heard even the most practical Grindgrind deny that the change which is passing over the costume of the ladies of Japan, is an injury to the country in an artistic sense that cannot be too much regretted. We tolerate the Western female costume on our own women because we are used to it, and because no eccentricities of dress can entirely spoil the beauty of a handsome woman; but no one can affirm that on its own merits it is either sensible or satisfying to the eye; and its highest development, full evening dress, would be ludicrous if it were not melancholy. Years ago, Thackeray remarked on the atavism that induced ladies at balls to copy, as far as decency allowed, the customs of their earliest ancestors; for they also "covered themselves with paint, and wore as little clothes as possible." No one would hold for a moment that the opera of "The Mikado" would ever have attained the vogue which has been so profitable to Messrs. Sullivan & Gilbert if the three little maids and their attendant *moosmies* were dressed even in the height of Parisian fashion; and the foreigners who attended the recent performance by Mr. Kemdani before the Mikado were painfully struck by the contrast between the Empress's special maids of honour, who were in Japanese court costume, and the remainder of the lady guests, who were clothed in all the glories of Western millinery; a contrast gravely to the disadvantage of the latter. Aesthetically, there is no shadow of question that the Japanese costume is far preferable to the foreign, and it hardly needed that the Japanese lady should begin her letter, as she does, by denying the allegations that have been made against her native dress.

The success of the Free Church of Scotland in India in educational work is well-known. Since the year 1830, when the great missionary Dr. Duff landed at Calcutta, the work of founding thoroughly-equipped colleges has been steadily progressing. This was the channel into which all the current of Duff's energies flowed, for up to his death he was but slightly acquainted with any of the native languages. One of the most vigorous of these colleges, the Madras Christian College, was set on foot in 1837 by two gentlemen who had been stirred by Duff's address in the General Assembly at Edinburgh two years before. The College is no longer denominational, but is now the great Christian College of Southern India, enjoying the support of all the evangelical missions there. The September number of its Monthly Magazine, a well-edited journal of literature, philosophy, science, and religion is in our hands, and is worthy of a great institution. The editor, Professor C. Michie Smith, comes of a well-known and able family, his brother being the famous Arabic and Biblical scholar, Professor Robertson Smith, now of Cambridge University. We have remarked with pleasure the thoroughness of the reviewing work. A serial tale of travels in Japan has reached its third part in this number. It is from the facile pen of the wife of a well-known resident of the capital, and is entitled "What they saw in Japan." The characters, though bearing fictitious names, are easily recognizable.

As regards of Indian institutions, it has always appeared to us that the people of this country do not enough appreciate the valuable aid to be derived from an acquaintance with the highly

developed civilization of India. Indeed, many positive misapprehensions seem to exist. A back street in a town of Hindostan is apt to signify to a Japanese something very far removed from the brilliant light of modern civilization. And yet the clever and intellectual Japanese student would find it a hard task to pit himself against the able and subtle Hindoo. The educational problems in course of solution in the great peninsula are as deep and far-reaching as the like problems in Japan, and the men who are striving to solve them there are highly qualified for the task. The manual now to be found in the hands of all scholarly students of the English language in India, is Rowe and Webb's *Hints on the Study of English*. Both of these authors are professors of English Literature in the Presidency College of Bengal, and are graduates of the University of Cambridge. The book is the result of a score of years' study and experience of what is required by Indian students of English. It is up to the high-level mark of English University exact culture. Though some of the warnings addressed to Indian students may be scarcely applicable to Japanese, yet the whole work is more worthy of study by the latter than any similar book of the kind. Indirect Narration and other hard subjects for an Eastern are carefully discussed. The book is published by Thacker, Spink and Co., of Calcutta.

THE *Fiji Shimpō*, in an article on Chinese trade, draws the attention of merchants who are now thinking of opening business in the north of China to the importance of profiting by past failures of their fellow-countrymen at the southern ports of that country. We are glad, our contemporary says, to hear that some merchants of Osaka contemplate establishing a business corporation under the name of the Eastern Asiatic Trading Company with the object of engaging in trade in northern China, and further that the Mitsui Bussan Kaisha has obtained the contract to supply the Chinese Government timbers for sleepers to be used on the railway lines, the construction of which will be undertaken by Krupp. It is now high time to consider the causes of the failures of our merchants in the south of China, and to avoid the repetition of the same errors in the north. Among the various circumstances that have conspired to defeat our business men in China, the most conspicuous is the want of men of proper qualifications. The Chinese are a frugal, industrious, and persevering people, and they shrink neither from inconvenience nor from disagreeable duties. Moreover, they have especial talent for making bargains, as may be seen from the fact that at Imari and Kutani they very often purchase porcelain at a price lower than that paid by our export merchants. Now, to do business with such a people requires the exercise of great industry, frugality, and perseverance, and our merchants ought to have selected managers and clerks for China characterized by these qualities. But instead of doing so, they sent young and inexperienced students, not acquainted with business, and especially ill adapted to deal with such a people as the Chinese. The consequence was that, when these arrived in China, they looked down upon the Chinese with contempt, and, following the example of English merchants, soon began to lead a luxurious life. Next to the selection of men, the most disastrous blunder made by our

merchants was indiscriminate in sending goods to market. Our merchants are deplorably deficient in calculating with a view to permanent profit. When a certain commodity is reported to be in demand, every one rushes to flood the market with it, without the least thought as to the extent of that demand; and the result is a fall in price beyond all reasonable limits of profit. Some years ago, matches were largely exported to China, but competition soon became so great among our own traders that the price fell to an excessively low figure, and the demand soon stopped. The same thing is observable in our trade with America. The third circumstance that has contributed to bring about the failure of our countrymen in the Chinese trade, is their inability to take advantage of new markets. The Japanese are in general ignorant of geography and of the various profitable routes of commerce, so that when they fail to dispose of their articles at one place, they are obliged to keep them indefinitely in godowns or to sell them at nominal prices. In 1884, several merchants of Osaka sent a large quantity of porcelain from Kutani, Imari, etc., to Hongkong. At first the ware was disposed of at some profit, but soon prices fell to a ruinous point, for the Osaka merchants had not intelligence enough to send their goods to some other market. Some foreign merchants had expected such a result, and as soon as the price fell to their figure they bought the wares and packed them off to Shanghai, Saigon, Singapore, Australia, and other places. Lastly, the inability of our manufacturers and merchants to adapt their goods to the taste of the Chinese is a cause of failure. For instance, fans exported to China are often too small to commend themselves to the favour of the people of the Middle Kingdom. At first the canned provisions exported from Hokkaido had labels of white paper; but the Chinese wanted red paper, and we had to change the colour of the labels accordingly. By paying attention to these circumstances, our merchants cannot but be benefited in their new trade in the north of China. China is a large country, and tastes and customs are no doubt different in the north and south. It will be important to carefully study those differences, so as to conduct business with profit.

WE are obliged to the *North China Herald* for a very shrewd criticism of an article recently published in these columns on the subject of the despatch of a Japanese Commission to report upon the art schools of Europe. There is just one little fault in our contemporary's critique. It ascribes to us opinions which we not only did not express, but even distinctly condemned. It is very entertaining to learn that, according to our creed, "the object of art is to save time and material, and produce the greatest number of pieces of the most exact similitude in the smallest possible time with the least consumption of material." If that were our opinion, we should at least have endeavoured to express it less tautologically. We do not pretend that to save time and material is art of a very high type, but what we fail to see is why such saving should involve the production of "the greatest number of pieces of the most exact similitude." Perhaps the most prominently admirable feature of Japanese Ceramic art, the feature which specially distinguishes it from Chinese, is that the decoration of every piece is the effort of a single artist,

instead of being a wretched, mechanical patch-work, done by several soulless artisans. If there be any one silly enough to advocate a change from the Japanese to the Chinese, or even to the European, habit, in this particular, we have never had the pain of meeting him. But in every industry there is necessarily a purely mechanical, as well as an artistic, function. The baking of a pot, the preparing of the materials, and even in some cases the moulding—these are mechanical processes, which by skilful combination and division of strength may be immensely facilitated, without in the smallest degree affecting the artistic portions of the work. We trust that this explanation will explain to our Shanghai contemporary the difference between our real meaning and his interpretation of it, and will also alleviate the regret he professes to feel for our "apostasy."

WE take from a home exchange the following statistics of railway accidents in Great Britain:—"The Board of Trade has just presented its annual return of railway accidents for the year 1885. From it we learn that there are few harbours of refuge safer than the inside of a railway carriage. At least, out of 700,000,000 passengers who took refuge there only six were killed. Like many other harbours, however, the risk is in the approach. Ninety-six other passengers were killed, mainly owing to a want of caution in getting in and out of trains. But though only 100 passengers were killed, the total number of persons who met their deaths on railways is not far short of 1,000. Nearly half this number were servants of the companies. Of these, 150 were killed while engaged in coupling and shunting carriages and trucks; nearly 200 were killed while working or standing on the permanent way, and only 15 by falling between the train and the platform—a fact which speaks volumes for the skill which guards acquire in the art of entering and leaving a train when in motion. Trespassers and suicides account for a larger number of fatal accidents than any other class, being credited between them with over 300 deaths. Level crossings are responsible for 58 killed and only 21 injured.

THE recent deposition of Prince Alexander and its accompanying features of vile corruption and dark treachery, together with the fact that a great European Power is suspected of having instigated the conspiracy, have made a peculiar impression upon the socialistic elements of European society. The manner of dealing with the Prince invites imitation, and it is observed that the most conservative empires in Europe have offered an example which might easily be followed against themselves. The assumptions which suggest these thoughts are, however, stoutly repudiated by the official press of the countries concerned. M. de Giers has personally gone to the trouble of laying the blame upon irresponsible enthusiasts at Sophia, who thought that all Bulgaria would welcome them as saviours of the country. One thing is certain, viz., that Russia certainly did not approve of all the means employed to bring about Prince Alexander's removal. His deposition and the manner in which it was effected have been a blow to the monarchical principle throughout Europe, and the belief, ostensibly entertained by the Nihilists and carefully disseminated by the socialistic press of Western Europe, that Russia not merely sanctioned the end, but

also through her agents directed the conspiracy in its details, constitutes no mean danger to the power and security of the Imperial Government. Of course, from a strictly correct point of view, Prince Alexander did not reign by "right divine," but was elected by the people. He owed his crown to them and to the European Powers, above all to Russia, nor was he even a sovereign ruler, being bound by special treaty in many things to yield obedience to the Porte, his lawful suzerain. From choice or more probably from necessity, he entered revolutionary paths, and at first with astonishing success. His final success or failure, however, will depend upon forces outside of Bulgaria. In the event of warlike complications on the Balkans and between the Great Powers, he seems to be destined to play an eminent rôle both from the native strength of his character, his resources as a general, and his popularity among the Bulgarians.

SOME of the prominent citizens of Sendai, having learned of the growth and success of the Rev. J. Neesima's *Dôshisha* English School in Kyôto, last year invited him to lend the influence of his name to the establishment of a similar school in their city. They promised to furnish buildings, native teachers, &c., and to bear all expenses save the support of the missionary teachers. Their desire was that the school should have a Christian basis, and that in time it should be worthy to be compared with the colleges of New England. Mr. Neesima, with the coöperation of the American Board's Mission, accepted the invitation, and the school was opened October 11th with a faculty of four Japanese teachers and two foreigners, and 120 scholars. Mr. Ichihara, who was in charge of the *Dôshisha* during Mr. Neesima's absence in America, holds the position of Vice-Principal. The course of study in the Preparatory Department covers two years, while the Academic extends through five years. The Bible is in the curriculum as one of the regular studies. The new buildings, a two-storied hall for recitation rooms, and two dormitories, each 144 ft. long, are in process of construction, and it is expected that they will be completed by January. The development of this school, being the first conspicuous union of Japanese philanthropists with Christian missionaries for the establishment of a large Academy, will doubtless be watched by many with much interest.

WE translate the following interesting article from the *Shi Pao* of October 2nd:—

It has been said by them of old time that when a man is found acting injuriously to his own family but benevolently to strangers his behaviour is unnatural and there is something hidden under the cloak of outward kindness.

We have from time to time printed translations from various foreign newspapers on the subject of the relations between the Chinese Government and the Pope. Some days ago we reproduced an article on the same subject from the *Temps*, a French newspaper of the highest authority. These articles all indicate that the French government is greatly troubled at the prospect of losing what is called the right to protect Christians in China. This is a question which has not hitherto been much considered by Chinese Statesmen. Those of them who have been in Europe, or who have studied political affairs there, know something of the importance of the issues which are covered up in that apparently harmless word "protection," but it is hardly to be expected that the Statesmen who have scarcely travelled beyond the walls of Peking can realize the full significance of the phrase. Nothing is better calculated to quicken the apprehension of the Government on this point than the extraordinary excitement of the French Government, which insists on protecting the Christians in China whether they desire this protection or not. For now that the French have so plainly shown their secret designs, it would be impossible for China to acquiesce, by word or deed, in the pretensions which France sets up. It is rather suspicious that the French Government, the greatest enemy of Christianity, which is constantly oppressing the priests and confiscating their property in France, should be so intensely desirous of protecting Christians in China when their protection is not required.

A leading French Statesman, Gambetta, who died a few years ago, left as a legacy to his followers the doctrine that the Church should be suppressed in France but supported in all foreign countries. Gambetta was a man who had no reverence for Heaven, and no religion. He seems to have regarded Christianity as a disease which he wished his own country to be rid of, but was not sorry to see it spreading elsewhere. It is necessary to keep these ideas in mind in order to understand the action of the French Government to-day. It would be out of place here to discuss what Christianity is. Like Buddhism, it had a very pure origin and the living principles of both are mercy, benevolence, and peace. But religions have in course of ages been overlaid with doctrines and practices which have obscured the simplicity of their origin, and even changed their character. The greatest misfortune to Christianity is that it has been made use of by Princes as a pretext for wars of aggression. In fact nearly all the wars of Europe for the last 1,000 years have been in some way connected with religion. This is sometimes made a reproach against Christianity, which professes to be founded on peace and self-sacrifice. But the reproach is scarcely just. Rather it is the peaceful character of Christianity which has induced ambitious Statesmen to make use of it to work out their own designs, just as in private life unscrupulous men are sometimes enabled to carry out questionable plans by using the names of men of blameless character. We are only now concerned with the political aspect of Christianity, not its merits as a religion. The modern history of Turkey affords the best illustration of the danger of allowing foreign Powers to interfere in matters of religion. During the last hundred years, Russia has several times made war on Turkey, always on the pretext of protecting Christians, and it is this which is fast breaking up the Turkish empire. It is interesting to observe that Russia and France follow the same policy in this matter. When the French Legation withdrew from Peking on the 2nd day of the 7th moon of the 10th year of Kwang-su (2nd August, 1884), the affairs of the Christians were transferred to the Russian Legation. The Ministers of the Tsung-li Yamen remember very well how eagerly the Russian Minister assumed the office of protector of Christians, going to even greater lengths in the way of protection than the French themselves had done. The reason for this is plain. Russia, although she has none now, expects to have by and bye many Christians in Mongolia and Manchuria who may be extremely useful to her in her aggressive designs on China. Therefore the Russian officers, always looking very far ahead, were most anxious to establish a right of interference for the protection of Christians. And they could do this without reproach when they were acting not for themselves but for France during war time, well knowing that whatever position she succeeded in establishing for France, Russia could claim for herself when the proper time came. But the more anxious Russia and France are to assert the right of interfering with Chinese Christians, the more resolute China should be in resisting all such interference. The only safety for China is to treat Christians, whether Chinese or foreign, exactly as all other people are treated,—to make no distinctions. Foreign missionaries have the right to travel and reside in the interior; they can exercise this right without getting passports from the French Minister. The Catholic missions are composed of men of all nations, but they all have Ministers in Peking to whom they can apply for passports. Let the Germans get their passports from the German Legation, the Spaniards from the Spanish, Italians, Belgians, and Hollanders from their respective legations, but no European State has any right to arrogate to itself the position of protector of missionaries in general.

It is satisfactory to learn that the Head of the Catholic Church is of this opinion, and although grateful to France for what she has done in the past is now desirous of being free from French protection in the future. To carry out these views the Pope is about to send to China a very high official to reside in Peking and perform the functions of a Minister. As the Pope has no troops and no territory, but is merely a kind of Dalai Lama, there is no danger to China from opening direct relations with him. The affairs of the missionaries can then be dealt with in an open and straightforward manner as no fear of political traps will lurk behind. The Christians, when they know they are no longer protected by a military State, will understand that their security will depend on their own wisdom in avoiding offences. And the officials and people, on the other hand, will gradually learn that the Christians are only anxious to lead virtuous lives without any political ambition, and they will respect them. The Imperial Government will then also be able to extend its favour to all Christians and Missionaries without the fear of nursing traitors in its bosom. The missionaries have among them men of great learning and much skill in sciences which the Emperor Kang-hsi—knew very well how to utilize. The present generation possesses men no less capable of rendering good services to China, and there would be no reason for not using them if the suspicion of their being agents of the French Government were once cleared away.

THE *Hochi Shimbun* writes in the following very superficial fashion on the position of England in Burmah:—"While England had but little difficulty in taking Mandalay, and in sending King Thebaw to India, she appears to find it a more difficult process to repress the rising of malcontents, and it has now been thought necessary to send out from home strong reinforcements, amounting to about 30,000 men. Why is it that the work of conquest was more easy than the maintenance of order? Simply because the English Government has most unwisely disappointed the Burmese. The inhabitants of the conquered territory had heard of the moderation and magnanimity shown by

the English nation to their countrymen in the lower part of Burmah, and entertained the hope that the invaders would depose the tyrant Thebaw and place a better ruler on the throne. Working upon this feeling, the English encouraged their aspirations, while at the same time carrying out an underhand policy, and so it happened that when the British troops appeared but little assistance was offered. Disregarding, however, the wishes of the natives, the victors assumed the rule of the country, both in name and in fact. This course was no doubt dictated by the French policy in Tongking, but to us it appears that the same object might have been attained by simply assuming protectorate authority over Burmah. England has committed a blunder in departing from the moderate policy for which she has hitherto been remarkable in her attitude towards conquered States.

THE friends of the Rev. S. G. Maclaren, for many years a resident of Tsukiji, and professor in the Union Theological Hall there, will be glad to learn that he was inducted last month to the charge of Coburg, a rising suburb of Melbourne, Australia. Mr. Maclaren's health was in a very precarious state after his return to Scotland two and a half years ago, and the physicians whom he consulted considered a change of climate the only means of saving his life. The congregation of the Presbyterian church at Coburg are to be congratulated on having obtained as pastor a gentleman of so ripe scholarship and matured judgment. It is to be hoped that Mr. Maclaren's health may soon be completely re-established. Mr. W. Gray Dixon, formerly professor in the Imperial College of Engineering, Tôkyô, is now a Presbyterian Minister, also in Melbourne. The Scots Church there, which lately furnished a celebrated heresy case to the religious world in Australia and elsewhere through its pastor Mr. Strong, has called Mr. Dixon to be assistant minister. Mr. Dodds, who was called to the charge when Mr. Strong left, is now under the ban of the Presbytery for heresy. Mr. Dixon's ordination will be delayed until the case is settled, but at present he is acting as minister of the congregation.

WE really begin to think that when all is said and done a considerable section of the public will have fully persuaded itself of the perfect legality of Great Britain's proceedings with regard to Port Hamilton. The *North China Daily News*, in a recent issue, reiterates the old fiction with delightful gravity, and even more than usual assurance. "All foreigners in the East," says our Shanghai contemporary, "who knew anything of the matter, the Chinese Ministers and we dare say the Cabinet at Tôkyô also, knew that we had acquired the place by the consent of Corea and for a consideration." What a pity it is that politicians, who are incapable of believing that their country can possibly be guilty of an arbitrary act, will not refrain from parading their blind confidence at the market cross. England is not immaculate: far from it. She can calm her scruples of conscience without much difficulty when confronted by national exigencies. But she is much more likely to be respected and trusted if she admits her fallibility, than if she tries to hide the traces of her wrong-doing under transparent pretences. Suppose that Russia had occupied Port Hamilton in the same fashion,

URBANA-CHAMPAIGN

and that Russian journalists were now to talk of Korea's consent having been previously acquired and consideration given, how loudly and with what justice we should laugh at their duplicity!

MR. EDWARD RUDOLPH GARCZYNSKI, whose name we do not remember to have heard before in connection with Japanese art, has the following interesting comments on that subject in the *New York Mail*:—

Every one in America is interested more or less in art matters, but very few care to attempt an analysis either of beauty or of their own emotions at the sight of beauty. Nor can this statement be justly considered as a reproach, because the power of being impressed by the beautiful is possessed by very many, whereas the gift of analytical power is exceedingly rare. When a fashionable New York belle pronounces a Japanese bronze of extreme hideousness "perfectly lovely," she is correct as far as the spirit of her expression goes, though somewhat conventional in the words themselves. She means that the bronze has a charm about it which forcibly impresses her feelings. The same girl is capable of saying of the Venus of Milo that it also is "perfectly lovely," and here again there can be no doubt that she experiences a real pleasure in beholding it, and feels herself drawn to it by its beauty. There are not a few professed writers upon art subjects who would contend that the girl feels nothing at all, and only uses the phraseology of the time. For there is a strong tendency in fashionable circles to be not only interested in art matters, but to be enthusiastic in the expression of one's interest. But it may be laid down as a fact that the tendency of the fashionable world, year by year, is to become more and more natural, and if art is fashionable, it is because art is really liked. It is therefore extremely probable that the New York belle who pronounces the Venus of Milo and a Japanese bronze to be each "perfectly lovely" finds them so, and likes them in real earnest. This catholicity of admiration is exceedingly puzzling to those who are anxious to belong to a school. According to their views one is classical or one is barbaric in his ideas about art, and no one has a right to eat out of two mangers or to carry water on both shoulders. Japanese bronzes and Hellenic marbles are as opposite in appearance as can well be. German art professors have described the former and have declared that classic art is good enough for them. Here is a clear condemnation of Japanese work by the mouth of authority. Here are men who boldly take the ground that Japanese art is to be despised, and it follows naturally and logically that this feeling of contempt springs out of genuine and profound admiration for the masterpieces of Greek sculpture. One cannot serve two masters; one cannot consistently admire a fat-bellied, grinning Japanese idol and the marble statue that enchants the world. Much may be pardoned to the frivolity of beautiful young women, but there is a point where the line must be drawn, and it is reached when the Venus of Milo is praised in the same terms as a Japanese Buddha, or a goddess of Mercy. If the girl only admired the Japanese things and did not care for the classical, then an easy explanation could be given with a flowing tongue of the temporary aberration of taste in society caused by the importation of Japanese objects often surpassingly brilliant in colour, and not devoid of a quaint naturalism. "And," the professor might continue, looking round his audience with kindling eyes and expanded brow, "it is not to be denied that admiration for the naturalistic school has greatly increased of late years, because more interest is taken in artistic matters, but it is only among those whose natures have not that refinement and perfect feeling for the beautiful which brings cultivated human nature to a full appreciation of classic art."

Away back of Hellenic art was some unknown land, and it is a reasonable conjecture that its artists were, to use the current phrase, men of the natural school. They have come down to us in a petrified condition, it is true, but the evidences of deep love of the beautiful are too plain not to be understood. These men, perhaps, we shall never know, must have evolved their comprehension of art from a loving study of nature; not of the human form alone, as is ridiculously reported, but of all that is beautiful. Their successors evolved canons of art from the lifeless copies of their work, instead of going to nature, and the consequence is that throughout the entire realm of classical art there is an endless repetition of a few decorative forms. It could not be otherwise. They copied their statues, and took the life out of them, and they copied their motives of decoration, and took the meaning out of them. They did not create, and could not create, because they did not go to nature, and it is only by receiving forcible impressions of beauty that the soul can conceive. Hence the degenerate Hellenic sculptors, when they worked for Romans, found it necessary to add a new interest to their copies of the human form, and this was downright gross, brutal, sensualism. Classical art never can cleanse itself from this stain, which is unfortunately too notorious. Even when there is no certainty of vile intention, there was a degradation of comprehension which is manifest enough. Compare the Venus de Medici, in which the female form is presented under a purely earthly guise,

with the Venus of Milo, which, in spite of its loss through repeated transitions, preserves the innate sweetness and modesty of womanhood. The study of the human form alone tends downward with unerring certainty, whereas the study of the beautiful in nature raises the artist upward and gives him the faculty of noble conceptions.

Have not the Japanese artists derived all their artistic impulses from China? Yet they never copied their models slavishly, nor evolved canons of art from them. They studied them faithfully and found that to rival them they must become one with nature, and through their intense appreciation of natural beauty they succeeded in seizing the hidden soul of art. To him who is imbued with the true principles of art it is not difficult to understand why a girl admires heartily the Venus of Milo and the Japanese bronze as well. There is not in the latter the elevation of the former, neither is there in a maiden's hair the sublimity of a line of peaks against a blue sky, appearing like a purple haze. But no one can regard the delicate little *adiantum* without fondness, for it appeals to the human heart in the same way, though in a less degree, as a graceful innocent child. Had the Japanese been as false and craven in spirit as some Europeans, they would have taken their Chinese models as the perfection of art, and evolved an academy out of them, and perpetuated them in endless repetitions. But instead of this, each artist endeavours to render his impression of nature in the best way he can, sometimes stumbling, sometimes copying nature a little too closely, but yet all the time feeling impressions and embodying them in creations.

Look, for example, at a great Buddhistic bronze in the store of a dealer in Japanese goods. It represents, or may be supposed to represent, a lotus, but it is not in the least a copy of a lotus, though its form suggests the contour of that mystic flower. Had the artist slavishly imitated the lotus, his work would have been an abortion, but he understood his business better. In analyzing the lotus he clearly understood that much of it depended upon its vegetable nature. This could not be rendered in bronze. He comprehended the quality of his material, and deliberately withdrew from his lotus all that bronze was unable to realize. The lotus has certain qualities which can and certain qualities which cannot be translated from vegetable tissue to bronze. Having resolved this great problem, his aim has been to create such a thing as a lotus would be if it grew in metal. If nature made bronze lotuses, they would be developed according to the nature of bronze, and not according to the nature of water plants. Your unreasoning realist, your French imitator of Japanese realism, would not have known this pre-eminent canon of art, and his bronze lotus would have been exact in outline, but would have been hideously unreal, and would besides have been glassy in tone. For Europe is not able to make bronzes which are good in the quality of the metal, and the French who claim to be foremost in bronze making, are not much better than the Germans whom they despise. French bronze looks vitreous and German bronze sponaceous. But Japanese bronze of the first quality suggests nothing save a green metal of very fine grain.

Here is a kakemono, or hanging picture, in which a Japanese artist has attempted to render a pine tree. He has been realistic, and at the same time has endeavoured to render his main impression, the needle-like form of the leaves. And he has succeeded admirably. But now look at this bronze, one of the first class. It represents a hero destroying a huge spider. We need not consider the earnestness of the action of the warrior, which to the classic eye verges on the grotesque, and is in curious contrast with Raphael's picture of St. Michael and the arch-fiend, where the action suggests neither the terror of combat nor the power of the archangel, and is ridiculously statuesque. What is worthy of notice is the pine tree. How was an artist in bronze to represent a pine tree? One of your classical men would have modelled the figures in high relief and given a background where a few suggestive lines in very low relief would indicate to spectators with powerful eyesight that the scene of the combat was a pine wood. This is a simple surrender of the problem. The Japanese artist models his pine trunk as faithfully as his figures, gives gnarled and twisted branches, and in their places circular tufts of foliage, on which, by a miracle of modelling, he succeeds in imposing a faint resemblance to pine needles. He reasoned it out just as the bronze worker of the lotus ornament did. His problem was, "What would be the foliage of pine trees if nature made them of bronze?" and this was his result.

This is impressionism, indeed, the impression of the beauty of the pine tree by a man who knew the great canon of art, the discrimination of an object according to the material in which it is to be rendered. The perfunctory Greek had but one law to apply to everything—the canon worked out by the most servile imitation of that unknown race who taught him art. And as the art objects that survived longest were statues, the art of Greek was statuesque and never moved out of that groove. It was a dead perfection of contour and mass.

As an illustration of the truth of this critic's observations with regard to the Japanese artist's tendency to reproduce impressions rather than

detailed effects, we may mention a case which recently came under our own notice. One of the greatest painters of the present time in Japan—perhaps the greatest in point of originality and boldness of style—is Kyōsai. There is scarcely any subject which he does not paint with facility, and there are few, if any, of his paintings which do not exhibit marks of genius as well as of close, patient study. Yet if you examine a hand or foot drawn by this eminent artist, you will detect there many of the faults which you have been accustomed to associate with Japanese productions of figure subjects; that is to say, you will see nothing to suggest the idea that the painter understands anatomy. Look through Kyōsai's books of studies, however, and you will find one that is filled entirely with copies of hands in almost every conceivable position, beautifully drawn and showing every joint and muscle with thorough fidelity. Then ask Kyōsai how it happens that, while thoroughly skilled in the proper method of drawing a hand, he allows so little of his skill to be seen in practice. He will answer you his is the proper method. For when one sees a person's hand as a part of his whole body, the impression conveyed is that, not of an anatomical object; but merely of a combination of outlines. To reproduce those outlines correctly requires careful preliminary study of every part of the hand, and a full knowledge of its anatomical aspect, but when there is question of painting it, from the artist's point of view, only the last results, not the detailed processes, of that study should be shown. Kyōsai will prove his theory by drawing first a hand in outline—such as you see in his pictures—and afterwards filling in the outlines until they become an anatomical study—such as you see in his sketch-book. You will then, perhaps, begin to understand that a point of principle is involved rather than one of ability.

NEVER since 1866 has Prince Bismarck's foreign policy met with anything like serious disapproval on the part of the German press. The most acrimonious opposition journals as well as the most untiring enemies of his home policy readily and without reserve acknowledged him to be *facile princeps* on the arena of European diplomacy. In fact, to criticize and to depreciate him as a statesman was the surest way of inviting contempt and ridicule. It is only of very recent date that such criticism has become more frequent, and has, comparatively speaking, assumed formidable dimensions. The occasion for it was furnished by the deposition, the return, and the ultimate abdication of Prince Alexander, and by the apparent subserviency of the Berlin Foreign Office to the wishes and susceptibilities of Russia. Prince Alexander had become a favourite of the people, not because he ruled over Bulgaria, but because he was a German, a successful general, and a popular King, whose achievements appealed at once to the imagination and the patriotic sentiments of all Germans. He was soon looked upon, not as a Bulgarian King, but as a national hero who deserved support from national rather than from political reasons. Public opinion was therefore little affected by the very cool and reserved attitude maintained by the official world in this matter, and when the sudden news was flashed across the wires of the Prince's deposition and his abduction to Russia, the sympathy for him rose

to the most intense excitement, especially in Berlin. Had not Russia, whether of her own accord or prompted by Emperor William's letter, refrained from detaining the Prince, the sympathy of the people and the apparent indifference of the Foreign Office would have presented so glaring a contrast as to evoke serious discussion in the Reichstag. As it is, the opposition press is severe enough on the Government, and has the rare advantage of appealing to the national sentiment as against Prince Bismarck. The official press preserved at first, and for a long time, a half ominous silence, scarcely, if ever, referring to Prince Alexander, and treating Bulgarian affairs in an indifferent sort of a way, as though claiming that no Bulgarian movement whatever could possibly affect German interests. But in proportion to the persistency of the opposition, official papers assumed a more passionate tone, pointing to France as the source of danger to Europe, and declaring it extremely significant that the opposition, never very conspicuous for their patriotism, should now at once, in characteristic harmony with all the Polish elements of the world, clamour for intervention on behalf of Bulgaria and against Russia. Semi-official and other conservative papers stated that Great Britain, though by her previous support of Prince Alexander she was in honour bound to uphold him, had yet through her press declared that she would fight neither for Bulgaria nor Constantinople, but only for India; that Germany had certainly still less reason for action than Great Britain; that Prince Alexander had not been elevated to royal dignity by German influence; and that Turkey also, his lawful suzerain, had acquiesced in his deposition. It had been expected that at the recent meeting of the Reichstag for the ratification of the Spanish treaty, a discussion of Prince Bismarck's foreign policy would take place. But the Chancellor himself did not choose to speak, and the deputies also preferred to remain silent, knowing well how quick the Chancellor is to resent what he considers interference with the foreign policy of the Crown, and being fully aware of the scantiness and untrustworthiness of the information at their and the public's disposition. The situation, however, must be most trying for Austrians, although to them the recollection of how well they were rewarded at the Berlin Congress for their neutrality during the previous Russo-Turkish war, may in a measure relieve apprehensions such as those expressed in the newspapers of Hungary.

Those of our Japanese readers whose love of soap and water has been outraged by observing the habits of the middle and lower classes in Europe and America, will be able to appreciate the following story from the *Boston Herald*:—"Recently a slight accident occurred on Chambers-street which caused some little merriment among those who were conversant with the affair. The axle of a coal-cart broke on the above-named thoroughfare, and the driver, a grimy, good-humoured admirer of the shamrock, was thrown violently from his perch, landing all in a heap on the sidewalk. An officer of Station 3 happened along at the time, and took the shattered driver to the Massachusetts General Hospital to have his wounds dressed. The man's injuries consisting simply of severe contusions about the shoulders and back, he was turned over to one of the medical

students. The attendant applied a large plaster to the patient's back, and while smoothing it down remarked: "There, Mr. C., you let that remain until you take your next bath." "Phwat's that you say?" said the injured man. The doctor repeated his orders, and, as the man began to recognize their significance, he burst out into a laugh that shook the pictures on the walls of the accident-room. "Leave it on till I take me next bath! Begorra, it'll stay there for some time, thin," ejaculated he. "Why, the last bath I took was twenty-six years ago, and then I fell overboard." It would, perhaps, be only fair to state that no one denied his assertion, and his appearance bore out the story of lapse of years since a good old-fashioned wash was introduced to his anatomy."

HISTORY is ever repeating itself. The friars of old began as poor half-starved wanderers, clad in the coarsest garb, and caring not for "creature" comforts. We know that they ended by living on the fat of the land, colouring their noses with old wine from their well-filled cellars. It seems that the modern religious movements which challenge notice by the loudness of their cornets and drums, are to have similar development. Two cornet-players in the Blue-Ribbon Army, believing that their efforts with cheek and throat had given them a claim on their instruments, were quite unwilling to return them to the "General." The "General" summoned them before the magistrate at Chester, and gained his case. But in the course of the trial it came out that this "Blue-Ribbon Army" was a splendid speculation, and brought no less than £20,000 yearly into the pockets of the "General." He may be congratulated on having so large an income, but certainly he must regret that the outside world has become aware of the fact. Better for himself that he had never summoned his bandmen, and had continued to batten unchallenged and unremarked on the offerings of impressionable "converts" and "inquirers."

THE *Mechanical World* has the following note about the iron works of Japan:—"The Government arsenal at Osaka, Japan, is now turning out steel rails as good as the imported; and it is said that before long full railway equipments will be made at home for their rapidly extending lines." This information reads pleasingly in contrast with the following cock-and-bull story from the *Tokyo Independent*:—"The Krupp guns manufactured at the Osaka Arsenal are for the *Katsuragi Kan*, and have been stored in the Tsukiji Arsenal. They are very, very pretty; and the only thing which will keep them from being equally useful is the fact that a marked reluctance has been noticed in military circles to stand in their vicinity when they are discharged."

ONE of M. Paul Bert's latest measures has been the publication of a decree fixing the port dues to be paid hereafter by ships entering the open ports of Annam and Tonquin. In every case there is a discrimination of 100 per cent. in favour of vessels flying the French flag. Thus the tonnage dues leviable quarterly on French ships frequenting these ports are two francs per ton, and those leviable on foreign vessels are four francs. Again, the fee per voyage is 50 centimes a ton for French ships, and one franc for foreign. It is evidently M. Bert's intention to preserve strictly against British and German competition whatever maritime carrying trade

the development of Tonquin and Annam may lead to. It may be presumed that nothing short of such powerful protection would serve to obtain for French ships a share in this business.

KOREA, it seems, is about to indulge in the luxury of the electric light. We read in the *Electrical Review* that "the Edison plant about to be shipped from America for the purpose of illuminating the palace of the King of Korea, embraces several artistic adaptations of the incandescent light, and that chief among these are two vases, with flowers which contain four small C.P. lamps distributed among them in the shape of flowers." The description is a little hazy, but the fact of the King of Korea's intention is plain enough.

THE maple-trees of the Usui Pass, which are noted for the richness and beauty of their autumn colouring, are at their best this week. The 9.25 a.m. train from Ueno reaches Yokogawa, situated at the foot of the Pass, about two p.m. Lovers of the picturesque will be amply repaid for the trouble of a visit. Maupet's Hotel, Kameya, at Karuizawa, on the other side of the Pass can be recommended for comfort.

THE following charters have been effected at Amoy:—German bark *Sibirien*, Newchwang to Amoy 22 lay days, \$1,475 in full; German bark *Orient*, Newchwang to Hongkong, 28 lay days, 18½ cents per picul; and German brig *Else*, 25 lay days, same voyage, 19 cents. At Shanghai the British schooner *Mercur* has been chartered to load at Hakodate for that port.

THE cholera returns for Tôkyô during last week were:—Friday, 22nd instant, new cases, 2; deaths, 5. Saturday, new case, 1; deaths, 2. Sunday, new cases, 4; deaths, 2. Monday, new cases, 3; deaths, 2. Tuesday, new cases, 5; deaths, 1. Wednesday, new cases, 5; deaths, 6. Thursday, new cases, 1; deaths, 4. Total new cases, 21; deaths, 22.

THE cholera returns for Yokohama during the past week were:—Saturday, 23rd instant, new cases, 4; deaths, 4. Sunday, new cases, 0; deaths, 2. Monday, new cases, 5; deaths, 2. Tuesday, new cases, 3; deaths, 2. Wednesday, new cases, 4; death, 1. Thursday, new cases, 3; deaths, 3. Friday, new cases, 2; deaths, 3. Total cases, 21; deaths, 17.

THE *Fiji Shimpô* publishes the following telegram:—

Nagasaki, October 23rd (Afternoon). The twenty-ninth sitting of the enquiry was held to-day; Chinese witnesses were called and examined. Mr. Motoyama, lately appointed secretary of Nagasaki Prefecture, has taken charge of the minutes.

We regret to report the loss of a steamer which left this port on Saturday last for Kobe, the *Normanton*, Captain Drake. It had been stated that there was great loss of life, the vessel having foundered, but this is not likely to be correct, as 27 persons have turned up.

A TIGRESS in Chiarini's Circus has given birth to a litter of cubs—three, and "the mother and young ones are doing well." We understand that Signor Chiarini intends to present one of the progeny to the Japanese Government so soon as it shall be fit to leave the mother.

## THE NEW REDEMPTION BONDS.

THE financial scheme which has just been announced by Imperial Ordinance is the largest measure of the kind taken by the Japanese Government during the past ten years. The face value of the securities affected is 174,752,675 *yen*. They comprise four varieties, namely, Pension Bonds, Kinsatsu Bonds, Industrial Bonds, and Railway Bonds. Upon these Bonds the Treasury now pays interest at rates varying from 6 to 7 per cent., and the project enunciated in the Ordinance contemplates the replacing of the four varieties by one class of Bonds, bearing an uniform interest of 5 per cent. Speaking approximately, the total annual interest at present paid by the Treasury to the holders of the four classes of Bonds above mentioned, is 11½ million *yen*; and since the interest at 5 per cent. will amount to only 8½ millions, a saving of three millions yearly is in prospect. We proceed to consider the details of the scheme.

When the territorial nobles surrendered their fiefs to the Central Government after the Restoration, it was arranged that these nobles and the military class generally should receive from the Treasury, as personal income, one-tenth of the revenues which they had previously enjoyed. By this agreement the Government undertook the task of paying annually some fifteen million *yen* to 320,000 families, aggregating about two million souls. This sum represented considerably more than one-fourth of the whole national income. It soon became an intolerable burden, and in 1873 the Government proposed to the pensioners that they should voluntarily commute their yearly payments for sums equivalent to six years' income in the case of hereditary pensions, and four years' income in the case of annuities. These sums were to be paid half in cash and half in Bonds bearing interest at 8 per cent. and redeemable after the lapse of three years at the convenience of the Treasury. The proposal was not largely availed of. We need not concern ourselves with it here further than to note that the total face value of the Bonds thus issued was 16,560,000 *yen*, and that their redemption was completed by 1883. Three years after the formulation of this proposal—i.e. in 1876—the Government came to the conclusion that a decisive step must be taken with regard to the pensioners. A scheme of compulsory capitalization was announced. By it the largest pensions were commuted at 5 years' purchase and the smallest at 14 years. The commutation was made in Pension Bonds, bearing interest at the rate of from 5 to 7 per cent. in the inverse ratio of the magnitude of the pensions. It was provided that the redemption of these Bonds should commence after 5 years and be completed within 25 years; that is to say, should commence in 1881 and be com-

pleted by 1906. No pledge was given with regard to the rate of redemption. That was to be regulated entirely by the convenience of the Treasury.

This measure has frequently been criticised as harsh and arbitrary. But it was dictated by the national exigencies. Its effect upon the pensioners may easily be stated. Their yearly incomes were reduced by from 2 to 25 per cent.—the smallest incomes suffering least—and the enjoyment of these incomes was secured to them for five years only. At the expiration of that time, their claims upon the Treasury might at any moment be finally discharged by the payment of the face value of their Bonds. As for the Government, it obtained immediate relief to the extent of nearly four million *yen* annually.

The total face value of the Bonds thus issued was *yen* 173,630,000; and of this aggregate 142,428,130 bore interest at the rate of 6 and 7 per cent., the remainder being 5 per cent. Bonds. The Bonds were neither saleable nor transferable, it being desired that they should remain in the hands of the former military classes, whose chief source of livelihood they constituted. In September of 1878, however, the restriction upon their sale and transfer was removed. Thenceforth the holders of the Bonds were allowed to dispose of them as they pleased, except to foreigners, who were necessarily excluded from such transactions, since the Bonds bore names and were registered. It does not appear that any considerable quantity of the Bonds changed hands at that time. The idea of speculating in them did not suggest itself, although their market value was so low that, as mere investments, they offered from ten to twelve per cent. interest. In order, however, to improve the circumstances of their holders, the Government sanctioned the establishment of national banks. The capital of the banks was secured by Bonds. On lodging these in the Treasury, the founders of a bank acquired the power to issue notes up to 80 per cent. of the face value of the Bonds. About 40 million *yen* worth of these securities were thus employed. The income derived from them was almost doubled by the device, for while their owners continued to draw the fixed interest on the Bonds, they derived at least an equal return from their banking operations. It is necessary to note this on account of its bearing on the moral aspect of the measure now announced.

We have next to consider the *Kinsatsu* Exchange Bonds. The first issues of paper money by the Government of the Restoration in 1868 were notes redeemable in thirteen years. By the end of 1869 the volume of these issues had increased from 24 million *yen* to 48 millions, and to improve their circulation it was found necessary to anticipate their period of maturity by 8 years. A Proclamation announced that the notes should either be exchanged

for coin in 1872, or that interest at the rate of six per cent. should be paid on them. When 1872 came, the Government, so far from being in a position to exchange the *Kinsatsu* for coin, had increased their issue to 73 million *yen*. Nothing remained, therefore, but to fulfil the alternative promise by paying interest. To effect this the public were invited to buy *Kinsatsu* Exchange Bonds, the redemption of which was to commence three years after their issue and to be completed in twelve years, their holders receiving interest at the rate of 6 per cent. in coin. The offer did not prove attractive. The Bonds were not easily negotiable as securities, being name-bearing and registered. Moreover, people had not yet begun to turn their attention to such investments, and the market rate of interest on money was, not six, but twelve to fifteen per cent. Thus the total face value of these Bonds purchased by the public did not reach seven million *yen*. In December, 1883, a new form of *Kinsatsu* Exchange Bonds was issued by the Treasury. These also bore interest at the rate of six per cent. in coin, but they were not registered, and it was provided that they should run for five years unredeemed, after which their redemption should be accomplished in thirty years. A few months after the issue of these Bonds, it was announced that Japan would resume specie payments on the 1st of January, 1885. Nevertheless, nearly nine million *yen* worth of the Bonds were sold.

Without detailed reference to the Nakasendo Bonds and the Industrial Bonds, we may now proceed to tabulate the securities affected by the new scheme:—

Pension Bonds, bearing interest of six per cent. and upwards. Issued in 1876; redeemable in 25 years from 1881.	YEN. Amount issued ... 142,428,130 Already redeemed ... 12,136,055 Remaining ... 130,292,075
Registered <i>Kinsatsu</i> Exchange Bonds, bearing interest of 6 per cent. Issued between 1874 and 1880. Redeemable within twelve years commencing from the fourth year after issue.	YEN. Amount issued ... 6,660,350 Already redeemed ... 993,650 Remaining ... 5,666,700
Unregistered <i>Kinsatsu</i> Exchange Bonds, bearing interest of 6 per cent. Issued in 1884. Redeemable within thirty years, commencing from the sixth year after issue.	YEN. Amount issued ... 7,939,900 Remaining ... 7,939,900
Nakasendo Railway Bonds, bearing interest of 7 per cent. Issued in 1884 and 1885. Redeemable within twenty-five years, commencing from the sixth year after issue.	YEN. Amount issued ... 20,000,000 Remaining ... 20,000,000
Industrial Bonds, bearing interest of 7 per cent. Issued in 1878. Redeemable within twenty-three years, commencing from the third year after issue.	YEN. Amount issued ... 12,500,000 Already redeemed ... 1,734,000 Remaining ... 10,766,000
Total.	174,752,675

These four varieties of Bonds are now to be gradually replaced by Redemption Bonds (*Seiri Kōsai Shōshō*), bearing an uniform interest of 5 per cent., and redeemable within fifty years, commencing from the sixth year after issue. It will be at once apparent that the new project is intended, not only to diminish the Treas-

sury's yearly disbursements an account of redemptions, but also to spread the operation of redemption over a much longer period. Mr. OKUMA, in his Financial Review of 1881, announced that the whole of Japan's debts would be discharged in twenty-eight years out of her ordinary revenues alone. At the time when this declaration was made, the state of the country's credit offered some excuse for an exhibition of financial feats. Now, however, there is no reason why the abilities of tax-payers should be strained to accomplish a task which no other nation would think of setting itself. The annual appropriations, at present rates, for the payment of interest and principal in connection with the items included in the above table, would aggregate about 14½ million *yen* when the period had arrived for the redemption of the Nakasendo Bonds and Unregistered *Kinsatsu* Bonds. They will only aggregate 12½ millions under the proposed system. The relief to the taxpayer will therefore be three millions annually.

With regard to the method of procedure contemplated, we believe that it is intended to offer the new Redemption Bonds for sale, and to apply the proceeds to the redemption of the securities tabulated above, beginning, of course, with those that carry the higher interest. Whether the redemptions thus effected will be in addition to those provided by the ordinary Budget, we are unable to say with certainty, but we presume that such will be the case. It may at any rate be assumed that the money paid for the new Bonds will not be withdrawn from circulation for any lengthy period—as is the case with the Nakasendo Bonds, the Navy Bonds, and the *Kinsatsu* Bonds—but will speedily find its way again into the hands of the public by the redemption of old Bonds. This consideration partially meets the objection which we have frequently urged with regard to the large issues of Government securities during recent years. On the other hand, the new scheme is doubtless to be regarded as a step in the Finance Minister's programme for reducing the interest paid by such securities, and thus diverting capital into more productive channels of trade and industry. Considered from this point of view, the sale of the new Bonds does not seem likely to be very extensive. Only seven years ago, the market rate of interest in Japan was from 11 to 12 per cent. on good security. It has now fallen to 8 per cent., and the difficulty of employing money profitably and safely is so great that capitalists are content with Government securities paying from five to six. But this change has been too sudden to be permanent. The issue of the Resumption Bonds must be a gradual process, extending over some fifteen or twenty years. Long before the expiration of the shorter of those periods, we may reasonably hope to see such a

revival of trade that only a very "bloated capitalist" will be content to leave his money invested at 5 per cent. Still the Government is right to derive what advantage it can from the present exceptional circumstances, with the view of lightening taxation and placing the national debt on an easier footing.

That complaints should be made by the holders of the old Bonds is inevitable. These persons are confronted not only by a considerable depreciation in the value of their securities, but also by a diminution in the income derived from them. The latter change might be supposed to bear with particular hardship upon the nobles and members of the former military class. But it is asserted by the best authorities that the Pension Bonds formerly held by these have passed, with rare exceptions, into the hands of capitalists and speculators. Even capitalists and speculators, however, may claim consideration, and urge that they have been taken by surprise. The answer is that they invested their money in Government securities with the full knowledge that the rate of redeeming the latter after a certain time depended entirely on the discretion of the Minister of Finance; that is to say, on the public convenience. It may also be reasonably argued that any loss suffered by the pensioners of the country under the new scheme is amply set off by the gains which accrued to them from their extraordinary privileges as the nation's bankers. We may observe, in conclusion, that the Government has notified its determination not to anticipate the period of redemption in the case of securities which have not yet matured. That, indeed, goes without saying; but there appears to have been some apprehension lest the redemption of Nakasendo Bonds and Unregistered *Kinsatsu* Bonds might be proceeded with at once, although neither of these securities matures before 1889.

#### A DIRECTION WHICH REFORM OUGHT TO TAKE.

IT is impossible not to reflect with sympathy on the peculiarly difficult circumstances in which Japanese ladies of the present generation are placed. The versatility shown by the men in adapting themselves to the conditions of a new civilization has been the subject of much admiring comment. But, after all, the men are incomparably better situated than the women. The former can travel abroad and study the new order of things in that best of all schools, the school of practical experience, whereas the latter are constrained to remain at home, contenting themselves with whatever modicum of refracted light may reach them across a medium that intercepts at least as much as it transmits. For there is little doubt that the men of Japan—and we do not except even those who by long sojourn in Europe or America

have adopted the spirit as well as the form of Occidental civilization—are not yet fully reconciled to the prospect of seeing the womankind of their country recast in a Western mould. There may be—probably there is—a good deal of selfishness in this reluctance. The Japan of old times was a paradise for the male sex. History does not tell of any country where the docility, fidelity, and submissiveness of the women were equally disproportionate to the power which their beauty might have conferred. It is natural that there should be some unwillingness to depart from this ancient order of things. And it is also natural that, in the eyes of intelligent Japanese, the extravagant influence possessed by ladies in the West, the grotesque homage paid to their weakness and inferiority, and the excessive dominance they exercise, should offer some repellant aspects. Positive types unfortunately produce much deeper impressions than negative. The unobtrusive virtues and moral graces of those almost perfect women with whom most of us have had the pleasure of associating in our own countries, either altogether escape the casual observation of strangers, being easily overshadowed by the strong, self-asserting traits of the general multitude; or, if observed, are regarded as remarkable exceptions that serve only to throw their unbecoming environment into higher relief. Other reasons there are, of course, which restrain the men of Japan from any wholesale attempt to bring their wives and sisters entirely within the influence of the new civilization. But the reasons we have assigned are probably the principal. The women, on the other hand, partly conscious of, but not fully appreciating, the motives of this reluctance, and now for the first time detecting a chance of attaining a happier place in domestic and social circles, are feverishly eager to adopt whatever phases of the imported civilization they find within their reach. Any one can see with what ardour they attend the schools opened for their instruction, and how they devote themselves to their studies with a zest which makes hygienists shake their heads over the physical prospects of the rising generation. This impulse is not to be gainsaid in so far as its educational tendency is concerned. But when it takes the direction of personal and social burlesque, the complexion of the affair changes. How much is the civilization of Japanese women advanced when they have learned to polka and to waltz; to remain up till the small hours imbibing champagne or spinning round and round a hot, gas-lit room, in what an ecstatic journalist recently called the "panting proquiquity of the sexes"? We have too much faith in the natural ballast of the Japanese character to believe that these silly innovations will attain much vogue, or to doubt that the common sense of the nation will dictate a reaction before the ladies of Tôkyô shall have succeeded

in condemning themselves to the utterly artificial, demoralizing, and uncivilized existence of the fair sex in London or Paris during "the season." But in the meanwhile, a Japanese girl is placed in a most embarrassing, if not in an absolutely dangerous, position. Not only are the fashions of Western social intercourse—especially the intercourse of the ball-room—entirely strange to her, but they involve much which is quite inconsistent with what she has been taught to consider becoming in a modest, refined lady. Is it quite certain that her innate sense of propriety will suffice to guide her straight among such perplexing circumstances, or that she will be able to receive with perfect moral equanimity admiration and homage the open expression of which has never been associated in Japanese society with a completely innocent purpose? Thoughtful Japanese may well feel uneasy in the presence of such contingencies. For the moment, their attention seems to be directed chiefly to the movement in favour of foreign dress for ladies, concerning which they say that, if it progresses at the present rate, Japanese officialdom will have to take the benefit of the act in a few years, since the average income of an employé in a Government Department is wholly insufficient to support such a strain. What is to be hoped, however, is that, considering the question more seriously, they will endeavour to postpone all this studying of steps and pirouettes, this organizing of periodical dances, and this indiscriminate adoption of a costume chiefly remarkable for its changeableness, until the path has been safely prepared for such disturbing superficialities by domestic education and reform. When we speak of domestic reform, we do not specially refer to the laughable incongruity of a lady with a sweeping train and high-heeled boots attempting to squat upon mats, or to bend her steel-and-whale-bone-encased body over a brazier. There is no need to dwell upon these things, since it is generally admitted that, unless the new movement is to be arrested by the inconsistencies it involves, it must be accompanied by a complete change in the construction and furniture of Japanese buildings. But even supposing such a change accomplished, how are the ladies to learn to adapt themselves to it, or to the usages of social intercourse based on principles exactly the converse of everything they have been accustomed to? At present, they are virtually without the means of acquiring instruction. Mothers, even though they do not themselves care to exchange the comfortable and inexpensive dress which they know how to wear to perfection, for a costly, irrational costume which exhibits all its worst features when it is clumsily carried, or who are reluctant to greatly modify the habits of life in which they have been trained

since their childhood, may nevertheless be anxious to educate their children in closer harmony with the times. In attempting to carry out this very proper aim, they are met on the threshold by the embarrassing circumstance that they know little if anything of the details of foreign dress or foreign customs, and that they can neither employ governesses, house-keepers, and sempstresses to impart the desired information at home, nor send their daughters to seminaries where it may be acquired. Again, there are many Japanese gentlemen who would be glad to entertain their friends, and even to live themselves, in foreign style, but who find that to effect this they must abandon their household to the tender mercies of restaurant keepers, and allow the sphere of household duties over which their wives and sisters should preside to be invaded by peculating outsiders. Probably few of us appreciate how largely this difficulty contributes to preserve the social gulf which still, whatever may be said to the contrary, separates Japanese and foreigners. To begin really at the beginning, to lay a foundation that will support the new system, the women of Japan must be taught how to carry the reform into their household circles, so that such elements of Western social civilization as the nation decides to adopt may be truly assimilated into the life of the family, instead of being grafted on it as alien excrescences for temporary purposes. Is it not time that the reformers who abound in Japan should turn their attention to this subject, for the sake not less of their wives and sisters, than of their own domestic happiness?

#### A TRAGEDY.

SHIMBASHI was thrown into a flutter of breathless excitement a few days ago. It should be premised that when we say "Shimbashi" we do not refer to the railway depôt, as might be supposed by an ordinary resident of Yokohama or Tôkyô. The railway depôt is unquestionably the most important object in the Shimbashi panorama, from a business point of view. But it is not by any means the most romantic object. In fact, to the young bloods of the capital, the railway depôt, or anything connected with iron roads, factories, anvils, and hammers is the very last idea conveyed by the name Shimbashi. To such as these it recalls the aspect of several little streets—alleys they might almost be termed in respect of their diminutiveness—which run parallel to, and westward of, that big thoroughfare where the rumble of tramway cars, the flaring of gas-lamps, and the unending display of Brummagem goods proclaim the triumph of an exotic civilization. They are streets so small that to shake hands across them from opposite windows seems a simple and becoming feat; so delightfully clean and spruce that you expect to see miniature

gardens in every balcony; and withal so snug and cosy that their denizens ought to be the happiest family in existence. They appear, too, to be in a state of chronic festival. For in each portico there hangs a corpulent lamp of many coloured paper, bearing a legend in prettily curved ideographs, at once mysterious and attractive; while across the lattices of the sliding doors and jaunty windows the fortunate wayfarer may often discern a flutter of bright-hued raiment, or detect the notes of softly touched instruments. Come back in the evening, however, when these portly lamps line either side of the street with a long row of gently glowing globes, and you will neither smell the fumes of incense nor hear the droning of litanies. The little street is then all stir and bustle. From the bath-house, which in the sunshine attracted your attention only by its exceptionally dapper, dainty appearance, there now issue snatches of song and peals of laughter, and to these fitful outbursts the perpetual clatter of busy patters, the rattle of sliding doors, and the hum of busy preparation supply a constant accompaniment. To resolve your doubts completely as to the character of the place, there meets you at every tenth step a little party of two—a young lady and her attendant. The former's apparel is just a trifle gayer than that generally prescribed by the eminently æsthetic canons of this country; she walks with a pretty gait of coy haste, and you can see that she admits, but does not invite the exercise of, your right to look at her. Her attendant is either a middle-aged, homely female, or a man whose physiognomy does not suggest the highest type of humanity. Is it necessary to say that this group comprises one of Professor TOYAMA'S aversions, a dangerous *dansuse*, and her *Hako-ya* or *samisen*-bearer? She is on her way to some tea-house where a party of the young bloods above alluded to, or it may be of old bloods, await her coming, to circulate the wine-cup, and to impart flash and fun to their carouse. The tiny domiciles with their corpulent lamps are the abodes of herself and her sisterhood, and it is her unseen presence that lends to the narrow street an indescribable air of nattiness and sunshine. Unreal would, perhaps, be a more appropriate adjective than indescribable. For there is little genuine brightness in the *geisha*'s life. Self-denial, suffering, hardship, and humiliation leave her no leisure to feel the merriment which she is perpetually compelled to simulate. And there are tragedies, too, in her existence. One seldom hears, indeed, that she has preferred euthanasia to the constant companionship of sorrow without sympathy. She goes on enduring because the purpose of her endurance being to support her parents or her family, its whole merit would be forfeited by a failure of patience. But in times of epidemic her necessarily irregular

habits and her inability to observe any rules of diet render her an easy victim. Now and then, too, the effort of concealing some bitter disappointment wears away her strength, and she is overtaken by a death which wiseacres misinterpret and charitable folks welcome. Occasionally, but still more rarely, she suffers for her own faults. Of such a case we set out to speak. The victim was a *geisha* called O-FUMI. Her reputation was decidedly third-class. Her name had been associated with that of a celebrated actor, and on the whole it was generally agreed that she was no better than she ought to be. About 2 a.m. on the 18th, her mother, who slept in the same room, was roused by O-FUMI's voice crying out the name of a former attendant, who had been dismissed a short time previously. The old woman jumped up only to find her daughter dead from a terrible wound in the bosom, and KIMBEI, the some-time attendant, fainting from the effects of a self-inflicted gash through which his intestines were protruding. So shocking a tragedy threw the whole neighbourhood into a ferment. The double crime had been executed with such ferocity, and the circumstances it indicated seemed so disreputable that the *Geisha* world and all the parasitical community it supports were horrified. Poor O-FUMI paid dearly for the liberality of her love, since she not only died an appalling death, but also left behind her a name of vulgar reproach, which latter feature of her fate would doubtless have been deemed incomparably the more cruel by a Japanese girl even so demoralized as she. There are black sheep in every fold, and we do not doubt that this incident will furnish new material to the wholesale social reformers of the hour. To us, however, it suggests a different inference. For it reminds us how very seldom the law is obliged to take cognisance of the class to which the murdered girl belonged. However much the worst members of that class may help to loosen the texture of public morality, decency, at all events, has nothing to lay to their charge. Yet it is a motley class. Even the uninitiated can easily trace to a very low level the various grades of humanity which group themselves, directly or vicariously, round such a centre. There must be many KIMBEIS whose fierce instincts need only opportunity to become active; and among the humbler parasites there must be a still greater number of waifs who would be openly vicious if they found any encouragement. Nevertheless, there is no section of the great city's inhabitants that affords less employment to the police. And this leads us directly to another point—the state of the streets of Tōkyō. One may walk there at all hours of the day and night from year's end to year's end, with the absolute certainty that one will never encounter any of the scenes which nightly convert the great cities of the West into a perpetual parade-ground

of the social evil. In London, a lady may not venture into any of the principal thoroughfares on foot after sunset, and things are scarcely better for a gentleman. In Tōkyō there is total immunity from any thing of the sort. Do Japanese reformers take sufficient note of these things? Do they appreciate that if there are features of their civilization which require to be altered, there are also features which they should strive earnestly to preserve? If they think that hot radicalism is alone needed, we recommend them to visit London or Paris two or three times after dark, and also to peruse the police records of those cities.

#### A RETROGRESSIVE POLICY.

THERE can scarcely be much doubt that the struggle which has been going on for some months between the Vatican and the Cabinet in Paris has ended in favour of the latter. The progress of the controversy has not, so far as we can judge, been watched by the public with very serious interest, and its issue is not likely to attract immediate attention. Those who think of the matter at all probably conclude that the protection of the Catholic Church in China is a question of limited bearings, and that, whether the duty devolves upon the representative of France or the delegate of the Pope in Peking, the world will continue to move in its old grooves. Yet, unless we are greatly mistaken, some not unimportant points escape this superficial view. At the very outset the affair presents an unwonted feature. The initiative was taken by the Chinese. For once these passive drifters with the stream of circumstance stepped out of their Fabian path. What was it that stirred them to offer such violence to the sanctity of precedent?

Within the Peking Palace grounds there stands a building known as the Peh-tang, or Northern Cathedral. The sites of this and three similar edifices in other parts of the city were given to the missionaries by the renowned Emperor KANGHSI. During nearly a century the propagandists of the imported faith basked in the sunshine of Imperial favour. Then came days of shadow. Their cathedrals were demolished, the furniture falling into the hands of the mob, and the sites being reappropriated or left vacant. It was not until after the Anglo-French occupation of 1860 that the work of restoration could be undertaken. It proceeded slowly and is not yet fully completed. The Peh-tang, however, soon recovered something of its old importance as the head of the Catholic establishments in the capital. But there was one exceptionally precarious element in the existence of the Peh-tang. It was too near the Imperial Palace. From the tower of the Cathedral the EMPEROR'S gardens could be overlooked. To the inmates of the Palace this undue propinquity

of a barbarian edifice seemed yearly more intolerable. The missionaries had to purchase the Imperial complaisance by concessions. The late Archbishop DELAPLACE entered into a covenant limiting the height of the tower, and engaging, it is said, that no person should ascend it without permission from the Palace. The story goes so far as to assert that, by way of pledge, the door of access to the tower was solemnly locked, and that one of the keys was retained by the Archbishop, the other handed over to a Palace official. But these precautions did not satisfy the EMPRESS. Now and again, with all the patient pertinacity of her race, she essayed to contrive the removal of this obtrusive memento that her empire had been defeated and its capital occupied by foreign barbarians. Her efforts invariably resulted in failure. One imagines that the missionaries should have deemed it politic, as it certainly would have been consistent with the teachings of their faith, to accept another site and smoothe away this constant source of friction between themselves and the authorities. But they were guided by lights not easily apparent to outsiders. Meanwhile the Tonquin imbroglio supervened. At its close the EMPRESS reopened the subject of the Cathedral, and, encountering the old stubborn attitude in Peking, instructed her Ministers to try what could be done by direct negotiations with Rome. The Viceroy LI and the Seventh Prince took the matter in hand. They chose as their agent Mr. J. G. DUNN, a gentleman tolerably well known in China and Japan. The selection is said to have been wise, not only in regard of the qualifications of its object, but also because Mr. DUNN, as a private individual, could conduct the negotiations, or even abandon them, without compromising the Government in Peking. The POPE appears to have received China's overtures cordially. The *pourparlers* proceeded merrily, until out of the comparatively small issue originally at stake, there emerged an important question, the direct representation of the Vatican at Peking. France now pricked up her ears. She imagined that in this subtle scheme the watchful manœuvring of England or the sinister suggestion of Prince BISMARCK was to be detected. We are in a position to say that these suspicions were groundless. No outside influence diverted the course of the proceedings, nor was any European Power, except France herself, admitted to the confidence of the negotiators. It was, indeed, a work of supererogation to refer so easily explicable an episode to recondite reasons. Since France had openly assumed the rôle of military aggression and territorial aggrandisement in the East, her ægis offered the worst possible pledge of peace and security to Catholic Christians in Chinese provinces. It was more than natural, it was almost imperative, that the Head of the Catholic Church should earnestly seek some means of

dissociating these distant and often persecuted members of his flock from the injurious tutelage of a restless and distrustful Power. On the other side, the Government of China was swayed in the same direction by considerations less sentimental, perhaps, but more cogent. Its archives showed only too plainly what species of political plants might be expected to grow out of the so-called spiritual interests of its Christian subjects. The Tonquin war had its origin in a religious dispute. The part taken by France in the invasion of 1860 was owing to the murder of a priest. The unsuccessful French expedition against Korea, in 1866, was the direct sequel of a Christian complication. Such tokens were not to be misread. A French protectorate of Chinese Christians meant a status out of which all kinds of perilous pretensions might be evolved. China understood this. She and the Vatican alike were driven in the same direction by considerations almost equally obvious and powerful. But by France the object of this combination appears to have been found intolerable. She does not even seem to have much cared how ill the world might judge of her mood. For how are we to interpret her determined opposition to the appointment of a Papal delegate? No one in Europe will be willing to draw the inferences plainly suggested by her obstructive attitude, or to credit the apparent contrast between her motives and those of China. But in the East it will assuredly be said that, while China seeks to remove all possible germs of future rupture with her late enemy, France, on the contrary, wishes to preserve those germs, and is resolved not to forego whatever political capital may be derived from religious persecutions and massacres which every civilized Power should endeavour to avert. We are most reluctant to put such a construction on the situation, but the French journals themselves scarcely leave us any alternative. They openly proclaim that the protectorate of native Christians is the foundation of French prestige in the East. It is true that the missionaries in China are, in the main, unfavourable to the project of exchanging the protection of a French Ambassador for that of a Papal Nuncio. Many of them believe in military, rather than in spiritual, tutelage, while others are said to be inspired with jealous apprehensions as to the probable division of power between their different orders under the proposed *régime*. The Gallicans object to an Italian representative, and the Jesuits fear that the Lazarists, whose district is the northern provinces, might derive superior advantages from their proximity to the centre of authority; while all are said to prefer the liberty they now enjoy to the direct supervision and control of a powerful hierarchy. But it is not to be supposed that deference to the sentiments of the missionaries in China greatly swayed the Cabinet in Paris. Other influences

were at work there, and, unless we are much mistaken, they are influences which will impart a new element of distrust to the relations between the East and the West. The means employed by France to coerce the POPE are a minor matter. The explanation generally offered is that she threatened to retaliate on her own Catholic subjects unless her wishes were respected by the Vatican, and that HIS HOLINESS was constrained to sacrifice the interests of the unfortunate Christians in China to those of his children nearer home. At all events, the Nuncio is not to go to Peking. Nor even is the obnoxious Cathedral to be removed. The restoration of the church properties in China having been effected by French arms, France claims an inalienable right to a voice in their disposal. It will not help, will this outcome, to smoothe the intercourse between Chinese and Westerns. The claim now asserted unequivocally by France embraces a great deal more than the protection of a few *Padres*, scattered here and there throughout the huge Chinese empire. It embraces also the implicit right to interfere in the concerns of native Christians, of whom there are about a million in China. France has thus recalled the times—fondly hoped to have become parcels of an irrevocable past—when Christianity was regarded by the Orient as a powerful political agent, compassing, with unwearied zeal and limitless devotion, the ends of unscrupulous aggrandisement under the guise of spiritual ministrations.

#### REDEMPTION PUBLIC LOAN BOND REGULATIONS.

NOTIFICATION NO. 98 OF THE DEPARTMENT OF STATE FOR FINANCE.

With reference to Article VI. of the Redemption Public Loan Bond Regulations, promulgated by Imperial Ordinance No. LXXVI. of the current year, it is hereby notified that the amount of the first issue of Bonds therein specified will be ten million *yen*, face value, and that the minimum price of allotment will be 98 *yen* per 100 *yen* of face value.

Applicants for Bonds of the first issue should, in compliance with Art. I of the Rules of Procedure for the Redemption Public Loan Bonds, issued by Ordinance No. XXX. of the Department of State for Finance, during the current year, present to the Bank of Japan, or to one of its Branch Offices or Agencies, a note stating the aggregate face value of the Bonds applied for, the price offered for them, together with the address and name of the applicant; such note to be presented between the 10th and the 20th of November of the current year.

The amount of security to be deposited by applicants for Bonds of the first issue is hereby fixed at 10 *yen* per 100 *yen* of face value.

The old Public Loan Bonds which, according to Art. IX. of the Rules of Procedure for the Redemption Public Loan Bonds, may be offered in exchange for Redemption Bonds of the first issue are hereby fixed as the Seven Per Cent. Capitalized Pension Bonds.

The Minister of State for Finance will fix the amount of Bonds to be allotted to the various applicants, and will instruct the Bank of Japan to make known such amounts to the applicants before December 20th of the current year. The tendered price of the amounts thus fixed, minus

the security money lodged at the time of application, is to be paid in two periods; the first extending from the 20th to the 28th of February, 1887, and the second from the 20th to the 31st of March, 1887: that is to say, one-seventh of the amount to be paid in the first period and six-sevenths in the second. It shall, however, be competent for applicants to pay the whole amount during the first period, if convenient.

(Signed) MATSUGATA MASAYOSHI,  
Count,  
Minister of State for Finance.  
October 23rd, 1886.

#### THE 115TH NATIONAL BANK.

NOTIFICATION NO. 99 OF THE DEPARTMENT OF STATE FOR FINANCE.

The Saikyō (Kyōto) branch office of the 115th National Bank of Otsu was closed, the 18th inst.

(Signed) MATSUGATA MASAYOSHI,  
Count,  
Minister of State for Finance.  
October 23rd, 1886.

#### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

#### ILLUSTRATED CRITICISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the *Tōkyō Independent* of the 23rd inst., we are favoured with the following interesting paragraph:—

Among other typographical matters, the difference between a comma and a full stop is often of importance. A foreign contemporary states that the value of the ice sold in Osaka during September was "1,882,522 *yen*." At this rate it would be one of the biggest trades in Japan, and certainly the most profitable. But the truth is that the amount sold was 52 *sen* over 1,882 *yen*.

In the very next column, on the same page, almost on a parallel line, occurs the following astounding statement:—

The number of law students has decreased from 5,201 in 1880 to 4,914 at the present time.

Now, Sir, we all know that a tailor is sometimes alluded to as the ninth part of a man; but what is the 914th part of a lawyer to be named? Is there not somewhere a story about the pot calling the kettle black?

I am, Sir, &c., COMMA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a letter to the *Japan Mail* of the 26th instant we are favoured with the following comical criticism:—

The number of law students has decreased from 5,201 in 1880 to 4,914 at the present time.—*Tōkyō Independent*.

Now, Sir, we all know that a tailor is sometimes alluded to as the ninth part of a man; but what is the 914th part of a lawyer to be named? Is there not somewhere a story about the pot calling the kettle black?

I am, Sir, &c., COMMA.

Why a lawyer should not be a man of parts, even of 914, does not appear; but a second-form schoolboy, whose parts led him to suppose that 0.914 bore some reference to a 914th, would find himself in imminent danger of a worse fate than has befallen the *Tōkyō Independent*.

I am, Sir, &c., DECIMAL.

#### CHILDREN AND THE CLUBS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Boat Club advertised "children not admitted," yet a favoured few got in, causing much jealousy to others not so privileged. The available space on the verandah, I admit, is very small, but there was room enough on the wharf. Now come the Cricket and Athletic Club with their notice "children under 12, 50 cents." Surely times are not so

hard, or the club funds so low, as to need this. Many children look forward to this treat, and if it is, as I admit, often the case that the best chairs are taken up by the amahs and their charges to the exclusion of lady visitors, this could easily be remedied by other means.

I am a member of both clubs and like to see the youngsters enjoying themselves, and trust you will agree with me that other means might be tried to raise the wind, or to control the coming race.

I remain,

ONE WHO WAS YOUNG ONCE.

Yokohama, 27th October.

[We do entirely agree with our correspondent.—Ed. J.M.]

### AMATEUR DRAMATIC PERFORMANCE.

An amateur dramatic performance was given at the Public Hall on Friday week last, in aid of the funds of that institution, which attracted a large and appreciative audience. The pieces produced were "A Cup of Tea," a comedietta in one act, and a farce entitled "A Family Failing," both of which went very well, and may be fairly said to have been a success in every way. The overture, the "Felsenmühle" of Reissiger, played upon two pianos, was well rendered by two ladies and Professor Sauvet, whilst between the pieces a string orchestra, under the direction of the Professor, played Suppé's "Poet and Peasant" overture, which was loudly applauded at its termination. The scenery was appropriate and sufficient, and the stage arrangements and accessories were complete, evidently the work of Mr. W. G. Bayne. "A Cup of Tea" is built upon the most slender framework imaginable, but the dialogue is smart and the interest is sustained throughout. *Scroggins*, a clerk, to avoid a creditor, bolts into a carriage which is waiting for its owner outside a mansion in the West End, with the intention of getting out at the opposite side, but the slamming of the door awakens the sleeping coachman, who whips up his horse, and *Scroggins* is unwillingly driven to the house of *Sir Charles Seymour*, where he wanders about. *Sir Charles* and *Lady Clara* ultimately arrive at home, when a conversation ensues which indicates that the lady is jealous. *Sir Charles*, who endeavours to remove this impression, but fails, ridicules the idea of his being jealous in any circumstances, and, under the pretence that her ladyship is tired, says goodnight and leaves her. *Scroggins*, still roaming about the house unable to find his way out, now walks into the room occupied by *Lady Clara*, who at first mistakes him for a burglar, but, after hearing his explanation of how he came there, resolves to test *Sir Charles*, and holds *Scroggins* in conversation, addressing him by a name accidentally heard by *Sir Charles* at the ball as associated with that of his wife, her ladyship knowing that her husband had not gone out as he intended, but was listening to all that passed. It will be seen that this situation is capable of being made the vehicle for a good deal of fun and a very pretty misunderstanding between *Sir Charles* and *Lady Clara*. The latter offers *Scroggins* the appointment of steward, and shortly after retires from the room, when *Sir Charles* enters and demands of *Scroggins* an explanation of his presence there at that time of the morning, 2 a.m. *Scroggins*, supposing *Sir Charles* to be the discharged steward, addresses him accordingly, and the scene that follows is the best part of the piece. Her ladyship ultimately returns, and after a passage of arms with her husband, culminating in her expressed intention of leaving the house, explanations follow and all ends happily. Although not a difficult rôle, the lady who undertook the part of *Lady Clara* was slightly overweighted in the character of a jealous wife and woman of fashion, and has yet to learn to keep her countenance at the laughable episodes. She must, however, be credited with being part perfect and quite at ease

on the stage, two material points in which so many amateurs fail. *Sir Charles Seymour*, taken by Mr. J. D. Wilson, was fairly played—a somewhat self-conscious, perhaps, but passable performance. It is a pity, however, that an actor with so good a stage presence should mar it by mannerisms. For instance, the constant tugging at the cuffs and arranging the coat—tricks perfectly in keeping with the character of *Scroggins*,—were entirely *faux pas* when practised by *Sir Charles Seymour*. *Scroggins* found a suitable exponent in Mr. A. C. Read, who made the most of a good part, and kept the house in a roar in the scene with *Sir Charles Seymour*. The small part of the servant *Joseph* was carefully taken by Mr. W. G. Bayne.

The farce, "A Family Failing," an adaptation from the French, is of the boisterous kind. Adaptations, especially of French pieces, often lose much of their wit in the operation, and this is evidently a case in point. The family failing is a red-hot temper, which finds relief in smashing crockery. *Sir Sampson Silliman* is *facile princeps* in the demolishing line, and this peculiarity of temperament is inherited by his daughter *Clarinda*, who, not satisfied with breaking tea sets and vases on small provocation, boxes the ears of her partner (*Lord Gawley*) at a ball. His lordship is "smitten" in a double sense, and ultimately obtains the hand of the pretty virago in marriage. The lady who played the part of *Clarinda* looked charming, and acted with vivacity, intelligence, and "force." The *Sir Sampson Silliman* of Mr. W. G. Bayne was an excellent performance, consistent throughout, and Mr. Read was equal to the part of *Lord Gawley*. Mr. Wilson, as *Sir Follitt Duckworth*—a dandy and colourless character—had a part which few men could make anything of. There was a call at the end of each piece, the curtain being raised amidst loud applause, and during the progress of the performance the ladies received very elegant baskets of flowers. The efforts of the company were certainly fully appreciated by the audience, and we trust the Public Hall will receive a good financial lift.

### THE "KIUSHIU MARU."

The official trial of the steamship *Kiushiu Maru*, recently purchased by Mr. Kildoyle from the Nippon Yusen Kaisha, and fitted with new engines and boiler, took place on Thursday. The weather was highly favourable, and the guests who had been invited on board enjoyed themselves thoroughly. The *Kiushiu Maru* left her moorings about two o'clock, and proceeded under easy steam to Kanonsaki, off which she put about and started on the return trip. When passing the Saratoga Spit Buoy the engines were put full speed and the vessel run to the Lightship—a distance of 8½ knots, which was accomplished in 48 minutes. This, with a slight current in the ship's favour, gave a speed per hour of about 10 knots.

As stated in our columns a short time since, the *Kiushiu Maru* is an iron steamer of 1,200 tons, gross, and was purchased last April by Mr. Kildoyle. Since that time she has been completely overhauled and fitted with new engines and boiler, steam windlass, &c. The new engines are of the ordinary compound surface condensing type, having cylinders 24 inches and 44 inches in diameter, with a stroke of 30 inches, and having a patent appliance for heating the feed water. The whole of the work has been done at the Creekside Engine Works, in the short space of 6 months. Steam is supplied by a multitubular boiler, with all recent improvements, 13 feet diameter and 10 feet 6 inches long, with three 3-foot furnaces.

Among those present were Commander Squire, R.N.; Messrs. A. C. Macnab, and Watanabe, Government Surveyors; Captain J. J. Efford, Lloyd's Surveyor; Captain Ingmann, Messrs. G. H. Seidmore, Suda, Tasuda, Oaki (Shinagawa),

Varnum, A. Center, Captain Makahara, Captain Pinkham, &c.

The *Kiushiu Maru* was under the command of Captain J. Hog; Mr. J. Minstead, under whose supervision the engines and boiler have been fitted, acting as chief engineer.

The trip was enjoyed to the fullest extent by those on board. Ample refreshments were spread in the saloon, and after the *Kiushiu Maru* had returned to her moorings the guests drank success to the vessel and to her owner. By the courtesy of Mr. Center, the P.M.S.S. tender *Restless* was placed at the disposal of Mr. Kildoyle, and by this means the guests were conveyed to and from the steamer with speed and comfort.

### CRICKET.

THE NAVY V. Y. C. AND A. C.

On Saturday the Yokohama Cricket and Athletic Club played a match with an eleven of the Royal Navy. A good pitch was secured, and although the ground was slightly heavy at first it improved as the day advanced. The weather was all that could be expected at this time of year, and, if the want of sun during a great part of the day made it rather chilly for the spectators, the players found it an advantage. The fielding all round was good, but the visitors in this respect excelled the home team. In the afternoon a large number of spectators, amongst whom were the Hon. Sir Francis and Lady Plunkett, occupied the Pavilion, and the band from the flag-ship added to the general enjoyment. At 10.30, Lieutenants Fulford and Christian faced the bowling of Edwards and Sutter, runs coming slowly and singly. In the third over Fulford, in making a late cut off Edwards, hit his wicket. One wicket for 4 runs. Mr. Collins then joined Christian, both playing steadily, the latter getting Edwards away to leg for two, then cutting him for three more, until with a few other runs the score had reached 24, when Edwards held the ball returned to him from the bat. Lieutenant Bush followed, and in his second over was dismissed as will appear below. Mr. Sarratt, in his first over off Sutter, was let off in the field, then Collins scored two off a nice cut from Sutter, Sarratt following with a three off the same bowler, then with a drive off Edwards for two more. Collins, who had batted steadily, was run out. Four for 34. Sarratt was joined by Lieutenant Spearman, and almost immediately caught and bowled by Sutter. Mr. Hickley relieved him, Spearman making a good four off Edwards, and Hickley one; then Spearman scored three more off Sutter, and another off Edwards. Hickley was retired by Sutter—six for 51,—and Spearman, shortly after being joined by Mr. Morgan, returned the ball to the bowler. Seven for 59. Lord Osborne then went in, but made but a short stay. So far, runs had been coming very slowly. Mr. Morgan was then faced by Lieutenant Lowdell, who although making but two cuts for three each, between them managed to raise the score to 79 before the latter was bowled out; Mr. Stephens replacing him, kept his wicket up whilst Morgan raised the score rapidly until Edwards displaced his stumps. Total 102.

The tiffin was provided by the Club Hotel, and a very good tiffin it was. Mr. Mollison proposed the health of the visitors, which was responded to by Lieutenant Bush.

After tiffin, Wheeler and Dodds represented the home team at the bat, and when only three had been scored the latter was run out; Trevethick following, after scoring two singles was easily caught, and Sutter was out leg before. Three for 10. Griffiths followed and played steadily, but after making one three off the slow bowling of Collins was enticed to repeat the performance, but lodged a ball comfortably in the hands of long-on, the score standing 10 higher. Mollison, the captain of the team, fared no better than his predecessors

with the bat; short-slip holding one off his gloves after he had scored a single. Five for 23. Edwards came in next, and together with the M.D., who kept steadily adding them on, brightened the hopes of his side. The next wicket was secured by Mr. Collins. Six for 50. Wilman added ten more before he skyed a ball that was caught by the wicket-keeper. Mr. Strange, with seven singles and three twos to his credit, kept the stumps together half an hour longer before long-stop held on to one he raised, Edwards all the time batting carefully and freely. Eight for 104. After Baggallay had taken the bat Edwards scored two more, then long-off held Mr. Baggallay. Hearne was the tenth man, and after scoring two threes and a single, he was run out by a good throw in from long-leg, Edwards having the honour of carrying out his bat for a well earned score. Total 122.

The Navy commenced their second innings at about a quarter to four o'clock, Lieutenant Christian and Mr. Stephens at the bat, to the bowling of Sutter and Strange. The former after scoring three singles was caught at long-field-on, and the latter, after being joined by Lieutenant Fulford, was bowled out. Fulford made some good hits before his stumps were disturbed, Mr. Collins having in the meantime disappeared for a single owing to the efficiency of point. Mr. Morgan again made the top score on his side, and Mr. Saratt, whose was the seventh wicket to fall, had increased the score by two twos and two threes to 54. Mr. Hickley, who had just before scored a single, was beautifully caught by third man, and Lieutenant Lowdell run out by a smart bit of fielding from the same quarter, the captain carrying out his bat. Total 54.

This closed what must have been, to admirers of the game at least, a very enjoyable day.

The following is the score, the Club winning on the first innings by 20 runs:—

For the Yokohama eleven, Mr. Edwards bowled 147 balls for 47 runs, taking 9 wickets. Mr. Sutter bowled 150 balls for 55 runs, taking 8 wickets, and Mr. Strange bowled 50 balls for 28 runs, taking 3 wickets. For the Navy, Mr. Saratt bowled 95 balls for 24 runs, making 7 wickets, and taking 3 wickets. Mr. Collins bowled 80 balls for 45 runs, taking 4 wickets. Lieut. Christian bowled 55 balls for 27 runs, and Lieut. Bush bowled 30 balls for 14 runs, taking one wicket.

#### JAPANESE EDUCATIONAL SOCIETY.

This Society is an association whose object is, by bringing together such persons as are interested in the same object, to assist the diffusion, improvement and advancement of education in this country. As to the history of its development, it is to be briefly stated that during the 12th and 13th years of Meiji, there were two educational societies established in the city of Tokyo, respectively under the names of Tokyo Kiōiku Kwaï and Tokyo Kiōiku Kiōkwaï, their respective objects being the elucidation of education in its theoretical and methodical point of view and the advancement of general education. In May of the 15th year of Meiji, the two societies were incorporated under the name of Tokyo Kiōiku Gakkwaï. But, the Society being still limited in its operations and in no very prosperous condition, its constitution was re-organized in September of the 16th year of Meiji, when it received its present name, and His Excellency Shinji Tsuji was elected Vice President, the sphere of its operation being thus much enlarged. A thorough improvement was then introduced in the mode of transaction of business, and the Society was entirely remodelled. The number of members was then about 500. In June of the 17th year of Meiji, His Excellency Riichi Kuki was elected President. In August of the same year, His Imperial Highness Prince Arisugawa was requested to exercise permanent supervision over the Society under the title of Sōsai, and the request was graciously granted. Their Excellencies Count Hirobumi Itō, Count Takatō Gōi, Count Munenori Terashima, Count Tsugumichi Saigō, Viscount Takachika Fukuoka and Viscount Tateki Tani, and also Their Excellencies Arinori Mori, Riichi Kuki, etc., supported the undertaking and joined the Society as honorary members, thus greatly adding to its honor. Since that time, the operations of the Society have been successful, and members steadily increasing in number. As to the results of the Society since its establishment, there have been three general meetings for addresses, lectures, conversations and discussions on education and for the information of educational conditions at home and abroad, while there have been 30 ordinary meetings. Besides such meetings, its members have frequently been sent to various localities at the request of the local educational societies or teachers' institutes for the purpose of delivering addresses or lectures. The memoirs of the Society were also published and the number of series already published is 33 and that of copies printed 100,000. Besides, the memoirs, books under the title of Kiōikuka Hōkei (Hints to Educators) were also published in three series, of which 7,000 copies were printed. The total income of the Society, derived from subscriptions and other sources, for defraying the expenses incurred for such works as the above mentioned, has amounted to 11,100 yen up to this time, the amount of actual expenditure being 10,200 yen.

Now, three years have elapsed since the establishment of the present Society and the number of members has increased to 3,000. At present, it is under the supervision of His Imperial Highness Prince Arisugawa as Sōsai, while the actual business is directed by His Excellency Shinji Tsuji, who was elected President at the general meeting of April last, on the expiration of the presidency of His Excellency Riichi Kuki. There is also a deliberative committee of about thirty members to whom the President may submit any question for advice and consideration.

The office of the Society is at No. 21, Hiutsu-bashi-tōrihō, Kanda-Kū, Tokyo. The business is there transacted by managers, clerks, and a few temporary employes.

Those who are interested in the object herein mentioned are requested to join the Society at once and thus to contribute to the advancement of the valuable work which it has undertaken.

#### REGULATIONS OF THE JAPANESE EDUCATIONAL SOCIETY.

Art. 1.—This Society has for its object the diffusion, improvement, and advancement of education in this country.

Art. 2.—Any persons interested in the above object may be admitted as members of the Society.

Art. 3.—Distinguished educators, or persons eminent in science and arts, or other persons of renown who are deemed useful to the Society, shall be admitted as honorary members.

Art. 4.—The Society shall be under the permanent supervision of one of the members of the Imperial Family as Sōsai (Honorary President).

Art. 5.—The following officials shall be appointed by the Society:—

President	1.
Managers	3.
Clerks	6.

N.B.—The President receives no salary, the managers and clerks may receive salaries at the discretion of the President.

Art. 6.—The duties of the officials are as follows:—

The President is to control all business of the Society.

The managers are to transact the business of the Society respectively assigned to them.

The clerks are to attend to the general business of the Society.

Art. 7.—The President shall be elected by ballot at the general meeting for a term of four years.

N.B.—The same person may be re-elected at any subsequent election.

Art. 8.—The managers and clerks shall be appointed by the President.

Art. 9.—The President shall have the power to appoint committees and to engage temporary employes, if necessary, for the transaction of the business of the Society.

N.B.—A certain amount of remuneration, or daily wages may be given to such committees or temporary employes, at the discretion of the President.

Art. 10.—Ordinary meetings shall be held once in each month, and the proceedings shall be as follows:—

A.—Addresses, lectures, conversations, and discussions on education.

B.—Miscellaneous information.

Art. 11.—General meetings shall be held once in each year, and the proceedings shall be as follows:—

A.—Report concerning the transaction of business and the financial state of the Society, and the results attained during the preceding year.

B.—Addresses, lectures, conversations, and discussions on education.

C.—Miscellaneous information.

Art. 12.—In case any urgent necessity should arise to hold an extraordinary meeting, such meeting may be called at the discretion of the President, or at the request of not less than twenty members.

Art. 13.—Each member of the Society shall be entitled to introduce any member of his own family or his friends to any meeting of the Society.

N.B.—Such admission may sometimes be refused according to the circumstances of the meeting-hall.

Art. 14.—A monthly subscription of twenty yen shall be paid by each member.

N.B.—Those who commute the monthly subscriptions by a single payment of not less than twenty yen, shall be made life-members.

Art. 15.—The memoirs of the Society shall be published every month and distributed to each member.

Art. 16.—Books promoting the interests of education may be published by the Society.

Art. 17.—The expenses of the Society shall be defrayed out of the subscriptions and other sources of income.

Art. 18.—Branch societies may be established in various localities, and the organizations of the same be fixed by the President.

Original from

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

Art. 19.—The President shall have the power to establish detailed rules for the carrying out of these Regulations.

Art. 20.—Any member who does not conform to these Regulations, or who is in any way detrimental to the Society, shall be excluded from the Society at the discretion of the President.

Art. 21.—These Regulations shall not be altered without a proposal of not less than twenty members, to be confirmed by a meeting.

### LETTER FROM LONDON.

(FROM OUR SPECIAL CORRESPONDENT.)

London, September 15th.

The dramatic incidents in Bulgaria,—the kidnapping of the Prince, his return amid the joy of the whole people, his subsequent abdication,—will all have become known to your readers soon after they occurred. I am only concerned to refer to one or two features of this new phase of the eternal Eastern question, which Reuter will probably not notice, as not being concrete enough at present. One is the calmness with which England sees the possibility of a Russian occupation of Bulgaria. I do not mean to say that such an eventuality excites no interest; it does a great deal. But there is no talk about its being the duty of this country to go to war to prevent this. There is the utmost sympathy here with Prince Alexander,—although it is not stronger or more conspicuous than that of the German people,—but, save for diplomatic aid, it is platonic sympathy with a high-spirited, courageous, and capable man in adversity. Another noticeable point is that, while the continental press tells us that England is the country chiefly concerned in the affair, England herself seems to think that the progress of Russia towards Constantinople is of even deeper importance to Austria and her ally Germany, and that if both these Powers can watch it with equanimity, and refuse to take a step to prevent it, it is no business of ours to do their work for them. The old Palmerstonian policy of defending India in Turkey is not only doomed; it has actually disappeared. Prince Bismarck is credited with a policy of advancing Austria to Salonica with equal steps to those taken by Russia to Constantinople, and with extreme complaisance to Russia in order to avert a Franco-Russian alliance, and to isolate France in Europe. In rebuking the popular outcry in favour of Prince Alexander, the official *North German Gazette* bids Germans look to the increasing power of France as the real danger, and the real motive of all German political combinations. I should say, however, that there is no evidence whatever that Russia contemplates occupying Bulgaria, or that she played anything more than a passive part in the seizure of the prince. The violent personal animosity of the Czar to Prince Alexander is apparent in every act of the former, but it is clear that the Czar had nothing to do with the prince's overthrow, beyond this, that his known rancorous hostility to the prince gave courage and force to the Bulgarian conspirators. The net outcome of the affair for us is that we have given up the unspeakable Turk as a bulwark; he was always a troublesome and disreputable ally, and always one of doubtful value. If we cannot keep India without his aid, we are in poor plight, and if we have to defend him as well as India, we are almost as badly off. Besides, if Russia does get to Constantinople, we have an ample recompense at hand, which is more than Austria can be sure of.

With regard to Ireland, the main item of interest is that Mr. Parnell brought in a bill last night to stop evictions during the coming winter, provided the tenants paid a proportion of the rental found by the land courts to be fair in view of the decline in the prices of agricultural produce. I fear, notwithstanding the views of *The Times*, that such a measure is wanted, and that large numbers of the

tenants are absolutely unable to pay the judicial rents. The bill is pretty sure to be rejected; and then the *Pall Mall Gazette* prophecies most doleful things. Ejections will begin; outrages will follow; "there will be a black Christmas, a bloody New-year;" Parliament will be called together early in January to give increased powers of coercion, the Irish members will be expelled from Parliament, Ireland will be governed as a Crown Colony, &c., &c. Let us hope not; but then the *Pall Mall* is not given to prophesying smooth things. It is said that Lord Randolph Churchill and Mr. Smith were in favour of the bill, but that they were overruled by the Premier. If the bill passed it might help the tenants to tide over the winter, but unfortunately it would be at the expense of the already impoverished landlords. Not that this matters much to the latest school of rabid Radicals, who look on a landlord in Ireland or elsewhere as *hostis humani generis*.

The relations between France and the Vatican arising out of the negotiations between the latter and China are attracting considerable attention, but it is very difficult to make out clearly how the matter stands. The statements published in Paris and those coming from Rome are diametrically opposed to each other. It is quite certain that the Pope agreed with China to send out an Apostolic Delegate who was to have control of the Roman Catholic Missionaries; it is equally certain that France protested violently against this step, threatened to break off relations, and to denounce the Concordat, and wound up by proposing that the Pope should send temporarily a special Ambassador to Peking who would study the question there and act in concert with the French Minister, leaving the political functions of the latter *vis-à-vis* the missionaries untouched. Beyond this, nothing is certain. One morning we hear from Paris that the Pope has accepted the compromise; the same afternoon we are told from Rome that the Pope is inflexible in his determination to carry out his arrangement with the Chinese. Then, it is said, His Holiness is wavering in consequence of the strenuous efforts of France; again, that the Chinese have insisted on the whole arrangement and nothing but the arrangement, and have informed the Pope that they will have nothing to do with a special or any other Envoy from the Vatican who would leave the position of the French Envoy unaffected. M. de Blowitz in *The Times* is doing his best to get the Pope to throw over the Chinese, and suggests that if he does, and accepts the French compromise, the Peking Government will receive his Envoy with honour, whatever they may say now. There the matter rests at present; but I may say that those in London who have a special interest in the affair are quite confident that the Pope will stick to his guns unless the French make concessions in other directions which there is little chance that M. de Freycinet will dare to make.

One of the jokes of the discussion is the reference to Mr. J. G. Dunn by the Paris correspondent of *The Times*. In one of his letters, M. de Blowitz with that exquisite air of omniscience which he knows so well how to assume, gives a history of the Roman Catholic Missionaries in China, and of the Peh-tang Cathedral in Peking. "An Emperor who reigned one time in China, named Kang-chi," begins de Blowitz, as if he were telling an Arabian Nights' story, "gave a site for this building," &c., &c. It sounds funny to hear Kang-chi spoken of in this way, as if one wrote: "Once upon a time a Queen reigned in England, and her name was Victoria." Coming down to the present day M. de Blowitz explains how an Englishman, Mr. Dunn, who held high military rank in China—indeed has the highest position in the Chinese official hierarchy—met Prince Chun in Peking, spoke to him about the matter, and immediately was intrusted with an Imperial mission to Rome. In this communication Mr. Dunn is spoken of as Mr. John Dunn. The following day M. de Blowitz read French journalists a lesson on

their absurd fashion of calling all Englishmen John; here they called the Ambassador Extraordinary of the Chinese Empire at the Vatican, John Dunn (for which Blowitz himself was responsible) when his name was really Charles George Dunn. The fact is, I believe that the name is John George. *Punch* has his little fun with the matter too; in these negotiations, says the sage, between the Pope, the Emperor of China and the President of the French Republic, the one question is, *Who's Dunn?*

The Marquis Tseng has at last left England for China. He has recently been travelling in Germany, visiting the Emperor and Prince Bismarck (at the special request of the latter) and being generally made much of. Unfortunately these late months in Europe have been a period of much anxiety to the Marquis. His youngest child (born in England) has been very ill with a complaint which the doctors cannot diagnose. The Marquis himself has not been in good health, so that perhaps he is not sorry to have a change. He was invited by the French Government when on his tour to visit Paris, but excused himself on the ground that his instructions did not admit of his doing so. However, on his way to Marseilles or Brindisi he passed through Paris, where M. de Freycinet called on him. It was at one time arranged that he should pay a visit to the Pope before leaving Europe; whether this intention has been abandoned I do not know. Perhaps one cannot sum up the result of the Marquis's eminent career in Europe better than by quoting words used by the *Spectator* about him during the critical time in Paris three years ago:—"That single man has done more to elevate European notions of Chinese statesmanship than fifty years of contact with China had previously done." I have had frequent opportunities of knowing that he entertains the friendliest feelings towards Japan, and holds views with regard to the necessity of an *entente cordiale* and coöperation in certain directions between the two countries which perhaps some Japanese statesmen share.

The *Pall Mall Gazette*, on the authority of a naval officer in Hongkong, reported during the week that Port Hamilton was to be evacuated on the ground that it would be a waste of power to defend it; but the Under Secretary for Foreign Affairs has stated in the House of Commons that this report is quite erroneous. Another alarming item of news, which, however remains up to the present without confirmation, comes from Reuter's Agent at Yokohama. It is to the effect that the Chinese Minister at Seoul, dreading a Russian protectorate over Korea, had telegraphed to his Government for troops, which had been sent in large numbers, some of them entering the Korean capital disguised as traders. This startling message came ten days ago, but nothing has since been heard of the matter.

One of the jokes of the Colonial Exhibition is a certain Mr. Ramanathan, a Tamil, from Ceylon, and a member of the Legislative Council there. This gentleman appears in public in a fearful and wonderful Oriental dress, with a gorgeous gold chain about his neck, and is the observed of all observers, who take him for the Sultan or the Shah, and envy him his coat of many colours. When at home in Ceylon this magnificent creature wears a black morning coat, a felt hat, a linen shirt, and collar, tweed prolongations, and patent leather boots. The modest gentleman keeps the garb of the balmie East until he arrives in unbalmy London.

Governor Pope Hennessy's friends in Parliament have scarcely served his cause by their activity in his behalf. The most active of them is a certain Dr. Egan, an Irish member, who first came into public notice by leading a disorderly mob in Cork during the visit of the Prince and Princess of Wales to Ireland. For his conduct on this occasion he was expelled from various clubs, and was thus qualified for election to Parliament. Mr. Stanhope, the Colonial Secretary,

Original from

refused to answer any questions respecting the merits of the quarrel; he declined to say on Dr. Tanner's invitation whether Mr. Clifford Lloyd had not quarrelled wherever he went; and he declined a similar invitation of Sir Julian Goldsmid's to say whether Sir John Pope Hennessy had not quarrelled wherever he went, but he said it was right it should be known that the unsatisfactory state of affairs in Mauritius existed before the advent of Mr. Clifford Lloyd,—an unfavourable observation for the Governor. *Punch* proposes that Mr. Lloyd should be sent to the Islands we have recently annexed (whichever they may be) and that the Governor be made Prince of Bulgaria. Things certainly do look rather black for His Excellency, but he is an adroit and wary bird, and generally flies off in jubilant freedom just at the moment when escape seems impossible to outsiders. So far in his Colonial career he has won; no doubt he will continue winning until the end. His defence has been undertaken in one or two journals, (especially in the *Pall Mall Gazette*), but the writers are obviously labouring under the disadvantage of not being acquainted with the facts on either side, and are accordingly thrown back on the general defence that he has laboured for the improvement of the natives, has secured their regard, which by a natural consequence has gained him the dislike of the Europeans, &c., &c.—not very brilliant reasons perhaps in the abstract, but they are just the arguments which tell most on reading people here, who exclaim: "Ah! here's a Governor fighting on behalf of the poor natives against a proud and dominant caste; here's a good man struggling with adversity; of course he must be right; equally of course he would quarrel wherever he went, for there are natives and tyrannical dominant castes wherever you go," &c., &c. Then there are the ever active Aborigines Protection Society, and other societies, which presented the Governor with addresses when he was in London a few years ago, and which command a powerful influence in the House of Commons, working in his favour. So, putting this and that together, if I were a betting man and found any one foolish enough to wager with me in the matter, I should put my money on the hero of a hundred fights. But I fear that these difficulties of his render his chances of an Indian Presidency (one ambition of his in official life, a self governing Australian Colony being another) smaller and smaller.

The affairs and movements of the Maharajah Dhuleep Singh have lately been causing much attention in England and in India. After the Sikh war, and the fall of Runjeet Singh, "the Lion of the Punjab," the heir to his throne, his grandson, the present Maharajah, was brought over as a child to this country. He was educated here, married here, and settled down to the life of a wealthy country gentleman. He lived at various places in England, and fifteen or twenty years ago purchased a large property in Norfolk. He erected a magnificent mansion here; his preserves were the finest in England, his furniture, pictures, china, hot-houses, were all of the best that money could procure. He appears to have had a large pension from the India Office, but he soon got heavily into debt. Once, and I believe twice, his debts were paid out of the Indian revenues, but the magnificent style in which he lived plunged him again into pecuniary difficulties, and this time Downing Street was inflexible. A few years ago the Maharajah started his case in *The Times*, but this did him no good. He raised a claim for a very large amount which he alleged was due him on account of the personal property of his family which the British or Indian Government had seized on the annexation of the Punjab. As to what was public property, no doubt that fell to the conquerors; but the jewels, ornaments, &c., of Runjeet and those of his family who had no living representatives were, the Maharajah claimed, his. On what ground the Indian authorities refuse this claim, I don't know; there

appear, however, to be some deeds signed by the Maharajah with relation to these, but he says they were extracted from him when he was very young, and did not know what he was doing. However this may be, in the middle of last year he announced his intention of quitting England for ever, and of returning to India, where he could live economically and pay off his debts. He says he refused a large sum—£50,000 is mentioned—in settlement of his claims by the India Office. He was permitted to return to India, but it was stipulated that he should reside in the Madras Presidency, a district as much foreign territory to a Sikh as it would be to a Japanese. Thelvedon Hall was advertised for sale with its contents, and His Highness started with the Maharanee (an English lady) and his family for Madras. Unfortunately for himself he appears to be a somewhat violent and wrong-headed man, without discreet advisers. Smarting under a sense of wrong, he issued a manifesto to the Sikh nation, in which he said that he had adopted the Christian religion when a child, that he now threw it off and returned to *Khalsa*, the faith of his fathers, that forty years of loyalty to the Queen-Empress had been rewarded with injustice, and that henceforth heart and soul he was a Sikh of the Sikhs like his grandfather Runjeet. After leaving Suez he actually did throw off his English dress and adopt the national garb of the Sikhs. His proclamation preceded him, and was published and known in Calcutta and London before he got out of the Red Sea. He was accordingly stopped at Aden, and was lodged with every mark of respect in the Resident's house as a distinguished visitor. Here he remained for some weeks; his family returned to London, and subsequently the Maharajah himself came back also. On the way back he wrote a number of hasty letters to the Indian papers; he said he would give up his pension, and would prefer to appeal to the generosity of his own people and of his fellow princes in India to being dependent any longer on the bounty of a British Government. A few days ago an advertisement appeared in *The Times* stating that the Maharajah Dhuleep Singh, having made all his property over for the benefit of his wife and children, would no longer be responsible for any debts contracted by them. This unhappily is not all. Last week an anonymous seditious proclamation was found circulating in the Punjab, calling on the people to rise and throw off the yoke of the hated Feringhee. The Russians, it said, were marching as deliverers through Afghanistan, led by the Maharajah Dhuleep Singh. There was much more of the same kind, calculated, absurd though it was, to excite an ignorant and excitable people. It is said now that the Indian Government has strong grounds to suspect the Maharajah of having prompted this proclamation. One of the threats published by His Highness was that he would throw off his allegiance to England and become a subject of some other European power. There the matter stands at present; but it is impossible not to believe that there has been gross mismanagement of the business somewhere, when a man who has spent his whole life in this country has been driven by a sense of wrong into disloyal and violent courses. Remembering the circumstances under which Dhuleep Singh came first into the British hands, that he was the lawful heir to a powerful Kingdom, and that his *quondam* subjects are now amongst the most loyal and contented subjects of the Queen-Empress, I do not think his claims should be strictly or nicely weighed. If he was extravagant, no doubt he owed it to his descent and his position. It would be a repetition of an old, old story if he should now cause us trouble which would cost to allay ten or a hundred times what would have satisfied him. He had a claim not only on British justice, but the very highest claims on British generosity. In all probability his demands were settled in red tape fashion by a leading permanent official in Calcutta or in Downing Street,

whose claims to generous treatment when he is retiring from the service will not be overlooked for want of pressing. Was it Mill or Joseph Hume who once said in Parliament that the average higher permanent official in this country with his little mind swathed in red-tape and incapable of taking a broad view of any subject was a pernicious and mischievous creature when in possession of power? The Barnacles are as vigorous a race as ever they were. By the bye, the Barnacles of the Ordnance Department are leading a pretty uncomfortable life of it just now. Unpleasant charges are being made against them in all directions, in the press and in Parliament. They are accused of corruption, of being hand in glove with firms from which they buy guns that burst. Names, dates, facts are stated, and the Lord Chief Justice and Mr. Justice Denman have refused to issue an injunction against the publication of these statements until a case of libel is tried in November or December. Their Lordships said it is of the last importance that these subjects should be fully discussed; if the statements are true the people who make and prove them are national benefactors; if false their punishment will be all the greater for their repetition, as the damage will be the greater, and accordingly the Court refused to muzzle what Mr. Stead calls "the watch-dogs of civilization." So Lieutenant Armit can go on saying what he likes about Sir William Armstrong and Company for the present, while the eminent ship-builders and gun-makers must console themselves with the reflection that every dog has its day, and that bye-and-bye they will have their day before a British Special Jury, in Her Majesty's High Court of Justice, Queen's Bench Division.

#### LETTER FROM SAN FRANCISCO.

(FROM OUR OWN CORRESPONDENT.)

San Francisco, September 30th.  
If you will cast your eye on a map of the world, you will notice that the earthquake belt of Central America has hitherto extended from 10° N.L., near which Caracas is situate, to about 18° N.L., near which stood the lost city of Port Royal, Jamaica. Earthquakes have occurred on the west coast of South America, at Quito on the equator, and at New Madrid in 37° North; but these belonged to different belts. The Central American belt proper covers about six degrees of latitude, which takes in the earthquake country of San Salvador and Guatemala, Northern Venezuela, and the Windward Islands, which have so often been desolated by catastrophes of this nature. Humboldt had a curious fancy that north of the 18th parallel there was a subterranean wall which protected North America from seismic disturbance, arising further south. Taking up this idea, some professors have lately started the notion that this wall has been broken down, and that henceforth the Southern States must share in the disturbances caused by the development of earth waves in the Central American belt. It is not a pleasant idea, and I give it you for what it may be worth. You in Japan know more about earthquakes than we do—which, in truth, is not paying you a high compliment. Certain it is that the disturbances at Charleston have not ceased, though the shocks are less destructive than the one of August 31st. The people of that unfortunate city have been spared the pangs of hunger and disease by the bounty of the north. But they die a thousand deaths daily from dread of new shocks. Many generations must elapse before Charleston recovers the modest measure of prosperity she had acquired since the war.

We in this city had an anxious time yesterday. A champion ass of the name of Wiggins predicted an earthquake to occur on this coast yesterday; and though Wiggins is well known to be an imbecile, who amuses himself by predicting earthquakes and storms which never occur, there

Original from

were many, especially among the weaker sex, who were very nervous all day, and slept restlessly last night. Wiggins' prediction, which was published on the 20th, read as follows:—

#### THE COMING EARTHQUAKE.

It is certain that an earthquake will visit the Southern States on the 20th of this month. The disturbance will cross the Atlantic and will in all probability affect Southern Europe. South America will be exceedingly liable to be affected and the upheaval will be a severe one. There is no danger from earthquakes in America until the 20th instant, and even then the earthquake force will move from east to west on a parallel a few degrees south of Charleston. If Charleston is visited this time it can only be on that day.

#### THE SOUTH NOT SO SOLID.

Being asked as to the parallel of latitude on which the disturbance would take place, Dr. Wiggins replied that the activity would be confined to the thirtieth parallel of latitude, and would extend from ocean to ocean. The shocks would also affect San Francisco and the Pacific slope. North of parallel 30 the disturbance will be meteorological, and will consist of a terrific storm—in fact, a vast hurricane. This will be especially severe in the Gulf of St. Lawrence and the Eastern provinces. If any small craft, such as fishing boats, were caught they would hardly escape, but such a warning had been given that it was not probable that any would be out. The storm would be preceded in Ontario, Quebec, the maritime provinces and New England by strong north-west winds on the 20th and 21st instants. The disturbance throughout will be terrific, and cannot fail to cause wide-spread devastation. The force would be far greater than that which caused the recent disturbance so disastrous to Charleston, and the country would be alike affected. The destruction to property would be something terrible. Jacksonville, Fla.; Mobile and Atlanta, Ga.; Mobile, Ala.; New Orleans, La.; Baton Rouge, Miss.; Houston, San Antonio, and Galveston, Texas, would in all human probability be more or less damaged. He predicted that New Orleans, Macon, and Mobile would be ruined, as these cities were right in the path of the subterranean and meteorological phenomena.

#### AN UNFORTUNATE CONJUNCTION.

When Professor Wiggins was asked to what cause he attributed this terrible submarine upheaval, he replied that it was produced by a shifting of the earth's centre of gravity, and that this displacement would be brought about by a conjunction of Jupiter, Saturn, Mars, and our two satellites, one being the visible and the other the invisible moon. The latter is a discovery of Dr. Wiggins. He did not agree with the opinion enunciated by Sir William Dawson at the recent meeting of the British Association, at Birmingham, that the cause was to be attributed to a contraction of that part of the earth's surface which forms the bed of the Atlantic. There would be no earthquake in Canada, but there would be probably a tremor in the province of Quebec. The disturbance would not commence anywhere until two o'clock in the afternoon. There might be tremors up to midnight, caused by the subsidence of the earth's crust after the great shock had taken place. Dr. Wiggins expressed himself as not at all surprised if on that day several new volcanoes should burst out in Central America and South America.

I need hardly add that the prophecy utterly failed of fulfilment. There was no earthquake on the 20th parallel, or any where else: there was no storm or hurricane anywhere; there was no wide-spread devastation, no destruction of property, no ruin at New Orleans, Mobile, or Macon. Wiggins appears to have invented the whole thing from a mixture of mischief and stupidity. He certainly succeeded in frightening many people, especially in this city. San Franciscans know what an earthquake is. They feel one about once a year; and though they have never experienced a really destructive shock, they never know when a little more steam may not be let on, and when a gentle tremor which merely makes picture frames rattle may not ripen into an earthquake that would convulse the city. We profess not to be afraid at all; but in our secret hearts, we are mortally nervous, and were not a little delighted when day broke this morning and the roofs were still on our houses.

The Secretary of the Treasury is still absent from his post, and in his absence, the Cabinet is reluctant to come to a decision on the subject of the sealers seized in Behring's Sea. It will be remembered that the seizures were made by a revenue cutter acting under orders from the Treasury Department, and that neither the Navy nor the State departments are concerned in the matter. Pending the action of Government, the subject is being pretty thoroughly ventilated in the newspapers, and the closer it is examined the more unjustifiable do the seizures appear. The latest authority on international law, Hall, of Oxford, denies the right of any nation to effect seizures at a greater distance from her shore line than her guns may reach. The old days was our marine league, but as modern guns carry further, the limit may perhaps now be set at three leagues. The *Kearsarge* attacked the *Alabama*—with the assent of two French ironclads which were present—at a distance of seven miles from the Cherbourg breakwater. The whole difficulty arises at present from the political influence possessed by the Alaska Commercial Company, which possesses a monopoly of seal-fishing in Alaska "and the waters thereof." This influence could not affect an honest man like Bontwell who, in 1871

refused to make seizures at a greater distance than three miles from land. But it did affect Secretary Sherman, who, in 1879, directed revenue cutters to seize vessels anchoring in Behring's Sea; and of course it affected Blaine, who distinctly stated that the Government of which he was the head would not allow seal fishing in any part of Behring's Sea, east of the boundary line which runs past Copper Island. The Company now complains that its rights are being invaded, and that if the invasion goes on, it will be unable to pay its rent to the United States. It affects to believe that parties are being fitted out in Japan to take seals in the waters surrounding the islands of St. Paul and St. George's. It insists on the maintenance of its monopoly over a whole ocean. And it is quite possible that it may carry its point. It is difficult to withstand a combination of brains and boodle. People are anxiously waiting to see what view Mr. Cleveland will take.

Mr. Boyd, editor of the *Panama Star and Herald*, is in town, and gives your correspondent a rather new view of the Panama Canal. Instead of being a failure, as the San Francisco press has taken pleasure to describe it, he avers that it will be a complete success. He says that it will be completed in six years, that is, in 1892, and that the Company has already secured all the money that will be required for the next three years work. Twelve thousand men are kept constantly employed, and each section of the work is under a separate contract. Mr. Boyd expressed no opinion as to the practicability of the cuttings projected on the Culabra section, nor did he say anything about the huge dam—half a mile long and 200 feet high, which is to hold the waters of the Chagres in check. But it is pleasant to find some one who comes from the spot, and who believes in the ultimate success of M. de Lesseps' scheme. Mr. Boyd ascribes the unfavourable comments made by travellers to imperfect information; the critics were too afraid of fever to spend time enough on the isthmus to learn what was really going on.

In some of the States quinquennial censuses are taken. A few figures from the returns of 1885 possess a peculiar interest. It appears that Mr. Blaine's State, which always goes Republican and always adheres to prohibition, has not increased in population for fifteen years. In products of agriculture and industry it is likewise falling back. So far as that State is concerned, Mr. Blaine's notion that protection is the mother of prosperity hardly seem to be confirmed. There are some points, however, in which Maine is making progress, and perhaps in justice to Mr. Blaine, they should be mentioned; notwithstanding a decrease in population, Maine shows an increase in insanity, pauperism, and crime.

The place hunters have shaken the dust of Washington from their feet, and have generally gone home. A recent letter from the national capital describes an interview with one of the last of the breed, a tall, seedy-looking, fiery-eyed son South Carolina:—

"To-day, sir," said the tall man, "I sold the last of my law books, sir, for \$10. By God, sir, I sold them to a nigger, sir. I sold a hundred dollars' worth of law books to a nigger. Don't that humiliation for a South Carolina Democrat? I have spent a year and four months here. I came here soon after Cleveland's inauguration under promise of the leading men of the South that I should be taken care of. You know my father. My father was one of the highest and best men in the State. He fathered the South, and here I am to-day, sir, with \$10 in my pocket and vengeance in my heart. I came here a year and four months ago with the promise of a good place. I was told to wait. Again and again I was told, wait only a few days or a week, and I have been waiting all these weeks and no title. A month ago Mr. Lamar sent me a note saying that he had a position for me in the Interior Department. I presented myself and learned that I was temporarily to be put upon the labor-roll with the prospect of a \$2,000 place in the course of a few months. While I was on particularly inviting terms, a price was named, and a man from the family who had never stooped to manual labor, I took the place. What do you suppose they set me doing? Washing spitons there in the basement just like a nigger. By God, sir, I worked for a month like a nigger, cleaning spitons and that for \$25 a month. Yesterday my soul revolted against the disgusting task for money and for all, and I determined that I would not submit to such an outrage. To-day I resigned. Tomorrow I go home. May God strike me dead if I ever set foot in this town again."

#### LATEST TELEGRAMS.

["SPECIAL TELEGRAM" TO "JAPAN MAIL."]

London, October 24th.

FRANCE, ENGLAND, AND EGYPT.

The French Press menacingly demand the British evacuation of Egypt.

London, October 27th.

THE PUBLIC DEBT OF EGYPT.

In pursuance of the Convention, the Treasury of the Public Debt of Egypt will be able to meet its financial engagements, and France will be deprived of its principal pretext for meddling.

London, October 28th.

ENGLAND AND FRANCE.

The Paris newspaper, the *Temps*, condemns the clamour that has been raised about the British occupation of Egypt, which it refers to as only temporary, adding that it is a fruitless dispute that will lead to war.

RUSSIAN PREPARATIONS.

Two Russian war-vessels have been ordered to Varna for the protection of Russian subjects in Sofia.

Varna has been declared in a state of Siege.

[FROM RANGOON PAPERS.]

London, October 13th.

THE BULGARIAN ELECTION.

Russia's nominee has been elected by an overwhelming majority by the Grand Sobranje.

London, September 30th.

THE MAURITIUS.

Sir Hercules Robinson is going to Mauritius in order to settle the disputes which have arisen between Sir John Pope Hennessy and Mr. Clifford Lloyd.

Montreal, September 29th.

THE COLONIAL AND INDIAN INSTITUTE.

The Canadian Government has promised a vote of twenty thousand pounds towards the Colonial and Indian Institute.

Sofia, September 29th.

RUSSIA AND BULGARIA.

General Kaulbars has issued a manifesto, in the form of a circular from the Russian Consul, in which the Russian Commissary urges the Bulgarians to trust to the Czar, and not to the Regency; and repeats the demands of the Russian Government with regard to the assembling of the great National Assembly for the election of a Prince, as well as for the release of the plotters. He strongly denounced the Regency, who have refused to entertain the Russian demands. The Bulgarians are filled with indignation at General Kaulbars's mode of hectoring them.

[FROM "LE SAIGONNAIS."]

Paris, October 6th.

FRANCE AND MADAGASCAR.

The tension reported in the diplomatic relations between the Hova Government and the French Government is in a fair way to being relieved.

EMBARKATION OF THE MARQUIS TSENG FOR CHINA.

The Marquis Tseng, late Ambassador of China to London, is to embark for China on Sunday, the 10th October.

## NOTES FROM JAPANESE PAPERS.

H.I.H. Prince Haru visited Marquis Nakayama the 27th instant, returning the same evening.

H.I.H. Prince Yamahashi, who resides at Kyôto, left for Tsuruga the 19th instant on a pleasure tour and returned to Kyôto the 22nd instant.

H.I.M. the Empress, accompanied by a number of officials and court ladies, left Tôkyô the 27th instant for Kanayama in Gunma Prefecture on a tour of pleasure.

The store section of the Naval Department has granted permission to Messrs. Okura & Co. and other twenty merchants to tender for provisions.

The Naval Section of the General Staff Office will be removed, the 30th or 31st instant, to new buildings which have lately been completed.

The Patents' Bureau of the Agricultural and Commercial Department has decided to construct new premises to be used as show-rooms of inventions sent in to be patented.

Fire broke out at Tairenji (a Buddhist temple) in Odawara, the 27th instant at 6 p.m. The temple was completely destroyed.

A social gathering of the employees of the various Japanese newspaper offices in Tôkyô was held the 27th instant at Isogen Restaurant, Shiba. All the proprietors of new-papers in the capital were present with the exception of two or three. The proprietor of the *Choya Shimbin* presided.—*Fiji Shimpu*.

Mr. Goto Shimpei, an *attaché* of the Sanitary Bureau in the Home Office, accompanied by a police inspector, will shortly visit all druggists' shops in the capital to inspect the medicines prepared for sale.

A meeting of the Standing Committee of Tochi Prefectural Assembly was held the 26th instant, the object being to open the annual meeting of the local assembly about the 10th proximo.

The annual local assembly of Otsuka city will be opened the 1st proximo, and the local assembly of Ibaraki Prefecture will take place the 10th proximo.

Mr. Murota Yo-hitami, lately appointed Japanese Consul to Fusan, arrived at Kobe the 28th instant.

Mr. Shirakami Naokata, Superintendent of the Nagasaki Customs, was promoted the 28th instant to the rank of sixth class of second grade by special order of H.I.M. the Emperor.

A special meeting was held the 28th instant in the Cabinet Office. Mr. Terashima, President of the Tradal Compilation Bureau and other members of committee were present.

The Mitsui Bank has applied to the Government for permission to purchase three lots of land, Nos. 1, 2, and 10, belonging to the Higher Middle School at Nishikicho, Kanda Division.

On the conclusion of the conference of the various chief inspectors of police, the 27th instant, Mr. W. Hochu, of the Police Bureau in the Home Office, gave an address on police administration.

A special shareholders' meeting of the Tôkyô Stock Exchange will be held the 31st instant, at the Banker's Club, to discuss some questions relating to the business of the exchange and also to elect an Assistant-Director, in place of Mr. Yokoi Shigenosuke.—*Mainichi Shimbun*.

The ninth conference on treaty revision was held the 28th instant in the Foreign Office. All the Foreign Ministers were present. The date of the tenth conference has not yet been fixed.

The office of the Engineering Committee of the Army has been removed to the building lately occupied by the Kyôdôdan School.

The Naval Department has added to the estimates of the nineteenth fiscal year a sum of yen 200,000 as a special fund towards the expense of constructing a number of torpedo-boats and of forming a torpedo company.

The total amount of sanitary expenses defrayed by the Tôkyô Government during this year was yen 800,000, of which yen 282,300 was drawn from the local taxes; and the total sanitary expenses defrayed by the people is estimated at yen 300,000.

The local assembly of Kanagawa Prefecture will be opened the 10th proximo.

It has been decided by the authorities that the new buildings of the Tôkyô City Government Office will be constructed on the site of the military drill ground at Yuraku-machi, Kojimachi Division.—*Nichi Nichi Shimbun*.

## TIME TABLES AND STEAMERS.

## YOKOHAMA-TÔKYÔ RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 6.35, 8.00, 8.50, 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

TRAINS LEAVE TÔKYÔ (Shimbashi) at 6.35, 8.00, 9.15, 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90.

Trains marked with (\*) run through without stopping at Tsurumi, Kawasaki and Utsunomiya Stations. Those marked (†) are the same as above with the exception of stopping at Kawasaki Station.

## TÔKYÔ-MAYEBASHI RAILWAY.

TRAINS LEAVE TÔKYÔ (Yueno) at 5.25 and 9.25 a.m. and 12.25 and 4.50 p.m.; and MAYEBASHI at 5.25 a.m. and 12.25 and 4.50 p.m.

FARES—First class (Separate Compartment), yen 1.80; Second class, yen 2.28; Third class, yen 1.14.

## TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.25 and 11.30 a.m., and 2.40 and 5.45 p.m.

FARES—First class, yen 1.10; Second class, yen 74; Third class, yen 37.

## UTSUNOMIYA-NASU RAILWAY.

TRAINS LEAVE UTSUNOMIYA at 9.50 a.m. and 4.37 p.m.; and NASU at 8.00 a.m. and 3.10 p.m.

FARES—First class, yen 1.10; Second class, yen 74; Third class, yen 37.

## TÔKYÔ-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TÔKYÔ (Yueno) at 5.25 a.m., and 12.25 and 4.50 p.m.; and UTSUNOMIYA at 9.35 a.m., and 12.25 and 5.00 p.m.

FARES—First class, yen 3.50; Second class, yen 2.10; Third class, yen 1.05.

## SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 8.40 and 11.40 a.m., and 2.44 and 6.20 p.m.; and AKABANE at 9.55 a.m., and 12.50, 4.05, and 8.35 p.m.

FARES—First class, yen 70; Second class, yen 46; Third class, yen 23.

## KÔBE-OTSU RAILWAY.

TRAINS LEAVE KÔBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE ÔSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYÔTO (up) at 6.40, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

TRAINS LEAVE ÔTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYÔTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE ÔSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90. Kobe to Kyoto: First Single, yen 2.25; Second do., yen 1.40; First Return, yen 3.55; Second do., yen 2.10. Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

## OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

FOR CHINA.—The steamers of the Nippon Yusen Kaisha sail weekly (Tuesday) for Shanghai, calling at Kobe and Nagasaki. Steamers of this Company also run to Korea and Vladivostok, at intervals, their sailing notices appearing in the local papers.

FOR SAN FRANCISCO.—The steamers of the O. & O. Co. and the P. M. Co. sail hence, approximately, every 10 days.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 a.m., and 12.00 m., and 4.15 p.m.; and leave Yokosuka at 6.30 and 11.00 a.m., and 4.00 p.m.—Fare, 30 sen.

*Mino Maru*, Japanese steamer, 550, Pender, 29th October,—Yokkaichi 28th October, General.—Nippon Yusen Kaisha.

*Takasago Maru*, Japanese steamer, 1,230, Brown, 30th October,—Kobe 28th October, General.—Nippon Yusen Kaisha.

## DEPARTURES.

*Normanton*, British steamer, 1,533, Drake, 23rd October,—Kobe, General.—Adamson, Bell & Co.

*Yamashiro Maru*, Japanese steamer, 1,512, 23rd October,—Kobe, Mails and General.—Nippon Yusen Kaisha.

*Nagato Maru*, Japanese steamer, 1,160, Young, 24th October,—Hakodate, Mails and General.—Nippon Yusen Kaisha.

*Takasago Maru*, Japanese steamer, 1,230, Brown, 25th October,—Kobe, Mails and General.—Nippon Yusen Kaisha.

*Mino Maru*, Japanese steamer, 550, Pender, 26th October,—Yokkaichi, General.—Nippon Yusen Kaisha.

*Satsuma Maru*, Japanese steamer, 1,160, G. W. Corner, 26th October,—Shanghai and ports, Mails and General.—Nippon Yusen Kaisha.

*Travancore*, British steamer, 1,140, J. Logan, 28th October,—Kobe, General.—Smith, Baker & Co.

*Claymore*, British steamer, 1,656, W. A. Gulland, 28th October,—Kobe, General.—Smith, Baker & Co.

*Chitose Maru*, Japanese steamer, 356, Kaya, 29th October,—Handa, General.—Nippon Yusen Kaisha.

*Hiigata Maru*, Japanese steamer, 1,096, Drummond, 29th October,—Kobe, Mails and General.—Nippon Yusen Kaisha.

*Saikai Maru*, Japanese steamer, 68, Minoura, 29th October,—Shimizu, General.—Nippon Yusen Kaisha.

*Toyoshima Maru*, Japanese steamer, 596, Tokito, 29th October,—Yokkaichi, General.—Nippon Yusen Kaisha.

*Oceanic*, British steamer, 3,017, Thompson, 30th October,—San Francisco, Mails and General.—O. & O. S.S. Co.

## PASSENGERS.

## ARRIVED.

Per Japanese steamer *Oni Maru*, from Kobe:—Mrs. Ochiai, Messrs. Cautland, P. Walker, H. Bateman, Kiu, Hagono, Abrahams, Squire, Meiche, Tomado, Ahkeda, and Yamada in cabin; and 104 Japanese in steerage.

Per French steamer *Tanais*, from Hongkong via Kobe:—Mr. and Mrs. Artand and maid, Messrs.

Zoeslin, Harischal, Cheik Ibrahim, Moeroshi, Midne, R. Khan, 1 Chinese, and 9 Japanese.

Per Japanese steamer *Wakanaura Maru*, from Kobe:—37 Japanese in steerage.

Per British steamer *Oceanic*, from Hongkong:—Surgeon Bowie, R.N., and Mr. Tokuda in cabin; and 5 Europeans in steerage. For San Francisco: Mr. and Mrs. Hippley in cabin; and 166 Chinese in steerage.

Per Japanese steamer *Takasago Maru*, from Kobe:—44 Japanese in steerage.

Per Japanese steamer *Tobio Maru*, from Shanghai and ports:—Mr. and Mrs. Russell, Mr. and Mrs. Curtis, Miss B. Harper, Messrs. Baker, Halliburton, Mosle, Delacamp, Gillingham, Perey, Ahrens, Hibi, Elliott, Stoffregen, Hunter, Thomson, and Captain Spiegelthal in cabin; Mr. and Mrs. Nagauka, Messrs. Smits, King, Nakao, and Takayama in second class; and 113 Japanese in steerage. For San Francisco: Mrs. B. Gardener in cabin. For Liverpool: Miss Kemp in cabin.

Per American steamer *City of New York*, from San Francisco:—Mr. E. Bougarel, Mr. A. Wild, Dr. McC. Lansing, Mr. and Mrs. McShane and infant, Mr. and Mrs. McKay, Rev. and Mrs. H. Jenkins, Miss H. M. Brown, Rev. and Mrs. O. W. Willert and two children, Mr. Jas. H. Deenstine, Rev. and Mrs. S. Worden and infant in cabin; and 2 Japanese in steerage. For Hongkong: Mr. Florence, Mrs. Williams, and Dr. H. F. Slife in cabin; and 500 Chinese in steerage.

## DEPARTED.

Per Japanese steamer *Satsuma Maru*, for Shanghai and ports:—Mr. and Mrs. Englebach, Rev. and Mrs. G. Hayes, Mr. and Miss Merrill, Mr. and Mrs. Murota and two children, Mr. and Mrs. Yamada, Mr. and Mrs. Novey, Mr. and Mrs. Okam and child, Dr. C. A. Arnold, Messrs. Yutsui, Kawakami, Kato, F. W. Leaf, J. M. Mody and servant, J. Oi, Tanabe, Matsuda, Yoda, and Monoguchi in cabin; Mr. and Mrs. Tsuchiya and child, Messrs. Gudelin, Okajima, Murio, Ichimore, Hasegawa, Egami, S. O-sawa, and M. Osawa in second class; and 23 Japanese in steerage.

## CARGOES.

Per Japanese steamer *Tobio Maru*, from Shanghai and ports:—Treasure, \$10,000.00.

Per American steamer *City of New York*, from San Francisco:—Freight, 78 tons; for branch ports, 378 tons. Specie, \$2,100.00; for Hyogo, \$113,000.00.

Per British steamer *Oceanic*, for San Francisco:—

## REPORTS.

The Japanese steamer *Omi Maru*, Captain Swain, reports:—Left Kobe the 23rd October, at noon and experienced strong winds from S.W. to Oo-sima; thence to port fresh gales with high head sea, and cloudy weather. Arrived at Yokohama the 24th October.

The French steamer *Tanis*, Captain Paul, reports:—Left Hongkong the 18th October, at 4.30 p.m. and experienced strong North and N.E. winds. Arrived at Kobe the 23rd, at 2.30 p.m. left the 24th, at 7.30 a.m. and experienced strong North winds and heavy rain. Arrived at Yokohama the 25th October, at 7.30 p.m.

The British steamer *Bounty*, Captain Boutillier, from Hongkong, reports N. and N.W. winds with cloudy weather to Turnabout; thence N.E. and E. winds with head sea to Akutsi; thence to port strong E. winds with cloudy weather and much rain.

The British steamer *Oceanic*, from Hongkong, reports fresh strong N.E. winds and high head sea throughout the passage. Arrived at Yokohama the 27th October, at 5 a.m.

The Japanese steamer *Wakanaura Maru*, Captain Christensen, reports:—Left Kobe the 25th October, at 1 p.m. and experienced easterly winds with thick rainy weather throughout the passage. Arrived at Yokohama the 26th October, at 9 p.m.

The Japanese steamer *Takasago Maru*, reports strong northerly and N.E. winds with passing squalls and rain throughout the passage.

The American steamer *City of New York* reports fine weather throughout the passage.

## LATEST COMMERCIAL.

## IMPORTS.

Business has again been quiet in every branch of the trade in Yarns and Textiles, and the aggregate of sales is remarkably small for this season of the year, when the "Autumn demand" is expected to be brisk; but it is to be feared that the extraordinary business of the summer months still weighs heavily on the hands of dealers and prevents their operating further until relieved by country trade.

**YARN.**—Sales for the week amount to about 100 bales only; the Market is exceedingly dull for all counts, lower for 28, 32s., and Bombays are quite neglected.

**COTTON PIECE GOODS.**—Sales are reported of 1,000 pieces 10 lbs. Shirtings, 2,500 pieces 9 lbs., 1,500 pieces 8½ lbs., 500 pieces 7 lbs. T-Cloths, 1,500 pieces Prints, 150 pieces Velvets, 350 pieces Turkey Reds, and 500 pieces Indigo Shirtings.

**WOOLLENS.**—1,500 pieces Mouseline de Laine, 150 pieces Italian Cloth, 130 pieces Silk Satins, and 1,000 pairs Blankets are all the sales reported.

Blankets—Scarlet and Green, 6 to 4½, per lb.....	0.37½ to 0.45

## METALS.

Some sales at lower prices, especially in Bar Iron, stock of which is very heavy. Nail Rods are rather neglected, but fair business doing in Wire Nails and Tin Plates. Generally speaking, the quotations must be reduced all round, and buyers appear to have the whip hand at present.

	PER POUND.
Flat Bars, 1 inch.....	\$2.40 to 2.45
Flat Bars, 1 inch.....	2.50 to 2.60
Round and square up to 2 inch.....	2.45 to 2.60
Nailrod, assorted.....	2.40 to 2.50
Nailrod, small size.....	2.50 to 2.60
Wire Nails, assorted.....	4.50 to 5.50
Tin Plates, per box.....	5.30 to 5.50
Pig Iron, No. 3.....	1.20 to 1.22½

## KEROSENE.

Business has been resumed at recent quotations. Considerable sales have been made, and holders now pretend that they will only sell a few, unless buyers can improve their offers. Meantime dealers are pretty well stocked, having about 100,000 cases of their recent purchases yet uncleared.

	PER CASE.
Devoe.....	\$1.77 to 1.80
Comet.....	1.72 to 1.75
Stella.....	None

## SUGAR.

A fair business has been done in refined descriptions at slightly lower prices; other sorts are at previous quotations.

	PER POUND.
White Refined.....	\$5.20 to 7.30
Manila.....	4.20 to 4.40
Daitong and Swatow.....	3.30 to 3.75
Brown Lakao.....	4.00 to 4.05

## EXPORTS.

## RAW SILK.

Our last issue was of the 22nd instant; since which date we have had a very quiet Market. Race-week has been one excuse for inactivity, and the actual net settlements do not exceed 100 piculs. These are divided into *Hanks* 100 piculs, *Hamatsuki* 25 piculs, while *Filatures* and *Re-reels* give a minus quantity of 25 piculs. In addition to this, about 25 piculs have been shipped for Europe by the *Doshunsha*, making the total Export business for the week 125 piculs.

As hinted above, various causes have combined to make a dull week in this branch. Until yesterday there was very little doing for Europe; indeed but for some decent parcels of *Hanks* taken up for that destination yesterday, we should have had something like a blank week. Again the demand for the United States has held off; some business has indeed been done, but this has been offset by rejections of previous purchases. Markets on the other side do not respond to the high prices asked here, and they must either improve or dealers here must submit to a reduction. At present holders make a show of strength, but here and there a dealer can be found who is inclined to be more current.

Supplies come in daily from all provinces, and the present stock list is fully 11,300 piculs. At the same time cold weather is reported from the interior, and summer-reeled Silks will soon be hard to find.

There has only been one mail steamer outwards during the week. This vessel, the *M. M. steamer Volga* (23rd instant) carried 266 bales for European ports. Total Export to all parts is now 7,293 piculs, against 4,762 last year, and 9,495 at same date in 1884.

**Hanks.**—The chief trade has been in this department, and yesterday some important transactions were initiated in *Shinshu* kinds. These correspond with a similar transaction during Race week last year, but the present price is \$650 against \$450 last October. Among the Settlements reported this week are *Shimaru* \$660, *Maribuso* \$650, *Hachoji* \$660.

**Filatures.**—The only transaction of moment has been a purchase of *Tokushu* at \$735 or thereabouts. Holders have not maintained their extreme pretensions of a week ago, and *Hakusuru* could no doubt be done at \$780, with *Kaimisha* at \$770. Nothing doing in fine sizes, and quotations for these kinds are nominal.

**Re-reels.**—Small business, rejections of former purchases much exceeding present settlements. Some few parcels have been taken into godown, but the quality of these leaves much to be desired, and nothing whatever is noted in the higher grades.

**Kakada.**—Not a single attempt at business, and all quotations are withdrawn for the present.

**Oshu.**—One fairly large parcel of *Hamatsuki* taken into godown at \$645; other sorts quite neglected.

## WASTE SILK.

Again we have to report a slight falling off in this branch; still business done amounts to 600 piculs for the week, divided thus:—Cocoons (various) 275 piculs, Noshi-ito 210 piculs, Kibiso 65 piculs, Neri 50 piculs. No trade for "Direct" Export this time.

Cocoons have had the lion's share of attention; there has also been considerable business in ordinary descriptions of Noshi and Kibiso, but the higher grades throughout have been entirely neglected. Supplies roll in with undiminished volume, and Stocks of all kinds are heavy. Quotations are generally well maintained, but it looks as though sellers must moderate their pretensions if they wish to do a large trade.

The M. M. steamship *Volga* on the 23rd instant carried 189 bales various Waste for Europe, and the ill-fated Canal boat *Normanton* had 50 bales *Pierced Cocoons* for New York. These shipments bring the present Export up to 7,997 piculs, against 2,083 piculs last year and 8,531 piculs at 29th October, 1884.

Cocoons.—A fair amount of business passing herein, all descriptions including *Tama*, *Waste*, and *Ya mamai* getting a share of the trade. The present Stock is nearly all composed of the inferior kinds, the recognised qualities of "Pierced" being hard to find.

Noshi.—All the transactions have been in fair to middling *Yoshu* at from \$118 to \$122, first cost. Other sorts entirely neglected at present, owing to the high range of values asked by dealers.

Kibiso.—All the business here has been in fair to middling *Yoshu* at from \$80 to \$85, other kinds, including filatures, finding no buyers at quotations.

Neri.—About 50 piculs found buyers at very high prices, \$30 being freely paid for ordinary uncleaned stock, and \$18 for veritable rubbish.

## QUOTATIONS.—(NEW WASTE.)

Pierced Cocoons—Good to Best	\$130 to 150
Noshi-ito—Filature, Best	180 to 190
Noshi-ito—Filature, Good	160 to 170

Kakada	1,400	Kibiso	5,400
Sandai & Hamatsuli	570	Mawala	435
Taysam Kinde	265	Sundries	125
Total piculs	11,300	Total piculs	11,400

## TEA.

A moderate demand has characterized the past week's business, at slightly lower prices than actually represented below. The total Settlements aggregate 1,360 piculs, making the amount 104,445 piculs for the season, against 162,105 piculs for the season 1885 at the same period. Kobe Settlements for the current year foot 128,000 piculs against 110,390 in 1885, and fully 11,000 piculs remain in stock. The steamship *Harter* which sailed from Kobe on the 14th, took 35,638 lbs. for New York, and 24,775 lbs. for Canada. The steamship *Antonio* took from Yokohama on the 16th 117,584 lbs. for New York, and 598,028 lbs. for Canada, aggregat-

ing 715,612 lbs. The Pacific Mail steamship *City of Sydney* took from Kobe on the 10th inst. 26,658 lbs. for New York, 62,368 lbs. for Chicago, 800 lbs. for San Francisco, and 20,549 lbs. for Canada, making 120,375 lbs. from that port. The same steamer took from this port on the 21st inst. 13,837 lbs. for New York, 55,566 lbs. for Chicago, 86,111 lbs. for San Francisco, and 9,653 lbs. for Canada, aggregating 165,169 lbs. The Suez Canal steamer *Antonio* took from Kobe on the 24th inst. 56,443 lbs. for New York, and 120,951 lbs. for Canada. The steamship *Normanton*, which left on the 23rd inst., for New York via Kobe, and has since been reported lost, took 5,000 lbs. for New York and 146,075 lbs. for Canada, aggregating 151,075 lbs. The total shipments from Japan to date, including the *Normanton's* cargo, are as follows:—For New York and Boston, 13,239,054 lbs. for Chicago; Canada and elsewhere, 21,742,916 lbs., and for San Francisco 3,954,735 lbs. making the total 38,936,705 lbs. as compared with 32,963,243 lbs.

PRICE, \$2.50.

The *Hioo News* thus refers to the work:—

We have to acknowledge the receipt of "A Romanized Japanese Reader," consisting of Japanese anecdotes, maxims, conversations, &c., by Mr. B. H. Chamberlain, the author of the Grammar of the Japanese Language which was published a few months ago. The Reader is in three parts of convenient size, well bound, and the typography reflects much credit upon the *Japan Mail* office, where the work was printed. Part I. contains the Japanese text of the anecdotes, &c.; Part II. an English translation, and Part III. is devoted to copious notes intended to give information concerning the persons and places mentioned in the Reader, to explain allusions, and in certain cases to bring out the literal meaning in a clearer manner than was possible in the translation. Mr. Chamberlain is such an acknowledged authority upon everything connected with the Japanese language, and has always been so thoroughly painstaking and conscientious in the preparation of his various publications, that students may well accept with confidence his latest work. In conjunction with the "Simplified Grammar" the "Reader" ought to prove of great benefit to all persons engaged in studying the language of Japan, and indeed to any foreign resident who wishes to speak correctly when venturing upon the vernacular.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

**ATKINSON'S ENGLISH PERFUMERY,**

Renowned for nearly a century, embraces all the most refined and elegant scents, and is sold in all the principal cities of the world. **ATKINSON'S ROSE SHIRAZ, STANGE AND CLOVE, and STANGE AND CLOVE** are the most popular of the perfumes, and being of pure and refined quality, they are highly recommended for the use of the ladies.

**ATKINSON'S EAU DE COLOGNE** is unequalled for its strength and delicate odour. It is sold in all the principal cities of the world, and is highly recommended for the use of the ladies.

**ATKINSON'S FLORIDA WATER** is an exceptionally fine perfume for the ladies, and is sold in all the principal cities of the world.

To be had of all perfumers, and of the following:-

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 6TH, 1886.

### SUMMARY OF NEWS.

THE Naval Regatta will be held on the Sumida River the 13th instant.

A CRICKET MATCH was played to-day, Yokohama Club v. The Navy.

DURING last month 11,000 pieces of bronze were manufactured and sold by one firm in Kyôto.

DEFINITE arrangements are said to be in progress for the fortification of Tsushima.

M. BERTIN, of the Naval Department, has received an additional appointment in the General Staff Office.

H.I.H. PRINCE HIRU visited the Printing Bureau the 28th ultimo, and the Naval College the following day.

MR. YAMADA, Governor of Tottori Prefecture, who had been staying in the capital, left the 30th ultimo for Tottori.

THE butchers in the capital are arranging for establishing a meat market at Tamachi before the end of this year.

THE daily arrival of tea at Kobe is 25,000 *kin*, but not more than half that quantity finds foreign buyers.

THE Athletic Meeting of the Yokohama Cricket Club took place on Tuesday last, and was a successful gathering.

MR. MURORA YOSHITOMI, lately appointed Japanese Consul at Fusan, left Kobe the 28th ultimo in the *Satsuma Maru*.

THE chief inspectors of police from various pre-

fectures, who had been staying in the capital, left the 31st ultimo for their respective posts.

A CHINESE resident at No. 157, Yokohama, is said to be making preparations to publish a Chinese journal.

MR. SENDA, Governor of Hiroshima Prefecture, who has been staying in the capital, left the 30th ultimo for Hiroshima.

THE British Admiral and a number of his officers have had the honour of being presented to His Majesty the Emperor.

MESSRS. SEKI, Hara, Tsuji, Nagao, and Kobayashi, have been appointed a committee in the Japan Educational Society.

ALL commanders of garrisons throughout the empire will arrive in the capital about the 20th instant to attend a conference.

MR. YOSHIKAWA, Vice-Minister of State for Home Affairs, arrived at Kanazawa the 23th ult. from an official tour in Nôshu.

A FINE steam launch of 8-horse-power, recently built at the Kawasaki Yard, has been purchased for the Kobe Post Office.

THEIR IMPERIAL HIGHNESSES PRINCE AND PRINCESS FUSHIMI, who had been staying at Atami, returned to the capital the 30th ultimo.

MR. KATO HIROYUKI, Senator, will give a lecture on science every Wednesday, in the Science Department, to the third term students.

MOST of the districts where cholera has prevailed have been officially declared free of the disease during the past ten days.

MESSRS. TECHOW and J. F. Lowder received Third and Fourth-class decorations respectively from the Emperor the 29th ultimo.

THE ceremony of conferring orders of merit on a number of civil and military officers took place 29th ultimo in the Imperial Palace.

DR. SAHEKI RICHIRO, an army surgeon, visited the palace the 29th ultimo, and was admitted to a farewell audience of H.I.M. the Emperor.

CHOLERA having entirely disappeared from Nagasaki, the restrictions on places of amusement and festivals have been removed.

THE late Japanese Minister to Russia and Mrs. Hanabusa, left the capital the 31st ultimo for Okayama, to worship at the ancestral tombs.

MR. NISHI NARINORI, President of the Tôkyô Court of Appeal, returned to the capital the 28th ultimo from a visit to various provincial courts.

THERE is a considerable demand in China for *saké*, particularly for that brewed at Nada, and every steamer now takes a large consignment.

MR. TAKAHASHI, Governor of Tôkyô, returned to the capital the 31st ultimo from Shiohara. It is stated that the governor has lately purchased

several lots of waste land near Shiohara with the intention of erecting a country residence thereon and reclaiming the land.

H.I.M. THE EMPRESS, who went the 28th ultimo to Kanayama in Gumma Prefecture, on a tour of pleasure, returned to the capital the 30th ultimo.

MR. SAITO SHUICHIRO, lately appointed counsellor, who has been ordered to visit European countries, left Yokohama the 30th ultimo in the *Oceanic*.

OWING to the small number of cholera patients in the capital, all hospitals will be closed the 15th instant, except one at Honjô, which will be kept open.

It is stated that the authorities contemplate erecting a fort at Tomagashima which will entirely command the channel that leads to Kobe.

It is stated that the Tokaido Railway will be completed from Kanagawa to Sakawagawa next year in time to open the line to the latter point in July.

THE steamers of the Nippon Yusen Kaisha plying between Nagasaki and Vladivostok and Tientsin are reported to be carrying full cargoes every voyage.

OVER 2,000,000 *yen* in *tempo*, stored in the Treasury godowns at Osaka, will be immediately sent to the Mint to be converted into modern bronze coins.

MR. SAWA, chief commissioner of the Record Bureau in the Home Office, has been appointed to take charge of the committee to investigate the Press Laws.

THE Cricket Match, Yokohama Club v. Navy and Tôkyô, was played on Wednesday, and resulted in favour of the combination by 17 runs on the first innings.

THE Yamashiro Tea Preparing Company is said to have made arrangements with the Nippon Yusen Kaisha for the carriage of its tea to America next season.

It is stated that Mr. Techow, who has received a third-class decoration, will leave Japan about the 18th or 19th instant for home, his term of service having expired.

In order to obtain a correct estimate of the flow of water in connection with the proposed Osaka Waterworks, gauges will be placed at Minoyama and six other places.

Mrs. MITSU MUXENITSU, lately appointed a Minister in reserve, will take up the business in the Administrative Bureau which has hitherto been conducted by Mr. Saito.

MR. ASADA SHINGORO, one of the suite of H.I.H. Prince Fushimi, was permitted the 29th ultimo to accept and wear decorations conferred on him by H.I.H. the Emperor of Austro-Hungary,

H.M. the King and Norway and Sweden H.M. the King of Belgium, and H.M. the King of Denmark.

THEIR IMPERIAL MAJESTIES THE EMPEROR AND EMPRESS left the Palace the 1st instant at 6 p.m. for Fukiage Park and witnessed a performance of Chiarini's Circus.

THE Finance Department notified, the 1st instant, that a drawing of yen 3,000,000 of the Seven per Cent. Pension Bonds will take place during this month.

MR. KATAOKA TOSHIKAZU, a Chamberlain of the Imperial Household, who went the other day to Akita Prefecture on official business, returned to the capital the 31st ultimo.

THE Tramway Company are now making preparations to construct a branch line from Kudan to Nihonbashi where it connects with the main line in front of Echigoya.

H.I.H. PRINCE ARISUGAWA, Commander in Chief of the Imperial Body-guards, who went the other day to Chiba Prefecture, returned to the capital the 27th ultimo.

THE estimated cost of the Kobe-Ikimeji railway is yen 173,250, and the work will be commenced so soon as a contractor can be found to undertake the work for that sum.

THE Osaka Shosen Kaisha being about to run a regular mail line to ports in the Inland Sea, eleven of their most powerful steamers have been selected for the service.

THE direct shipments of tea made by the producers of Shiga Ken having been entirely successful, they have resolved to engage in the business on an extensive scale.

It was recently reported that a site in Yamashiro for a branch of the Imperial University had been selected at Odano, in Kadono-gun, but the rumour is not confirmed.

MR. OYAMA TSUNASUKE, lately appointed private secretary to Count Inouye, removed the 1st instant, to the official residence in the Foreign Office hitherto occupied by Mr. Saito Shuichiro.

THE *Maya Kan* and *Akagi Kan*, which are in course of construction at the Onohama Ship-building Yard, will be attached to the third Admiralty Office at Guko, when they are completed.

VISCOUNT TANI, Minister of State for the Agricultural and Commercial Department, was permitted the 29th ultimo to accept and wear a first-class decoration conferred on him by H.I.M. the Czar.

PRINCE TOKUGAWA IESATO, accompanied by Mr. Mizoguchi, left the capital the 31st ultimo for Shizuoka to inquire after the health of his adopted father (the last Shogun of the Tokugawa line).

A BALL was given to the officers of the British squadron on Friday week, and the Admiral and officers gave a ball on Tuesday last. Both entertainments took place in the Public Hall, and were entirely successful.

As ordered to inspect, officers made the 1st instant, the total number of men and women at girls in Yamanashi, Chiba, and other places in the capital, was 160

and 46 respectively, against 369 women and 68 girls in April last, showing a decrease of 83 women and 22 girls since the latter month.

MESSRS. KATSUMADA, Governor of Aichi Prefecture, and Iwanura, Governor of Ishikawa Prefecture, who have been staying in the capital, left the 29th and 30th ultimo respectively for Aichi and Ishikawa.

COUNTESS ITO, and other ladies to the number of sixty, assembled at the Rokumei-kan, the 4th instant, to discuss the preliminary arrangements for holding a meeting of the Ladies Benevolent Society.

MR. ISEKI, a wealthy merchant in Hikone, Shiga Prefecture, left Yokohama, the 30th ultimo, for San Francisco, with the object of remaining abroad for six years in order to acquaint himself with the condition of trade.

MR. NISHIMURA SUTERO, chief commissioner of the Engineering Bureau in the Home Office, has been presented with a pair of flower vases by Government in recognition of his services while Governor of Okinawa Prefecture.

DURING February and March last, exports from Kobe were each month yen 438,900, and imports yen 579,000. In September the exports had nearly doubled, while the imports had decreased by over yen 25,000.

It is intimated from the Spanish *Charge d'Affaires* to the Foreign Office that, owing to the departure of Mr. Wolff, acting Spanish Consul at Yokohama, Mr. von Kreitner, Consul for Austro-Hungary, is authorized to succeed him.

H.B.M. MINISTER has intimated to the Foreign Office that during the absence of Mr. J. J. Enslic, H.B.M. Acting Consul at Nagasaki, who will shortly take one month's leave of absence, Mr. A. M. Chalmers will represent him.

It is intimated to the Hakodate Branch Board of the Hokkaido Administration that Mr. J. J. Quin, H.B.M. Consul at Hakodate, having left on the 22nd ultimo on a tour through neighbouring localities, during his absence the Consulate will be closed.

MR. YOSHIDA, Vice-Minister of the Agricultural and Commercial Department, will leave the capital about the 9th instant to attend the ceremony of conferring prizes at the competitive exhibition in Hiroshima Prefecture, which is fixed to take place the 14th instant.

REPRESENTATIVES of the residents of Yokkaichi have received permission from the Government to establish a Merchants' and Manufacturers' Association. Messrs. Yamagi, Tayaka, and Minowa were elected President and Vice-Presidents respectively at a meeting held the 24th ultimo. The members of the Association propose to start a commercial daily paper called the *Yokkaichi Shimpo*.

H.I.M. THE EMPEROR, accompanied by a number of officials of the Imperial Household, visited the Imperial University the morning of the 29th ultimo. His Majesty was received by Princes of the Blood, Mr. Watanabe, President, and other officers of the University, and after inspecting the institution, proceeded, under the guidance of Mr. Watanabe, to the Botanical Garden at Koto-Mataya, returning in the evening.

The Import market is unusually dull, dealers generally showing no inclination whatever to

operate. Sales of Yarns and Textile Fabrics have been exceedingly small, and the same may be said of Metals and Kerosene. Of the latter commodity, however, clearances have been satisfactory, and country dealers are reported to be short of Oil; holders are consequently firm, and look forward to extensive transactions and higher prices at no distant date. Sugar is slow of sale, though values are unaltered. Of Exports, Silk has seen a small and quiet business, the total not exceeding 300 bales, of which one-third has been for direct export, principally to America. From the latter quarter, however, the demand has ceased, and it is scarcely to be expected that European markets can continue much longer to pay the high prices—\$200 per picul over those of this time last season—demanded here. The supply continues to come in, and stock on the spot was never so large as at the present moment. Holders, however, with the assistance of the Japanese Banks, speak confidently of being able to maintain current rates. In Waste Silk the business has averaged 100 piculs per diem at full prices. The stock is heavy and constantly arriving, and dealers seem more inclined to hold on than to make concessions. Tea has only been sparingly dealt in, buyers' prices being one and two dollars per picul lower for the sorts on offer than the rates for which they are held, and the result has been a restricted business. Foreign Exchange is firm, though scarcely in sympathy with the latest alteration in the value of silver.

#### NOTES.

THE Third of November was this year blessed with Emperor's weather—very seldom, as last year, is the sky unpropitious. Owing to recent rains, however, the ground was soft, and the Hibiya Parade Ground was soon trampled into mud by the regiments of horse and foot marshalled there for the annual review on His Majesty's birthday. A few minutes after 8 o'clock H.E. Count Oyama, Minister of War, arrived in a carriage, and during the next half-hour the members of the diplomatic corps and Japanese of high rank gathered slowly. The German Minister and Consul were conspicuous on horseback in the brilliant uniforms of the Red and Blue Hussars, and the secretary in Blue Dragoon uniform; but the absence of the representatives of Great Britain, the United States, Russia, and Holland made the diplomatic attendance seem very meagre. About nine o'clock His Imperial Majesty arrived in a carriage and pair, accompanied by Prince Arisugawa, Prince Fushimi, and a considerable suite. Thereafter he proceeded to inspect the troops, who numbered about 8,000, and were under the command of General Miyoshi. The new uniforms of blue with yellow or red facings are noticeably a great improvement on the old. The inspection finished, with no other mishap than a runaway horse, the bands struck up the music for the march past. As the train of artillery was passing the Emperor, the wheel-horse of one of the limbers fell, and necessitated a divergence from the route on the part of the cavalry who were coming up. These last presented an admirable front, and did credit to their training. At the finish, shortly after half-past nine, His Majesty drove off.

HIS EXCELLENCY the Minister of State for Foreign Affairs and Countess Inouye gave one of the most brilliant entertainments ever witnessed in Tokyo at the Rokumei-kan,

on the 3rd instant, in commemoration of His Majesty the Emperor's birthday. The decoration of the building appears to have been entrusted entirely to Japanese taste, and we need scarcely say that the result was admirable. The spacious hall within the vestibule was converted into a garden of chrysanthemums, a profusion of these flowers being trained along trellises or massed in handsome pots and vases. To complete the delusion, clumps of richly boughed bamboos grew here and there among rockeries and deep beds of moss, while in charming contrast to their feathery foliage there stood, a little to the left of the main staircase, a guarded old trunk, covered with leafless branches bearing a profusion of red berries among which were perched numbers of bright plumaged birds. The balustrade of the main staircase was completely swathed in moss and wreathed with chrysanthemums, and a recess on the upper landing, in which the ladies' refreshment buffet stood, was converted into an arbour of wistaria. The decoration of the ball-room itself consisted chiefly of flag draperies, but a brilliant and picturesque effect was produced by clusters of electric lights suspended from floral wreaths with which the entire ceiling was festooned. From eight to nine hundred guests were present, including Princes of the Blood, all the high dignitaries of State from the Minister President downwards, the members of the Corps Diplomatique, numerous officers and officials of rank, and the principal foreign residents of Tôkyô and Yokohama. An exceptionally large number of Japanese ladies graced the scene, and it was very noticeable that among them all only two wore the costume of their country. These two were supported in their conservatism by the members of the Chinese Legation, including three ladies—a minority conspicuous by its exceeding smallness. It is plain that the die is cast. Those who have hitherto hoped against hope that the movement in favour of foreign costume might be arrested before it swept away the graceful and comfortable habiliments of the fair sex in Japan, must now resign themselves to the inevitable. The leaders of public thought have evidently made up their minds that a nation cannot possibly bestride the margin of Western civilization, but must stand either within it entirely or without it altogether. Perhaps they are right. At any rate, so far as this question of costume is concerned, there is some comfort in the fact that the ladies of Japan, in their manner of wearing it, begin to display all the versatility for which their race is remarkable. It was a subject of general comment at the ball of which we speak, that the incongruities which formerly discredited the introduction of the new style, had well nigh disappeared, and that the wearers of the imported costume had already learned how to lend to it something of their own peculiar grace and naturalness. Their Excellencies Counts Ito and Inouye may well have viewed with satisfaction this new evidence of the nation's ability and readiness to adapt itself to the reforms which they were not the least conspicuous in originating, and are still the most powerful to support.

M. CHIARINI and his troupe had the honour of performing before His Majesty the Emperor in the Imperial Park, Fukiage, on Monday afternoon. It had been understood for some time that this performance would take place, but it

was considerably deferred until the time came for the removal of the circus from Kanda, where it had been drawing large audiences for two months, to Tsujiki. By this device any interruption of the usual public performances was avoided. The tents were spread in the spacious manège of the Park, the only change in the arrangement of the interior being that a lofty rostrum was erected at one end of the principal tent for the accommodation of the Imperial Court. By His Majesty's command cards of invitation were issued to a large number of officials and officers of the army and navy, to the foreign employés of the Government, and to a few other persons. The general body of those invited had taken their places by 6.15 p.m., and at 6.30 punctually Their Majesties the Emperor and Empress, attended by Their Imperial Highnesses Prince and Princess Arisugawa, His Excellency the Minister President of State and Countess Ito, and by some other distinguished personages, entered the Imperial box. There were a considerable number of Japanese ladies present, and all—with the exception of a few ladies in waiting who wore the usual Court costume—were dressed in European style. The Empress was attired in a robe and mantle of black silk, the uniformity of her toilette being relieved only by a white ostrich feather in her hat. The costume became her admirably, and the grace and dignity with which she carried it were the subject of universal remark. The Emperor wore the undress uniform of the Imperial Guard, the only decoration on his breast being the star of the Chrysanthemum. In short, with the exception of the little group of ladies whose scarlet *hakama* furnished a bright point of colour, it would have been impossible for a casual visitor to guess that the scene before him was not European. Of the performance itself it is scarcely necessary to speak. The whole troupe exerted themselves to the utmost, and their efforts were again and again greeted with rounds of applause. Their Imperial Majesties were evidently interested in several of the feats, though they preserved throughout much of the unbending reserve prescribed by the traditional etiquette of Japanese Imperialism.

THE extraordinary story told by the survivors of the *Normanton* has naturally created a most painful sensation among the Japanese. The annals of the sea are rich in instances where chivalrous courage and a high sense of duty induced the commanders of vessels, their officers, and even common seamen to go down with their ships rather than make any attempt to save their own lives before the last of the passengers entrusted to their charge had been safely taken off. But happily there are few, if any, cases like that of the *Normanton*, where twenty-six officers and sailors rowed away from a sinking vessel leaving the whole of their passengers, twenty three in number, to perish helplessly. The ship, we are told, going full speed through thick darkness and heavy seas, struck amidships on a pinnacle rock and, crashing over it into fifteen fathoms of water, immediately began to fill. There were plenty of boats—more than enough to have saved every one. These were lowered at once without suffering any damage, and by the time they were in the water, the vessel had settled down. Then occurred the incredible incident which imparts such a shocking element to the tragedy. The passengers consisted of twenty-three Japanese. None of

them, it is said, could speak English, and there was no one among the crew who could communicate with them in their own language. These twenty-three persons, including three women, "huddled together in the alley-way, with the water washing fore and aft about them, and resisted all attempts to induce them to go into the boats." They were not paralysed by terror. It is not a trait of Japanese disposition to become helpless in the presence of danger, and, moreover, we are told that "they showed no signs of fear." What we have to believe is that they were visited by some access of strange infatuation, so unnatural and so unreasoning that they ceased to be able to recognise the danger of remaining by a ship which was rapidly settling down in the water, and from which the officers and crew were hastening to fly. It is declared that the captain and several of his men did everything in their power to shake this miraculous obstinacy. But all to no purpose. The twenty-three unfortunates remained unmoved and immovable although the condition of the vessel had become so perilous that the boatswain, who is said to have persisted longest in the endeavour to move them, was obliged to save himself by jumping overboard. Did this story fall within the range of human credulity, there would still be a heavy charge to prefer against the captain and his men. For if they found themselves unable to communicate by word of mouth with their passengers, for whose safety they were morally responsible, there still remained available to them twenty-six pairs of arms and hands to enforce an order on which depended the saving of many lives. Sailors are not usually delicate as to the methods they employ to effect their purpose, especially when life or death hangs on the issue. And although the tale needs no corollary to heighten its incredibility, there is still another very suggestive incident. The crew of the vessel numbered thirty-nine, all told. Among these were twelve firemen. Every one of the firemen was lost, and not one of the crew perished, except a man who fell overboard in the act of lowering the boats. It is asserted that three of these firemen died in the boats from exhaustion. It is hard to understand why sixteen hours in a well-manned boat, under no very exceptional conditions as to sea and weather, should have killed three men. But let that pass. The fate of the other nine firemen is the point. How came it that they alone of the crew went down with the sinking ship? If the captain and his officers really made so many efforts to shake the supernatural mood of their Japanese passengers, had they not also time, before flying from the vessel, to summon the firemen from below? And if they fled without waiting to summon their comrades, what becomes of that mysterious scene in the alley-way, where twenty-three placid Japanese resisted numerous attempts to save their lives, and resigned themselves without fear to the company of a sinking ship while boats that would have rescued them were vainly waiting to be occupied? There will be more heard of this affair, we hope. For the moment we can only wish that the *Normanton* had sailed under some other than a British flag. The Court at Kobe has acquitted her of blame, but, so far as the evidence now before us is concerned, this decision will scarcely be endorsed by public opinion.

LORD PENANCE, the champion of the F. Traders, does not acknowledge himself cru-

by the reply which his arguments elicited from Mr. Medley at the instance of the Cobden Club. On the contrary, he returns to the charge with renewed vigour in an essay recently published. His chief purpose in writing is to combat the contention that every importation of foreign goods into a country must be balanced by a corresponding exportation of that country's products. Every one knows that, so far as actual commodities are concerned, no such equilibrium exists in England's case, since she imports a great deal more of these than she exports. But Free Traders contend that appearances are deceptive in this matter. In modern times, they say, England has lent hundreds of millions sterling to foreign countries. It is not to be supposed for a moment that she lent these enormous sums in gold or silver. What she gave to foreign nations was the outcome of her factories; as machines, ships, railway plant, and so forth. In short, she exported the products of her labour, and foreign countries became her debtor to that extent. She is then in the position of a creditor receiving large annual sums of interest from abroad, and with this interest—which is virtually the price of previous exports—she pays for the apparent excess of her imports. In other words, there is equilibrium between the two branches of her trade. Lord Penzance does not deny that such is the case. He admits Mr. Medley's assertion, but claims that it only goes to support the argument of the Fair Traders, since, if England pays for her surplus imports with foreign securities, she is making these purchases out of her savings, out of her previously acquired wealth: in short, she does not procure her imports by the sale of her "current labour as embodied in manufactured goods," but by dissipating the wealth which former generations accumulated. It is strange that Lord Penzance should be blind to the retort which this contention of his will inevitably elicit. For if it is true that England made foreign countries her debtor, not by lending them gold and silver, but by selling to them the products of her labour, it must be equally true that they discharge the interest and principal of their obligations by similar means. In other words, they send to England for this purpose, not specie but produce or manufactured goods. The greater the quantity of such produce and goods, the more will British imports exceed British exports. But to say that England, by receiving these articles, dissipates her previous savings, is much as though one should assert that a King was dissipating the result of his military victories by receiving annual tribute from peoples whom he had conquered in war.

**THE Hongkong Daily Press** contains the following account of the prelude to another probable trouble between the British Local authorities and the Chinese:—

The celebrated seizure of the alleged pirate Chang Chi in this colony by Chinese seamen from a gunboat belonging to the Foochow Squadron, has been quickly followed by another case almost equally flagrant. A man named Fung Afung, an alleged district headman of the Triad Society, having been inveigled into a launch, was there seized and carried forcibly to Kowloon City. Fung Afung lives at To Kwa Wan, British Kowloon, near the Chinese border, and he carries on the business of a Chinese medical practitioner. He is believed to be the headman of the Triad Society in that district, and of so dangerous a character that a reward of \$500 has been offered by the Chinese authorities for his arrest for a considerable time. As, however, Fung was careful not to go over the border, the Chinese authorities did not care to violate soil, his arrest did not come off until a piece of

strategy was successfully played upon him on Sunday last. That morning a man went to him at his house and told him he had a friend very sick in Hongkong, and that he believed some famous pills Fung knew of would restore him to health. He did not know where to get them himself, and if Fung would come with him across to Hongkong, he would reward him handsomely for his trouble. Fung was completely taken in by this plausible ruse, and he at once agreed to come across to do this mission. He took the ferry launch from Hung Ham, and in Hongkong he procured his treacherous customer the pills so much desired. He then took the next launch back, which happened to be one of Tok Kee's ferries, which ply between Hongkong, Hung Ham, and Kowloon City, and he did not gather the fact that among the many passengers on board the launch were a number of Chinese soldiers in plain clothes.

In the ordinary course of events the launch should have proceeded first to Hung Ham, but owing to instructions from the Kowloon City soldiers, she made direct for that town. As soon as Fung saw what was taking place he at once had great misgivings, as he knew his life was not worth much if he landed there, and as the launch passed the point at the Docks he made a bold bid for freedom. He sprang over the side, but unfortunately for him there was a sampan passing, and this being hailed from the launch, went in pursuit of him, and those on board seized him before he could make the shore. They brought him back to the launch, where he was put in the cabin below, and kept there till the launch was alongside the stone wharf at Kowloon City. The authorities there took charge of him, and he is now a prisoner there, with every chance of losing his head unless the British authorities succeed in rescuing him. Such an open act in the presence of a crowd of passengers could not long fail to reach the ears of the Authorities of this colony. It happened that there was on board this launch a coolie employed at the Hung Ham Police Station, and when the launch put back to land the passengers who ought to have been dropped there before, he at once gave information to the Police here, who conveyed the intelligence across the water without delay. There is no doubt about the man's arrest, and small chance of any inaccuracy as to the way he was seized, as Police Inspector Perry was over at Kowloon City the next day, and the Mandarin in charge there informed him that he had arrested the man Fung. He stated, however, that the man was merely arrested at the stone wharf there, having been seen to land from the ferry launch. Of course the man could not have got there by fair means, as Kowloon City is the last place he would think of going to of his own free will, and then there remains the jump overboard and the subsequent arrest and forcible detention in the cabin, besides the instructions the master of the launch received to go direct to Kowloon. All this was witnessed by a great number of passengers, and it is impossible to doubt the truth of the story. The master of the launch also corroborates, for he states, as an excuse for his share in the matter, that he was powerless with the soldiers on board, and had no option but to obey their commands.

THE question of Freight Rings and the injurious effect they exercise upon commerce by keeping up the cost of transportation, is beginning to attract serious attention in England. The London *Economist* writes strongly on the subject, and its article has elicited a letter from a city merchant who delivers himself of the following opinions:—

You charge merchants with conferring the power of injury by their supineness and shortsightedness.

I do not know how far this charge may be true in regard to the Australian and Indian trades. Without admitting its correctness as applied to merchants connected with the China, Japan, and Straits business, I venture to point out that there is also to be contended against the powerful elements of self-interest, arising from the remuneration and advantages secured by merchants who act as agents in the Eastern ports for certain lines of steamers in the ring.

These merchants are some of the largest shippers in the Eastern trade, and as they co-operate with the ring, the difficulty of successful opposition is vastly increased. And something more than supineness and shortsightedness has to be overcome. Some three or four years ago, certain merchants connected with China, feeling pressure, started a company, called the "China Shippers' Mutual Steam Navigation Company, Limited," to build steamers to run, it was understood, in the interests of merchants as opposed to those of shipowners. I fear, however, it will now be found that the interests as shipowners of those concerned have got the better of their interests as merchants, and that this line, if not actually in the conference, has been and is working in entire accord with it.

As to the Peninsular and Oriental Company, would it put them in any way right if the directors, in reply to your challenge for information as the alleged guarantee fund, were to affirm that the company is not one of the guarantors? Surely not when the company is in the ring, even if it be not guaranteed. And what excuse is sought to be made on behalf of the ring?—that freights, owing to competition, were so low as to be unremunerative. But this is a condition of business which is, unfortunately, not confined to steamship owning, nor in that business to Australian, Indian, and Eastern lines.

But in regard to these Eastern lines, does it not arise because most steamers owned by some, if not all, of the concerns working in combination are old-fashioned, expensive, in their first cost as compared with present prices, poor carriers, and comparatively large coal consumers. That is where the shoe pinches. And those in these rings want to exact from the commerce of this country such higher

freights as will enable them to run unsuitable vessels, which could not live in competition with the much cheaper and more suitable steamers of the present day, furnished with triple expansion engines and other improvements.

THE New York *Nation* has a pretty article on dreams. The writer sets out with the hypothesis that "the larger number are but ungoverned thoughts that have escaped from the guidance of the slumbering will"; and adds that "the course of these wild fancies often brings a revelation of our inmost selves; the ways along which rush these steeds of our imagination often indicate the lines of our spiritual life." As cases in point he mentions the well-known dreams of Wordsworth and George Sand. Wordsworth, especially when he was in London, dreamed repeatedly that he was a large bird "soaring and floating where he would"; and that his chief exhilaration consisted in soaring above the other birds which surrounded him. George Sand, from her tenderest to her maturest years, used to have repeated visions of a boat full of dulcet-voiced friends with whom she floated over azure seas to some unknown shore of enchanted loveliness. It will be observed that in the cases of both these celebrities the sensation of floating was predominant; a sensation which medical men are wont to associate with defective digestion. Perhaps less poetic folks would have dreamed of drifting over precipices or sliding down banisters. We remember hearing of a metaphysician who drew terrible deductions as to the futher career of a small boy who was perpetually tormented with a dream of living in a rat-hole and sharing his couch with the dirty rodents. After the child's parents had been rendered unhappy by the predictions of the wise man, it was discovered that one or more rats had actually been in the habit of travelling over the poor child's face in their nightly peregrinations. Steps were taken to alter their route, and the fell vision returned no more. We wonder whether the ways along which rushed these steeds of the small boy's imagination indicated the lines of his spiritual life.

A TREMENDOUS journalistic contest is impending in New York. The *Times*, of that city, as every one knows, has sent an expedition to explore Alaska. The expedition has already discovered, or professes to have discovered, a river, a lake, and three glaciers. The river is horribly muddy. In fact mud is its chief characteristic. But the leaders of the expedition, more enthusiastic than judicious, christened this dirty stream "the Jones River," after Mr. George Jones, editor of the *Times*. Imagine the cordiality of such an invitation to jealous and malicious rival journalists! They frankly admit the appositeness of the epithet, but insist that the river was previously known as a mark on a twenty-year old map. Probably they added that Mr. Jones, too, only existed as a mark on paper until his injudicious flatterers began to call attention to his remarkable mud-diness. If they did not say this they said something scarcely less disagreeable; namely, that in the case of the editor of the *Times* "the calculated malice of splenetic age had been succeeded by the extempore lying of bumptious youth." The *Nation* justly observes of this controversy:—"When such differences as this occur on the discovery of the very first river and lake, one asks with a shudder: Where shall we be when the *Times* has filled up its map with other geographical finds?"

FRIENDS of Professor J. A. Ewing, late of Tōkyō University, will remember that his appointment to the chair of Engineering in University College, Dundee, was the immediate cause of his leaving Japan. This institution, founded by the munificence of the late Miss Baxter, is now in the fourth year of its existence, and seems to enjoy a large share of popular favour. For the benefit of the mercantile and working classes of the city, evening classes are made a prominent feature of the college work. There are courses in Mathematics, Natural Philosophy, Chemistry, Engineering, Biology, Classics and Ancient History, English Literature and Modern History, French and Political Economy. Lectureships are to be founded in Fine Art, Education, Law, and other subjects, there being one already in Logic. Attendance on the science classes qualifies for the science degree at St. Andrew's University, without attendance at the University itself. Dundee youths who cannot afford to leave the city are thus enabled to obtain a degree from a teaching University, and are drawn away from the London University local examinations. In every way, as, for, instance by Saturday classes for teachers and those unable to attend on other days, the resources of this excellent college are being developed to their fullest extent.

HIS IMPERIAL MAJESTY'S visit to the University came off the morning of the 29th. The students of the University, numbering close on 600, lined the street outside of the large iron gate at Kaga Yashiki, by which His Majesty was to enter. Within the gate on both sides of the path, were stationed the professors and higher officials of the University. Their Excellencies Count Oyama, Mr. Mori, and Mr. Watanabe, the President, along with Messrs. Kanda, Teuji, and other gentlemen of high official position, were in waiting at the doorway. His Majesty, arriving about 9.15 a.m., first held an audience in the President's room for Professors and others of *Sonin* rank. Thereafter he visited the Colleges in succession, commencing with the Physical Institutes of the Science College. Professors Yamagawa and Knott had prepared several interesting experiments in light, electricity, and magnetism, which were being carried on by the students of the Physical Laboratory. His Majesty then proceeded to the Chemistry Laboratory, where Dr. Divers and Professor Sakurai showed him the results of several experiments they had been engaged with on the ash of beef and rice and on other substances. A visit to the department of Sanitary Science was followed by an inspection of the dormitories, where a considerable time was spent. The next place visited was the Seismological Laboratory, where Professor Sekiya exhibited a very complete set of appliances for recording and measuring earthquakes. In the Physiological, Anatomical, and Pathological departments, which were visited in succession, instruments, diagrams, and specimens of a typical nature had been carefully arranged. The same was true of the Biological Institutes, to whose bright airy rooms His Majesty next proceeded. Beginning at the Botanical end, where herbariums, specimens, and microscopic preparations were displayed by Professor Yatabe, the Imperial party passed through the Geological and Mineralogical section to the portion devoted to the Zoologists. Geological maps of China, Japan, and Korea, microscopes, goniometers, and all

the necessary implements of the Petrologist and Mineralogist, and fine specimens of natural crystals, among which magnificent rods of Japanese stibnite were specially noticeable, adorned the walls and tables. The naturalists had, besides the obvious museum specimens of animals, a good assortment of the instruments and chemicals necessary for the scientific study of life forms. An elaborate section-cutting instrument was shown in full working order, cutting fine microscopic sections of an embryo chick. Leaving the Biological Laboratories, His Majesty crossed over to the Clinical and Surgical lecture-rooms, which occupy the same building as certain of the Hospital wards. So far, the buildings visited, though light, airy, and serviceable, had been all of a temporary kind. Indeed, a few months more will see the Chemical Laboratories transferred to handsome new brick premises. But the Law and Literature Colleges of the University have for some time occupied an admirably planned and handsome brick edifice, after designs by Mr. Conder, in the upper rooms of which the Library is at present housed. This was now visited, the Emperor entering in succession the lecture-rooms of Professor Hozumi, who is a barrister of the Inner Temple, Dr. Rathgen, who was lecturing on Constitutional Law, Professor Toyama, who was lecturing on Psychology, and Professor Dixon, who was lecturing on English Literature. After an inspection of the Library His Majesty drove off about noon to the Botanic Gardens of the University which are situated in Koishikawa. The Engineering College at Torano-mon was not visited. A new building in the Tudor style, after designs by Professor Tatsuno, is now in course of erection in Kaga Yashiki, close to the Oji road, on a site formerly occupied by the houses of professors.

According to the evidence collected by the Royal Commission on Trade Depression it appears that there is one radical reason for Germany's successful competition with Great Britain in the item of iron. That reason is that the ores used in Germany are better adapted to the basic process than the ores used in England. Mr. W. A. Donaldson, when examined by the Commission, explained that in Germany they mix Spanish ore with German ore, and thus produce a class of iron which competes with the Scotch metal in their own markets though not abroad. From this iron, however, by the Bessemer process rails are manufactured which are largely exported to Canada, India and Australia. This is an important point, as showing that some of the causes of the decrease in the bulk of England's iron trade are not at present within the control of capital or industry.

The same Mr. Donaldson made another interesting statement. The year 1882 was exceptionally prosperous for those engaged in the iron business in Great Britain. A large volume of trade was done, and in spite of a brisk demand prices remained at a point which encouraged consumption. This happy conjuncture was referred by Mr. Donaldson to the fact that considerable quantities of foreign hematite ore were imported and the manufactures had at their disposal an ample supply of material at low rates. Had it been necessary to procure the same quantity of iron from the English mines, the price of labour would have risen at once, and either production would have been checked or the cost of the ore would have

prohibited profitable manufacture. This is a striking illustration of the wholesome working of free trade.

What is even more interesting is that Spanish mine-owners are beginning to show symptoms of the insatiation which wrecked the prospects of the owner of the golden-egg goose. We find the following in a home exchange:—"A meeting of the principal iron-ore mine-owners in Spain was held last week at Bilbao to consider the desirability of forming an association with a view to regulate the price of iron ore. A committee was appointed to discuss the details and draw up a basis on which to proceed. It is understood that the meeting, which was called by the owners of the three largest ironworks in Bilbao, was enthusiastic and unanimous." Combinations of this sort will do more than anything else to restore the British iron trade to its old position of supremacy.

THE *Fiji Shimpō* publishes the following special letter from its Sōul correspondent, dated September 24th:—There are several standpoints from which the relations between Korea and Russia, can be viewed,—geographical, commercial, and historical. I shall here confine myself to the question of the conclusion of a secret treaty between the two countries. It is now many years since Russia directed her attention to the north of Korea, and during this time the inhabitants of Kankyōdō have been constantly crossing the border into Russian territory, where they have been naturalized. Recently the people on both sides of the frontier have been on terms of close intercourse with one another. The road by means of which communication is established is across the Tomanko, and it is along this route that the Tai Wōn-kun, while he was Regent, sent several Koreans to Vladivostock to study mechanics. The Russian and English interpreters in the foreign legations at Sōul are mostly from Kankyōdō. Mr. Cho Hak, secretary of the Literary Bureau, and Mr. Kin Kaku-u, a secretary of the Department of Home Affairs, were among the students sent to Vladivostock. Apropos of Mr. Kim, that gentleman is said to be in hiding in this city. Since China began to interfere in Korean affairs, there has arisen a party advocating principles of independence. This spirit of independence was supplied from two sources; one source being Japanese, which culminated in the *Emule* of Kim Yo-kun in 1884, and the other, Russian, which came through the inhabitants of Kankyōdō. The rise of the Loyalist and Independent parties dates from the latter portion of 1883 and the beginning of 1884, when the rupture between China and France was becoming more and more decided. At this time when the principles of independence were loudly advocated, most people were inclined to rely on Japan. The people from Kankyōdō had little influence, but they endeavoured from about the middle of 1884 to gain assistance from Russia by angling for the favour of courtiers and such statesmen as Kan Kei-shok and Ji So-en. They followed the lead of Kyō and Kim Kei-ko. About this time the *coup d'état* of Kim Yo-kun took place. After Kim's disturbance, it was feared by the King and the Min family that Japan and China might come to blows in this quarter. At this critical moment, a Russian naval officer entered Sōul through the assistance of a native of Kankyōdō. Kim Yogen accompanied this Russian to Vla-

divostock and there concluded the so-called "secret treaty." The Korean Government was then in the hands of Mr. Kim Jôshok, but the King, knowing that this Minister would not consent to any such policy, entrusted the matter to Möllendorff. The conclusion of a secret treaty is a fact, but there exists no documentary evidence of it except correspondence. The carrying into effect of this secret treaty was expressly stipulated to refer to the event of a rupture between Japan and China, so that the conclusion of the Tientsin Treaty of April, 1885, rendered it ineffective. In July last, Russia despatched Mr. de Speyer to carry out the provisions of the treaty, but the matter ended instead in its abrogation. While Mr. de Speyer was still here, a member of the Eastern faction, Chô Chôki, secretly informed the Chinese Consul, Mr. Chin Yoto, of the existence of the secret treaty. Li Hung-chang was also made acquainted with the news, in reference to which he was very indignant. Mr. Möllendorff was recalled, and Chô Chôki and Kim Yo-gen were sentenced to exile. Of the secret treaty, not a word of remonstrance was sent to Russia, and China had seemed to have entirely forgotten everything connected with it, when her representative, Yuen lately surprised the King and others by again bringing it to public notice. The opinions of the home papers seem to differ very much on this topic, some asserting that the existence of a secret treaty was a fact and some that it was not, while still others go so far as to say that the treaty still exists. I have narrated the true story of it for the information of the your readers.

There have been lively scenes at the Tôkyô Stock Exchange. Lively, indeed, is not a sufficiently expressive epithet. The vernacular press, with a consensus which is more than suggestive, employs the term "boiling" to describe the condition of the meeting at which the complications culminated. The seeds of the trouble appear to have been sowed last July. A profit of about sixty thousand yen had been realized by transactions in public loan bonds, and a question arose as to the disposition of this sum. One party advocated its employment for the payment of dividend; another proposed that it should be carried to the reserve fund. After a somewhat animated discussion, the former carried the day, to the great dissatisfaction of their opponents, who thenceforth applied themselves diligently to acquiring such a number of shares as would enable them to command a majority of votes. Having accomplished this end, as they calculated, they called for an extraordinary general meeting, which was held on the 17th ultimo. The leader of the malcontents was Mr. Saito Kôji, and with him were forty-two shareholders. The allegation advanced by this party was that the officials of the Exchange had been guilty of improper practices in connection with depositing the funds of the Exchange in certain banks. The discussion commenced at 11 a.m. and the meeting remained in session until 8 p.m. Not the least curious part of the affair was that the controversy turned chiefly upon the obstinate resolve of the malcontents not to divulge the particulars of the charge which they preferred. They held that accurate disclosures would injure the credit of certain banks and might unfairly damage the reputation of some of the Exchange officials. Their opponents, on the other hand, employed every device of dis-

cussion to overcome this resolve. Iterated calls for information, taunts, jibes, and every variety of pressure failed, however, to break down the determined attitude of the forty-two, who, it appears, had pledged themselves beforehand not to be betrayed into particularizing. The reports nevertheless say that Mr. Saito twice lost his sang-froid and was on the verge of overstepping the preconcerted bounds when the timely intervention of Mr. Fukuchi, editor of the *Nichi Nichi Shimbun*, restored the position. The tact and perseverance of the forty-two at last won the day. The majority of those present at the meeting expressed themselves satisfied that the charges of the impeaching party, even in the absence of details, were sufficient to warrant action. It was decided that a new President and managers should be elected. The voting resulted in the choice of Mr. Kôno as manager, and Messrs. Matsuguma, Yokoi, Komatsu, and Matsubayashi as Managers. Mr. Kôno, who was for some time Minister of Education and afterwards of Agriculture and Commerce, on accepting the office of President spoke emphatically with regard to the necessity of improving the character of the Exchange. Of the Managers, Mr. Matsubayashi was subsequently found to be disqualified, as the thirty shares entered in his name were not his own property.

The *Fiji Shimpô*, in a leading article, discusses the results of this extraordinary general meeting and expresses great satisfaction at the election of Mr. Kôno as President. The *Fiji* justly argues that the connection of such a name with commercial enterprise, especially as President of the Stock Exchange, indicates that the status of the mercantile class in Japan is undergoing a great change for the better. Meanwhile, these occurrences seem to have attracted the attention of the authorities, and there is talk of abolishing the Stock Exchange and establishing in its place a Bourse on European models. Many journalistic comments have been evoked by the rumours of this scheme.

The solemn farce of the surrender of the reins of government by the Empress of China to the youthful heir, and their virtual resumption by Her Majesty at the request of her loyal councillors, is completed by the following Rescript which the *North China Herald* translates from the *Peking Gazette*:

July 19th.—(1) Prince Ch'un has presented a Memorial expressing more his humble desire and imploring that We will constrain Ourselves to consent to direct the Government; Prince Li and others have addressed to Us an earnest prayer that We will direct the Government for some years. Hsi chên and others represent that, in view of the present state of affairs, the Emperor's assumption of the Government should be postponed for a time; and Kuei-tsen calls attention to the exceeding gravity of the matters involved in the Emperor's assumption of the Government of the country. All these Memorials We have carefully perused.

Throughout history the regency of an Empress has ever been an exceptional matter. If it be not conducted with care, as the annals of the country show, many abuses will arise and spread. The Emperor's period of pupillage being accomplished, We issued a decree stating that the time had arrived and We should give over the reins of Government. So to do had during ten years and more been the most earnest desire within Our breast. This should be known to all Our subjects, officials and private persons. Therefore on the 14th day of the moon (July 1-th) We declined to listen to the joint prayers of Our Princes and ministers.

During the last few days the Emperor on the occasion of his morning and evening visits to Us, with the utmost sincerity of heart and language has constantly prayed that our loving instruction may be continued to him for his guidance. Our Princes and ministers in their Memorials have time and again dwelt on the difficulties now besetting the State and the gravity of a road military and civil administration. Prince Ch'un adds to his Memorial an earnest prayer that We will think of the Temple of the Dynasty and give comfort to the Spirits of Our predecessors.

As We looked again and through these Memorials Our

mind was filled with deep awe. In the present moment of national difficulty, the rectification of fundamental rules requires that a hundred neglected points should receive proper attention. In order that the Emperor, when he first assumes the reins, may be able to make up his mind and determine his plans, we cannot refuse to guide him where affairs require it, so that everything may be done with thoroughness and completeness. Therefore, having been repeatedly implored by the Princes and ministers, we dare not insist on doing what would be right as regards Ourselves in opposition to the expressed desire of the whole nation. We are thus constrained to give Our consent. When the Emperor undertakes the administration of the Government We will still continue to direct his action for some years. It is Our confident hope that you, the servants of the State, both high and low, will not fail with loyal hearts and earnest efforts to give your assistance in rectifying whatever is wrong till the perfection of Government is attained.

Mr. J. A. Froude, in his recent work "Oceana," while speaking in glowing terms of the natural beauty and great capabilities of New Zealand, gave no favourable account of its present condition. The Government of the islands, instead of encouraging immigration and offering every inducement to an agricultural population to settle on new land, was running into debt to provide for the inhabitants of the towns, already too crowded. The pick-axe and the spade, in place of breaking up virgin soil in the rich valleys and plains, were employed, at Government expense, on such needless and unremunerative work as the enlargement of the harbour at Auckland. A graving-dock that is to be the biggest in the world was also in process of construction there. And this for a population of half a million! The loans so readily taken up in London were thus fostering a town population, who enjoyed their workman's paradise of short hours and high wages. They shrank from the hard and solitary life of the settler, so necessary to the development of the country, and in the end so much better for themselves. A black outlook was ahead, for the country was living beyond the natural means at its command. Recent events go to corroborate the truth of Mr. Froude's assertions. On July 8th, 200 workmen held a meeting, and resolved to ask the Government for work, that their wives and children might be saved from starving. Again on the 17th July, we find the local papers stating that no less than 390 men, not including the above-mentioned 200, are engaged in the relief works which were provided at Dunedin for the benefit of the unemployed. This appearance of the unemployed seems strange in a new country where we should expect to find not the old troubles between capital and labour, but rather small proprietors, each working his own farm. The population of the colony is actually decreasing. According to official returns, 1,183 immigrants arrived during last June, as against 1,544 departures.

The following is from the *Fiji Shimpô*:—Financiers in the West are chiefly concerned with the question of distribution, while in this country they bestow their attention mostly on production. In the West capital is abundant, and private individuals do not need the interference of the Government in industrial affairs; but here in Japan capitalists of enterprise are as yet few in number, and the State has accordingly to assume the function of industrial production. We deeply regret that the condition of civilization in this country so widely different from that in the West, as to necessitate such action on the part of our financiers. But for the future, we earnestly hope that the Government will let the people alone, and, leaving them to show their own skill and enterprise in industrial affairs, devote itself to the promotion of an impartial distribution of wealth.

Those who have been able to lay their hands on the official vines have sucked the juices of protection, but less fortunate people had to suffer on that very account. It is fortunate, however, that thus far these iniquities have been confined to the native population alone, and that few complaints have been made by foreigners. But in future, the Government will have to take account of foreigners as well as Japanese, in the event of the opening of the country for mixed residence. Moreover, it is amply proved by past experience that the protégés of the Government seldom succeed in business. We therefore hope that the Government will no longer interfere in productive industries, but will confine its attention to the question of an equitable distribution of commodities and money.

The telegram which we publish in this issue with regard to affairs in the Balkan peninsula shows that a dangerous crisis has barely been tided over. Briefly speaking, the situation in Bulgaria at the date of our latest detailed telegrams (October 9th) was this; that Russia, through her agent General Kaulbars, was employing every means of passing over the heads of the Regency, into whose hands the reins of government had fallen after the abdication of Prince Alexander. With this object she required that the election of the Prince's successor should be made by the whole Bulgarian nation without distinction of political parties, and that the election should not take place until after the lapse of an interval sufficient to allow the public excitement to calm down. The Regency, on the other hand, desired to proceed with the election at once, while the conspirators who had forcibly abducted Prince Alexander were still lying in prison, and while a state of siege existed. In pursuance of this purpose, circulars were posted by the Regency, at the end of September, fixing an early date for the election of the Grand Sobranje, by which the Prince's successor should be chosen. General Kaulbars threatened to have these circulars removed, but our information does not say whether he actually caused such a violent measure to be taken. What he certainly did was to present to the Regency a note formulating three demands: first that the state of siege should be immediately raised, as no truly representative election could take place under such circumstances; secondly, that the elections should be postponed until November; and thirdly, that the persons charged with Alexander's abduction should be immediately released. With the first of these demands the Regency signified its willingness to comply, but to the other two it emphatically declined to yield. In other words, the Regency refused to take a step amounting to a virtual approval of the illegal conspiracy to which Prince Alexander had fallen a victim. To take such a step at Russian dictation would have been to proclaim to the people—that is, to the intending electors—that all hope of Bulgarian independence was abandoned. Confronted by this firm attitude on the part of the Regency, General Kaulbars made a species of direct appeal, or, to speak more accurately, addressed a direct menace, to the people. Through the Russian Consuls in Bulgaria he sent a strong circular for communication to the people. In this document he declared that the time for mere words had passed; that acts alone could convince Russia; that the Czar could not allow Bulgaria to try the abductors of Prince Alexander; and

that the Bulgarians had been guilty of a breach of discipline in burning flags and insignia of St. George. The effect of this circular was to aggravate the situation. The agents employed by the Russian Consulate in Sofia to distribute the document were seized and beaten; an important deputation, consisting of 114 of the principal citizens, waited on Kaulbars and endeavoured, unsuccessfully, to induce him to withdraw or modify the circular; and the Council of Bulgarian Ministers was confirmed in its resolution to withstand the Russian demands. It was at this period (September 30th) of highly strained relations that Prime Minister Tisza made an outspoken declaration in the Hungarian Parliament to the effect that no agreement whatever existed between Austro-Hungary and Russia with regard to the exertion of their respective influence in the Balkan States; that the former desired Bulgarian independence, and that armed interference by any single power would not be allowed. Lord Randolph Churchill quickly followed with an unmistakable intimation that England did not propose to remain quiet in the event of armed interference by Russia in the Balkan Peninsula. Meanwhile General Kaulbars was pressing for a reply to the note which he had addressed to the Bulgarian Regency. He received an answer, October 2nd, promising compliance provided that the independence of Bulgaria was formally guaranteed. The Russian representative met this stroke of diplomacy by a tour through Bulgaria and a direct appeal to the people of the various towns. At the same time—early in October—rumours were circulated in St. Petersburg to the effect that the Roumanian army had declared in favour of Russia, and had even gone so far as to urge upon the Bulgarian Regency the necessity of accepting Kaulbars' terms in order to avoid a breach between Bulgaria and Roumania. How much of this report was true we have no means of judging, but it certainly did not induce the Regency to postpone the election of Prince Alexander's successor. A Russian nominee was chosen by the Grand Sobranje on the 13th of October. An attempt still seems to have been made to resist Russia's demands with regard to the release of the political prisoners. But here too Bulgaria has finally been obliged to yield in the face of a menace which amounts to an open declaration on Russia's part that she has no intention whatsoever of being inconveniently bound by the Treaty of Berlin.

HIS MAJESTY THE EMPEROR was graciously pleased to receive in audience at the Akasaka Palace on Tuesday, Vice-Admiral R. Vesey Hamilton, C.B., Commander-in-Chief of the British squadron on the China and Japan station. Admiral Hamilton was accompanied by the following officers:—Captain R. H. Harris, Captain L. C. Keppel, Captain M. J. Dunlop, Captain S. P. Dacres, Commander Bromley, Lieutenant Leah, Flag-Lieutenant Knayton, and Mr. Ross-Lewin, Chaplain. The Admiral and officers were presented to His Majesty by H.M. Minister the Hon. Sir Francis Plunkett, K.C.M.G.

We take the following interesting note from the New York *Nation*:—The Congregation of the Inquisition at Rome has just issued a decree that has created a great sensation in Belgium, forbidding Catholic judges to grant divorces to

Catholic suitors. There has been a divorce law in force in Belgium since 1803, and it has been administered under six different Popes without interference. Moreover, Leo XIII. passed three years at Brussels as Papal Nuncio, and witnessed its operation. His allowing the issue of this decree by the Inquisition is, therefore, looked on now as signifying in some degree the triumph of the Jesuit reactionists at the Vatican, and it promises a renewal of the bitter war between the Liberals and the clergy in Belgium. It probably means that the declining health of the Pope creates increased difficulty in resisting what our Presidents know so much about—"pressure." The pressure of the reactionists is constant, while the power of resistance varies greatly in different men and at different periods of life. The persons whom the decree will most perplex, however, are the Catholic judges. They have sworn already to administer the law, and have been administering it without scruple or hindrance from ecclesiastical authorities. They must administer still or resign. It will be interesting to see how many will do so; that is, how many will risk eternal damnation in order to keep their places. It seems rather hard on them, too, to be singled out for restrictions which are not imposed on their French, or English, or American brethren. The English or American judges could escape by leaving divorce cases to their Protestant brethren, but in Belgium the judges are all Catholic and generally pious.

THE following appears in *The Times* on the subject of Chinese coolies:—

The Anti-Slavery Society having learnt that the Spanish Government were contemplating the renewal of Chinese immigration into Cuba, immediately took steps to warn the Chinese Minister in England against such renewal, and in reply to a letter on the subject received the following:—"Chinese Legation, July 22, 1886. Sir,—Allow me, through you, to offer to the committee of the Anti-Slavery Society my best thanks for their letter of the 16th instant drawing my attention to the endeavour which the Spanish Government is said to be making in order to renew negotiations with China for the purpose of promoting the emigration of Chinese labourers into Cuba, and urging the advisability of the Chinese Government declining to sanction any scheme of emigration which would not provide ample guarantees for the good treatment and perfect independence of intending emigrants. Though the Chinese Government, thanks to the representations of your society, is now thoroughly alive to the abuse to which contract labour is liable, and little likely to overlook the necessity of taking measures to prevent its subjects from proceeding to foreign countries under conditions which would deprive them of their liberty of action on their arrival. I shall not fail to bring your communication to the notice of the proper authorities and counsel them to renewed vigilance. Be so good as to offer to the committee my sincere thanks for the courteous terms in which they have been pleased to refer to my exertions on behalf of my countrymen during my residence at this Court, and also to express to the committee my gratitude to them for the never-falling interest they have taken in the welfare of Chinese subjects inhabiting Peru, Cuba, and other places. I have the honour to be, Sir, your most obedient servant, Tseng.—The secretary of the Anti-Slavery Society."

It is said that the scenes which occurred in the House of Commons on the last days of the debate on Parnell's anti-eviction Bill were but very faintly depicted in the published reports. The tactics of obstruction were openly pursued by the Irish members with a degree of effrontery hitherto unparalleled. Parnell himself seems to have shrunk from associating himself with conduct which he could neither sanction nor restrain. He absented himself from the House for several days, and in his absence every vote of the estimates was discussed *ad nauseam*, the Irish members speaking forty times at a single sitting. This conduct disgusted many of the

Original from

Gladstonians. They characterized it as "a degrading orgie of obstruction," and it was evident that the ties of alliance which bound them to the Irish cause were strained almost to snapping. Long-winded speeches and frivolous arguments were not the only weapons employed by the Parnellites. They did not even make a pretence of debating seriously, but indulged freely in shouts and jeers, with cries of "You shan't do any English business;" "We are only beginning this game;" "You will have to knuckle down," and so forth. The Government, meanwhile, appear to have purposely refrained from any attempt to check the obstruction. One or two half-hearted appeals were indeed made to the better feeling of the obstructionists, but on the whole it was easy to see that the Conservatives had adopted the policy of giving the Irishmen rope, and letting them show the county what obstruction in its ugliest guise means. The present outlook is that the union between the Gladstonians and Parnellites cannot hold, and that Government will be in a position, at the next session of Parliament, to ask for and receive almost any powers within the limits of reason.

An entertainment was given on Tuesday at the Seamen's Mission Rooms to the members of the temperance societies on board H.B.M. ships now in harbour, and their friends. About 250 seamen were present, besides a number of friends of temperance work resident here. The chair was occupied by the Rev. R. Ross-Lewin of the *Audacious*. The proceedings commenced by the men partaking of a substantial tea, kindly provided by the missionary and other ladies of Yokohama. The Chairman, in a few well chosen words, pointed out the benefits to all classes from total abstinence from intoxicating liquor, but specially amongst men in "the Service." Addresses on the same subject were given by Messrs. J. A. Thomson and Unstey. The evening was enlivened by songs, readings, and recitations by Miss Crosby, Miss Ballagh, Mr. Robt. Thomson, and a number of men from the different ships. Mrs. MacArthur presided at the organ. A most enjoyable evening was brought to a close by the Chairman proposing a hearty vote of thanks to the ladies for providing the tea, to those who had contributed to make the evening enjoyable by singing, etc., and to Mr. J. A. Thomson for organizing the meeting. This was done by three lusty cheers. Mr. Edwards then proposed a vote of thanks to the Chairman, and the meeting closed by singing "God Save the Queen."

THE Rev. R. Henry Davis depicts the field of his missionary labours at Niigata in colours which cannot fail to give prominence to any success he may achieve there. Here is what he says on the subject in the *Christian Mirror* :—

As near as I can judge, not less than seven-tenths of the so called educated class are atheists and materialists—and the masses are steeped in ignorance and prejudices. Or to put it in another way—this province is the stronghold of Buddhism and the recruiting ground for the houses of ill-fame of all northern and central Japan. Respectable merchants often sell their daughters to lives of shame. In fact, the people seem to be made up in about equal proportions of the three following motives,—politeness to an extreme in mere words (not one of them would ever think of ceasing to smoke because of the presence of a lady, either native or foreign), love of money without labor in the acquisition, and abandonment to the lower and viler passions. I have often had persons offer to receive baptism, if I would give them a little money. When the gospel is urged upon individuals, we are often asked if its acceptance will cut them off from any

of their sinful pleasures. There are probably more houses of ill-fame in this small city of 40,000 souls than in all the three northern New England states, if not more than in all New England. I sometimes am almost forced to think that the very spiritual element itself in the original endowment of human nature has been lost or consumed by the lust of the flesh and the pride of life, as it was in ancient Sodom and Gomorrah.

Mr. Davis has not cared to show how a place where "seven-tenths of the educated class are atheists and materialists" can, at the same time, be "the stronghold of Buddhism." Perhaps in his moral vocabulary atheism and materialism are synonyms for Buddhism. As for his assertion that "respectable merchants often sell their daughters to lives of shame," we take leave to doubt it very emphatically. At no time in the social history of Japan were such transactions tolerable except under the pressure of extreme indigence, and since they became illegal, some fifteen years ago, they no longer take place in the sense implied by Mr. Davis. But indeed that gentleman's standards are an amusing illustration of the prejudices he so loudly condemns in the Japanese. His test of the depth of politeness sounds like a jest. Considering what Japanese smoking amounts to; considering that Japanese women smoke almost as much as Japanese men; and considering that for centuries no idea of rudeness has attached to the notion of smoking in the presence of ladies, Mr. Davis could hardly have selected a less convincing trait of the barbarous condition which it is his function to regenerate. We shall not attempt to discuss the degree of immorality which disfigures his benighted district. New England, his standard of comparison, may be everything that he evidently believes it to be. We venture to assert, however, that in Niigata, as in all the other cities of Japan, the records of half a cycle do not comprise so many public outrages of morality as may be witnessed in one night in the streets of an European or American capital. Of course there is plenty of work for Mr. Davis and his confrères. Where is there not work for earnest philanthropists? But if it is Herculean work, in some senses, the Augean stables are not in Japan.

METAPHORS are pretty and forcible things when their use is skilful. The Minister of St. Paul's, Glasgow, is an expert in their employment. He has written as follows to Lord Randolph Churchill :—

You have penned an insolent reply to a respectful public document. You are now Cabinet Minister, but I observe with astonishment and regret that you have not laid aside those weapons of abuse and scorn with which you tomahawked your way to power. You seem to think it not unworthy of a Minister of the Queen to describe a body of representative men as senseless and irrational for daring to differ from you on a matter of public policy. It is a national calamity when men pitchforked into a high position are destitute of decent manners. It is one thing to tear opponents and grovel over them like the bulldog of politics. It is another to be a British statesman.

The occasion which evoked this parade of tomahawks and pitchforks was Lord Randolph's reply to a remonstrance addressed to him by the Scottish Protestant Alliance against the appointment of a Roman Catholic to be a Secretary of State. "Dear old Scotland" appears to be as benightedly intolerant as ever.

THE development of a good throat for music among the Japanese must be a question of time. Many of the women possess sweet voices, and a foreign training produces very fair results in girls' schools. But the voices of the men at present do not promise either good tenors or good basses. The reform in the theatre, substituting a good orchestra for the present very inferior music, ought to help on matters by

improving the musical ear of the public. A musical society, calling itself the "Musical Society of Japan," has been started in the capital with the view of fostering the study of the best music. It looks forward, among other things, to organizing grand concerts from time to time, when good opportunities occur. We hope shortly to see in Tôkyô a stately theatre, built and fitted up in Western style, but retaining some commendable Japanese characteristics, ready to open its doors to the public. Funds have poured in, as much as \$100,000, we believe, having been already subscribed. Mr. Suematsu and Professor Toyama are to be congratulated on the success which is crowning their efforts.

HERE is something interesting to smokers, from the columns of the *St. James's Budget* :— "Several reasons have been assigned for growing tobacco in England. One that should have been obvious, however, has been overlooked. Either smoking must be encouraged by making the loathsome plant a native of the soil, or England as a smoking country will soon be nowhere. The people who have never been able to see the justice of allowing others a cigar when they do not smoke themselves will learn with surprise that the average Belgian smokes four times as much as the average Englishman. There are 550 lbs. of tobacco consumed in Belgium for every 100 inhabitants. Holland, Germany, and Austria come next, and France stands seventh. Of all the European countries England very nearly smokes least. Spain, which is the lowest in the list, averages over 1 lb. per head, and England's average is only 138 lbs. per 100 inhabitants. If Spain did not fritter away its time over cigarettes, England would be the country that smokes least in Europe."

If any proof were needed of the colonizing fever which at present disturbs the blood of the French nation, it would be found in the following utterances of that staid economist M. Paul Leroy-Beaulieu :—

Aux Nouvelles Hébrides nous avons eu le grand tort de conclure avec l'Angleterre, il y a quelques années, une convention que nous ne pouvons plus appliquer. Nous n'avons pas besoin de la dénoncer, cela est superflu. Nos colonies sont établies dans ces îles, ils ont besoin d'une protection; nous leur avons envoyé des soldats; ceux-ci doivent y rester à demeure et toujours; il serait sage, de la part de notre gouvernement, de renforcer ces postes et d'y entretenir un effectif respectable, 1,200 à 1,500 hommes. La *Pail Gazette* nous menace d'un *casus belli*. En vérité, quand les trois empires vont se partager les dépouilles de la Turquie, l'Angleterre prendrait sur elle d'entrer en guerre avec la France et serait ce plaisir aux trois Cours alliées de leur offrir le spectacle d'une lutte stupide entre les deux puissances occidentales! Non, les Anglais ne sont pas arrivés à ce degré de folie. Une guerre entre l'Angleterre et la France, d'ailleurs, les Anglais ne peuvent se faire à ce sujet aucune illusion, ce serait la révolte immédiate de l'Irlande, la révolte de l'Égypte, une recrudescence de la guerre de Birmanie, ce serait l'interruption du commerce anglais par les croiseurs français. Il surgirait dans tous nos ports des émeutes des Dugaa-Trouin, des Jean Bart et des Suffren. L'Angleterre, qui ne peut même pas se nourrir, serait affamée dans son île. Ce serait peut-être aussi l'annexion de la Hollande par l'Allemagne. En un mot, une pareille guerre serait la cause d'un gigantesque craquement de la puissance britannique. L'opinion publique anglaise ne peut songer à rien de pareil. En France, personne ne pense à froisser l'Angleterre; elle annexe des étendues énormes sans que nous nous y opposions. Nous ne dénoncerons pas actuellement la convention relative aux Nouvelles-Hébrides, mais la force des choses nous a amenés à occuper ces petites îles et nous devons y rester.

A Madagascar, il semble que la France soit en train de se laisser duper par les Howas. Nous avons toujours été opposé à ce traité équivoque d'où nous annonçons qu'il sortirait une guerre nouvelle. Il nous paraissait qu'avec six mois de plus de patience et l'envoi de 3 à 4,000 hommes que la paix au Tonkin laissait disponibles, nous eussions pu établir sur l'île un protectorat incontestable, émanciper les Sakalaves, occuper

tous les principaux ports et tenir dans Tananarive une garnison sérieuse. Il est aujourd'hui très vraisemblable qu'il nous faudra recommencer l'expédition; ce traité définitif et prématuré en aura été la cause. Le gouvernement français ferait bien de doubler ou tripler l'effectif des troupes dans la grande île, d'occuper les montagnes qui dominent Diego-Suarez, et au besoin de reprendre possession de Vohémar et de Majunka.

FOR the sake of the sprightliness of the House of Commons, it would be a great pity if the Irish members were removed from Westminster. They often lend to the debates a flavour of considerable piquancy. Witness the following passages which occurred during the adjourned debate on the Address at the beginning of September:—

The Speaker having proceeded to put Mr. Parnell's motion,

CAPTAIN COLONY (seated, and with his hat on), said,—Mr. Speaker, at this moment a member on the other side of the House crossed over here and said to me that I had said that he was paid for it, and that I was a liar. (Loud cries of "Name.") It was the member for Mid Cork.

THE SPEAKER.—If the hon. member for Mid Cork made use of any expression of that kind, perhaps he will give some explanation to the House (Hear, hear.)

DR. LANNER, sitting in his place with his hat on, said,—The gentleman who has appealed to you, Sir, just now, shouted across the floor that I was paid for trying to poison this discussion, and I said to the gentleman distinctly that he was a liar. (Loud and prolonged Home Rule cheers.) I need hardly say that I should not have used such strong language had I not been strongly provoked by the offensive statement of the hon. member.

THE SPEAKER.—The best course will be for the division to proceed, and for the two hon. members to attend in their places after the division. (Laughter and cheers.)

Had this happened in France, rapiers would certainly have been unsheathed the following morning. But in England the sequel was different. After the division the Speaker rose and said:—

I have spoken to both the hon. members concerned, and the hon. gentleman who used the first expression tells me that he did not use it in the sense in which it was understood by the hon. member. ("Oh, oh!" from the Home Rule members.) The hon. member tells me that he was most unwilling to give pain to the hon. gentleman, and he apologized and without reserve withdrew the expression. The hon. member for Mid Cork also in the most frank and unreserved manner withdraws the expression he made use of. After that explanation the House may think it right that the incident, which was a very unfortunate one, should drop. (Cheers.)

Another incident in the same debate was still more Irish.

MR. W. REDMOND maintained that there was one real cause of the riots which had taken place in Belfast. The hon. member proceeded to criticize the speech of the hon. member for Antrim (Mr. Macartney). He should not, he said, condescend to follow the hon. Tory member for Antrim through the low and scurrilous depths of language into which he had fallen.

THE SPEAKER.—The hon. member has made use of an improper and unparliamentary expression, and I hope he will at once withdraw it.

MR. W. REDMOND.—I will withdraw it most unreservedly.

THE SPEAKER.—It is an expression which almost requires an apology, and I caution the hon. member against repeating it.

MR. W. REDMOND.—I have already withdrawn it; but I assure you, Sir, that there was nothing further from my intention than to transgress your ruling, or to say anything which would place me under the censure of the House. I will not again use the words which I have withdrawn with reference to the hon. member opposite. The hon. member proceeded to say that the language of the hon. member for Antrim was unbecoming; but the only excuse that could be made for him was that he represented nothing particular in Ireland.

THE SPEAKER.—The hon. member is not dealing at all with the amendment before the House. He has not spoken at all relevant to the subject, and I warn him to be more relevant.

MR. W. REDMOND.—I will do as you wish with the greatest readiness, and again I assure you, Sir, that I have no real intention of doing so. (Loud laughter.) As soon as I am allowed to proceed free from the interruptions of hon. members who laugh so heartily, I will resume my remarks. The hon. member then continued his criticism of the speech of the hon. member for Antrim, and observed that he would not follow so ungentlemanly a line of argument. (Cries of "Order.")

THE SPEAKER.—If the hon. member repeats this language I shall have to take the very severe course of naming him. This is the second time I have called him to order for using expressions which are highly improper and unparliamentary. I will now ask him to express regret to the House for having used the last expression which has fallen from him.

MR. W. REDMOND.—The expression "ungentlemanly" I unreservedly withdraw, and I would not have used it if I had thought it unparliamentary. (Cries of "Oh, oh.")

THE coup made by the Irish police under Sir Redvers Buller's directions, in capturing two bands of Moonlighters, took place on a farm at

a place called Teale Bridge. The estate is one of those extensive but very poor properties which are only too common in the West and South of Ireland. Nine thousand acres of land are valued at only £1,000 annually. Even this small sum cannot be collected, and the proprietress, Miss Thompson, has been obliged to evict a number of tenants who refused to pay an increase of rent. The Moonlighters caught an unexpected Tartar, but great doubts are entertained as to the possibility of getting a jury to convict them. Neither the loyalty of the constabulary nor the activity of a dozen General Bullers will be of much avail so long as the functions of judgment devolve upon men who applaud, and would themselves unhesitatingly commit, the crime of which they are required to convict. In some not very remote era, civilized people will look back with amused surprise at the silly pertinacity with which Anglo-Saxons used to cling to that relic of barbarism called trial by jury.

SOME important changes are said to be impending in the British diplomatic circle. That Sir William White is to replace Sir Edward Thornton at Constantinople, has been common talk for some time. But we hear nothing of a new embassy for Sir Edward. The public appears to have concluded that his long and honorable diplomatic career ends with Constantinople. Sir William White's successor at Bucharest is expected to be Mr. Lascelles, now Her Majesty's Representative at Sofia. It is also said that Lord Lyons intends to resign the embassy in Paris next April, and that he will be succeeded by either Sir Edward Malet or Mr. H. C. Vivian, now Minister at Brussels. Paris without Lord Lyons will seem strange to Englishmen.

THE match over hurdles came off on Saturday, and, contrary to expectation, Ruby won easily. The ponies took the first obstacle together, and Ruby passed the Stand with the lead, which he increased to four lengths at the half-mile post. From this point, however, Marsala gradually drew up, getting level at the bottom bend, and the pair jumped the last hurdle but one at the same instant. At the last jump, Ruby was a length in front, Marsala knocking the hurdle down in getting over, and in the run home Ruby left the grey and won easily by several lengths. Marsala neither jumped nor galloped so well as in the race he won, touching all the sticks in getting over. When he joined Ruby, however, it was looked upon as a certain win for him, but he did not go on the flat in his customary form, with the result above stated.

WE are requested to state that on Saturday, the 13th November, at 1 p.m., a Concert will be given in the Hall of the Kunmōin (Blind and Dumb School), Tsukiji, Sanchome, in aid of the funds of that Institution. The programme will include Japanese and Chinese Music by performers of note on the *Koto*, *Samisen*, *Kokin*, and *Shakuhachi*; and European pieces under the direction of Professor Sauvet, Instructor in the Institute of Music under the control of the Department of Education. The admission fees (1 yen each) will be devoted to the funds of the Institution.

THE following resolution was passed at a meeting of the Council of the Japan Branch of the Evangelical Alliance, on 27th inst.:—"Whereas large bodies of Christians in Europe and America

have agreed to observe the 1st Sunday of November next as a day of special prayer for the outpouring of the Holy Spirit upon Missionaries and Mission work in all lands; resolved, that we earnestly commend to all Christians in Japan to join with their brethren in other lands in the observance of this day."

THE *Hieigo News* of the 2nd inst. says:—"At H.B.M.'s Consulate yesterday a court of inquiry into the loss of the British steamer *Normanton* was opened, the court consisting of J. Troup, Esq., H.B.M.'s Consul, with Captain Gulland, of the *Claymore*, and Captain Logan, of the *Travancore*, as associates. There are a great number of witnesses to examine, and the court will be occupied some days."

THE cholera returns for Yokohama during the past week were:—Saturday, 30th October, new cases, 3; deaths, 3. Sunday, new case, 1; deaths, 3. Monday, new case, 0; death, 1. Tuesday, new cases, 2; death, 1. Wednesday, new case, 0; death, 0. Thursday, new case, 0; death, 1. Friday, new cases, 4; deaths, 3. Total cases, 10; deaths, 12.

THE cholera returns for Tōkyō during last week were:—Friday, 29th October, new cases, 4; deaths, 5. Saturday and Sunday, new cases, 6; deaths, 2. Monday, new cases, 7; deaths, 6. Tuesday and Wednesday, new cases, 5; deaths, 6. Thursday, new case, 1; death, 0. Total new cases, 23; deaths, 19.

THE *Fiji Shimpō* publishes the following telegram:—

Nagasaki, October 29th (Afternoon). The thirty-third sitting of the enquiry was held to-day. Mr. Kusaka is about to leave for Saseloh, but during his absence the conference will sit as usual.

THE *Nichi Nichi Shimbun* publishes the following telegram:—

Nagasaki, October 30th, 3.50 p.m. In accordance with a request made by the Chinese representatives, the sittings of the enquiry will be closed for a week, beginning from yesterday. Mr. Kusaka, Governor of Nagasaki, left for Saseloh yesterday.

The *Ching-yuen* and the French frigate *Turenne* arrived in the harbour the 28th and 29th instant respectively.

THE action raised by Mr. Uchiyama Rossetu against Messrs. Cocking & Co. for \$208, which was set down for hearing and proof on Tuesday morning, in H.B.M. Court for Japan, was settled out of Court.

AFTER a very successful season at Kanda, Tōkyō, Chiarini has struck his tent, and will make a fresh pitch on a piece of ground in Tsukiji, near the Seyoken.

THE winter service on the Yokohama-Tōkyō Railway commenced the 1st inst. The alterations in the time-table of this and other lines will be found in this issue.

AT noon Wednesday, the birthday of the Emperor, the Japanese flag was run up and saluted by the ships of the British Squadron.

WE are informed that the P. & O. steamer *Zheran* left Nagasaki for Yokohama via Kobe on the 4th instant (Thursday) at 3 p.m.

WE are informed that the German steamer *Stettin* is bringing up the English mail of the 4th inst. from

# ORIENTAL WITNESSES IN BRITISH COURTS.

FROM time to time the gravity of judicial proceedings in England and of the British public is disturbed by the appearance of a witness, usually Oriental, who either claims to have the oath administered in some peculiar way, or to whom it is administered with grotesque ceremonies in accordance with precedent. Thus we hear at intervals of swearing a witness by cutting off a cock's head, smashing a saucer, burning paper, or the like, accompanied by imprecations which, under other circumstances, would be styled impious or blasphemous. Last year, when a Japanese was burnt to death in the Japanese village at Knightsbridge, and one of the deceased's friends appeared as witness before the coroner's jury, the question arose how he was to be sworn. The witness, on being asked what form of oath was binding on his conscience, said he thought if that he promised to tell the truth, then dipped his finger in ink, and placed it on a piece of paper, his conscience would thereby be bound. In the event, his evidence was found unnecessary, and his conscience was spared the ordeal. In 1868, in a case of robbery tried before the Southwark Police Court, the prosecutor, who said he was a Japanese Buddhist, refused to be sworn at all, as the practice was, he said, contrary to his religion; but he wrote in Japanese a declaration that the statement he would make to the Court should be "in the whole nothing but the truth, according to the custom, religion, and belief of this country and my own." The witness stated that he believed in a God, who would punish him hereafter if he said what was not true, and the report goes on to add that he seemed extremely careful to speak only of facts, without attempting to gloss over anything that might appear against his case. The prisoner was sentenced to four months' imprisonment with hard labour. Not very long ago, a Hindoo barrister laying an information against a woman for robbing him late at night near Leicester Square, astonished everyone by saying that he was a Quaker, and as such he was admitted to make an affirmation. The late Mr. CHISHOLM ANSTEY, with whose brilliant abilities there was more than a due mixture of eccentricity, in a paper written for the Judicial Society nearly twenty years ago, to advocate the abolition of all oaths to heathen witnesses, ridiculed the pertinacity of enforcing strange oaths upon Chinamen, who from time immemorial have taken no oaths at all in their own courts of justice. In Hongkong, in the early days, judges borrowed from the Straits Settlements the practice of handing a witness a slip of red or yellow paper inscribed with curses in the Chinese character, which he was told to burn with a lighted candle. This process was called

burning paper of imprecation, and was invariably a source of much amusement to the witness and the other Chinese in court. A Chief Justice (HULME, we believe), decided to select some more solemn form of oath, and he introduced from China the practice of "cutting off a cock's head, under the canopy of heaven, with maledictions in the name of the demon of the swearer." The burning paper, Mr. ANSTEY says, was an invention of a missionary in Malacca from a hazy recollection of the description of a Chinese ordeal which he had read in PINKERTON'S voyages. The difficulty of knowing precisely what to do with non-Christian or Pagan witnesses is not confined to the East. In New Caledonia, as Captain BRIDGE tells us in a paper in the September number of the *Proceedings* of the Royal Geographical Society, French officials swear South Sea Islanders in the following "*bêche de mer* lingo," or "sandal-wood English," the pidgin of these regions:—"Me talkie true, me no tell lie, me no gammon; me," raising the right hand to the sky, "swear."

It may, as Mr. ANSTEY argued, be desirable that all oaths should be abolished in these cases in England, as they are now in Hongkong and on the coast of China. But grotesque as the proceedings may be in Courts at home, they rest on a substratum of sound common-sense and legal principle, so long as oaths are to be retained at all. In former times English law held infidels, Jews, and heathens to be incapable of giving evidence at all in the Courts, for, said Lord COKE, "they are the subjects of the devil, and not of any Christian prince." But this cruel doctrine was altered in 1744 by the judgment of Lord Chief Justice WILLES in the celebrated case of *Omychand v. Barker*, in which the question arose whether a Hindoo witness could give lawful evidence. The judges held that the form of the oath did not matter; the main point was that the witness should believe in a Supreme Being, the avenger of falsehood, and in a future state of rewards and punishments. Hence, in the case of doubtful witnesses, the practice arose of asking them the question: "Do you believe in a God the avenger of falsehood," and then inviting them to mention the mode of swearing which would be binding on their conscience. It is not for the law of England to say what form will bind the consciences of men of different races, religions and customs. That is not only beyond the province of law, but is an impossibility, and accordingly it is left to the witness to say. Having said it, and having been sworn by the ceremony he indicates, the offence of bearing false witness becomes at once converted into the crime of perjury. He is left perfectly free to select his own mode of oath; he cannot even be asked whether some other mode would not be more binding on his conscience; and then

he gives his evidence with the pains and penalties of perjury hanging over him. Hence it is that there are so many ridiculous forms in the Courts at home. They are dictated by the wayward fancies of ignorant men, generally sailors or servants on board ship: at one time it is inking the finger, at another writing a promise, and so on.

Thus far, no particular form has come to be identified with Japanese witnesses in English judicial proceedings. But there is one which has become almost universal in the case of Chinese. Mr. ANSTEY calls it the "rival imposture" to the burning paper and the cock's head. It consists in breaking a saucer. This practice is first heard of in English procedure in 1804. At the December Sessions at the Old Bailey in that year, two men, ALSEY and GUNN, were charged with stealing and feloniously receiving the monies of one ER PIUN, a Chinaman, who was called as a witness. The interpreter was a Chinese called ANTONIS, who had left his country when a child, had become Christian, and had been to and fro on business ever since. He said he had often seen oaths administered in China and was well acquainted with judicial proceedings there. Witnesses, he said, make an appeal to the god they worship in that country; they break a saucer, and then they are told, *your body will be cracked as that saucer is cracked, if you do not tell the truth*. The witness was sworn on this formula, and the prisoners were convicted on his evidence. But it was not until 1843 that the formula was finally settled as it is in use at the present day. In that year, likewise at the Old Bailey, before Baron GURNEY, two men named ENTREHMANN and SAMUT were indicted for feloniously assaulting one ASSANG, on the 16th of December, and cutting and wounding him on his left cheek, with intent to do him some grievous bodily harm. The report goes on to say that the prosecutor was a Chinese, and as he did not understand the English language, an interpreter was sworn. In reply to a question from Baron GURNEY, the interpreter said he was acquainted with the mode of administering an oath to a Chinese witness, and described it in the manner in which it was afterwards administered, adding that he had frequently seen it so administered, and believed it to be binding in that form. The prosecutor was then called, and on getting into the witness-box immediately knelt down, and the saucer having been placed in his hand, he struck it against the brass rail in front of the box and broke it. The crier of the Court who swears witnesses, then, by direction of the interpreter, administered the oath in these words, which were translated by the interpreter,—"You shall tell the truth and the whole truth:—the saucer is cracked, and if you do not tell the truth your soul will be cracked like the saucer." This is the original form commonly used in the case

of Chinese witnesses, simply because such witnesses (being probably coached beforehand by the interpreter) say it is binding on their consciences. But if they wanted the burnt-paper or cock's head-ceremony there is no reason why it should not be performed; indeed, it most certainly would be. Sometimes Chinese witnesses, probably from a spirit of mischief, assert that their consciences will not be bound unless some absurd or impossible thing is done. A gentleman named AYUK, in the New York Marine Court, once enumerated the various ceremonies attending the taking of an oath in China, some of which were impossible in New York. As these ceremonies could not be complied with, the witness could not be examined. Next day he appeared in Court with the plaintiff, and said he was quite mistaken as to the laws and customs of China relating to oaths, and that the only essential ceremony was the reading aloud of a part of the Chinese Bible in a temple! There being no Chinese temple in New York, the witness replied that temples and Courts of justice were the same in China, and hence that the ceremony of reading aloud a few passages from CONFUCIUS in the Marine Court of New York would bind his conscience! What effect this may have had on Mr. AYUK'S tender conscience, we cannot say. Its effect in American law was to make him a legal witness, liable to indictment for perjury if he gave false testimony. In a certain divorce case in the House of Lords in 1846, a Chinese witness, KO WAN, on whose testimony the proof of adultery depended, protested that it was against her religion to take two oaths in one matter, for she had already been examined before the old Ecclesiastical Court. But Lord BROUGHAM would not admit her objection. He said that her gods would punish their Lordships if anything wrong were done by them; after which he ordered the interpreter to read her a lecture on the sanctity and use of oaths, and finally induced her to give evidence.

The whole system of oath-taking, judicial and administrative, is gradually undergoing a change in England. Affirmations are in many cases taking the place of oaths, and the present method of swearing in members of Parliament, public officers, and others, as well as witnesses, appears to be falling into disrepute. Certainly it would be no loss to the dignity of judicial proceedings, or to the general administration of justice, if ordinary affirmations were substituted for oaths in the case of Oriental witnesses.

#### LIFE IN JAPAN AND RELIGIOUS BELIEF.

THE influence of climate and surroundings on creed and character is fully recognized in these days. Since BUCKLE rode this hobby of his almost to death, in works whose popularity is diminished more in England than outside of it, the theme has been dwelt upon by a multitude of writers, who sometimes fail to hold the balance exact between race capabilities and race surroundings.

It has often occurred to us as an interesting question, to consider the reflex effect of Japanese life and ideas upon those "elegiac and religious children of the fog and mist," who come to preach a foreign faith to a people who have never become acquainted with a like faith or lived under like conditions—light-hearted "children of the sun." The theology of the Picard of Noyon was worked out amid wars and massacres and cruel torturings; it was hard and stony as the fortresses of old France. The saints were radically distinguished from the sinners, and the struggle was a mighty one, both internally as personal conflict and outside in the wicked world. The creed was an admirable one to inspire an army or a people in a struggle for life, and the assurance of Final Perseverance was as invigorating as the faith of the soldiers of the Prophet. But when life had sunk down into a peaceful calm, and men had no need of a war-cry, Protestantism, even of a milder type than JOHN CALVIN'S, showed little power of expansion. It has done good work, no doubt in the United States, and during last century it changed the face of the Highlands of Scotland, making godly men out of freebooters. But it has not been a great conquering force, as its founders expected. It shows a tendency to relapse into hard hypocrisy or colourless respectability. The grimaces of a TALMAGE or the spasmodic performances of a General BOOTH are too sure signs of degeneration. Does not the orthodox Protestant Creed lack a certain harmony with nature? We bow before mystery, but we rebel against contradictions.

"Woe" says a living sage, JOSEPH ROUX, whom all Paris is honouring, "woe unto him that utters the language of ideas in a country where that language is a dead letter." Is not this the feeling of many a missionary who preaches of original sin and conversion and election to men who know not anything of these things? Of all notions, this notion of inborn radical sin seems most absent from Japanese life. It may be there, but certainly it does not appear to ordinary observation. The essential wickedness of men in an unsaved state, called by theologians Moral Inability in a fallen state, does cast a peculiarly anti-Japanese cloud over the world. "This is a fine day," said a meek church-goer to a stern elder of the church, as they walked

together to service on a beautiful Sabbath morning in June. "And is this a day to talk of the fineness of the day?" was the dreadful rejoinder.

Blindness to natural beauty, and distrust of nature, must slowly disintegrate under the influences of the sunny Japanese sky. And with them the old theology goes. Professor DOWDEN, in a recent article on Literature, tells us how, wonderful as it may seem to the men of to-day, WORDSWORTH was looked upon as a dangerous religious teacher when first his writings came into notice. But to us nothing appears more natural, for although the poet is now the bosom companion of men of a religious mind, his masterpiece dealt the deadliest blow it ever received to the doctrine of Original Sin. How WORDSWORTH would have enjoyed Japan!—who was so well pleased

"to recognize  
In Nature and the language of the sense,  
The action of his purest thoughts, the nurse,  
The guide, the guardian of his heart, and soul  
Of all his moral being?"

There is too much reason to believe that the hard and fast creeds of two centuries and a half ago, or even of a century ago, are singularly calculated to hamper the present expansion of Christian effort. Works on theology in touch with the times, like DRUMMOND'S Natural Law in the Spiritual World, are all on the new lines. They refer to the Christian life not as a change from perdition to salvation, but as a natural growth, the planting of new seed in congenial soil. The questions which puzzle and distress Japanese, such as the fear that belief in Christianity implies belief in the eternal punishment in hell of all their ancestors, become meaningless in the light of the new teaching.

As little can be hoped from an emasculated as from an outworn creed; but why choose between the two, when there may be a third alternative? The tendency of religious belief among the Protestant churches here seems to us certain to flow in the new channel, which goes directly for its inspiration to the Sermon on the Mount and the Parables. The influences are in the air and the landscape and the people.

#### NEW CURIOSITIES.

ONE is often surprised to hear a globe-trotter refer with undisguised satisfaction to the curios which he has collected during a tour of a few weeks in Japan. Amateurs who have studied the matter at all know that anything in the shape of a good old curio has become unprocureable by a passing visitor, and are consequently disposed to set down the happy globe-trotter's purchases as veritable rubbish. But the fact is that the Japanese are yearly improving in their art manufactures, and that a collector who is content to buy simply what is beautiful and artistic, without concerning himself as to its age, can find almost as many charming objects as he

pleases. In lacquer and porcelain he will perhaps be disappointed. Not that there is any inability to manufacture as fine lacquer now as was ever produced in the past. The skill is there, but the market is wanting. The cost of really good lacquer is prohibitive both to manufacturer and to consumer. In the case of porcelain alone the proficiency of old times seems to be scarcely recoverable. But in everything else, it is hardly an exaggeration to say that the Japanese are fully as skilful as they ever were. Look at their ivories, for example. We do not speak of the so-called "*netsuke*" which are manufactured by the gross, and sold at every curio shop in every city of the empire. Such things may have their merits, but one soon wearies of their ubiquity, and grows angry with their unending reduplication. We refer to a very different class of carvings; genuine labours of love that will compare favourably with the choicest efforts of the old masters. Like all works of real merit, these are not to be obtained *ad infinitum*. But neither are they absolutely scarce. Any good dealer always has one or two on hand. A trait of such specimens is that the man who made them generally happens to have died just after completing his task. His mantle, too, never descends, so that a duplicate of his last *chef-d'œuvre* is out of the question. But collectors need not be discouraged by this announcement. In the space of two or three months they may confidently reckon on finding in the hands of the same dealer an exact reproduction of the same carving with the same history as to the recent death of the carver and the comparative incapacity of his successors. Indeed, if we except the multitude of rough conceits in bone and walrus ivory which are expressly manufactured for the markets of the West, it may be said that the practicality of modern trade has not invaded the domain of the Japanese ivory-and-wood carver farther than to encourage the manufacture of specialties. There are men now-a-days who carve only skulls; others who confine themselves to clusters of rats; others whose idiosyncrasy lies in the direction of barn-door fowls, and so forth. This sacrifice of versatility to specific skill is evidently a first step towards the mechanical division of labour which long ago deprived Chinese decorative art of all originality or ideality. Still, for the moment, its results are admirable. Among the skull-carvers there is one whose work is so minutely exact that anatomists marvel and every-day folks are tormented with a horrible suspicion that the man must have passed his life in the company of skeletons. The creator of rats is as wonderful in his own line, and perhaps more wonderful in the fact that he has been killed at least fifty times by the astute vendor in Kobe who enjoys a monopoly of his rare productions. The globe-trotter, having acquired such specimens, is justified if he goes on his

way rejoicing. They will rescue his collection from the stigma of mediocrity even though it includes some of the paint-and-paste vulgarities called *Satsuma*, or of the smoked demons and begrimed coolies that do duty for "very old" wood carvings in the bric-a-brac stores of Yokohama. Look, again, at that essentially modern development of Japanese industry — *cloisonné*. There used to be, indeed there still is in many quarters, a firmly rooted notion that Japanese enamels are inferior to Chinese. So they were undoubtedly in former years. The Japanese *cloisonné* of old times was thin without being delicate, sombre without being solid, and rough without being strong. The Chinese, on the contrary, while it charmed by skilful juxtaposition of brilliant colours, presented at the same time a comfortable aspect of solidity and durability. It was essentially a satisfactory article of decorative furniture, grateful to the eye and reassuring to the economic instinct. But the contrast is all the other way now. In the hands of the modern Japanese artist the manufacture of *cloisonné* enamel has been carried to a point of perfection never even conceived by the greatest Chinese experts of bygone days. Alike in brilliancy, variety, and depth of colour, in grace of form, in artistic beauty of design, and in marvellous delicacy of execution, the Japanese product towers immeasurably above its Chinese predecessor. The only dilemma that besets the acquisition of such specimens is uncertainty with regard to impending developments of the art. Considering the strides that have been made during the past ten or fifteen years, who can say that the master-piece of to-day will not be the mediocrity of to-morrow? After all, one of the great comforts of a collector of old objects of *virtu* is that they represent, or ought to represent if well chosen, the *ne plus ultra* of a period. They run no risk of being speedily supplanted by finer developments. Four years ago, we should have been inclined to say that this danger was not imminent in the case of embroideries, for example. But during that time the embroiderer's art also has received an immense and unanticipated impulse. The Kyôto artisan of to-day will stitch you a veritable picture, with *chiaro-oscuro* as accurate as though it were produced with a brush on canvas. Think of lights and shadows produced with a needle and thread on a silk ground! It would be rash to predict that the limit has been reached even in this direction. And here we may allude to another branch of Japanese art which, from some inexplicable cause, remains virtually unpatronized—the art of the silversmith. Travellers, by the time they reach Japan, have generally completed their purchases in this line. They tell you with proud satisfaction of their plaques acquired in India and their vases purchased in Canton, never suspecting that they have come to a

country whose workers in metal can afford to look down on the whole world. In how many European or American houses are there to be found tea-services in Japanese *repoussé* silver? We know of only one shop in Yokohama where such things are to be sold, and the specimens exhibited there are not only costly but by no means representative. One of these fine days it will occur to some speculator that an *ELKINGTON* and *MASON* in Tôkyô might be one of the greatest attractions of the East. It is impossible to gauge the capabilities of an art which needs only patronage to rival achievements that set the æsthetic world wondering when it first made their acquaintance. Certainly the time has passed when there was truth in the constant criticism that everything new was bad. The uneducated amateur who visits Japan to-day needs no guide but his own taste. If he is wise, he will confine himself to objects which make no pretence of antiquity. If a collection put together on this principle does not include any "historical" pieces, it will at all events be beautiful and genuine, and its owner will have the satisfaction of knowing that in making it he was not a perpetual victim of deception and chicanery.

#### THE SAME GOAL BY DIFFERENT ROUTES.

A WRITER in the *Christian* comments on our recently expressed opinions with regard to the position of women in Japan and the direction which any sound movement of reform on their account should take. It is evident that there is no desire on the part of this writer to approach the subject in a controversial spirit, and though in the course of his article he apparently endeavours to establish some illogical contrasts between our views, we shall not follow him into that discussion. To one point, however, we will draw his attention; namely, that under the same form of civilization it may very well be possible to find happy means as well as unfortunate extremes, for the simple reason that the operation of every system applied to a number of dissimilar subjects must show varying results. Thus in Europe we may find, and happily do find, thousands of women who closely approach our highest ideal as regards both moral character and feminine disposition. But we find also women, and these too the types which the present extravagant relation between the sexes tends to educate, who, taught to regard homage as their right, have ceased to associate it with the chivalry that originally dictated it, and who, by their exercise of frivolous dominance, have converted social intercourse into a burlesque. Similarly in Japan, while many of the most beautiful feminine traits have been developed by a system that inculcates self-sacrifice and fidelity as the highest virtues, the same system has

so weakened men's perception of what is properly due to the possessors of such virtues, that one is perpetually shocked by contrasts between the treatment which women deserve and the treatment which they actually receive. However, we did not set out to show that in order to be consistent in warning Japanese reformers against the extreme tendency of Western civilization while at the same time encouraging them to change their own, it is necessary to condemn both systems utterly. A little reflection will, we think, convince the writer in the *Christian* that the exigencies of logic are not so imperative. Our purpose rather is to note that the conclusion reached by him is, in substance, identical with our own, though differing apparently in form. His panacea is the development of home life as it is lived by God-fearing people in the West. "Shall we not then recommend," he says, "the religion which teaches the true secret by which both men and women may be raised to higher positions, and spheres of usefulness, by which the word 'home,' which in Japanese yet lacks an equivalent, shall come to mean more than a mere dwelling place, and through which the standard of morality will be raised, and the whole nation influenced for good?" It is held by many earnest Japanese that the great reform which they seek to accomplish in the position and treatment of the weak sex cannot be satisfactorily achieved until Japan becomes a Christian nation. Professor TOYAMA, in a pamphlet just published, distinctly commits himself to this opinion. For our own part, while we have often declared our conviction that Christianity is the basis of Western civilization, and that if Japan attempts to adopt the latter and reject the former she will find herself confronted by a multitude of insuperable dilemmas, we nevertheless purposely refrained from thrusting Christianity into the forefront of this discussion. The peril of needlessly exciting religious prejudices is too evident to need comment. If Christianity ever recommends itself finally to this country—and we are persuaded that it will recommend itself—the process will not be that of ordinary propagandism, such as the preaching of doctrines and dogmas, the publication of legendary records, the iconoclasm of inconvenient faiths. Japan once rejected foreign civilization for the sake of the treacherous and turbulent Christianity that presented itself in the van. When she accepts Christianity, it will be for the sake of that civilization. And as the latter has appealed to her intelligence, so must the former also. She will adopt the Christian system of morality when she learns that without it her reforms must be superficial and incongruous. Everything that tends to demonstrate this inevitable superficiality and incongruity, without openly trenching upon theological controversy, is a useful means to the desired end.

Altruism is the pivot upon which the system of Christian morality rests. "Do unto others as you would they should do unto you." Stripped of its supernatural adjuncts, the whole Christian code is summed up in that incomparable phrase. And altruism is precisely what is needed in the particular case under consideration. It was this consideration that induced us to write:—"Education may help women to win respect, and independence may save some of them from the worst alternative of marriage, but these devices must remain mere palliatives, so long as the man refuses to acknowledge in practice that the only virtues he has any title to expect in a woman are those which his own conduct exemplifies; that he owes to the feelings of his wife as much consideration as he requires her to show for his good name, and that no degree of poverty or physical suffering can condone the crime of parents who support themselves on the wages of their daughters' shame." It seems to us that if these principles were recognized, and acted upon in Japan, the country would be within sight of that "home life" which the writer in the *Christian* so earnestly eulogizes. He speaks with only too much truth when he says that as yet there is no complete "home life" in Japan. There is incomplete home life. One half of of the household, the mother and the children, exhibit in their loving and trustful intercourse all the beautiful traits that are nurtured in household circles, as we in England interpret the term. But the father too often stands without the circle. He fails to discharge, scarcely even tries to discharge, the duties that such a sacred association imposes. Before his children are old enough to appreciate his temptations, they learn to connect their mother's sorrows, perhaps her frequent tears, with the exercise of his libertine caprices. He forfeits her love and their allegiance. To complete the "home life" by making him an integral part of it involves an immense alteration in his perception of the debt he owes for the homage and fidelity which he exacts. If, in discussing the direction which the reform ought to take, we principally emphasised the necessity of educating this altered perception, it was not because we undervalued the essential rôle which women play in home life, but because the imperfection of Japanese home life at present is due almost entirely to the conduct of the men, and with the men, therefore, the reform should commence. The writer in the *Christian* indicates Christianity as the general means to be used and "home life" as the end to be compassed. We, on the other hand, endeavoured to point out what particular moral principle—a Christian principle if you will—is outraged by the existing state of affairs, and in what particular respect the household life of Japan is incomplete. Both roads lead to the same Rome. Their divergence is only on points of method.

## CORRESPONDENCE.

## ILLUSTRATED CRITICISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As "Decimal" appears to pride himself on his powers of repartee or on the exhibition of his party spirit rather than of his parts, allow me to point out to him through your columns that he forgot to find out from his second-form school-boy that 0.914 means nine hundred and fourteen thousandths, and that if it is possible to conceive of 914 thousandths, it is equally possible to conceive of one of such parts.

By repeating only a fraction of my letter, "Decimal" has fractionally misrepresented the spirit in which it was written, and has made me appear as a cavilling mathematician, instead of which I am only a poor little

COMMA.

October 28th, 1886.

## OBSERVATIONS ON HOKKAIDO.

By SEKI NAOKIHO, A GRADUATE OF THE LITERATURE DEPARTMENT IN THE IMPERIAL UNIVERSITY.

(Translated from the *Nichi Nichi Shinbun*.)

(Continued from 9th October.)

I shall next consider the debts which the fishermen owe to the Government. The Kaitakushi opened its purse liberally to supply them with capital to carry on their undertakings, but its very liberality became a cause of trouble to its protégés. The Kaitakushi encouraged the people to apply for loans, even to such an extent as to make it the rule to lend a few hundred yen to every fisherman who had a place for drying *kombu*. This indiscriminate liberality of the Colonization Office induced dishonest fishermen to secure public money by opening fictitious drying places for *kombu*. Even honest people could not withstand the temptation thus offered them of borrowing large sums of money on very easy terms. The total amount of the debts still due to the Government by the fishermen is computed at several million yen. To take an illustration, the amount in the two rural divisions of A'keshi and Hamanaka alone reaches a little over yen 132,000, distributed among about 60 persons, the average amount being yen 2,200 each. The consequence of such a liberal supply of capital is that the Government and the fishermen alike are suffering, the former finding it difficult to get the capital back and the latter having no means of repaying it. They are both of them equally to blame.

Whatever might have been the advantage of borrowing public money for the first few years, it has now become decidedly injurious to the prosperity of the fisheries in Hokkaido. The period of payment varies in different cases, but ranges between ten and thirty years. Payment is made in the products obtained, at the rate of from 6 (in the case of *kombu*) to 10 (in the case of herrings, etc.) per cent. of the total produce of the year. Of course, the payment to the Government must be made before any other engagement of a private nature, and this circumstance occasions peculiar difficulty to the fishermen, for the capitalists of Hakodate and other localities hesitate to lend them money on account of a fear that their security will be appropriated towards the liquidation of the Government debt. Every one who has visited Hokkaido, must have observed that very few fishermen carry on their trade without borrowing capital. The majority of them being destitute of capital, they are obliged to borrow money on the security of the produce of the coming season, and to ask merchants to advance articles of food and other necessities on credit. The account is settled with the produce of the season. It will be understood that, when fishermen are under an obligation to pay 6 or 10 per cent. of their produce to

the Government before the fulfilment of any other engagement, capitalists naturally think twice before advancing money to them, and if they ever do advance it, it is at an enormous disadvantage to the borrowers. It thus frequently happens that the producers are compelled to stop work for want of capital, apart altogether from those unlucky fishermen who have suffered complete failure. These being the disastrous consequences of their obligations to the Government, it is but natural for them to desire for a postponement of the period of payment. Their wish seems to be to let the debt lie unpaid for a period of ten years. I sympathize with them in their earnest desire for some liberal settlement of their present difficulties.

Another circumstance that attracted my attention during my journey in Hokkaido was the universal complaint of the fishermen there against the inspection of *kombu* and of the packing of fish guano. The grounds of their complaint are two; (1) that they lose opportunities for disposing of their products, and (2) that they are obliged to incur unnecessary expense. It was, indeed, their own shortcomings that necessitated the adoption of the measure by the Government, but so far as remedy is practicable, the present method of inspection must be modified. In late years the drying of *kombu* has become very imperfect, and the article exported to Shanghai often deteriorates, thus decreasing the demand for it. Again, the packing of fish guano was formerly very carelessly done, and a considerable quantity was lost in the course of transportation. These circumstances led to an official inspection of *kombu* before shipping it off, and to similar inspection of the packing of guano. The object of the authorities being to maintain the credit of the articles, I see no objection in the abstract to this measure, and most of the fishermen likewise deem it necessary. Nevertheless, it too frequently happens in practice that difference of opinion between the authorities and fishermen leads to unpleasant consequences. Fish guano has to be packed in a peculiar kind of mat imported from some northern provinces of the mainland, and further it costs 5 *sen* per sack to have it packed in the style prescribed by the regulations. When the packing is deemed imperfect, it has to be repacked, thereby adding to the cost 2 *sen* more. The negligence of the fishermen themselves is responsible for the establishment of such an expensive and troublesome inspection. But I cannot help thinking that, with slight modifications, the inspection may be made more tolerable and at the same time more convenient. The number of officials engaged in inspection is limited, and the expenditure of much useless time occurs in their travels from one fishing locality to another. Such being the case, I would suggest to the authorities in Hokkaido to modify the method of inspection, and if it is impossible to modify it, it must be carried on in a more liberal spirit. On the other hand, the fishermen themselves must use more discretion in drying *kombu* and packing guano, as it is their own interest that is to be protected.

#### AGRICULTURE.

In previous articles I have described the difficulties under which the fishermen in Hokkaido are now labouring, and have offered my own suggestions as to their amelioration, hoping thereby to attract the attention of the Government on the one hand, and on the other to invite public discussion to the subject. It gives me satisfaction to see that my efforts have not been entirely fruitless, and especially am I indebted to the *Japan Mail* for its kindness in aiding the general diffusion of my articles through its columns, where a full translation is now being published.

Having concluded my remarks on the question of the fisheries, I shall now proceed to speak of agriculture. It was in 1869 that a colonization office was established in Hokkaido under the name of the Kaitakushi, with the object of reclaiming waste land. The Government has since expended a vast sum of money on the island, and the officials

engaged in the work of colonization have been zealous under great hardships in pursuing their object; while on the part of the people also considerable attention has been bestowed on the work of colonization, and various corporations have been established for the purpose. I had, therefore, expected, before starting on my recent journey north, to see the forests of Hokkaido changed into cultivated fields, and its extensive plains waving with ripening grain. But on arriving there, my disappointment was even greater in the case of farming, than in the case of the fishing industries. I could not visit all of the plantations, but I can safely assert that, excepting a few settlements established by noblemen and the villages of the military emigrants (*bondenhei*), the cultivated ground in the whole island is composed of small patches of poor settlers scattered far and wide. With a total area of about 5,083 square *ri*, or about twice that of Kiushiu, the aggregate area of cultivated land—including every kind, whether in possession of the Government or the people—is less than 50,000 *cho*. The number of emigrants from 1878 to 1883 was only 829 families, or 3,120 persons. The value of the total agricultural products for 1881 was *yen* 335,960; in 1882 it decreased to *yen* 223,648; and the following year it again decreased to *yen* 136,146. Much of this steady decrease is attributable to the condition of the harvests and the state of the markets, but upon the whole the work of reclamation has taken a downward course.

According to information derived from a large colonization company, it appears that, putting aside the funds sunk at first, the money yearly expended does not yield so much as 5 per cent. annual interest. The poorer settlers must be satisfied if they get enough to meet their immediate thirst and hunger. I am in a position to say, on the authority of a geologist, that the soil, though not particularly fertile, is not unfit for farming purposes; and I personally observed that mulberry trees, hemp, wheat, barley, milk, *soba*, beans, potatoes, fruits, and vegetables grow very well in Hokkaido. None of them is inferior to those grown in the south. How is it, then, that agriculture not only makes no advance, but on the contrary is declining in Hokkaido? There must be causes to account for it.

The causes appear to be as follows:—(1) While on the one hand the farmers of Hokkaido, having but lately settled there, were not in a condition to be much benefited by the rise of prices from 1875-6 to 1878-9, on the other, they have keenly suffered from the depreciation of prices since 1881. (2) The farmers had exceptionally good harvests both in 1881 and 1882, but in the latter year the Kaitakushi was abolished, and with it ceased the purchase of farm products by the Government, so that the producers immediately lost the only means of disposing of their commodities. (3) While it is evident that the productive capacity of the soil is diminished by each year's crop, the farmers have neglected to apply sufficient fertilizing materials, and as a consequence, the yield has decreased. (4) Unusual losses were sustained in 1883 on account of droughts and injuries by insects. And lastly, (5), the imperfect means of transportation have been most influential in retarding the development of agriculture in Hokkaido, by inflicting double losses on the farmers in exporting their products and importing articles of necessity. With the exception of one or two articles, farm products in Hokkaido are all bulky and low priced, so that, in the present inconvenient state of transportation, it is impossible to send them to a market, and they are accordingly heaped up in granaries and left to decay. On the other hand, articles of daily consumption, such as rice, salt, *miso*, *shoyu*, oil, cotton, etc., command unusually high prices on account of this inconvenience of transportation. Even at Hakodate, the first port of arrival in Hokkaido, prices are remarkably higher than in the south, and transportation further into the interior greatly raises the prices. Taking advantage of this circumstance,

some dishonest merchants contrive to make money by exchanging articles of necessity for the products of the farmers at great disadvantage to the latter. For these reasons, the farmers are groaning under an increasing weight of debts, and scarcely able to earn a livelihood, being almost slaves of their debtors. And this after all their hardships in a cold country far removed from their original places of residence. Where can there be a being with a human heart, who will not sympathize with them, and endeavour to devise means of delivering them from their present distress?

I have thus far described the condition and difficulties of the farmers in Hokkaido. In order to deliver them from their present distress and develop farming in future, the Government must adopt vigorous measures for the removal of obstacles and for the promotion of agricultural undertakings. And before everything else, I should like to see roads opened and river courses improved. History shows that, except in cases where extraordinary artificial means have been employed, the cultivation of waste land and increase in population will follow the course of land and water transportation. As already stated, the inconvenience of transportation is telling severely on the farmers of Hokkaido, and for this reason alone it is of urgent importance to construct roads with as little delay as possible. But there is another circumstance which still more enhances that importance. I mean the extension of the Oshu railway, and the opening of new roads in the north-eastern Provinces. On my way home from Hokkaido I passed through the various Prefectures of Iwate, Miyagi, Fukushima, and Tochiki, and in the course of my journey, I observed vast tracts of land left entirely uncultivated, such, for instance, as the plains of Nasu and Iwase. The soil is certainly not poor, but it has been left unreclaimed solely because there have not been sufficient means of transport either by land or water. But roads are being rapidly opened in the above mentioned prefectures, involving the levelling of hills and the filling up of ravines. With the improvement of the Kitakamigawa and the completion of the north-eastern railway—which will take place with a year or two,—it is evident that the uncultivated land in Oshu will undergo reclamation, and it will then be thought by many unwise to emigrate to Hokkaido, while there are such hopeful prospects in the north-eastern provinces of the mainland. From a national point of view, it makes little difference whether land is reclaimed in Hokkaido or in the Provinces of Oshu. But looking at the matter from the standpoint of the welfare of Hokkaido, there is no doubt that the opening of convenient roads in the north-eastern provinces will greatly promote the prosperity of that island. Unless exceptional facilities be given, it will be impossible to secure the prosperity of agriculture in the island, and from this point of view, it is important to open facilities of transportation by roads and rivers as far as practicable.

As to the roads in Hokkaido which permit the passage of carriages and wagons; the first is that between Hakodate and Sapporo over a distance of little more than 70 *ri*. It was opened in 1872 and is wide and level. The next is the road between the port of Otaru and Sapporo, but as there is a railway line between these places, this road is not much used for transport purposes. The road leading from Otaru to Yoichi, though somewhat irregular in grade, is still a passable one, and the same can be said of that connecting the town of Fukuyama with Hakodate. The new road—6 *ri* long—between Nemuro and Oshima is also good. These are the only roads in the whole island over which carriages and wagons can pass, all the others being miserable paths either along the beach or through deep mountain forests, over which transportation is effected by means of horses. Something of the imperfect state of the roads in Hokkaido will be seen from the fact that their Excellencies Counts Inoue and Yamagata had, in their recent journey there, to travel the whole way from Sapporo

poro to Nemuro on horse back. Under these circumstances, nothing can be done in the way of developing the resources of the island. While there, I was allowed, by the special favour of the authorities of the Hokkaido Administration Board, to see a drawing of a newly surveyed route for a road between Sapporo and Nemuro. It is in a direct line and about 100 *ri* long. (At present the distance between the two places is put down at a little over 140 *ri*). Making this line a basis, various roads are to be cut to the right and left. I was very glad to see the drawing, and hope now that this scheme will soon be carried out. It will, of course, be impossible to execute the whole plan at once, nor can the road be perfect from the outset. The most important portions should be undertaken at first, and the work gradually extended to other less important points. Inestimable benefit will be conferred on the farming interest in Hokkaido by the opening of these roads.

Before leaving this subject of agriculture, I have a word to say upon the system of emigration and reclamation. Hitherto it has been maintained that, if only the number of inhabitants be increased, the object of colonization will be attained; and, acting on this principle, very liberal assistance has been given to emigrants of the lower classes. They have been provided with the expenses of travel to Hokkaido, expenses for the erection of cottages, and funds for the purchase of seeds and implements. But I observed that these poor emigrants have made no improvement since their settlement; they are still as poor as ever and only able to supply the barest needs of existence. Their presence affords no grounds to hope for the development of industries. On the other hand, the few settlements of noblemen, who have been able to maintain their plantations through various difficulties for several years, are alone exporting greater or less quantities of farm products. It will thus be seen that, unless people of capital themselves, or emigrants under their control, settle in Hokkaido, and unless farming is carried on a large scale, it will be difficult to open up the island. I believe that it was this idea that made the Government abolish the enactment providing emigrants with the expenses of journey and settlement. But while on the one hand discouraging the settlement of poor people, it must not be omitted on the other to induce rich people and noblemen to emigrate there, by removing the obstacles now lying in the way of agriculture and giving as much protection as can reasonably be afforded.

To continue on the topic of farming in Hokkaido; I have another point to commend to the attention of the authorities, and that is the enactment of regulations to enforce the observance of contracts between capitalists and farm labourers. In Hokkaido, it is more remunerative to work in connection with fishing establishments than on farms, and it has too frequently happened that labourers, conveyed from the south by various colonization companies, have deserted the ox and plough, and gone off to the fisheries, in spite of the terms of their original contract. The companies have all along been powerless to stop this desertion, nor could they expect much benefit from bringing actions at law against the workmen. Several of the large farming companies have in this way been unable to accomplish their object. The only cases where such difficulties have been avoided are to be found on the plantations of noblemen, where the bonds of loyalty and mutual sympathy have prevented the settlers from attempting such conduct. For instance, at the settlement of Mr. Date (a scion of the former chieftain's house of the clan of Sendai) at Mombetsu, the master and vassals live in perfect harmony, and all the settlers have faithfully kept their original pledge that they would rather eat earth and die than go to the coast and engage in fishing. As the fruits of their perseverance, they are now in a condition of comparative affluence. But this cannot be expected in the case of ordinary employers and employes; and it is consequently

necessary to compel the labourers to sign a binding instrument, and to punish with strictness any who break the contract.

It is also important to apply strict regulations to the mode of employing labourers on the field. In advocating this course, I do not mean to say that the ordinary labourer should be treated like a prisoner. What I mean is to fix the number of hours the labourers have to work,—say eight or ten a day,—and to prevent the idling away of precious time, as is commonly done by workmen in the south. In my recent journey in Hokkaido, I noticed an instance of the good results of maintaining strict order on the farm. I allude to the military farmers. They are provided, on arriving there, with a tract of land from 3 to 5 *cho* in extent for each family, which they have to reclaim under strict military regulations. The number of working hours per day is fixed at 10, and during that length of time they go out with their families and engage in clearing and cultivating land under the supervision of military officers, who move through the fields from morning till evening, encouraging the indolent and punishing the disobedient. The work of reclamation therefore goes on very quickly among the *tondenhei*. For instance, the military settlers at Wadamura near Nemuro—numbering 220 families—arrived there on June 4th, this year, but by the time of the visit of the two Ministers of State on August 25th, they had already turned 68 *cho* of wild land into fine farms, grown with peas, beans, *soba*, potatoes, and other vegetables. Such is the result of order maintained on the field. On private farms, it will of course be impracticable to enforce military regulations as in the case of the *tondenhei*; but it is possible to bind labourers by means of a contract. So far as such a contract contains no unjust stipulation, the Government must recognize it and afford ample protection for its observance. By adopting this policy, I think it will be possible to effect a great improvement in agriculture in Hokkaido. I, therefore, hope that the Hokkaido Administration Board will be invested with special power to enforce the observance of contracts between farmers and their employes, by meting out strict penalties to either party who disregards it.

Side by side with the encouragement of agriculture, attention must be paid to manufacturing industries. In a land like Hokkaido, where means of transportation are lacking, it is impossible to export agricultural products in the raw state. They must accordingly be manufactured and then exported, as in the case of the conversion of wheat into flour and of beet root into sugar. To this end, the Government have established more than twenty factories, but I found that many of them are at present unworked. I do not pretend to know the exact cause of their suspension, but it must be either that they do not pay or that the local Board has not enough work to carry them on. Even among those which are still in operation, it is highly probable that some yield little profit, or even that the expenses are hardly covered by the income. Those manufactories which have no hope of yielding profit, had better be abolished at once; while in the case of those which, though at present unprofitable, have the possibility of becoming so in the future and are moreover calculated to give encouragement to agriculture, may be worked by the Hokkaido Administration Board within the limits allowed by its funds. But with regard to the latter class of manufactories, it seems to me to be a better policy to sell them to private companies or individuals, for there is a great difference in an economical point of view between the official and private management of any undertaking. If the Government gives the purchasers of those manufactories sufficient facilities and protection, and in return reserves a certain control over the maintenance of the establishments, both the Government and the people will be alike benefited by their transfer. Without entering into

minutiae, I shall content myself with the hope that the Government will bestow careful consideration on what I have just briefly touched upon.

#### CONCLUSION.

I have thus far dwelt upon the condition of the fisheries, farming, and manufactures of Hokkaido, and made suggestions as to the mode of remedying the distress of the people engaged in those undertakings. Now I propose to conclude my observations, but before doing so, I shall say a word as to the adoption of a fixed course of policy for the colonization of the island. If, after encouraging agriculture and thereby inducing people to sink capital in farms, the policy is suddenly changed in favour of manufactures, those who have taken to farming will be compelled to suffer great loss; and when the object of the Government is again changed to the development of fishing industries, those manufactures that had been depending upon the protection of the Government, will in their turn suffer. The same thing holds good in the case of mining or of commerce. It is, therefore, important to fix at the outset a line of policy to be pursued for the development of the resources of Hokkaido, and I earnestly hope that, in giving protection to any private company, the Hokkaido Administration Board will ascertain accurately whether there is sure hope of success or not, and that, when once protection is given, it should be consistently continued up to the last. Of what has passed away, I do not like to speak, but this I must say, because, the Hokkaido Administration Board having been newly established in the place of the former prefectures, with the object of energetically carrying out the work of colonization, a new epoch has been inaugurated in the history of Hokkaido, and also because the Government is now on the point of fixing its future line of administration in that island.

What line of policy the Government is going to pursue for the development of the resources of Hokkaido, I am not in a position to know. My own opinion is, that it will be extremely unwise to pursue a patch-work policy. It is important to ascertain where profit is most abundantly and easily obtainable, and then proceed to extract it before attempting less promising fields of action. Or, in other words, natural products must be collected before artificial products are cultivated. Of all kinds of industries in Hokkaido, the fisheries ought to be put at the top of the list, followed by mining, agriculture and lastly by manufactures. Thus the Government has to encourage the development of the fishing industries before everything else. It is but natural that people should all seek to engage in fishing, because marine products are most easily obtained by the expenditure of comparatively slight labour. If it is attempted by artificial means to divert this natural inclination of capitalists and fishermen to other directions, the attempt will never bring benefits. In the time of the Tokugawa Government little attention was paid to Hokkaido; the means of transportation on land and sea were of the poorest description; but still the fishing industries were very prosperously carried on. Every where in the island of Hokkaido proper on its eastern and western coasts, and even in Chishima and Karafuto (Saghalien), the sea-shores were studded with fishing villages. This circumstance at once proves that men naturally seek gain where gain is most easily obtainable, and confirms my statement that attention should be first paid to the fisheries. Have the profits of fishing been exhausted in Hokkaido? By no means. There are various things connected with the fishing industries there, that need improvement and amelioration, such as nets, the mode of fishing, boats, etc. Moreover, the fishermen in Hokkaido, as already described, are in a condition calling for the immediate adoption of some measures of remedy. After the fisheries come mining and agriculture. Though not so easy and simple as in the case of fishing, the process of extracting profit from mineral products needs no great amount of

labour, especially in Hokkaido, where the minerals to be secured are principally coal and sulphur. Mining enterprises will, therefore, spring up quite easily, if the Government gives protection to those engaged in the work, by permitting the employment of convict labour, by affording means of transportation, and taking other measures deemed expedient for the furtherance of their object. When there remains no more space for fresh enterprises in fishing and mining, the Government must turn its attention to farming. With the increase of population, agriculture will naturally become remunerative, and with slight encouragement from the Government, farming will easily be made prosperous. And last of all, manufactures should be encouraged after all the other three kinds of industries shall have been attended to. Proceeding in this manner, the prosperity of Hokkaido will increase at a rapid rate. Proceed in the opposite direction, commencing with manufactures, and what will be the consequence? Suppose that a flour mill has been established, with foreign made machines worked by a foreign employé, and that several hundred thousands of *yen* have been sunk at the outset, with a yearly expenditure of several thousand more. It is calculated that several hundred thousand *koku* of flour can be found. But before working the mill more than a month, all the wheat grown in the vicinity will have been used up, and it will then become necessary to wait till the time of next harvest, producing only a few thousand *koku* of flour. This supposed case is by no means an imaginary one. To take another illustration, let me ask the question: Will the Government be able to accomplish its object of colonization by merely encouraging the emigration of farmers? In too many cases the labourers secretly leave the farms and go to fishing places, and when protection is given to agriculture alone and little attention is paid to fishing, the latter will gradually decline. This again is no unreal fancy. I, therefore, suggest to the Government to fix at the beginning a deliberate course of policy to be followed in Hokkaido in order to develop its resources. I do not mean to say that all the manufactories now in existence should be abolished; there will be no loss in maintaining those which have prospects of paying in future. What I urge is, that the Government should fix the order in which it will encourage the four classes of industries in Hokkaido, so that the public may have a definite basis for business calculations. Hokkaido abounds with fish, has exhaustless mineral wealth, and is very rich in soil. It is really a store-house of the wealth of the country. It is no chimerical idea to think that, when the resources of that island shall have been developed, the center of the wealth and civilization of the country will gravitate there. I hope that the authorities will pay attention to this circumstances, and grant my wishes, which I am sure are those of the people of Hokkaido. If the hoped for day arrives, I will not spare my pen to depict and rejoice in the prosperity of Hokkaido.

#### AN EPITOME OF PROF. TOYAMA'S LATEST PAMPHLET.

##### RELATIONS BETWEEN SOCIAL REFORMS AND CHRISTIANITY.

In a pamphlet just published, under the title of "*Shakai-keiryô to Yôshûkyô to no Kankai*" (Relations between Social Reforms and Christianity), Professor Toyama sets out by saying that it is not correct to assert that there is little social intercourse between the different sexes in Japan. The sexes have mixed, and are at present mingling with each other quite freely, as may be seen by observing festivals and picnic parties in the flower-blossoming season, where men and women appear in equal numbers. Another incidental proof of this

assertion may be obtained by inspecting pictures of various events and festivals throughout the country, at which men and women are invariably present in equal proportions. But he admits that this custom of freely mixing together without respect to sex, is rarely observed in one class, that is the *shizoku*. He thus draws a well marked line of distinction between that class and those below it, so far as the relations of the sexes are concerned. Among the farming, manufacturing, and merchant classes, men and women have enjoyed almost equal social and family privileges from time immemorial. Among them marriage has been more natural, and the relations between man and wife more affectionate and more consistent with the equal rights of the sexes, than among the military class. Further evidence of the fact that women of the three lower classes have enjoyed more freedom than their sisters of the *shizoku* class, is afforded by the difference in the treatment of children by military and *heimin* parents. In a *heimin* family the sons and daughters are treated alike, but in a *shizoku* family all the daughters are required to maintain towards their brother, who is to succeed the father's rank, relations like those between a master and his vassals.

The Professor next proceeds to investigate the causes that have operated to produce so great a difference in the position of women in different countries. He refutes the idea that the main cause lies in difference of race. It is erroneous, he says, to suppose that the Teutonic race alone is specially constituted to favour the maintenance of a respectable status on the part of women. If so, he asks, are our *heimin* people of that race? Were our ancestors also of that race, when the position of women was far more honourable than it is at present? It is not race, but the character of civilization and to a considerable degree also of religion, that has produced the differences in the position of women in various parts of the world. To be more exact, the position occupied by the weaker sex depends upon whether the character of society is militant or industrial. In a militant society, order and discipline are required before everything else, and the spirit of such a society is always intolerant and oppressive. Just as a despotic ruler presides over all the affairs of his State, so a despotic master subjects, in such a society, all the members of his family, wife, and children, to treatment very much resembling that accorded to slaves.

On the other hand, it is noticeable that where fighting is not the principal occupation of a people, the position of the women is higher than in communities where warfare constitutes the chief business. The history of European nations from the time of the rise of Rome, down through its days of decline, through the ignorant ages following its fall, and through the gradual return of society to industrial pursuits, teaches the same truth. At present the position of the fair sex is in the most enviable state in England and America, where the prevailing character of society is essentially industrial; while in countries like France and Germany where the militant spirit is comparatively active, women occupy relatively a lower position. The same thing may be observed in our own history. Before the political power of the State slipped into the hands of the military class, when, under the wise rules of our Emperors, the country was progressing in industrial, legal, literary, and artistic matters, the fair sex occupied an honourable position in society, and the Imperial throne was more than once occupied by a female ruler. But after the assumption of power by the military class, women's position gradually declined. When Tokugawa Iyasu reduced the country to order and encouraged learning, the nation once more saw the crown worn by a female, and certainly in an age that could produce such authoresses as Izumi Shikibu, Murasaki-Shikibu, Sei Shônagon, Akazome-no, &c., woman's position could hardly have been what it is now.

Though the remote cause of the degradation of the position of women must be sought in the militant character of society, there are several immediate causes, among which the most influential are the laws of inheritance and religion. When all the property as well as the rank of a family is inherited, as has been the case in the families of the Japanese military class, by the eldest son alone, and nothing beyond articles of dress and ornament are left to the daughters, it is but natural that the position of the money less sex should be that of slaves to the sex which feeds them. As to religion; the Professor differs from those who maintain that the introduction of Chinese philosophy has been the primary cause that has wrought this complete change in the status of women. What Confucianism did was to assist a tendency which had already been created by circumstances peculiar to the nation's history—military usurpation. Its action may be compared to that of an accomplice in a murder. The teachings of Confucius, combined with the feudal system, produced a pseudo religion, which created the unnatural relations between the sexes that exist among the military class.

Professor Toyama next undertakes to investigate whether Chinese philosophy is destined to continue to exercise its influence or not. In order to decide this question, the best thing is to see whether the character of our society is militant or industrial. Comparing the absolute fighting capacity of the country at present and in former years, we are now incomparably stronger than before; but the general character of society is no longer militant. Chinese philosophy requires the maintenance of despotic power by the head of the family, establishes an unnatural relation between the sexes, and condemns the fair sex to degradation; but the conditions that made it possible for the Confucian system of morality to enforce such doctrines have now passed away with the disappearance of the military spirit of society. The Professor thus concludes that Chinese philosophy must go out of fashion. Not only has it outlived its time, but it is also exerting a very pernicious influence through its conservative disciples, who to a man oppose every movement of social reform.

Having shown that the Chinese code of morals is out of date and that it deserves to be completely thrown aside, Professor Toyama proceeds to say that its place must be taken by the moral system of the West. To say that this line of conduct is right and that wrong, because one is in conformity with, and the other opposed to, natural laws, is not sufficient. It will be far more effective to tell people to do one thing or avoid another, on some high and supreme authority. Reasoning can have but little influence with a people who believe in Buddha, Confucius, Nichiren, Suitengû, Kômpira, etc. The only effective method of approaching them will be to use the name of some such person as Christ or Mahomet. Just as the Confucian philosophy has been used to support the feudal system, so it will be wise to let Christianity assist the work of social reform. Indeed it is not only unwise, while introducing the Western sentiments and customs, to shut the door against the Western religion; it is well nigh impossible to do so. There are two classes of people who advocate the introduction of Christianity. One is that of ordinary believers, who go so far as to assert that Christianity is the only religion; and the other class includes those who, from policy, desire to have their countrymen appear like Western people. Professor Toyama has several other reasons for advocating the adoption of Christianity. Firstly, that religion assists the improvement of music. The history of music in Europe discloses the undeniable fact that the church has been the mother, and more, of music. Not only has it helped the production of great musicians, like Bach, Handel, Haydn, and Mendelssohn, but it has served as the medium of diffusing a taste for music among the people in general. Secondly, the adoption of Christianity will serve to civilize the minds of the Japanese qualities

of combination and union, in which they are sadly deficient. European and American people are among the human family most noted for their facility of combination and union. Various circumstances have combined to produce this result, but the influence of Christianity is one of the most conspicuous. Christianity brings together all sorts of people, men, women, and children, once in every week, to bow before the same God, to say amen to the same prayers, to read from the same Book, to sing the same songs, and to listen to the same sermon. Moreover, the members of the church sympathize with one another's sorrows and rejoice at one another's happiness. Will not such a religion have a strong tendency to make a people united and combined? Thirdly, as already pointed out, freedom of intercourse between the sexes is possible in, and encouraged by, an industrial society; and it is of vital importance to call in the aid of religion to hasten and perfect the change which has already commenced in the character of our society. The influence of Christianity has ever been to elevate the position of women, and to bring the two sexes together to the benefit of both. The Professor, therefore, concludes that the best method of effecting social reform is to adopt Christianity, and cause the sexes to meet each other once a week and engage together in benevolent works.

The relative superiority of the religions of the East and West, the Professor does not attempt to decide, but he says that there are two facts which are past all question; first, that Buddhism has no influence among the people of the higher classes, and secondly, that the Confucian system of morality, which has in the past regulated the conduct of the upper classes, is not adapted to the new order of things. It is not true, he says, to assert that the higher classes have had no religion. The truth is that they believed in a religion, which may be called the feudal religion, that is the worship of ancestors. The feudal religion has no doubt produced splendid characters, but the present age does not require the sort of character which a religion of loyalty to a master and father is adapted to develop. Will the upper classes remain without a religion now that the feudal religion has gone out of date? That cannot be, and ought not to be allowed. The effect of living without a religious principle is already apparent in the wandering and helpless condition of the present generation as to its moral conduct, like people floating on the wide seas in a boat without even a compass to guide its course. The Professor concludes thus:—"The reformers of society must not be contented with such paltry measures as the inauguration of balls and garden parties. Those who, while enthusiastically admiring the customs and manners of the West, do not exert themselves to further the introduction of that religion which has the most intimate connection with those manners and customs, must lay themselves open to the charge of being either ignorant or cowardly."

### THE JAPAN RAILWAY COMPANY.

We translate from the *Official Gazette* the ninth report of the Japan Railway Company:—

#### GENERAL AFFAIRS.

**GENERAL MEETING.**—On January 20th, 1886, the general meeting of shareholders was held at the Koseikan, No. 14, Nishi-Shinjyō, Kojikicho, in Kyōbashi-ku, at which the report on the company's business during the latter half of the preceding year, 1885, was read. After the reading of the report, points relating to the payment of dividend for the period just referred to were considered, and the estimates of office expenses and expenses for works for the first half year of 1886 were approved.

**NOTIFICATION OF THE RAILWAY BUREAU.**—The Director of the Railway Bureau notified, on January 7th, that he had received instructions from the Minister President of State informing

him, that all petitions, applications for instruction, and reports made by private individuals in connection with railway affairs, and all charters and instructions granted to private railway companies in the name of the Department of Public Works or the Minister of that Department, should henceforth be under the control of the Railway Bureau or the Director of that Bureau.

**SANCTION OF THE DEPARTMENT OF FINANCE.**—In pursuance of the provision of Art. 18 of the company's constitution, the estimates of the office expenses, and of expenses for works for the first half-year of 1886 were reported to the Auditors of the Department of Finance on February 1st, and on the 5th of the same month their approval was obtained.

**INSTRUCTION OF THE DEPARTMENT OF FINANCE.**—To the Nippon Tetsudo Kaisha.

It is hereby notified that, whereas the expenditure on works to be defrayed from the present month until February, 1887, will be paid out of the funds now in deposit, those shares, which were to be drawn during the month of August this year, should be raised in the next period, but that, whenever any deficiency of capital is experienced in practice, steps will be taken to meet the requirements.

"COUNT MATSUGATA MASAYOSHI,  
Minister of State for Finance."

"June 23rd, 1886."

The credit of the company having been increased under the special protection of the Government, many of the shareholders are desirous of paying in their capital in advance of the regular period, but such payment in advance has been stopped. It being, however, thought that the stoppage of payment of shares in regular periods would affect the credit of the company, and, further, it being evident that, although the funds at present in deposit may be sufficient to prosecute works until about February next, a deficiency may arise before the completion of the third section of the line, a petition was presented to the Department of Finance for permission to draw shares in regular periods; and the petition was granted on June 30th.

**CONSTRUCTION OF TELEGRAPH LINES.**—The Utsunomiya-Shirakawa line being under construction, application was made to the Department of Communications in March this year for the construction of a telegraph line beyond Utsunomiya a distance of 10 miles, and for the erection of a telegraph office at Fukaya Station. The application was duly granted.

**LEASE OF LAND.**—Application was made to the Governor of Tōkyō on March 17th, for the lease of a piece of land in Ueno Park containing 3,018 *tsuba*, and of a portion of the land under the Bureau of Forestry (containing 8 *se*) at Nishigahara mura in Kita-toshima, as these pieces of ground were important for the laying out of railway lines. On March 30th they were leased as "ground for laying rails," according to Art. 2 of the company's charter.

**WORKS ON THE UTSUNOMIYA-SHIRAKAWA LINE.**—For the construction of the Utsunomiya-Shirakawa line (48 miles), the permission of the Minister of the former Department of Public Works had been obtained. After the completion of surveys over the line, an estimate of expenses was compiled and submitted to the company; the estimate amounted to yen 2,380,864. The Director of the Railway Bureau informed the company that the construction of the line would be commenced from March 1st.

**WORKS ON THE THIRD SECTION.**—As stated in the last report, Mr. Masuda was ordered, on December 31st, 1885, to proceed to Sendai, in connection with the survey of the line there, which was duly completed. In April this year, the commencement of the construction of the line was sanctioned, and it was reported by the Director of the Railway Bureau that the work of construction would be commenced from June 1st.

**CONTRACT FOR CURRENT DEPOSITS.**—For convenience of payments with regard to the portion of the third section lying within the territory under the Fukushima Prefectural Government, a contract was made with the Sixtieth National Bank for a period of time extending from July 1st, 1886, to June 30th, 1887, by which it was arranged that money should be drawn from its branch office at Fukushima.

**ORDER FOR RAILS FROM ABROAD.**—According to the instructions of the Director of the Railway Bureau, received on April 34th, respecting the purchase of 100 miles of rails to be used on the third section, an order was transmitted to the Union Company in Germany through the medium of a German firm, Messrs. C. Illies & Co.

**COMPLETION OF THE BRIDGE OVER THE TONEGAWA.**—During the construction of the bridge, the conveyance of passengers and goods across the river was effected by establishing stations on both banks and using a ferry. The bridge having been finished, the trial run was made on June 15th, and the passage of ordinary traffic was commenced on the 17th of the same month, when the temporary station at Nakada and the system of ferry boats were dispensed with.

#### CONSTRUCTION.

Concerning the construction of the 1st, 2nd, and 3rd sections of the company's railways, the Director of the Bureau has made the following report:—

In making a report upon the progress of the works of construction on the Nippon Tetsudo Kaisha's railway lines during the present period, it will be well first to enumerate the more important of these works. In the 1st section, the construction of the temporary bridge over the Kanriagawa and of additions to the iron bridge over the Karasugawa was completed. In the 2nd, the iron bridge over the Tonegawa was finished, and the Omiya-Utsunomiya line was thereby connected. With the completion of this bridge, the Nakada station was abolished, while the Kurihashi station was rebuilt. The construction of the Utsunomiya-Shirakawa line made considerable progress; rails were laid as far as Yanoita, while construction trains are running as far as the Kinugawa. The works north of Takahisa and the construction of iron bridges over the Kinugawa (Nishi and Higashi) have been commenced. In the 3rd section surveys have been commenced between Fukushima and Shirakawa, while the construction of the Sendai-Fukushima line has been commenced. These are the principal works executed. Details will be found in the following paragraphs.

The construction of the temporary bridge over the Kanriagawa, in the 1st section, was commenced in November, 1885, and on April 1st this year the first run was made. The foundation of this bridge was of wood, covered with charred timber, the spaces between the two being filled with clay and pebbles. The bed of the river round them—to the extent of 15 feet, was covered with *jakago* (network made of twining plants, containing stones) to withstand the force of the current. Thirty iron beams were used in the flooring of the bridge. The construction of the additions to the Karasugawa iron bridge was begun in August last year, and although during the rainy season the volume of water in the river showed more or less increase, no serious obstacle was presented to the execution of the work. On March 10th in the present year the passage of trains over the bridge was stopped so as to facilitate the construction of the frame-work of the bridge. Nine days afterwards, the trial run was performed, and the work of construction was completed the same day. This work was necessitated by the damage caused by the flood of July last year. That portion of the frame work which had been partly dislodged was renewed, and an iron beam 100 ft. long was used to complete the work. The dimensions of the different parts were:—piling, 27 ft. long, 11 ft. wide; and foundation, 31 ft. long, 10 ft.

wide. On the Shinagawa line, a siding 78 ft. long was laid at the Shibuya station; at Shim-machi, a goods siding 267 ft. long was constructed for the purpose of transporting goods; and several signal posts were placed along the line west of Omiya. By way of protection to the line, ballast was applied over an area of 569 *tsubo* on the Ueno-Akabane and Shinagawa-Akabane lines, and over another area of 662 *tsubo* on the Urawa-Maebashi line. Between Ueno and Oji, 540 sleepers were laid, and embankments were repaired at more than 10 places between Ueno and Maebashi.

On the 2nd section, the construction of the iron bridge over the Tonegawa was continued from the preceding period, and completed on 15th May this year, when a trial run was made. Two days later the passage of ordinary traffic was begun, and the use of boats on the river for the purpose of ferrying across passengers and goods was discontinued from that date. The Nakada Station became useless in consequence of the complete connection of the Omiya-Utsunomiya line. The construction of this bridge took nearly 12 months. The entire length of the bridge is 1,548 feet. Excluding the two at both ends of the bridge, there are altogether 11 piers. After testing the piers, the earth filling was removed, and the inside was filled in with concrete. The total number of iron trusses used was 24, of which 18 were 79 feet 10 in. in length, and 6 were 208 feet 10 in. The laying of the trusses was commenced on January 28th this year, and finished on May 10th, after occupying 14 weeks. The materials employed were bricks (1,924,500 pieces), trusses (24), cement (2,737½ casks), and stones (11,270 pieces). These are the brief outlines of the construction of the iron bridge. On the completion of the bridge, the Kurihashi Station was rebuilt on the new line. The building is of wood, one storied, thatched with tiles, and occupying 48½ *tsubo*.

Work on the Utsunomiya-Shirakawa line was pushed eastward in the direction pointed out in the report for the last period. Rails have been laid as far as the southern bank of the Nishi-Kinugawa, and trains are run that distance for the conveyance of materials of construction. The Higashi-Kinugawa and the Nishi-Kinugawa are spanned by convenient temporary bridges. Proceeding along the route, the ground slightly rises as the southern bank of the Arakawa is reached. Crossing this river, the ground again becomes low, and considerable labour was required to make the necessary cuttings and embankments. After passing through Okamura, the route crosses the Uchikawa, and passes near Yanoita. All this part of the route is nearly level and the streams are not very wide, so that the construction of the line was comparatively easy. Rails have been laid as far as the last mentioned place. From there the Higashigawa is soon reached. The ground on its southern bank is high, while on the opposite bank it is low, just as in the case of the Arakawa. Passing through the wide plain of Nasuno and the village of Mishima, the line then crosses the Janokawa. This stream is entirely dry in ordinary weather, but in the rainy season it overflows to a considerable distance on both sides, so that it will be necessary to construct a very long bridge. The line afterwards crosses the Nakagawa, the breadth of which is about 300 *shaku*, and for which a temporary bridge is now being designed. The ground to the north of this stream is undulating in many places. After passing Takahisa on the east, the line crosses the Yosagawa, and running through the wild regions of Toyohara, Ogura, etc., reaches Shirakawa, in front of the old castle. At this point the Shirakawa station is to be located, but as the ground belongs to the War Department, application has been made to that Department for its transfer to the company. To the north of Takahisa, the works executed from May 11 until June 30th consist of the following:—Embankments (6,414 *tsubo*), cuttings (7,795 *tsubo*), lengths of the above works 2 miles 14 chains,

and the erection of an office (23 *tsubo*) at Takahisa, of officers' quarters (37 *tsubo*), of a store (6 *tsubo*), and of two watch-houses (24 *tsubo*). The branch construction office at Utsunomiya was removed to Takahisa to superintend the works on the Fukushima-Shirakawa line. The construction of the iron bridge over the Nishi-Kinugawa was commenced in April last, and eight of the piers have been constructed. The preparations for the construction of the iron bridge over the Higashi-Kinugawa were commenced in May last, and the works were begun in June. After fixing the position of the central line and of breakwaters four of the latter have already been finished.

(To be continued.)

### ATHLETIC SPORTS.

The Athletic Sports, which had been postponed on account of the stormy weather on Saturday, for which they were originally fixed, took place on Tuesday. The event was on the whole highly successful, though the number of competitors might have been larger in some of the contests. Heavy rain fell in the early morning, and fears were entertained for some time as to the success of the meeting, but happily the weather remained fine during the entire forenoon, and the enjoyment of the spectators while the sports lasted was marred by no unfavourable condition so far as the weather was concerned. There was a good attendance of ladies in the Pavilion and on the ground during the afternoon.

The prizes were presented to the winners by Mrs. Steele, and hearty cheers were given at the finish for the ladies.

The Tokyo Marine Band was present and played a variety of pleasing selections.

Details are appended:—

100 YARDS FLAT. Two Prizes. 14 Entries.

H. B. Collins, Lieut. Bush, J. Campbell, and L. Salabelle competed in the first heat, in which Collins at once took the lead and kept it to the last, Bush 2 yards behind. Time 11½ sec. In the second heat Martin, C. Morgan, and C. W. P. Allen ran, Martin coming in first and Morgan second in 12½ sec. Collins, Bush, Morgan, and Martin went off in the final. The first named got away with a long start and was never caught, though Bush came within a yard of him on the tape. Martin retired early, having tripped. Time 11½ sec.

MEN'S HURDLE RACE. 120 Yards, over 10 Flights of Hurdles. Three Prizes.

The first heat in this race placed Law (*Cleopatra*), first and Richards (*Leander*), second, the time being 21 secs.; and the second heat resulted in Russell (*Leander*), coming in first and Murphy, second in 22 secs. Law, who ran and jumped in capital style, won the final heat by several yards in 21½ secs. Murphy taking second and Richards third place.

HIGH JUMP. Two Prizes. 7 Entries.

Only four competed in this contest—A. H. Dare, Martin, W. J. Kenny, and Campbell. With the exception of Kenny, all cleared up to 4 feet 6 in, but Campbell, taking off too soon, failed at 4 feet 8 inches; Martin succeeded, but could not jump 4 feet 10 in, which Dare cleared. The winner, however, failed afterwards to jump 5 feet, which he cleared easily last year.

220 YARDS FLAT (for Midshipmen of H.B.M.'s Navy). Two Prizes.

C. Sykes (*Constance*) took the lead at the very outset and won by several yards, H. J. Marshall (*Audacious*) taking second place, through the other competitor, S. Bickley (*Audacious*) looking back. Time 29 sec.

THROWING CRICKET BALL. Two Prizes. 12 Entries.

Six competed. Even with the aid of the strong breeze that was blowing, the throwing was not of the best. F. W. Strange took first prize with a

throw of 77 yards 3 in., Rev. E. C. Irwine coming next with 73 yards 2 feet 6 in.

HURDLE RACE. 120 yards. 10 Flights.

Two Prizes. 11 Entries.

Five started in this race. Dare, Morgan, and Campbell ran in the first heat, Dare coming in winner by several yards and Morgan second. Time 20½ seconds. In the second heat Bush won by a yard from Salabelle—time 21 secs. The final heat resulted in Bush's splendid jumping landing him first at the tape, Dare second, and Morgan third—time 20 secs.

MEN'S GUN-WHEEL RACE. 220 Yards. Three Prizes.

This race gave the spectators a good deal to laugh at, the more excitable competitors displaying an unhappy tendency to strand each other on the palings of the enclosure. The heats were run in perfect good-humour, and one of the losers entertained the company to some very effective back, fore, and wheel tumbling after the finish of his heat. Sibley (*Audacious*) and Rooke (*Constance*) were respectively first and second in the first heat; Fullerton (*Leander*) first and Maynard (*Audacious*) second in the next; Benton (*Leander*) first and Goodman (*Leander*) second in the third heat; the final resulting in Fullerton taking first place; Benton second, and Sibley third.

440 YARDS FLAT. Two Prizes. 6 Entries.

Martin and Collins started alone in this race. The former took the lead from the start and kept it all through, his opponent giving up towards the close. Time 58 seconds.

PUTTING THE SHOT. Two Prizes. 13 Entries.

Strange and Irwine led off, and the mark was soon moved up to 24 feet 9 in., where both Martin and Richmond placed it. Charlesworth followed with 23 feet 10 inches, and Bush, coming next, increased the distance at once to 27 feet 0½ in., Strange now threw 26 feet 10 in, Martin 26 feet 5 in., Irwine 21 feet 10½ in., Richmond 25 feet 10½ in.; Strange in his next try to beat Bush's throw moving the peg up to 27½ in. Martin failed to improve on his former distance, and the lieutenant easily gave his opponents 28 feet 6 in. to think over. This settled matters, the result being Bush (28 feet 6 in.) 1; Strange (27 feet 1½ in.) 2; Martin (26 feet 2 in.) 3.

880 YARDS FLAT. Two Prizes. 10 Entries.

Four started. Campbell led for a while, but after hunting him at a distance of a yard Martin chose his time, and took the lead with comparative ease. Collins and Salabelle dropped out before the finish. Time 2:18.

MEN'S 880 YARDS FLAT. Three Prizes. 2 Entries.

This was a capital race. Thurridge (*Cleopatra*) led Russell (*Leander*) were first round the greater part of the course till Law (*Cleopatra*) came up from the rear, and, passing both easily, came in winner, Thurridge second, and Russell third. Time 2:12.

LONG JUMP. Two Prizes. 6 Entries.

This resulted in favour of Salabelle (16 feet 9 in), Martin coming next with 16 feet 8 in, Campbell with 16 feet 3½ in, and Dare with 15 feet 2½ in. Campbell jumped well towards the end but, falling back, was thrown out.

MILE FLAT. Two Prizes. 10 Entries.

Four started, but Collins and Campbell could not keep up the pace and dropped out. Lowdell led Martin till entering up the straight in the second lap, when Martin came, and a pretty race took place up to the Pavilion, where Martin stopped, thinking the contest was finished. Lowdell ran the rest of the course alone, and won. No time was taken.

MEN'S OBSTACLE RACE. Two Prizes.

The obstacles consisted of a gridiron of bamboos faced by two hurdles, up to which the competitors ran in sacks, a sail spread flat, under which they had to crawl, a flight of hurdles, windsails through whose inviting folds they had to wriggle, and, as a finish they had to go through barrels

suspended about 4 feet from the ground. May (*Amazilia*) came in first, Fullerton (*Leander*) second, and Sibley (*Constance*) third.

#### OBSTACLE RACE. Two Prizes. 10 Entries.

The starters were L. Salabelle, Campbell, Bellairs, R.N., Stephens, R.N., and Hickley, R.N. Salabelle took the lead and maintained it to the finish, Stephens coming in second.

CONSOLATION RACE. 440 Yards. For all who have competed but not won a Prize at the meeting. One Prize.

This race was not run owing to the lateness of the hour at which the other sports finished.

#### TUG OF WAR.

A crew from the *Constance* first engaged another from the *Leander*. The latter won, but judgment was given against them because they over-hauled the rope instead of going back with it. In the next and final heat a team of marines from the *Cleopatra*, captained by Corporal Francis, pulled the *Constance* men over and won.

#### CRICKET.

##### YOKOHAMA CRICKET AND ATHLETIC CLUB V. FLEET AND TOKYO.

This match, which was got up instead of the return match between the Fleet and the Club, was played on Wednesday, and resulted in a hard-won victory for the visitors. The weather was favourable, and the wicket in fair order, though slightly treacherous in consequence of the late heavy rain. The home team (captained by Mollison) won the toss, and sent Edwards and Dodds to face the bowling of Collins and Serratt. The game opened badly for the Club, Dodds, after cutting the first ball for one, being run out in an attempt to score off a hard hit to long-off by Edwards, sharply fielded by Griffiths. Sutter joined Edwards, only to see the latter retire—easily caught by Collins at slip off Serratt's second ball. Wheeler, who followed, had no better fortune, Serratt's next ball taking his off stump. Things began to look bad. Read, the next to bat, helped to make a slight stand, however. He commenced by driving Collins for a three, and in the next over Sutter made a fine hit off Serratt for 3 to long-on. This, followed by another three by Sutter (a hit to the pallings to leg, off Serratt) helped to improve matters. In the next over, Sutter retired, caught by Griffiths at mid-off off Collins' first ball. Mollison joined Read, who, however, was shortly afterwards caught out by Serratt at point. Five wickets for 21. Litchfield then went to the wicket and hit Serratt for a three, Mollison doing the same. A few singles were put on carefully, before Litchfield was bowled off the leg by Collins. Needham followed in, and, with Mollison, made the longest partnership of the innings. In fact it is probable that he saved the Club from an ignominious defeat, for had he not played so carefully it is quite possible that Mollison would not have had an opportunity of making the brilliant score he put together. Runs being steadily added and both batsmen being apparently set, a change of bowlers was made, Strange taking Serratt's place at the Pavilion end, and Christian relieving Collins. The score, notwithstanding the changes, still rose, Mollison making several bold hits; and after a few overs Griffiths went on at the Settlement end in Christian's place. Serratt, too, resumed bowling. With the score at 73, Needham was bowled by Griffiths. Wilson, the next to bat, hit Griffiths to long-leg for two, but retired in the next over—Serratt taking his off stump. Robinson joined Mollison, who made two more good hits—one to square-leg, the other to long-on—the score being increased to 86 before Mollison, playing just a little too far back in the defence of his wicket, displaced a ball and retired for a well played and deservedly applauded 51. Baggeley, the last to go in, hit Griffiths' last ball for a two; and in the next over from the Settle-

ment end Bush took the ball. All hope of topping the hundred disappeared with Bush's third ball, Robinson giving Duff an easy catch at short-leg off it. The innings closed for 91—a very good score, considering the way in which Edwards, Dodds, Wheeler, and Sutter were disposed of.

After tiffin, at the close of which the health of H. I. M. the Mikado was drunk, the Fleet and Tokyo went to the wickets.—Collins and Christian facing the bowling of Sutter and Edwards. After a maiden over from each bowler, Christian got Sutter's second ball away for three, and with a break of two more maiden overs, both by Edwards, drove that bowler also away for a three. With the score at 21, Collins was sent back by a ball from Sutter. Trevithick joined Christian, and with him kept the bowlers at bay some time, Trevithick securing several singles, whilst his partner got Sutter off to square-leg for three, followed soon after by a hit for another three, this time off Edwards. The next hit, too (which yielded but one), promised well for a three, had it not been for a piece of good fielding by Needham. The batsmen having seemingly settled well down to their work—although it was noticed that Christian had several lucky escapes—Edwards went on at the Pavilion end. His first over from that end, however, gave three to Trevithick—a single, and one two to long-slip. In Sutter's next over Trevithick was caught out by Robinson at point; 2 wickets for 48. Griffiths was the next to bat.—Read at this stage relieving Edwards in bowling. Griffiths collared Read's second ball, but it cost him his wicket, Dodds effecting a good running low down catch. Duff followed. Read's next over was badly punished, Christian getting a single off the first ball, Duff two to long-off the second, and a hit to long leg for two, and a single off the fourth and last balls. Off his next over, too, Christian scored a three, whilst Duff hit to long-leg for three, but the last ball gave a catch to Baggeley at long-off, which disposed of Christian, who had put together 22 in fine style. Bush joined Duff, hitting his first ball from Sutter to square-leg. In the same over, Duff was unfortunate enough to give a catch to Dodds behind the wicket at long-stop. Serratt, the next to go to the wicket, drove Sutter's last ball to long-on for two. Edwards here went on bowling again at the Pavilion end, but Bush hit his first ball to short-leg for one. Edwards's third ball, however, took Serratt's stumps, and Strange, who took his place, fell to his first ball, and Edwards' next. Seven wickets for 71. Macmillan then went in and, with Bush, made a stand for some time. A few singles were put on before Bush got Edwards away to long-leg for two; then Macmillan "snicked" Sutter for two twos. In Sutter's next over Bush hit to long-leg for three, whilst Macmillan "snicked" another two;—and in Edwards' next over Bush scored four for a fine hit to long-leg. With the score at 92, and after making the winning hit, Bush was run out. Spearman joined Macmillan, who got Sutter away to long-on for three. Spearman followed with a hit to long-leg for three—also off Sutter. Macmillan then hit Edwards to long-off for two, and Spearman also got him to long-off for two in the next over; but was given out next ball, "leg before." Hickley, the last to go in, retired at once, bowled clean by Edwards. The innings closed for 118, 16 of which were extras,—one result of the poorer fielding of the Club team.

As the game was decided on the first innings, we need not particularize regarding the Club's second innings, beyond saying that in it Dodds and Edwards did somewhat better (although the former was again run out), that Sutter was unfortunate enough to fall before an easy first ball, and that Litchfield got into double figures by some free hitting. A few ladies graced the field with their presence, although the keen northerly wind made it rather cold in the shade.

#### THE LOSS OF THE "NORMANTON."

The *Hogo News* of Friday last publishes the following:—

The anticipations of disaster caused by the non-arrival of the steamer *Normanton* were justified yesterday afternoon when news came of the total loss of the vessel, all the Japanese passengers on board—23 in number—and 12 of the crew. We are informed by one of the survivors of this terrible calamity that the *Normanton* left Yokohama on Saturday last for this port. She had little cargo, as her principal loading was expected here, but unfortunately for themselves 23 Japanese, three of whom were women, took passage by her. On Sunday night at about half-past seven o'clock our informant heard the look-out calling "light on the starboard bow." At this time it was raining hard, and, as our informant describes it, "as dark as a pocket," with a heavy sea running and a strong breeze. Almost simultaneously with the warning from the look-out, a shock was felt as of the vessel running against something, and immediately afterwards another. The lead was hove at once, and showed fifteen fathoms and no bottom, so it seems likely the *Normanton* struck a pinnacle rock—indeed we are told it could be seen just awash after the vessel wrenched clear. It seems that the steamer struck about amidships, and, going pretty fast through the water at the time, must have sustained great injury. Any how she at once commenced to fill, and the water came in so rapidly that it was evident the only chance for the passengers and crew lay in taking to the boats. Of these there were an unusual number, and more than sufficient to have saved everyone on board had they only preserved their self-command. Unfortunately there was no one able to communicate with the passengers in their own language, and to this may be attributed in great measure the lamentable loss of life that ensued. As soon as the steamer was seen to be sinking the captain ordered the long-boat and two life-boats to be lowered ready for service. In accomplishing this one of the crew fell overboard and was probably crushed between the boat and ship's side, for nothing more was seen of him. By this time the vessel had settled down, and the captain ordered all hands into the boats. This order the Japanese declined to obey. They huddled together in the alley-way with the water washing fore and aft about them, and resisted all attempts to induce them to go into the boats. Probably they omitted taking the opportunity of saving themselves through ignorance, for we are informed they showed no signs of fear, and resolutely declined to separate. Captain, officers, and several of the crew tried all in their power to get the Japanese into the boats, but without success, for neither knew the language of the other, and to this want of means of communica-

tion is undoubtedly due the distressing loss of life that accompanied this calamity. In about half an hour after the *Normanton* struck, and just as the vessel was going down, the crew took to the boats, one man—the boatswain—being left behind while engaged in a last attempt to induce the passengers to abandon their attitude of passive resignation and seek the means of safety provided. The boatswain felt the steamer going down, and, seizing a lifebuoy, jumped as clear of her as he could out into the darkness. His escape is really miraculous, for twelve hours he floated about, and it was not until next morning that one of the boats noticed and picked him up. In this boat was the captain, and they landed about midway between the two lighthouses on Oshima, the occupants of the other boats having got ashore on the other side of the island. On mustering the survivors it was found that 26 officers and men were saved, while 23 Japanese passengers, 1 sailor, and 12 firemen had lost their lives, three of the firemen dying from exhaustion in the boat before reaching land. The bodies of these men were buried near the beach, and after some difficulty—owing to ignorance on either side—two junks were obtained to convey the survivors to Kobe. On Tuesday they left Oshima, where they were treated with the utmost kindness, and yesterday evening all reached here safely except the captain, chief officer and chief engineer, who came up overland from Wakayama. It is worthy of mention in connection with this unfortunate affair that the watertight bulkheads of the *Normanton* proved utterly useless. They gave way like matchwood, and did nothing towards retarding the sinking of the vessel.

### FRANCE, CHINA, AND THE VATICAN.

Sir Rutherford Alcock has addressed to *The Times* a remarkable letter under the title of "France, China, and the Vatican." Sir Rutherford's conclusions, the most important of which we quote below, coincide exactly with the opinions which we have ourselves expressed on the same subject:—

Nor, considering the past history of the foreign relations of China, and how fruitful the missionary element has been in stirring up dissensions in the midst of excitable populations and provoking war with foreign Powers, can it be wondered at that such a determination should at last be manifested. It requires no long memory on their part to recall how the first war with France, in a professed alliance with the British, who had other grounds of quarrel, was ostensibly to seek redress from the Government of Peking for the judicial murder of a French Bishop in a distant province. This was only in 1860, and it led to the Treaty of Tientsin and the opening of the gates of Peking to foreign legations and missionaries. The first use the latter made of this privilege was to claim the four sites granted by Kang-hi to the Pope for churches two centuries before, and to build a cathedral within the Palace precincts and overlooking the gardens with two high towers. Anything more impolitic or exasperating and offensive cannot be conceived. This north cathedral, which destroys the privacy of the Emperor's gardens as much as a French church the would that of Buckingham Palace it built within the enclosure, was built and maintained, in spite of all protests and remonstrances, as a grievous and offensive outrage offered to the Sovereign and the nation. The Lazarist Mission and its Bishop, it is true, seemed at last to see how impolitic it was, and in 1874 entered into a contract to accept another site not far off, and an offer to rebuild the cathedral at the cost of the Chinese Government. But unfortunately, owing to the death of the young Emperor and of Bishop Delaplace soon after, nothing was done, as your correspondent states. And later, in the early part of this year, a similar contract was entered into by the present Bishop or Vicar Apostolic of Peking and the Procurator of the Lazarist Mission, but the French Government seems to have interposed a veto. The war of 1860 is not the only one which China has had to engage in with France, and the origin of which was remotely due to French missions. In Cochinchina the inducement they held out to their Governments in the last century, and more recently, to annex territories in Annam and Tonquin was a motive for aggressions from which the late hostilities in the China seas took their origin. Space will not allow me here to trace back the history of these successive aggressions, ending in the seizure of Tonquin and an attack on China, as a measure of reprisal, with its campaign of bombardments and blockades without any declara-

tion of war. But the missionary origin of the rights of France in Cochinchina is unmistakable, and commences with the treaty entered into by Louis XIV. in 1686, who next year despatched five ships and a regiment to take possession of Bangkok, on the representation by these missionaries of the "great commercial and political future reserved for Indo-China in French hands"—"et le rôle digne d'elle dans ces contrées où flotte si orgueilleusement le drapeau anglais!" The next missionary envoy, Bishop de Pigneau, was still playing the same part, and more successfully, in the next century with Louis XVI., while using similar arguments of rivalry to the English. He obtained the despatch of an expedition of ships and troops in 1787 to restore a fugitive King, Yin-Long, to his throne, under the wing of the militant Bishop, who obtained, as was natural, great and exclusive advantages for the missionaries and for France—the chief argument of the Bishop being the great advantages both in peace and war to be derived from the occupation of Cochinchina by the establishment of a French colony there, and "the most certain way of damaging the English in India by ruining or, at any rate, weakening their commerce." This was the commencement of a protectorate over the country, while the missionaries were placed in a position of great influence, as they desired, and, in one sense, had well deserved: and this was the real origin of all the subsequent designs for the conquest of Annam and Tonquin in recent years, mixed up with many conflicts of a politico-missionary character in the interval, and interspersed, as usual, with many massacres and persecutions, which gave frequent occasion for the intervention of French naval forces, and the annexation of provinces as the penalty. These were all precursors of the last advance on Tonquin, every step of which was well known in Peking. Indeed, they could not be otherwise than known, despite the professed aims and motives of the French in their official and diplomatic utterances. For the time has long passed when the Chinese Government was so ill-equipped with means of information that it was obliged to accept such statements as were officially put before it by foreign States. For the last 20 years it has had a large staff of highly-educated foreigners in its service, not only familiar with foreign languages, but well versed in the Chinese language, both written and oral, through whom it has probably been quite as well acquainted with what the policy of foreign Powers was as any of these in regard to each other. Whatever newspapers in Europe supply in the way of information the Chinese have long had at command. And as regards the French, their objects and proceedings in Tonquin, there was no lack of such information in the press, supplied by the French officers employed in Tonquin. Notably a *brochure* was published by Captain Rivière, who lost his life in carrying out the object described in a *sortie* from Haïphong. In a *brochure* entitled "*La Guerre avec la Chine, la Politique Coloniale, et la Question du Tonkin*," the character and design of the aggressive operations in Annam and Tonquin could not be more plainly or cynically stated. In this he openly advises that France should avail itself of the chance of a quarrel with China about the "Black Flags" and Tonquin to take possession of Yunnan, Kwang-se, and Kwang-tung—that is, the three southern and western provinces of China proper—and concludes that a war with China would be a "*bonne affaire future*" and "*une excellente affaire pour la France*." And this was the officer sent out in command of the naval and military forces of France. What were likely to be the conclusions of the Government at Peking, with this *brochure* before them, as to the *bona fides* and morality of the war on their coast on a plea of reprisals for wrongs suffered, or the desirability of having missionaries in their midst under a French protectorate to repeat the rôle of the De Rhodes and De Pigneaus, or a protectorate to be exercised when and where and how a French Minister or Government might see fit, to be a standing menace at Peking, an ever-recurring cause of dispute between the Governments, and a danger to the Empire which no diplomacy could avert?

It is contended by some of the French papers that if the missionaries should be deprived of the protection of a great military Power such as France, with fleets and armies at command, the Chinese may soon repeat the history of the past and extirpate Christianity out of the land, if they cannot effect the expulsion of the missionaries themselves. But it is to be observed that such protection as France affords is a two-edged sword, and in their hands is quite as full of danger to the missionaries, both Roman Catholic and Protestant, and the mission in which they are engaged, as of security. The latter, as the recent massacres and many preceding shews, is evidently very illusory, while the danger is real and per-

sistent, arising from the active hostility it keeps alive among all the ruling classes, and, with their tacit connivance, among the people, giving point to and intensifying the race hatred and distrust of a whole nation. It would be a great mistake, therefore, to suppose that the contention of France with the Vatican is a matter which concerns the French and their missions exclusively. Their policy affects other and larger interest—religious, political, and commercial—and other foreign Powers besides France. It is policy fraught with danger to all who have any interests in China—and nearly all treaty Powers have interests which in magnitude far exceed those of France—and affects injuriously the safety of all who have any intercourse with the Chinese in their own country. All the Western Powers are thus involved and have a legitimate voice in the issue. All this hostility among the Chinese has very little to do with religious fanaticism. They are of all nations the most tolerant, perhaps from the reason that they are very indifferent, and care little for any form of religion. When the Emperor Yoang-tching, in 1724, issued his exterminating edict it was from policy and not from religious motives, as he himself deigned to explain to three of the Jesuit Fathers, in answer to their memorial, in the following terms, which leave no doubt:—

Certain Europeans in the province of Fokien have been endeavouring to defy our laws and trouble our people. The great men of the province have applied to me, and I must repress this disorder. It is the business of the Government with which I am charged. You say that your law is not a false law, and I believe it. But what would you say if I were to send a troop of Bonzes and Lamas into your country to preach their law in it? How would you receive them? You wish to make the Chinese Christians, and this is what your law demands, I know very well. But what in that case would become of us? The subjects of your kings, the Christians whom you make, recognize no authority but you; in times of trouble they would listen to no other voice, I know well enough that there is nothing to fear at present; but when your ships shall be coming by thousands and tens of thousands, then indeed we may have some disturbances.

As the Emperor and despotic ruler of a great pagan empire extending over a third of Asia, with some 300 millions of subjects, this surely was a very rational view to take, and one showing a singular prescience of future possibilities. In the universal indifference which through all their history, has prevailed in the Chinese nation, every one may please himself as to what religion he professes, with one proviso, that it is not connected with secret societies or political objects. This as regards the Government; and as regards the people themselves, that it shall not interfere with their worship of ancestors, their feasts and processions, for which funds have to be found by all the inhabitants of the several communities. Unfortunately, says Abbé Huc, "the Chinese Government has placed Christianity in this category, and it is very difficult to correct this error and introduce more just ideas." Very difficult indeed, I should say, and in view of what is hourly taking place under their eyes, it may well be impossible. M. Huc is quite right in his conclusion that the Chinese Emperors are neither intolerant nor bigoted, and are too entirely without any religion to care for creeds—save in so far as they interfere with temporal things. I entertained the same conviction after some 20 years' residence among the Chinese, and the last five of these spent in Peking as Her Majesty's Minister, and therefore when asked by Pope Pius IX. at Rome, on my return home, soon after the massacre of Tientsin, how I accounted for the persistent hatred manifested against the missionaries and their converts, I felt constrained to answer: "It was not a question of religion with them, but of civil jurisdiction," and I was not surprised that he did not pursue the subject further. It is a truth, however, which lies at the very root of all the contention, past and present, in which the Chinese Government has been engaged in connexion with missionaries ever since the Treaty of Nankin gave admission to the Empire.

Under such conditions it may well be doubted whether the protectorate of a great European Power is not a fatal gift, and one which leads those under its aegis to put forward pretensions fraught with signal danger to themselves, their trusting converts, and every foreigner, lay or ecclesiastical, within the area of their ministrations. It is against such assumptions and unwarranted pretensions that the Chinese Government is now making a determined stand, and it is in the interest of religion and of all foreign nations that they should not fail.

## LATEST TELEGRAMS.

["SPECIAL TELEGRAM" TO "JAPAN MAIL."]

London, November 1st.

## RUSSIA AND BULGARIA.

General Kaulbars has presented an ultimatum to Bulgaria, saying that, failing to receive a satisfactory reply within three days, he will leave with the Consular staff, and that the Regency will be held responsible for the consequences that follow.

London, November 2nd.

## AFFAIRS IN BULGARIA.

The kidnappers have been released, and Kaulbars has withdrawn his ultimatum.

## THE EVACUATION OF EGYPT.

It has been affirmed on trustworthy authority at Cairo that the French will employ every means to procure the British evacuation of Egypt.

London, November 4th.

## AFFAIRS IN BULGARIA.

Bulgaria has been recommended to yield completely to Russian demands, in order to avert Russian occupation.

Russia has renewed her former assurances to Austria that the occupation of Bulgaria is not intended.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Kobe, November 5th.

## THE LOSS OF THE "NORMANTON."

At the conclusion of the enquiry into the circumstances attending the loss of the steamship *Normanton*, Captain Drake was exonerated from all blame.

In accordance with arrangements made by the Tokyo City Government, Mr. Tanaka Hisashige has commenced the manufacture of a large electric light with the object of illuminating the Engineering Exhibition, which is to be held next year.

A number of officials and workmen of the Telegraph Bureau left for Hakodate the 4th instant in the *Niigata Maru*, taking with them a quantity of plant.

Correspondence from Okinawa, dated the 25th ultimo, states that the sailing vessel *Kiyokaze Maru*, which arrived at Naha the 16th instant from Sakishima experienced a severe gale the 23rd September. About 300 bales of chestnuts had to be jettisoned, and the vessel was considerably injured. Another sailing vessel, the *Kajiki Maru*, was wrecked the same day, and the crew were brought to land by the *Mikiyo Maru*. The *Nishikaze Maru* is missing. Mr. Mori, secretary of Okinawa Prefecture, accompanied by Messrs. Saito and Wakayama, clerks, and Hashiguchi, chief inspector of police, will leave the 26th instant for the capital in the *Izumo Maru*. Cholera has greatly abated in the islands, but small-pox is raging with virulence.

A child about three months old was found the evening of the 3rd instant in the enclosure of the Zotokuin, Yokohama.—*Fiji Shimpō*.

It has been decided by the Osaka Shipping Company to open regular communication thrice a month with Shikumo in Kōchi Prefecture, placing the *Wakanoura Maru* and *Sanko Maru* on the line.

The Post-office at Edobashi, Tokyo, will be removed to new buildings which are to be erected at an estimated cost of yen 15,000 in the enclosure of the Communications Department.

The total quantity of *kombu* exported from Hakodate to China from the beginning of September to the 20th ultimo was 880 *koku* (one *koku* is equal to about 2½ piculs).—*Mainichi Shimbun*.

For Europe, via Hongkong... per P. & O. Co.	Saturday, Nov. 13th.

## TIME TABLES AND STEAMERS.

## YOKOHAMA-TOKYO RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 7.00, 8.15, 9.30,\* 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00,\* 5.00, 6.15, 8.00, 9.15, and 11.30 p.m.

TRAINS LEAVE TOKYO (Shimbashi) at 7.00, 8.15, 9.30,\* 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00,\* 5.00, 6.15, 8.00, 9.15, and 10.30 p.m.

FARES—First Single, yen 1.00; Second do., *sen* 60; First Return, yen 1.50; Second do., *sen* 90.

Trains marked with \* run through without stopping at Taitsumi, Kawasaki and Utsunomiya Stations. Those marked † are the same as above with the exception of stopping at Kawasaki Station.

## TOKYO-MAYEBASHI RAILWAY.

TRAINS LEAVE TOKYO (Utsunomiya) at 6.00 and 10.00 a.m. and 1.00 and 4.15 p.m.; and MAYEBASHI at 6.00 a.m. and 1.00 and 4.15 p.m.

FARES—First-class (Separate Compartment), yen 3.80; Second-class, yen 2.28; Third-class, yen 1.14.

## TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.15 and 11.30 a.m., and 2.25 and 5.50 p.m.

## UTSUNOMIYA-NASU RAILWAY.

TRAINS LEAVE UTSUNOMIYA at 10.25 a.m. and 4.57 p.m.; and NASU at 6.40 a.m. and 3.15 p.m.

FARES—First-class, yen 1.10; Second-class, *sen* 74; Third-class, *sen* 37.

## TOKYO-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYO (Utsunomiya) at 6.00 a.m., and 1.00 and 4.15 p.m.; and UTSUNOMIYA at 8.15 a.m. and 11.10 a.m., and 4.50 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10; Third-class, yen 1.05.

## SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 9.10 a.m., and 12.34, 3.39, and 4.09 p.m.; and AKABANE at 10.33 a.m., and 1.34, 4.44, and 8.22 p.m.

FARES—First-class, *sen* 70; Second-class, *sen* 46; Third-class, *sen* 23.

## KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYOTO (up) at 6.46, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

TRAINS LEAVE OTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYOTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, yen 1.00; Second do., *sen* 60; First Return, yen 1.50; Second do., *sen* 50. Kobe to Kyoto: First Single, yen 2.25; Second do., yen 1.40; First Return, yen 3.55; Second do., yen 2.10. Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 7.15 and 11.00 a.m., and 1.30 and 4.00 p.m.; and leave Yokosuka at 8.30 and 10.40 a.m., and 1.30 and 4.00 p.m.—Fare, 20 *sen*.

## LATEST SHIPPING.

## ARRIVALS.

*Omi Maru*, Japanese steamer, 1,525, Swain, 31st October.—Kobe 30th October, General.—Nippon Yusen Kaisha.

*Toyoshima Maru*, Japanese steamer, 596, Tokito, 1st November.—Yokkaichi 31st October, General.—Nippon Yusen Kaisha.

*Yoshino Maru*, Japanese steamer, 207, Tamura, 1st November.—Yokosuka Dock 1st November, Ballast.—Nippon Yusen Kaisha.

*Hiogo Maru*, Japanese steamer, 896, C. Nye, 2nd November.—Niigata 31st October, General.—Nippon Yusen Kaisha.

*Kii Maru*, Japanese steamer, 860, Kawaoka, 2nd November.—Kobe 1st November, General.—Nippon Yusen Kaisha.

*Niigata Maru*, Japanese steamer, 1,096, Drummond, 2nd November.—Kobe 1st November, General.—Nippon Yusen Kaisha.

## PASSENGERS.

## ARRIVED.

Per Japanese steamer *Omi Maru*, from Kobe:—Mr. and Mrs. Draw, Mrs. Yoshikawa, Mr. and Mrs. Kamey, Messrs. Papp, Isoun, and C. Ito in cabin; and 99 Japanese in steerage.

Per Japanese steamer *Niigata Maru*, from Kobe:—1 Japanese in cabin; 3 Japanese in second class; and 49 Japanese in steerage.

Per Japanese steamer *Yamashiro Maru*, from Kobe:—Mr. and Mrs. Pors, Colonel Palmer, R.E., Messrs. Fraser, Higashi, Asegawa, Tokoyama, Hattori, Subawoto, and Sakaokami in cabin; 5 Japanese in second class; and 150 Japanese in steerage.

Per Japanese steamer *Nagato Maru*, from Kobe:—Messrs. Mori Nagayoshi and Sato Cho in cabin; Mr. Naruse Chushichi in second class; and 39 Japanese in steerage.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Mrs. and Miss Hudson, Miss Hillier, Mr. and Mrs. Ohashi and 3 children, Miss Hata, General J. Corner, Messrs. W. H. Devine, J. F. Broadbent, W. H. Galbois, A. Liddell, Dol Ferro, Cih Que, Tokato, Matsumura, and Takasaki in cabin; Mr. J. Petris, and one Japanese in second class; and 141 Japanese in steerage.

## DEPARTED.

Per British steamer *Oceanic*, for San Francisco:—Rev. and Mrs. J. Murray and four children, B. Gardner, Miss Kemp, Mr. Chester Holcombe, Mr. S. Samuel, Mr. W. R. Bennett, Rev. and Mrs. C. Martin and child, Surgeon R. Cama, Mr. and Mrs. T. W. Hellyer and child, Mr. J. J. McEluish, Mr. H. Cartland, Mr. Colgate Baker,

Mr. H. J. Hunt, Miss Wood, Mr. and Mrs. Aitland, child, and servant, Mrs. Arnsden, Messrs. A. H. Groom, H. S. Bateman, H. Shigio, S. Saito, K. Isaki, and R. A. Wylie in cabin.

Per British steamer *Thibet*, for Hongkong via Kobe and Nagasaki:—Mrs. Foley, two children, and nurse, Miss C. M. Hickson, Mr. and Mrs. G. W. Rowland, Lieutenant O. E. Dun, Messrs. E. M. Fisher, S. M. Brice, L. G. McCormick and native servant, H. S. Barton, C. P. Walker and European servant, R. W. Brecks, F. Du Bois, A. W. Gillingham, F. Kidamura, A. Cox, R. J. Crowle, J. Saunders, J. Coaker, J. Bresby, J. Ben, J. Eames, J. Lyons, J. D. Hoods, J. Keene, F. H. Woodage, C. F. Mugford, H. Palfett, F. W. James, and M. Williams in cabin; and 6 Europeans and 5 Chinese in steerage.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Rev. and Mrs. O. W. Willets and two children, Rev. and Mrs. H. Jenkins, Mr. and Mrs. Kaneko, Mr. and Mrs. Maitland and child, Messrs. K. Itakura, W. Doebbling, W. Durand, W. D. Bredon, H. A. Ahrens, J. S. Pollitt, M. A. Ruhl, G. R. Mosle, M. Ginsburg, F. Kosoyegaw, Frank Myburg, and S. Kuroda in cabin; Mrs. Spencer, Messrs. Miyasaki, Morimoto, J. Reimers, Yamasaki, Mizushima, Hattori, Hasegawa, and Yoshimura in second class; and 10 Chinese and 78 Japanese in steerage.

Per French steamer *Monsaleh*, for Hongkong via Kobe:—Messrs. Henry H. Andrew, Legrand, Forsyth, John Houston, T. Takeshima, Kubota, and Oushi in cabin.

## CARGOES.

Per British steamer *Thibet*, for Hongkong via Kobe and Nagasaki:—Silk for France, 507 bales; for London, 10 bales; total, 517 bales.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Treasure, \$2,500.00.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Treasure, \$6,000.

Per French steamer *Monsaleh*, for Hongkong via Kobe:—Silk for France 200 bales.

## REPORTS.

The Japanese steamer *Omi Maru*, reports:—Left Kobe the 30th October, at noon and experienced strong gales with high sea throughout the passage. Arrived at Yokohama the 31st October, at noon.

The Japanese steamer *Niigata Maru*, reports:—Left Kobe the 1st November, at noon, and experienced light northerly winds with thick drizzling rain to Hinomisaki; thence heavy head swell to Oshima; thence strong north-westerly winds with clear weather to Omisaki, veering to west and continuing to Rock Island, when it veered to S.W. falling light. Arrived at Yokohama the 2nd November, at 7.45 p.m.

The Japanese steamer *Yamashiro Maru* reports:—Left Kobe the 2nd November, at noon, and experienced moderate to fresh N.W. winds and fine weather to Omisaki; thence to port moderate to fresh N.E. winds and fine weather. Arrived at Yokohama the 3rd November, at 7 p.m.

The Japanese steamer *Wakanoura Maru*, reports:—Left Hakodate the 2nd November, at 7.15 a.m. and experienced strong breeze from E.N.E. and heavy rain with heavy head sea, at noon; wind increasing and barometer falling at 6 p.m.; blowing a heavy gale, and attended with heavy passing squalls of wind and rain, at 7 p.m.; hove ship head to the wind and slowed engines and laid until 9 p.m.; thence wind and sea moderated, with wind veering to N.E. and N.; at 9 kept ship away on course and proceeded. Arrived at Oginohama the 3rd, at 7 p.m.; and left the 4th, at 9 a.m.; had strong N.E. winds and cloudy sky. Arrived at Yokohama the 5th November, at 9 a.m.

The Japanese steamer *Nagato Maru*, Captain Young, reports:—Left Kobe November 4th, at noon, and had light variable winds and overcast weather to Omisaki; thence to port N.N.E. winds and fine weather. Arrived at Yokohama the 5th November, at 7 p.m.

The Japanese steamer *Fokohama Maru*, Captain W. Haswell, reports:—Left Shanghai the 30th October, at 12.20 p.m. and had a fresh breeze from north with overcast sky and heavy head sea which continued to Nagasaki, where arrived at 8.25 p.m. November 1st. Left again November 2nd at 2 a.m., and had strong N.W. winds and fine weather to Shimomoseki where arrived at 3.53 p.m. same day; left at 5.10 p.m. and had moderate north and N.E. winds and fine weather throughout the passage to Kobe, where arrived November 3rd, at 2.47 p.m. Left again November 4th, at 10.50 a.m. and had light N.N.E. winds and cloudy weather to Yokohama where arrived on November 5th, at 4 p.m.

## LATEST COMMERCIAL.

## IMPORTS.

Business has very nearly arrived at a state of utter stagnation, transactions so far as reported having been almost nil during the past week, and clearances for the same period very small; dealers show not the least inclination to operate, and prices are consequently quite nominal.

**YARNS.**—About 60 bales will cover all the sales for the week, and two kinds of these consist of Bombays at lower prices.

**COTTON PIECE GOODS.**—1,500 pieces 7 lbs. T. Cloths and 800 pieces Turkey Reds are all the sales reported in this class.

**WOOLLENS.**—Sales of 200 pieces Italian Cloth, and about 160 pieces Silk Satins have been reported.

White Refined	\$5.20 to 7.30
Manila	4.20 to 4.40
Daitong and Swatow	3.30 to 3.75
Brown Takao	4.00 to 4.05

## EXPORTS.

## RAW SILK.

Our last issue was of the 29th October, since which date we have seen a quiet Market, with small business. Settlements by foreign hong have been

about 200 piculs, divided thus:—Hanks 85 piculs, Filatures 70 piculs, Hamatsuki 45 piculs. Japanese Export firms have also taken about 100 piculs—principally for America—thus making the total trade for the week 300 piculs of all descriptions.

The business since the departure of the *Oceanic* has been entirely for Europe, demand for the States holding quite aloof. It would seem that prices here must recede ere long, especially with a rising exchange, but holders are unusually strong and assert their ability to hold the very heavy stock. Certainly the great facilities afforded by the Japanese Banks make this an easy task compared with what it would have been a few years back; at the same time, buyers are justified in looking for some reduction in price, especially if the Markets abroad do not soon improve.

A great contrast in the trade to-day when compared with the same day last year. Then we were just entering the great "boom," starting at prices about \$200 per picul below those of to-day; now we are dragging along with a small trade, a larger stock than ever before known, and all buyers anxiously looking for a decline in values here.

Supplies come rolling in, and the stock has increased 1,000 piculs during the week. Quotations may in some instances be slightly reduced, and possibly some dealers would accept a shade less to sell a parcel or two, but the general feeling is averse to making concessions.

There have been two shipping opportunities since last writing, the American and English mails, both leaving on the 30th ultimo. The *Oceanic* had 305 bales for New York, and the *Thibet* 517 bales for France. Total export for the present season to date is now 8,116 piculs, against 4,800 last year; and 10,581 on same date in 1884.

**Hanks.**—A moderate business in this class destined for Europe; and with lower prices more trade would undoubtedly be done, especially if the political horizon should clear. Among the transactions we note *Mariposa* \$650, *Annaka* \$615, *Yechizen* \$590. Several large parcels are in strong hands, owners professing their ability and intention of holding at present values.

**Filatures.**—Not much done this week. In fine sizes \$850 has been noticed for a parcel "extra" *Oshu*, and \$730 for No. 1 *Koshu*. In full sizes no business at all since the departure of the *Oceanic* a week ago.

**Re-reels.**—The trade has run upon Common kinds for Europe; nothing has been done for the States. Holders of best chops are very firm at quotations, and there seems no prospect at present of any sensible decline.

**Kakadas.**—Some few piculs were taken into go-down a week ago but have since been returned to the native town. All quotations quite nominal.

**Oshu.**—Considerable transactions in *Hamatsuki* at about \$580, other sorts quiet.

Available supplies to date	21,400	16,150	18,990

WASTE SILK.

A steady business, averaging 100 piculs per day, the settlements for the week being 600 piculs, divided thus:—*Cocoons* 55 piculs, *Noshi* 305 piculs, *Kibiso* 165 piculs, *Neri* 75 piculs. Japanese shippers are busy packing for to-morrow's French mail, and their sendings will be included in next figures.

The business done has been almost entirely for continental Europe, all kinds except *Mawata* sharing in the demand. Prices may be quoted a fraction off from last week's rates, but any concession is counterbalanced by a rising foreign exchange.

Arrivals are constant and heavy, making the Stock-list mount up. This does not seem to cause holders much uneasiness; perhaps, as the end of the year draws nigh some of them may be inclined to loose their hold.

The P. & O. steamer *Thibet* (30th ultimo) took 209 bales *Waste* and 56 bales *Cocoons* for Europe, and the Steamship *Pembroke* had on board 2 bales *Neri* (supposed to be on Kobe account) for London. Present Export is 8,702 piculs, against 2,364 piculs last year and 9,677 piculs in 1884.

**Cocoons.**—A small business in "Middling" Pierced at \$125, and some 40 piculs *Tama* at \$70. The Stock is chiefly *Tama* and *Waste* descriptions.

**Noshi.**—Fully half the trade has been in this class, some descriptions giving a fractional decline. Among the sales made we notice *Hachiji* \$150 to \$160, *Joshi* "Assorted" \$120 to \$125, *Mine* \$145 to \$157. In *Filatures* and *Oshu* sorts, no business.

**Kibiso.**—Rather more demand generally; *Gi*, *Tokushu* has been done at \$155, *Joshi* \$170 to \$200, *Annaka* \$83, *Zaguri* \$75 to \$79, *Tajima* \$82, *Koshu* \$70 to \$80.

**Neri.**—Plenty of demand at long figures. Prices paid are from \$19 to \$30 for the rough uncleaned Stock, against \$9 to \$13 for similar quality at the same time last year.

Kakada	1,610	Kibiso	5,700
Sendai & Hamatsuki	575	Mawata	530
Taysam Kinds	205	Sundries	120
Total piculs	12,400	Total piculs	12,100

TEA.

The small business done aggregates only 1,145 piculs, and consists mainly of low grades. Several houses are offering one and two dollars below the dealers' price for all sorts, and as the markets in the United States and Canada are weekly drooping, prices here are bound to come down. The only tea shipment reported so far is by the steamship *Oceanic*, which sailed on the 30th ultimo and took 44,690 lbs. for New York, 27,700 lbs. for Chicago,

46,512 lbs. for San Francisco, and 10,872 lbs. for Canada, aggregating 129,774 lbs. from Kobe.

Common	\$12½ & under
Good Common	13½ to 14½
Medium	15½ to 17
Good Medium	18 to 19½
Fine	22½ & up'ds

NOW READY.

REVIEW OF THE CHAPTER ON PAINTING, in "L'Art Japonais, by L. GONSE.

BY E. F. FENOLLOSA.

To be obtained at the Office of the *Japan Mail* and of KELLY and Co., Main Street, Yokohama  
Yokohama, August 8th, 1885.

NOW READY,

In 3 Parts, Demy 16mo, limp,  
**A ROMANIZED JAPANESE READER;**  
consisting of JAPANESE ANECDOTES, MAXIMS, &c., in easy Written Style, with an ENGLISH TRANSLATION and NOTES. By BASIL HALL CHAMBERLAIN, Professor of Japanese and Philology in the Imperial University of Japan; author of "A Simplified Grammar of the Japanese Language," &c., &c.

PART I.—JAPANESE TEXT.

PART II.—ENGLISH TRANSLATION.

PART III.—NOTES.

PRICE, \$2.50.

The *Hingo News* thus refers to the work:—

We have to acknowledge the receipt of "A Romanized Japanese Reader," consisting of Japanese anecdotes, maxims, conversations, &c., by Mr. B. H. Chamberlain, the author of the Grammar of the Japanese Language which was published a few months ago. The Reader is in three parts of convenient size, well bound, and the typography reflects much credit upon the *Japan Mail* office, where the work was printed. Part I. contains the Japanese text of the anecdotes, &c.; Part II. an English translation, and Part III. is devoted to copious notes intended to give information concerning the persons and places mentioned in the Reader, to explain allusions, and in certain cases to bring out the literal meaning in a clearer manner than was possible in the translation. Mr. Chamberlain is such an acknowledged authority upon everything connected with the Japanese language, and has always been so thoroughly painstaking and conscientious in the preparation of his various publications, that students may well accept with confidence his latest work. In conjunction with the "Simplified Grammar" the "Reader" ought to prove of great benefit to all persons engaged in studying the language of Japan, and in need to any foreign resident who wishes to speak correctly when venturing upon the vernacular.

## THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist at Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!  
HOLLOWAY'S OINTMENT  
Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, millet, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

**ATKINSON'S ENGLISH PERFUMERY.**  
Fragrant and lasting, and of a purity and delicacy of scent, which cannot be surpassed. The following are the principal articles in the collection:

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 13TH, 1886.

### SUMMARY OF NEWS.

MR. OKI, Governor of Kanagawa, left the 8th instant for Ashigara.

COUNT SAIGO, Minister of State for the Navy, arrived in Paris the 7th instant.

MR. YASUDA, Governor of Ibaraki, will arrive shortly in the capital on official business.

THE Cricket Match, Club, V. Navy, played on Saturday last, was won by the latter team.

MR. SEKI, Governor of Ehime, who had been staying in the capital, left for Ehime the 9th inst.

THE cadets of the Naval College will proceed to Yenchujima the 10th inst. for gunnery practice.

MR. KUNISHIGE, Governor of Toyama, arrived in the capital the 4th instant on official business.

THE meetings of the standing committee of the Tōkyō Local Assembly were closed the 9th inst.

THE naval regatta which was to take place the 13th instant on the Sumida river, has been postponed.

AN Art Exhibition will be held in the Yokohama Public Hall on the 25th inst. and two following days.

MR. ISHII, Director of the Imperial Telegraphs, will proceed to Hakodate about the end of this month.

H.I.I.I. PRINCE ARISUGAWA, President of the General Staff Office, visited the Naval Section the 9th instant and conferred with Vice-Admiral

Nirei on the subject of establishing a naval university.

MR. NADESHIMA, Governor of Aomori, who has been staying in the capital, left for Aomori the 6th instant.

MR. IWASAKI YANOSUKE has purchased the site of the old Gakushuin (Peers' School) at Nishikitasho, Kanda.

MR. NAGAYAMA, who has been appointed postmaster at Nagasaki, left the capital the 9th inst. for Nagasaki.

THE engineers of the Osaka Garrison, are now having a fortnight in the field, practising bridge construction.

THE Autumn Meeting of the Kiōdō Keiba Kaisha will take place to-day and to-morrow at Shinobadzu.

A NUMBER of officials have been sent to report on the condition of the harvest in the rural divisions of Tōkyō.

MR. SEKI SHIMPEI, Governor of Ehime, who is at present staying in the capital, will leave for Ehime the 9th instant.

AN explosion of gunpowder took place in the Osaka Arsenal the 9th instant, and five workmen were injured.

CHOLERA broke out suddenly at Marugame in Shikoku the 8th instant, four persons being attacked by the disease.

MR. SHINOZAKI, Governor of Niigata, who is staying in the capital, will leave about the 18th instant for Niigata.

MR. MŌRI SAMON, a chamberlain of the Imperial Household, left for Edogawa the 8th instant on official business.

THE official inspections of the various garrisons throughout the empire were concluded the 31st of last month.

THE Post Office building in Shiba district will be extended to meet a large increase which has taken place in its business.

MR. YAMADA, Governor of Tottori, who has been staying in the capital, left for Tottori the 8th inst. in the *Takasago Maru*.

VISCOUNT TANI, Minister of State for the Agricultural and Commercial Department, arrived in Berlin the 5th instant.

COMPETITION between steamers running from Kobe to Hongkong has caused a considerable decline in freights for that voyage.

MR. YOKOHAMA MAGOCHIRO, who went to Tientsin to investigate the condition of trade in that locality, returned to the capital the 4th instant.

H.I.I.I. PRINCE HARU visited the barracks of the First Regiment in the Tōkyō Garrison the 4th inst., and witnessed the exercises of the soldiers.

THE idea of supplying Osaka with water from Yoshino-gawa has had to be abandoned on

account of the cost—yen 2,500,000. Other sources of supply are being surveyed.

COLONEL WATANABE, accompanied by the troops of the 4th corps stationed at Aomori, left for Nasunokawara the 8th instant.

COUNT INOUE, accompanied by a number of naval officers, and Mr. Oki, Governor of Yokohama, visited the *Audacious* the 7th instant.

RESIDENTS in Osaka are now making preparations to construct a tramway from the Umeda Railway station to the Naniwa station, by way of Ajikawa.

GOLD coins amounting to yen 95,000, which have been struck at the Osaka Mint since July last, arrived in the Finance Department the 8th instant.

A NUMBER of gentlemen interested in the sulphur trade have left for Hokkaido to establish a sulphur company, projected by Mr. Iwasaki Yanosuke.

A GENERAL meeting of veterinary surgeons will be held the 11th instant in the Veterinary Department at Mita to discuss the origin of cattle-plague.

MR. YOSHIKAWA, vice-Minister of State for Home Affairs, left Osaka the evening of the 7th instant for Kyōto, and arrived at Otsu the following day.

EXPERIMENTS with new steel projectiles lately manufactured in the Naval Arms Factory will take place the 16th, 17th, and 18th instant at Etchujima.

It is stated that Messrs. Minomura Rosuke, Koyasu Takashi, and Kitaoka Bunpei, Directors of the Nippon Ginko, have sent in their resignations.

THE family of Count Ito, who had been staying at Takanawa during the prevalence of cholera in the capital, removed the 7th instant to Magatamachi.

THE Korean Government are said to have given orders to Messrs. Okura & Co. to construct a mint at Jinsen, and will engage a chemist from the Osaka Mint as instructor.

THE Osaka Water Police have received a fire extinguishing pump to be placed upon their steamboat, and a body of firemen will be attached to the corps.

MAJOR-GENERAL ONUMA, commanding the 9th corps of the Hiroshima Garrison, who arrived in the capital the 7th instant, visited the War Department the following day.

MR. SHIODA, Japanese Minister to China, left Peking the 16th of last month for Tientsin on official business and started on his return to the capital the 20th ultimo.

MR. YOSHIDA, Vice-Minister of State for the Agricultural and Commercial Department, accompanied by Mr. Otsuki, secretary, left the

capital the morning of the 9th instant for Hiroshima. During their absence Mr. Shinagawa Tadamichi has been appointed to take charge of the Bureau of General Affairs.

VISCOUNT TOMINOKOJI HIRONAO, a chamberlain, and Mr. Yamaguchi, a secretary, of the Imperial Household, arrived at Ogaki, Gifu Prefecture, the evening of the 8th instant.

THE nature of the liabilities of the Government to the Japan Mail Steamship Company has become a source of dispute between the authorities and the directors.

THE total number of whales caught in Nagasaki Prefecture from November, 1885, to March last was 66, the weight of which was 1,176,196 *me* and the value *yen* 30,118.

VISCOUNT MADENOKOJI MICHIFUSA, a chamberlain of the Imperial Household, who had gone to Fukushima and Miyagi on official business, returned to Tôkyô the 4th instant.

THE Tramway Company is now making preparations to construct a branch line from Kudan to Nihonbashi, where it will connect with the main line in front of Echigoya.

MR. TSUDA SEN, proprietor of the Gakunosha, proposes to visit Sapporo in the beginning of next year, with the intention of establishing an agricultural school at Iwami, in that district.

THE Tôkyô Court of First Instance issued a notice the 9th instant stating that Viscount Wakebe, residing at Karasumaricho, Shiba, had filed a petition to be adjudicated a bankrupt.

WORK was resumed at the Imperial Mint on the 1st inst. During the vacation repairs have been executed to the buildings and offices and the establishment generally has been put in order.

TWO strategical officers in the General Staff Office will leave the capital about the 10th instant for Sendai to attend the autumn manoeuvres of the troops of the Sendai Garrison.

IT has been decided at a meeting of representatives of various banks in the capital, to conduct business on Sundays. The decision will come into operation from the beginning of next year.

THE Government contemplates increasing the number of meteorological observatories to 35. Hitherto 28 have been in daily communication with the Geographical Bureau in the Home Office.

MUCH excitement has been caused in Japan by the published accounts of the loss of the British steamer *Normanton*, which sank with all her Japanese passengers on board after the crew had left her.

DURING the absence of Mr. Yoshida, vice-Minister of State for the Agricultural and Commercial Department, Mr. Yanagiya, private secretary, will take charge of the Marine Products Bureau.

VISCOUNT TANI, who is at present in Switzerland, has been instructed by the Government to purchase a quantity of machinery of Swiss manufacture for the purposes of the War Department.

MR. HAYASHI SEICHI, chief public prosecutor of the Nagasaki Court of Appeal, who arrived in the capital the 3rd instant, has attended the Judicial Department daily since the 4th instant

in order to report on the proceedings of the enquiry. He will leave again for Nagasaki after staying about ten days in the capital.

MESSRS. KUBOTA, Beisen, and Sachino Bairei, noted painters in Kyôto, have received orders from the Construction Bureau of the new Imperial Palace which will bring them shortly to the capital.

PRINCE SANJO, Lord Keeper of the Privy Seal, paid a visit the 9th instant to Sugamo and Dangozaka, Tôkyô, to view the chrysanthemums, and afterwards proceeded to the public gardens in Ueno and Asakusa.

MR. IWAMURA, chief of the Hokkaido Administration Board, has applied to the Cabinet Office to grant an annual allowance of *yen* 500,000 for five years in addition to the estimate of *yen* 1,500,000.

THE total number of cholera patients in the capital from the first appearance of the disease to the 31 ultimo was 12,172, of whom 9,734 died and 2,155 recovered, the remainder being still under medical treatment.

VICE-ADMIRAL R. VESKY HAMILTON, commanding the British squadron on the China and Japan Station, accompanied by a number of naval officers, visited the Naval College the 5th instant, and inspected the cadets.

MR. TAKAHASHI MOTOYOSHI, a member of the Marine Produce Association, will leave for the Bonin Islands the 10th instant, with the object of experimenting with a new gun which he has invented for shooting whales.

THE Assaying and Geological Sections of the Agricultural and Commercial Department, located at Aoi-cho, Akasaka Division, will remove the 14th and 14th instant to premises lately constructed at Dosanmachi, Kôjimachi Division.

THE eleventh meeting in connection with treaty revision was held the 9th instant from 2 to 5 p.m. in the Foreign Office. All the foreign representatives were present as usual. The twelfth meeting is fixed for the 15th instant, at 3 p.m.

MR. SOMEKAWA SEI, assistant commissioner of the Marine Produce Bureau, in the Agricultural and Commercial Department, has been ordered to visit Hyôgo, Hiroshima, Yamaguchi, and Ehime to investigate the condition of marine products.

MR. MIYAKE SHU, Director of the Medical Department of the Imperial University, who has been staying in Europe, where he has been engaged in the investigation of medical questions, is expected to arrive in Japan about the 20th instant.

A GARDEN party was given the 6th instant at the Palace. Several members of the Imperial family and all the Ministers of State, foreign representatives, officials of *chokunin* rank, peers, and foreign employés of the Government, accompanied by their ladies, were present.

PRINCE TORUGAWA KIKI (the last Shôgun of the Tokugawa line) and suite arrived in the capital the 5th instant. The Teihoin (mother of the Prince) has been ill for some time at the residence of the Marquis Tokugawa at Shin-komme-machi.

THE total quantity of raw silk which arrived

in Yokohama during last month was 15,048 bales, of which 7,682 bales were sold to foreign firms and 2,091 bales rejected. The total quantity of waste silk which arrived in the same period was 11,043 bales; 5,299 bales were sold to foreign firms and 158 bales were sent back to the interior.

THERE is very little to be said about the Import market, the trade in Textile Fabrics and Yarns being described as "stagnant." The Metal trade is in similar case. A fair amount of Kerosene has changed hands, and stocks are somewhat reduced, but buyers seem inclined to wait. Sugar calls for no remark. In Exports, Silk had been in fair demand early in the week, after which there was a lull, but a few buyers came with a rush at the close, and holders are again in the stirrups. A larger business has been done in Waste, but the condition of the market is much the same as last reported. Rather larger dealings have taken place in Tea, but there are signs of slackness approaching. Foreign Exchange fluctuated slightly early in the week, but in sympathy with the condition of the silver market, has gone up another point and is firm at the close.

#### NOTES.

THE evidence, or so much of it as has reached us, elicited by the Naval Court of Inquiry into the loss of the British steamer *Normanton* contains two points which strongly confirm the views we have already expressed with regard to this most unhappy calamity. The first is that among the Japanese passengers there were three who helped to lower the boats. Of these three two are said to have been midshipmen, and the captain is of opinion that "they could have told" their countrymen of the danger. What became of these three Japanese? The explanation originally offered was that the Japanese passengers were unconscious of the peril which menaced them, and that, in the absence of an interpreter, it was found impossible to rouse them to the necessity of leaving the ship. Apart from the general incredibility of this statement, we are now confronted by its manifest inapplicability to the case of the three men who assisted to lower the boats. They certainly must have been fully alive to the danger and entirely cognisant of what was going forward. Why were they left behind? Did they, also, as soon as the boats were lowered, exchange their attitude of active helpfulness for one of "clinging together" and "refusing to leave their effects?" The second point is suggested by the following extract from the report of the captain's examination:—

Do you think the passengers could have been saved, had they done as they were told?—Yes; there were plenty of boats. A fourth could have been lowered.

Observe this well—"a fourth could have been lowered." But it was not lowered. The crew of the *Normanton*, all told, consisted of 38 men and a Chinese boy. The passengers numbered 25. There were therefore 64 souls to be saved. Perfectly cognisant of this total, the captain and his officers caused only three boats to be lowered out of seven which were available. Is it conceivable that on a dark night with a heavy sea running they purposed saving sixty-two people with three boats? "A fourth could have been lowered." Certainly it could, but when? So soon as the twenty-three Japanese pas-

sengers had signified their willingness to be saved? Such fables can find credence with children alone. And what was the real condition of these passengers? At first we were told that they showed no signs of fear. Now we learn that they "took no notice" of the solicitations addressed to them on their own behalf, but sat in their places clinging together. One account makes them unconcerned and unconscious of their danger; the other represents them as paralysed with terror, although three of them actually assisted to lower the boats. The detailed truth of this cruel mystery will perhaps never be known. But its outlines present themselves without much obscurity. There never was any deliberate intention of leaving the Japanese passengers behind. Let us dismiss that suspicion at once. But the duty of saving them was counted altogether a secondary consideration. Three boats out of seven were lowered; the vessel began to show signs of sinking; the crew hastened to save themselves, and the Japanese, with patient docility waiting for their turn to be taken off, found that it never came.

\* \* \*

When the *Normanton* struck there were on board twenty-seven Occidentals and thirty-eight Orientals. Of the former, one perished by an accident. Of the latter one was saved, shall we say by an accident also? These are suggestive proportions. A Chinese boy, probably the cabin boy, a favourite of the captain or of some other officer, was the only Oriental who reached the shore alive. Decidedly the *Normanton* was a fatal ship for Orientals. Twelve of the firemen were Lascars. Of these, the story runs that three (?) committed suicide, but how or why we are not told. Three others "were shoved" into the boats, only to die of exposure in a few hours under circumstances which render their death not the least mysterious part of the affair. The remaining six Lascars were seized by the same species of vertigo which induced the Japanese passengers to prefer drowning to rescue. Was it impossible, one cannot help speculating, to "shove" more than three Lascars into the boats. Could not the remaining six have been similarly treated? Apparently not, since there was not time to carry away even the Japanese women. The dead unfortunately cannot bear testimony. The truth of this cruel business must remain hidden, but the disgrace it fixes upon British seamanship will not be easily forgotten.

\* \* \*

The *Nichi Nichi Shinbun*, in its issue of the 9th instant, comments in strong terms on the circumstances attending the loss of the *Normanton*, and on the judgment of the Marine Court of Inquiry which investigated the case. After relating the details of the catastrophe, so far as they are known to the public, our contemporary observes that it would be improper to criticise the verdict of the Court until the whole of the evidence collected by it is made known, since it is quite evident that nothing short of most convincing testimony could have warranted the acquittal of a captain who, though he had time and ability to save himself and his crew, left every one of his passengers to perish. Nevertheless, from a general point of view, the *Nichi Nichi* regards the decision of the Court as a misfortune, not alone for the company which employs Captain Drake and for the nationality which he represents, but also for all foreigners in the East. It is only too likely that

the fate of the unfortunate passengers by the *Normanton* will create in the minds of the Japanese public a feeling of distrust towards foreign steamers, and no means of dispelling such a feeling are immediately apparent. The practice in the western marine, when a ship is placed in an emergency, is first to jettison the cargo, afterwards to save the passengers, then to provide for the rescue of the officers and crew, and last of all for that of the commander. Anyone who, being in charge of a vessel, disregards this rule, exposes himself to contumely. And there can be no question, says the *Nichi Nichi Shinbun*, that the principle underlying this custom is correct. But in the case of the *Normanton*, it appears to have been the captain who saved himself first; the crew escaped with him or subsequently, and all the Japanese passengers were left to drown. Whatever may have been the ignorance of the Japanese, it is inconceivable that they can have been blind to the peril which menaced them, or that they can have deliberately refused succour. Admitting the truth of everything stated by the captain before the Court, the Japanese public will inevitably conclude that had the *Normanton's* passengers been Westerns, their fate would have been less summary. As for the assertion that the class of Japanese who took passage in the *Normanton* are not regarded by foreign captains as passengers but rather as animate commodities, the *Nichi Nichi Shinbun* finds it difficult to credit anything of the kind. No Western in command of a vessel would take such a view of his duty; still less would a foreign Court support him in it. Yet, after what has occurred in the case of *Normanton*, it will be impossible to combat suspicions of this nature. Our contemporary concludes thus:—"Now that the revision of the treaties is drawing to a conclusion, the number of foreign vessels plying on our coasts is likely to increase, and cases where Japanese entrust their lives to the custody of the commanders of these ships are already becoming more frequent. Under these circumstances it is most regrettable that a feeling of insecurity and suspicion should have been aroused in the minds of the people of this country. That such a feeling existed in former times was more or less inevitable, but that it should have been reawakened and confirmed by the conduct of Captain Drake is an unexpected misfortune. If foreigners desire to dispel this sentiment of distrust, they must behave with greater caution and consideration. The twenty-three victims who lost their lives in the *Normanton* cannot speak for themselves, and compassion for their sad fate forbids their countrymen to remain silent."

\* \* \*

Each fresh instalment of the evidence elicited by the Naval Court of Inquiry deepens the unpleasant impressions to which the *Nichi Nichi Shinbun* and the *Yiji Shimpō* give expression. If the testimony of the captain stood alone, it would still be sufficient to excite the gravest suspicion. For, according to his own statement, it appears that he took his place in the boats some time before the ship went down, and while it was still uncertain whether the Japanese passengers could be induced to leave the alley-way. He says that he himself tried twice to persuade the Japanese to follow him, and that his officers also tried. Under these circumstances we have no hesitation in saying that a ship-master with

an ordinary sense of humanity and of his duty would have ordered his men to pass the Japanese passengers into the boats by force, beginning with the women. Captain Drake did nothing of the sort. On the contrary, he seated himself in one of the boats, and sent the boatswain back "to try once more" to save the twenty-five persons committed to his, Captain Drake's, charge. While the boatswain was making this attempt, the boats floated away from the ship and her captain saw no more of her. He did not even endeavour to rescue any unfortunates who might have been struggling in the water. "The sea was too rough" to permit any such attempt. It was not sufficiently rough to swamp a boat drifting about all night without oars. It was only too rough to allow of a drowning man being pulled out of the water.

\* \* \*

The testimony of the chief officer is even more damning. It shows that after the ship struck, a sort of general scramble took place, and that "*saue qui peut*" was the order of the day. The chief officer and the carpenter lowered one boat with eight men and the third mate in her. The boat was upset in the act of lowering, and the men, with one exception, scrambled back to the vessel. The first mate says that they "then went to the port boat and left the ship." The third mate, who was one of them, says that he found the captain on the port side, and a boat alongside, and that he "sang out and jumped in." He adds that "before shoving off, he saw the chief mate and the boatswain in the ship." What had become of the captain he does not explain. Combining his statement with that of the chief officer, who says that, after the port boat had shoved off, "the carpenter and the boatswain were the only men he saw on the ship's deck with the exception of two Japanese passengers," it seems pretty evident that nearly the whole of the European crew fled from the ship at a very early stage of the proceedings. The chief officer himself, while engaged casting off the lashings of a small boat on the poop, saw that the star-board life-boat had righted and immediately jumped into her, calling to the carpenter to follow. Had the Japanese passengers been on deck then, how, we wonder, could they have been saved.

\* \* \*

The indignation excited by the story of the *Normanton* affair has not by any means subsided among the Japanese. The *Nichi Nichi Shinbun*, in an article entitled, "Who caused the twenty-three Japanese to be buried in the stomachs of fishes?" reviews the evidence adduced by the Kobe Court of Inquiry. The Tōkyō journal asks its readers to imagine, if they can, what would have been the state of affairs had the captain and crew of the *Normanton* been Japanese and the passengers Westerns. What sort of language would the newspapers have employed, and what species of resolutions would have been passed at indignant public meetings? Would not the Japanese crew have been charged with a total want of humanity and with disgraceful negligence of a sailor's first duties? And if a Japanese Court of Inquiry had acquitted the captain of all blame, would not the verdict have been roundly censured? Nay, would not the interference of diplomacy have been invoked, and in all probability resorted to? "Therefore," says the *Nichi Nichi Shinbun*, "foreigners ought not

to be surprised if the Japanese are somewhat outspoken in their expressions of pain and indignation over the fate of their unfortunate country-men and country-women."

\* \* \*

We are persuaded that among those foreigners who have read the details of the loss of the *Normanton* there will not be found one who does not regard the affair with keen sorrow and shame. Undoubtedly the *Nichi Nichi Shim-bun* is right when it says that had the case been reversed, had the passengers been Europeans or Americans and the crew Japanese, the cruel desertion of the former by the latter would have roused a storm of public indignation. That the incident, as it actually occurred, has attracted no little attention among foreigners, may be inferred from the unanimous utterances of the foreign press. Twenty-three Japanese have perished under circumstances which constitute a deep disgrace to British steamanship. If Englishmen do not yet bestir themselves collectively to give public expression to their indignation, and, if possible, to bring the offenders to justice, it is not because they are disposed to condone what has happened, but rather because they naturally shrink from everything calculated to fix the disgrace until the ordinary channels of redress have been exhausted. People are fain to draw a veil over the sad occurrence, knowing that such conduct as that displayed by the crew of the *Normanton* is fortunately rare among British sailors. But we are sure that the matter will not be allowed to rest where it is without a very strong protest on the part of the English residents.

\* \* \*

It now turns out that the number of the Japanese passengers in the *Normanton* was not twenty-three but twenty-five, and that among them were five women and a boy of eleven. They were not all persons of the lower orders. Twelve were *shizoku*. There was one old lady, sixty-seven years of age, travelling to Kago-shima with her son, a man of twenty-nine. The ages of the four other women were forty-nine, thirty-six, twenty-three and eighteen respectively. The boy was with his father and mother, the former being a man of fifty-five. The master of the *Normanton*, in a letter addressed to one of our local contemporaries, says that his agents informed him he should have thirteen Japanese passengers, but that on counting them he found twenty-three. The *Normanton* had no passenger certificate, yet, even, for a ship thus unprovided, the carelessness of her management was startling. The agents gave notice of thirteen passengers. If any provision was made at all, it was made presumably for that number. On board the ship, however, when heads were counted, the thirteen had swelled into twenty-three. And even this calculation was incorrect, since there were really twenty-five. Is the care taken of the passengers to be inferred from the accuracy with which they were counted.

\* \* \*

It appears also that among the passengers there was a man who could not only speak English but who was also a shipping agent, and ought therefore to have been serviceable in a crisis. Is it not strange that of the five persons—four officers and a boatswain—who are supposed to have "tried," separately and at intervals, to rouse the Japanese to a sense of their danger, only one happened to

come across this man? The others could not make themselves understood, nor could they find any one to interpret for them.

\* \* \*

We learn that one of the Japanese who travelled in the *Normanton* has been saved. How he was rescued—whether by a passing junk or by a boat from the shore—our information does not tell. He is alive, however, and it is now possible that we shall hear the other side of the story.

\* \* \*

It is announced in the vernacular press that Mr. Fukuchi, editor of the *Nichi Nichi Shim-bun*, will deliver a speech at the City Hall, Yokohama, at 7 o'clock on the evening of the 14th instant, on the subject of the loss of the *Normanton*. We learn also, from the *Mainichi Shim-bun*, that certain members of the Omeisha—a debating society recently dissolved, which included in its ranks many of the most prominent liberal politicians in the capital—will shortly give public addresses on the same subject. Admission to the City Hall on Sunday will be *gratis*, but in the case of the other addresses tickets will be sold, and the proceeds handed over to the relatives of the unfortunate passengers in the *Normanton*.

\* \* \*

It seems to us that the idea which has occurred to the projectors of these addresses is one which might be acted upon with great propriety by the British residents at the open ports. Among the ill-fated passengers in the *Normanton* there must have been several whose deaths will involve their families in more or less distress. To assist these mourners would be a worthy office of charity, and would have special grace under the peculiar circumstances of the calamity. We are expressing, we believe, a widely shared opinion when we say that, however good may have been the intention of the master and officers of the *Normanton*, the result of their conduct constitutes a heavy disgrace to British seamanship. The Japanese must feel, and evidently do feel very bitterly the apparent abandonment of twenty-five of their countrymen and countrywomen in a sinking ship, whose officers and crew were able to save themselves without difficulty. Argue the matter as we please, naked facts speak to all the world with terrible eloquence. It is not in our power as private individuals to take any steps for throwing a stronger judicial light on the incidents of the shipwreck, but we can at least evince our sorrow for its issue by giving material aid to those upon whom the loss has fallen most severely. Subscriptions for this purpose have already reached this office. We need not say that we shall be happy to receive others, and to publish the names of the donors in our columns.

THERE is a school of very wise economists who shake their heads vigorously over what they are pleased to call the "bimetallic fad" of restoring silver to its proper place as a medium of exchange, because such an operation would, they allege, impart to the metal a fictitious value. Suppose that some all powerful potentate were to issue an edict forbidding the use of any material except kid-leather in the manufacture of foot gear, it is manifest that the value of certain other classes of hides hitherto employed for that purpose would fall appreciably. Lawful boots and shoes under such circumstances would become scarce and dear.

Would it be imparting a fictitious value to cow-hides, pig-skins, and so forth, if the edict were revoked and the old freedom of choice restored as to material? But to come from hypothesis to actual fact, these objectors appear to forget that the economical crime which they shrink from committing is already committed everywhere in a greater or less degree. We cannot put this more clearly than it is set forth in the following extract from the *St. James's Budget*:-

There are some countries which do not use gold and silver at all, such as Russia, which has practically nothing but paper money, and still to a great extent Austria. In regard to these, the alleged depreciation of silver in relation to gold has either prevented the return to a metallic currency, or greatly retarded it, through the doubts of Governments what standard should be adopted. There are other countries which, retaining their old silver currency, have taken measures to prevent its depreciation. They have managed this by declining to adopt the obligation which Great Britain has virtually imposed on India, of coining all the metal that is brought to the Mint. The restriction of the free mintage of silver is the expedient adopted by the countries included in the so-called Latin Union. But the amount actually minted is not arbitrary, but has a certain relation to the value of gold. Another expedient resorted to has a typical form in our own country. It is well known that, besides our standard currency of gold, we have a subsidiary coinage of silver, in which no coin is of the value which it nominally represents. The silver in a shilling is not worth a shilling; that in a half crown is not in the market worth half a crown. The coin, in fact, circulates through a fictitious value communicated to it by the Government stamp upon it. But the quantity of silver coined is limited by the rule which provides that the coins shall not be a legal tender beyond a small amount. This very same contrivance, of making silver coins circulate at a nominal value by means of the Government stamp, has been tried by other nations on a vastly larger scale. Germany has a gold currency; but there is a subsidiary silver coinage much larger in quantity than that of England, and of the same nature. The coinage of the United States is exactly in the same condition. The United States dollar, which is coined by millions, does not contain anything like the silver which answers to its nominal value. But it circulates, and is deposited at banks as security for notes, simply because it bears a stamp imprinted on it by virtue of the directions of an Act of Congress. The fact, therefore, is that there is no nation which has not endeavoured to protect itself in some degree against the variation of the precious metals in value.

\* \* \*

We need scarcely say that the *St. James Budget* is not a bimetallic journal. It has a fine aristocratic leaning towards the royal metal. But the conclusion it draws from its own facts is purely bimetallic and really entertaining. Have these nations, it asks, suffered by protecting themselves against the variation of the precious metals in value? "Theoretically, some inconvenience must attend a certain number of the expedients which they have attempted; but still among them are the most prosperous commercial countries in the world. Who can say that their prosperity has been retarded by their precautions against depreciated silver?" In other words, all these nations have been doing, each for itself and on a small scale, what bimetallists want them to do in concert and with rational comprehensiveness. No diminution of material prosperity can be laid to the charge of the experiment. The natural conclusion ought therefore to be that it is a sound operation. But such is not the conclusion of the *St. James's Budget*. On the contrary, its deduction is:—"It is not necessary to plunge into the mist of bimetallic theory; let the new Commission take charge of that. Let us simply recognize that all nations but England have treated the question as not too hard for practical men; and let us do justice to India in allowing her to manage her own currency as she would do if she were an independent country trading largely with us." In other words:—"All countries have always been more or less bimetallic; they have not suffered by being so; let us, however, give ourselves no trouble to investigate bimetallic theories; they are dangerous 'fads'; only, since India suffers by not being bimetallic, let us relieve her from the control which keeps her as she is, and let us give her permission to become bimetallic on whatever scale she pleases."

Original from

PARLIAMENT, having been prorogued, would not meet again until January, in the ordinary course of events. It is asserted, however, that in view of contingencies which are easily conceivable, instructions have been issued to hold things in readiness for a November session. Every one understands this to signify that the Government foresees the possibility of being obliged to ask Parliament for special powers to apply coercive measures. At present, the cloud on the horizon seems to be Sir Redvers Buller. That officer, whose executive ability has already been conspicuously displayed, has reported that the disturbed state of the districts visited by him is chiefly due to the influence of the National League. The discovery cannot be called startling. Ninety-nine persons out of every hundred could have made it without a special investigation *in loco*. Coming from General Buller, however, who is the Government's extraordinary agent, it probably means that the same view is held in Downing Street, and that when Sir Redvers recommends the suppression of the League as the only way to restore tranquillity and make the law respected, he indicates the Government's intention quite as much as his own opinion. If that be so, there is trouble in the air. The League will die hard; all the harder, too, in view of the pretty certain fact that every similar organization will doubtless be proclaimed at the same time. When Lord Spencer suppressed the Land League, he forgot to add a general prohibition of like societies, and the omission is said to be severely criticised by Conservatives. It is easy, however, to be wise after the event. As to the question whether, in the event of the Conservatives adopting General Buller's suggestion, Parliament will grant them the required powers, rumour predicts a fierce struggle in the House. Gladstone, Childers, Morley, and Mundella are credited with a resolve to oppose such a measure to the bitter end, and the obstructive tactics of the Parnellites are expected to exhibit developments hitherto unconceived. But Mr. Parnell himself seems to be growing a little weary. His absences from the House, even during the debate on his own Bill, were notably frequent. His friends, it is said, openly explain that Parliamentary life is becoming distasteful to him, and that he has little personal sympathy with the bulk of his followers. Perhaps he foresees failure and would play the part of the prudent rat. If he divests himself of the mantle of leadership, it is expected to fall on the shoulders of Mr. Dillon, who has been conspicuously active in recent debates, and who is said to be a good second to Mr. Parnell in popularity. It is an interesting page of history that the present generation of British statesmen are engaged in compiling.

It is inevitable that an army in the field should have camp-followers. Such parasites do not disgrace it or affect the justice of the cause for which it fights. The only disgrace possible in connection with them is that their misdeeds should be condoned by the general and his officers. The American dynamitards may be regarded as camp-followers of Parnellites, and many Englishmen are resolutely bent upon proving that the Nationalist leaders and the heads of the dynamite factions are in close accord. Mr. Patrick Ford, editor of the *Irish World*, has contributed to the establishment of this hypothesis. He has published a defence against the two charges preferred against him—infidelity to

Mr. Parnell and a weakness for dynamite. The former he denies emphatically; the latter he proudly admits. He says that he has "laboured long and hard to build up the Parnell movement"; he advises his friends to "roll up their sleeves and coöperate with Parnell in good faith." He declares that he has encouraged the Parnell Parliamentary Fund; subscribed to it himself; published its reports and collected money for it. In fact he adduces all sorts of evidence that, whether with or without Mr. Parnell's direct commission, he is a stout partisan and supporter of the Nationalists, and the public knows that Mr. Parnell has never repudiated his advocacy and assistance. Then, with regard to dynamite, his avowed sentiments are thus summed up by the *St. James's Budget*:—"St. Paul tells us," observes this advocate of wholesale slaughter, "that every creation of God is good. Dynamite, then, considered in its origin and elements as coming from the hands of the Creator, is necessarily good. Considered as a product of science, it is calculated to advance the interests of civilization; and as such it is good." He goes on to make a distinction. Dynamite may be perverted to evil uses. It was so perverted by the Chicago murderers, because they used it to encourage the cause of anarchy, and anarchy is distasteful to Mr. Ford. "But dynamite employed in the direction given to it by Irish patriotism was never intended for anarchical purposes," Ford explains that the London dynamiters were carrying on legitimate war against the English nation. It is, he says, a "War of Extermination" on both sides. He is not content with condoning the use of dynamite in the past; he recommends its use in the immediate future. He says that Sir Redvers Buller "employed dynamite against his unfortunate victims in the caves of Zululand;" and that "if the Irish accept battle from him they must be prepared to fight him with his own weapon, and wage the war of extermination [now actually in progress, according to Ford] to the bitter end."

What we desired to choose from the Bible some text inculcating a lesson opposite to the social reforms now agitating the public mind in Japan, we should not have selected St. Paul's behest:—"Wives submit yourselves unto your own husbands as unto the Lord." The doctrine enunciated by the apostle of the Gentiles eighteen centuries ago seems to us to be pretty much the doctrine by which conjugal relations have been regulated in Japan ever since a period even more remote than the era of St. Paul. There has been too much submission to lords in Japanese households, already. We want a new creed, and it surprises us that a writer in the *Christian* should adduce this doctrine of ancient times as a summary of the duty to be discharged by women.

THE members of the Tōkyō Stock Exchange held another extraordinary general meeting on the 31st ultimo. The proceedings of the meeting are not reported in detail, but from what the *Nichi Nichi Shinbun* says on the subject we gather that the tone of the shareholders with regard to the project of a bourse was moderate and liberal. Our Tōkyō contemporary congratulates the Exchange on the opportunity thus offered for effecting reforms in its constitution and methods. The published quotations of the speech delivered by the President, Mr. Kōno,

show that he took a broad and sensible line. In view of the approaching opening of the country for mixed residence, he urged upon Japanese traders the importance of subserving all trifling differences between themselves to the large necessity of preparing for direct contact with foreign merchants. He concluded with these words:—"It will thus be apparent that, although at first sight a considerable divergence of opinion may seem to exist between the project for establishing a bourse and that for reorganizing the present Exchange, the advocates of both measures are really unanimous in their desire to improve an important organ of commerce and to extend its sphere of action for the benefit of the whole business community."

According to the *Choya Shinbun*, the scheme for the establishment of a bourse originated from the hopeless condition of the Warehouse Company at Fukagawa. In order to assist that concern the merchants interested in it decided to establish a bourse, anticipating that the warrants issued by the company would be in great demand, and that a larger quantity of commodities would be placed in its stores. They also agreed to increase the capital of the company to yen 1,000,000, and to apply to the Government for a guarantee of 8 per cent. annual interest. The authorities were then considering some plan for remedying the defects of the present exchanges, and the project for the establishment of a bourse was at once favourably received by the Agricultural and Commercial Department. But when it was referred to the Finance Department, the clauses relating to the Warehouse Company met with a flat disapproval, while but little objection was urged against the question as to the establishment of a bourse. Accordingly, the projectors of the scheme omitted from the application all the clauses concerning the Warehouse Company, and the application now seemed in a fair way of being granted, when a new obstacle arose. Business men interested in the Rice and Stock Exchanges had viewed the scheme with great attention all along, and had already taken prompt measures on their own part. They drew up a memorial protesting strongly against the abolition of the Rice and Stock Exchanges. On the 29th ultimo, the more prominent members of the Exchanges called on Count Ito, and left with him the above-mentioned document. The projectors of a bourse had, says the *Choya*, planned to strike terror into the minds of the shareholders of the Exchanges by skillfully circulating rumours as to the abolition of those institutions, their purpose being to bring down the price of the shares and then buy them up, so as to facilitate their bourse scheme. The shares, indeed, fell by as much as yen 170 to 180, but the timely and energetic efforts of the leading shareholders defeated the strategem. It is further stated that the advocates of the bourse will also send a delegation to the Minister President. It remains an open question which party will win; but it is at present asserted by some that the bourse will be sanctioned on condition that its sphere of business transactions be limited to silk, tea, barley, wheat and other grain, thus allowing the Rice and Stock Exchanges to continue as before.

Its issues of the 23rd and 25th ult., the *Fiji Shimpō* warns the Government against taking any radical step in obedience to their desire to re-

medy the evils connected with the present Rice and Stock Exchanges in Tōkyō. It is now rumoured that a bourse will be established on the model of those in Europe, and that it will be made to take the place of the present Exchanges. The details of the constitution of the bourse are not known, but the *Fiji Shimpō* thinks that it will be in outline pretty much as follows. Three or four hundred brokers will be selected, each of whom will make a contribution of a thousand *yen* at the outset. A large building will be erected in a convenient part of the city from the capital thus collected. Brokers will have to occupy houses in the neighbourhood of the bourse. Besides the original contribution, each broker will have to deposit a sum of *yen* 10,000 as security. The object of the Government is thus to raise the standard of brokers, and to secure the business of the bourse from falling into the hands of speculators. The *Fiji Shimpō* professes to be sincerely desirous of seeing the present corruptions of the exchanges corrected, but at the same time is far from confident that any good will come out of drastic measures such as the Government is reported to contemplate. The capital of the Stock Exchange is *yen* 200,000, divided into 2,000 shares of *yen* 100 each; while the capital of the Rice Exchange is *yen* 100,000, in 1,000 shares, of *yen* 100 each. The shares of the former are at present selling at *yen* 400-500; and those of the latter at *yen* 300-400. As, legally, the period of the business of the Exchanges is fixed at five years, it is not, says the *Fiji*, at all contrary to law to abolish them at the expiration of the stated period, and to establish a bourse. But there is a point which claims the consideration of the Government, and that is the fact that business men have been led by past custom to believe that the stipulated period would be prolonged. The *Fiji Shimpō* argues, from this standpoint, that it would be hard upon the present holders of the shares of the Exchanges to deprive them of the greater part of their profit in connection with those shares. Moreover, the *Fiji* believes that the only good achieved by the establishment of a bourse will consist of a better kind of building and a more complete code of rules. As to the character of the brokers, the Tōkyō journal is inclined to doubt if any real improvement can be made; for the present brokers of the Rice and Stock Exchanges will for the most part form the membership of the bourse. Further, the object of stopping speculative business seems to be far from attainment, for even at present speculations are being entered into as to the establishment of a bourse. The *Fiji Shimpō* concludes with the following sentences:—"Should it appear that the end of the Rice and Stock Exchanges has drawn near, the price of the shares of those institutions will instantly fall, and their owners will have the misfortune of losing many thousand *yen*, while the new bourse will be indirectly benefited to that extent. At a time like the present, when speculative business prevails, is it not the duty of all upright persons to discourage it, instead of opening a new channel for its activity? We must not be understood to mean that the present Exchanges are all that can be desired. On the contrary, we are sincerely desirous of seeing them reformed. But in reforming them judgment must be exercised so as to avoid partiality to anyone."

Adopting a view similar to that of the *Fiji*

*Shimpō*, the *Nichi Nichi Shimbun* regards the project of the establishment of a bourse with suspicion. It writes on this subject in its issue of the 29th ultimo, as follows:—A sudden and startling phenomenon has occurred in the business world. We allude to the rapid fall in the price of the shares of the Rice and Stock Exchanges during the last few days. In the beginning of the present month, the shares of the Rice Exchange were quoted at *yen* 480-490, and the shares of the Stock Exchange at *yen* 380-390, but they are now selling at about *yen* 310 and *yen* 220 respectively. Some ascribe this sudden fall to the return of business activity, but if this view be a correct one, which it is not, other shares and bonds ought to have undergone a similar change. There is a peculiar circumstance which has always operated to produce violent fluctuations in the price of the shares of the Rice and Stock Exchanges, and that is the limited number of those shares (2,000 in the case of the Stock Exchange, and 1,000 in the case of the Rice Exchange), which has made it easier for business men to speculate upon them. After making allowance for this feature, however, the greater part of the present unusual fluctuation remains unexplained. We must ascribe it to the report of the establishment of a bourse. This project is not a novelty; it has been heard of for some years, but it now seems to have succeeded in engaging the attention of a certain section of the Government. Our contemporaries state that Mr. Yoshida, the Under Secretary of State for Agriculture and Commerce, invited to his official residence the 25th instant, Messrs. Shibusawa, Masuda, Okura, Kawasaki, and several other prominent business men of the capital, and asked their views on the draft of the constitution and rules of the bourse to be established. The publication of this news confirmed the suspicion which had lurked in the public mind as to such a measure on the part of the Government, and brought down the price of the shares of the Exchanges. Those who advocate the establishment of a bourse urge (1) that it is disadvantageous to real business men to leave the settlement of prices to speculators, (2) that the present brokers cannot be trusted, and (3) that it is not wise to continue the present system of dividing profits between brokers and shareholders. In order to remedy existing evils, they propose (1) to establish a bourse, (2) to select respectable persons as its brokers, (3) to effect all kinds of transactions in mercantile products in the bourse, and (4) to carry on also transactions in bonds and shares. Now, we do not think it unnecessary to establish a bourse, but it does not appear likely that the object of its projectors will be achieved immediately. We fully acknowledge the necessity of introducing some reform in the present Exchanges, but it does not seem expedient, in order to correct their evils, to establish a bourse. We believe that it will be possible to accomplish the object by improving the present Exchanges. It is also to be noted that the project for the establishment of a bourse is still limited to a certain section of the Government.

Continuing its remarks in a subsequent issue, the *Nichi Nichi* says:—Our contemporary, the *Hochi Shimbun*, tells us that the object of the authorities of the Agricultural and Commercial Department is to correct the corruptions of the

present Stock and Rice Exchanges, the corruptions alluded to being the expense of the present system, and the prevalence of speculation to such a degree as to cause the Exchanges to be looked upon as gambling places. The same journal informs us that Messrs. Shibusawa, Iwasaki, Masuda, and Kawasaki have expressed their approval of the general outline of the scheme of the Government. We are also told that it is proposed by some of them to allow, besides regular brokers, those merchants in Fukagawa and elsewhere who are actually engaged in the rice trade, to do business on the bourse, and likewise to permit bankers to transact business there. Further, the above-mentioned gentlemen are said to concur in the wish that the Government should deal with the present Exchanges in a deliberate and conciliatory manner so as not to produce economical disturbances. We thus see that the object of the authorities as well as the wish of the gentlemen above alluded to are equally excellent. But we hesitate to give our approval hastily to the scheme for the establishment of a bourse, for to arrive at a resolution in such a matter requires most careful consideration. No doubt the advocates of the scheme in question think it more effective and practicable to substitute a bourse for the present exchanges than to improve the latter; but they can have no objection to proceed in a less violent method, if they see that there is hope of improving our Exchanges up to the standard of those in Europe and America. And no experienced person will fail, we think, to see that there is such a hope, if only they will take the matter into full consideration. It being, if we remember right, fixed by law that the periods of the business existence of the Tōkyō Rice and Stock Exchanges will expire respectively in 1887 and 1888, it is perfectly legal for the Government to refuse to extend that period. But from general custom this period has come to be regarded by business men as secure of prolongation, so that the Government is morally bound to permit such extension. Without some such security, who would invest money in business undertakings started for specific periods of years? When the Exchanges were first established, the shareholders believed that the term would be prolonged, and no doubt the Government also must have admitted the prospect of permitting such prolongation. As the consequence of this strong belief, together with other causes, it has come to pass that the capital of the two Exchanges, originally amounting only to *yen* 300,000, has reached the practical value of as much as *yen* 1,300,000 or *yen* 1,400,000. Now, if the Government refuses to permit any extension of the period, is its duty of protecting private property fulfilled? We are fully aware that Mr. Yoshida, the Under Secretary of State for Agriculture and Commerce, has paid attention to this circumstance; and no doubt Mr. Shibusawa and others have this in view when they wish the Government to deal with the exchanges in a deliberate and conciliatory manner. We are thus led to suppose that both the authorities and those gentlemen who are advocating the establishment of a bourse equally wish to take measures to protect the people from losing over a million *yen*; and we presume that it is not the intention of the Government to establish a bourse before taking such measures. Having thus far dwelt upon the importance of pro-

pecting the property of the shareholders of the Rice and Stock Exchanges, we shall now proceed to consider in detail the question of a bourse. As to the charge that the present Exchanges are so corrupt as to merit the title of mere gambling places, we should like to discuss it at length, were it not a little outside our present object. Taking it for granted that the Exchanges are as bad as is stated, and supposing that a bourse is established as now proposed, will the character of the brokers show an immediate improvement, and will the prevalence of speculative business cease? Before deciding upon the establishment of a bourse, it will be necessary to fully consider these circumstances. We believe that Messrs. Yoshida, Shibusawa, and others have already exhausted investigation in these directions. But there remains another question, which has to be settled prior to the establishment of a bourse. Is it necessary in the case of Japan, or at least of Tôkyô, to combine in one establishment both produce and stock exchanges, and, if so, what is the necessity? In England and America, there are two classes of exchanges, (1) produce exchanges, and (2) stock exchanges; while in countries like France and Belgium these two kinds of exchanges are combined in one form under the name of bourse. We see, then, that the system of exchanges differs in different countries, and it will consequently be unwise to confine our attention to any one country in an attempt to improve our own system. Moreover, our rice exchanges may be compared to the produce exchanges of the West, so that the system of exchanges in this country nearly resembles those of England and America, the difference between the two being found in the constitution of the exchanges and in the mode of doing business. It seems thus to be a more proper method to continue the present system of our exchanges and introduce such reforms in them as may be deemed necessary; that is, to follow the course of the development of exchanges in this country. If a bourse is to be established, it is necessary first of all to let the public understand why it is advisable to follow the French system. The rumour as to the establishment of a bourse has engaged the attention of the business public, and not only those directly connected with the Exchanges, but also all other merchants have felt more or less the effect of the shock given to the commercial world. Already there are many who have been subjected to serious losses on account of the violent changes produced in the price of the shares. Thus, while on one hand desiring the improvement of the Exchanges, the public do not on the other wish to have the improvement effected by producing serious confusion in the economical world. We, therefore, sincerely hope that influential persons will exert themselves in the direction of improving our Exchanges on their present basis.

THE recently mooted scheme for the construction of a railway in Kiushû appears, according to the vernacular papers, to have assumed a practical form. Mr. Yasuba, Prefect of Fukuoka, issued, more than a month ago, a circular letter to the most prominent citizens of Fukuoka, Kumamoto, and Saga Prefectures, urging upon them the importance of developing the resources of their districts by constructing railways. He next convened a meeting of those who had ex-

pressed consent to the scheme of the Kiushû Railway, at the Mangyôji Temple, in Hakata, Province of Chikuzen, on September 28th and 29th. According to resolutions adopted by the meeting, the capital required for the construction of the line is estimated at yen 3,000,000. It is to be raised by the sale of scrip throughout Japan, and Government is to be petitioned to guarantee the interest. The proposed line is divided into two sections; the first starting from Moji-ura in the Province of Buzen, and terminating at Misumi in the province of Higo, after traversing Ogura, Fukuoka, Kurume, and Kumamoto; and the second section is to start from the first section somewhere in the Province of Chikuzen, and extend through Saga as far as Nagasaki. A telegram published in the *Nichi Nichi Shinbun*, dated Kumamoto, October 29th, informs us that the conference of the Prefects of the three above-mentioned Prefectures in connection with the construction of the railway, held at Kumamoto, terminated favourably.

Some surprise is naturally expressed with regard to the published project for a railway in Kiushû. It is not doubted that the line will be a success, and that its construction will confer immense benefits on Kiushû. But the fact that only five out of the nine provinces in the island are to be traversed by the line, is received with dissatisfaction. The *Nichi Nichi Shinbun* echoes this sentiment, and wonders why Bungo, Hyûga, Osumi, and Satsuma have been omitted from the programme. From a geographical point of view, our contemporary thinks that the main line should extend from Moji-ura via Fukuoka and Kumamoto to Kagoshima, and that communication with Nagasaki, Misumi, Miike, Tsurusaki, and Sadowara should be by branch lines. A project so extensive would, of course, require several years to complete, but the scheme ought certainly to point cardinal to Kumamoto, just as the trunk line of the main island has Aomori for its prospective terminus. The construction of the central road might be deferred in favour of branches which seemed more immediately necessary, but to reach Kagoshima eventually should certainly be the aim of the projectors.

We take the following from *Bradstreet's*:—"Some idea of the activity which has characterized the proceedings of the German police against the Socialistic press may be gathered from a catalogue, compiled by the secretary of the Berlin police, and containing a list of the Socialistic publications which have been seized, or the circulation of which has been prohibited since the passage of the legislation directed against Socialism in 1878. It appears that from that date up to June of the present year, 792 printed volumes, 13 isolated numbers of German periodicals, and 19 of foreign periodicals were placed under interdict, while 83 German and 41 foreign newspapers were definitely prevented from being put into circulation. This makes a total of 948 interdictions, of which 255 were in 1878, 141 in 1879, 87 in 1880, 141 in 1881, 40 in 1882, 62 in 1883, 132 in 1884, 72 in 1885, and 18 in the first five months of this year. Out of these prohibited publications, 530 were in Prussia, 196 in Saxony, which is the head-quarters of Socialism, 85 in Bavaria, and 23 in Hesse. Moreover, 246 Socialist associations were dissolved, of which 71 were in Prus-

sia, 73 in Saxony, and 47 in Hesse. Among the prohibited German publications were Herr Marx's "Manifesto of the Communist Party in 1847," several pamphlets and manifestoes of Ferdinand Lassalle, and works by Liebknecht, Bebel, Most, Hasenclever, Engels, and Volmar. The foreign authors placed under ban comprised the Dutch Socialist Nieuwenhuis, Bakounin, and Stepniak (Russia), and several French Communists. Among other things prohibited were several theatrical pieces, and a number of portraits of Socialist notabilities.

THE audacity of newspaper men is becoming proverbial, but a reporter of the *Figaro* has carried off the palm in this particular line. His proceedings are pithily summed up thus by a London journal:—The *Figaro* consented, at the request of the Chinese Legation, to repudiate the "interview" with Marquis Tseng which it had previously published. The reporter, however, whose account was thus disavowed, has been allowed to defend himself and to reassert the correctness of his narrative. He insists that he had two interviews with the Marquis. But Mr. Tching, secretary to Marquis Tseng, says that the first interview never got beyond the stage of being asked for; that the reporter prudently wrote his account beforehand, and then, by some accident, published it prematurely; and that the second interview consisted in an attempt by the interviewer, which entirely failed, to see the Marquis with a view to explaining the unfortunate slip. To which the reporter replies that all Chinamen, from Tseng to Tching, are no better than the Cretans, and further stigmatizes them as a "tas de magots." Poor fastidious Herr von Blowitz holds up his hands in astonishment that a newspaper-man should like to interview the representative of a nation of whom he can speak so disrespectfully.

News comes from Tientsin that the French have scored an emphatic win in respect of the works at Port Arthur. Our readers, if they have kept themselves posted in the record of events, will remember that after the epidemic of syndicates had subsided last spring, the only surviving evidence of its ravages was a French syndicate permanently settled in Tientsin with a museum and other "cards of introduction" in prospective. This syndicate has made the coup in question. It has secured a contract of 1,150,000 lvs. for the Port Arthur works. Port Arthur, now unanimously acknowledged to be the most valuable naval stronghold in the Gulf of Petchili, has been admirably fortified—some say rendered absolutely impregnable—under the direction of the Viceroy Li. But the Chinese desire also to have a dockyard there, and upon this project they have already expended hundreds of thousands of taels without accomplishing anything tangible. It is understood that the dockyard works have hitherto been under the direction of three incompetent, if not corrupt, Tao-tai, and rumour has gone so far as to assert that the bungling of these gentlemen lately reached a point which made the Viceroy desirous, and even anxious, to retrieve and conceal their seven years' mismanagement by handing the whole thing over to foreign contractors. Of course it was very well known that such a chance was likely to offer, and merchants anxious to secure it were not wanting. Of these Messrs. Jardine and Matheson seemed foremost in the running; but now comes the unexpected news that they have been distanced by the French syndicate.

Precisely how the thing happened we are, of course, unable to say. But there is strong reason to think that official influence is largely responsible. Consul Ristelhueber's name figures conspicuously, whereas rumour has it that Her Britannic Majesty's Consul was not taken into the confidence of the great English firm until the contest was virtually over. A correspondent of the *North China Herald* writes that the contract is drawn up with great skill, and that by its access to the harbour is secured to French ships alone during the progress of the works. We do not doubt that this affair will be made another cause of complaint against the supposed supineness of the Queen's officials. Contrasts highly favourable to the French authorities will be freely drawn. To those who are behind the scenes, however, it will be, on the contrary, a fresh instance of the peculiarly self-contained habits of the British merchant. To him, under ordinary circumstances, an official seems to be a thing to be righteously avoided and carefully excluded from all confidence. Suddenly, however, the discovery is made that some rival of a different nationality has been carried by his Consul's aid within actual reach of a coveted prize. Then the Briton puts away his reserve and places himself under the official ægis, only to find that he is too late. His eleventh-hour appeal furnishes nothing more tangible than a scape-goat. It enables him to lay the blame on his Consul's shoulders, and he freely lays it there. His rival, meanwhile, has been consulting his Consul at every stage and benefiting by the latter's advice and coöperation. We do not pretend to decide between the original merits of the two methods, but only note that the success of the one is generally quite as explicable as the failure of the other.

THE Kyogekishōsha is perhaps the largest printing establishment for educational works in the empire. Its premises are situated in Shiba, on the right of the road leading up to the great red gate of the Zo-jo-ji temple. The enterprise used to be carried on by a company, at whose head was the late Mr. Kondo Makoto, founder of the Kondo-gakko, in Shūsensha, Shiba, a very successful school which was lately moved into a commodious and well-ventilated building in foreign style close to the Tōkyō-Yokohama railway. The printing enterprise is connected with the school, and its profits have been sufficient to meet the expense of erecting the new building for the latter. Mr. Kondo, well-known as a Japanese scholar and antiquarian, was one of the victims of the late cholera epidemic. His place, we believe, will be taken by his son Mr. Kondo Motoki, a distinguished graduate of the Imperial College of Engineering, who is now studying shipbuilding at Newcastle in England. A handsome branch office for the sale of the books published, has lately been opened in Takekawa-cho, on the right of the main street leading from the Station.

ENGLAND's delightful habit of washing her dirty linen in public, places her, just now, in a curious position before the world. If we are to believe everything that Englishmen themselves say, the Navy has guns more deadly to those behind the breech than to those before the muzzle, and the army has bayonets that cannot be used and cartridges that jam. At all events, we see the darkest side of our own picture,

which is some small comfort. Sir Samuel Baker now comes forward with a heavy charge against the Martini-Henry rifle. In a letter to *The Times* he says:—

Every person is aware that a rifle, to be handy, should come up to the shoulder almost instinctively. It would be impossible to produce a rifle that would suit everybody, as people differ in their build, length of neck, arms, &c.; but there can be no question that, to obtain fair shooting when firing rapidly, the stock should be well bent, otherwise the shots will be invariably too high.

Our Martini-Henry rifles are ridiculously straight, as remarked by your correspondent in charge of his interesting letter. This fault accounts for the extraordinary failure of our infantry fire in face of the enemy, which at close range should be swept off the face of the ground if the rifles came up instinctively to the shoulder.

All sportsmen are well aware of the recoil inseparable from a straight stock, where the cheek must be depressed upon the butt when taking aim; but with a well-bent stock a heavy charge of powder may be fired with impunity. When the Martini-Henry was first introduced the recoil was a serious cause of complaint, owing to this cause.

In a tour round the world I added a Martini-Henry Government rifle to my culinary battery; this was used in the trigger to a pull of three pounds, and was delicately sighted.

The result of three years' shooting proved that I seldom failed to hit a standing object, but I constantly missed all running shots, with the Martini. Owing to the straightness of the stock, it was impossible to fire quickly with any accuracy.

Some months ago I took the liberty of offering the results of my experience to the proper authorities, as the Government were about to produce a new rifle for the Army.

The reply from the Small Arms Department acknowledged the old defect of a straight stock, but declared the intended remedy to be a slightly reduced angle of the shoulder-plate from 88° to 85°.

I confess I was amazed and incredulous, but I said no more.

I submit this fact for the consideration of sportsmen, soldiers, gun-makers, and British tax-payers.

No practical sportsman would order a rifle with the Martini-Henry breech action, which is the worst in existence, being a mere trap for dust or rain, while the extractor is useless should a cartridge jam, and the danger is intensified from the absence of a half-cock.

THE *Jiji Shimpō* gives currency to a rumour that among the high dignitaries of State there are some who advocate the removal of the seat of Government to Kyōto. The principal reason advanced by these politicians is said to be that, in the event of war, the comparative inaccessibility of Kyōto would render it more secure than Tōkyō. It is further argued that if the fifty million *yen* which municipal reformers contemplate spending upon the remodelling of Tōkyō and the construction of a harbour there, were employed upon improvements in Kyōto, the latter would become a splendid capital, whereas it is by no means apparent that corresponding advantages will accrue from the same outlay in Tōkyō's case. This reasoning does not seem to us very conclusive. Kyōto, with its incomparably picturesque situation and its attractive associations, is doubtless a charming place of residence, and there can be no question that if fifty million *yen* were spent upon it, a very pretty city would be the result. But where is the money to be procured. From the *Jiji Shimpō's* manner of representing the sentiments of those who advocate the scheme, one would imagine that it is not a question of finding fifty million *yen*, but merely of determining where that sum shall be spent. The citizens of Tōkyō, however, if they subscribe fifty millions for municipal and harbour purposes, are not unlikely to wish that their silver shall be laid out upon their own town and port; and as for the citizens of Kyōto subscribing such a sum, or even a fifth of it, for such a purpose, we must be permitted to be sceptical. These, meanwhile, are superficial questions. The main point is the pity, the very great pity, that Kyōto should be deserted altogether by Imperialism and virtually by officialdom. The Japanese say of this delightful city that it is good as a temporary place of sojourn, but that it will not compare with Tōkyō as a permanent residence. The Japanese are right no doubt, and we cannot think that

even strategical considerations will upset their estimate. Why not subscribe to their verdict, however, and make arrangements for the periodical removal of the Court to Kyōto? The Western capital has some claims upon the consideration of the Government. Its permanent desertion is not to be contemplated with equanimity by any class of persons.

THE American Board of Foreign Missions, whose work in Japan is so well known, has just held its annual meeting at Des Moines, Iowa. The sittings were somewhat stormy, owing to a warm discussion having been raised on the question of a future probation for the heathen world. The "new departure" party threaten a schism if their demands are not granted, and much soreness of feeling and bitter language are the unfortunate results. Dr. Noble of Chicago proposed a resolution condemning the doctrine as heretical, and advising the rejection of the demand for liberty to teach it, but his resolution was rejected, and the whole matter is referred to a council. Now that liberty of thought on this question is permitted even in so strict a body as the English Church Missionary Society, we hope for a favourable result. It is impossible to sympathize with this comment on the matter from a paper of the old school:—"For brazen impudence of assertion and demand, commend us to the new departure men. For over seventy-five years the American Board has been doing a grand work on the old orthodox and Scriptural lines. But these advanced thinkers, having made an addition to the gospel, demand that the Board shall send out missionaries who can teach the new doctrine of probation after death to the heathen world. And if the Board will not yield to their demands, they will split it. Heresy, whatever may be its virtues, was never characterized by modesty or humility. There is nothing that frightens the average Congregationalist so much as to tell him that the right of the individual to think as he pleases in religious matters is in danger. He will consent that men should question God's right to condemn a guilty world, but no one dare question his right to think as he pleases. So when the new departure men, having no 'thus saith the Lord' to support their notions, raised the cry, 'our right to think as we please is infringed by the action of the secretary,' good orthodox men hesitated to oppose them. It is sad when liberty of opinion is exalted in authority above the Word of God, but so it has happened and so it will come to pass, as long as vain, conceited man struts and fumes on this earth."

DR. ANDERSON's catalogue of his collection of Japanese and Chinese paintings, now in the British Museum, has at last been published by the trustees of that institution under the title "Descriptive and Historical Catalogue of a Collection of Japanese and Chinese paintings in the British Museum, by William Anderson, F.R.C.S. London. Longmans, Quaritch and Trübner, 1886." The Catalogue is a large volume of about 600 pages, and the amount of labour which has been devoted to it in order to make it as complete as possible fully accounts for the long delay in publication. It contains also thirty-one full page plates. In the preface the writer explains that the great size of the catalogue is due to the large amount of general explanation required on account of the novelty of the subject to Western readers. As originally planned it would have been larger still, for it

was proposed "to introduce a preliminary sketch of the history, technique, forms and characteristics of Sinico-Japanese painting, together with a review of the various applications of pictorial design." But this would have made the volume of inconvenient bulk, and added to its expense. It was also judged that it would be more suitable to a private undertaking, and hence the origin of the *œuvre de luxe*, "The Pictorial Arts of Japan." Of the collection itself, Dr. Anderson says that, although comprising representative specimens of all the various schools, it must be regarded only as a nucleus to be added to hereafter. Coming to the main body of the volume, we find first a brief sketch of the early history of Japanese Pictorial Art. After this the pictures are classified under the various schools, "and to each group is prefixed an account of the main facts in the history of the school, with a list of the principal artists whose names have found a place in native biographical records, and, lastly, the legendary and other motives have been dealt with more or less in detail." The schools treated in this way are (in order) the Buddhist, the Yamato and Tosa, Chinese Sesshiu, Kano, the Popular School or Ukiyo-yeriu, Kōrin, Shijō, Ganku, drawings showing European influence, and mixed schools. These are followed by an appendix on marks, seals, inscriptions, &c. The next part of the catalogue deals with the representatives of Chinese and Korean pictorial art in the collection. Then follow these copious indexes for which the publications of the British Museum are famous, one being an index of the names of the principal artists referred to in the catalogue, with Chinese characters. Without attempting now to pass judgment on the volume, a cursory examination shows it to be the work of a writer who has remarkable grasp of his subject; every page, too, exhibits the minute care which has been bestowed on it. It may be mentioned that the number of entries in the Japanese part of the catalogue is 3,562, and in the Chinese and Korean part 227.

THE much-talked-of meeting of the members of the now defunct Liberal party was held at the Ibumura-ko the 24th ultimo. The attendance of provincial members, especially from the north-east, is stated by the Tōkyō journals to have been very large. The total number present on the occasion was over two hundred. The meeting was originally intended to bring into closer relations the members of the old Liberal and Reform parties, and the attendance of the latter was invited. But it seems that this object was not attained, for all the more prominent numbers of the old Kaishintō, such, for instance, as Messrs. Shimada, Fujita, Inugai, Koizuka, etc., excused themselves on various grounds. Messrs. Hoshi Tōru, Suihiro Tetsuō, Kato Heishirō and a few others made speeches, and the proceedings were followed by a dinner. Nothing definite was settled at the meeting, but it seems that a similar meeting is to be convened either next spring or autumn. Further, each of the members of the recent meeting is to be provided with a list of the names of those who attended on the occasion.

A CORRESPONDENT of the *North China Herald*, writing from Chefoo about Port Arthur (Lushun-kou), delivers some sweeping opinions on the hacknied subject of Chinese officialdom:—

Never was a high official surrounded by a set of

more useless creatures than Li Hung-chang, and he is really greatly to be pitied. The state of the works at Lushun-kou affords ample illustration of this. The defensive works erected under the direct authority of the Viceroy are perfect and compel admiration. The work of the Taotais Chao Fu, Yuen, and Liu simply provokes laughter. These officials are of course completely ignorant of engineering, none of them having ever seen a dockyard in their lives, and it is not their fault in their work is worthless. They have built walls which fall down by their own weight before any pressure has been brought upon them, and they have spent about 400,000 taels in moving mud about not only uselessly, but really in a way to spoil one of the finest harbours in the world. These Yellow River engineers have been employing thousands of coolies in filling up a fine deep inner harbour, perfectly landlocked and suitable for the reception of a fleet. It is estimated that 400,000 taels have been entirely thrown away, and perhaps worse, for it would be easier to make a good harbour if nothing had been done to it than it is now that its natural advantages have been destroyed. It was not very wise of the Viceroy to allow these Yellow River engineers to try their hand at dock work, but the state of things at Port Arthur has thrown unexpected light on some of the Yellow River problems. Certainly, if the works on the Yellow River are constructed on anything like the principle of those at Port Arthur, we have no difficulty in understanding why that river is so unmanageable and why the country is always flooded. For seven years the Yellow River Taotais have been working at Port Arthur harbour, and they have accomplished nothing. They were afraid of being found out, and tried to hand the whole thing over to certain French engineers to complete. Besides the Harbour works there is a torpedo establishment at Port Arthur which is nearly as useless as anything of the kind can be. The men know how to fire torpedoes, having learned all that from Mr. Hasenclever, a very expert German officer who was recalled by his own government two years ago. But when they have discharged the torpedo they think they have done all that is required. They know nothing of the construction of the torpedo and whether it would explode or not or whether it goes to its mark or not. If it goes wrong they don't know how to put it right and they have nobody to teach them. A few workshops they have, but nothing more than what is seen in ordinary iron works. In war these Port Arthur torpedoes would be no more considered by an enemy than a swarm of flies. The only thing the department does is to stop any improvement. So long as Liu is there he will not allow his own ignorance to be exposed by any improvements being introduced. If the Viceroy would only take the Harbour works and the torpedoes in hand himself the work would be done, but he is only one man and cannot do everything; therefore the Taotais, all pulling different ways, and all equally ignorant of their business, will blunder along until another war finds them in the same helpless condition as the last one. Their ships and guns will be simply a prey to the enemy.

It will be remembered that a recent telegram announced the prospect of a Conservative Home Rule bill for Ireland, based on the principle of provincial councils, but that a subsequent telegram contradicted the story. The origin of the rumour appears to have been the publication of a draft bill by the *Daily News*, accompanied by a statement that the measure had been prepared by the Cabinet. The *Standard*, it will be remembered, had acted as Mr. Gladstone's herald in a similar manner, and the *Daily News* appeared to be now in a position to turn the tables on the Tory journal. Of course there was much excitement over the revelation of the *News*, more especially as that journal is generally supposed to have very close relations with Mr. Chamberlain, whose well known idea on the subject of Home Rule the hypothetical bill embodied. Another circumstance which enhanced the interest of the incident was the fact that it followed close on the heels of Lord Randolph Churchill's remarkable speech at Dartford, when he announced a programme of democratic Toryism which took away the breath of old-fashioned Conservatives. People jumped to the conclusion that, under the leadership of the "Flibberty-gibbet," the Tories were going to turn the tables on Gladstone by appropriating the principal planks in his platform, not alone in Irish affairs, but with regard to other matters also. Whether the authority of the *Daily News* was good or bad, the initiated soon

succeeded in detecting internal evidence which, they declared, proved the bill to be a fabrication. One blunder, at all events, had been made by the *Daily News*. It had announced that the Irish Committee of the Cabinet was actually engaged preparing the bill, whereas, in point of fact, the four most prominent members of the Committee were all absent from Great Britain at the time. Nevertheless the conviction remained that the bill described by the *Daily News* really represented the ideas derived by Lord Randolph from Mr. Chamberlain, whether the Cabinet and the Hartington Unionists approved of them or not. Indeed a Churchill-Chamberlain alliance appears to be the most salient feature in English politics just at present. It is a curious combination, and the principles on which it is supposed to be based are unquestionably very distasteful to large numbers of Conservatives. The transfer of the payment of tithes from tenant farmers to landlords, and the creation of labourers' allotments, are projects which seem much better suited to a Radical than to a Conservative programme. Lord Randolph, however, is evidently seeking to enhance his value in the Cabinet, and may, perhaps, be intriguing for a reconstruction of that body. Many aver that his main purpose is simply to keep public attention riveted on himself. If that be so, he is to be congratulated on his success.

THE apprehensions entertained some time ago with regard to the probability of a winter session of Parliament seem to be groundless. Contrary to what many politicians predicted, the Parnellites are said to be exerting all their influence on behalf of peace and quiet in Ireland, in the belief that they will thus establish a claim upon the immediate attention of Parliament to their Home Rule schemes. The landlords, on their side, looking hopefully to the results of the Land Commission appointed by the Government, are abstaining from evictions, so that, for the moment, everything is going on smoothly. But the "moon-lighters" are an inconvenient element in the situation. Though unanimously denounced by the Nationalist press, they decline to hold their hands altogether, and cruel outrages still continue to discredit "the cause." The next attempt of the ultra-conservatives will doubtless be to prove that Parnell is a direct patron and instigator of moonlighting.

SINCE the science of statistics attained its modern developments, many curious truths have been brought to light. Perhaps none is more curious than the now well established fact that the old idea as to poverty and ignorance being the chief source of crime is utterly erroneous. No one will deny that during the past twelve years popular education has made enormous strides in France, for example. Neither effort nor expense is spared to diffuse knowledge among the very lowest strata of society. As for the miseries of indigence, they, too, are by no means what they were a quarter of a century ago. Work is more plentiful and better remunerated than ever, and the price of the necessities of life is, on the whole, less than it used to be. Yet statistics show that out of every hundred persons arraigned before the criminal courts in France, no fewer than 17 or 18 are youths of from fifteen to eighteen years of age who have benefited, so far as their intelligence is concerned, by the educational facilities of the

Original from

time. In fact, seventy per cent. of French criminals know how to read and write; from four to five per cent. are persons of superior education, and only some twenty-five or twenty-six per cent. can be called illiterate. Turning to other figures, we find that only six or seven per cent. are persons without any trade or profession; thirty-six or thirty-seven per cent. are agriculturists; twenty-nine or thirty per cent. are industrials; fourteen or fifteen per cent. are tradesmen; five or six per cent. are domestics, and seven or eight per cent. are house-owners or persons following genteel professions. The old notion as to the demoralizing effects of poverty and ignorance must, therefore, be abandoned.

M. Arthur Mangin, commenting on all this, says that society is to blame for such disappointing results. Too much indulgence is shown to criminals who deserve none at all. Apart from scandalous miscarriages of justice, the constant tendency of prison reform is to ameliorate the lot of condemned criminals; to prepare for them in distant but fertile and healthy countries a future which many an honest family might envy. Thus the repression of crime is gradually transformed into a system of encouragements and recompenses for the enemies of society. The trade of recidivist will soon be a career which, at the cost of a few unpleasant years passed in the prisons of the State, will ensure to every rascal, at a comparatively youthful age, a country retreat where he can end his days in peace and comfort. It will suffice to have completed the prescribed tale of convictions in order to be sent, at the public expense, to peacefully colonize New Caledonia or some other "island of the blessed."

MR. TARRING, at one time professor of English Law in Tôkyô University, is now assistant judge in H.B.M.'s Supreme Consular Court at Constantinople. He had lately occasion to travel as far as Baghdad, to try a rather serious charge of murder there. Going across Syria and Mesopotamia, he descended the Tigris on a raft. But the journey was so unpleasant and fatiguing, hardened traveller though Mr. Tarring is, that he did not care to venture back that way. The long round, down the Persian Gulf to Kurrachee, and thence by Bombay to Suez and Alexandria, was speedier. He gives no glowing account of the country. He would shift the Garden of Eden a good deal further east.—"The interior of Japan is Paradise in comparison."

THE Protestant Missionaries in Syria and Palestine seem to be having a hard time of it. A memorial has been drawn up and signed by more than seventy of them, complaining of vexatious interference on the part of the Turkish Government. The missionaries are of various nationalities, British, German, American, and Swiss. Mr. Connor, of the Church Missionary Society, has been expelled from his house in Irbid, east of the Jordan, by orders from Damascus, has been personally insulted by the populace, and is now prevented from resuming his work. Again, an order from the Porte dated December 16th, 1885, instructs officials to search carefully and find out when evil designing persons are about to build schools, churches, or places of worship, since these "make wide divisions among our faithful subjects, and corrupt and injure them." A

later order forbids entirely the building of new schools or places of worship, or the repair of those already in existence except under vexatious conditions. As a result Protestant schools and places of worship have been closed, the doors sealed, and the people forbidden even to meet in a private house for worship. Dr. Vartan's hospital work at Nazareth, carried on successfully for a long period in premises he bought from private owners, is threatened by the authorities. The land, which he made his own in due legal form, is now claimed as *miri*, or public land, and appraised at one-fifth of its real value. The right of petition is also virtually denied to sufferers.

THE vernacular press publishes a very circumstantial account of an accident to Mr. Frame, the lion-tamer of Chiarini's Circus. The story is that, on Tuesday evening, when Frame had inserted his head into the mouth of one of the tigers, the animal suddenly closed its jaws. Frame fell senseless, and was with difficulty drawn from the cage by the rest of the company. For forty minutes he remained unconscious, but happily his wounds did not prove to be of a fatal nature. Such is the tale—a *canard* from first to last. Nothing of the kind happened. Mr. Frame is still scathless, and the tiger which is supposed to have crushed his skull is peacefully discharging the duties of a mother to three very pretty cubs.

WE observe with great satisfaction that the Address to Mr. Russell Robertson, on the occasion of his approaching departure for Europe on leave of absence, has been drawn up by the Committee appointed for that purpose—namely, Messrs. T. Thomas, J. F. Lowder, and J. A. Fraser—and that it now lies at the rooms of the Chamber of Commerce, awaiting signatures. Mr. Robertson's term of Consular office in Yokohama extends back to the days of the proverbial "oldest resident," and during the whole of the time he has steadily progressed in the esteem and respect of the foreign community. This opportunity of expressing the sentiments by which his fellow residents are animated towards him, will be universally welcomed.

ON Monday [the "Snowflake"] Minstrel troupe of the *Cleopatra* gave a very enjoyable entertainment on board ship. The weather was not at all favourable, and as a result very few visitors from Yokohama were present, but there was a large attendance from the other ships of the squadron. The entertainment consisted entirely of nigger songs and dances, varied by two small burlesques which, while varying the programme, served to show the versatility of the "Snowflakes."

FIRE broke out on Monday in the house No. 51, Bluff, occupied by and belonging to Mr. J. R. Anglin. The fire was first observed about half-past eight, and though there was very little wind the flames quickly spread over the whole house which was soon completely destroyed, nothing being left standing but a chimney. A number of Japanese manual engines were early on the spot and rendered good service. The house and furniture were insured.

A TELEGRAM has been received here announcing the occurrence of a shooting affray at Hakodate on board the *Favonius*, Captain Dunham. It ap-

pears that the cook and steward quarreled, and the latter shot the former in the jaw, the wound being of a serious nature. The ship had loaded a cargo of sulphur for New York, and was ready for sea, but as the English Consul is absent, Captain Dunham can take no steps in the matter.

THE cholera returns for Yokohama during the past week were:—Saturday, 6th November, new case, 1; death, 1. Sunday, new case, 1; deaths, 0. Monday, new case, 0; death, 0. Tuesday, new cases, 3; deaths, 2. Wednesday, new case, 1; deaths, 2. Thursday, new case, 0; death, 0. Friday, new cases, 0; deaths, 0. Total cases, 6; deaths, 5.

THE cholera returns for Tôkyô during last week were:—Friday, 5th November, new cases, 2; deaths, 4. Saturday and Sunday, new cases, 3; death, 1. Monday, new cases, 2; death, 1. Tuesday, new cases, 0; deaths, 0. Wednesday, new cases, 0; deaths, 2. Thursday, new case, 1; death, 1. Total, new cases, 8; deaths, 9.

WE have received a telegram announcing the postponement for one week of the Autumn Meeting of the Kioto Keiba Kaisha, which was to have commenced to-day. The Committee arrived at that decision yesterday, and although the weather this morning is, overhead, all that can be desired, the condition of the track at Shinobadzu is probably such as to preclude the possibility of racing.

THE property No. 155, Bluff, belonging to Mr. Percival Osborn and consisting of 1,072 tusbos of land, and a two storied residence, with stables, &c., was sold by public auction on Tuesday at Mr. Dross's Rooms. Mr. Aitchison became the purchaser for \$3,700.

MR. J. CONDER was entertained on Tuesday evening by the Tôkyô Association of Architects, and on Wednesday by the President and Japanese Professors of the Imperial University, in connection with his approaching departure for Europe on leave of absence.

THE *Kaimon Kan* got under weigh on Wednesday morning to go to Yokosuka, but shortly after leaving the anchorage stuck on the spit off the mouth of the Creek. She floated off at 1.30 apparently without injury.

THE *Mainichi Shinbun* publishes the following telegram:—

Nagasaki, November 9th 12.30 p.m.  
The [thirty-fourth sitting of the enquiry, which was to have been held to-day, did not take place.

WE are requested to state that, in consequence of the departure of Mr. Russell Robertson on leave of absence, H.B.M. Minister has appointed Mr. John Carey Hall to act as H.M.'s Consul at Kanagawa and as Assistant Judge of H.B.M.'s Court in Japan.

WE are informed that the P. & O. steamship *Thibet* left Hongkong for Yokohama *via* Nagasaki and Hiogo at 5.30 a.m. on Friday morning, 12th instant.

HER MAJESTY'S MINISTER, the Hon. Sir Francis R. Plunkett, visited the *Audacious*, flagship of Vice-Admiral R. Yesey Hamilton, C.B., on Sunday, and returned the usual salute on leaving.

METHODS OF RECOMMENDING  
CHRISTIANITY.

THE growing divergence in home countries between written creed and actual belief has led to a state of mind which is singularly ill-fitted for the serious work of proselytism. Sons of pious parents, or young men who have come under the personal influence of some religious friend, prepare themselves for the work of the ministry with every good intention and good impulse. When they come to study theology, two things may happen. They may know too little of science or of scientific criticism to have revealed to them the grave difficulties that beset an acceptance of the old theories of inspiration. Indeed, many theological seminaries seem to aim at making themselves little havens, where the stern waves of the outer sea are not allowed to dash. And here scholars are trained for the hard seamanship of life—no wonder if afterwards they prefer to hug the shore, or when a storm arises, completely lose their heads. Other students of theology see the rocks ahead and are too timid to try the passage. They surrender themselves wholly to the guidance of older hands, contenting themselves with the thought that what satisfied their parents, pastors, and masters, is good enough for them.

We have no intention, in making these distinctions, to classify exhaustively; we are only discussing general tendencies. If a large number of the graduates of theological schools enter upon actual life with the vaguest notion of what science is, or with a well-grounded fear of it, their influence for good must be greatly narrowed, and they will certainly be obscurantists. Receiving without demur the apologetics of a past generation, the generation to which their professors belonged, they will fail to understand the points at issue among the keen enquirers of these modern days. Their weapons of defence and offence will be as out of date as the muzzle-loaders of the Crimean war or the guns captured at Sebastopol. Now, it is much to be deplored that the propagandists of a great faith should arrive amongst a quick-witted people with antiquated processes and a halting method. This confession of weakness, indeed, is sometimes naïvely made by missionary preachers. "Our faith has done for our fathers and mothers; they have lived the lives of the righteous, and their latter end has been peace. Why pull down a structure where they dwelt in safety? As well pull down the old family mansion, associated with so many memories, because some architect, enamoured of all the new scientific improvements, declares it to be old-fashioned." The Japanese listener would naturally retort: "But am I to build in this old-fashioned style? I seek not merely what is good—I seek the best."

In the centres of evangelical life in the

States and elsewhere, the people need constantly to be reminded that they really ought to read their Old Testaments. That part of the Bible, with some notable exceptions, is as little used as the best parlour of an out-of-the-way farm house. For all practical purposes, to the members of a modern congregation, the Old Testament might be a twentieth part of its actual size. Custom and traditional respect keep the unread portions on the old nominal footing of authority, but the extraordinary divergence of opinion which results from a really thorough investigation of their contents, even among those most orthodoxly inclined, augurs ill for a long continuance of this *status quo*.

Nothing is more certain than the impossibility of thrusting a Bible complete down the throat of an educated Japanese. The feat may be accomplished at revival meetings in home countries, but here only very ignorant or very interested converts would receive so composite a book without a thorough inquiry into the credibility of all its contents. When Professor HUXLEY, a very sensible and acute man on all other subjects, differs radically from Mr. GLADSTONE as to the value of the cosmogony given in Genesis, a Japanese who refuses to come to any decision at all on what is probably a moot question, should not thereby be shut out from the privileges of the Christian church. He only refuses to decide upon a question where sensible men differ. Indeed, he would act similarly to a well-known professor in the most orthodox of Presbyterian churches, who stepped into the controversy, and said religion had really nothing to do with the matter.

We do not see why the Pentateuch should be put into the hands of converts or enquirers. To those anxious after a new faith it can offer little nourishment. And yet many who are told that the Bible is the great storehouse of the one true religion, are found stumbling on past the genealogies to the Tower of Babel, growing more and more confused the farther they proceed. They have been given a Bible by some missionary friend, and they honestly begin to read it, as books should be read, from the beginning. Long before they get in sight of the XCth Psalm, which would be of more spiritual use to them than the whole Pentateuch, their perseverance may well have flagged. Surely the great truths of the Bible are the fatherhood and attributes of God and the character of CHRIST; and if the book is so misused as to darken evidence and raise stumbling-blocks, a great wrong is done to religion. We do not speak without sympathy in the missionary circle itself.

To import the shifty arguments, disingenuous pleading, and antiquated historical criticism of a bewildered orthodoxy into a country where keen intellects are searching for what is undoubtedly true and essentially stable, is to build on the sand. Of all books to recommend Christianity,

the religion which comforts both Protestant and Catholic, none can be compared with the inimitable IMITATION of CHRIST. The richest product of the religious life of the Middle Ages, it still remains the treasured companion of good men. General GORDON died with a well-worn copy of it in his pocket. And yet this wonderful book is virtually unknown to Christian converts. Girls at mission schools will repeat from memory an elaborate argument proving the correctness of the Mosaic cosmogony—the result of a long series of religious, say rather geological, lessons. Truly this is giving, in place of bread, a stone.

MATTHEW ARNOLD never wearies of repeating that the national English defect is a lack of lucidity. Lucidity we cannot have until we shall be able distinctly to state what is pure ore in the received religion, and what is mere alloy. A creed which people are accustomed to accept only with grave mental reservations, is a most dangerous instrument of moral perversion and of obscurantism. It is singularly unsuited to favour proselytism in a new land. With all its boasted progress in literature, modern Christianity has produced no book on ethics equal to the Nicomachean Ethics of the great Stagyrte. Its missionaries hide the noblest product of Christian thought under a bushel. Can we wonder if progress is slow, and if the outer world is apt to sneer?

## A LADIES' INSTITUTE FOR TOKYO.

THE great desire manifested by Japanese gentlemen to obtain for their wives and daughters a thorough insight into European life and manners, is one of the marked signs of the times in the capital. Professor TOYAMA, in an article in the *Gaku-zei-zasshi*, which we have already discussed at some length, gave utterance to views that are widely held. We are glad to learn that the subject is now taking a practical shape, and that a well-developed scheme is to result from what might have proved merely an interesting discussion.

The powerful support of Count ITO's name has been obtained in the foundation of a Society for the Promotion of Ladies' Education in Japan. His Excellency has consented to be President of the Society, and the promoters expect soon to be able to publish a complete list of distinguished lady Vice-Presidents. Professors TOYAMA and DIXON are acting as honorary secretaries, and Mr. T. TOMITA, formerly *Chargé d'Affaires* at the Court of St. James's, and now Vice-President of the Bank of Japan, is the Honorary Treasurer. General OTORI, Bishop BICKERSTETH, and the President and a number of the most active of the Professors of the Imperial University are on the Committee. The immediate object of the Society is to establish in a central position in Tōkyō, an Institute for the higher education of women. It will also favour in every way

Original from

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

the establishment of Similar Institutes in other parts of the empire.

The object of the Institute is threefold; it aims at being at once a Club, a Lecture Institute, and a high-grade School. Care will doubtless be taken that each of these objects receives its due share of attention. Only a limited number, perhaps not more than twelve, resident pupils will be admitted, who will enjoy special advantages, and will be expected to pay a fair equivalent as board. This will form the nucleus of the institution.

In addition to their use by resident pupils, the public rooms of the Institute will be open to a large number of day pupils, married or unmarried, for whom a regular course of instruction in house-keeping, nursing the sick, dress, deportment, literature and ethics, will be provided. Ample kitchen accommodation will be provided for instruction in cookery, a branch of housekeeping to which special importance will be attached.

Outside of the regular course, probably in the afternoons, when the lecture-rooms are vacant, it is intended to make use of the promised aid of University Professors for the delivery of special courses of lectures. This will make the institute a means of promoting the higher education of women, as understood in European countries. Lastly, the Institute is intended to serve as a club or meeting-place for ladies, and will be provided with reading and reception rooms, and grounds laid out for out-door games. One of the halls, also, will be arranged with a view to its use as a concert-room.

The whole institution will be entrusted to the management of a foreign lady principal, assisted by two or more foreign lady teachers, who will be appointed by a Council chosen by the shareholders. It is proposed to raise the necessary funds by the issue of shares of \$30 each, up to the required amount, the possession of one share constituting membership. This capital will be expended on the purchase of buildings and grounds and the expenses incidental thereto. When once fairly launched, the Institute, to be a success, must more than pay its working expenses.

The enterprise has already many warm friends, its aims being regarded with general sympathy. It is identified with no special school of thought or opinion. The more advanced men of position in the capital all look forward to having houses built and furnished after the European style, and over these their wives must preside. To provide an education such as will fit the wives and daughters of the better classes for the new sphere that is opening up to them is the great aim of the Institute. By lectures, by training in household matters, by association with foreign ladies at meals and afternoon teas, by outdoor sports and evening gatherings, to all of which purposes the Institute buildings will be specially adapted, this important aim is to be carried out.

#### THE NEGOTIATIONS BETWEEN CHINA AND THE VATICAN.

IT is now beyond doubt that, as we stated in a recent article, the POPE has decided to postpone the despatch of an Apostolic Delegate, or Envoy, to Peking for the present. This is the form which his announcement to the Chinese has taken; what it really means is that the arrangement negotiated with so much care and pains, to which the POPE had set his hand, is to be of no effect. French diplomacy has triumphed, or perhaps it would be more accurate to say that the Head of the Catholic Church has quailed before French threats; he could not bring himself to shut definitely and for ever the door of conciliation with the French Republic, and accordingly he has thrown the Chinese over. Whether this will do the French any good in China, whether it will avert the destruction of their "protectorate" over Roman Catholic missionaries and their converts, is a wholly different question. They have for the moment succeeded in preventing the POPE from being a party against them in the battle; how far they have thereby assured success to themselves is a point to which we shall revert presently. Meanwhile, before public interest in these negotiations is lost in the more exciting events which appear likely to follow; before all attention is centred on the new tack which the Chinese assert they will take, it may be well to place on record a few historical facts which appear to be either wholly unknown or seriously misapprehended in the East as well as in Europe.

It has been alleged over and over again in the French press that the idea of an arrangement between China and the Vatican originated in England and Germany for the purpose of diminishing French prestige and humiliating France in the East. There is absolutely no foundation for this statement. It is scarcely necessary to say to Eastern readers that the Chinese are quite capable of evolving such a policy for themselves. Even if they were not, they have Europeans in their service who could do it for them. As a matter of fact, the negotiations were already in progress when they first excited the interest or even came to the knowledge of the British and German Governments. As far as can now be ascertained, the policy of China entering into relations with the Vatican for the purpose of settling various questions in which both were interested, was first advocated by an Englishman in the service of the Chinese Government in connection with one or other of the innumerable discussions relating to the position of the Peh-tang Cathedral in Peking. Ever since its erection, the Chinese have constantly objected to this edifice as not only insulting to them from the circumstances in which the present site was restored, but as offensive, and, according to popular ideas, injurious to their

Sovereign. The missionaries offered no strenuous objection to its removal to another site, nor did the POPE; but the French Government stepped in at the last moment and prevented an arrangement. Ten years ago, it was suggested to the Chinese that they should refuse to acknowledge the French right to interfere in these questions any longer, and that they should deal directly with the POPE in all ecclesiastical matters. The suggestion was mentioned by a member of the Tsung-li Yamèn to the late Bishop DELAPLACE, an unusually able and conciliatory man, as a sort of last resource left to the Chinese. But nothing came of it at the time. The Chinese had not the same experience then that they have now, and *quieta non movere* was the maxim of Prince KUNG's Government. Time passed on; the Tonquin question with the subsequent war arose, and then once more the idea was revived by a different person, also an Englishman in the Chinese service, who had the ear of a distinguished and powerful Chinese statesman. This time the seed fell on fruitful soil. From the beginning of the Tonquin affair to the end, from the moment that DUPUIS and GARNIER between them created a Tonquin question down to that in which hostilities ceased after the French retreat from Lang-sou, the priests and their converts took the side of France. The former proclaimed it as their glory, their reply to the taunts of lack of patriotism levelled at them, that they taught their converts ever to look to France as their great protector and defender, who one day would come amongst them and save them from hardship and persecution. Father LOUVEZ, of Cochin-China, who recently wrote an interesting history of the church in that region, which has been published with the *imprimatur* of a couple of bishops, has openly declared this to be the practice and policy of missionaries. He does so, it is true, in a somewhat fiery introduction written to rebut the charges made against the missionaries by Frenchmen in the East and at home of dropping their nationality, forgetting they are French, and so forth. Yet he certainly makes a formal acknowledgment to that effect. Bishop PERUGINIER of Tonquin, again, issued during the war as many and almost as warlike manifestoes as the French General. He welcomed the successes of the French troops as giving himself and his fellow-labourers new souls to be saved, and new fields for labour. It is superfluous to elaborate this point, more especially as we are dealing rather with the state of the Chinese mind at the moment, than with the sufficiency of their reasons for thinking as they did. What they thought was that the Tonquin affair afforded another proof that the Catholic Missionaries are the advanced guard of French interests, and that they are dangerous political emissaries. Hence the old proposition that China should enter

into direct relations with the POPE, with the view of withdrawing Roman Catholic Missionaries in her Empire from their connection with France, was eagerly taken up. An incident, wholly unexpected by the Chinese, offered a favourable opportunity for approaching the POPE and opening the negotiations in a perfectly natural manner. This was the arrival in Peking from Rome in the spring of last year of a priest bearing an autograph letter from the POPE to the EMPEROR entreating his clemency and protection for the Roman Catholic Missionaries and their flocks during the war with France. This legate was treated with extraordinary attention by the high Chinese officials, and the POPE's letter received from the EMPEROR a reply which is understood to have been considered most satisfactory. The drawback to missionary enterprise caused by the connection between France and the Church in China was pointed out to the legate, and it was suggested that the Chinese Government would be quite willing to receive an envoy from the POPE in Peking, and if necessary to despatch one of their own to Rome. With this general message the Father returned to Rome, where he arrived in August. The project appears to have commended itself to the POPE and his advisers, as well it might, for the Vatican stood to win either way. The plan might be used as a lever to obtain better terms for the Church in France, or, if accepted, peace, improved prospects, and the friendship of the Government in China would be secured to the missionaries and their flock. Various messages passed between the Vatican and the Chinese Legation in London through various channels, but principally through Cardinal MANNING, and gradually a good basis on which to work was laid. The willingness of both parties to come to some arrangement such as that proposed to the POPE's emissary in Peking, the readiness of the Chinese to treat with his Holiness as a perfectly independent power, their promise to use every effort to remove the unpopularity of the missionaries by proclaiming that they were under Imperial protection,—these and other main points being understood and placed beyond doubt or question, the time came for settling further details of the new Concordat. Monseigneur AGLIARDI, a distinguished ecclesiastic, was appointed representative of the Vatican at Peking, and his status as well as the treatment to be accorded to him in his intercourse with the Chinese Government being determined, the drafting of a complete Concordat, and the settlement of the details were committed to his care after his arrival in the Chinese capital.

This was early in July. The whole matter was thus concluded as far as China was concerned. Early in the negotiations, the attention of the French Government was directed to them, and M. DE BEHAINE, the French Ambassador to the Vatican, was

instructed to demand explanations. He was informed of the arrangement contemplated, but it was added that the POPE did not intend interfering with the interests of France in China. His Holiness, it was said, was anxious to acquire full information as to the state of the missionaries and their converts in China, and for this purpose intended accrediting M. AGLIARDI as his Envoy. Hereupon M. DE BEHAINE observed that his Government viewed the appointment with much apprehension, as likely to interfere with the position always held by France as defender of the faith in China. To this it was replied that France had nothing to fear, since the Envoy would confine his attention to purely ecclesiastical and religious questions, and that the POPE had now pledged himself to the Chinese to send the Envoy. Soon afterwards, the Ambassador proposed as a compromise that the POPE's envoy should study the question in conjunction with the French Minister at Peking, and that the mission should be considered as temporary. This proposition was accompanied with a hint that, in case of its rejection, the relations between France and the Holy See would be broken off. Within three days (September 4th) the POPE accepted the French compromise, and M. AGLIARDI was instructed to leave Marseilles on the 25th September by French mail. On news of this arrangement being received by the Chinese, they immediately informed the POPE that their interpretation of the agreement between them was that the Papal Legate was to be wholly independent of any foreign Power whatever, and that he was to have full diplomatic functions. Whether in the new circumstances M. AGLIARDI's mission answered these requirements, might have been a subject of discussion, but this was rendered unnecessary by a sudden and unexpected move on the part of the French Government. The compromise, proposed on August 21st, and accepted by the POPE, was M. DE FREYCINET's own. Yet, on September 12th, M. DE BEHAINE was ordered to present an ultimatum to the Vatican. Its contents were these:—If the POPE sent any Envoy whatever to China, France would break off relations, denounce the Concordat, sever the connection which exists between Church and State, and thus strike out of the budget the annual grant of fifty millions of francs to the former. Two days later it was announced that M. AGLIARDI's mission was postponed for the present, and this information was conveyed to the Chinese Embassy in London immediately, and through it to the Chinese Government. The POPE was compelled to choose at short notice between the interests of the Church in France and those of the Church in China. Few, except very presumptuous persons, will question the policy of his decision. He has to regard the interests of the Catholic world at large, and to shape his decisions with all the infor-

mation which the Vatican alone possesses. But the tenacity of the Papacy is historical, and we shall not be accused of rashness if we conjecture that the subject will be heard of again in connection with the relations between France and the Vatican.

The Chinese, being now deprived of the POPE's countenance and assistance, are thrown on their own resources, and the question is, what will they do? Will they allow matters to go on in the old way; or will they repudiate pretensions which are based on no treaty right, and which they have found excessively inconvenient, not to say dangerous? We cannot profess to answer these questions positively; time alone will show. But there are certain incidents in the negotiations which will encourage the Chinese to resist and repudiate the claims of France to a protectorate over the Roman Catholic Missionaries of all nationalities. Italy and Germany from the beginning manifested the utmost interest in the Chinese proceedings, and went so far as to express much sympathy with their aims. Spain and Belgium have done the same. Later on, when French hostility became more pronounced, the Chinese obtained an assurance from all the above four Powers that they had never abandoned the protection, authority and control over their subjects in China who were missionaries, which was theirs by treaty, and that they were fully prepared to exercise the right of protection whenever it became necessary, precisely as with their subjects engaged in other occupations. Their Ministers and Consuls were ready to issue passports, to forward and support their complaints to the Chinese local authorities, and to perform all other duties towards them. Armed with these assurances, the Chinese will doubtless feel freer to refuse to acknowledge passports issued by French Consuls to missionaries who are not Frenchmen, or to hear from French officials complaints respecting others than French citizens. We will not, however, speculate further on the future policy of China in this matter. Our object has been to describe as nearly as possible in chronological order the various steps in these important and curious negotiations, which have suddenly terminated, for the present at any rate.

#### FURIOUS RIDING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I ask you to kindly insert the following few lines, to draw attention to a danger which is more or less of daily occurrence. I refer to furious riding along the Bluff main road by sailors. There is always a considerable carriage and jinrikisha traffic, though persons in vehicles stand less chance of injury than pedestrians. Many of the latter, however, are nurses and children, and it is on

behalf of these that I trouble you with this note, several narrow escapes from being ridden over having come within my own knowledge. The men gallop at the greatest speed they can attain—they race, in fact—and although I have no wish to curtail their enjoyment on shore, I certainly think they might moderate their pleasure by having some regard for the public safety, and reserving their galloping for the country roads. In the hope that those in authority may warn the men that they run the risk of injuring, perhaps for life, little children and the women in charge of them, I have been induced to pen these lines.

Yours, &c., &c.

The Bluff, Thursday.

MATER.

#### NIIGATA MORALS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of to-day I was deeply grieved to read Mr. Davis's account of the condition and morals of the Japanese inhabiting Niigata.

I have lived ten years in Yokohama and its vicinity and during that time have mixed freely with the Japanese and am in a position to prove that this description would not be true of those I have met with. In fact the general impression I have formed of them is that, if they are not as good as Christians, yet they are not nearly so bad as rejecters of Christ, or hardened sinners. I must say though, that I believe the worst of the Japanese make for the missionaries. I am sorry for the missionaries, as it must be very discouraging for them to deal with such wicked men and women. Probably Mr. Davis wrote this letter to the *Christian Mirror* during a fit of discouragement, but no doubt in his better moments he would be found ready to admit that the "good and wise" are many even in, at present, unchristianized Niigata. One thing I am certain of, and that is that the cause of missions is not helped by such pictures of heathen wretchedness, simply because they partake of the nature of exaggeration, any more than the same cause would be helped by exaggerated reports of the great advance of Christianity here. Let us have the sober truth, and nothing but the truth. Mr. Davis knows full well that he would sleep with his door unlocked and his window open in Niigata, with a far greater sense of security than he would in New England; that he can walk into secluded places in Japan without fear; that he can visit the lowest dens of Niigata so long as he is careful to be polite, and that he can be sure of being treated with politeness which must imply something more than that of words only; that he can daily see orchards unprotected and not robbed, allotment grounds (in the midst of a poverty stricken population) needing no policemen to guard them from night thieves. He can see children cheerfully providing for their aged parents, and giving them of their best; husbands and wives living faithfully together without the protection of elaborate marriage laws. Mind, I am not saying that there is not great wickedness existing alongside of quiet good and honest living, but I do wish to show that the law of the Lord is written in the hearts of all men, and certainly in the warm hearts of the Japanese. One word as to the "reverend gentleman's" closing sentence, "I am sometimes almost forced to think that the very spiritual element itself in the original endowment of human nature has been lost or consumed by the lust of the flesh and the pride of life as it was in ancient Sodom and Gomorrah." I am too dull to detect his meaning. Does he mean to say that he believes his hearers' souls are lost? Why, I thought he would have known that, even before he came out "seeking to save."

Or does he hint at soul-less men amongst the heathen? I would much rather swallow some nice little additions to Bible truth, such as annihilation,

calvinistic election, and torments for ancestors "who had sufficient light to condemn but not to save" than this statement of his; and as to Sodom and Gomorrah, neither he nor I know much about the people of those cities. Enough for us that Our Lord warned the religious people of his day that it would be worse in the day of judgment for them, than for those dwelling in the aforementioned places. Let all citizens of new and old England, taking his words to heart, cease pluming themselves on the superior excellencies of their respective nationalities, and they will succeed better in winning the gentle races of the East to Christ.

Yours truly,

BIBLE CHRISTIAN.

Yokohama, November 4th, 1886.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You have inserted an extract from the *Christian Mirror*, wherein the Rev. Henry Davis gives to the Christian world, and all besides, the religious and moral condition of Niigata. The reverend gentleman evidently takes his view from a Christian standpoint, and possibly having in his mind the ulterior design of enhancing the importance of the missionary work to be done in Japan. For the world outside the limits and boundaries of his field of labour, it appears to be the object of the missionary to magnify the need of the instrumentalities which the Church is so anxious to afford to subjugate the heathen world to its communion. Hence it is that the depth of the depravity of the people among whom he labours is so graphically portrayed by the average worker in the vineyard of his Lord. To abase another is one method of exalting one's self. The text that the Christian at home is not chary of applying to domestic religious matters—"Charity covers a multitude of sins," appears to have no place with the heralds of gospel truth in lands strange to the doctrine taught by the Christian Church of the Western world. To know not of the forms and ceremonies of the Church of Jesus Christ, is enough with the missionary world, and its aiders and abettors, to consign a people to heathendom and all the pains and penalties the Church of Christ has seen fit to fulminate against the believer in, and followers of, other religions. The reverend gentleman, Mr. Henry Davis, proclaims "not less than seven-tenths of the so-called educated class of Niigata, Atheists and Materialists." What proportion of the "so-called educated class" of the Hub of his type of moral localities, the New England States, would have to lie in the same bed with the Niigata contingent of Atheists and Materialists if they were carefully enumerated? The city of Boston could make as good a showing, no doubt, as is claimed for Niigata. As to the masses, "steeped in ignorance and prejudice," the reverend gentleman no doubt intends his readers to infer that the masses are steeped in ignorance and prejudice in matters religious. That they are ignorant of the teachings of the Christian Church, or that they are prejudiced in favour of their own religion, the religion of their ancestors, in which they have been taught and reared, surely cannot be charged as a crime. Where is there a set of men and women on the top of God's footstool that are more prejudiced in their religious ideas than the professors of Christianity? I do not take in the so-called Christian—because of the vast multitude living in Christian lands who are as heretical toward the pretensions of the Church as any so-called heathen can possibly be. Where can there be more intolerance discovered than within the Church, as represented by the numerous sects dividing it? And surely, the written history of the Church, either the Roman Catholic or the Protestant wing, discovers as great enormities perpetrated against humanity, individually and collectively, as can be found in that of any other religion. There is one good feature to be observed in the religion of the people of Japan—they consign no one individual to eternal pains and torments

because he is not accustomed to pray with their formulæ; that blemish is found to attach to the religionists of the Christian Church. The rev. narrator of the iniquities of the people of Niigata is but an ordinary exponent of the true inwardness of his confrères. The Japanese heathen is fain to allow others not of his persuasion to make their way to heaven by their own road. It is amazing with what complacency the average Christian teacher and missionary taunts those who sail their bark on other streams with "ignorance and prejudice."

During the few weeks I have sojourned in Japan, I must confess that I have not been led to the conclusion that this people stand so much in need of the religious teachings of the missionaries as the Western world has been educated to think. The teachings and example of the Christian residents of Japan, as well as of those who visit these shores to spy out the wondrous beauty of the land and who delight in viewing the products of Japanese art in their home settings, are of an order not a whit inferior to that encountered in the conservative centres of church influence in Europe or America, and I have yet to discover that any chasm so wide or so deep divides the morality of the native from that of the foreigner as benevolent enthusiasts for the salvation of the denizens of this eastern world are inclined to portray. Virtue for virtue, vice for vice, a Roland for an Oliver can be discerned by the on-looker. Although the cloak covering the life of the one set may be more voluminous in its folds than the gauze covering the other, yet the lineaments are there and it is but a toss up where the worse form lies. Outside of the material results of church connections, I perceive that the great multitude of foreigners—Christians we are all called by the native, I understand—appear to have as small regard to religious observance of church teachings as the natives themselves. The majority, and that a large one, I judge from what I observe, do not visit the sanctuary; absenteeism appears to be the rule. The Pharisee looms up hugely when your man sees no good in others; the heart of the ungodly world is larger by all odds than that of the church, and is to-day the great fountain of human sympathy and brotherly charity. The really noble army of workers in the cause of humanity and brotherly love is outside the church—the disenthralled and free thinkers who discover good and acknowledge it wherever it may be shown, whether it wear one hue or another, or is environed with an orthodox formula or not. It appears that Niigata must be a wonderful place. It has 40,000 souls; so says the Reverend Henry Davis, yet it is the recruiting ground for the houses of ill-fame of all northern and Central Japan, while at the same time it maintains a home contingent of immoral women greater than is to be found in all New England. The statement looks as if it would not bear scrutiny; I think it will not wash. The credulous may absorb it as a fact, but outside of the elect who receive the narrative of the miracles related in the Bible as veritable of actual occurrences, it is probable not one who reads it will believe it. I have visited quite a number of the populous centres of Japan, and having roamed somewhat over my own country as well as abroad, I can but bear testimony to what I have seen, as well as what I have not seen. I have witnessed politeness and courtesy among the masses of the common people of Japan that would put to shame the vaunted high culture and breeding of many a western land; I have not seen a tittle of the vice and corruption flaunted in the face of the wayfarer that is to be encountered in any of the populous cities of the Reverend Henry Davis' New England States. This in justice to the women of Japan, who need not to veil their faces before their Western sisters where modesty and modest demeanor are in question. Of the educated classes, what can Mr. Davis expect but that, as they drift away from the tales and legends they have had told them by their

Original from

elders, and were taught to rely upon in their days of adolescence, they will be shy of embracing other improbable and incredible relations, that are not only as apparently fictitious and mythical as those they discard, but have that appertaining to them that causes the heart to sadden, and the mind to reject them as monstrous absurdities. The missionary may labour in his way. He may represent the people among whom he works as wanting in all that comports with his standard, and as filled with all the attributes that own the devil as progenitor, yet the years will witness but small return in the harvest of bigotry and narrow selfishness he would cultivate—saving a few, and consigning the remainder to eternal damnation. Whatever may be the destiny of the Japanese religiously, it is to be hoped that it will be an improvement upon any of the systems of faith and belief that they have offered to them to-day, either by the Church of Rome or by the numerous Protestant sects who are seeking to proselytize the multitude to their folds. You ask Mr. Editor: "Where is there not work for earnest philanthropists"? There is not a missionary in Japan who could not find as urgent necessity for his labours in his home community or state or nation as he finds in Japan. Japan is a pleasant field to occupy. It is a glorious country to live in, and no doubt Niigata is endurable to the Rev. Mr. Davis—for all its wickedness. The religion of the Japanese has that about it whatever else it lacks that makes the people law-abiding. It has made a nation of as patriotic men and devoted women as can be found anywhere, entirely devoid of cant and self-righteousness. It has developed a civilization distinct from that of the Western world, and although it has not eradicated the animal instincts and passions of humanity in greater or less degree than the civilization of the West has done, there appears to be as much security for life and property here as elsewhere. All the fables that are published by those interested in the extension of their particular religious creeds, regarding the depravity centred in the Japanese, must be in a large measure either the outgrowth of intolerant and fanatical zeal, or studied misrepresentation on the part of those whose living and comfortable sustenance depends upon the continuance of the undertaking to proselytize the world.

Yours, &c.,  
November 4th, 1886.

TRAVELLER.

[We publish this letter because the opinions it embodies are fully deserving of consideration. But it is only fair to remark that if the honest zeal of the Rev. Mr. Davis betrayed him into indiscreet and exaggerated expressions, his views cannot for a moment be counted representative. The teaching and conduct of the vast majority of the Christian Missionaries in Japan are not wanting in any element of charity and tolerance. If some of them still exhibit an old-fashioned tendency to count everything abhorred that lies beyond the pale of Christianity, their narrow and unbecoming spirit is gradually becoming more and more exceptional.—Ed. J.M.]

## CENTRAL SANITARY BOARD.

### IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance relating to the Organization of the Central Board of Sanitation, and order it to be promulgated.

[His Imperial Majesty's Sign-Manual]  
[Privy Seal.]

Dated the 4th day of the 11th month of the 19th year of Meiji.

(Countersigned) Count ITO HIROBUMI,  
Minister President of State.  
Count YAMAGATA ARITOMO,  
Minister of State for Home Affairs.

### IMPERIAL ORDINANCE NO. LXIX.

#### ORGANIZATION OF THE CENTRAL BOARD OF SANITATION.

Art. I.—The Central Board of Sanitation will be under the control of the Minister of State for Home Affairs; and will, in reply to enquiries from

any of the Ministers of State, state its views on public and private sanitation, and also consider methods of carrying out sanitary measures.

Art. II.—With regard to sanitary questions, the Central Board of Sanitation may memorialize the Minister of State in whose control the particular matter at issue falls.

Art. III.—The Central Board of Sanitation may, in matters relating to sanitation, issue inquiries to the Metropolitan Police Inspector-General, the Chief of the Hokkaido Administration Board, and Governors of Cities and Prefectures, or may despatch members of the Board to local districts for purposes of inspection.

Art. IV.—The rules governing discussion in the Central Board of Sanitation should be fixed by that Board, and approved by the Minister of State for Home Affairs.

Art. V.—The following officials will be appointed to form the Central Board of Sanitation:—

PRESIDENT—The Secretary-General of the Department of the State for Home Affairs.

COMMITTEE, composed of

The Director of the Medical Bureau of the Department of State for War;

The Director of the Sanitary Bureau of the Department of State for the Navy;

The Director of the Bureau of Imperial Physicians in the Department of the Imperial Household;

The Director of the Medical Department of the Imperial University;

The Metropolitan Police Inspector-General;

The Governor of the City of Tōkyō;

The Director of the Sanitary Bureau of the Department of State for Home Affairs;

The Director of the Police Bureau of the Department of State for Home Affairs;

Two Councillors of the Department of State for Home Affairs;

Seven physicians;

Two veterinary physicians; and

Two chemists.

EXTRAORDINARY COMMITTEE:—

Manager (Kanji)—The Director of the Sanitary Bureau of the Department of State for Home Affairs.

Clerks.

Art. VI.—The President should, according to the rules of discussion, control the debates of the Board, and report its resolutions to the Minister of State for Home Affairs and to the particular Minister in whose province falls the matter discussed.

Art. VII.—In case of the absence of the President from any meeting, his duties will be discharged by the highest official present at such meeting.

Art. VIII.—Of the Committee, physicians, veterinary physicians, chemists, Councillors of the Department of State for Home Affairs, and the Extraordinary Committee, shall be appointed by the Cabinet, according to the representations of the Minister of State for Home Affairs.

Art. IX.—The Manager will conduct the general business of the board under the direction of the President.

Art. X.—Clerks will be of *hannin* rank, will be appointed by the President, and will, under the direction of their superiors, engage in keeping records of debates and attending to accounts.

## TRANSLATIONS FROM NATIVE JOURNALS.

### THE WRECK OF THE "NORMANTON."

(Translated from the *Fiji Shimpō*.)

Our readers must be aware—for we reproduced the story a few days ago from the *Hiogo News*—that a British steamer, the *Normanton*, struck a rock off the coast of Kii while on her voyage to Kobe; that all the Japanese passengers, 23 in number, and 13 of the crew were drowned, and that the captain and 25 officers and men were able to save themselves by taking to the boats. The *Hiogo News* obtained this information from one of the survivors of the calamity. According to his story, the loss of the Japanese passengers was attributable to the want of means for intelligibly communicating with them, and to their ignorance and insensibility to danger. They declined to obey the repeated attempts of the captain and others to induce them to get into the boats. As it stands, this story seems too improbable to afford Japanese any satisfaction. We have, therefore, attempted by every possible means to ascertain the facts about this incident, but up till to-day no trustworthy information has been obtained. Indeed, we may not be able ever to accomplish our object, for not one of the Japanese passengers survived the calamity, and their version of the affair can never be made known to their fellow countrymen.

The *Normanton* was a British steamer, of 1,533 tons, commanded by Captain Drake. We are informed that she has been only three times in Japanese waters, but on this occasion she started boldly without engaging a pilot. Encountering a tempest, she went astray from her proper course, and the disastrous consequence is now before the public. No matter what may have been the suddenness of the wreck, it is extremely suspicious that not one of the 23 Japanese passengers was saved, while so many as 26 of the officers and crew of the ship were able to get ashore. The *Hiogo News* informant tells us that every means of saving the passengers was at hand, but that the latter lost the opportunity of escaping through their own ignorance and refusal to obey the orders of the captain. It is probable that the want of means of communication was a hindrance to a certain extent, but that the Japanese declined help through ignorance can hardly be credited. However ignorant and senseless they may have been, they must have perceived with their own eyes—if not by their ears—the danger of their situation, when they saw the ship sinking. Moreover, it is said that about half an hour elapsed from the moment the vessel struck on the rock until the captain and others left it, and there ought to have been ample time to effect the rescue of the unfortunate passengers. It is, therefore, hardly within the limit of ordinary probability that all the Japanese in the vessel should destroy themselves by obstinately remaining on board. Not only is it impossible for us to believe such a story, but we have strong suspicions regarding it. The power and the responsibility of a captain while on board a ship are so great that comparison can hardly be made. We may say that the whole weight of the ship is on his back. If he sometimes changes his course or throws cargo overboard, it is because he values the safety of the vessel and the lives in it above all other things. When it happens that the vessel he commands is wrecked, his first duty is to rescue his passengers, next to see after the safety of his men, and last of all to save himself. It is not allowable for him, either legally or morally, to desert his vessel in such a case before attending to these obligations. Has Captain Drake of the *Normanton* discharged his trust? We doubt it. Some people may say:—"It is commonly acknowledged all over the world, that the captain of a ship is the last person to leave it in the event of wreck, and in practice

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

this rule is so regularly followed that those who disregard it are not permitted to appear in society with honour. But all this applies only so far as relates to the people of the West, and in dealing with Japanese the rule cannot be observed as a standard. Occidentals think that their religion and laws are different from those of Orientals, and that in dealing with the latter, they need not observe those rules of etiquette which are applicable to the peoples of the West,—that in fact they may treat them like cats and dogs. This being their conviction, it is no wonder that their conduct is unusual and unexpected whenever any important event happens. Those foreign vessels especially which are plying on our coasts do not take in Japanese passengers as passengers, but as a class of animate commodities. The freight rate is accordingly cheap, and their treatment rude and inhuman. When a storm rages, these living goods are not allowed to come out of their place of storage, lest they may interfere with the work of the sailors, and the captain and the crew of the ship do not even think of them in finally leaving the vessel. The case of the *Normanton* may be one of these. We neither agree with those who use this language nor do we pronounce Captain Drake guilty of any such act. But we have strong suspicions as to the wreck of his ship, and some very unpleasant thoughts are awakened in our minds. Our only hope is that the enquiry now proceeding at the English Consulate, Kôbe, may result in giving some manner of satisfaction to the Japanese nation.

#### THE JAPAN RAILWAY COMPANY.

##### [NINTH REPORT.]

(Continued from 6th November.)

"On the 3rd section, the preliminary survey of the Shirakawa-Fukushima line was commenced on May 22nd, and completed on June 20th. The route selected is approximately as follows:—The ordinary road between Shirakawa and Sukagawa (18 miles) is generally straight, but as there are hills in many places, it was deemed advisable to take a more circuitous course over more level ground; and accordingly a line has been selected which passes for some distance along the Abukumagawa, and, about half a *ri* after leaving Yabuki, traverses a plain directly towards Sukagawa. By following this route, this distance is somewhat prolonged, but the ground being in general level, much advantage will be gained both from engineering and business points of view. The route passes across the Abukumagawa, which is about 200 feet in width. A distance of two miles between Sukagawa and Namerikawa will be traversed by the railway line on the west of the ordinary highway. The gradient on this part of the line is very great, being almost 1 in 40. The line crosses two streams, the Shikadogawa (100 feet) and the Namerikawa (55 feet.) After leaving the Namerikawa, the line passes Kôriyama, all the while keeping the highway on the east. From the latter place it crosses to the east of the highway, and, passing over level ground, reaches Fukuwara. The distance from the Namerikawa to the latter place is  $8\frac{1}{2}$  miles. Between Kôriyama and Fukuwara, the line passes over three rivers, the Nammitakawa (40 feet), the Sasayakigawa (50 feet), and the Osegawa (50 feet.) Beyond Fukuwara it traverses the plain of Taimengahara on the west of the highway over steep gradients and sharp curves, and passing across the Jokawa (50 feet) and the Adashitarôkawa (30 feet), reaches Motomiya, a distance of 7 miles. From Motomiya to Sugita, the route runs on the west of the highway. From Sugita the line again crosses to the east of the highway, and, at a distance of 6 miles 30 chains from Motomiya, arrives at Nihonmatsu. Between the latter place and Fukushima, the ground is extremely rough, there being several mountain ranges in the route. The gradients are in some places as great as 1 in 40, while the line has to make many sharp curves. In the vicinity

of Shimizumachi, a tunnel is required, but its length has not yet been calculated. The distance between Nihonmatsu and Fukushima is 13 miles 50 chains, and the line crosses the Yuigawa (30 ft.) the Matsukawa (50 ft.), and Sukawa (860 ft.). Such are the principal features of the line between Shirakawa and Fukushima, as obtained by the preliminary survey. As to the Sendai line (which is 57 miles 68 chains counting from Shiogama, through Sendai, to Fukushima); the construction survey was commenced in December last, and finished in May this year. The line was to skirt Sendai on the east, but while the survey was going on, a question arose as to the advisability of taking it through the city, and it was finally decided to adopt this view, after making an actual survey over a distance of 6 miles 50 chains. The construction of the line was commenced on June 2nd from the terminus at Shiogama, and embankments and cuttings already completed amount to more than 4,000 *tsubo* in the aggregate. At Shiogama, a landing-place has been constructed, and the Nanakitadagawa and the Ichikawa have been spanned with temporary bridges. Work has been commenced on the Nanakitadagawa-Sendai line and the Sendai-Iwanuma line, and it will not be long before the construction of the Shirashi-Fukushima line will be undertaken. These are in brief the principal points in the matter of construction on each of the three sections. The connection of the 2nd and 3rd sections will be effected at no distant date, so that great progress may be expected by the time when the next report has to be made public."

##### MAINTENANCE AND REPAIR OF ROAD AND PLANT.

**MAINTENANCE OF LINE.**—The length of line taken over by the company during the preceding periods from the Bureau of Railways, amounted to 98 miles. Adding to this the portion of the line north of Kuribashi as far as Utsunomiya (32 $\frac{1}{2}$  miles) received from the Bureau on April 24th this year, the total length of the line at present under the management of the company amounts to 130 $\frac{1}{2}$  miles. On the completion of the Tonegawa iron bridge, its maintenance was assumed by the company after June 17th, when the Kuribashi station was rebuilt. All particulars concerning the laying of ballast, the renewal of sleepers, etc., have already been mentioned under the preceding heading.

**CONSTRUCTION.**—The construction of an office belonging to the store section of the engineering department at Ueno, and a library, and a store, both at the same place, which was begun during the preceding, was finished in this, period. In addition a workshop (15 *tsubo*) and a store (18 *tsubo*) at Ueno, and a platform at Utsunomiya, are under construction.

**NEW ENGINES.**—Seven engines have been acquired during the period under review.

##### BUSINESS.

**GENERAL BUSINESS.**—In general, the business of the company during this period presents few points of difference from the preceding report. Comparing the receipts from passenger rates with those of the first half of last year, an increase of a little over 23 per cent. is observable, but, the 2nd section having been much extended, a certain percentage of decrease is observable when we calculate the respective receipts of the two periods above mentioned on each mile of the line. The amount of goods carried during the preceding period showed an increase of 67 per cent. on the first half of last year, while in receipts the increase was a little over 47 per cent. This is attributable partly to the extension of the line, and partly to concessions made to the convenience of the public, by allowing reduction in the case of articles which had hitherto been transported by boat. Owing to the latter arrangement, a decrease of over 10 per cent. is seen in the receipts from goods, when we calculate ton for ton. To review the business of the company month by month: in January and February passengers

were very scarce, but from the middle of March they began to gradually increase, and in April special trains were started to Ôji from Ueno as usual. Passengers were most numerous in that month, but a slight decrease was experienced in May; and in June, which is the busy season for sericulture and all other farming operations, the number of passengers was very small. The receipts from goods were most abundant in March and least so in February. In other months, the amount was nearly equal.

**RECEIPTS FROM PASSENGERS AND GOODS.**—The number of passengers during the present half-year was 344,061; and the receipts from this source, yen 159,108.30; receipts from luggage and small parcels were yen 4,594.93, the weight carried being 204,297 lbs. Goods carried amounted to 36,929,610 lbs. besides 3,496 cars hired, and the receipts from these two sources amount to yen 69,638.046. The total for passengers and goods thus comes up to yen 233,312.277. Adding to this sum yen 145, receipts from special trains, and yen 385,095, receipts from hand cars for conveying goods, the grand total amounts to yen 233,940.872.

**DISCOUNT OF PASSENGER RATES.**—On the 1st section, the first daily train both up and down had originally been fixed to carry goods alone, but with a view to the convenience of passengers, several passenger cars were attached to it after June 16th. As this first train was slower than the others by over an hour on the whole line, the ordinary passenger rates were reduced by a quarter.

**TRANSPORTATION OF POSTAL MATTER.**—There has not yet been received any report from the Post Office as to the amount of postal matter transported over the company's line in the present period, and the figures relating to the preceding period will therefore be given here. The amount carried gratis on the line from July 1st to December 31st, 1885, was 96,061 pieces; or in weight 228,031 lbs.

##### SHARES.

**SHARES AND SHAREHOLDERS.**—The total number of shares on June 30th, 1886, was 236,590; and the numbers of shareholders, 3,240. Comparing these figures with those of the report of the preceding period, this is a decrease of 168 shareholders.

**PAYMENT OF SHARES.**—The amount paid-up on shares during the present period has been yen 697,745, of which yen 221,596 represent the first payment, and yen 476,149, the second. Adding the above amount paid up during the present period to that paid in during the preceding periods, yen 5,950,407, the aggregate amount of capital paid up from the establishment of the company until June 30th, 1886, was yen 6,648,152.

**PUBLIC SALE OF SHARES.**—According to Art. 13 of the company's constitution, the shares not paid up during this period were offered for public sale. The number of persons who were thus removed from the list of shareholders was 8, and the number of shares thus offered for sale, 58, including the first and second payment.

##### ACCOUNTS.

**SUBSIDY INTEREST FOR THE PRECEDING PERIOD.**—The subsidy interest for the preceding period (July 1st to December 31st, 1885), yen 72,421.178, to which allusion was made in the report of the preceding period, was received from the Department of State for Finance, on January 28th, 1886.

**EXPENDITURE AT THE HEAD OFFICE.**—The total amount of expenditure at the head office during the present period was yen 23,565.507. Compared with the estimate, yen 29,791, there remains a surplus of yen 6,225.493. Of the total expenditure, two-thirds, or yen 15,710.338, were defrayed from the construction fund; and one-third, or yen 7,855.169, from the traffic receipts during this period; and of the latter source of expenditure, the 1st section bore as its share yen 6,284.135, and the 2nd section, yen 1,571.034.

**EXPENDITURE FOR THE OPENING OF LINES.**—

Of the outstanding portion, yen 11,880 of the expenditure for the opening of lines, yen 600 was paid back from the net profits of the present period.

**RECEIPTS AND EXPENDITURE.**—During 181 days, from January 1st to June 30th, 1886, the total amount of traffic receipts and expenditure was as follows:—By comparing the two sums, it will be observed that the expenditure was 47.4 per cent. of receipts:—

	YEN.
Receipts.....	234,106.40
Expenditure.....	111,021.03

Dividing the above sums by the number of business days, 181, the average per day comes out as follows:—

	YEN.
Receipts.....	1,303.405
Expenditure.....	619.378

The respective proportion falling to each section is as follows:—

	YEN.
First Section { Receipts.....	187,801.647
Expenditure.....	81,609.340
Second Section { Receipts.....	46,324.753
Expenditure.....	20,611.600
Percentage of expenditure on receipts.....	64.6 per cent.
Average per day:—	YEN.
First Section { Receipts.....	1,037.278
Expenditure.....	447.506
Second Section { Receipts.....	255.427
Expenditure.....	105.478

#### PROFIT AND LOSS ACCOUNT.

**GENERAL RATE OF NET PROFIT.**—Adding yen 234,106.40, total traffic receipts, and yen 32,047.158, miscellaneous receipts, we get the grand total of receipts, yen 267,053.558. Subtracting from the last sum, yen 118,876.199, expenditure at the head office ( $\frac{1}{3}$ ), business expenditure (in whole), and yen 600, a sum paid to liquidate the expenditure for the opening of lines, there remains a net profit of yen 147,517.359. Comparing this with yen 6,408,294.333, the total amount of shares already paid up, we get a rate of 4.639 per cent. per annum.

**NET PROFIT ON THE FIRST SECTION.**—Adding yen 187,801.647, traffic receipts, and yen 21,118.105, miscellaneous receipts, the grand total amounts to yen 128,919.842. Subtracting from this last sum, yen 6,284.135, expenditure at the head office, yen 81,099.34, construction expenditure, and yen 528, a portion of the sum used for the liquidation of the expenditure of opening lines, there remains a net profit of yen 121,036.307 for the 1st section. According to Art. 17 of the constitution, shares are divided into three portions—the construction fund for the 1st, 2nd, and 3rd sections. Comparing the net profit with yen 3,000,000, the construction fund for the 1st section, we obtain a rate of 8.602244 per cent. per annum.

**NET PROFIT ON THE SECOND SECTION.**—Adding yen 46,324.753, total traffic receipts, and yen 11,828.913, miscellaneous receipts, the total receipts amount to yen 58,153.666. Subtracting from this sum, yen 1,571.034, expenditure at the head office, yen 29,951.60, construction expenses, and yen 132, a portion of the sum used for the liquidation of the expenditure for the opening of lines, there remains a net profit of yen 26,478.992. Comparing this with yen 2,633,333.333, the average amount of shares for this section, a rate of 2.01106268 per annum is obtained.

**SUBSIDY INTEREST.**—The rate of net profit for the 1st section being above 8 per cent. per annum, it is not necessary to ask for subsidy interest. But the rate for the 2nd section (2.01106268 per cent.) having fallen under 8 per cent., subsidy interest amounting in the aggregate to yen 78,854.341 for the present period has been applied for to supply the deficiency. The 3rd section being not yet opened for traffic, the subsidy interest, yen 30,998.44 (at 8 per cent. per annum), for the average sum of shares paid in for the section, yen 774,961 has been applied for. Thus the total amount of the subsidy interest applied for is yen 109,852.781. Although this sum has not yet been received, it has been taken in calculation as if already received.

**DIVIDEND.**—Adding yen 47,517.359, the net profit, yen 78,854.341, subsidy interest for the 2nd section, yen 30,998.44, subsidy interest for the 3rd section, and yen 12,467.937, surplus carried over from the preceding period; the aggregate amounts

to yen 269,838.077. Dividing this by yen 6,408,294.333, the amount of shares for the 1st, 2nd, and 3rd sections, a dividend of 8.4215 per cent. per annum is obtained. Declaring the rate of dividend at 8 per cent., yen 256,331.773 was distributed as dividend; and the remaining amount, yen 13,506.304 (corresponding to 0.4215 per cent.), is carried over to the next period as a credit balance.

#### THE NIPPON YUSEN KAISHA.

Under the heading "What to do with the Nippon Yusen Kaisha," the *Fiji Shimpō* of the 1st and 2nd instant reviews the origin, career, and present condition of the steam navigation company. It says in effect that the company was conceived in error, born in error, and has grown in error. When Mr. Okuma, then Minister of Finance, was about to retire from the Government, various rumours were circulated as to certain gigantic undertakings said to have been contemplated by him and Mr. Fukuzawa, but his resignation took place before anything of the sort was attempted. Upon his resignation, however, there followed considerable movement in the business world. Calamities overtook several companies and banks, which had thriven under his patronage, and the same was expected to befall the Mitsu Bishi Company, which was acknowledged to have had close connection with the retiring Minister. But when the company had weathered the storm, it began to be asserted in certain quarters that the Mitsu Bishi Company had been monopolizing the coast transport business of the country too long, and this led to the establishment of a rival company in 1882, under the name of the Kyōdō Unyu Kaisha. It was apparent at that time that the establishment of a rival company would be fatal to the prosperity of both the old and new companies, for it was plain that the Mitsu Bishi's vessels were sufficiently numerous for the bulk of the carrying trade of the country. But people refused to see this palpable fact, and the Kyōdō Unyu Kaisha was established, which constituted the first of a long series of errors. For some time the two companies managed to carry on their business with due regard to profits, but after 1884 they began to engage in the open warfare of competition. This was the mistake as much of the old as of the new company. The disastrous competition soon reached large proportions, and people began to speculate as to methods of stopping the destructive contest. The question was at last solved by the amalgamation of the two rivals into a new company in the fall of 1885. The *Fiji Shimpō* holds that the present Nippon Yusen Kaisha, though directly born of the Mitsu Bishi and the Kyōdō Unyu Kaisha, was conceived in 1881 as one of the errors prevailing then in our social atmosphere. Outsiders had supposed that both the Mitsu Bishi and the Kyōdō Unyu would be only too glad to unite their property even at a very low estimate, and that the new company would thus be enabled to start with exceedingly good hopes of success. But, continues the *Fiji*, people were astonished at the declared valuation of their property. It was evident from the time of its establishment, that the path of the Nippon Yusen Kaisha would be beset with serious difficulties. It was natural enough that capitalists should make a rush to invest their money in the new undertaking, but the *Fiji Shimpō* declares that the valuation of the property of both the Mitsu Bishi and the Kyōdō Unyu was not correctly made.

The *Fiji Shimpō* then proceeds to consider the present condition of the Nippon Yusen Kaisha, and intimates that its finances are in no enviable plight. The relations between the company and the Government having been fixed by public documents, it may appear strange that there should exist complicated matters between the two, but the *Fiji Shimpō* regrets to say that this seems to be the fact. According to the accounts of the company for the year ended September last, the total receipts during the year amounted to about yen

3,900,000, while the expenditure reached to about yen 3,180,000. Thus the amount of profit is represented by about yen 700,000, while on the other hand the amount of capital to be laid aside for the reserve fund, funds for the repairs of vessels, etc., reaches over yen 2,000,000. Adding to this sum yen 880,000 (interest on the capital of the company, yen 11,000,000), the amount of money required is as much as yen 3,000,000. Even supposing that no interest is to be paid on the shares of the Government, there will still remain a deficit of yen 2,000,000. Now, with regard to the mode of supplying this deficit, there seems to be a difficulty between the company and the Government. The *Fiji Shimpō* urges the latter to follow the plain reading of the documents settling the relations between it and the company, and to supply the deficiency. The Government ordered the company by Art. 6. of the contract to defray all expenditure on land and sea, lay aside reserve funds, etc., and pay back interest on its debts, before proceeding to declare a dividend of profit; and by Art. 7. of the instructions, it further assured the company that the interest of 8 per cent. shall be guaranteed for the first 15 years. It was owing, continues the *Fiji*, to this assurance of the Government, that capitalists invested their money in the company's shares. That the business of the Nippon Yusen Kaisha would not be sufficiently profitable to fulfil its obligations to the shareholders, must have been evident to the Government at the time of the establishment of the company, so that cases like the present must have entered the minds of the framers of the contract and instructions. It is, thus, the obligation of the Government to supply the company with sufficient money to fulfil the conditions imposed on it by the documents given it at the outset, for how can the guaranteed interest be distributed without some such step on the part of the authorities? Some people may say that the Government has indeed promised to supply any deficiency of dividend to raise the rate of interest to 8 per cent., but that it has given no promise as to the supplying of money to make up deficiencies for laying aside reserve funds, etc. But it is scarcely necessary to refute such an absurd idea. The *Fiji*, therefore, concludes that, from every point of view, it is the Government which has to supply the Nippon Yusen Kaisha with the required amount of money. While no appreciable improvement has been made in the sea-carrying trade of the country since the time of the Mitsu Bishi Company, the loss of money incurred by the nation at large in connection with steamship companies is immense. As it is useless to complain of what has already passed away, the *Fiji Shimpō* only desires the Government to fulfil its obligations and not to disappoint the shareholders of the Nippon Yusen Kaisha. Our contemporary cautions the Government against repeating the economic confusions produced by the rumour of its attempt to establish a bourse.

#### LETTER FROM LONDON.

(FROM OUR SPECIAL CORRESPONDENT.)

London, September 25th.

The eternal Hartley case has been again brought before Parliament, as it had been half-a-dozen times already, by means of a question by some good-natured member. This time it was the ingenious Mr. Gent Davies, member for one of the metropolitan constituencies on the Surrey side of the Thames, who blandly enquired whether before signing any agreement for revising the treaties with Japan, the Government would press the Japanese "for payment of the claims of Mr. J. Hartley and other British merchants, who, contrary to the provisions of the existing treaties between the two countries, were prevented by the unlawful action of Japanese officials from selling in Japan goods upon which all duty imports had been paid." Sir

James Fergusson replied that successive Foreign Secretaries had come to the conclusion that Mr. Hartley's case was not such as would justify diplomatic interference. I fear it will be too much to expect that Mr. Hartley will now give up the pursuit of the *ignis fatuus*, a pecuniary settlement of his claims by Japan at the instance of the British Government, which he has been steadily pursuing with disastrous consequences to himself for many years back. Personally, I have always thought that Mr. Hartley has suffered somewhat more than he deserved; he was the earthenware pot floating down between the brass and iron pots. As it was, had he been able to turn his experience and energy to building up a new business in England in 1878 after his return from Japan, he would probably have met with some success; but he appears to have wasted years and all his resources in the struggle to get his grievance acknowledged by his own Government. Bearing in mind what Mr. Hartley's position was ten years ago and what it is now, I think it would be a graceful and generous act of the Japanese Government to help him to live his remaining years in peace; I fear he can do but little now for himself to improve his future. I do not know that it would be altogether generosity either, for (unless my memory deceives me greatly) some of the acts of servants of the Government towards Mr. Hartley, after his unfortunate "case" was over, would hardly bear examination. It was no doubt war to the knife at the time; Mr. Hartley is now and has been for some time past prostrate. The victors might well show some generosity, more especially as with the settlement of the bases of treaty revision, all disputes such as that which caused Hartley's ruin will in future be impossible. I am sure if all the facts were known to Count Inouye, poor Hartley and his grievance would cease to trouble Parliament and the public.

Professors Ayrtton and Perry, both of whom now possess the blue-ribbon of science, the F.R.S., and who are shining lights in the new technical college founded by the City Guilds, are developing a new invention of theirs called "telpherage," for the conveyance of goods, in successive small quantities, on telegraph wires by means of electricity. Electric lighting has been blighted by Mr. Chamberlain's bill, and these learned and ingenious gentlemen have accordingly transferred their talents from this branch of applied science to another which is more likely to pay. An experimental "telpher" line has been constructed at Glynde in Sussex, where it is to be seen by the traveller from London to Eastbourne or Hastings. It was opened recently by Lord Hampden, the late Speaker of the House of Commons, much to the gratification of the illustrated papers which were then hard up for subjects. I refer to the matter particularly now because I have before me a lecture on telpherage delivered by Professor Perry, in which he says that although an immediate application of the system is not to be expected in England, where common roads, railways and tramways are so numerous that telpherage could probably only be worked as a feeder of railways, yet in a country like Japan where good roads and railways are few, and transport is very defective, telpherage should be a powerful instrument in the developing its resources. What with electric boats (one crossed the channel the other day), electric lights, electric trains, telpherage, and a host of similar applications of electricity, the pundits in that subject, like the "scientific twins" here mentioned, should be in clover. They are amongst the few old Easterns who, after their return home, have succeeded in making a high reputation for themselves. The average Eastern resident never does anything after his return; whatever energy life in a hot climate has left in him, is spent in wishing he were back again amongst the fish-pots, or in trying to get there. One might count on the fingers of one hand the returned Easterns—officials, barristers, doctors, engineers, what not,—"great

guns" in their day, who have not dwindled into the merest nobodies after getting home. I refer of course to men in the prime of life, not to those who have passed their lives in the East, and have come home to spend the rest of their days in peace. But this is a subject on which much might be said, which I have not the space to say now, and accordingly I drop it here for the reflection of your readers who may for any reason take an interest in it.

Sir Charles and Lady Dilke, who, since the conclusion of the Crawford case, have been staying at Royat-les-Bains, returned to London last week. On the day of their return, the *Pall Mall Gazette* published an article entitled "A Question for the Queen," urging Her Majesty to strike Sir Charles off the list of the Privy Council with her own hand, and without consultation with her advisers. The argument was this: there is evidently going to be no prosecution for perjury. Sir Charles Dilke appears to have no intention of initiating one; the late government shrank from the odium of prosecuting a colleague; the present government shrinks from prosecuting an old opponent. It would be an invidious task in either case, especially for Lord Salisbury. The same reasons have prevented either the late or present Premier from advising the Queen to expel him from the Privy Council; hence in the name of public morality, &c., &c., the Queen should do it of her own motion, with her own hand. This is the coolest suggestion I have ever read. Because, says the *Pall Mall*, Mr. Gladstone and Lord Salisbury have not the courage to do what is right,—it was, forsooth, unpleasant to Mr. Gladstone and might be attributed to party feeling in Lord Salisbury—in order to spare the feelings of these gentlemen, and to help them to evade their duty, the Queen is to do an unconstitutional act! She is to outrage constitutional propriety at the behest of the *Pall Mall*, in order to spare her Premier the pain of being accused of acting from party feeling. If it is proper to strike Sir Charles Dilke off the list of the Privy Council, Lord Salisbury is the proper person to advise it; if it is not, the Queen would not be justified in doing it. If it is improper that his name should be retained, the responsibility for it must rest first with Mr. Gladstone and then with his successor, who have both shirked their duty. The idea of a prosecution for perjury is absurd. Perjury, unfortunately, is an every day occurrence in the Divorce Court, and if prosecutions are to be instituted, where are they to stop? On the whole, the *Pall Mall* could have done much better to leave the subject alone; Dilke's offence was great; his punishment has been even greater. It is said that he intends to start a London daily newspaper to be owned and edited by himself. It would be a joke if he ran an evening paper against the *Pall Mall*. With his wide experience of men and affairs, his great literary ability, and with the brilliant gifts and indomitable energy of his wife, his paper would soon make its mark. He is already a newspaper proprietor, and many of the initial difficulties would therefore be removed in his case. The establishment of a London newspaper under his control would certainly be a literary event of the first magnitude.

Since the opening of the Colonial and Indian Exhibition, propositions have been constantly made in the newspapers and elsewhere for rendering it permanent in this country—not exactly in the Horticultural Gardens, but elsewhere,—and the Thames Embankment on the site of the abortive Opera House near the St. Stephen's Club was the spot generally suggested. While these discussions were proceeding in a fitful way, other proposals for worthily commemorating the Queen's Jubilee next year were also being made and discussed. The Prince of Wales has just brought the two together by addressing a letter to the Lord Mayor of London, as Chief Magistrate of the capital of the Empire, suggesting that no more

suitable memorial of the Queen's reign could be raised than an Institute which should represent the Arts, Manufactures, and Commerce of our Colonial and Indian Empire. The Prince lays down the broad outlines of what such an institution should be. It would be at once a museum, an exhibition, and the proper locality for the discussion of Colonial and Indian subjects. His Royal Highness thinks that all the more important collections now at South Kensington would be placed at its disposal. A suitable building would be erected by public subscription, and the whole be placed under the control of Trustees, under the permanent presidency of the Heir Apparent. The idea has been received with the greatest enthusiasm, and certainly it appears an excellent method of utilising the patriotic subscriptions which will be forthcoming next year to commemorate half a century of the Queen's reign. When George III. reached his jubilee, loyal subjects with more money than they knew what to do with, erected towers, obelisks, cairns, and what not on the loftiest points in the neighbourhood. A large part of Flintshire and Denbighshire is dominated by a square tower of this kind which is tumbling into ruins, and which can hardly ever have been of any use; a huge plinth in the south of the Isle of Wight, not far from Ventnor, was erected at the same time, and in other parts of the country fervour took the same shape. We are more practical in these days, and an adequate Imperial Institute, established on sound bases, will do more good than a tower in every city in Great Britain. One thing appears clear about it already, viz: what is called the "South Kensington clique" will have nothing to do with it. The *Times* correspondent in Melbourne declares that Sir Philip Cunliffe-Owen's hand in any project of the kind will ruin it in the estimation of Victorians. The latter certainly have a very decided grievance. They we told that great efforts would be made to have Colonial producers, and not Colonial merchants, in London represented at the Exhibition, and that the vine growers of Victoria should have abundant opportunities of exhibiting their wines, and of familiarising the British public with them. On the faith of these assurances large quantities of Victorian wines were sent over, but on their arrival here it was found that the whole refreshment contract was sold to Messrs. Spiers and Pond for £15,000, that this included the sole right to sell liquors within the building, that the contractors got all their Colonial wines from a merchant in the city who did not represent any of the exhibitors, and that therefore the wines sent over at so much cost and labour, were practically wasted, for no one saw them, or had any opportunity of sampling or examining them. "The Colonial vine-growers," the principal of them writes to *The Times*, "owe Sir P. Cunliffe-Owen nothing but indignation and resentment." It certainly does look an unpleasant piece of business. In making the contract with Spiers and Pond special care should have been taken to protect the interests of the exhibitors who had been invited for a special purpose. Spiers and Pond sell, at 4s. a bottle, Colonial wines which the growers would cheerfully sell within the exhibition for eighteenpence; improper and ignorant persons are used by them to sell such Colonial wines as they are gracious enough to keep, and meantime large stocks of Colonial wines belonging to exhibitors who were specially invited to bring them in order to push them here, are lying untouched, and at present untouchable, in the cellars under the Albert Hall. So Sir Philip Owen will probably be kept away from the formation of the Imperial Institute. That will be one pie in which he will have no finger.

The Marquis Tsing appears to be destined never to leave Europe. A fortnight ago he arrived at Marseilles in order to go by the French mail; his youngest child, who has been ill for a long time, was taken so bad that the Marquis

had to postpone his departure. He is said to have taken a villa in Switzerland for a few months; and according to another account to be on his way back to England to consult the medical men who have attended the child since its birth. The Marquis himself is far from being in a good state of health, and he is therefore all the more deserving of sympathy. It was at one time expected that he would pay a visit to the Pope on his way out, but there appears no chance and no utility in such a meeting in the present circumstances. Meanwhile, the new Minister and Sir Halliday Macartney are at St. Petersburg, and have been there for the past month. They are expected in London next week.

Mr. Frank Dillon has given Londoners an opportunity of examining a real Japanese house, for he has sent the house in which he lived himself when in Japan to the Bethnal Green Museum, there being no room for it at South Kensington, and he informs all and sundry through the press of the fact. He says that readers of Professor Morse's book (the learned Professor, by the way, has just been elected president for the present year of the American Association for the Advancement of Science) will find in his house all the details referred to in the book.

In speaking of the Marquis Ts'eng in the last paragraph but one, I should have mentioned a funny incident which has just taken place in Paris. During the Marquis's stay there on his way from Eastbourne to Marseilles, the *Figaro* contained a report of an interview between one of its staff and the Minister. It read very well and sounded very plausible, being full of large generalities which the Marquis would use if he wanted to say nothing, until mention was made of M. Ferry. Here the interviewer made the Marquis say that he thought Ferry the only statesman in France, and that all the members of his Government were of the same opinion. But for this the *Figaro* gentleman might have gone on his way in peace, and few would have been any the wiser. The Marquis's opinion of M. Ferry is a particularly strong one, and he has made no secret of it. So far from thinking him a statesman he believes him to be a chameleon; a man who would rather shift and dodge any day than go a plain way even though there may be a plain way straight to his goal, and withal a person whose shifts and dodges never deceived any one but himself or the mob. M. Ferry played false perpetually where a little consideration would have showed him that the game must be discovered before he could gain anything by it. He was jealous, excessively jealous, of his dignity when at the Quai d'Orsay; he constantly fidgetted himself into attacks of illness over fancied slights of this or that ambassador, which he did not quite know how to treat. He was like a school boy whose nether extremity has been made uncomfortable by the application of the cane. Three or four times in succession he sent unofficial envoys to London to ascertain whether the Marquis would negotiate the preliminary terms of peace; these gentlemen had just enough credential to ensure them a civil reception, never quite enough to secure confidence. They all came with the same tale: they were not sent by M. Ferry directly, but they had means of knowing his ideas, they knew how anxious he was for peace, &c., &c., and they knew that if he felt assured that the Marquis would accept so and so, peace could be made at once. The answer was always the same: the Marquis had nothing to do with Tonquin, he had no power to negotiate, but he was ready to submit to his Government any authoritative proposals or suggestions for peace. Then vague suggestions as to terms would be made, and at this point the question was always asked: Are you negotiating at Peking now or not? If so, you had better confine yourselves to one line, if not, go a head. The reply invariably was that nothing was being done in China. The proposals, suggestions, whatever they may be called,

would be telegraphed to China in due course, and in a few days the reply would come that M. Ristelhuber, or some one else at Tientsin, had been sounding Li Hung-chang, or that some one at Peking had been making advances to the Tsung-li Yamén. Now M. Ferry, one would think, must have known that duplicity of this kind would be instantly discovered. As I have said the Marquis thinks him a man of wiles, but nine-tenths of his wiles are so clumsy as to be useless; he referred to his position in a great country like France as an instance of what Democratic Government is coming to—the Merry-Andrew who can cut the antics which seize the fancy of the mob will be their ruler. Hence when the *Figaro* contained this caricature of his views, which moreover was an insult to all other French public men, especially to M. de Freycinet, the Chinese Legation published a note stating that the Marquis never made such a reference to M. Ferry. The reporter persisted, and finally the Secretary of Legation was forced to declare categorically that no such interview had ever taken place; that the reporter never saw the Marquis; that after the publication in the *Figaro* the reporter called at the Legation, as he said, to explain matters to the Marquis, but that the latter refused to see him. The reporter replies by persisting that he had two interviews with the Marquis, and says the Chinese are a terribly tricky lot:—A "*tas de magots*" he styles them. Then he sent two friends to demand an apology of M. Ching, the secretary who published this denial, or his blood. M. Ching replied that he did not want to offend the reporter, his orders were to state the truth. The seconds went away declaring the reporter's honour quite satisfied. There the matter rests at the moment of writing.

Reuter's agent in Yokohama, telegraphing on the 22nd instant, says that the treaty negotiations continue, but so far no definite understanding has been arrived at which would render practicable the early signature of a new treaty. The *Times* correspondent had given us to understand that negotiations were suspended until October, and that the main difficulties so far as Great Britain and Germany were concerned, had been removed.

### LETTER FROM SAN FRANCISCO.

(FROM OUR OWN CORRESPONDENT.)

San Francisco, October 19th.

The uncertain earth continues to heave and lament as though in the throes of some internal disorder. Shocks, slight but distinct, continue to remind Charleston that a power against which mankind cannot contend may at any time complete the destruction which the catastrophe of August 31st commenced. A sea wave has overwhelmed a long strip of coast in Texas, sent 250 human beings to their last account, and robbed a thousand more of house, home, and belongings. It was on the afternoon of Tuesday last. A hurricane had swept the West Indies at the close of the week previous. The wind died out before reaching the coast of the continent, but the tidal wave it drove before it rushed on. Sabine, a little village of 200 inhabitants on the river which connects Sabine Lake with the ocean, built on a sand spit only 4 feet above high water mark, was first drowned out. First the negro huts were lifted, toppled over and drifted; next the taller buildings began to quiver and shake, and finally capsize with all their inhabitants; and at last every structure in the place was afloat, driving out to sea. Then villages on Johnson's Bayou, and Taylor's Bayou shared the same fate. The coast lies low, and is intersticed by little arms of the sea which in southern dialect are called bayous. Up these the hungry sea crept; forty miles from the shore, the water in stagnant pools and creeks became salt. The carcasses of thousands of drowned cattle and hogs, horses and fowl, new drift over the expanse of water, and

clouds of sea gulls and buzzards reveal the presence of dead bodies below them. It is hard to say how many human lives have been lost.

A curious coincidence was the outburst of a terrible storm, two days later, on the British shores. Several vessels were lost, and a number of persons perished.

The fall campaign proceeds languidly. In the cities, the mushroom growth of a number of independent parties reveals the general relaxation of political discipline. Party fidelity appears to be a thing of the past. In Massachusetts, the Democrats are running for Governor a son of the famous man Governor John A. Andrew—who himself was a delegate to the Republican convention at Chicago in 1884, and has since turned Mugwump. In this state both the Republican and the Democratic candidates for Governor bolted their party tickets nine years ago, and would, if political discipline were enforced, be ineligible for office. The Republicans talk of carrying Louisiana, and the Democrats bid fair to carry Michigan. Perhaps the most interesting of the pending contests in the one for Mayor of New York. The democrats have nominated an exceptionally good man—Abram S. Hewitt, a member of Congress, and ex-Chairman of the Democratic National Committee. The Republicans have taken up that infant phenomenon young Roosevelt, who is not only the son of his father and the grandson of his grandfather, but really showed political capacity as a member of the New York legislature. A third candidate in the shape of Henry George, author of *Progress and Poverty*, has been put forward by the labour party, and is making considerable headway. George is English by birth, came to San Francisco when a very young man, became an editor here, and finally drifted East where he began to preach the philosophy,—slightly modified from Prudhomme,—that property in real estate is robbery. The betting men are all at sea over the probable result. If the workmen stick to George they can elect him; but when election day comes round, working men's parties are apt to disintegrate. In 1879 they carried this state with a rush; at the following election there wasn't enough left of the party to bury.

The Knights of Labour have not added to their fame by the Richmond Congress. Reporters were excluded, and people generally inferred that a party which could not stand the daylight must have something to conceal. The fact is, workmen, in this country as elsewhere, have much to learn before they can accomplish results as a political party. Many of them mean well, and there is much that is sound in Powderly's philosophy; but the great bulk of the agitators among workingmen are mere blatherskites. The strike at Armour's beef and pork packing establishment at Chicago, which the knights sent a committee to settle, ended on Monday by the surrender of the strikers. When they told Armour that if he persevered in his obstinacy there would probably be bloodshed, he replied that he hadn't the least objection. He thought a little blood-letting was a good thing now and then. On which the strikers caved in.

Blaine is having another triumphal march through Pennsylvania. In that state the champion protectionist is always welcome. Your readers may remember that in the canvas of 1884 he announced the startling discovery that protection was the foundation of Christianity. He now declares in Philadelphia that it is the cornerstone of temperance. "For," says he, with admirable logic, "where do you see so much drunkenness as in free trade England?" The sentiment was loudly applauded. There may have been some iron founders in his audience who took a more sober view of the subject. One day last week eighty car loads of steel rails arrived at New York from England for a railroad in the South West. The duty paid by the railroad company was just \$20,000. It imported the rails because it could

not help itself; the revival of railroad building has filled the foundries here with orders for a long time ahead, so that they can execute no more. Thus the \$20,000 tax paid by this company did no one any good; it merely went into the Treasury of the United States which every statesman is trying to deplete. The Pennsylvania iron founder may possibly also have reflected, as he listened to Blaine's wild enthusiasm over protection, that Alabama is now producing iron at a less cost, by three or four dollars, than the best situated foundries in the Keystone State, and he may have speculated on the possibility of enacting a tariff to protect Pennsylvania against Alabama.

I had occasion, in a former letter, to mention, as an evidence of the profits of authors, the fact that General Grant's memoirs were going to make his widow rich. The publishers, in a letter which has appeared in the papers, say that they are about to send her another check for \$100,000, making \$350,000 in all. These publishers, whose firm name is Webster & Co., but whose active member is Mark Twain the humorist, are enterprising fellows. They say that they have concluded their bargain for the publication of the Memoirs of the Pope. They are to bring the book out in half-a-dozen countries simultaneously, in as many different languages. It will appear in Italy, Spain, Portugal, Austria, France, Great Britain and the United States at all events, and "all rights have been reserved" in other countries as well. Webster & Co. publish all their works by subscription, through canvassers. They are not popular with the trade; but they afford a living to hundreds of book agents, male and female.

If we are to believe Lieutenant Henn, owner of the *Galatea*, there is no prospect of another race for the Queen's Cup next year. In conversation with a newspaper reporter, the lieutenant said that the Royal Yacht Squadron was not likely to take up Mr. Bell's challenge. "The Club," said he, "do not think the game worth hunting. It is a long trip over in the first place, then you miss the whole racing season abroad. The chances are you come over here, and have virtually no race, for the weather is calm. That is not racing." The lieutenant added that, though he still believed the *Galatea* would beat the *Mayflower* in windy weather, the latter is "the best boat he ever saw." "I say without fear of contradiction," he added, "there is not a boat in all England can race with her." Bell and his partners—there are five or six interested in the enterprise—propose this winter to build a boat which shall be as superior to the *Mayflower* as the latter is superior to the *Priscilla*.

#### IN THE U.S. CONSULAR-GENERAL COURT.

Before C. GREATHOUSE, Esq., Consul-General.  
TUESDAY, November 9th, 1886.

SHUGIURA SHICHIRO V. T. K. JAMES.

This was an action brought for recovery of yen 28.40, \$25 of which were wages and \$3.30 the cost of shoeing two ponies placed by the defendant in plaintiff's keeping.

T. K. James, sworn, admitted having made an agreement with the plaintiff for \$25 per month, but said one of the ponies had been seriously injured. He deposed that the pony cost him \$87 and was perfectly sound in all respects. It was bought after the last spring races. Witness was absent from Yokohama about a month, leaving the two horses and a buggy in charge of the defendant. On his return he found the pony referred to sick, unable to work, and covered by sores, with the mark of a blow on the nose. It was at present under the care of a veterinary surgeon. The other pony which was in good condition when he left, was also weak when he came back. The buggy was damaged. He had owned the buggy for twelve or fourteen months, and had it overhauled eight months ago

by Mr. Kildoye. The wheels had sprung and the spokes and ties were loose by hard usage. The condition of the horses, he believed, arose from bad food. Witness did not know one of the ponies when it was brought round. He had to send it back, and had not been out with it since. He paid \$6 in gold for a whip which he claimed the plaintiff retained; the horse blanket was new and should be worth about \$6. The defendant only brought back half of the blanket. The horse had never been sick previous to witness's departure.

Mr. Pequignot deposed that the sorrel pony was brought to him on 30th September in very bad condition, although previously both horses were in good condition. He saw them in August, several times in the morning, ridden by a betto. They were not fat when he saw them. They looked as if they were not well attended to, and badly nourished. They were in very bad condition when brought to him in September. The sorrel had a swollen nose as if it had been beaten. The bones were bruised, and injured. There were no other injuries on the horse. It was now improved, but was not fit to be used yet. When it returned to him he would not have given \$10 for it. He could not say what was the value of the horse when he saw it in August; but a horse of that kind in good condition should be worth about \$100. The other horse was thin when brought, but has since improved.

To the plaintiff—He believed from experience both of horses and bettoes that the injury to the horse was caused by a blow. Mr. James called a Japanese veterinary surgeon.

Plaintiff deposed that when Mr. James left the horses with him the black horse had a sore knee. When Mr. James left the black horse was in good condition, and when he came back this horse was in very good condition. When Mr. James left the sorrel had over its neck a number of spots or pimples like itch; they were called *horase*, which meant surfeit; they had been over-fed. The sores came out worse during Mr. James' absence, and on his return witness told Mr. James, who got medicine, and put it on it. The horse got well and he thought the defendant had ridden him as often as ten times. He had the horse about 28 days after the defendant came back. Mr. James paid him for August previous to going away—that was about the 2nd of September. He had the whip and blanket, in the same condition as before, and would return them as soon as he was paid. One morning when Mr. James brought home the trap, part of the hub was split, evidently by a hard smash. Mr. James himself drove to the wheelwright's. He was then using the black horse. The carriage was there for about 15 days, and during that time the horses were sent to Mr. Pequignot's. After he came back Mr. James had used the carriage three or four times previous to taking it to be repaired. During the defendant's absence he never used the carriage. He had to ride the black horse every three or four days. He did not think anybody could have used the buggy without his knowledge.

To defendant—During your absence I have never driven with the buggy to the circus, and kept it standing there for several hours.

The case was adjourned till the 13th instant, in order that the plaintiff may bring a couple of witnesses.

#### CRICKET.

YOKOHAMA CRICKET AND ATHLETIC CLUB  
V. THE NAVY.

The return match between the Club and the Navy came off on Saturday, and resulted in a reverse for the local team, thus leaving the honours between the Club and the Visitors "easy." It must be admitted, however, that Saturday's victory was decidedly greater than that of the Club on the 23rd ultimo. On the present occasion the Club did

not play under the most advantageous circumstances, it is true; Mr. Duff, for instance, not being able to appear in the eleven. As in the former match, the visitors showed to much greater advantage than their opponents in the field.

The band of the *Audacious* was present during the afternoon, and did much to enliven the proceedings. We append full score and bowling analysis:—

#### LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 8th.

ENGLAND AND TURKEY.

The relations between England and Turkey have become more cordial.

ENGLAND, FRANCE, AND EGYPT.

According to the *République Française*, the French Ambassador at London has suggested to the British Government that it should fix the date for the evacuation of Egypt.

RUSSIAN PLOTS.

Russian plotting in Bulgaria continues.

London, November 10th.

ENGLAND, FRANCE, AND EGYPT.

The *République Française* is declared to be inaccurate in its statement that the French Ambassador at London had suggested to the British Government that it should fix the date for the English evacuation of Egypt.

RUSSIA AND TURKEY.

Twelve hundred Russian troops and several Russian war-vessels have arrived at Bourgas.\*

THE LORD MAYOR'S SHOW.

The Lord Mayor's Show took place yesterday, and perfect order prevailed. It was guarded by police and escorted by cavalry.

A socialist demonstration took place in the evening in Trafalgar-square, but the mob was dispersed by troops without opposition.

SCIENCE OF FRED. ARCHER.

Frederick Archer, the well-known jockey, has committed suicide.

\* [Bourgas is a town in European Turkey, in the pachalik of Roumelia, 120 miles north-west of Constantinople, standing on the north shore of the Gulf of Bourgas, in the Black Sea.—Ed. J.M.]

## NOTES FROM JAPANESE PAPERS.

Their Imperial Majesties the Empress and the Empress-Dowager visited H.I.H. Prince Fushimi at Kioizaka, the 11th instant, returning the same evening.

Viscount Hijikata, Court Councillor, proceeded the 10th instant to the Tokiwa School in Nihonbashi Division, to make preliminary arrangements for the reception of H.I.H. Prince Haru, who is expected to visit the institution shortly.

Princess Sanjo, mother of H.E. the Lord Keeper of the Privy Seal, left the capital the 10th instant for Atami. The Princess has not yet quite recovered from her late illness and is attended by a physician.

Mr. Kawazu, Chief Commissioner of the Criminal Bureau, visited the Home Office the morning of the 11th instant on urgent business, and conferred with Mr. Kiyoura, Chief Commissioner of the Police Bureau. Mr. Kiyoura, bearing instructions from Count Yamagata proceeded to the Judicial Department the same afternoon. It is stated that his visit related to the Nagasaki affair.

Prince Tokugawa Keiki, who is at present staying at Koume, on a visit to his mother, has been daily visited by large numbers of the Mito clan, and other friends.

According to investigations made in Yokohama the 9th instant, the total quantity of raw silk remaining in stock was 23,285 bales, of which 7,290 were Filatures, 6,576 *Zaguri*, 4,867 Hanks, 2,820 Kakeda, 954 Hamatsuki, and 778 various kinds.

Mr. Yoshida, vice-Minister of State for the Agricultural and Commercial Department, arrived in Osaka the 10th instant.

The additional clauses of the postal regulations are now under investigation in the Cabinet Office. It is stated that according to the contemplated changes, new post-cards of *riu* 5 will be issued in place of the present one-*sen* cards in such large towns as Tokyo, Osaka, and Kyoto, and return post-cards will be abolished.

Mr. Yoshikawa, Vice-Minister of State for Home Affairs, arrived at Osaka the afternoon of the 10th instant. Messrs. Fujita & Co. invited his Excellency to dinner the same evening, and also Messrs. Hayashi, postmaster; Nakai, Governor of Shiga; and Uchimi, Governor of Hyogo. Mr. Yoshikawa visited the Osaka City Government office and the local assembly buildings the following day.

The *Nishin Kan*, which has been stationed at Tai, left for Yokkaichi the 11th instant.—*Jiji Shimpō*.

Owing to pressure of official business Prince Sanjo, Lord Keeper of the Privy Seals, is said to be attending the Cabinet Office every other day.

The meetings of the strategical officers of the various garrisons throughout the empire closed on the 10th instant.

Mr. Takagi Kanehiro, Inspector-in-Chief of Hospitals in the Naval Department, proposes to establish a hospital at Shichara, the locality being suited to *kakke* patients.

Mr. Mosse, of the Cabinet Office, gave a lecture on administrative functions in the Home Office the forenoon of the 11th instant. Count Yamagata and the chief commissioners of the various bureaux were present.

A special meeting of shareholders of the Japan Kerosene Mining Company will be held the 13th instant in their office at Sakamoto-Mura, Tokyo, to discuss the subject of releasing from office Mr. Nagasaki Michiyoshi, Vice-President of the Company.—*Nichi Nichi Shimbun*.

H.I.H. Prince Haru paid a visit on the 10th instant to the Military College.

Mr. Takasaki, Governor of Tokyo, notified the 11th instant, that the local assembly will be opened the 15th instant.

The festival of Gion, Kyoto, will take place the 17th instant.

The abattoirs at Hosiwa will be extended shortly owing to the increase in the consumption of beef.—*Hochi Shimbun*.

H.B.M. Minister has intimated to the Foreign Office that, owing to the departure of Mr. Russell Robertson, H.B.M. Consul and Assistant Judge at Yokohama, on the 13th inst. for home, Mr. John Carey Hall is appointed to take charge of the consulate, vice Mr. Robertson.

Mr. B. H. Chamberlain and Professor Toyama Shoichi were appointed the 10th instant to the duty of compiling a First English Reader.—*Official Gazette*.

## MAIL STEAMERS.

## THE NEXT MAIL IS DUE

From Shanghai, Nagasaki, & Kobe	per N. Y. K.	Friday, November 19th.
From America	per P. M. Co.	Friday, Nov. 19th.
From Hongkong	per P. & O. Co.	Sunday, Nov. 21st.
From America	per O. & O. Co.	Friday, Nov. 29th.

The *Statia* (with English mail) left Hongkong the 5th November and is due on Saturday, November 13th. \* *City of Peking* left San Francisco on October 30th. + *Thibet* left Hongkong on November 12th. † *San Pablo* left San Francisco on November 9th.

## THE NEXT MAIL LEAVES

For America	per P. M. Co.	Saturday, Nov. 13th.
For Europe, via Hongkong	per P. & O. Co.	Saturday, Nov. 13th.
For Kobe	per N. Y. K.	Saturday, Nov. 13th.
For Hakodate	per N. Y. K.	Saturday, Nov. 13th.
For Shanghai, Kobe, and Nagasaki	per N. Y. K.	Tuesday, Nov. 16th.

## TIME TABLES AND STEAMERS.

## YOKOHAMA-TOKYO RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 7.00, 8.15, 9.30, 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 11.00 p.m.

TRAINS LEAVE TOKYO (Shimbashi) at 7.00, 8.15, 9.30, 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 11.00 p.m.

FARES—First Single, *yen* 1.00; Second do., *sen* 60; First Return, *yen* 1.50; Second do., *sen* 90.

Those marked with \* run through without stopping at Tsurumi, Kawasaki and Omori Stations. Those marked † are the same as above with the exception of stopping at Kawasaki Station.

## TOKYO-MAYEHASHI RAILWAY.

TRAINS LEAVE TOKYO (Ueno) at 6.00 and 10.00 a.m., and 1.00 and 4.15 p.m.; and MAYEHASHI at 6.00 a.m., and 1.00 and 4.15 p.m.

FARES—First-class (Separate Compartment), *yen* 1.80; Second-class, *yen* 1.20; Third-class, *yen* 1.14.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.15 and 11.30 a.m., and 2.25 and 5.50 p.m.

## UTSUNOMIYA-NASU RAILWAY.

TRAINS LEAVE UTSUNOMIYA at 10.25 a.m. and 4.57 p.m.; and NASU at 6.40 a.m. and 3.15 p.m.

FARES—First-class, *yen* 1.10; Second-class, *sen* 74; Third-class, *sen* 37.

## TOKYO-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYO (Ueno) at 6.00 a.m., and 1.00 and 4.15 p.m.; and UTSUNOMIYA at 8.15 a.m., and 11.10 a.m., and 4.50 p.m.

FARES—First-class, *yen* 3.50; Second-class, *yen* 2.10; Third-class, *yen* 1.05.

## SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 9.19 a.m., and 12.34, 3.39, and 4.09 p.m.; and AKABANE at 10.33 a.m., and 1.34, 4.44, and 8.22 p.m.

FARES—First-class, *sen* 70; Second-class, *sen* 46; Third-class, *sen* 23.

## KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYOTO (up) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYOTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

## OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

FOR CHINA—The steamers of the Nippon Yusen Kaisha sail weekly (Tuesday) for Shanghai, calling at Kobe and Nagasaki. Steamers of this Company also run to Korea and Vladivostok, at intervals, their sailing notices appearing in the local papers.

FOR SAN FRANCISCO—The steamers of the O. & O. Co. and the P. M. Co. sail hence, approximately, every 10 days.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 7.15 and 11.00 a.m., and 1.30 and 4.00 p.m.; and leave Yokosuka at 8.30 and 10.40 a.m., and 3.10 and 4.00 p.m.—*Fare, 20 sen.*

## LATEST SHIPPING.

## ARRIVALS.

*Belgic*, British steamer, 2,695, W. H. Walker, 6th November.—San Francisco 19th October, Mails and General.—O. & O. S.S. Co.

Hasokawa, Takawa, Otsuki, J. J. Broadbent, J. Wilson, H. M. Skene, R. Meir, Liddle, Chin Shone, S. Mine, Takato, Ishima, Fujisaki, Samekawa, Nagayama, Yamashita, J. Matsudaira, K. Hirai, R. Yoshida, N. Wild, Sawada, and Seki in cabin; Mrs. Rosse and Sannomiya in second class; and 98 Japanese in steerage.

## CARGOES.

Per British steamer *Teheran*, from Hongkong via Kobe:—Sugar, 4,954 bags; Merchandise, 5,160 packages.

Per Japanese steamer *Yokohama Maru*, for Shanghai and ports:—Treasure, \$24,300.00.

## REPORTS.

The British steamer *Teheran*, Captain Seymour, reports:—Left Hongkong October 30th, at 6.30 a.m. and had fresh to strong monsoon and heavy head sea with overcast weather to Nagasaki, where arrived November 3rd, at 8.40 p.m. Left November 4th, at 3.30 p.m. with fresh N.E. winds and cloudy sky, and arrived at Kobe November 6th, at 6 a.m.; left at 6 a.m. on 7th and had light to moderate winds and light rain to Onaisaki, thence to port fresh N.E. gale and heavy head sea. Arrived November 8th, at 2.30.

The American steamer *City of Rio de Janeiro*, Captain Wm. B. Cobb, reports:—Left Hongkong the 2nd November, at 3.50 p.m. and had strong monsoon with heavy head sea during first three days; thence to port N.E. winds with smooth sea generally. Arrived at Yokohama the 9th November, at 2 p.m. Time, 6 days and 21 hours.

The Japanese steamer *Takasago Maru* reports:—Left Kobe the 11th November, at 11 a.m. and experienced strong southerly winds and rain to Oshima; thence to port heavy easterly swell, which changed to N.W. strong breeze, and heavy head sea. Arrived at Yokohama the 12th November, at 8 p.m.

The German steamer *Electra* reports:—Left Hongkong the 3rd November; experienced a stormy passage.

## LATEST COMMERCIAL.

## IMPORTS.

Each succeeding week has witnessed a quieter feeling in the Market, a smaller amount of business doing and fewer clearances being made, until we may be fairly said to have arrived at "utter stagnation," as the record of sales for the past week is too insignificant to be otherwise described. Quotations are, of course, for the most part quite nominal.

**YARNS.**—There is no demand, and quotations are all nominal; sales do not amount to more than 25 bales altogether.

**COTTON PIECE GOODS.**—Sales are limited to 1,000 pieces Turkey Reds, 500 pieces Prints, and 500 dozen Hankerchiefs.

**WOOLLENS.**—A special sale of 5,000 pieces Mouseline de Laine in one line at a reduced price has been reported, and other sales consist of 100 pieces Italian Cloth, 2,000 pairs Blankets, 150 pieces Cloth, and 120 pieces Silk Satins.

## COTTON YARNS.

	PER PICUL.
Nos. 16/24, Ordinary	\$26.50 to 28.00
Nos. 16/24, Medium	28.50 to 29.00

Cloths—Presidents, 54 @ 56 inches	0.50 to 0.60
Cloths—Union, 54 @ 56 inches	0.40 to 0.60
Blankets—Scarlet and Green, 6 to 4 lb, per lb	0.37 1/2 to 0.45

## METALS.

Dull dragging market. Some amount of business at quotations; but things generally are weak with small transactions. Stocks, especially of Manufactured Iron, are large, and press heavily on a small market.

	PER PICUL.
Flat Bars, 1/2 inch	\$2.40 to 2.45
Flat Bars, 3/4 inch	2.50 to 2.60
Round and square up to 1/2 inch	2.45 to 2.60
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.50 to 2.60
Wire Nails, assorted	4.50 to 5.50
Tin Plates, per box	5.30 to 5.50
Pig Iron, No. 3	1.20 to 1.22 1/2

## KEROSENE.

A fair amount of business has been done, and sales recorded are about 40,000 cases on the basis of \$1.77 1/2 for "Devco" 115° test. Stocks are reduced to about 350,000 cases, but fresh arrivals are expected shortly, and buyers do not care about going on at present rates. Of the present stock it is estimated that about half is still in importers' hands, the balance being sold stock waiting delivery.

	PER CASE.
Devco	\$1.77 to 1.80
Comet	1.72 to 1.75
Stella	None

## SUGAR.

Only 100 piculs of white description have been reported, and this small lot was sold at another drop of 15 cents. per picul on previous prices. Other sorts remain unchanged in value.

	PER PICUL.
White Refined	\$5.00 to 7.15
Mandao	4.20 to 4.40
Wire and Swatow	3.30 to 3.75
Brown Takao	4.00 to 4.05

## EXPORTS.

## RAW SILK.

Our last issue was of the 5th instant; and we have now to record a marked increase in the business done, the Settlements for seven days ending yesterday being 1,000 piculs, divided thus:—*Hanks* 125 piculs, *Filatures* and *Re-reels* 725 piculs, *Kakada* 35 piculs, *Hamatsuki* 50 piculs. *Taysam* kinds, 65 piculs. Japanese Direct shipments have been insignificant, although the outgoing mails are expected to have something.

During the first days of the interval we had a continued quiet Market with prices gently sagging downwards, especially for *Filatures* and *Re-reels*. What little business we had was entirely for Europe. Now all is changed; the sales in the last two days have been large and prices have recovered with a bound from any symptom of decline. Holders are jubilant and feel themselves more than ever confirmed in their waiting policy. It is but fair to say that operations are confined to a very few buyers, and there is no room for any such "boom" as we experienced at this time last year.

Supplies are ample and continuous, so that, in spite of the good business passing, the Stock is now increased to 12,900 piculs. Present arrivals begin to show the effect of cold weather in the interior; and the assortment on offer will soon run down in quality, if not in quantity.

Quotations generally must be raised again to the rates ruling in October; all signs of weakness or concession are for the present swept away, and as usual some holders decline to offer their Silk at all.

There has only been one mail departure during the interval, that of the *Mensaleh* on the 6th instant. This vessel carried 200 bales for France, and the total Export from 1st July is now 8,314 piculs, against 6,100 last year, and 10,752 at same date in 1884. The P. M. S. *City of Rio de Janeiro*, leaving to-morrow, has 371 bales engaged at the time of writing.

**Hanks.**—Considerable business done, ostensibly for Europe, on the following basis:—*Maribuso* \$650, *Omama* \$640, *Hachoji* \$585. All Silks in this class are in very strong hands, capable of holding on indefinitely.

**Filatures.**—Something done in fine sizes for Europe in grades below No. 1. In the list we observe *Usen* \$732 1/2, *Tamba* and *Kofu* sorts at from \$730 to \$700. During the last forty-eight hours considerable parcels have been taken for the States, among which are the following chops:—*Gakosha* No. 1, \$805, No. 2, \$780, *Hakusuru* \$765, *Toetsu* \$750, *Shunmeisha* \$725, *Totosha* \$720, but the two last could not be repeated to-day. *Hachoji* (*Hagiwara*) done at \$750, *Shinshu* fil. *Shijushu* \$745, *Koshinsha* \$740 and others about the same figures.

**Re-reels.**—Chief trade in Common sorts for price, destined for Europe. Recently some business in *Five Girl* at \$710, with ordinary No. 1 at \$690, still the bulk of the week's transactions has been in medium and common Grades.

**Kakada.**—A few piculs only taken into Godown at quotations, but nothing weighed-up at present.

**Hamatsuki and Coarse kinds.**—A fair amount of sales at recent values.

**P.S.**—During the day one or two Swiss buyers have come with a rush and settled some 1,500 boxes *Filatures* and *Re-reels*. Prices are accordingly jumping, and the following quotations would now be quite impracticable. Exchange is rising also, thus causing present purchases to lay down at very high figures on the other side.

## QUOTATIONS.

Hanks—No. 1 1/2	\$680 to 700

## WASTE SILK.

A much larger business here than during the previous week, all kinds (except *Mawata*) participating and the sales amounting to 950 piculs, divided thus:—*Cocoons* (chiefly *Tama*) 280 piculs, *Noshi* 240 piculs, *Kibiso* 280 piculs, and *Neri* 150 piculs. In addition, the *Boyekisha* have shipped about 180 piculs *Noshi* by the French mail.

The general conditions of the Market are the same as last week, most of the *Tama Cocoons* have been bought for the United States Market, while all other trade is for Europe. Quotations cannot be reduced, and although here and there some holders profess to make slight concessions these reductions are well-nigh imaginary.

The M.M. steamer *Mensaleh*, 6th instant, carried a miscellaneous assortment of 361 bales for various continental ports, including 59 bales *Noshi* "Direct" shipments. The canal-boat *Angers* has also 100 bales *Cocoons* on board for New York. Present Export is up to 10,269 piculs, against 3,767 last year and 10,977 at same date two years ago.

*Cocoons*.—Genuine Pierced exist no more, and the business of the week has been in *Tama* at \$70 per picul.

*Noshi*.—A fair amount of business, comprising *Oshu* at \$182½, *Hachioji* \$150 to \$160, *Foshu* "fine" \$152½, "assorted" \$120 to \$125. Nothing done in *Filatures*.

*Kibiso*.—A revival in the demand for high class *Kibiso*, the produce of some well known *Shinshu* filatures (like *Hakusuru* and *Totosha*) finding ready buyers at \$155, while unnamed sorts brought \$140. In addition to these lines there has been considerable trade in *Foshu*, averaging about \$70 per picul, with something in *Bushu* at \$55.

*Neri*.—Good demand at long prices—\$30 being freely paid for uncleaned Stock in *Shinshu* kinds.

## QUOTATIONS.

Pierced Cocoons—Good to Best .....	\$130 to 150

## TEA.

Fully 1,800 piculs have been handled during the

past seven days at easy prices. Several Ten Inspectors have already taken their departure for America, and transactions are not likely to be on a very extensive scale for the remainder of the season. Settlements both here and at Kobe are 326,495 piculs, against 277,555 piculs in 1885. The steamship *Oceanic*, which sailed on the 30th ultimo, took 15,068 lbs. for New York, 40,691 lbs. for Chicago, 11,250 lbs. for Saint Joseph, 208,186 lbs. for San Francisco, and 6,664 lbs. for Canada, aggregating 281,859 lbs. The *Bentlarig*, which sailed on the same date, took 81,781 lbs. for New York, and 6,384 lbs. for Canada, amounting to 88,165 lbs. The steamship *Kent*, which sailed on the 6th instant, took 31,600 lbs. for Canada only. All the above shipments are from Yokohama. The market shows no alterations.

## NOW READY,

In 3 Parts, Demy 16mo, limp,  
A ROMANIZED JAPANESE READER;  
consisting of JAPANESE ANECDOTES, MAXIMS, &c., in easy Written Style, with an ENGLISH TRANSLATION and NOTES. By BASIL HALL CHAMBERLAIN, Professor of Japanese and Philology in the Imperial University of Japan; author of "A Simplified Grammar of the Japanese Language," &c., &c.

PART I.—JAPANESE TEXT.

PART II.—ENGLISH TRANSLATION.

PART III.—NOTES.

PRICE, \$2.50.

The *Hiogo News* thus refers to the work:—

We have to acknowledge the receipt of "A Romanized Japanese Reader," consisting of Japanese anecdotes, maxims, conversations, &c., by Mr. B. H. Chamberlain, the author of the *Grammar of the Japanese Language* which was published a few months ago. The Reader is in three parts of convenient size, well bound, and the typography reflects much credit upon the *Japan Mail* office, where the work was printed. Part I. contains the Japanese text of the anecdotes, &c., Part II. an English translation, and Part III. is devoted to copious notes intended to give information concerning the persons and places mentioned in the Reader, to explain allusions, and in certain cases to bring out the literal meaning in a clearer manner than was possible in the translation. Mr. Chamberlain is such an acknowledged authority upon everything connected with the Japanese language, and has always been so thoroughly painstaking and conscientious in the preparation of his various publications, that students may well accept with confidence his latest work. In conjunction with the "Simplified Grammar" the "Reader" ought to prove of great benefit to all persons engaged in studying the language of Japan, and indeed to any foreign resident who wishes to speak correctly when venturing upon the vernacular.

## The Japan Weekly Mail.

"FAISCE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 20TH, 1886.

### DEATH.

On the 20th November, at No. 261, Bluff, SARAH LOUISA SPRAGMAN (Minnie), the beloved wife of John Griffin, in her 37th year.

The funeral will be from Christ Church to-morrow (Sunday), at 3 p.m., and all friends will kindly accept this intimation.

### SUMMARY OF NEWS.

VISCOUNT ATAGO died at Kyôto the 10th instant after a long illness.

THE total amount of the estimates for the Tokaido Railway is yen 9,680,826.

NEW cremation grounds and brick buildings are to be constructed at Katsuyama, Yokohama.

THE opening ceremony of the Hokkaido Normal School took place the 13th instant at Sapporo.

THE Government contemplates establishing a Fine Art Hall in Ueno or some other suitable place.

MR. KUNISHIGE, Governor of Toyama, who had been staying in the capital, left for Toyama the 14th instant.

MR. CHISAKA, Governor of Okayama, who had been staying in the capital, left for Okayama the 13th instant.

VISCOUNT TOMINOKOJI, a chamberlain, and Mr. Yamaguchi, a secretary, of the Imperial House-

hold, returned to Tôkyô the 14th instant from an official visit to Kyôto and three neighbouring prefectures.

COUNT CHARLES ZALUSKI, Austro-Hungarian Minister, left for Tomioka the morning of the 14th instant.

THE *Normanton* tragedy has occupied public attention throughout the week to the exclusion of almost every other topic.

A PROSECUTION for manslaughter has been instituted against the master of the *Normanton* by the Japanese Government.

H.I.H. PRINCE HARU paid a visit, the 15th instant, to the Yushukan in the precincts of the Rasukuni Jinja at Kudan.

THE *Tsukuba Kan* arrived at Kobe the 14th instant from the Hawaiian Islands. She will remain there for a week.

MR. YOSHIKAWA, Vice-Minister of State for Home Affairs, left Tsu the morning of the 16th instant for Yamada.

PRINCE TOKUGAWA KEIKI, who had been visiting his mother in Tôkyô, left again for Shizuoka the 13th instant.

SEVERAL ladies of Kyôto, adepts in the art of writing shorthand, are about to establish a Phonographic Society.

MR. YEGAWA, Commissioner of Customs at Kobe, will, in addition, undertake the duties appertaining to the position at Osaka.

THE tea trade in Kobe is described as being exceedingly dull at present, the daily sales averaging no more than 5,000 cattie.

THE Autumn Meeting of the Kioto Keiba Kaisha, originally fixed to commence on Saturday last, was postponed until to-day.

THE new dispatch boat *Alacrity* is daily expected to arrive here. She will probably bring up the Commodore from Hongkong.

MESSRS. SHIMOMURA & Co., Konyacho, Tokyo, are now making preparations to construct a railway from the city to Hachioji.

A DRAFT of the Bourse Regulations, which was lately submitted by the authorities to the Cabinet Office, has been under discussion.

THE large demand recently noted from China for porcelain continues, and manufacturers are unusually busy, executing the orders received.

THE ships of the British Squadron, with the exception of the *Cleopatra*, have all left this port. The *Cleopatra* will probably remain here several weeks.

OF the twenty-eight cities and prefectures which were declared infected with cholera only four now remain upon the list, the principal of these being Osaka, though the number of cases that

occur there daily has for some time past been than less ten.

MR. HIRAKAWA, Commissioner of Customs at Niigata, has been transferred to Nagasaki.

COUNT INOUE, who went to Shiohara the 12th instant, returned to Tôkyô the evening of the 14th instant.

PREPARATORY to the Emperor's visit to Kyôto in the spring, the water of all the Palace wells is to be analysed.

MR. HANABUSA, late Japanese Minister to Russia, who had been staying at Okayama, returned to the capital the 15th instant.

A DRAFT of the Mechanics' Regulations, which had been under compilation by the authorities, has now been completed and will be issued shortly.

H.I.H. PRINCE HARU visited the Botanical Garden at the Imperial University, the 13th instant, and proceeded to the Fukiage Park the following day.

It is stated that Lieut.-General Count Kuroda, who is at present travelling in Europe, has received a first-class decoration from H.I.M. the Czar.

MR. ICHIKAWA EBIZO, younger brother of the well-known actor, Mr. Ichikawa Danjuro, died from *kakke* the 12th instant at the age of forty-two.

M. BERTIN, of the Naval Department, proceeded to the Yokosuka shipbuilding yard the 16th instant and inspected the *Takao Kan*, which is in course of construction.

PRINCE SANJO, Lord Keeper of the Privy Seal, and Mr. Sano, Court Councillor, have consented to become honorary members of the Japan Educational Society.

A PROCLAMATION over the signature of His Imperial Majesty the Emperor has been issued announcing that Japan has entered the Red Cross Association.

MR. YOSHIKAWA, Vice-Minister for Home Affairs, accompanied by the Governors of Kyôto and Shiga Ken, recently inspected the works of the Kyôto-Biwa canal.

THE Cricket Match on Saturday last between the Club and the Navy ended in a draw on time being called. The game was much in favour of the Club team.

MR. YANAGISHITA, of the Sanitary Office, who lately returned from Okinawa Prefecture, is at present compiling a pamphlet containing a report of his visit.

VISCOUNT HIGASHIZONO and Mr. Yoneta, chamberlains of the Imperial Household, left the capital the 13th instant for Katsura, Chiba Prefecture, on official business.

AN Imperial Ordinance has been promulgated, extending the withdrawal from circulation of

the old *tempo* copper coins until the 3rd day of the 12th month of the 24th year of Meiji.

MR. YOSHIDA, Vice-Minister of State for the Agricultural and Commercial Department, arrived at Hiroshima the 13th instant to attend the Competitive Exhibition there.

MR. HATANANO SHOGORO, Japanese Consul at Tientsin, is now making preparations to open a Competitive Exhibition in his locality next year with the object of extending trade.

THE experimental office of the Marine Products Bureau has requested Japanese Consuls in the United States to report on the prospect of selling oil obtained from whales and *iwashi*.

MR. ARIGA NAGAO, a senator, and Viscount Kamei, who are to leave for Europe to complete their studies, were admitted the 13th instant to take a farewell audience of M.I.M. the Emperor.

THE new buildings for the High Normal School have lately been completed at a cost of *yen* 320,000. It is stated that the opening ceremony will take place in the beginning of next year.

MR. TERAHARA, assistant commissioner of the Police Bureau, who was expected to return to the capital from an official visit to Kyôto and neighbourhood, will remain in Kobe for some time.

THE meetings of the Tôkyô Law Association, which had been temporarily suspended, were reopened the 12th instant at Tokyo Merchants and Manufacturers' Association premises at Kobikicho.

COUNT NISHI SANJÔ, a chamberlain of the Imperial Household, who left for the Detached Palace at Togashima, Hakone, the 10th instant on official business, returned to the capital the 15th instant.

THEIR Imperial Highnesses Princes and Princesses Arisugawa, Fushimi, Kitashirakawa, and Arisugawa (third grade) visited the buildings of the new Imperial Palace the 13th instant and inspected the various apartments.

THE drawing of Five, Six, and Seven per Cent. Pension Bonds took place the 13th inst. in the City Government Office in the presence of officials from the National Debt and Record Bureaux in the Finance Department.

THE twelfth conference in connection with treaty revision was held the 15th instant at a.m. in the Foreign Office. All the foreign representatives were present as usual. The thirteenth conference is fixed for the 22nd instant at 2 p.m.

A VERY successful concert was given on Saturday last, in the hall of the Kunmô-in (Blind and Dumb School), the programme consisting of Japanese, Chinese, and foreign music. The receipts go to the benefit of the institution.

H.I.M. THE EMPEROR proceeded to the Fukiage Park the 15th instant and visited the various apartments of the new Imperial Palace. Afterwards His Majesty witnessed a game of polo, which was played by students of the Peers' School and a number of officials in the Imperial Household.

IT is stated that H.I.M. the Emperor has given private intimation to the authorities that he will visit Kyôto in January next year when the

twentieth anniversary of the His late I.M. Komei will take place. The date of His Majesty's departure from the capital will be notified before the middle of next month.

THE officials of the First National Bank have lately discovered a counterfeit of the convertible *yen* 5 note issued by the Nippon Ginko. It is stated that the note is so closely imitated that there is some difficulty in distinguishing it from a genuine one.

THE residents at Mito, Ota, and Nakaminato, in Ibaraki Prefecture are making preparations to construct a private railway from Mito to Kayama, in order to connect with the North-Eastern line of the Japan Railway Company and afford more facility of communication between Tôkyô and that locality.

ACCORDING to investigations made during September last, the total number of Japanese residents in Fusan was 1,874, of whom 919 were males and 865 females, living in 430 houses. The total number of Japanese residents in Gensan during the same period was 284, of whom 179 were males and 105 females, living in 75 houses.

IT is stated that the business in Kyoto of Viscount Tominokoji, chamberlain, and Mr. Yamaguchi, secretary of the Imperial Household, is to make arrangements for the reception of H.I.M. the Emperor, who proposes to attend the ceremony of the twentieth anniversary of His late I.M. Komei, which will take place at Kyoto the 30th January, 1887.

STAGNATION continues in the Import market, the condition of trade in that direction being rather more accentuated this week than last. In Yarns, Cotton Piece-goods, and Woollens, business has been of a retail character in extent, and prices are consequently nominal all round. Little has been done in Metals of any description, only dribbling sales of Kerosene are reported, and Sugar has been sold in small lots only which make no impression on the stocks. Of Exports, Silk has been largely dealt in at long figures, mostly for Europe; but the stock is still heavy and arrivals come freely. In Waste Silk much less has been done, the prices demanded on a steadily rising exchange having made buyers cautious. Tea begins to drag, and reports from quarters of consumption are not encouraging. Foreign Exchange has risen steadily day by day, and closes firm with indications of a further upward movement.

#### NOTES.

THE public will learn with satisfaction that proceedings have been instituted by the Prefect of Hyôgo against Captain Drake, of the *Normanton*, on a charge of homicide. Application for a summons was made on the 12th instant, and the process of swearing informations commenced on the 15th. The charge is preferred under instructions from the Ministers of State for Home Affairs and for Communications, who appear as accusers. The legal conduct of the case has been entrusted to Mr. J. F. Lowder and Mr. Masujima, who left for Kobe on Saturday night. Mr. Tsukabara, a Councillor of the Department of State for Home Affairs, accompanied by Commander Squire, late Royal Navy, and now in the service of Marine

Bureau, took passage at the same time on the same business. We are glad that the Government have decided to take this step, because the affair, if left at this stage, would constitute a lasting stain on the reputation of British seamen and must seriously impair the character of English justice in the minds of the Japanese nation. It is beyond question that, were the cases reversed, had the abandoned passengers been European and the crew that abandoned them Japanese, the indignation of the foreign community would be expressed in vehement terms. We cannot recognise that a difference of nationality ought either to affect our sympathy with the unfortunate sufferers, or to extenuate the culpability of those who abandoned them to their fate. Whatever be the result of the proceedings now in process at Kobe, they will at least have the effect of elucidating the catastrophe. We sincerely hope that their issue will be to relieve the chief actors from the stigma now attaching them, or, if that be not possible, that British justice will be at least absolved from the imputation of condoning, when exercised towards Japanese, conduct which would be bitterly condemned had English men and English women been its victims.

\* \* \*

THE preliminary stage of this trial affords an interesting example of the machinery which has been set up in Japan by foreign Powers for the administration of justice. Great Britain certainly has less to reproach herself with on this score than any of her Treaty associates. Her Kanagawa Court is well equipped, and offers to a foreign suitor all the facilities and guarantees which can be reasonably desired. Yet even in her case something very like a travesty is unavoidable in connection with the arraignment of Captain Drake. For the same official who, as President of a Naval Court of Inquiry, recorded his deliberate verdict that "the master and officers of the *Normanton* did everything in their power to save life," has now to sit in a magisterial capacity at an investigation in which the same Captain stands charged with homicide for criminal neglect of the means at his disposal to save life. Nothing could be conceived more inconsistent with all the first principles of impartial investigation. A Consul's primary and most important function is to act as the client of his nationals in all their disputes with strangers. The consequence is that he often finds himself compelled to perform the rôle of an advocate one day and of a judge the next in the same affair. But to have to preside judicially at an investigation in which a decision publicly delivered by himself is challenged, demands an almost supernatural duality of mind. Probably there are some of Her Majesty's Consuls who by long training and constant effort have developed this twin capacity. But to educate themselves to such a point of self-abstraction cannot be much more difficult for them than it is for others to believe that the feat has been accomplished. Japanese who consider the matter attentively must find it very like a solemn farce, and may be pardoned if their faith in Consular jurisdiction does not survive the discovery.

\* \* \*

THE *Hochi Shimbun* states that Mr. Kuroda, a counsellor of the Home Office, accompanied by Mr. Nishida, a clerk, was to have left the 14th instant for Kobe with the object of reporting on the locality (in the Kii Channel) where the *Normanton* was wrecked. The

Departments of Home Affairs and Communications propose to lay a protest before the British Consul at Kobe relating to the *Normanton* affair. The Japanese Government have requested the authorities to see that the crew of the *Normanton* do not escape, a rumour prevailing that some have already left. It is very doubtful whether the bodies of any of the 25 passengers have yet been found up to this date, and therefore Mr. Kuroda has been ordered to make enquiries on this point.

The *Mainichi Shimbun* says that Mr. Uchimi, Governor of Hyōgo, has taken the preliminary steps towards a prosecution on receiving instructions from Count Yamagata and Admiral Enomoto, both Ministers having decided to appeal against the judgment of the recent Court. Application has been made for the detention of Captain Drake, but no complaint as to manslaughter has been made.

We (*Japan Mail*) understand that two of the engineers of the *Normanton*, who arrived in Yokohama by the *Tukasago Maru* on Friday, have been sent back to Kobe.

The five leading metropolitan Japanese newspapers publish the following uniform announcement in their issues of Saturday:—

"The remains of the Japanese passengers who travelled in the *Normanton* lie at the bottom of the sea off the coast of Kii, while the master and crew of the vessel, on whom devolved the responsibility of providing for the passengers' safety not only landed safely, but have also been absolved of all blame by a Naval Court of Inquiry assembled at the British Consulate, Kobe. There being not a single Japanese survivor of the catastrophe, we are unfortunately deprived of all evidence on the side of our unhappy countrymen and countrywomen. We have, however, the satisfaction of observing that the views expressed in our columns on the subject are endorsed by not only the Japanese but also the foreign community. Our position as journalists constitutes us a convenient medium of communication with the public, and we, the editors of the undermentioned papers, have therefore jointly resolved to invite the aid of charitable persons on behalf of the families of the unhappy victims of the catastrophe. We are prepared to receive subscriptions for this purpose, under the following arrangements:—

1. There shall be no limit as to the amount of each subscription, but limits of from 1 to 10 yen are suggested.
2. The list shall be closed on December 10th.
3. The names of subscribers shall be published in our columns from time to time.
4. The money collected shall be transmitted to the families of the deceased through the hands of the proper authorities.
5. The amount of the subscriptions and all accounts relating to them shall be published in full.

We pray our countrymen to show their generosity by sending contributions, however small, to any of the undermentioned offices.

The *Yiji Shimpō* Office.  
The *Hochi Shimbun* Office.  
The *Choya Shimbun* Office.  
The *Mainichi Shimbun* Office.  
The *Nichi Nichi Shimbun* Office.

Among the circumstances which contributed to deepen the suspicion engendered by the *Normanton* catastrophe, the death of the Lascars who escaped from the ship was not the least remarkable. There were among the crew twelve Lascars serving in the capacity of firemen. Three of these entered the starboard life-boat with the chief officer and the carpenter, and although the two Europeans reached the shore in safety, the three Lascars perished from exposure. It seemed strange that one night in an open boat under a Japanese autumnal sky should have killed these three firemen, and the public was not unnaturally disposed to attribute their death to the unfortunate fatality

that attended all the Orientals in the *Normanton*. Subsequent information shows, however, that the exposure which cost the Lascars their lives proved nearly as fatal to their European companions. It will be remembered that in the act of lowering the starboard life-boat she upset, precipitating her crew into the water. At the last moment the chief officer, observing that she had righted, jumped into her and was followed by the carpenter. The boat was then nearly full of water, and being without oars, drifted all night at the mercy of the wind and waves. In the morning Japanese boats put off from the shore and brought her in, when the Lascars were found to be beyond help and the two Europeans were in a fainting condition. The Naval Court of Inquiry did not trouble itself to ask how the five men passed the night in the life-boat, and we are consequently left to guess whether the toil of baling or any other hardship was added to the suffering of wet and exposure. But it is at least satisfactory to know that the death of the Lascars is intelligibly explained. On the other hand, the fact that the chief officer and his companions had to escape in a boat full of water and without oars, leaving four other fully equipped boats hanging on the davits of the *Normanton*, suggests a vivid idea of the confusion that must have prevailed in the ship.

The charitable efforts of the five leading metropolitan journals on behalf of the relatives of the passengers who lost their lives in the *Normanton* are meeting with great success. Subscriptions are coming in rapidly. The published names of contributors already include those of many high officials and leading residents of Tōkyō. Mr. K. Nabeshima, has addressed the following letter to each of the five journals that have taken a leading part in the movement:—

GENTLEMEN,—The pleasant duty devolves upon me of addressing you in the name of the undermentioned ladies and gentlemen. The reports thus far published with regard to the wreck of the steamship *Normanton* show that all Orientals who were on board perished, with the exception of one Chinese boy, while all the Occidentals, with the exception of one who met his death by accident, survived. If such be really the fact, fate, in this instance, has been very unkind to the people of the East. Confining our attention for the moment to the case of our own countrymen and countrywomen, it would seem that their death must be attributed to one of two causes—either they were abandoned to their fate by the so-called "civilized" Occidentals; or, obeying a chivalrous instinct, they generously sacrificed themselves so as not to obstruct the safety of the Westerns, to whom life is very precious. On either hypothesis, the calamity that overtook our unfortunate compatriots is to be sincerely pitied, and our sympathy with the dead has been intensified by the finding of the Naval Court of Inquiry assembled at Kobe. It is for us, whose nationals were the victims of the catastrophe, to do something which may soothe the spirits of the departed and mitigate the sorrow of their mourning relatives. Observing that you have promptly taken steps with this object, the undermentioned ladies and gentlemen have commissioned me to convey to you their heartfelt approval of your efforts, and to forward their several contributions to the fund you are collecting.

Your obedient servant,

K. NABESHIMA.

The names of the ladies and gentlemen on whose behalf Mr. Nabeshima writes are: Countess Yamagata, Count and Countess Toda, Count and Countess Maeda, Baron and Baroness Nagaoka, Count Sagara, Count Matsudaira, Mr. and Mrs. Iwasaki, Mr. and Mrs. T. Masuda, Dr. and Mrs. Takagi, Mr. and Mrs. Shibusawa, Mr. K. Nakayama, Mr. K. Sue-matsu, Mr. and Mrs. K. Nabeshima, Mr. and Mrs. M. Ito, and Marquis and Marchioness Nabeshima.

We refrain from translating the articles which continue to appear in the vernacular press on

the subject of the loss of the *Normanton*. Our readers have already been rendered sufficiently cognisant of the strong public feeling excited by the news of that sad catastrophe. But the remarks of the *Hochi Shimbun* deserve special notice. That journal at the outset discussed the affair in terms which veiled sharp sarcasm under a guise of moderation. It condemned the conduct of the master and crew sufficiently plainly, and traversed the judgment of the Naval Court of Inquiry. At the same time it reminded its readers that a distinction should be drawn between regular passenger ships and ordinary cargo vessels like the *Normanton*. In the latter no proper provision is made for passengers; they are shipped, pretty much as merchandise, at cheap rates, and if they subject themselves to the perils of the sea under such conditions, that is their own look-out. But the real sting of the *Hochi's* remarks is contained in the last paragraph. Our contemporary there observes that the *Normanton* catastrophe is, after all, a mere bagatelle compared with the treatment which the passengers in a much larger vessel called *Japan* are receiving at the hands of foreign nations. This is a biting criticism, and most apposite. Just as the crew of the *Normanton* left the passengers to perish and provided only for their own safety, so European nations, thinking only of what advantage they may severally derive from Japan's helplessness, leave her to struggle with difficulties which were chiefly created and are rendered insuperable by their unscrupulous selfishness.

"Sub-Judice's" protest, which appears in our correspondence columns, is timely but scarcely quite accurate. Since the fact became known that an action for manslaughter was about to be brought against Captain Drake, of the *Normanton*, the foreign press of this settlement cannot be said to have "sided against him." With the circumstances of the shipwreck and the proceedings of the Court of Inquiry alone before us, it would have been a distinct neglect of duty to refrain from criticism. But the news that a criminal action has been instituted precludes further comment. We trust and believe that a similar reticence will be observed by the vernacular press. The *Mainichi Shimbun* of yesterday, it is true, contains a picture which is not only an untrue representation of the catastrophe, so far as the evidence indicates, but seems also designed to serve no purpose other than the mischievous excitement of public opinion. The picture shows a number of Japanese, men and women, struggling among waves that sweep over the deck of a sinking ship, while in the distance three boats full of foreign sailors pull quietly away, and in the stern of one a man stands up pointing, apparently in derision, to the unfortunates who are perishing with the wreck. The *Mainichi Shimbun* does not add to its reputation by this virulent caricature. It is not the function of a respectable journal to rouse unjust resentment in the minds of its readers, or to prostitute its columns to the malicious distortion of facts. At present the sympathy of the foreign residents is with the Japanese, but indiscretions such as that perpetrated by the *Mainichi Shimbun* cannot fail to weaken, and, if continued, to alienate this feeling.

The excitement about the *Normanton* affair is already keen enough in all conscience. We

read in the vernacular press that the two sons of Mr. C. Miyagi, one of the sufferers, applied to Messrs. Takanashi and Masuda to institute a suit for damages before the British Consular Court in Yokohama against the master of the wrecked steamer. But Messrs. Takanashi and Masuda, believing that a better course would be to bring the suit in the name of the relatives of all the deceased passengers, have addressed a circular to the relatives offering their services gratis. It is further stated that these two lawyers are supported by Mr. Shibusawa and a number of other wealthy merchants in Tôkyô, who have engaged to bear the whole expenses of the suit. The conduct of the case in the local court has been entrusted, it is said, to Mr. Kirkwood, and the resolve is to carry it even to England until justice is obtained. Meanwhile, Mr. Shimada, editor of the *Mainichi Shimbun*, and Mr. Kurisu, a Yokohama merchant, have applied to the Minister of State for Home Affairs for permission to examine the wreck by the aid of divers at their own expense, and have commenced negotiations for that purpose. This step is doubtless prompted by a suspicion entertained in some quarters that the Japanese passengers were shut into a cabin at the time of the wreck and thus prevented from availing themselves of the boats. But the latest information is that just before the vessel went under water, the passengers were seen in a group at her bows. In that position they were addressed by the crew of one of the boats, and told to jump into the sea, when the boat would pick them up. But they shrank from doing so. Another statement is that the Law Association, a Society formed by Professors of the Imperial University and lawyers, was to hold an extraordinary meeting last evening in the lecture-hall of the Department of Jurisprudence for the purpose of voting upon four resolutions with reference to the *Normanton* catastrophe. We also read that the students of the Meiji Hôritsu Gakko, one of the most flourishing private schools of law in the capital, held a meeting the night of the 14th inst. at the Kaikaro restaurant and resolved unanimously to offer their services gratis for conducting legal proceedings on behalf of the families of the drowned passengers. Their aid is, however, rendered superfluous by the action of Messrs. Takanashi and Masuda.

The lecture delivered on Sunday in the Yokohama Machigaisho by Mr. G. Fukuchi (of the *Nichi Nichi Shimbun*) was attended by over three thousand persons, many being unable to gain admittance. The excitement was so great among the audience that the assistance of the police had to be obtained before the lecturer could get a hearing. Mr. Fukuchi spoke of the disaster at some length, and suggested that subscriptions should be collected for the purpose of defraying the expense of searching for the bodies of the passengers. He also pointed out that in the meantime it will be advisable that Japanese should not take passage in cargo ships, apart altogether from the question of what flag they sail under.

Referring to the *Normanton* case, the *Hiogo News* of the 16th instant says:—When the charge of manslaughter brought by the Japanese authorities against the Captain of the *Normanton* came on for hearing yesterday in H.B.M.'s Court and application was made for a postponement until to-day, as Mr. Lowder, who

conducts the prosecution, was on board the *Teheran*, and the vessel had not arrived. The Court granted the application and admitted the accused to bail. In addition to Mr. Lowder, the *Teheran* brought down Mr. Tsukahara Shuzo, Chief Commissioner of the Marine office, Captain Squire, R.N., and Mr. A. F. Macnab, also of the same department. We are informed that the preliminary inquiry will be held in private, only those officially connected with the case being permitted to be present.

There can be very little doubt, we imagine, that the telegram from Kobe which we extract from the vernacular press, to the effect that British firms at Kobe are to be boycotted until justice is obtained against Captain Drake of the *Normanton*, is purely a figment of some giddy reporter's imagination. The *Mainichi Shimbun* has already made itself notorious by publishing a caricature calculated solely to inflame public passion, and it does not mitigate the unpleasant impression by ventilating rumours of such an extravagant nature as that under consideration. Indeed, we are emphatically of opinion that both the press and the public are carrying this *Normanton* agitation beyond all reasonable limits. It will be a most unfortunate sequel to a sad catastrophe should the Japanese nation show itself incapable of preserving, in the presence of a judicial investigation, that calm and impartial demeanour which the first principles of moral civilization dictate.

Addresses on the *Normanton* case were given on Thursday evening at the Yokohama Machigaisho before a meeting numbering over a thousand persons, and including several foreigners. Messrs. Norita Yakichi and Tomita Gentaro delivered an "Appeal to the community of Yokohama-ku," in which they described the manner in which the officers and crew of the vessel were rescued while the passengers were left behind. They suggested that a full report of the proceedings at this meeting, signed by the Japanese residents in Yokohama, be sent to the *London Times* and other journals in the West in order that the matter should be brought fully before all the world. For this purpose it was proposed to raise a fund to defray the expenses, any sum that remained to be given to the families of the passengers. The first letter would probably be sent by the *Gaelic*. Mr. Ogawa Michizo, Mr. Koezuka Kin, and Mr. Shimada also spoke, the latter stating that he had received a telegram from Kobe to the effect that the chief officer said the loss of the passengers was caused by the fact that the order to save them was given too late. The meeting terminated about ten o'clock.

Addresses under the auspices of the five leading Tôkyô journals will be given the 23rd instant in Tôkyô in reference to the *Normanton* affair, and the money realized by the sale of tickets will be contributed to the relief fund for the families of drowned passengers. The proprietor of the Shintomi Theatre has offered the building for that purpose, but the matter has not yet been settled. The lecturers are as follows:—Messrs. Fukuchi (*Nichi Nichi*), Suehiro (*Choya*), Numa (*Mainichi*), Nakami-gawa (*Fiji*), and Fujita (*Hochi*).

A writer, who apparently lacks resolution to address himself directly to the journal which he attacks, publishes, in the columns of the *Japan*

*Gazette*, a letter traversing our statement that, since the public announcement of a criminal suit being instituted against Captain Drake of the *Normanton*, the foreign local press had not prejudiced his cause. The writer points out that an article inimical to Captain Drake appeared in our own columns simultaneously with the announcement that a criminal action was about to be instituted. This criticism looks just. But the fact is that our article was in reply to a letter published by Captain Drake himself, in which our previous statements with regard to the *Normanton* affair were characterised as "extraordinary;" and further, if the *Japan Gazette's* correspondent will examine the article, he will observe that we confined ourselves strictly to a discussion of the evidence laid before the Naval Court of Inquiry. Such a course was perfectly legitimate, and does not merit any of the strictures implied in the letter of the *Gazette's* correspondent. It is absurd to suppose that the interests of justice forbid a newspaper to comment on the published proceedings of a Court because the same case is about to be reopened by another Court of a totally different nature. Captain Drake appealed to the public, declaring his conviction that when the whole of the evidence elicited by the Naval Court was published, he would be acquitted of blame. We simply answered his challenge by reviewing the evidence, and showing what slender ground it offered in support of his conviction.

When the court was opened yesterday (16th Nov.) for the hearing of the charge brought against the Captain of the *Normanton*, it became apparent that no restriction would be placed upon the attendance of the public. Our statement that the matter would probably assume the form of a private inquiry was, therefore, in error. It is very evident that the proceedings are attracting a great deal of attention among the Japanese, judging from the number of officials and others who were present in court yesterday (16th). The case will seemingly occupy some considerable time, and is to be resumed at ten o'clock this (17th) forenoon.—*Hiogo News*.

The Japanese papers publish the following telegrams:—

(*Nichi Nichi Shimbun*.)

Kobe, November 13th 4 p.m.  
The Governor of Hyogo presented a complaint the day before yesterday in H.B.M. Court against Captain Drake of the *Normanton* for the crime of manslaughter. The Court will be re-opened the day after to-morrow. Mr. Creagh, Editor of the *Hyogo News*, represents the Governor, and Mr. Kirkwood is expected to arrive from Tôkyô.

(*Choya Shimbun*.)

Kobe, November 13th, noon.  
Captain Drake was arrested last night and the British Consul (?) at Yokohama will arrive here to preside over the Court.

(*Nichi Nichi Shimbun*.)

Kobe, November 15th, 3.40 p.m.  
The preliminary examination in regard to the *Normanton* case, which was to have been opened to-day, has been postponed till to-morrow. Mr. Lowder arrived here to-day.

H.B.M.'s Judge is expected to arrive to attend the trial.

Mr. Kuroda, Counsellor, has not arrived yet. He will probably go to Wakayama.

(*Mainichi Shimbun*.)

Kobe, November 15th, 2.50 p.m.  
Mr. Tsukahara, chief commissioner of the Marine Bureau, arrived here to-day at noon.

(*Hochi Shimbun*.)

Kobe, November 15th, 2 p.m.  
Mr. Kuroda, counsellor, who was to have gone

to Kishu to investigate the circumstances of the *Yokomichi* affair, has not yet arrived.

Mr. Lowder, representing the Japanese Government arrived to-day.

(*Nichi Nichi Shinbun*)

Kobe, November 16th, 5.30 p.m.

The preliminary examination in the *Normanton* case was opened to-day in H.B.M. Court. Messrs. Lowder, Masujima, T. Uehara, and two foreigners were associated with the Court. The defendant applied to the Court for a postponement until he could summon a barrister from Shanghai. He paid \$4,000 to the Court as bail.

(*Mainichi Shinbun*)

Kobe, November 16th, 5 p.m.

The preliminary examination of Captain Drake and others was held to-day at 10 o'clock in the morning and again at 2 p.m. The public were allowed to attend the Court both in the forenoon and afternoon.

Mr. Kuroda, Counsellor, arrived to-day at 9.30 a.m.

(*Nichi Nichi Shinbun*)

Kobe, November 17th, 4.30 p.m.

The preliminary examination in connection with the *Normanton* case was opened to-day. The attendance of the public was allowed yesterday.

The Governor of Wakayama arrived here to-day. Mr. Kuroda, counsellor, will leave here to-morrow for Wakayama.

It is rumoured that the case will be transferred to Yokohama.

Mr. Masujima leaves by to-day's steamer for Yokohama.

(*Mainichi Shinbun*)

Kobe, November 17th, 3.20 p.m.

The *Normanton* case was again opened to-day. The Governor of Hyogo visited the British Consulate to-day.

It is stated that the leading merchants in Kobe have decided not to carry on trade with English firms until the conclusion of the present action.

(*Hochi Shinbun*)

Kobe, November 17th, 4.45 p.m.

Mr. Masujima, who represents the Governor, has left to lodge preliminary notice with a view to the removal of the case to Yokohama.

(*Nichi Nichi Shinbun*)

Kobe, November 18th, 3.05 p.m.

The preliminary examination in connection with the *Normanton* case was opened to-day.

Mr. Kuroda, Counsellor, accompanied by Mr. Matsumoto, Governor of Wakayama, leaves to-day for Kishu in the *Tsuru Maru*. A diving bell was also shipped on the steamer.

(*Mainichi Shinbun*)

Kobe, November 18th, 3.20 p.m.

William Wells, first mate of the *Normanton*, states that the death of the passengers was caused by the order to save them being given too late.

Kobe, November 18th, 10.15 a.m.

Messrs. Ooka and Hatano arrived last night and immediately had an interview with Mr. Kuroda, relating to the diving operations at the wreck.

Kobe, November 18th, 2.50 p.m.

The preliminary examination was opened to-day and all the crew were examined. The testimony was generally against the captain.

Kobe, November 18th, 2.50 p.m.

The departure of Mr. Kuroda has been postponed till to-morrow.

A subscription has been opened at this office on behalf of the families of the unfortunate Japanese who lost their lives in the *Normanton*. We feel that it would be quite superfluous to say anything in recommendation of a charity which will appeal at once to the generous instincts of the foreign community. One circumstance may, however, be pointed out; namely, that by pecuniary relief alone can some antidote be provided for the painful impression which this sad event has produced throughout Japan. Neither public speeches, newspaper articles, nor even memorials are likely to reach the remote districts where the homes of the mourners are situated. But substantial succour, following quickly on the footsteps of the evil news, may do much to restore the confidence which the catastrophe has

undoubtedly shaken. The following subscriptions have been already received:—

	DOLLARS.		DOLLARS.
The Hon. Sir Fran. R.	10.00	Captain Allen	5.00
Fraser, Esq.	10.00	Captain A. R. Brown	10.00
Thos. F. Le Port	10.00	A. Macmillan, Esq.	10.00
Trench	10.00	H. C. Litchfield, Esq.	10.00
A. Larcom, Esq.	10.00	T. H. James, Esq.	5.00
J. H. Gaulton, Esq.	5.00	Peyton Jordan, Esq.	5.00
R. de H. Bayard, Esq.	5.00	W. A. Stone, Esq.	10.00
A. O. Gay, Esq.	10.00	F. B. Glover, Esq.	10.00
W. de Russell, Esq.	10.00	Captain L. M. James	10.00
D. W. Stevens, Esq.	5.00	F. W. Strange, Esq.	5.00
C. Walsh, Esq.	10.00	E. Dun, Esq.	5.00
Colonel H. S. Patner	10.00	A. Wedder, Esq.	5.00
B. A. Chamberlain, Esq.	10.00	T. J. Moss, Esq.	5.00

W. Rowe, Esq.	5.00	Total	684.00
L. Mullison, Esq.	5.00		
W. Sutter, Esq.	5.00		

A CONCERT was given on Saturday last in the Hall of Kunmō-ain (Blind and Dumb School), Tokyo, in aid of the funds of that institution, the programme being a mixture of Japanese, Chinese, and foreign music, both vocal and instrumental. There was a large attendance, many persons being compelled to stand, and the funds of the Kunmō-ain must have benefited considerably by the venture. The managers were evidently unaccustomed to the business, as the audience was kept waiting exactly half-an-hour before the first piece on the programme was commenced, although some Japanese music was given by inmates of the institution during this time on three kotos and a samisen—a sort of "playing in" the house. The first piece, the "Tsuru-nosongomori," was played on a koto, two kokius, samisen, and fute, as was also the "Sarashi" which followed. The musicians, who soon proved themselves to be skilled performers, were well rewarded with applause. The Chinese music was discoursed by a band of ten, which included three wood-wind and five string instruments, and two drums, the pieces being the "Shoka-raku" and the "Raishinto." These were also performers of a high class, and were loudly applauded. This part of the programme concluded with the "Shochikubai," which was excellently rendered, though somewhat tedious on account of its length. Some members of the Institute of Music, under the direction of Professor Sauvlet, next appeared in three vocal efforts, the last being a choral morceau from "Il Trovatore." The choir was not nicely balanced, the soprano—the sweetness of which was now and then heard—being dominated by the voices of more than three times the number of male organs of indifferent timbre. They sang in time, however, and considering the institution has not long been established, are to be congratulated upon the progress made. Like many amateurs in other countries, however, they appear to have missed the first lesson in singing—"please open your mouth." This was followed by two male members of the Institute of Music performing on the piano, and these were succeeded by three young ladies on the same instrument, the performance

of both parties receiving a recognition at the hands of the audience. The next items were a polka and a gavotte by an orchestra comprising nine violins, three bass viols, and a contra basso. The pieces were simple and went well, the first violin being played by a young lady, whose tones were excellent and whose bowing was workmanlike. A lady from Yokohama and Professor Sauvlet then played Reissiger's "Felsenmühle;" another lady from Yokohama sang the "Jewel Song" from "Faust" (in French), and a very successful concert was brought to a close by an orchestra from this Settlement rendering in a manner well known to most readers the popular overture to Suppé's "Poet and Peasant," each of which was much appreciated and duly applauded. We are glad to see that so laudable an object as the augmentation of the funds of the Kunmō-ain received the valuable and ready assistance of foreign amateurs, and the managers of the institution may be assured that a similar programme will, after a short interval, again attract a large audience. The Japanese and Chinese music is novel to many, the progress of the members of the Institute is interesting, and the efforts of the foreign amateurs are always appreciated.

THE value of Bulgaria to Russia on her way to Constantinople is well known, but the intrinsic value of the country, apart from political considerations, is often overlooked. Bulgaria proper, as constituted by the Berlin Congress, counts about two million of people. By a trifling extension of its present extremely primitive agriculture, the land could easily sustain ten million inhabitants, and by a few improvements in tilling and cultivation it could maintain about five million more. Only a sixth of this extremely fertile country has been brought under cultivation. It would easily yield an abundance of tobacco, cotton, roses, iron, and timber of every variety. Wool and meat could be made articles of export, and the production of silk would be nowhere more remunerative, Asia Minor excepted. The state of society, too, would favour the rapid growth of the national resources. A nation of small proprietors, the Bulgarians know neither want nor dependence. All have enough to live; great landed proprietors and an aristocracy are unknown. While the Servian is merry, impulsive, and not over-inclined to work, the Bulgarian is quiet, slow, and steady, even stubborn. Austria imports most, then England, then Roumania. France participated in an import of 90,000,000 francs in 1882 only to the extent of 3,000,000. German imports passing through Austrian hands cannot well be estimated. One third of the country's revenue goes to defray the expenses of the military budget. There are no debts, but the peasants are unusually loath to pay taxes. Hence has arisen the necessity of borrowing money to meet the expenses of the Servian war, in connection with which Russia is said to offer a loan on conditions more political than financial. Russia has lost a great deal of prestige in the country owing to her general policy as well as to the desire on her part to fill high positions in the army and in the civil administration with Russians rather than Bulgarians. Some of her most determined opponents in Bulgaria first became estranged from her by a real or fancied failure on her part to recognize their merits, and the possible

return of Russian officers to Bulgaria is looked forward to with little complaisance by those who profited by their recall. The fact that Russian soldiers and men-of-war have been sent to Bourgas, a town where the Pro-Russian party is strongest, may indicate that Russia hopes to restore her prestige only by the drastic remedy of occupation. If such be the case, a great crisis is at hand for Bulgaria and for Europe also.

THE social question assumes with every year a more threatening aspect throughout Europe. Agitators who believe that a state of anarchy will best serve their purposes are daily increasing in number. Plots are reported from St. Petersburg and Vienna against the lives of the Emperors there, and Paris and Leipzig have of late witnessed more or less serious riots in their streets. Some of the continental States try to meet the danger by what has been called State socialism,—an attempt to incorporate into the legislature as much as can be safely adopted from the socialist programme. Others refer the solution of the problem to private benevolence and to the good sense of the labourers and their employers. Neither method, however, though it may alleviate the evil and lessen its danger, can effect a complete cure. Against anarchists, the organized party of discontent, the final resource will always be the law and the force that stands behind the law. There is not the shadow of a doubt that the anarchists are largely recruited from the criminal elements of society, and that many among them are only too glad to avail themselves of a political party name to deceive others, and often themselves, as to the true nature of their agitation. Recently a proclamation was issued by some of their leaders in Paris, concluding as follows:—"Workmen, onward! Act, take what belongs to you and death to those who have stolen it from you. Death to thieves! Long live anarchy!" General Boulanger's friends—or enemies—do him little favour by claiming that he desires war, not for regaining lost prestige, not for Alsace-Lorraine, but for the sake of settling the social problem. If war indeed could settle it, Germany would have no socialists, Russia no Nihilists, and France no Communists.

We congratulate Messrs. Kelly and Walsh on their conception that, instead of importing into Japan Christmas cards which, when they are prettiest generally present some features borrowed from Japanese art, a more rational scheme would be to prepare upon the spot something which would be really representative of Japan, its people, their customs, and its scenery. The idea is good, and, judging from a specimen card which has been submitted to us, the manner of carrying it out will prove, on the whole, entertaining. The card we have before us contains six miniature photographs, reproductions, if we mistake not, of scenes which have become traditional by perennial repetition in the albums of both residents and globe-trotters. Fuji, of course, occupies the place of honour, and is flanked on either side by a gate of the Nikkō temples and a group of country-folks in a wistaria arbour. Then, in one corner below, we have the particularly pretty Cyprian whose face figured for so many years on the sign-board of Messrs. Stillfried and Anderson. Her vis-à-vis is a betto, showing a highly tattooed back, and, for the sake of propriety,

separated from his fair neighbour by a pagoda. All this is very well, but what shall we say of the abominable doggerel that finds a place in the seventh division of the card?

"Japan is not a land where men need pray,  
For 'tis itself divine:—  
Yet do I lift my voice in prayer and say:  
May every joy be thine."

This miserable couplet is signed "Ohtomaro," a mongrel term which might have been more appropriately written "Oh-good-lor-o." Underneath the couplet there is a device consisting of a painter's palette resting, in an impossible position, on a branch of blossoming plum. The palette is, of course, of foreign form; nothing like it was ever seen in Japan. In short, the designer and composer of the contents of the seventh division of the card appear to have done everything they could to spoil the whole affair. It is to be hoped that they have been happier in other cases. But even if they have not, the cards are an immense improvement on the ornate and brilliantly tinted souvenirs which people are in the habit of sending each other through the post at the festive season of the year.

THE project of a railway in Kiushû has elicited some of the rosy estimates which usually brighten the inauguration of such schemes. The committee appointed by the projectors has held several meetings at Hakata, in Chikuzen, and has drawn up a constitution for the company, as well as a memorial to Government for the concession. The *Nichi Nichi Shimbun* says that no doubt need be entertained with regard to the assent of the authorities, as Prefect Yasuba, during his recent visit to the capital, conferred with the Ministers upon whom the decision will devolve. Of the first section of the proposed line—from Monji-ura in the province of Buzen to Misumi-minato in the province of Higo, about 150 miles in length—the portion lying in the Prefecture of Fukuoka, some 90 miles, has already been surveyed. Elaborate statistics have also been prepared under Prefect Yasuba's directions, showing the probable earnings of that portion of the section. In these statistics the quantities of products exported from, and imported into, the prefecture in 1882 are taken as a basis, and ample corrections are applied on account of the difference between the state of the markets then and now. The result is that the maximum weight of the goods which might pass over the line is 956,268,995 catties, and to this total a correction of 30 per cent. is applied on account of other routes. At the rates of 4 and 8 *rin* a *ri* per two catties of heavy and light goods respectively, the receipts from this source amount to 159,288 *yen*. With regard to passengers, the number of persons who travelled to and from Fukuoka in the districts lying along the line in 1882 was 1,094,023. These are divided into middle and lower classes, the transport of the former being estimated at 4 *sen* and that of the latter at 2 *sen* apiece per *ri* (2½ miles). The receipts from this source tot up to 141,194 *yen*, and the total earnings of the line aggregate 300,482 *yen*. Two-fifths of the aggregate are put down to working expenses, and the result as net earnings is 180,290 *yen*. The cost of construction is estimated at 50,000 *yen* per *ri*, giving a sum of 1,800,000 for the whole 36 *ri* (90 miles), and on this assumption a dividend of over ten per cent. is predicted. The prospect is said to have roused much enthusiasm in Fukuoka, and the inhabitants of Osaka and other

places are hastening to subscribe. The people of Kumamoto are described as having been conspicuously zealous from the outset, and those of Saga Prefecture, though somewhat lukewarm at first, are now joining heartily in the scheme.

\* \* \*

It will be seen at once that the above estimate includes some points which require modification. The rates for passenger traffic are small—only three-fifths of those charged on the Tōkyō-Yokohama line, where, according to the Fukuoka estimate, second and third class tickets should cost 18 *sen* and 36 *sen* respectively, instead of 30 *sen* and 60 *sen* as at present. Moreover, the number of persons who have hitherto travelled by road is by no means a fair criterion of the number that would be likely to travel by railway. The tendency of railways is to develop passenger traffic enormously. The experience of Japan in this respect has been uniform with the experience of Western countries. We should be inclined, therefore, to add from 30 to 50 per cent. to the sum set down against earnings from the passenger source. The case of goods is different. It is true that an inland line, like that under consideration, would be comparatively free from the competition of coasting steamers though this immunity does not extend to the portion—18 *ri*—between Monji-ura and Fukuoka, and further the Fukuoka road would not have to contend with even river traffic. But, for some reason or other, the carriage of goods by rail has not yet recommended itself largely to Japanese producers. The Tōkyō-Takasaki line, for example, in spite of its favourable situation, has not succeeded in attracting this species of traffic to an appreciable extent. Admitting that it is handicapped by the great rivers which traverse the districts it crosses; that its capabilities as a carrier of market supplies are virtually annulled by the inconvenient location of the terminus, and that the directors have not yet laid themselves out seriously to meet the convenience of producers, there still remains the conservatism of the Japanese farmer, who has not learned to set a pecuniary value on his time or on the exercise of his thaws and sinews. We should be disposed, therefore, to conclude that the projectors of the Kiushû line take a too sanguine view when they look forward to obtaining 70 per cent. of the goods' traffic in the district. But the most inexplicable figure in their calculations in the estimate of the cost of construction. No railway in Japan has been built for fifty thousand *yen* a *ri*. Even the Poronai line cost over seventy thousand, and it is not to be supposed that the method of construction employed in Hokkaido will be followed in Kiushû. Three million *yen* seems a more correct estimate on account of cost of construction than one million eight hundred thousand. Such errors of calculation, however, cause incomparably less concern than the wholesale reductions which the floating capital of Japan is undergoing. What with Nakasendo Bonds, Naval Bonds, Kinsatsu Exchange Bonds, Redemption Bonds, and Kiushû Railway Scrip, it is evident that ability to meet the demands of ordinary commerce is constantly diminished, and that the much-to-be-desired period when such demands will arise is proportionately deferred.

THE *Yiji Shimpō's* remarks—published among our translations a few days ago—on the subject of

the Nippon Yusen Kaisha, are not distinguished by the thoroughness for which that journal is generally conspicuous. We do not allude to the question of the interpretation to be put on the pecuniary obligations assumed by the Government towards the Company. That matter involves a discussion upon which we are not prepared to enter here. What we refer to is the reason assigned by the *Yiji Shimpō* for the inception of the Kyōdō Unyu Kaisha. According to our Tōkyō contemporary, the only purpose which the projectors of the latter had in view was to mitigate the injuries caused by the monopoly of the Mitsu Bishi Kaisha. That is a remarkably misleading view of the facts. The interests of the maritime carrying trade had very little to do with the establishment of the Kyōdō. They may have seemed to justify the step, but they certainly did not suggest it. The country had imperative need of ships in view of contingencies that need not be discussed now, and the creation of a new coast-carrying company seemed the most expeditious and effectual method of procuring what was wanted with the greatest speed and in closest accord with the requirements of the moment. There is a radical difference between that explanation and the one alleged by the *Yiji Shimpō*.

We venture to suggest to the Committee of the Yokohama Art Exhibition that it might be advantageous to extend the period during which the exhibits will be on view. Three days is not a long time, especially in the case of exhibitors who live at a distance, and who are consequently put to much trouble and some expense in forwarding specimens. Besides, the Exhibition, according to the present announcement, will close on Saturday, a decidedly inconvenient day. Some of the exhibitors will doubtless be anxious to remove their property at once, and others may be unwilling to do so on Sunday. It may thus, perhaps, be necessary to extend the operation of removal over two days—an arrangement which would increase the risk taken by the Committee and be inconvenient in other respects. Finally, if there is to be any Japanese audience from Tōkyō—and we see no reason why several ladies and gentlemen should not come, if the affair is properly advertised—Sunday is the day which would particularly suit them. The Public Hall will, under any circumstances, have to be retained for the purposes of the Exhibition until Monday night, so that to throw it open on Sunday would not add to the expense and might increase the profits.

IF M. Tisza's late speech is a full expression of Austro-Hungary's present policy—and we have no reason to doubt it—a great change has indeed taken place in the leading circles of the dual monarchy; a change long ago urged by the Hungarians and of late but faintly resisted by the German half of the Empire. A possible division of Turkey between Austria and Russia is easily spoken of and reads well on paper; but how to dispose of, and how to govern, territory so acquired, is a question much more readily answered by a despotic than by a parliamentary or constitutional State. The introduction of parliamentary institutions and the consequent extension of the suffrage in German Austria have had the effect of depriving the German element, through the Galician and Bohemian vote, of a great part of its former power, and in Hungarian Austria, owing to the same

process, the proud Magyar is at present scarcely able to keep his head above the rapidly rising Slavonic flood. Since Bosnia has been added as another jewel to the crown of Austria, German-Austria and Hungary have both been equally determined not to allow the Bosnians to destroy their parliamentary circles. For the western half of the monarchy the incorporation of Bosnia would have meant the addition of another discordant and but semi-civilized element, and would have been equivalent to the permanent and irremediable decline of German influence; while the eastern half of the Austrian monarchy would have found in the Slav population of Bosnia an element likely to upset the stability of her government, and finally capable, by the aid of kindred elements in Croatia, Transylvania, and North Hungary, of even wresting from the Magyar his ancient supremacy. It is, therefore, generally believed that these circumstances, as much as political regard for Russia, have prevented the Austrian government from formally annexing Bosnia and the Herzegovina. So long as no formal annexation takes place, it is possible for Austrian statesmen to keep ulterior questions affecting the status of the new territory in a quiescent state. The Slav elements of Austria have, of course, taken position, too, as to the future of Bosnia. In their eyes the great desideratum is the change of the dual monarchy into one composed of three equally strong parts with the same rights and responsibilities; one comprising the greater number of ancient crown lands, predominantly German; another embracing Hungary proper, and possibly Galicia, predominantly Magyar; and finally the Slavonian portion with Croatia, the military frontier, Bosnia, Herzegovina, parts of Transylvania, southern Styria, Carniola, and Istria with Trieste. These wishes and questions can as yet be kept in the background, but with Bosnia annexed and Austria safely in possession of Salonica, they could not be discussed as now platonically and with any real indifference; they would call for a practical and speedy but extremely difficult solution that would unsettle and change much of the result of the last four decades. No doubt such problems would be met and solved; probably, too, with the same success for which Austrian statesmen, dealing with difficult national questions, have of late become deservedly conspicuous. But the creation of a strong Balkan confederation receiving support from, and giving support to, Austria, would be more valuable and more enduring perhaps than any acquisition of additional but undesired and scarcely desirable territory. Such a policy on Austria's part would be perfectly intelligible and is beyond doubt the one urged by Hungary. Should the programme become impracticable, owing to lack of proper support on the part of the Balkan States themselves, then Austria would yet be in time to fall back on the alternative recommended by some Vienna journals, namely, compensation—provided she had not already committed herself too deeply against Russia.

About six weeks ago a German official paper wrote that among all the candidates for the Bulgarian throne Prince Waldemar only was likely to be successful. Equally related to the reigning families of Russia and England, his character and antecedents afforded guarantees for a conservative Government in Bulgaria. England,

the paper argued, would certainly accept his candidacy and approve of his election by the Sobranje, but whether Russia would as readily agree to his assumption of power in the Principality was a question which the writer confessed himself unable to answer. The first part of this forecast has been realized. The Prince of Oldenburg, by character, education, and sympathy a thorough Russian and a devoted personal friend of the Czar, was probably too pronounced a Pro-Russian to be acceptable either to England or to the Bulgarians. The various candidates put forward, or at least believed to have been favoured, by either Turkey or Montenegro were yet more unsatisfactory, as neither of these Powers could offer any reasonable guarantee that Macedonia would not be drawn into the sphere of active politics. The Sobranje, therefore, seems to have taken a middle course, electing a candidate universally believed to be acceptable to the Powers. Whether Russia favoured or opposed Prince Waldemar's election, or whether she chose to stand sullenly aloof, we have as yet no means of knowing. But Prince Waldemar's refusal to accept the crown, wise as it may be from his standpoint, prolongs the uncertainty which weighs so heavily upon the most vital interests of Bulgaria and Europe. In Prince Waldemar, Bulgaria might have found a ruler who would have sincerely endeavoured to bring about, and to maintain, friendly relations with Russia without compromising the Principality's independence. Whether such endeavours would have been successful, however, is a question which the Prince himself seems to have answered in the negative. It appears to be growing more likely with every month that the Gordian Knot of the Eastern Question, the status of the Balkan populations, will have to be cut by the sword in a future far from distant; and in view of this contingency, the recently declared policy of Austria to favour and foster the independence of the Balkan States, together with Great Britain's support of Austria in these questions, seem to offer the best security for the cause of freedom and the equilibrium of Europe. Such a policy only will effectually unite the many races of Austro-Hungary and enlist the active support of Serbia, Bulgaria, and Roumania, while Turkey herself, seeing in it her only hope and safeguard against otherwise endlessly recurring wars and dangers of war, may decide to be, as she indeed ought to be, one of the chief members of a future Balkan Federation.

We find, in the last number of the *Tōkyō Gakugei Zasshi*, an essay by Mr. Basil H. Chamberlain on the necessity of a reform in the Japanese method of reading Chinese. Everyone knows that a Japanese, in reading a Chinese sentence, changes the order of the words to suit the idiom of his own language. By this process he of course destroys the rhythm of the original and strips it of everything but its bare sense. It may well be supposed that such a ruthless mutilation has often been the subject of scholastic censure. Mr. Chamberlain does not tread new ground, but he at least contributes an important and authoritative opinion, and the scholarship he displays in his manner of doing so gives additional weight to his words. He premises that students of the Chinese classics in this country do not profess to be content with the general meaning of what they read, but aim also at mastering the exact spirit in which the great masters, Confucius and Mencius, wrote.

Suppose, then, by way of illustration, that a Chinese subjected the Japanese language to a similar system of re-arrangement, and observe the result in the case of the well known poem:—

*Tago no ura ni uchi-ide mireba  
Shirolae no  
Fuji no tokane ni  
Yuki wa furitsutsu.*

Re-arranged according to the Chinese idiom, this assumes the following most unmusical form:—

*Uchi-ide mireba ni Tago no ura  
Yuki wa furitsutsu  
Ni Shirolae no  
Fuji no tokane.*

Possibly the difference of harmony will not be fully evident to the general public, but they may take it for granted on the assurance of such students as Mr. Chamberlain. The essayist goes on to discuss an objection often urged on behalf of the Japanese method; namely, that, if a sentence is left in its original order, there is much difficulty in tracing the exact relation of various causative and conjunctive forms. Mr. Chamberlain hints that this argument is the outcome of ignorance. No one denies that the Japanese language, or the English language, has grammatical rules of its own. "Why should not a similar extraterritorial privilege be extended to the Chinese language also." The consequence of the concession may be embarrassing to those who do not study Chinese earnestly—and it is a language which requires very earnest study. But persons who do study it, will find many points of resemblance between its syntactical methods and those of Occidental tongues, and will no longer experience any difficulty in construing its sentences as they are written. Mr. Chamberlain further urges that a mongrel tongue such as that produced by grafting Japanese syntax upon Chinese construction, necessarily ceases to be a medium of creation. A Chinese, reading Japanese poetry in the manner indicated above, cannot possibly hope to compose a poem himself. And what is true of poetry, is true also of prose. In these days of exact scholarship every one will agree that the method condemned by Mr. Chamberlain is intolerable. We hope that he may have the pleasure of finding himself among the pioneers of an important reform. Imagine how English would fare if it were Japonicised after the method indicated above. Here is a sample:—

#### ENGLISH FORM.

"The splendour falls on castle walls  
And snowy summits old in story;  
The long light shakes across the lakes  
And the wild cataract leaps in glory."

#### JAPONICISED FORM.

"Castle of walls and story in  
Old snowy summits on the splendour falls  
The lakes across the long light shakes,  
And the wild cataract glory in leaps.

Twice during the past few days the *Nichi Nichi Shinbun* has published reports of the despatch of Chinese troops to Korea. Rumours of this nature have been so long in the air that the public has become more or less acclimatized to them, and they remain little noticed. In the present case, however, the story derives a colour of probability from an explanation which appears in the same journal's issue of the 12th instant, to the effect that the object of sending the troops is to protect Port Hamilton, which Great Britain has agreed to vacate on condition that China will erect forts and station a garrison there. This story comes from the Shanghai correspondent of the *Nichi Nichi Shinbun*. Our Tōkyō contemporary's comment on it is that, whatever may be England's intention or China's disposition, there is little likelihood that such a step would be taken without Japan's

knowledge, inasmuch as China is precluded by the Tientsin Convention from sending an armed force to Korea without the consent of this empire. Unquestionably, however, a rumour of the above import is current in Shanghai, and it seems not impossible to the *Nichi Nichi Shinbun* that, having regard to the outlying situation of the islands forming the Nanhow group and to the prime purpose of the Tientsin Convention, the Chinese Government may consider that the stationing of a garrison at Port Hamilton would not be a breach of the Convention. We (*Japan Mail*) cannot admit the probability of this hypothesis. The Convention is quite explicit. It forbids either of the high contracting parties to send an armed force to Korea without the consent of the other, Port Hamilton is undoubtedly a part of Korea. Its propinquity to or remoteness from Seoul has nothing to do with the issue. If China is to be at liberty to interpret for herself the particular parts of the little Kingdom to which her obligation applies or does not apply, the Convention becomes a farce. But, after all, there is not much occasion to discuss this question, so far as Port Hamilton is concerned, seeing that England has not yet given it up, and, in our judgment, is not at all likely to give it up at this juncture. The condition of the Bulgarian imbroglio renders war a not improbable contingency at any moment, and, in the event of war, Port Hamilton would be of manifest use to either of the principal belligerents.

PROFESSOR SAUVLET's concert on Wednesday in the Public Hall was not successful in drawing a good attendance, only seventy or eighty people being present. The programme comprised several pianoforte solos by Mr. Sauvlet, which were rendered with all the professor's brilliance and spirit, two soprano solos—"Eco dell' Arno" (Gordigiane) and "Valse de Concert" (G. Sauvlet, which were charmingly sung by the ladies to whom they had been assigned, two songs "The Roll Call" (Ciro Pinsuti) and "Io t'amerò" (Stanzieri) given by two gentlemen amateurs, and the duet "See the pale moon" (Campana), by lady and gentleman amateurs, the first part of the programme being opened by an overture by two pianos, violon, violoncello, and flute, and the second by "La Flute Enchantée" (Mozart) on two pianos, while the concert was closed by the air "Dear Friends Farewell," sung by one of the lady soloists with a chorus of male voices. The programme was, as may be gathered from this indication of its character, of a very high order, and regret was expressed that it should be rendered before so small an audience. Both the lady and gentlemen soloists are first among our local amateurs, and appeared at their best in the songs they rendered, the accompaniments to which were played by Mr. Sauvlet himself. Some changes had to be made in the programme in consequence of the absence of a lady who should have taken a prominent part in it.

We take the following from the *North China Herald*:—A Memorial to the Throne from Li Hung-chang gives us a very vivid presentment of the cheapness of living in China. The Viceroy asks for an extra allowance of Tls. 5 for each boat carrying tribute rice to Peking, and he explains that these boats, which must be of moderate size as they carry crews of seven or eight men each, make three trips a year, "and their earnings after deducting expenditure, do

not amount to more than ten taels or so per boat," out of which the whole crew have to support themselves. It is customary for the crew to take from the cargo the actual rice they can consume: but even so, \$2 a head a year is little enough for the crews to live on. Owners of house-boats would be glad to get off for Tls. 12 a year, which is the government allowance for oiling, caulking, and repairs. It is satisfactory to see that the government consents to allow the extra Tls. 5 per boat asked for, which will give each boatman the enormous increase of \$1 a year to his pay.

MUCH anxiety is felt by the agents of the British steamer *Plainmiller*, which left here on the 1st inst. for Otaru. The agents have received telegraphic information to the effect that the vessel left Otaru on the 9th inst. at six p.m., the ordinary limit for a run from that port being three to four days. Presuming that she is still afloat, it is probable that she has broken down, as it is certain that had she anchored for shelter or gone on shore it could only have been at a spot within a short distance of a telegraph station. The captain is at this port, having remained on shore sick; the vessel left here in command of her late chief officer. We think that the authorities would do well to send the *Cleopatra* out to look for the overdue steamer.

THE appearance of a date block for 1877 is a reminder that the present year is drawing to a close, Messrs. Grosser and Co., as general agents for the Fire Insurance Association, Limited, of London, and the Fire Insurance Company of 1877 of Hamburg, being the first in the field in the distribution of this necessary adjunct to every office. A good feature in the block received from Messrs. Grosser is the marking of the Customs holidays.

SOME more than usually astute counterfeiter has, we understand, been passing off imitations of the 5 yen notes of the Nippon Ginko. Merchants will do well to study the conformation of the word "Five" on the genuine note, the "F" in the counterfeit being, according to our information, slightly different from that on the real note.

THE cholera returns for Tōkyō during last week were:—Friday, 12th November, new case, 1; death, 1. Saturday and Sunday, new cases, 5; deaths, 2. Monday, new case, 1; deaths, 3. Tuesday, new case, 1; deaths, 0. Wednesday, new cases, 2; death, 1. Thursday, new cases, 2; death, 1. Total, new cases, 12; deaths, 8.

SINCE the 13th instant, inclusive, the only day on which new cases of cholera or deaths from that disease were reported was Monday, 15th, when the numbers were given as new cases 2, death 1.

HIS IMPERIAL MAJESTY THE EMPEROR issued a proclamation under date the 15th instant, intimating that Japan has entered into the Convention of the Red Cross Association.

THE *Mino Maru*, which was stated the other day by a local contemporary to have left the port for Yokkaichi, is still in the harbour, where an attempt is being made to replace a blade of her propeller, which was lost on the last trip.

THE *Alacrity* (6), double-screw steel dispatch-boat, Commander R. B. Maconochie, is expected to arrive at this port in a few days.

## CAPTAIN DRAKE'S APPEAL.

THE master of the *Normanton*, Captain W. DRAKE, addresses to one of our local contemporaries a letter complaining of our comments on the circumstances which attended the loss of his ship. Captain DRAKE characterises our article of November 6th as "an extraordinary statement," but unfortunately he makes no serious attempt to show in what respect our views were erroneous or extravagant. Any valid explanation which he could offer would be received by the public with grateful relief and by ourselves with hearty satisfaction, even though our own criticisms were thereby proved entirely fallacious. To the hope which he expresses, that "the public of Yokohama and the editor of the *Japan Mail* will form a more lenient view of the conduct of himself and his crew," there is only this to be said, that the wish of every member of the British community is to construe his actions in the most favourable light. Never previously have we read of any case in the annals of British seamanship where the crew of a sinking ship saved themselves and left their passengers, women and men, to perish helplessly. No one who values the high reputation earned by English mariners in all the seas of the world through long centuries of hardy and chivalrous conduct, can be willing to admit the truth of an incident which so seriously disfigures the fair record. To Captain DRAKE himself the situation in which he is placed must be scarcely tolerable. A skilful sailor and a brave man, as the position to which he has risen justifies us in believing him, he finds himself charged with acting, or allowing those under his command to act, in a manner disgraceful to the flag he sailed under. We cannot choose but sympathise with him, doubting not that he would rather have gone down with his ship than have survived on such terms. The public, therefore, is only too willing to listen to his explanations. But he appears to have none to offer. As before the Court of Inquiry, so now in the columns of a newspaper, he can only repeat the bald assurance that "he and his crew did all they could to save life." It is impossible that he can expect the world to be satisfied with that statement. He relies on the evidence laid before the Court of Inquiry. We can assure him that that evidence and the finding of the Court are painful and humiliating surprises to the public. It was bad enough that the officers and crew of a British ship should be living comfortably on shore while the bodies of her Japanese passengers, men and women, were lying at the bottom of the sea; but this shame was if possible exceeded by the solemn farce of a British tribunal which, with such evidence adduced to account for such a fact, could deliberately place on record its opinion that "the master, officers and others of the European

crew did all in their power to save the lives of the passengers." What was it that the master, officers and crew did? The proceedings of the Court are now published in full, and we can answer the question very briefly—too briefly.

The master "tried to explain their danger" to the Japanese passengers, and "urged them to get into the boats." But "they took no notice and clung together." In that condition he left them and went to the bridge. On their obedience to his order depended the safety of these twenty-five persons. He saw that they were either unable or unwilling to obey. It was, therefore, his plain duty to compel their obedience. But he took no step whatsoever with that object. He left them there and thus, and gave them no second thought, so far as his acts were concerned, until he was on the eve of quitting the ship. Observe what he then did. Sitting in a boat with two officers, eight able-bodied sailors and two boys, he sent the boatswain, single-handed, to endeavour once more to bring out the twenty-five passengers, among whom were five women. At this supreme moment, with sufficient force at command to ensure the rescue of at least a portion of his passengers, he entrusted to the boatswain alone a duty which he had found himself unable to discharge. And before the result of the boatswain's forlorn essay could be ascertained, the boat "floated away" from the vessel and the passengers were left to die.

"There were more than sufficient boats to carry the passengers," says Captain DRAKE. It is true. There were seven boats hanging in the davits when the ship struck. But at the last moment, when, if the passengers were to be saved at all, they must have been saved in a body and without delay, there was only one boat available, and in it were already seated thirteen persons. To understand this it is necessary to recapitulate a few facts. Only three boats were lowered. Of these one, the starboard life-boat, was upset in the act of lowering. Practically, therefore, there were but two boats provided to accommodate sixty-five persons—a crew of thirty-nine and twenty-five passengers. It is difficult to fix the exact time when one of these boats, containing the third officer and ten seamen, shoved off, but that she was not waiting by the ship at the last is shown by the fact that the chief officer and the carpenter, left alone of all the Europeans on the deck, were about to lower another boat when they observed that the starboard life-boat had righted. They jumped into her, and almost immediately afterwards she was washed from the ship's side, being nearly full of water and without oars. In the *Normanton* there then remained twenty-five Japanese passengers, six Lascar firemen, and one European, the boatswain. Had these thirty-two persons endeavoured to escape, they would have found only one boat—the Captain's—to

receive them, and in it were already seated, as we have seen, thirteen persons. Such was the provision of boats made, and such were the steps taken by the master to rescue his passengers. Let us see now in what manner the other officers did "everything in their power to save life."

The chief officer, before lowering the boats, went to the Japanese passengers and tried to get them out. What methods he employed, we do not know. The Court of Inquiry gave itself no concern about that, but in every case was content with the bald statement that a "trial" had been made. The Japanese—so the chief officer alleged—refused to obey him. They were curiously obdurate, these Japanese. Five women, a little boy, and nineteen men saw the crew of the ship hastening to leave her; saw her sinking deeper and deeper in the water; saw the waves washing over her deck in larger and larger volumes. At such a time, human beings, whatever their stoicism, or obtuseness, snatch at any means of succour, eagerly obey anyone authorized and competent to provide for their safety. But the Japanese refused to move. If they were paralysed by terror, their condition ought to have supplied an additional incentive to those charged with the duty of rescuing them. It had no such effect upon the chief officer. He bade the boatswain "assist" the Japanese, went himself to lower the boats, and never again took any care for the lives of the twenty-five passengers.

The boatswain, having been instructed by the chief officer to "assist" the Japanese, "did so." That is all we know of his proceedings. With that assertion, perhaps the briefest and most meagre ever submitted or accepted in evidence, the curiously *insouciant* Court at Kobe was quite satisfied. He "tried to get the Japanese out, but they refused." He "did not know why they refused." His manner of "trying" was not sufficiently cogent to elicit their reasons. They did refuse, however, and so he left them. At a subsequent period he renewed his attempt under instructions from the captain. It was then too late. The water was coming over the bridge and the boatswain—whose gallantry constitutes one bright spot in the sombre story—barely succeeded in saving his own life.

The second officer brought up three of the Japanese and left them on the bridge. Presently he found that two of them had rejoined their fellow-passengers in the alley-way. He then placed himself in a boat and made no further effort to save the passengers.

The third officer tried to explain to the Japanese that the ship was sinking. Finding one of them who could speak English, and who complained of inability to understand what was going forward, he "took him to the lower bridge and showed him a boat." This was "the last he saw of the passengers."

Such is the whole official record of what was done for the passengers. No organized attempt to rescue them was made. A few isolated efforts by individuals, a few verbal appeals in a language known to be incomprehensible—that is all. Only once was there any semblance of combined endeavour. The boatswain asserts that, at the last moment, "the carpenter and I were going to try to get the passengers off the ship." The duty of saving the lives of twenty-five passengers including five women and a child, had apparently devolved upon these two seamen. And their intention of "trying" to discharge it was never translated into action. Yet the Court of Inquiry records its opinion that "the master, officers, and others of the European crew did all in their power to save the lives of the passengers." The manner in which the Court conducted the examinations, and its finding, do not help to lessen the disgrace. They intensify it. For so marked was the perfunctoriness of the "inquiry," so flagrantly unjustifiable the verdict, that the Japanese nation will surely suspect something worse than mere incompetence and stolidity. If it be possible to remove the double stigma which has been placed on British seamanship and British justice, we trust that no official efforts to that end will be spared. If it be not possible, then at least the press can do its part by strongly disavowing, on behalf of the general public, any semblance of willingness to condone such reproaches.

#### CALM COUNSELS.

WE are sincerely glad to see that the storm of popular indignation about the *Normanton* affair is beginning to subside, and that reason promises soon to take the place of resentment. The article which we translate to-day from the columns of the *Fiji Shimpō* breathes a spirit much more consistent with the relations between Great Britain and Japan than that displayed by the previous utterances of the vernacular press in regard to this most unhappy catastrophe. We think, indeed, that our Tōkyō contemporary might have said a good deal which he has left unsaid. Nothing could be sounder than his argument as to the injustice of confounding the custom of the British nation with the act of a few sailors, above all when that act is entirely inconsistent with the long record of courageous and able seamanship which Englishmen can show. But he might have added that, in this instance, all doubt as to the direction which the sympathy of the British public takes was dispelled at the outset. Not only was the English press of Yokohama unanimous in its condemnation of the finding of the Naval Court of Inquiry, but the foreign community, without distinction of nationality, came forward and subscribed liberally to a fund for the families of the passengers who perished in the ill-fated ship. Animated, as it evi-

dently is, by a desire to be just, the *Fiji Shimpō* would have better accomplished its good purpose by giving due prominence to these important facts.

And here we ought to say that in alluding, with apparent condemnation, to the conduct of the master of the *Normanton*, we have no intention of pronouncing judgment on Captain DRAKE, who is now undergoing trial for a crime of which he may, and we sincerely trust will, be able to prove himself innocent. Our critical reference is only to the facts elicited by the Naval Court of Inquiry at Kobe, and above all to the strange discrepancy between the fullness of the finding of that tribunal and the meagreness of the evidence submitted to it. To anything which the Japanese public, or the Japanese press, may say upon this head, we can make no adequate reply. The Court, as it seems to us, went out of its way to express, on the slenderest and least explored grounds, approval of conduct which nothing but the fullest and most convincing testimony could condone. Yet even here there are some points which deserve to be noted by all impartial persons. In the first place, the proceedings of the Court as published by the newspapers may be only an outline of the investigation as it was really carried on. The journalistic report was not stenographic, and it is conceivable that, by means of questions not recorded, details may have been elicited of which nothing is publicly known. On the other hand, taking the proceedings as they stand, an argument of a different nature suggests itself. The Court did not address itself specially to an examination of the course adopted with regard to the Japanese passengers in the *Normanton*. That it did not exhaust every possible means of eliciting everything which might bear upon this point, and, above all, that it recorded an emphatic finding unsupported by such information, were, indeed, errors of the gravest nature. Setting aside the conduct of the Court, however, the fact appears to be that the master and officers of the *Normanton* were virtually left to tell their own story; and it is very possible that these men, sincerely believing that they had done what they could to save life, and finding no disposition to question their conduct severely, omitted particulars which would have materially altered the complexion of the case, and which may be adduced at the investigation now in progress. Of course we are offering a purely hypothetical explanation. But before venturing to formulate any conclusion in such a matter, it is necessary to consider every imaginable extenuation. Finally, the Japanese should remember that there is a vast difference between a Naval Court of Inquiry and a Court of Justice. The former's principal function is to investigate and determine the character of the seamanship shown by those to whom the management of a vessel

is entrusted. Its proceedings, outside of that function, are not invested by public opinion with anything like the significance which attaches to a trial conducted before a Court of law. In the event of that most improbable contingency, the acquittal of Captain DRAKE, in the face of conclusive evidence, should such be elicited by the tribunal which will have to try him finally, it will be time enough to speak of a miscarriage of justice.

But there is one point above all to which the attention of the *Fiji Shimpō* should be directed. Our contemporary concludes the article in question by a species of invocation to the British authorities to render impartial judgment in view of the friendly relations between Japan and Great Britain. Does this mean that the verdict of a Court of Justice should be swayed by political considerations? We cannot too strongly deprecate such a notion, or too emphatically protest against the imputation that the acquittal or condemnation of Captain DRAKE will possess international significance. British Courts of law have to try and determine every case on its own merits and according to the evidence, without the slightest concern for questions of State. Thus, in the instance specially under consideration, Her Majesty's Minister in Tōkyō is absolutely powerless to influence the course of justice one way or another. Any attempt on his part to do so, would be as futile as it would be culpable. The matter is now beyond the reach of all diplomatic interference, and if Captain DRAKE is acquitted, it will be simply because the evidence produced by the prosecution is insufficient to convict him. That his passengers were Japanese, not English, will not and ought not to weigh for a moment with the tribunal before which he is arraigned.

#### THE QUESTION OF THE ELEVATION OF WOMEN IN JAPAN.

(BY A JAPANESE.)

I.

WHEN the traditionally virtuous and chivalrous people of the "Land of the Gods" lived and died in happy harmony with Nature, as yet free from the enslaving influence of Chinese philosophy and the intolerant ascendancy of military spirit, the position of women was far more honourable and blissful than it is in these latter days of conventionalities and artificialities. When an Empress of such extraordinary capacity as JINGO held the reins of power, or when authoresses of such classic renown as MURASAKI SHIKIBU, SEISHONAGON, ISE, and many others, took active parts in the development of the yet uncultivated language of the country, it can hardly be supposed that the position of women was merely that of submissive slavery to the strong sex. Had the country progressed in an even course of advance since those happy days of yore, Original from centuries back, Japanese

civilization might have assumed a different character so far as concerns the relative position of the sexes. But unfortunately the subsequent course of events was highly unfavourable to the preservation of the rights originally enjoyed by the fair sex.

About the beginning of the twelfth century, a change of vital importance overtook the country; a change which was most influential in shaping the subsequent course of the national history. Political power was usurped by the military class. During the first fifteen hundred years after the accession of the Emperor JIMMU, in 660 B.C., the sovereign power was wielded by the Emperors themselves. They were in reality, as well as in name, the Chief Magistrates of State and the commanders-in-chief of the forces. Soldiers were then raised by a method very much like the modern conscription system, and there was as yet no regular military class. But by degrees the constant waging of border warfare developed hereditary military families throughout the country, especially in the provinces of the west and north-east, while, at the same time, control over the military affairs of the country slowly but steadily slipped from Imperial hands into those of generals and officers. As it has happened in the case of every other nation, the rise of a hereditary military class meant in this country, also, the usurpation of the sovereign power by that class. For a space of about five hundred years, from the beginning of the twelfth until the beginning of the seventeenth century—at which latter date the country was first reduced to a state of permanent tranquillity by TOKUGAWA IYASU—Japan was the scene of one long continuous series of bloody struggles for power among the rival military houses, beginning with the fierce contests of the HEIJI and the GENJI, and continuing through the eventful years of the ASHIKAGA Shōguns, down to the exciting scenes under the brilliant but short-lived houses of ODA and TOYOTOMI. All the energies and healthy spirit of the nation were thus wasted, at that important stage of its development, in fruitless and barbarous internecine quarrels, and the promising germs of civilization which had become visible in the tenth and eleventh centuries, were abruptly checked in their natural growth.

In addition to, and in some respects resulting from, the above mentioned interruption of the peaceful development of national civilization, there followed from the endless intestine wars of those five centuries two consequences of the most vital importance, directly affecting the position of women in this country. It has ever been found that when the domination of mere physical strength constitutes the principal feature of society, the position of women is, to a greater or less extent, that of mere slaves to the strong sex. Engaged in constant fighting, and spending the prime

of their lives far away from home, amidst scenes little calculated to restrain the force of their animal passions, the men of those turbulent times had neither leisure nor inclination to attend to the requirements of the domestic virtues, without which neither can true home life exist, nor can the proper honorable status of women be consistently maintained. While thus, on the one hand, the wild military life of licence led by men, as much as women's consciousness of their own insignificance in society, made it impossible for the latter to maintain anything like equality with the former; on the other hand, the vicissitudes and sorrows of an age of battles, and the innumerable ills and sufferings entailed upon the weak sex, forced women to seek consolation in a religion whose nature was peculiarly well adapted to reconcile them to the hardship of their lot. It is not too much to say that the religion in question largely contributed to deepen and render permanent the inferiority to which women were condemned by the predominance of brute force during the five centuries of what may be termed the Dark Ages of Japan. Though Buddhism had been slowly and surely gaining a footing among the people of Japan during the six hundred years that had elapsed from its entrance into this country in 552 A.D., it was not until the agitated period referred to above that the teachings of the great Deliverer of Asia began to exercise a deeper and more general influence on the minds of the women of the country, and to a lesser but still appreciable extent on those of the men also. Speaking of the influence of Buddhism, it must not be omitted that the general ignorance of the age made the priests the only repositories of the learning then in existence, thus establishing their title to be the infallible guides of their illiterate converts, just as exactly similar circumstances made the Roman Catholic clergy despotic in Mediaeval Europe.

To these two influences, the unsympathetic ascendancy of physical strength and the unquestioned sway of Buddhism, there was added another, hardly less calamitous to the rights of the fair sex, at the time when the country at last settled down into a state of repose under the astute rule of TOKUGAWA IYASU. This remarkable man assumed the title of SHOGUN, or in full SEI-I TAI SHOGUN, in 1603. By his far-seeing and subtle genius was established a feudal system with excessively partial and oppressive codes of social and domestic morality, adopted from the teachings of Confucius and Mencius. Plainly recognizing the causes of the failures of his predecessors, NOBUNAGA and HIDEYOSHU, IYASU wisely sought to wedge, as it were, each class of the people immovably into a fixed groove. As a means to this end he encouraged the study of Chinese philosophy, the whole tendency of which is to develop a negative, or passive character;

to train every one to be contented with his own lot in life, however miserable that lot may be. It need scarcely be said that the effect of the new order of things was most tyrannical and complete upon the members of the weak sex. These, as already described, educated both by the nature of the treatment they had previously received, and by the character of the religion to which they had been forced to turn for consolation, found little difficulty in resigning themselves to the shameful position now definitely assigned them by the unfeeling and semi-barbarous usages of feudal society. It is true that the influence of Chinese philosophy had been more or less at work even during the anarchical centuries immediately antecedent to the assumption of power by IYASU. But it was unquestionably during the sway of the TOKUGAWA Regents that that philosophy operated with the full force at once of a religion and of an ethical system. Something of the extraordinary influence wielded by Confucianism may be understood from the fact that, at the principal schools in each clan, the images of CONFUCIUS and his disciples were solemnly and sincerely worshipped by students at a particular season each year.

It is, therefore, scarcely possible to avoid the conclusion that the status of women was far more natural and honourable in the early, than in the later, periods of Japanese history. The clan warfare which continued almost without intermission for five hundred years after the beginning of the twelfth century; the growing prevalence of Buddhism during those ages; the final establishment of a peculiarly organised feudalism under the TOKUGAWA Government; and the spread of the doctrines of CONFUCIUS—these are forces which a study of Japanese history shows to have been chiefly responsible for the relegation of the weak sex to a position of harsh and unnatural inferiority.

## II.

It would have been strange, had the tide of social reform now sweeping over the land with such force left undisturbed the status of Japanese women. For assuredly that status is in some respects quite inconsistent with the spirit of civilization breathed by the nation in its new career of progress. Already the desire of a better state of things has been awakened in the bosoms of women themselves, and everywhere this desire is rapidly working marvellous changes.

Until very lately Japanese women had virtually no existence from a social point of view. Feudal morality, at once rigid and timid, forbade them to mix in society, and habit dulled their sense of the ignominious position thus assigned them. When now and then some of the more aspiring and courageous awoke to the reality of their social degradation, and manifested signs of discontent, they were sure to be os-

traced from the fellowship of their conservative sisters as presumptuous *otemba*. It was considered extremely unfeminine to show the least symptom of individuality, much more of independence, even when important personal interests were involved. To die for a man who had been the most cruel and unfaithful of husbands, was regarded by women as the acme of virtuous devotion. Observe now, how greatly this is changed. Not only have the minds of women been freed from silly and contemptible prejudices against the noble aspirations of the more ambitious of their number, but ladies now vie with one another to elevate their social status. They no longer adhere to the wretched standard of virtue prescribed by the tyrannical formalism of feudal society, and too long suffered to survive the peculiar circumstances which established it. Though still to a very limited extent, they have begun to take part in social *r  unions*, and the number of ladies gracing various public occasions by their presence is rapidly increasing. Everywhere clubs and associations are springing up among the women of the middle and higher classes for literary and other purposes. But nowhere is the impulse given to the aspirations of the fair sex more apparent and hopeful than in the extraordinary number of applications for admission to various missionary and other female schools during the last two or three years. Indeed, this rush for education is increasing at such a rapid rate, that even at present a want is keenly felt for the establishment of many more female seminaries in the capital alone.

Great as is the change recently wrought among our women, it must be confessed that as yet their position in society is very far from being what it ought to be. Despite the zealous efforts of literati, journalists, public speakers, and religious teachers on the one hand, and the earnest and keen enthusiasm of many women on the other, the attempts thus far made to raise the position of the fair sex are of an extremely superficial nature and still more limited in their sphere of action. It is thus natural that a great deal of impatience should be manifested on the part of sanguine social reformers at the tardy progress of this movement. Yet, if one calmly and impartially considers the various domestic, social, and legal obstacles which have to be surmounted by Japanese women in their hurried journey to overtake men, one is constrained to marvel, not that they have accomplished so little, but that their endeavours have already been so successful. It is unjust as well as unmanly to overlook, as is often done, the peculiar obstacles which lie in the path of the fair sex. Let us, therefore, briefly consider some of the principal among them.

Japanese women receive little or no protection from the law in their married state. Marriage is a private affair, and is

complete and legal when the fact of union is reported to the local office where the husband resides. No oath is administered and no contract required. Man and wife are thus left to settle their mutual relations in married life as best they can, free from all interference on the part of the law. It need scarcely be said that, under these circumstances, the "privileges" of strength have become prescriptive rights. A man can divorce his wife at any time and for any reason suggested by his ingenuity. He need only hand her the so-called "three lines and a half" (*mikudarihan*), or written intimation of divorce. What the law requires at the termination of a married state, as well as at its inauguration, is simply that the accomplished fact should be reported to the local office. The poor woman can do nothing. She has only to blame her own inability to retain her husband's capricious and wandering love, and to reflect that sometimes, perhaps unconsciously, she failed in imperturbable good temper and slavish subjection to his despotic will. To make her situation more miserable, a divorced wife has no means of recovering even her personal effects, except through the good-will of her former husband. It is true that the educated section of the nation is unanimous in condemning this state of things. But it is equally true that so long as women have to depend upon the mere sentiments of their husbands for the enjoyment of marital rights, they cannot be expected to develop a becoming spirit of individuality and self-respect.

The next question is that of education. Considering the nature and scope of the education they have secured at school and in society, and the means of self-culture they possess at present, it does no small honour to the natural capacity of Japanese women that they should have shown so marked and zealous an inclination to regain their lost privileges. All that the women of the higher classes have hitherto received in the way of education amounts to the knowledge of a few hundred ideographs of the commonest occurrence; a tolerable degree of proficiency in the art of letter-writing; a verbatim acquaintance with the principal points of morality prescribed for wives and daughters; a knowledge of the rules of versification, and a limited training in music and the polite arts, as for example, *cha-no-yu*. In the matter of mental culture and moral education, properly so-called, little or nothing is done for them. It will be understood, of course, that this category does not include the rising generation of Japanese women, who have passed the courses in normal schools or in some of the female seminaries maintained by missionaries. Happily the number of these women is yearly increasing, but it has not yet become sufficiently large to count appreciably in a general review of the condition of the sex.

If the school education of females has been extremely meagre and incomplete, the tone of the education they have received in society has been decidedly of a pernicious character. As already alluded to in the beginning of this present article, the tendency of social education until very lately has been to discourage every indication of individuality or independence. The standard of excellence prescribed for woman has been the slavish surrender of her rights to the tyrannical will of the strong sex. The cultivation of her natural capacities and the development of her higher aspirations are almost entirely neglected. Reared amidst surroundings distinctly unfavourable to the formation of any but the most complaisant and servile character, it is but natural that Japanese women should be loaded with a dead weight of unconscious habits and customs, moral as well as intellectual. This weight constantly drags her down in her earnest and noble efforts to raise herself to the level upon which she anciently stood. To blame her for the tardiness of her progress is much as though one were to whip an over-laden horse.

What has been thus far said concerning the influence of social surroundings upon Japanese women applies equally to the general influence of their home life. But there is a circumstance peculiar to home life in this country; a circumstance which constitutes one of the most potent impediments to the elevation of women. I refer to the arbitrary power exercised over a wife by her parents, especially by her mother-in-law. This is a result more or less inevitable where parents live with their married daughters. But it is chiefly the outcome of the extravagant attitude which Confucianism prescribes for children in their relation towards their parents. The popular saying, that a woman has three successions of masters in her life, parents in maidenhood, husband in marriage, and children in old age, illustrates a state of affairs which sadly needs reform. But, though it is true that in her married life a wife has to obey the will of her husband in everything, perhaps the heaviest and the most painful yoke she has to carry is the despotic power exercised by her mother-in-law. Of all the despots in the world, the ladies who, by virtue of that title, reign supreme in many a household in this country, are perhaps the most remarkable as well as the least amiable. The unsparing, and in too many cases malignant, censorship of these domestic tyrants invades the whole domain of their poor victims' existence, whether at home or abroad, in the management of domestic affairs, in the arrangement of wardrobes, in the selection of friends, and even in the form of worship. One can heartily sympathize with the young ladies of Japan, who, when pressed to entertain a marriage proposal, invariably ask before everything else whether the gentleman's mother is

alive, and if so, what sort of woman she is. The extent of this despotic power may be surmised from the well established fact that a good proportion of the numerous cases of divorce in Japan are directly attributable to some offended whim of a mother-in-law. Truly the woman of Japan is painfully situated. On the one hand she is exhorted to raise her position and reproofed for her tardy progress; on the other, she is certain, if she follows this advice, to provoke the resentment of her mother-in-law, who obstinately adheres to the old feudal conception of female duties. It is not the fault of Japanese women if they submit, in spite of their own inclination, to the overshadowing authority of their family despots. It is true that every mother-in-law is not what is here described. But the number of those conforming exactly to my description is unfortunately overwhelming, while the number of those who do not conform to it in a greater or less degree is almost nil. Young ladies of noble aspirations, who lead miserable lives solely on account of their mothers-in-law's narrow-minded conservatism are only too common. Within my own experience are two; one of a lady who laboured long and painfully to obtain the permission of her mother-in-law to be baptized as a Christian, and who succeeded only lately in her long endeavours; and another of a lady who is still unable to obtain similar sanction and is also under strict prohibition to join any of the associations started by her friends.

Last in the list of disabilities, though by no means least important, is the general moral tone of society in regard to the relation between the sexes. As remarked in the *Japan Mail* some time ago, the loose notions entertained by most men in regard to the moral obligations arising out of the relation of the sexes, are not in this country incompatible with a fine moral character in other respects. But in whatever light we view the matter, the fact remains that this state of things constitutes the most disgraceful blot on the moral character of the nation, and that it is fatally opposed to the improvement of the social position of Japanese women. Women are told that they must mix freely in society with the other sex, but those who so boldly counsel this course, as scholars, journalists, and politicians, appear to forget that men have not yet taken any serious steps to render such a course easy to modest and virtuous women. Every sensible woman must keenly feel the injustice done her when, as is the fashion now-a-days, she is roundly reproofed for her rational, though to zealous reformers provoking, reluctance to obey implicitly the advice of her critics. If any one doubts that she is right to hesitate, let him calmly consider the course of conduct he would like to see adopted by either his wife or his daughter. Would he be pleased to see her act up to the full extent of

the counsels so thoughtlessly tendered to women in general by radical reformers? In ninety-nine cases out of every hundred, he will answer, no.

While thus detailing the numerous difficulties under which Japanese women labour in their attempts to regain their rightful position in society, and while censuring the conduct of those who with thoughtless severity lay the blame of failure chiefly on the fair sex, it is not by any means intended to be inferred that women are entirely free from blame. Hard as their lot is, they have many means at their disposal to improve it, and they are certainly blameworthy for their negligence to better utilize those means. But in speaking or writing on the question of the elevation of women, it is an injustice to leave out of sight the numerous and powerful influences which conspire to prevent them from solving the problem by their own unaided strength.

### III.

On the question how to improve the position of Japanese women, the opinions thus far put forth by reformers appear in some respects narrow and superficial. Indeed, the majority of the so-called reformers scarcely seem to comprehend the true nature of the task they have undertaken with so much zeal, or to appreciate its far-reaching and complicated bearings upon many other questions of a domestic and social character. After reading and hearing all that has been written and spoken on the subject, one cannot help feeling that something of cardinal importance, whatever it be, has been left unnoticed, and that the question has not been probed to its very bottom.

The *Yiji Shimpō*, which has been, from its first appearance some years ago, specially conspicuous for a bold and outspoken crusade against the old state of things in regard to the relation of the sexes, writes incessantly with characteristic force upon the necessity of protecting the rights of women by enacting laws relating to marriage and property; by removing the harsh rules of conventionality which now hold the two sexes entirely apart from each other, and by improving the character of the intercourse between them. But how is this improvement to be secured? Not surely by legal enactments. Even supposing that all the cruel and artificial barriers now set between the sexes were swept away, and that women were invited to mingle with men just as they do in the West, would they feel safe in accepting the invitation? Would parents and husbands readily allow and frankly urge their daughters and wives to accept it?

The *Nichi Nichi Shimbun*, which is always remarkable for the practical nature of its opinions, urges, together with many other journals, the importance of providing women with the means of earning their bread. No doubt the present inferior

position occupied by the weak sex is owing in part to their exclusive dependence upon the income of their husbands; and every Japanese must welcome the active efforts that are being exerted in this direction; as, for instance, the establishment of a female technical school by many well-known officials and citizens of Tōkyō. But it will be easily understood that there is, in the present state of things in this country, a long, long space between providing bread-earning professions for women and the improvement of their social status. The classes of women to whom the earning of means of livelihood is a matter of importance, are necessarily those which have little consequence from a social point of view.

Professor TOYAMA expresses pretty correctly the sentiments of the better portion of the educated classes, when he advocates the education of girls in European fashion in every respect, so as to fit them to the requirements of a home life and social intercourse modelled upon Western patterns. The number of persons is by no means small who actually feel themselves arrested in their endeavours to adopt the Western mode of living by the ignorance of their wives as to the management of domestic affairs in foreign style. It is also keenly felt that, whatever may be the attractions of their character in other respects, our women have much to learn from their Western sisters in qualities of individuality and self-respect. In view of these circumstances, every educated man is only too ready to endorse the opinions of the popular Professor as expressed in his recent articles on the subject. No doubt excellent results will be achieved by the establishment of female seminaries on the lines there proposed. Still, even after the establishment of such educational institutions, the principal object of the elevation of the position of women *vis-a-vis* men will be almost as far from accomplishment as ever.

My settled conviction is that what is most needed—what lies at the very root of the whole question—is the regeneration of society in general by the adoption of Christianity. That which really prevents the elevation of the position of women from being carried out in this country is, not the insufficiency of their personal qualifications, but the moral tone of the social atmosphere. This moral tone is due to the conduct of the male sex. There is not, perhaps, a man in the whole empire who would not in theory approve the principle of the elevation of women. But how many are there who do not in practice continue to hold the weak sex in its ignoble status by their conduct towards their wives and daughters, and also by their general behaviour in society? The attitude of Japanese men is in this respect highly inconsistent and hypocritical. If they seriously and sincerely wish to see the reform of their country, they must advocate really accom-

plished, they must strive before all other things to live a more honest and conscientious life, so as to enable women to respect and follow the advice given them by their present masters. From the fact that they have too long subjected women to almost brutal hardships, and from the fact that they have of their own accord taken upon themselves to carry out this reform, men are bound to see that every obstacle is removed from the path of the wronged sex, and that it is fairly started in the route to regain the position which it occupied in the youthful and promising days of the national progress more than seven centuries back. As is too sadly apparent to every intelligent and impartial mind, the Japanese of to-day are dangerously light-hearted and wanting in qualities of gravity and seriousness. Much of this is no doubt owing to their essential traits as a nation. But a great deal must also be attributed to the temporary release of so debonnaire a people from the restraints of the moral system which they rigidly observed under the old *régime*. It is now high time for the sake of Japan's national reputation that her people should return to their true character, and completely regenerate the whole social atmosphere. But is it possible to do so, without deep and serious beliefs? And what religion is there that deserves attention, if it be not the religion of CHRIST, the teachings of which constitute the basis of all Western civilization?

Apart from its effect upon the general moral tone of society, there is another aspect of Christianity which we must not lose sight of in dealing with the subject of the elevation of women. Of all the religions on earth, Christianity is the only one which practically recognizes the equality of woman with man. The women in the West owe something of their enviable position to circumstances which cannot be reproduced here; but their indebtedness is specially great to Christianity, whose spirit permeates every department of society, every branch of literature, and every trifling detail of political institutions. The adoption of Christianity is, therefore, at the bottom of the reform in hand, as it means the regeneration of society and the direct as well as indirect elevation of women's social status.

Professor TOYAMA, in his latest pamphlet, which I have just seen, urges the adoption of Christianity as the best means of accomplishing the reform in which he takes so much interest. But it is a matter of high regret that half the force of his excellent and exhaustive reasoning is lost by the fact that he echoes once more the old opinion: "Religion is good for others but not for me." Precisely here lies the most formidable obstacle in the way of all social reforms, but especially of the reform now under discussion. We have more than enough advisers and guides, but the number of those who are sufficiently humble and sincere to follow their own advice is

very small. This haughty spirit of self-sufficiency, which is the lingering remnant of feudal customs, effectually prevents sound and wise suggestions on social reforms from being carried into effect. So long as this spirit continues to prevail, little good is to be expected from all the loud and high sounding discussions on the subject. To be respected one ought to respect oneself, and one must follow one's own advice, if one wishes it to be followed by others.

### THE TEMPO.

#### IMPERIAL ORDINANCE.

We hereby give Our sanction to the present Ordinance relating to the extension of the period of withdrawal from circulation of the old *Tempo* copper coins, and order it to be promulgated.

[His Imperial Majesty's Sign-Manual.]  
[Privy Seal.]

Dated the 15th day of the 11th month of the 19th year of Meiji.

(Countersigned) COMTE ITO HIROBUNI,  
Minister President of State.  
COMTE MATSUGATA MASAYOSHI,  
Minister of State for Finance.

#### IMPERIAL ORDINANCE No. LXX.

The period of the withdrawal from circulation of the old *Tempo* copper coins, promulgated by Imperial proclamation No. XXVI of the 10th month of the 17th year of Meiji, is prolonged until the 31st day of the 12th month of the 24th year of Meiji.

### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

#### TELPHERAGE.

##### TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the London Letter published in the *Japan Mail* of November 12th, your Correspondent speaks of Professors Ayrton and Perry as "developing a new invention of theirs called telpherage." There is an inaccuracy in this statement of no small moment in these days when historic truth is so much sought after. Possibly the error springs from the probable lack of technical knowledge on the part of your Correspondent, notwithstanding his having before him at the time a report of a lecture by Professor Perry. But the facts are these:—

The idea of doing on a large scale with electricity what was done on a small scale with pneumatic tubes was first imagined by Professor Fleeming Jenkin of Edinburgh. In 1882, on reading an account of Professors Ayrton and Perry's automatic block system for electric railways, he saw that therein lay the solution of his plan. He then effected a combination with these electricians, formed the Telpherage Company, and devoted the few remaining years of his life to the development of the system. As Engineer to the new company, he personally superintended the construction of the telpher line at Glynde in Sussex from the beginning of 1885, till his unexpected and much lamented death in June of that year. Professor Perry then succeeded to the post of engineer to the company, and brought the Glynde line to completion. It was opened on October 17th, 1885—the ceremony being performed by Viscountess Hampden.

The system required new inventions at every stage, and gave full scope to Professor Fleeming Jenkin's well known inventive faculties. Probably it would be impossible for any outsider to say, even with the list of numerous patents before him, what special devices were due to Professor Fleeming Jenkin, and what to Professors Ayrton and Perry. To the first mentioned, however, more than to any other man, are we indebted for telpherage, both as an idea and as a practical realization.

It may interest your readers, who may not have access to technical literature, to be told a few facts regarding this new carrying system. The telpherage train consists of an electric locomotive and a

series of buckets, each of which hangs from a pair of wheels travelling along a strong steel line stretched from post to post somewhat like a telegraph wire. The locomotive is situated in the centre of the train, and is driven by an attached electric motor, which is in electrical connection with two of the train wheels, and through them with the steel line. These special wheels are on opposite sides of the locomotive, and must be so far apart as never to be on the same stretch of line but always separated by one post. Now, the line is not a single continuous one, but is broken up into segments by the posts, alternate segments being in electric connection with one another and joined to one or other terminal of a machine for generating electric currents. The telpherage train thus acts as a necessary part of the electric circuit. The current must flow from the one special train-wheel to the other through the electrometer and so supply the driving power. In the Glynde telpher line, each bucket can carry nearly 300 lbs. of clay—so that a whole train of ten buckets can convey fully a ton of clay, and this at a speed of at least 5 miles an hour.

The system is not meant to compete with railways, whether steam or electric; but it is said to be, even already, more efficient than horses and carts. Over uneven or broken ground or in circumstances where good roads are an impossibility it is, however, undoubtedly the method of the future.

Yours respectfully,  
CARGILL G. KNOTT.

### THE SALE OF CHILDREN.

#### TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the *Japan Weekly Mail* of Nov. 6th is a statement which seems intended to convey the impression that sales of female children to lives of shame no longer take place in Japan. Upon this subject I would request the privilege of writing a few words, not in a controversial spirit, but in the hope of calling the attention of those interested in the progress of Japan to an important matter. There is indeed a law forbidding these sales; the question is whether or not it has yet accomplished much in preventing the deplorable custom. Many facts which have come to my knowledge lead me to fear that the people do not find it difficult to evade the laws. Let me mention some of these facts.

While conducting a Sunday school in a provincial city it was noticed that some girls belonging to families that could hardly be spoken of as "under the pressure of extreme indigence" soon dropped out of the classes. Inquiry showed that they were kept at home to receive lessons upon the *samisen* in order that, because of this accomplishment, they might be disposed of at a higher price than could otherwise be obtained. The girls professed not to care anything for the *samisen* and to be averse to entering a house of ill fame; but they must obey their fathers. Remonstrances with the parents availed nothing.

I have knowledge of two cases where girls, after the death of their parents, were sold by their brothers to pay the debts of the family.

Two or three years since, when travelling on a small Japanese steamer, a woman brought a girl, fifteen or sixteen years old, bared to the waist, into the cabin and commenced negotiating for her sale to one of the passengers who appeared to be connected with that branch of business. The indignation that I felt was only partially abated by the evident indifference of the girl. The matter was discussed in the most cold-blooded manner as though it were a dog instead of a human being that was being bargained for. As the girl was unable to play any musical instrument, the man said that she was not worth more than five or six yen, and he advised the woman to keep her until she had been sufficiently trained to sell at a higher price.

I was recently told by a Japanese lawyer of high standing that it would be very difficult to prove any violation of the law against such sales. The girl would be spoken of as owing money to the house of ill fame, so that she must remain in its service until the debt was cancelled. So far as he knew, no interference was made by the officers except when a girl absolutely refused to obey her parents. How seldom this is likely to occur is evident when one remembers the Japanese idea of filial obedience. Moreover, a large proportion of the sales are made when the girls, being only ten or twelve years old, little realize the shame, and see only the attractive side of the life to which they are devoted.

Inmates of the houses of ill fame often run away, but when discovered are forced to return. A well informed Japanese tells me that, even though the

girl should resist and call upon a policeman for help against violence, he would not prevent her from being carried back. She has at least done wrong by absconding, and if she has had any reason to complain of ill-treatment she should make her appeal from the house where she belongs. The same gentleman tells me that many husbands sell their wives to houses of ill-fame.

From what I have seen and from what others tell me, I cannot believe that the terrible practice has been much abated. If wrong in this opinion I should be only too glad to see the opposite proved. Is it not a subject well worthy of your careful investigation? If the present laws are effective, then all friends of Japan must rejoice; but if this custom of selling one's own offspring to the most terrible form of slavery still exists, then I cannot but beg you to use the wide influence which your paper exerts among the Japanese in urging them to cleanse their land from this great evil.

Yours respectfully,

OBSERVER.

November 10th, 1886.

## JAPANESE TRADE WITH PERU.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I respectfully beg you to help me in bringing to the notice of the prominent class of Japanese who take an interest in foreign trade, the following useful information by allowing it to appear in your valuable paper:—

From translations taken from the *Fiji Shimpō*, I have noticed that the Editor of that paper is frequently calling the attention of Japanese merchants to the value of establishing trade in foreign countries, and thereby finding an outlet for their numerous manufactures, which course would benefit all classes of native artisans.

Although there are a few Japanese merchants established in foreign countries, such as San Francisco, New York, London, and Paris, none of them have yet ventured to Peru, a country in which a ready sale could be had for a great many Japanese manufactured goods. As I am a Peruvian myself, and have just returned from Callao, I can say with some experience that coals, tea, rice, and wax will find a ready sale, also matting and porcelain of all descriptions, and many other goods too numerous to mention here without unduly encroaching on the valuable space of your paper. There is no porcelain whatever made in South America; it is all imported from Europe; coals are brought all the way from England via Cape Horn, and the same ships return loaded with sugar.

In Lima I found shops kept by Chinamen in which I saw exposed for sale Japanese porcelain, cheap Japanese lacquer ware inlaid with mother-of-pearl, and coloured matting; and these goods the Chinamen had the impudence to tell me all came from Canton.

I shall be glad to furnish more particulars regarding what trade can be done between Japan and Peru to any Japanese merchants who may desire to establish such a business as I have quoted above.

Enclosing my card and address, I beg to remain, Sir, yours faithfully,

PERUVIAN.

Tôkyô, November 16th, 1886.

## THE "NORMANTON" CASE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I hoped with the English sense of fair play that some one better fitted than I would have interposed on the behalf of the officers of the *Normanton*, but as no one seems to have done so, I would venture to suggest that as Captain Drake is to be again tried, it would be better, instead of assuming his guilt the having been already acquitted) to await the result of the new trial.

Captain Drake has arrayed against him the whole of the Japanese press, two barristers, a Councillor of State, and an ex British Naval Officer, and apparently forgetting the maxim that a man is innocent until proved guilty, the English press also appears to be siding against him.

I am, Sir, your obedient servant,

SUB-JUDICE.

Yokohama, November 16th, 1886.

## THE "NORMANTON" AND FAIR PLAY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you kindly allow me space in your columns for a few words. I have read, with much pleasure, the letter in your issue of to-day signed

"Sub-judice;" and with the opinions and sentiments expressed therein I most heartily concur. It does indeed seem to me very unfair and very un-Englishman-like, to "round" upon a man when he is down! Would it not be better "form" (not to say, more just and generous), for the press and the community, individually and collectively, to await the result of the forthcoming trial, before passing strictures upon the character of Captain Drake and his officers?

I sympathize with the relatives of the poor Japanese passengers as much as any one, and it has afforded me very great pleasure to add my "mite" to the fund so kindly started by you on their behalf. But, may I call attention to the fact that the poor sailors of the ill-fated steamer have lost all their belongings—have lost their means of subsistence—and will probably be detained in Japan a considerable time. Who will support them, the while? Very probably, too, the poor sailor (Francis Bernard) who was drowned, when doing his duty—lowering the life-boat—leaves a widow and family. I feel sure that many members of our generous community would only be too glad to subscribe to a fund on behalf of "poor Jack?"

I am, yours very truly,

IMPARTIAL.

Yokohama, 17th November 1886.

(So far as we can see, neither the press nor the community is prejudging Captain Drake's case. Since it became known that he is to be tried, comment has been withheld.—Ed. J.M.)

## THE "NORMANTON" FUND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I observe that in publishing, in your issue of the 16th instant, a translation of a letter addressed by me to five Japanese journals, enclosing some contributions to the *Normanton* fund, you describe me as "an official of the Foreign Office." I desire to state through your columns that my action in this matter was in a purely private capacity, and that its purpose was limited to the charitable work in which we Japanese are gratified to see that all nationalities have heartily joined.

Yours obedient servant,

K. NABESHIMA.

Kami-Nibauchō, No. 29, Tôkyô.

November 17th, 1886.

(No one imagined, we should suppose, that Mr. Nabeshima's letter had any official significance. We mentioned his post merely for the purpose of distinguishing him from several gentlemen of the same name residing in Tôkyô.—Ed. J.M.)

## NIIGATA MORALS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Having lived with my family for three years in Niigata, and having always and at all times experienced the greatest kindness in every way from the natives of that city, I think it is only right to speak up for them, and I must say I cannot agree with Mr. Davis that theirs is "a politeness of mere words" only. I have been in Japan twenty years, during which I have travelled around a good deal, and I do not think Niigata any worse than, or even so bad as, other cities I could name. I may add that we lived in a lonely suburb of the town, and we never missed anything, or experienced any intrusion in any way. If a resident or visitor to the town saw anything that shocked his morals, it would be because he went into a part of the town where and in which place only, such might be expected.

I remain, an absent friend of

NIIGATA.

Yokohama, November 15th, 1886.

## CHRISTMAS CARDS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On examining the Christmas card criticized in your issue of to-day, I must come to the conclusion that the author of the critique must have written it under peculiar circumstances.

No one ever saw any of the photographs reproduced in the card before May last, except the "Betto" and the "Cyprian," because they did not exist before that time, although some of the subjects have been photographed since a photographer ever came to Japan.

The "gate" happens to be a holy-water cistern. "Ohtomaro" is Hitomaro on the card, and the "palette" is no more Japanese than "a Merry Christmas and happy new year."

Yours respectfully,

A. F.

Yokohama, November 17th, 1886.

(We did not say that the photographs existed before. We did not say that the palette was Japanese. We did not mistake the structure over a holy-water cistern for a gate. We did mistake "Hitomaro" plus a bracket for "Otomaro." Did A. F. write the poetry? Ed.—J.M.)

## ASIATIC SOCIETY OF JAPAN.

A general meeting was held in the Library, No. 33, Tsukiji, Tôkyô, on Wednesday, November 10th, 1886, at 4.30 p.m., B. H. Chamberlain, Esq., Vice-President, in the chair.

The minutes of last general meeting, having been published in the *Japan Mail*, were taken as read.

The CORRESPONDING SECRETARY intimated the election of Dr. Michaelis as an Ordinary Member of the Society.

In the absence of the author, the CORRESPONDING SECRETARY then read a paper by E. H. PARKER, Esq., H. B. M. Vice-Consul, Chemulpho, Korea, entitled "The Yellow Languages"—that is Chinese, Japanese, Korean. The object of the paper was to show that, before Chinese was imported into Japan either directly or indirectly through Korea—say before A.D. 1—the Japanese spoke a language, the great majority of words in which came from the same language stock as Chinese. In a paper on "Japanese," read at the previous meeting of the Society, Mr. Parker had studied, by detailed comparison of the phonetic values in Japanese, Korean, and several of the Chinese dialects, the principles which guided the interchange of sounds in these various languages. In the present paper, which was a continuation of the former, he attempted, by a study of a list of over 500 Japanese words in the light of the phonetic principles already laid down, to base this theory of the common origin of Japanese and Chinese words. An example or two will show the nature of the reasoning adopted. Thus *shita* (tongue) is believed to be from the same root as the Chinese, being indeed more like the Hakka *shit* than the Sinitic-Japanese *setsu*. Again, the view that *fude* (brush-pen) and Cantonese *pât* are from the same source, *fude* being indeed more like the Chinese than the Chinese derived *hitsu*, is rendered the more plausible by the parallelism in Korean, the native word being *put*, while *pât* is the Chinese-Korean form. The author sums up his conclusions under four heads:—There is fair ground for the hypotheses (1) that a large number of pure Japanese words have a common origin with Chinese; (2) that a very much smaller proportion of the same have a common origin with Korean, which smaller portion has manifestly no connection with Chinese; (3) that a still smaller proportion of Japanese (objects of nature only) can be traced to the same source as both Chinese and Korean; (4) that a very doubtful and small number of Korean words, distinctly unrelated to the Japanese, may, with an effort, be derived from the same source as Chinese words. Thus, although in grammatical construction Japanese is similar to Korean and utterly unlike Chinese, it shows, from a vocabulary point of view, much stronger affinities with Chinese than with Korean.

The CHAIRMAN, in acknowledging the indebtedness of the Society to Mr. Parker for his philological contributions, remarked that the theory put forward was certainly a quite novel one. For that very reason, however, it deserved a close study; for views, heretical when first broached, have often proved in the end to be truth.

W. DENING, Esq., then read a paper on "The Gakushi-kai-in." The paper opened with an account of this Society of Japanese Scholars, taken from the Annual Report of the Educational Department for 1879, and then described in some detail the peculiar features of the Society, including a translation of the Constitution and Rules. From these it appears that the aim of the Gakushi-kai-in is to raise the standard of scholarship, and that its members are men of established reputation and experience. The membership is fixed at 40, of which 15 are appointed by the Emperor, and the others elected by existing members. Until quite recently each member received a remuneration of \$150 per annum; but remuneration is now limited to members above sixty years of age, each of whom receives \$200. The Society meets once a month, when lectures are given, or papers read, or discussions held, as the case may be. Non-members are admitted to these meetings by ticket; but any foreigner can gain admittance by presenting his card at the door.

An idea of the subjects discussed by the Society may be obtained from the following, picked at random from the long and full list of published papers furnished by Mr. Dening:—"Female Education," "The Origin of the Early Civilisation of Japan," "Confusion in the Fifty Sounds (*iroha*)," "On Baths," "A New Logical Theory," "The Comparative Strengths of Vegetable and Animal Food," "The Future of Religion," and so on. The various papers are contributed by such well known scholars as Fukuzawa Yukichi, Katô Hiro-

yuki, Kanda Kōhei, Nishimura Shigeki, Nakamura Masanao, and others.

The last part of the paper consisted of a very complete resumé, amounting almost to a translation, of one of these papers. It was on "The Evils of Abdication, Heirship, and Adoption," by Shigeno An-eki.

The custom of abdication commenced with Royalty, the first instance being that of the Empress Kōgyoku, who abdicated in favour of her younger brother and assumed the title of the August Royal Grandparent (about A.D. 944). This and similar instances of the abdication of Emperors were no doubt a necessity and probably a benefit. The first instance of an Emperor abdicating seems to have been a case of religious enthusiasm, the Emperor preferring a life of monastic seclusion to a life of political power. The custom, however, assumed a different aspect when abdication, whether voluntary or involuntary on the part of the sovereign, became what might be termed a political trick. A former Emperor in retirement was a sufficient cause for all manner of intrigue, and led not infrequently to civil wars. The custom gradually extended to Ministers of State and Government officials, who found their retreats to be convenient spots from which to pull the wires of Government. So prevalent did the custom become at the time of Hōjō Takatoki and Ashikaga Yoshimitsu that it was said that the Cabinet was full of shaven pates, and that there never was a time in which it was so fashionable to be religious.

The chief and original object of adoption was, of course, the preservation of the family name. There are, however, nine or ten different kinds of *yōshi* or adopted sons, of which the son adopted to preserve the family name is but one. As with the custom of abdication, so the custom of adoption led to distinct abuses. Nobles adopted sons when by so doing they could benefit themselves either by position or wealth. Thus a Court noble, who had a son, say, two or three years old would adopt as son a youth of 16 (the age of majority) and then apply for the Government grant of land or rice which it was customary to give in such circumstances. Then he would make his own son *yōshi* of the adopted son; so that, when the former came of age in his turn, he was entitled to apply for another grant. At first only men above fifty were allowed to adopt sons, and these had to be chosen from the same family; but gradually all restrictions became abolished.

The essayist in conclusion criticised very severely the customs as they had developed in Japan. Adoption of a young child in certain circumstances was praise-worthy, but the plan of adopting adults was essentially bad. It led to the setting aside of the order of precedence established by nature, and has been the cause of the greatest confusion and trouble in families. To try and keep up the family name by introducing an alien was an absurdity; besides the extinction of a family, which could not, save by adoption, be preserved, was not a cause for rational regret. As with individuals and nations, so with families—one succeeds the other.

Then the custom of abdication was also irrational. Nature had fixed birth and death—not heirship and abdication—as the limits of a man's life. A man, in full possession of all his faculties, had no right to withdraw himself from active life and spend his days in playing chess or chequers or reciting Buddhist prayers. Also it was to be feared that a nation, whose individuals were largely endowed with the spirit of abdication, would be apt ere long to lose its independence. If any persons had a superfluity of means and no heirs, rather than bestow this wealth on a single individual adopted for the purpose, it would be better bestowed for the benefit of the State. In this way would their names "be perpetuated, and thus their altruism prove to be the most exalted form of egoism."

The CHAIRMAN, in thanking Mr. Dening for the extremely interesting contribution he had made to the Society's Transactions, observed that, considering the different kinds of adopted sons that might exist, it was little wonder that he had been unable to get any clear idea of the complicated relationships which existed in the families of some of his Japanese friends.

Mr. K. NAGAI remarked that the *Gaku-shi-kai* was really organized at the suggestion of Mr. Tanaka Fujimaru when he was Vice-Minister of Education. It was matter for surprise, therefore, to find no mention made of Mr. Tanaka by Mr. Dening. Mr. (now Count) Saigō Yōmeichi was appointed Minister of Education in December, 1879, just after the Government had granted Mr. Tanaka's request to be allowed to form the Society.

Mr. DENING, in reply, said that he was very much obliged to Mr. Nagai for the information supplied, which should be inserted in his paper. Nevertheless, he was not responsible for the omis-

sion, as in the Mombushō Annual Report, from which he had drawn the account of the organization of the Society, no mention was made of Mr. Tanaka as its founder.

Dr. DIVERS observed that the paper they had just heard was of great interest, not only because of the special side of Japanese life with which it dealt, but also because of the admirable and characteristic manner in which it emphasised the broad principle of action, that man's duty is to work as long as he has the power.

The meeting then adjourned.

### PRESENTATION OF ADDRESS TO MR. RUSSELL ROBERTSON.

On the 12th instant, at half past two o'clock, a meeting of British residents took place in the Chamber of Commerce Rooms in order to present an address to Mr. Russell Robertson, H.B.M. Consul at Kanagawa, who departs shortly for home on leave of absence. Despite the inclemency of the weather there was a good attendance. Among those present were:—Messrs. J. H. Brooke, T. Thomas, O. Keil, E. Bayer, F. Lowder, A. G. Green, E. J. Moss, J. P. Mollison, J. T. Griffin, W. Whitfield, J. A. Fraser, F. S. James, M. Brown, J. Dodds, C. Halburton, J. Barlow, E. B. Watson, E. W. W. Playfair, A. E. Wileman, W. J. Kenny, Herbert Smith, Jas. Stewart, A. Winstanley, &c.

Mr. T. Thomas, upon whom devolved the duty of presenting the address, said—Mr. Robertson, I have to present to you this address, which has been drawn up and signed by the British residents of Yokohama. To me it is a very pleasant task, and it recalls to my mind the days of "Auld Lang-syne." As you know, it is more than a quarter of a century since I had the pleasure of making your acquaintance, and I am glad to say that I have enjoyed your continuous friendship ever since.—(Applause.) Many and great events have taken place within that time; there have been occasions of sorrow, but I am happy to say that that period has also many pleasant associations for us.—(Applause.)—Lately, you are aware, there has been considerable criticism on the Consular bodies generally, and in presenting you with this address it is, we hope, to be accepted as a tribute of our highest appreciation and esteem.—(Loud applause.) Mr. Thomas here read the address, and continued: In conclusion, Mr. Robertson, we ask you to allow us to tender also our appreciation of the genial kindness of Mrs. Robertson—(applause)—whenever occasion has offered, and to wish you both a safe journey home, a pleasant stay there, and a happy return to us.—(Loud applause.)

Mr. ROBERTSON—Mr. Thomas and Gentlemen, I thank you most cordially for this very kind address, and I assure you it is a great gratification to me to know, that as British Consul, and as a public servant, I have won the confidence of so many of my countrymen at this port.—(Applause.) When one of my oldest friends, who is now present here, called on me at the Consulate, a few days ago, and intimated your kind intentions towards me, he said among other things, that there were those amongst you to whom my advice and assistance had not only been of appreciable value, but had saved them from many hours of anxiety.—(Hear, hear.) I do not think, gentlemen, that any Consul need wish for more satisfactory or more encouraging words than these. I am quite ready to admit that there are gentlemen in H.M.'s Consular service in the East, who bring to bear on their work a far higher order of ability than I possess, but I do not think there is one amongst them who works with a stronger sense of duty, or with a more sympathetic interest in the welfare of his countrymen.—(Applause.) I think you will agree with me that it is not alone the greater troubles of life, but quite as much the lesser daily business cares and anxieties that worry and annoy; to relieve you in these, so far as it has possibly lain within the scope of my duty, has been my constant aim and endeavour.—(Applause.) There has, I believe, been a rumour current that I do not intend to return to Japan. I assure you that is not the case; on the contrary, I trust to be spared to pass many years amongst you, and I hope farther, with the more matured judgment and ripened experience those years will bring, to render myself yet more worthy of the public and private regard that have been so kindly expressed to me in this address.—(Applause.) One word in conclusion, gentlemen, which is to say that I am never likely to forget that it has been from the lips and in the society of many of my old friends whom I now see here, that I have learnt those lessons in business knowledge which are, I trust, helping to make me, what I always aspire to be, a true commercial representative of my countrymen in Yokohama.—(Loud applause.)

Mr. THOMAS—One thing I have omitted to mention, and that is that it was intended originally that this address should have been accompanied by a more substantial souvenir, and it was only on your expressing a wish to that effect that the intention was departed from.

On the call of Mr. THOMAS, three cheers were given for Mr. and Mrs. Robertson. Their health was then pledged in a glass of wine, after which the meeting separated.

The address and the names of those who subscribed it are as follow:—

To RUSSELL BROOKE ROBERTSON, Esq.,  
H.B.M. Consul, Kanagawa,  
&c., &c., &c.

We, British Residents of Yokohama, desire to place on record our recognition of the fact, that during the past fifteen years, while holding the position of Her Majesty's Consul at this port, and transacting the various duties incidental thereto, in a manner which we feel must have been as highly approved by Her Majesty's Principal Secretary of State for Foreign Affairs as it has been appreciated by us, you have safeguarded the interests of your countrymen and proved yourself a worthy representative and exponent of the best traditions of Englishmen.

We gratefully acknowledge your participation in every question affecting the commercial welfare of this port, and your readiness at all times to assist with your advice and experience those of us who have had occasion to bespeak your good offices.

We advisedly abstain from a more detailed enumeration of the reasons which have led us to present you this address. They are to be found in the assurance which we offer you, of our appreciation of your character as a man, of our admiration of the qualities which have enabled you to share our social life and amusements, while maintaining all the dignity of your office; of the esteem in which we hold you personally; and of our hope to see you among us again, after you have enjoyed your well earned leave of absence.

## TRANSLATIONS FROM NATIVE JOURNALS.

## THE "NORMANTON" CATASTROPHE.

(Translated from the *Fiji Shimpō*.)

Great Britain is queen of the seas, and the interests of all Oriental nations require that they should always cultivate her friendship and good will, political as well as commercial. This has ever been our firm conviction, from which, as is well known to all, we have never swerved. When our country was first opened, owing to the want of a mutual understanding between the English and the Japanese, there occurred many events which seriously embarrassed our social intercourse. The attack upon the British Legation by some unruly spirits of the time, the Namamugi affair, the consequent arrival of the British fleet, and the demand of indemnity for the Shimonoseki outrage, were some of the unpleasant events that made us tremble for the fate of the relations so recently opened. But, whether in time of war or of peace, constant association is the best means of understanding and becoming intimate with each other. In spite of all embarrassments, each year—nay, each month—found the number of English coming to Japan more numerous, and thus our opportunities for associating and becoming intimate with them were greatly increased. There was another fact that worked potently for the maintenance and advancement of our intercourse. Our Government was revolutionized, and public sentiment began to assume an entirely different tone, in harmony with the new régime, giving as different an aspect to our foreign intercourse. Twenty years have rolled away, during which so many changes have been inaugurated in this respect that the present connection existing between England and Japan has no point of resemblance with what it was then. To follow the English mode of thinking, to use articles of English make, to study and speak the English language, to live an English life—in short, to be thoroughly anglicized,—this is the state of things which at present manifests itself in the provinces as well as the cities of this empire. Not has our implicit confidence failed to elicit due response on the part of the English people, who have so often manifested their kind disposition toward us. The long mooted question of Treaty Revision has at last been brought to a fair promise of final consummation, chiefly, it is said, by the generous efforts of the English. All these kind and friendly actions on the part of the English nation are appreciated not only by the higher and more intelligent portion of our countrymen but by the great mass of the people in general. While Anglo-Japanese intercourse is in such an auspicious condition, it is extremely to be regretted that the *Normanton*, a British steamer, should have been lost off the coast of Kinslin and that all the Japanese passengers, numbering more than twenty, should have perished without a solitary exception, while all the English were safely landed. This news was received with a great deal of adverse comment throughout the country. Our strong sympathy for the drowned, was, however, mitigated by the hope that a Consular Court of such a country as Great Britain, famous for its just and upright administration of the law, could not fail to render just and impartial judgment in this case and mete out due punishment to the guilty parties. This hope was entertained most warmly as the only means of comforting the departed souls of the lost. But, after all, it proved to be a mere delusion. H.B.M.'s Consular Court at Kobe, after a so-called investigation of the facts, absolved the crew of all guilt. As soon as this was known, public feeling, in excitement almost bordering on frenzy, began to express itself in strong terms. "Leniently as we may treat the matter," it said, "we can not suffer it to pass unnoticed. We must not be satisfied with the action of the court; we must do all in our power to redress the wrongs of our fellow countrymen and countrywomen." Among those who take the most active part in this agitation, it is a matter of deep regret to see some who, true to the common saying, "From their dislike of the priest, men are led to dislike the cassock," manifest a certain degree of coldness in their intercourse with Englishmen in general, who but yesterday were regarded as the most intimate of friends. This leads us to hope most earnestly that this popular agitation will be calmed as soon as possible in order to maintain friendly relations with England.

Concerning the question of what measures should be employed to appease the public excitement, there is a certain over cautious section who advocate inaction. "The amicable relations existing between England and Japan, thus far so well

maintained," they say "should not be disturbed by such a trifling matter as the drowning of a few persons. It is most desirable that we should regard the catastrophe in the light of an accident that will never occur again, and let it pass without much comment. If it should become a diplomatic question between the English and the Japanese Governments, it will be a matter of great embarrassment." We agree with this peaceable sentiment, but at the same time we are inclined to think that such a course is not only entirely impractical but will serve to aggravate the case. Suppose we leave the matter where it has been left by the judgment of the Consular Court, will that not be pretty much as if one were to cover offensive matter for the time being? In that event nothing would be more natural than that popular discontent, chafing against such apathy, should develop a more violent mood than ever. The best course to be pursued, therefore, at this time is simply to give free vent to the public sentiment. Those who advocate the former plan, are doubtless influenced by zeal for the maintenance of Anglo-Japanese amity. They know the great importance of international intercourse, but they do not know how to properly translate that importance into action. The fact that certain Japanese desire to institute a legal suit to inquire into the circumstances attending the wreck of an English vessel carrying countrymen of ours on board, is not likely to jeopardize the amicable relations we have with England. If the captain and his crew be found guilty, nothing can be more appropriate than that they should be punished in a suitable manner. Such an issue would neither detract from the national glory of England nor add to that of Japan. The institution of the suit would simply be the doing of a most ordinary thing in the most ordinary course of its political functions by a government, in order to appease the discontent of its subjects. Suppose there occurs some petty difficulty between the servants of two families who are on the most friendly terms with each other, are the two families to be estranged because the trifling trouble cannot be settled with perfect satisfaction to both? Surely not. They will not hesitate to sacrifice the parties immediately concerned, for the sake of maintaining their friendly relations. Therefore we hope that the captain and the crew of the *Normanton* will be tried twice, or thrice if necessary, and that, if found guilty, they will be duly punished. It will not only give great satisfaction to the Japanese, but will redound to the credit of England. Those who desire purposely to leave the matter in an indefinite state in order to maintain Anglo-Japanese friendship, must be supposed to be entirely ignorant of the proper method of conducting the foreign intercourse of Japan. As we have stated before, we are glad to find Anglo-Japanese intercourse so much advanced, and it is because we value it, that we do not like to leave this matter in an indefinite state. According to the telegram given in our yesterday's issue, the second trial of Captain Drake has been instituted by the Governor of Hyogo, and yesterday was fixed for the opening of the proceedings. We are further informed that Captain Drake has been arrested. It is our implicit belief that the English authorities will not fail to see the importance of Anglo-Japanese friendship as compared with the trifling matter under notice, and will render a just and impartial judgment, compatible with the good name of Great Britain.

## KOREAN FINANCE.

(Translated from Seoul Correspondence of the *Fiji Shimpō*.)

Korea long remained a secluded country, and her political system has been in the direction of decentralization. The income and expenditure of the central Government have been fixed within very narrow limits, and on every occasion when the country was involved in war with Japan or China during the five centuries of its national existence, the Government was reduced to the last extremity of financial embarrassment. Under such circumstances, there were five methods of obtaining funds: (1) reduction of the number of soldiers on actual service, (2) reduction of the salaries of officials, (3) the utilization of reserve funds, which consisted of about 60,000 *koku* of rice and about 10,000 *kamme* in weight of silver, (4) the melting of copper coins, and (5) the sale of official rank. Whenever financial difficulties arose, it was always necessary to resort to some one or all of these measures. After the invasion of this country by Toyotomi Hideyoshi, the salaries of the officials are said to have been reduced to one-third of the former amounts. At that time,

and about the time, also, of the invasion by the founder of the present dynasty in China, the reserve funds were exhausted and recourse was had to the stamping of copper coins and the disposing of official rank for money. The decrease in the number of troops dates from remoter times, just after the assumption of power by the present dynasty, when it was necessary to construct new palaces and increase the number of civil officials.

After the Tai-wön-kun became Regent of the Kingdom, the number of soldiers was increased while at the same time large building works were carried out at the palace and for Government offices. The French expedition made it necessary to issue copper coins named *tō-hyaku-sen*, which were abolished without redemption, after having been used in circulation for several years. About this time intercourse between Japan and Korea was opened, and the finances of the Government were reduced to such an extremity of exhaustion, that there remained neither reserve funds nor scope for the reduction of official salaries. No wonder, then, that the Korean Government has been ever since that time hard pressed financially.

The opening of intercourse with Japan was soon followed by similar concessions to other Powers, but until the disturbance of the Tai-wön-kun in 1882, no special financial difficulty was experienced in the foreign intercourse of the country, as the funds which the *daimyō* of Tsushima formerly received at Fusan had been sufficient to defray all the expenses connected with foreign relations. But since the above mentioned event, the erection of new Government buildings, the establishment of foreign legations at Seoul, the *coup d'état* of Kim Yō-kun in 1884, indemnities paid to Japan, bribes sent to China, the despatch of officials to Japan, the purchase of various luxurious articles by the King from that country, and other expenses, have combined to make the pecuniary difficulties of the Government worse than ever.

The first measure which the Korean Government adopted to bridge over its economical difficulties was the coining of the *tō-go-sen* copper pieces in 1883. As the new coins were poorer in quality and smaller in size than the old *ichimonsen*, the *tō-go-sen* instantly depreciated, and by the spring of 1884, their depreciation had proceeded so far that the prices of things had risen three times as high as they formerly were, and consequently further coining was unprofitable. A new device was resorted to; nominal official rank called *Kangoku* (Inspectorship) began to be sold extensively. In every rich family, the male members were appointed "Inspectors" and were in return ordered to pay *ryō* (Korean) 5,500 apiece, of which 500 *ryō* were pocketed by intermediate officials and the remaining 5,000 *ryō* (Japanese *yen* 250) were received by the Treasury. These payments may be compared to our *gōyōkin* during the feudal times. From the middle of 1885 until the spring of the present year, the sale of this rank was carried on most extensively; from fifteen to twenty transactions being at one time made daily, and the income amounting from *yen* 10,000 to *yen* 100,000 per month. Discontent being manifested by the people and a certain class of officials at the sale of the offices, the practice was stopped after June last. New taxes have been laid on cattle hides, and gold dust is being collected, but the profits from these two sources have been very small, while the customs business is a constant tax on the Treasury.

Being unable to meet its extraordinary necessities of expense by these measures of only a temporary character, the Korean Government has been compelled to contract foreign debts. Among these the more important are as follows:—*yen* 170,000 to the Yokohama Specie Bank, *tails* 310,000 to the Shaoshin Company of Tientsin, and *yen* 100,000 to a German firm. Taking into account all other loans, the total amount of the foreign debt of the country exceeds a million *yen*, while on the other hand the expenditure of the Government, is if anything, on the increase.

Since the abolition of the sale of the office of Inspector, the reserve funds of the Government have been entirely exhausted. By way of illustration, I may mention the following facts. Since last summer a gunpowder factory has been under construction, and although at first it was designed to erect as many as 13 buildings, the work was stopped after finishing only three. A few Japanese mechanics had been engaged for the purpose, but they are simply amusing themselves at Seoul. An official building for a Bureau called *Tenkai-Kyoku* was also commenced in the spring of this year, and was to have been completed before the coming winter, but in summer it became necessary to put off the continuation of the work for two or three years. Lastly a steamer, the *Shima Maru*, bought from Japan and now lying in the harbour of Ninsen, is

not yet in the actual possession of the Korean Government, and the original owner is pressing the latter for payment of the price of the ship.

The only method of remedying the present financial difficulties of the Korean Government, will be to remodel the mode of levying taxes. But the difficulty is that there is no statesman who advocates the execution of this reform. Everybody keeps silence on the subject of taxation reform, for the result of speaking out on the question would be the rousing of the resentment of the King and high dignitaries of State. The Government has conceived a useless expedient, which has been put into practice since July or August last. The expedient consists in selling official positions. There have been five such transactions. Your correspondent knows the names of all the purchasers of these official positions, but will refrain from mentioning them. Two persons were appointed Governors of rural districts (*Gunsins*) for yen 3,500 each; one man received the position of *marko* at yen 3,500; and two men were made secretaries for yen 500 each. In certain quarters, the working of mines is advocated as a measure of financial remedy, but this is as far from being put into practice as the taxation reform. It is, moreover, doubtful whether mining will prove profitable or not, for it is stated that the amount of gold is very small. While abroad the country is surrounded by Great States, at home she is aching under the weight of these extraordinary difficulties. In the eyes of your correspondent, Korea no longer has any semblance of independence. Some people say that, if reforms are started now, the difficulties may be to a greater or less extent removed so far as finance is concerned. But the desired financial reform must be preceded by reconstruction of the system of the Government itself, and the entire change of political customs, which is impossible unless the country gives up its independence.

### THE PRESS OF NEW YORK.

#### LORD LONSDALE'S INGLORIOUS CAREER.

NEW YORK, October 10th, 1886.

New York journalism, in this last quarter of the nineteenth century, is a study. Not in all aspects an edifying study, but certainly one which assists in the solution of many social problems. It may be fairly said to represent the community to an extent which was never even attempted until within a few years past. It cannot, however, be said to represent it thoroughly. The classes which are reputable in the truest sense find scarcely any genuine reflection of their views or convictions in the various publications which together constitute the mighty metropolitan press. One or two weeklies, and perhaps a couple of dailies, cling to what in earlier years were regarded as the honorable purposes of the craft, but the vast majority are devoted to that species of enterprise which consists in fostering and stimulating every kind of unwholesome popular excitement, and satisfying the eager curiosity thus awakened by methods which recognize no restraints of propriety or delicacy,—not to say decency. It is obvious that, but for the existence of a depraved public instinct in numerous quarters, the newspapers of to-day could not possibly continue their extraordinary careers. With the millions who buy and read lies the responsibility, if not precisely the justification, for their course. It is argued by the defenders of the new régime that a craving for the minutæ of vice is implanted in human nature; that the masses are keenly alert to discover the worst that can possibly be known of their fellows,—in general and in particular; that reports of the misdeeds of mankind are and always have been scented, hunted down, and devoured with avidity, in private circles, in thoroughfares, in clubs, and in all places where men do congregate and the faculties of hearing and speech are cultivated. This being the universal, though doubtless deplorable infirmity, it is held that newspapers are warranted in availing themselves of it, and in maintaining a wholesale espionage over society, with the avowed intent to detect, investigate, and proclaim everything that is calculated to gratify the morbid propensities of the multitude. That which may freely be made the theme of common conversation, no matter how gross or iniquitous, may legitimately be recorded in print. The community,—at least a large proportion thereof,—signifies its approbation in the most practical way; and the debased press of this generation has attained a prosperity which the old school of journalists could not have prefigured in their wildest dreams.

It is useless to deny that the position taken by the upholders of the modern system is strong. In no part of the world, to-day, can a perfectly cleanly

newspaper expect to enjoy the material success which is secured by the unscrupulous and licentious. In England, notwithstanding the restrictions of legal authority, the tone of the press has manifestly degenerated during the last decade. *The Times* preserves its aspect of superficial decorum, but its variations from the former standard of severe austerity indicate clearly enough the prevailing tendencies. The livelier and looser sheets are dragging it from its ancient moorings; and though it may never entirely surrender its claims to superior virtue, the fact that it deviates from them at all is equivalent to an acknowledgment that the popular taste is developing in new and unwholesome directions. What would journalism be in Great Britain, if the regulations under which it is conducted were not enforced? In the United States it is virtually independent of regulations. If any power exists here by which it can be repressed, that power is never put in operation,—or with exceptions so rare as to prove the rule. There is nothing to hinder an editor from printing whatever he chooses to print about any living being,—man or woman, private citizen, public official, politician, clergyman, actor, pauper, or millionaire. The whole populace is his quarry, and the more mercilessly he pursues his game, the more assured he is of substantial reward. Some of these purveyors of scandal frankly avow that they make Ishmaels of themselves simply because in that character they can most rapidly acquire opulence. Others, with lingering instincts of shame, profess to aim by devious means at moral ends. They cannot bear to avow themselves collectors and distributors of infamous compilations merely for the sake of gain, but pretend that to uncoil vice is to vanquish it; and that by their far-reaching organizations they are enabled to gather and exhibit the exact facts of every current abomination, thus fixing the obloquy upon the guilty, and protecting the innocent from idle and injurious rumor. There might be something worth considering in this plea, if it were honest; but it has not a fraction of honesty about it. No attempt is ever made, in the scurry of daily journalism, to analyze reports that happen to obtain circulation. A man of faultless life and irreproachable character is liable, any day, to find himself held up to the opprobrium of the world, for no other reason than that a reporter is at a loss for a subject, and satisfies his need by connecting some imaginary tale of depravity with a name which he perhaps picks at random out of a directory. It is not admitted to be an outrage if an individual bearing the same initials as an actual malefactor is pilloried as a felon; if his family relations are dragged into publicity; if his business credit is paralyzed, and his peace and welfare are for ever destroyed, through the carelessness or the malice of a ready writer. On the contrary, it is rather held to be a good stroke of work, as it enlarges the field of operations, and multiplies the objects of inquiry and scrutiny. Thus there is no safeguard, for any citizen, against the possible assaults of reckless or malignant journalists. "Sensations" must be had; and if they are not plentifully supplied from venacious sources, they must be manufactured, no matter with what disregard of truth and honour, or at what cost of suffering to blameless victims.

It has to be acknowledged that there are certain conditions under which this system of guerilla journalism performs, consciously or otherwise, a public service. It would be singular if there were not some form of evil to which its methods might be effectively applied. A striking example has in fact presented itself here within the month just past. A scandal of portentous dimensions,—so flagrant and nauseous as to have made itself known, probably, even in the islands of the Far East,—broke upon the city of New York in connection with personages no less notorious than the Earl of Lonsdale and the leading actress in a second or third rate burlesque company of which the chief of the Lowthers chooses to act as manager. This is the same noble lord who caused the imprisonment of Edmund Yates, not very long ago, for an alleged libel in *The World*. Whatever may have been the merits of the case in which Yates figured, it is quite certain that if the "society journals" of London had been permitted to have their way with the eccentric young peer, for a year or more, he would have been taught in good time a lesson which he has now learned too late to profit by. His escapades at home, with various women who in the assumption of fictitious characters have lost all regard for their own, were so glaring and unblushing as to shut him out from every class of society except that to which his inclinations seemed to lead him; but though he made himself the talk of the town, no newspaper ventured to narrate his exploits, for fear of consequences similar to those which befell *The World*. The vampire weeklies banded to celebrate him and his adventures, but his solicitors were on the

watch, with dire threats of vengeance in case his privileges as a peer of the realm should be infringed. So he went on his way rejoicing. Had he been, as I have said, less successful in imposing silence on his own ground, he might have received valuable warnings, which, if heeded, would have saved him from the blackest disgrace that any "hereditary legislator" has endured in modern times. Unmindful or ignorant of the fact that immunity from reproach could not be so easily commanded in America as in his own country, he set forth in company with the actress before spoken of, whose stage name is Violet Cameron, and appeared on these shores in the aristocratic rôle of business manager of her troupe. Just before his departure from England, he distinguished himself by pummeling the fair Cameron's husband, who on a certain occasion was unreasonable enough to intrude upon his lawful wife while she was in consultation,—on theatrical matters, presumably,—with his lordship. As the nobleman is almost a giant in stature and a skilled bruiser by training and habit, while the superfluous husband is a shrivelled little shrimp, the escutcheon of the Lowthers was glided with no additional glory by this encounter,—especially as the police proceedings which followed had the effect of conferring momentary freedom of speech upon the long dumb-stricken newspapers. In the midst of the broadside with which they signaled their emancipation, the noble earl took passage across the seas with his Violet, but landed in New York only to find that the discarded husband, de Bensaude by name, had preceded him by a few hours. Then the jubilee began. Lord Lonsdale was instantly set upon by a swarm of reporters, whose attentions appeared to afford him rare delight until the next morning, when to his consternation he found himself literally, minutely, and rigorously reproduced, without omission, adornment, modification, or extenuation of any kind. There he was, in all his bad English (and a peer's English can be bitterly bad, sometimes) all his vulgarity (a peer knows how to be vulgar, when he sets himself about it and when his name is Lonsdale)—photographed, in short, with a cruel and life-like accuracy which must have made him shudder, unless, indeed, he has passed the shuddering point of sensitiveness. Upon him, I suppose, pity would be wasted; but it is impossible to think without pity of some of those who are bound to him by indissoluble ties, and whom he unsparingly bespattered with the luth in which he straightway proceeded to entrench himself. Through column after column he laid himself open to the mockery and contempt of decent men. In the centre of a Broadway bar-room he dilated effusively upon his "protectorate" of the actress; expounded his dealings, pugilistic and other, with the husband; laid bare the story of his domestic life, explaining why Lady Lonsdale had not accompanied him on this ignoble expedition; and enunciated his theory that a connection of the sort he had established with la Cameron was not necessarily a barrier to the conjugal happiness of all parties concerned. By way of emphasizing this particular conviction, he invited the lonely and deserted spouse, de Bensaude, who opportunely strolled in among the throng, to drink with him; and the curious spectacle was witnessed of a British peer swallowing cocktails with a man whom he had separated from his wife, whom he had cudgelled in England, and whom he had threatened five minutes before to cudgel again. Upon which of the parties to this spirituous fraternization the disgrace fell most heavily, it would puzzle a casuist to decide. All these things, plain and unvarnished, were duly paraded in the daily journals. And not these alone. In swift succession were chronicled the expulsion of the burlesque beauty from the hotel in which she had first settled,—her repute being altogether too rancid for toleration by the other occupants; her begonia to another inn, where she and Lord Lonsdale were accommodated with contiguous apartments; the conversations of the earl with his protégé while the latter lay in bed; and the continued meetings of the lord and the husband, on terms of good fellowship, the pair eating and drinking together, publicly, on several occasions. So closely were the two men followed by the representatives of an insatiate press, that a reporter of the *New York World* was enabled to give a choice specimen of their conversation, as they gazed upon a well known picture of naked women, which hangs in the bar of the Holman House. "I think," said his lordship, "that girl with the blue ribbons in her hair looks like Vi; don't you, Benny?"—"I think so, too," answered the complaisant little animal. You may well rub your eyes, you who read at a distance, and ask if such brutalities can be. They can be, and are; and what is more, there appears to be no likelihood of their interruption. To cut the Lonsdale extravaganza short, I will mention that the *entente cordiale* be-

two or three patrician and plebeian did not last long. De Mousande became too pressing in his demands for alms, and was suddenly locked up in jail on a charge of threatening to assault his wife. He retaliated by commencing suit against the earl for having destroyed the tranquillity of his home, declaring himself damaged to the extent of \$100,000; and the lawyers are now luxuriating over the prospect of sinking a productive shaft in the Lowther coal mines.

The single feature of this disgusting affair which can be viewed with satisfaction is the prompt consigning of its prominent participants to popular odium. The whole concern of Lonsdale & Co. is shattered to irretrievable smash. For once, the license of the New York press has served the interests of cleanliness and decency. The burlesque show has been dropped without a trial. People will not go near it. On the night of the first performance there was scarcely a woman to be seen in the theatre, and since then the seats have been unoccupied by either sex. Lord Lonsdale has been cut dead by New York society. The clubs will not receive him, and the citizens to whom he brought private letters will not let him come near them. This is an unprecedented stand for New York to take, and it is beyond a doubt that no such fastidious coyness would have been exhibited but for the exposures in the newspapers. The disconcerted nobleman wanders about town with a mark upon him compared with which the brand worn by Cain would, in the estimation of many, have been a symbol of meritorious distinction. It is not recorded that that primal, eldest malefactor that he went about drinking in pot-houses with any poor wretch whose wife he had sequestered, nor that he made light of his own wife's name in connection with his personal profligacy. Lord Lonsdale has also to bear in mind that the disclosures of the past few weeks cannot be passed over in his own country. His power to evade notoriety and to stifle criticism has vanished, and he can hardly hope to resume, at home, the course of life which was possible only so long as secrecy could be maintained. Therefore, I say, let the sensational press of America have one acknowledgment to its credit. It has applied an appropriate garb of moral tar and feathers to a figure which could not be more fittingly decorated. The task was not suited to delicate fingers, but every one longed to see it done, and nobody regrets that it was done so efficiently as to close for a long time and perhaps for ever the particular path of devilry which the scape-grace earl chose to follow.

I have allowed this noisome episode to encroach so far upon the space I am entitled to, that I cannot now venture to recur to the original theme, and must leave the general consideration of New York journalism for another occasion. It is a subject, which by strong hands might be most instructively employed, and which, even though imperfectly treated, can scarcely fail to develop numerous points of interest.

## CRICKET.

### YOKOHAMA CRICKET AND ATHLETIC CLUB V. THE NAVY.

This match, the "conquering" game between the Club and the Navy, and the closing one of the season if we mistake not, was played on Saturday, thanks to the interest of our Visitors in the game, and the determined efforts of the Club Captain to get together an eleven. The Navy gave the Club the innings, there being at the time the match commenced (12.15) very few Club men on the ground. Edwards and Macmillan opened the batting, Collins and Sarratt bowling. Edwards started well with a drive for three off Collins' third ball, followed by a cut for three off Sarratt, and a single; Macmillan, too, getting a single off Sarratt before the over finished. Two or three more singles were put on, and Edwards snicked Sarratt for three, and in the next over got Collins away to long-on for three more. Collins' next ball fared no better, Macmillan sending it to long-on for another three. Sarratt's next over, a maiden, saw Macmillan sent back, and Hearne took his place. Edwards next hit off Collins to square-leg reminded the batsmen that there was a strong field to break through; Hearne however, was more successful a ball or two after, making three off a hard hit to the pavilions at leg. Another maiden from Sarratt followed; but each ball in Collins' next over was played, though only six runs were made, thanks to the sharp returns. On his next over too, Edwards made a forward hit for three, and a drive to long-on for two, Hearne also hitting to long-off and adding a single. Hearne next got Sarratt away for one, Edwards

following by sending the next ball but one to long-on for two. Hearne's next hit off Collins well nigh cost him his wicket, as he gave a chance of a high catch to Troughton at square-leg, and not content with that, afforded another chance, though a harder one, off Sarratt's opening ball in the next over, following it up with a hit for one. He gave a third chance very soon afterwards, this time at point, where he was well caught by Hickley. This brought Duff out. After a maiden over from either bowler, each of the bats got Sarratt off to leg for a single, Duff next sending Collins to the pavilions for four. A few singles were added, before Collins, following a maiden from Sarratt, had another of his overs badly punished, Edwards driving the first ball to the pavilions at square-leg for two, the third to long-on for one, and Duff hitting the last high to long-off for three. Duff followed by sending Sarratt to square-leg for four, a hit which reminded observers of the advantage of a square-leg hit from the Settlement end as the stumps were pitched on Saturday. Off Collins' next over also Duff scored five, two hits for two, and a single. Edwards followed by getting Sarratt away to square-leg for three, and by cutting Collins for two. Both players appeared to be well set when luncheon was announced.

On resuming, Troughton and Mitchell went on bowling. When a few more runs had been added, and after contributing a total of 25, Duff was unfortunate enough to give Sarratt an easy catch at cover-point in Troughton's second over. Kenny, who then joined Edwards, made three—one being a free hit to square-leg for two—before giving Collins an equally easy catch in the slips off Mitchell. Griffiths followed. Edwards then got Troughton away in successive overs for two threes, Griffiths in the meantime snatching three singles ere retiring before a "yorker" from Mitchell. Mollison, the next to bat, was very unlucky, being caught out by Collins in the slips off Troughton after making two twos and a single. Litchfield now went in, and he, after contributing five, one two and a fine hit to leg for three, gave way to Playfair—a ball from Troughton fetching him. Playfair and Edwards made another stand, Griffiths doing the running for the former, who was pluckily playing at considerable disadvantage. Bush at this stage relieved Mitchell, and Sarratt soon afterwards took Troughton's place at the Pavilion end. Runs were now added rapidly, Edwards playing well. After himself adding ten, mostly singles, and helping to run the score up to 153, Playfair was bowled by Bush. Sarratt almost immediately after took Wileman's stumps, not however until Edwards had put on the only four of his innings. Robinson, the last to bat, helped to make a final stand. He got several good hits off Bush, mostly to square-leg, one being for three. In Sarratt's next over Edwards made a fine forward cut for three, Robinson following with a similar for two. Robinson scored another two for a hit to square-leg and a single; and Edwards also got a single off the next over, Bush's. The latter here put Collins on in his place at the Settlement end, and off the last ball of the over Edwards was almost caught, through giving the only chance in his innings. Robinson then hit Sarratt past mid-on for two, and Collins for another two to square-leg, Edwards making a single off Collins' last over. In the following over, Edwards was unfortunate enough to play a ball from Sarratt on to his knee, whence it just rolled to his wicket, thereby preventing the carrying-out of his bat. His total score was 93, and to him therefore the honours of the day were ungrudgingly accorded as he returned to the Pavilion. Robinson's 18—the best score he has made for some time—were well and carefully put together, and he did his best to assist Edwards to get into three figures.

At 20 minutes four o'clock the Naval team commenced its innings, Collins and Mitchell facing the bowling of Edwards and Hearne, Collins hit Edwards' third ball to square-leg for one, and made another single off Hearne, Mitchell following with a hit to leg for three off the same bowler. Edwards' next four overs were maidens, the second one sending Mitchell back, clean bowled. Hickley joined Collins, and two or three singles were put on, Hearne meanwhile delivering two maidens. Off the first ball of Edwards' eighth over Macmillan caught Collins out at point. Sarratt took his place, and commenced by hitting Edwards to long-off for two; Hickley also got a two and one single off Hearne's next over. After adding two singles, Sarratt unfortunately hit Hearne up—a catch well waited for and held by Kenny at long-off. Warden next went in, but in the next over but one Edwards clean bowled Hickley. Morgan joined Warden, only to see his partner bowled by Hearne almost immediately. Osborne followed and, as if to give further evidence of the ill fortune attending the Visitors' batting, was almost at once caught

out at point by Macmillan off Hearne's last ball of that over. This brought Grogan not, who after a maiden had been delivered by Edwards, cut Hearne to point for two and then hit the same bowler to long-off for one. In the next over Edwards bowled Morgan. Braddon joined Grogan, and hit Hearne to long-on for a single. In the same over Grogan was given out, leg before wicket. Troughton followed in. Braddon got Edwards away in the slips for two, but the following ball found its way to his middle stump. This brought out Bush, who put himself in last through having sprained his wrist before the match began. Troughton added one, and in the last over of the game should have been caught and bowled, but unfortunately the bowler overran himself and so missed the catch, much to the disappointment of the Club. Time was called almost immediately afterwards, and the game, though decided as a draw, was markedly in favour of the home team. The Navy played short of two very good men, Lieutenant Christian (who is in Hospital with fever we are sorry to hear), and Lieutenant Spearman, of the *Constance*, who was unable to engage to play in consequence of his ship being under orders for sea. The Club, moreover, had the advantage of Duff's presence behind the wicket. We give below full score and bowling analysis:—

THE CLUB.		THE NAVY.	
Mr. Edwards, b. Sarratt	93	Mr. Collins, c. Macmillan	6

## FINANCIAL ADMINISTRATION.

### A HISTORY OF THE CURRENCY.

(Continued from 16th October.)

With regard to the alteration of the standard, several of the foreign merchants resident in Japan entertained doubts as to the advantages to be derived from it, and the managers of some of the banks forwarded to the Government representations to the effect that it would be advantageous to keep to the silver standard; but, as the right to make this change rested with our Government, none of the foreign ministers raised any objection. And so the Government at once completed the arrangements for the new coinage system, Mint Regulations, &c., decided upon, as before mentioned, and on the 27th of June 1871 published them to both Japanese and foreigners in the following notification:—

"In the matter of the currency, the Government has up to the present been employed in the withdrawal from circulation and the recoinage of former issues of coin. Now, however, in accordance with an equitable policy based on universally recognised principles of right, the Government will, from the 2nd of August next, recoin at the Osaka Mint, at the request of Japanese or foreigners and in accordance with the following regulations, into new money gold and silver bullion, old gold, silver, and even foreign coins in proportion to the actual value of the bullion or coins thus sent in to the mint, no regard being paid to the nominal value of coins so presented."

The Mint Regulations, Lists of the New Coins, Tables showing variations allowed in the respective standards of fineness, Diagrams of the New Coins, Tables of Weights and Standards of Fineness, Statements as to the fixed limits of circulation, and other documents relating to the subject were attached to this notification of the 27th of June, 1871, but as a separate volume, containing all these papers, has been already printed and published, and consequently both Japanese and foreigners are thoroughly acquainted with them, they have been omitted.

A provisional draft of the Regulations attached to this notification had been already drawn up in December, 1870, but as there were several points

in regard to which the foreign Representatives had to be consulted,<sup>27</sup> our Ministers of State made frequent visits to Yokohama and held consultation with the Foreign Ministers, and after much discussion and repeated alterations the regulations were, in May of the following year, finally determined upon.

Looking back at the question from to-day and bearing in mind that these regulations were framed on the model of the usual regulations in force in Europe and America, it would almost seem as if no particular difficulty should have been experienced in coming to a definite decision in regard to them, but, if we look well at the state of things that existed at that time, we cannot fail to perceive that it was only after great trouble that the Government at length succeeded in drawing up this volume of regulations. At that time the majority of the people failed to understand the Imperial intentions in regard to currency reform and new coinage, and there were even people who were actually suspicious of the great difference in shape and denomination which existed between the new coins and those previously in use. The Government, therefore, in order to remove these suspicions, issued a proclamation, in which they took the trouble to explain clearly the reasons for the issue of the new coins and other details in regard to them. This proclamation was what was afterwards called the "New Currency Regulations." It was as follows:—

"As the trade between this Empire and foreign countries has since ancient times been small, there has been no exact system of currency, and, although there have been many different kinds of coins (of the same nominal value), the actual values of these have never been the same. Speaking briefly there have been *Keichō* gold, *Kiōhō* gold, *Monji* gold, gold *Obans* and *Kobans*, 1 *bu* gold pieces, 2 *bu* gold pieces, 2 *shu* gold pieces, 1 *bu* silver pieces, 1 *shu* silver pieces, *Tohiyaku* silver, various large and small copper coins, and besides these numberless coins which have been current only for a short period; there have even been coins, the circulation of which has been limited to a particular province or a particular district, and which up to the present time have never been current elsewhere. Hence there are all sorts of coins differing in shape and in size and in value, and, as the proportion of alloy used in each case was a variable quantity, the result is that the coins differ also in quality. It is therefore almost impossible to ascertain the exact weight and composition of these coins,—points of essential importance in a currency. Old and new coins circulate together in a confused manner and their quality has been, as a natural consequence, debased, while counterfeit money has been issued, and the present serious state of affairs is the result. The occasional good coins have either been unprofitably hoarded up in the godowns of the rich or exported in no inconsiderable quantities to foreign countries. As a consequence the purchasing power of money has declined, its employment to meet the requirements of daily life has been interfered with, and there is reason to apprehend that its general utility for public purposes may cease altogether. This state of things is disastrous to the whole Empire and no greater distress could befall the nation.

"On enquiry into the causes of this evil we find that the evil is one of long standing and is due to the absence of an uniform value for coins of the same denomination, and the fact of a mixed circulation of bad and good money. Now that commerce has reached a more flourishing condition, how shall we improve the circulation of money and lay the foundation of a prosperous country, unless we reform the old evil system and introduce a new and good coinage? This is the business of the government and a most urgent work that brooks no delay. Hence it is that as early as the year 1868 the work of reform has been commenced, and, regardless of the enormous expense entailed, a Mint has been founded at Osaka. A large assortment of machinery has been obtained; the principles of currency in force in every country in the world have been ascertained, and in the regulation of all matter relating to coinage, from the quality and weight of gold and silver down to details respecting the proportion of alloy to be used, and the rules of minting, the financial systems of every country have been compared and considered carefully. It is the intention of the government, proceeding in this manner, to issue a new coinage of carefully regulated quality and to cause it to circulate everywhere throughout the country, together with the coins already in circulation, and the ceremony of opening the Mint has already taken place."

"As however, the prices of commodities have, as already stated, fluctuated greatly in consequence of there being so many different kinds of

money in circulation, and much distress has been caused thereby, the Government intend gradually to withdraw all the old coins and replace them by a new and uniform currency. Moreover, in accordance with the principle that money is the circulating medium of a nation, the Government will, without delay, receive any bullion brought to the mint by people desiring to exchange it for coin, and will give in return for it current coin. As, therefore, old kinds of gold and silver money which people, following established precedents, have been accustomed to consider as precious valuables, will in a few years come to be regarded as simple bullion, it is important that people should hasten to exchange them and put them into circulation, and should take care not to stand in the way of the true principles of currency.

"The object of the Government in establishing a mint being to fulfil its duties in the protection of the nation's interests, the people should bear this well in mind, and everyone should diligently do his duty in the station of life in which heaven has placed him.

"These explanations are hereby published; copies of the shapes of the new coins, and tables of the weights and standards of fineness are also added, as well as detailed regulations for the exchange of bullion. This proclamation with annexed papers will be circulated all over the country.

"July, 1871." "DAIJO-KWAN."

(The Regulations attached to the above proclamation are included in the New Currency laws and are therefore omitted here.)

The foregoing is a brief summary of the principal features of the reforms which were carried out in our new monetary system. The amount and weight of gold and silver bullion that were received at the Mint and the number of gold and silver coins coined therein, and also the number of copper coins minted from the date of the opening of the mint up to June, 1885, a period of 175 months, were as follows:—

GOLD.		
BY WHOM BROUGHT INTO THE MINT.	WEIGHT, $\frac{2}{3}$ THE FINE.	oz. Troy.

It is not clear what estimate the Government formed, when work commenced at the mint in 1871, of the quantity of gold, silver and copper coins that would be required, nor is it clear what opinion they held with regard to the time in which they would be able to coin the required amount of new gold, silver, and copper coins; but from a public document of that time it appears that the opinion of the Chief of the Government Department concerned was that in about 10 years from the commencement of work at the mint (January 1871) about *yen* 250,000,000 of the new gold, silver,

and copper coins would be minted. (In accordance with Articles 26 and 27 of the resolutions agreed upon at the meeting of Okuma, Minister of State, and Terajima, vice-Minister for Foreign Affairs, with the Minister of the various foreign countries, which took place in February, 1881, at the American Legation in Yokohama). Subsequently, however, it was found that, owing to various causes, the work of coinage did not progress as rapidly as had been anticipated, and even after 14 years from the beginning of the work the amount of the new gold and silver coins struck was not more than 113,000,000 *yen*, while the amount of copper coins minted was 1,200,000 *yen*.

Although there are many reasons for the difference between the amount actually coined and that previously estimated, yet the first and principal cause was that our gold and silver mines were few and that, in the case of the few that there were, capital and skill for developing them were lacking. This was the principal reason. The second cause was that, in 1873 and 1874 and succeeding years, the newly minted coins found their way in large quantities to foreign countries; moreover in 1877 and 1878 the amount of paper money in circulation was largely increased, while in 1878 and 1879 the note issues of the National Banks also reached larger proportions, and consequently, for several years, the balance of trade was against us. As a result the outflow of gold and silver coins and gold and silver bullion grew steadily larger, and we find, accordingly, that the quantity of bullion received at the mint for coinage at that time was considerably less than that sent in at the commencement, during the years 1873 and 1874. This was likewise one of the chief causes. Other causes, which contributed to the same result, were that during 1875, 1876, and for several years after, the government, in order to repay in a convenient form their foreign loans, purposely restricted the amount of gold coined at the mint and caused only one kind of gold bars, of a fixed weight, to be made, and that again from 1879 to 1884 they purposely diminished the coinage of the subsidiary silver coins.

#### CHAPTER III.

#### STEPS TAKEN IN REGARD TO OLD GOLD AND SILVER COINS IN THE BEGINNING OF THE PERIOD OF MEIJI.

If we enquire generally into the disorder which existed in our monetary system at the beginning of the period of Meiji we find that the Shogunate, in the latter days of their existence, in consequence of the diminution of their financial resources, and in order to meet their pecuniary difficulties, coined large quantities of inferior 2 *bu* gold and 1 *bu* silver pieces, and that all the large clans, too, gradually came to coin privately their own money. At the beginning of the Restoration, before the government had prohibited the private coining by the clans of their own money, many of the rebel-clans in the north-east and of the other large clans coined in their own territories 2 *bu* and 1 *bu* gold pieces and 1 *bu* silver pieces, etc., and used this money to defray their various military expenses. In consequence of this the circulation of counterfeit coins, more especially counterfeit 2 *bu* gold pieces, increased greatly, and the result was that there were over ten different kinds of 2 *bu* gold pieces passing through the hands of the money-changers in Yedo, Osaka, Kyōto, and other towns. As seven or eight out of these ten were counterfeit, incalculable distress was caused to the people. The government, in order to guard against this evil, sent strict injunctions to all the clans on the 14th of October, 1869, to take measures to prevent the issue of this counterfeit money. These orders, however, had no effect, and the counterfeit coins continued to circulate in increasing quantities in the chief towns. The coinage by the government of inferior 2 *bu*, 1 *bu*, and 1 *shu* pieces was commenced at the mint in Yedo in May, 1868, and at the mint at Nagabori in Osaka in June of the same year; these coins being made on the model of the inferior coins issued by the Shogunate in, and after, 1860, and during the period of Bunkyo and Kōō. Up to March of the following year there were coined and issued at the two places, Yedo and Osaka, 2 *bu* gold pieces to the value of 3,670,643 *ryō* 2 *bu*; 1 *bu* silver pieces to the value of 1,066,833 *ryō* 2 *bu*; and 1 *shu* silver pieces to the value of 1,171,400 *ryō*. Since the government itself issued at that time inferior coinage to such a large amount, it is no wonder that the strict prohibition against the private coining of money by the various large clans was ineffectual.

As the numbers of inferior coins in circulation continued to increase the evil effects became more and more serious, and the distress caused thereby affected not only the people of this Empire but foreign merchants residing in Japan. Conse-

<sup>27</sup> In accordance with the Treaty of June 25th, 1866.

quently the latter addressed themselves to their Ministers and Consuls and loudly asked that a remedy might be applied. Accordingly, the foreign representatives addressed an official *de jure* patch to our Minister for Foreign Affairs, in which they complained of the evils caused by the debased currency, and demanded that this state of things should be remedied. (Vide the letter of the Foreign Representatives to the Japanese Minister for Foreign Affairs, dated February 17th, 1869.) The general purport of this document was as follows:—

"We have heard that foreign commerce is seriously disturbed by the great fall which has lately occurred in the market value of the Japanese current coins, the one *bu* silver piece and the two *bu* gold piece.

"By the Convention of June 25th, 1866, the *bu* is declared to be a silver coin containing not less than nine parts of pure silver and one of alloy, and weighing not less than 134 grains Troy weight (in Japanese about 1 *ren* 7 *mō*). According to this standard 311 *būs* are equal in intrinsic value to 100 Mexican dollars. But now the market price of *būs* has lately fallen to from 340 to 350 *būs* per 100 Mexican dollars, to the serious detriment of the foreign import trade and those foreigners who have become large holders of Japanese coin. This excessive depreciation of the *bu* coinage is not generally attributed to the ordinary fluctuations of commerce, or even to the great demand for dollars, which has been created, it is said, by the bullion contracts of the government, but to the reports which are becoming prevalent that the *būs* now issued by the Japanese government are of a lower standard than that named in the Convention of 1866, and that much spurious coin of the denomination of the two *bu* piece has passed into circulation.

"It cannot be supposed that the Mikado's government have sanctioned, in the minting of their coins, any departure from the fineness of the silver *bu*, which is formally declared in the Convention of 1866 to be the standard of that coin. The Representatives of the Treaty Powers feel obliged, however, to point out that the unfortunate reports, to which they have referred, are as injurious to the credit of the Japanese Government as they are detrimental to the interests of commerce, for, not only is it incumbent on a Government to maintain the purity of its coinage at the declared standard, but it should also efficiently protect the public from counterfeit or unauthorized issues. They therefore beg that the Japanese Government will consider what measures may best be taken to check these disturbing reports and to diminish the excessive fluctuations in the market value of native coin."

The Government, before deciding on a final answer to the request of the Plenipotentiaries, tried various plans in order to put a stop to the evils resulting from the counterfeit coins. One of the plans they adopted was to establish an office in Honcho, Tōkyō, for the verification and assortment in rolls bearing the Government stamp of gold and silver coins, and to issue instructions that every one, when making payments in coin to the Government, was to submit the coins to this office for verification. (Decree of 14th of March, 1869.) Another was to establish similar offices for the verification of coins in Kyōto, Osaka, Yokohama, Hyōgō, and Nagasaki, and cause spurious money to be examined there. (Decree of 17th of March, 1869.) A third plan which they adopted was to abolish the gold and silver mints in Tōkyō and to stop the issue of the coins made on the old model, namely, the inferior 2 *bu* and 1 *shū* gold pieces. (Decree of the 24th of March, 1869.) However, as two weeks passed without the final answer of the Government having been sent, the Foreign Representatives forwarded a further urgent despatch to the Minister for Foreign Affairs requesting a decided answer (4th of March, 1869). This despatch was to the following effect:—

"In our despatch of the 17th ult. we pointed out the very injurious consequences resulting from the debased character of the 2 *bu* gold pieces and 1 *bu* silver pieces issued by the Japanese Government, and requested that prompt and efficient measures should be taken. Since then some time has passed by and, although two weeks have elapsed, we have received no reply to our communication. What is the reason of this? In this matter most important questions are involved which seriously affect the commerce of our respective countries, and which brook no delay. These questions are as follows:—

"1. How much pure silver and how much alloy are contained in the silver *bu* now coined by your Government, and what is the weight of the coin?

"2. What proportions of gold, silver, and alloy are contained in the 2 *bu* gold piece, and what is the weight of this coin?

"3. Do daimios, or any persons in Japan other than the Government of the Mikado, possess the right of coining either silver *būs* or gold 2 *bu*

pieces or coin of any description, 'gold, silver, or copper?

"4. If they do possess this right how can their coins be distinguished from those issued by the Government, and are they under obligations to the Government to issue their coins at a fixed standard and weight, etc.?

"We beg that you will be so good as to furnish us with replies to these questions at an early date (4th March, 1869)."

Four weeks having passed by since the Foreign Representatives had sent in this second letter without any decided answer having been received from the Minister for Foreign Affairs, the Foreign Representatives sent a third despatch pressing for a final reply (2nd of April, 1869). In answer to this the Minister for Foreign Affairs informed the Representatives that Okuma Hachitaro, Vice-Minister for Foreign Affairs, who was then in Osaka, had been charged with the duty of investigating the foundation for the rumours as to the circulation of spurious gold and silver, and that he was accordingly awaiting Okuma's return to Tōkyō from Osaka and would then reply to the letter of the Foreign Representatives. As, however, there were among the coins then in use certain coins below the proper standard of weight, a decree had been already issued stopping the coining of 2 *bu* gold and 1 *bu* silver pieces, and these coins would not in future be issued. If any daimios or other persons were to coin money privately such acts would be visited, according to the laws of Japan, with very heavy punishment (4th of May, 1869).

(To be continued.)

### LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 11th.

The Marquis of Salisbury has declared that the policy of Austria with regard to Bulgarian affairs largely influences that of the British Government, and that the latter will not be backward if the Powers decide to vindicate the Treaty of Berlin. He expressed a hope for the maintenance of peace, but said that British interests would be protected wherever attacked.

London, November 13th.

The Grand Sobranje has elected Waldemar Prince of Bulgaria.

London, November 14th.

The King of Denmark having refused to sanction the acceptance by Waldemar of the Crown of Bulgaria, the latter has declined.

London, November 15th.

A Bulgarian deputation will visit each of the European Powers and explain the situation.

Count Kalnoky, Austrian Minister for Foreign Affairs, in a speech declared that Austria was anxious for peace, but not at any price.

Sir H. Drummond Wolff has been summoned to London.

London, November 16th.

It is reported that Sir William Hart Dyke has been appointed Governor of Hongkong.

The Socialists have arranged to hold a demonstration in Trafalgar-square on Sunday, and have requested the Marquis of Salisbury to remain in town to receive a deputation.

London, November 18th.

The reported appointment of Sir W. Hart Dyke to the Governorship of Hongkong has not been confirmed.

Count Andrassy has strongly condemned the admission of Russia to the alliance of Emperors.

Per German steamer *Stettin*, for Hongkong: — Silk for Lyons, 154 bales.

Per French steamer *Tanais*, for Hongkong via Kobe: — Silk for France 938 bales.

## REPORTS.

The British steamer *Altowar*, Captain Bannet, from Hongkong, reports: Left that port November 10th, at noon, and first part of passage had strong E.N.E. winds, overcast sky, and heavy head sea, which was shipped fore and aft. On November 12th wind and sea moderated, and continued so until 13th, when the wind increased and a strong breeze and drizzling rain were experienced until the 18th, when the wind and sea increased, and a gale was met with light rain. At 4 p.m. slowed engines, Rock Island bearing N.N. This wind and weather continued until 3 a.m. on 19th, when it moderated; at 5 a.m. put engines at full speed and continued the passage to Yokohama in strong N.E. winds and overcast sky. Arrived at 10.30 a.m.

The Japanese steamer *Tokio Maru*, Captain Wynn, from Shanghai, reports: — Left Shanghai on November 13th, at 11 a.m. and had fresh northerly winds and fine weather to Nagasaki, where arrived Nov. 15th, at 6 a.m.; left the same day, at 4.30 p.m. and had moderate northerly winds and fine weather to Shimoda, where arrived at 4.55 a.m. November 16th. Left the same day at 7.30 a.m. and had fine weather and light northerly winds to Kobe, where arrived at 6 a.m. 17th; left at 6 p.m. same day and had a light north wind which freshened to Oosima, when the wind shifted to N.E. and increased to a gale with heavy rain. At noon, 18th, wind increased to a heavy gale attended with terrific squalls and rain, and a mountainous sea, which continued to 4 a.m. 18th when the sea and weather moderated; thence to port had strong N.N.E. winds and clear weather. Arrived in Yokohama on November 19th, at 2.30 p.m.

## LATEST COMMERCIAL.

## IMPORTS.

Stagnation prevails throughout and dealers seem scarcely inclined to take any notice of the Market. It would be rather difficult to give the prices at which business will be resumed, but meanwhile quotations must be left unaltered. They are of course nominal excepting as regards the very few sales reported.

YARNS.—Sales for the week amount to about 150 bales, equally divided between English and Bombay; there being almost no demand at present, prices are nominal.

COTTON PIECE GOODS.—Sales are reported of 250 pieces 8½ lbs. Shirtings, 150 pieces 10 lbs. ditto, 700 pieces Turkey Reds, 450 pieces Velvet, 1,500 pieces Indigo Shirtings, and 500 pieces Prints.

WOOLLENS.—250 pieces Italian Cloth, 150 pieces Plain Orleans, 200 pairs Blankets, and 80 pieces Silk Satins, comprise the sales in this class.

Tin Plates, per box	5.30	to 5.50
Pig Iron, No. 3	1.20	to 1.22½

## KEROSENE.

A small daily trade this week at unchanged rates. Stocks are increased by the arrival of the *Sultan* with 50,000 cases, and other ships are looked for presently.

	PER CASE.	PER HULL.
Devoe	\$1.77	to 1.80
Comet	1.72	to 1.75
Stella	None	

## SUGAR.

Sugar has been in somewhat better demand, and for white descriptions previous prices have been paid. Brown and Manila sorts are not in request. The market remains very quiet at the close, and total transactions are not more than 1,500 piculs all sorts.

	PER HULL.	PER PIECE.
White Refined	\$5.00	to 7.15
Manila	4.20	to 4.40
Daitong and Swatow	3.30	to 3.75
Original	4.00	to 4.05

## EXPORTS.

## RAW SILK.

Our last issue was of the 12th instant; since that date there has been a considerable trade, the Settlements for a week amounting to 1,670 piculs, divided thus:—*Hanks* 60 piculs, *Filatures* and *Re-reels* 1,525 piculs, *Kakeda* 20 piculs, *Oshu* 5 piculs, *Taysam* kinds 30 piculs. Additional to these figures "Direct Export" has been 130 piculs, making a grand total of 1,800 piculs.

As shown in our post-script last week we had quite a "splurge" by a Swiss house, by whose aid about 1,200 piculs (chiefly *Filatures* and *Re-reels*) were settled in three days. Of course this made holders very frisky and prices were advanced considerably. There is now a much quieter feeling: the large Settlements are being inspected in a very leisurely fashion: the "leviathan operators" are not above trying to cut prices at the scales, and there is a decidedly weaker feeling in the Market, with prices receding a little.

It was not to be expected that any genuine "boom" should now arise, for prices are about \$100 above those current at this time last year, and there seems to be a good margin for a fall later on. The Stock is heavy; politics in Europe are very unsettled; the New York Market hangs back from following ours, and it is quite on the cards that Japanese holders may become rather anxious sellers next month.

Supplies are coming in fairly, and in spite of the heavy Settlements the present stock is fully 1,200 piculs. Quotations are somewhat higher than those we printed a week ago, and foreign exchange is stepping upwards almost daily.

*Hanks*.—No very large transactions, but prices are firm. The Settlements (60 piculs) include *Maribuso* \$650, *Shimonita* \$605, *Hachiji* \$665 to \$585.

*Filatures*.—Large business at somewhat irregular prices. Demand has apparently been for both hemispheres, and among the sales we find the following (possibly the prices may be "shaded" a little when the weighing comes on). *Oshu* and *Ise* (fine size) \$840, *Hasegata* \$780, *Tajima*, *Shinsei-sha* \$775, *Black Horse* and *Saidanshu* \$770, *Uzen*, *Ishiyoshino*, *Kakusanha*, *Yamagata*, *Yurikishia*, *Miyoshi* \$760, *Kanayama*, *Chiyosha*, *Nagano*, *Saito* \$750, other *Sanshu* kinds at \$740 and a good line of *Tajima* at \$700.

*Re-reels*.—Considerable trade in these but, generally speaking, among the common and inferior grades; *Joshu* (Ichimurae) noted at \$735, *Koriyama* \$730, *Chichibu* \$720, *Yamagata* \$710, *Takasaki* \$700, *Bushu* \$690—with much rubbish at about \$650.

*Kakeda*.—A few small parcels taken into godown, and further transactions are reported as being on the carpet. Prices paid are on the basis of our quotations given below, but the trade actually done has been too small to serve as a guide for future transactions.

*Oshu*.—Only one sale in *Sendai*, noted at \$150; nothing passing in *Hamatsuki*.

*Sundries*.—A fair business in *Nagahama* at \$450 for "good average" cargo.

There have been three outward mails, American, English, and German. The *City of Rio de Janeiro* (13th) carried 374 bales for the United States Markets, the *Teheran* (13th) took 314 bales for France, and the *Stettin* (16th) has 154 bales for Lyons. Total Export for all countries to date is 9,123 piculs, against 6,887 piculs last year and 11,203 piculs at 19th November, 1884.

Export from 1st July	11,200	11,850	12,150
Stock, 19th November	12,000	6,600	7,950
Available supplies to date	23,800	18,450	20,100

## WASTE SILK.

A considerable falling off in the business of this Department, and Settlements for the week do not exceed 250 piculs, divided thus:—*Cocoons* 25 piculs, *Noshi* 155 piculs, *Kibiso* 40 piculs, *Neri* 30 piculs. Besides these figures the *Boyekisha* have shipped 100 piculs for Europe.

Exporters complain that they cannot work against the combination of high-priced *Waste* and high Exchange. On the other hand, sellers do not see why they should reduce their pretensions, the consequence being a small daily business. Meanwhile, Stocks are reduced by the Direct Export and some few parcels reabsorbed by the interior. We make the revised Stock-list show a total of 11,000 piculs—quite enough for present requirements. Quotations unchanged.

The *Teheran* (13th) carried 152 bales *Waste* and 12 bales *Cocoons*, the canal-boat *Hampshire* being credited with 307 piculs *Cocoons* for New York. Total Export from 1st July, 11,135 piculs, against 4,375 piculs last year and 11,900 piculs at same date in 1884.

*Cocoons*.—As recently, the trade has been in *Tama* descriptions at about \$70.

*Noshi*.—A few small purchases, including *Mino* \$150, *Joshu*—best \$157½, assorted \$127½, *Shinshu* \$145.

*Kibiso*.—A small business, chiefly in *Joshu* sorts, at from \$35 to \$65 according to quality.

*Neri*.—Some transactions in Good Medium at from \$20½ to \$26½ uncleaned.

## QUOTATIONS.

Pierced <i>Cocoons</i> —Good to Best	\$130 to 150
<i>Noshi</i> — <i>Filature</i> , Best	150 to 160
<i>Noshi</i> — <i>Filature</i> , Good	160 to 170
<i>Noshi</i> — <i>Filature</i> , Medium	140 to 150
<i>Noshi</i> — <i>Oshu</i> , Good to Best	180 to 190
<i>Noshi</i> — <i>Shinshu</i> , Best	140 to 150
<i>Noshi</i> — <i>Shinshu</i> , Good	130 to 145
<i>Noshi</i> — <i>Shinshu</i> , Medium	120 to 135
<i>Noshi</i> — <i>Bushu</i> , Good to Best	150 to 160
<i>Noshi</i> — <i>Joshu</i> , Best	140 to 150
<i>Noshi</i> — <i>Joshu</i> , Good	120 to 130
<i>Noshi</i> — <i>Joshu</i> , Ordinary	110 to 115
<i>Kibiso</i> — <i>Filature</i> , Best selected	140 to 160
<i>Kibiso</i> — <i>Filature</i> , Second	130 to 140
<i>Kibiso</i> — <i>Oshu</i> , Good to Best	130 to 140
<i>Kibiso</i> — <i>Shinshu</i> , Best	100 to 110
<i>Kibiso</i> — <i>Shinshu</i> , Second	90 to 105
<i>Kibiso</i> — <i>Joshu</i> , Good to Fair	85 to 90
<i>Kibiso</i> — <i>Joshu</i> , Middling to Common	70 to 85
<i>Kibiso</i> — <i>Hachiji</i> , Good	60 to 55
<i>Kibiso</i> — <i>Hachiji</i> , Medium to Low	50 to 40
<i>Kibiso</i> — <i>Neri</i> , Good to Common	30 to 20
<i>Mawata</i> —Good to Best	250 to 275

## Export Table, Waste Silk, to 19th Nov., 1886:—

	SEASON 1886-87.	1885-86.	1884-85.
	PIEULS.	PIEULS.	PIEULS.
Waste Silk .....	8,000	3,797	9,883
Pierced <i>Cocoons</i> .....	3,125	578	2,617
Total .....	11,125	4,375	11,900
Settlements and Direct	12,650	8,550	16,450
Export from 1st July	11,000	7,550	4,800
Stock, 19th November	11,000	7,550	4,800
Available supplies to date	23,800	16,100	21,250

*Exchange*.—Foreign has continued its upward march, and rates are firm at the following quotations (in fact the foreign Banks ask an advance on these figures):—LONDON, 4 m/s., Credits, 3 5/8; Documents, 3 5/8; 6 m/s., Credits, 3 5/8; Documents, 3 5/8; New York, 30 d/s., G. 88½; 4 m/s., G. 88½; PARIS, 4 m/s., fcs. 4.30; 6 m/s., fcs. 4.33. Domestic: *Kinsatsu* at par with silver coin.

## Estimated Silk Stock, 19th November, 1886:—

	RAW.	PIEULS.	WASTE.	PIEULS.
<i>Hanks</i> .....	2,700	Pierced <i>Cocoons</i> .....	600	
<i>Filature</i> & <i>Re-reels</i> .....	6,200	<i>Noshi</i> .....	4,823	
<i>Kakeda</i> .....	1,700	<i>Kibiso</i> .....	4,780	
<i>Sendai</i> & <i>Hamatsuki</i> .....	600	<i>Mawata</i> .....	620	
<i>Taysam</i> kinds .....	300	<i>Sundries</i> .....	175	
Total piculs .....	12,000	Total piculs .....	11,000	

## TEA.

The demand has gradually subsided and at the close only 980 piculs have been settled. A further decline in value has taken place, but the market is steady. Private information from New York indicates a rapid decline for Japan Teas, and should such be the case it will put a stop to all buying for the present, as fully 5,000,000 pounds

having already been shipped, more than at same date last season. The steamship *Kent*, which sailed on 6th inst. for Kobe, took 66,945 lbs. for New York and 38,790 lbs. for Canada, from that port. The P.M. steamship *City of Rio de Janeiro* took from Kobe 14,870 lbs. for New York, 12,530 lbs. for Chicago, 21,903 lbs. for San Francisco, and 5,468 lbs. for Canada, total 54,870 lbs. The same steamer took 18,673 lbs. for New York, 50,988 lbs. for Chicago, 127,950 lbs. for San Francisco, and 8,248 lbs. for Canada. The steamship *Hampshire* took 54,330 lbs. for New York only.

Common .....	\$12
Good Common .....	13 to 14
Medium .....	15 to 16
Good Medium .....	17 to 19
Fine .....	22 & up'ds

## EXCHANGE.

Foreign Exchange has been on the rise all the week, and is firm at the close with a further tendency upward.

Sterling—Bank Bills on demand .....	3/4½
Sterling—Bank 4 months' sight .....	3/4½
Sterling—Private 4 months' sight .....	3/5½
Sterling—Private 6 months' sight .....	3/5½
On Paris—Bank sight .....	4/24
On Paris—Private 6 months' sight .....	4/24
On Hongkong—Bank sight .....	4/34
On Hongkong—Private 10 days' sight .....	4/34
On Shanghai—Bank sight .....	7½
On Shanghai—Private 10 days' sight .....	7½
On New York—Bank Bills on demand .....	80½
On New York—Private 30 days' sight .....	81½
On San Francisco—Bank Bills on demand .....	80½
On San Francisco—Private 30 days' sight .....	81½

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 27TH, 1886.

### DEATH.

On the 26th November, at the General Hospital, Cavaliere VITO POSITANO, His Royal Italian Majesty's Consul for Japan.

### SUMMARY OF NEWS.

THE first snow for the season fell in Niigata and Hakodate the 19th instant.

THE Government has decided to establish an Admiralty Office for the North.

THE Naval Department contemplates establishing a School of Construction.

H.I.H. PRINCE FUSHIMI left Utsunomiya the 20th instant for Fukushima.

THE opening ceremony of the Tôkyô French School took place the 16th instant at Ogawamachi.

THE death is announced of M. Paul Bert, the French Resident-General in Touquin and Annam.

THE trial of Captain Drake, which will take place at Yokohama, has been fixed for the 6th proximo.

THE Conferences on Treaty Revision continue, but nothing is publicly known as to the progress made.

MR. OGIN CHIKATSU, foster-father of Viscount Ogin Chikamichi, died the 18th instant after a long illness.

MING YONG-IK, who was robbed of a letter of credit some time since in Hongkong, has recovered the amount, £2,312 10s., in an action

in the Supreme Court against the Comptoir D'Escompte de Paris, who paid the stolen letter.

It is stated that Lieut.-General Viscount Miura has decided not to accept the appointment offered to him to visit Europe.

THE Autumn Meeting of the Kioto Keiba Kaisha took place on Saturday and Sunday last at Shinobadzu, in magnificent weather.

MAJOR MECKEL, of the Military University, who has been staying in Kisarazu on official business, returned to the capital the 20th instant.

MAJOR MURATA, of the Artillery, was permitted, the 22nd instant, to accept and wear a decoration conferred on him by H.I.M. the Czar.

LIEUT.-COLONEL KURIHARA, of the Sakura Division, visited the Tôkyô Garrison the 19th instant in connection with conscription business.

COUNT YAMAGATA visited Count Ito the 18th instant, and afterwards proceeded to the Cabinet Office along with the Minister President.

THE P. & O. steamer *Thibel*, on her last trip from Hongkong, made the passage from that port to Nagasaki in four days eight hours.

COUNT OYAMA has forwarded two pairs of copper flower vases to the Austro-Hungarian Ministers of State for War and for Naval Affairs.

MESSRS. KUROKAWA and TATSU, engineers of the Naval Department, were ordered the 18th instant to proceed to France on official business.

MR. KATO, Chief Commissioner of the Banking Bureau, is at present in Paris, whence he will report on the condition of the banks in France.

FIRE broke out the 21st instant at 4.30 a.m. in Sanbancho, Kôjimachi Division, but was extinguished at 5.40 p.m. after destroying 43 houses.

MR. MASUJIMA RUKUICHIRO, barrister-at-law, who has been absent in Kobe on business, returned to the capital the evening of the 19th instant.

AN exhibition of art objects was opened at the Public Hall on Thursday last, the proceeds of which will be handed over to the Ladies' Benevolent Society.

H.I.H. THE EMPRESS DOWAGER paid a visit the 19th instant to Chiarini's Circus at Tsukiji. All the Princesses of the Imperial family and many peeresses were present.

THE factory at the Shinbashi Railway Office has sent a locomotive to Baniu to be used in transporting timber and earth for the construction of the Tokaido line.

SOME anxiety is felt with regard to the suspension of the Nagasaki Conference. Rumours are widely current that the Chinese show a plain resolve to avoid any just conclusion.

THE excitement with regard to the *Normanton* affair has greatly subsided. The Japanese have

organized a subscription for the families of the drowned Lascars, and also for the defence of Captain Drake.

THE Azumatei at Sapporo proposes, it is said, to establish in the locality a large hall resembling the Rokumei-Kan at Tôkyô at an estimated cost of yen 30,000.

It is stated that the aggregate estimates for the 20th fiscal year in the various Departments will be reduced by yen 180,000, notwithstanding an increase in one of the Departments.

A CRICKET MATCH, played on the 22nd instant between the Kobe Club and a team from Her Majesty's Ship *Constance* and *Swift*, resulted in a win for the former by 89 runs.

THE Customs revenue collected at Nagasaki during the month of October last was \$14,135.63, the amount during the corresponding period of the previous year being \$10,563.49.

THE total quantity of Miike coal exported from Japan during last month was 16,465 tons, of which 10,565 tons were for Hongkong, 4,340 tons for Shanghai, and 1,560 tons for Singapore.

H.I.H. PRINCE HARU visited the barracks of the second corps of the Imperial Body-guards, the morning of the 19th instant, and afterwards proceeded to the residence of Marquis Nakayama.

DURING the storm experienced in Naoetsu, Etchu, the 18th instant, twenty-one houses were destroyed, while two houses were partly injured, and much damage was also done to other property.

CORRESPONDENCE from Otaru, dated the 13th instant, states that the catch of salmon is not abundant this year, and the price is quoted at yen 600 per 100 *koku* (one *koku* is equal to 2½ piculs).

THE machinery for two new dredgers has arrived at Nagasaki from England. When the hulls, which are being built on the spot, are completed, the dredgers will be set to work in Nagasaki Harbour.

A BRANCH office of the Suikosha (Naval Club) has been established at Yokohama. Port-Admiral Viscount Nakamuda and Rear-Admiral Arichi have been elected President and Vice-President respectively.

A MEETING was held the 23rd instant in the Agricultural and Commercial Department in reference to the proposed Bourse. Mr. Takahashi, chief commissioner, and the secretaries of the Commercial Bureau were present.

RETURNS from the principal centres of the epidemic show that cholera has virtually ceased. On the 16th inst., there were no new cases in Hyôgo or Shiga *ken*, neither were there any on that date in Sakai or in the City of Osaka.

MR. NISHI NARINORI, President of the Tôkyô Court of Appeal, accompanied by Mr. Fukuhara, Chief Accountant-in-charge, and two secretaries, will leave the 1st proximo to visit the local

courts in Chiba, Kanagawa, Shizuoka, Yamashiro, Tochigi, and Ibaraki Prefectures.

LIEUT.-GENERAL VISCOUNT TAKASHIMA, commanding the Osaka Garrison, who attended a series of gunnery experiments the 16th instant at Aibano, Shiga Prefecture, returned to the garrison the 18th instant.

THE total amount of new Redemption Loan Bonds applied for up to noon of the 20th instant (the closing day) was over yen 16,381,000, of which yen 11,252,300 were applied for in the head office of the Nippon Ginko in the capital, the remainder being in branch offices or agencies throughout the empire.

ALTHOUGH a general improvement has to be noted in the demand for textile fabrics, business has been far from active, and Yarns have seen but small sale. There is, however, a marked increase in inquiry, though offers do not come very near to the ideas of sellers. The dull condition of the Metal market remains unaltered, the only article disposed of in anything like quantity being Wire Nails, and these only in best assortments. Clearances of purchased Kerosene have been good, but buyers fight shy of further engagements for the moment, and express a desire to await developments. Sugar is extremely dull, and the small business done has not disturbed values. A very large business has been done in the principal Export, the transactions in Raw Silk amounting to not far off 3,000 piculs. This has had the effect of reducing stocks, and deliveries, which seem to hang fire, have been much short of sales. The principal demand has come from Lyons, and the activity at this centre of consumption has had an undoubted effect upon the American market which seemed a week ago to have been fully supplied. Holders are, naturally, in high feather, and many decline to exhibit musters in the belief of still higher prices before the season closes. In Waste Silk a good business—approaching 1,000 piculs—has been done. Although figures remain unaltered, the transactions of the week could not now be repeated at similar rates, and holders exhibit a confidence not altogether unwarranted by the condition of the market. Arrivals have been close on the heels of transactions, however, and qualities have been fairly maintained. Dealings in Tea have dwindled to meagre proportions, and prices are almost nominal. Foreign Exchange, rising and strong early in the week, was checked somewhat by a fall in silver, which had the effect of a slight reduction a couple of days ago, and rates close with a disposition to weakness.

#### NOTES.

AT 6 o'clock on the evening of the 16th instant, an extraordinary meeting of the Law Association (*Hōgaku Kyōkai*) was held in a lecture-hall of the College of Jurisprudence in the Imperial University, Tōkyō. The President of the University and a number of well known Professors were present, and the members assembled were about 900, according to the *Fiji Shimpō*. The chair was taken by Professor Tomii, and four resolutions were unanimously adopted. First; that in the opinion of the Association the examination conducted by the Naval Court of Inquiry at Kobe was defective. Second; that there are grounds for arraigning Captain Drake of the *Normanton*

on a charge of manslaughter. Third; that the relatives of the passengers who lost their lives in the *Normanton* are entitled to bring a suit for damages against the master and owners of the ship. Fourth; that the Association believes that a properly constituted court will pronounce a just judgment in a case arising out of the *Normanton* affair.

We are not by any means clear as to the meaning of the last resolution—whether it was intended as a declaration of confidence in the British Court by which the case will be tried, or whether it implies that unless that Court condemns Captain Drake, it cannot be considered a just tribunal. Professor Hōzumi proposed the first resolution, supporting it by various arguments as to the perfunctory nature of the inquiry made by the Naval Court, the failure to cross-examine witnesses, and other *laches* which have already been publicly discussed. The second resolution fell to Professor Kinoshita, who cited a number of precedents from English legal records, and whose contention was endorsed by Professors Storrs. Professor Hijikata based the third resolution on the provisions of Lord Campbell's Act (9410 Vic. c. 93), and Mr. Yamada Kinoshita proposed the fourth.

These resolutions, coming from a body so competent and influential as the Law Association, carry considerable weight. At the same time it has to be remembered that the only evidence before the Association at the time was that elicited by the Kobe Naval Court. We cannot help thinking, therefore, that the Association was slightly inconsistent, since it began by denouncing the insufficiency and perfunctoriness of the Kobe Court's proceedings, and then went on to base some decided opinions on the testimony procured by that very Court. The Tōkyō Chamber of Commerce, at a meeting held on the same day, showed a more practical spirit. On the proposal of Mr. T. Masuda and Mr. K. Masuda, the Chamber resolved to memorialize the Government with regard to the necessity of speedily enacting and enforcing regulations for the control of navigation in the case of all vessels plying between Japanese ports. The Chamber also elected a Committee for the purpose of investigating, and collating, for the information of the authorities, the laws which exist upon this subject in Europe and America. Unquestionably one of the most flagrant points in the *Normanton* affair was that, without possessing a passenger certificate, the ship carried passengers. It is to be presumed that nothing of the kind could have occurred had there been a competent and efficient harbour-master at Yokohama. Unfortunately there is no harbour-master. Why there is not, most of our readers are doubtless aware. It is an old story. We need not repeat it here. That a want so pressing was not supplied years ago is certainly not Japan's fault. Meanwhile, the Government may exact navigation laws or any other laws it pleases, but how they are to be enforced as against foreigners under existing circumstances, we fail to see.

The *Fiji Shimpō* justly reminds its readers that the excitement they display about the *Normanton* affair contrasts rather curiously with their apathy in regard of the Nagasaki outrage. Living, says our contemporary, generation after

generation, under the shadow of a military despotism, the people of Japan have become accustomed to conceal their feelings. To exhibit indifference comes almost naturally to them, which trait of their character has rendered them an inviting mark for foreign arrogance and imperiousness. Aliens are apt to call the Japanese apathetic dullards because they betray no emotions outwardly, and to regard them as abject when they exercise the virtue of docility. "But," proceeds the *Fiji*, "our countrymen have now learned the value of asserting their claims publicly, and have afforded on this occasion a practical illustration of their knowledge." The Tōkyō journal then observes that there are other affairs besides that of the *Normanton* which claim public attention, and that among them the Nagasaki complication is the most important. Already much indignation has been felt about the exceeding slowness of the Conference, and now comes the intelligence that the proceedings have been suspended. Nevertheless, the *Fiji*, concludes with an expression of confidence that the time is not far distant when the right will be clearly shown to be on Japan's side.

The following letter, which appears in Japanese in the *Nichi Nichi Shimbun*, has been sent to us for publication:—

#### THE "NORMANTON" AFFAIR.

TO THE EDITOR OF THE "NICHU NICHU SHIMBUN."  
SIR,—Does it not seem, allow me to ask, that the agitation with reference to the *Normanton* tragedy threatens to attain dimensions inconsistent with either the furtherance of justice or the interest of Japan? The unanimous expressions of the local foreign press and the liberality of the foreign community in contributing to a fund for the families of the deceased, must have convinced all thinking Japanese that Western sympathy is strongly roused on behalf of the unfortunate people who met their death under such sad circumstances. That the crew of a sinking vessel saved themselves, while the passengers perished, is a fact sufficiently deplorable in itself. But in this instance it is supplemented by the failure of a Court of Inquiry to fully investigate so unusual an incident, as well as by the indiscretion which the Court displayed in delivering a verdict that went beyond the evidence adduced. That your countrymen's indignation should have been roused by these events is natural, and I can assure you that the feeling of foreigners is with you. Looking at the matter calmly, however, I would ask, Sir, what it is that has happened. Surely it cannot be supposed for a moment that the officers and crew of the *Normanton* were influenced by any sentiment more culpable than selfish solicitude for their own safety. You do not think, nor, I hope, does any one of your countrymen think, that the abandonment of the passengers was an act of deliberate intention. In the absence of the most conclusive testimony your sense of justice forbids you to attribute such barbarity to any seamen, however wanting in humanity. But there is no conclusive testimony. On the contrary, it is easy to reconcile the incidents of the shipwreck with an explanation which materially extenuates the conduct of the master and officers. The most recent accounts say that the *Normanton* was at first supposed to be in no danger of sinking. Her head was consequently turned seaward, and a portion of the short spell of life that remained to her was allowed to pass without any preparation for saving those on board. Suddenly a bulkhead gave way, and it became a question of minutes how long she could continue afloat. Something very like a panic seems to have ensued. The master lost control of the crew; perhaps of himself also. Had strict discipline and order been preserved by rude seamen in a sinking ship on a dark, tempestuous night, the public would have loudly applauded. Is it fair to be equally loud in censure because the exceptionally high qualities necessary for such a display of courage and calmness were not exercised? Meanwhile, where were the Japanese passengers? Doubtless several of them were sick in their berths, and others, unconscious of imminent danger, were taking shelter below from the inclement weather. It must be remembered, too, that in all probability

the great majority of the crew scarcely knew that there were passengers on board, and few, if any, imagined that there were women among the number. The general supposition may have been that, as there were plenty of boats available and as sufficient time to lower and get into them remained, the Japanese ran no risk of being left behind, and, indeed, would themselves take care that they were not. Thus, partly through negligence, but chiefly owing to panic and want of discipline, the supreme moment probably arrived without any organized effort being made to help or carry the passengers into the boats. It is easy for us, sitting comfortably at home, to indicate faults and utter criticisms, but men who see death staring them in the face are not always helpful and collected. I do not advance the above as an exact version of what occurred. I merely say that it is a version not inconsistent with the evidence, and far more consistent with the reputation of British seamen than the hypothesis that they were sufficiently cowardly and inhuman to abandon a number of helpless men and women on the deck of a steamer about to founder. For, Sir, you must remember that the *Normanton* affair is not the only experience your countrymen have had of British seamanship. Many and many a time in the past have British sailors, not without trouble and risk, rescued and brought safely into port Japanese castaways who, failing such aid, must have perished. It is not for me to recapitulate these cases. They are familiar to you, no doubt, and they can easily be verified by any Japanese who values the sentiment of gratitude. Are your countrymen, I would ask, showing to the world a worthy spirit when they allow their sense of past benefits to be obliterated by a solitary incident, which, after all, shows nothing more than an unprecedented absence of the humane courage to which so many Japanese owed their lives in recent times? Your good judgment, Sir, will tell you, I am confident, that if the present agitation be continued, the right and wrong of the *Normanton* affair will ultimately be obscured by popular passion, and a calamity less regretted by foreigners than by Japanese may be aggravated by the introduction of international feelings, which neither influenced the catastrophe itself nor ought to affect its consequences. The machinery of the law has now been put in operation, and the affair will be thoroughly and impartially sifted. Pardon me if I remind you that any display of public temper or prejudice in the interim will not only disturb the even course of justice, but may also be construed by the outside world in a sense very unfavourable to Japanese civilization. I write as a sincere friend of your country, and as one whose sympathies are with you in this matter. Upon you, Sir, and upon those who like you wield extensive influence, devolves the duty of taking care that the agitation roused by the press does not create a new barrier between your country and the friendship of foreign nations.

Your obedient servant,

ENGLISHMAN.

Yokohama, November 18th, 1886.

The advertisement, of which we annex a translation, has been inserted by several of the leading Japanese of Tōkyō in the *Jiji Shimpō*, *Nichi Nichi Shimbun*, *Hōchi Shimbun*, *Mainichi Shimbun*, and *Chōya Shimbun*. In forwarding the advertisement to us for publication, one of these gentlemen writes—we quote his letter, which is in English, verbatim:—"My friends and myself have prepared the accompanying advertisement with the object of obtaining subscriptions on behalf of the Lascars who were lost in the *Normanton*. Is it not discreditable that the very Japanese who are so indignant with Captain Drake for abandoning twenty-five Japanese who did not belong to the same nationality as himself, do not seem to feel a particle of pity for the Lascars who did not belong to the same nationality as themselves, and who most likely died as painful a death as the twenty-five Japanese? The Lascars, too, may have left in their distant homes wives and children who are now waiting in vain for the return of husbands and fathers. Or sadder still, they may have left neither relatives nor friends to mourn their fate. If a prayer is to be offered for the sake of any soul in the *Normanton*, is it not for the souls of these Lascars?"

who offers prayers in behalf of the twenty-five Japanese, but forgets to offer one in behalf of the Lascars, is no better than a ship-master who saves his own countrymen but forgets to save those who are not of the same nationality as himself. Yet not a prayer-meeting, so far as I know, has been held in behalf of the souls of the Lascars. And this is not to be wondered at, for the motive of the prayer-meetings which have thus far been held by the Bonzes and others in behalf of the drowned Japanese, does not appear to have been anxiety for the souls of these unfortunates, so much as the desire of making a national demonstration, and in many cases the hope of rousing an anti-Christian feeling. What mistaken patriotism! The most lamentable feature of the present case is our people's not seeing that, if they are so angry with a ship-master who saved himself while his passengers all perished, and at the result of the first trial, every true Englishman is mortified by these things still more. And still more lamentable, if really possible, is the fact that our countrymen do not remember that if there is any people who always side, with one who is down, they are the English people. I pity our twenty-five countrymen and countrywomen who lost their lives in the *Normanton*, but I pity still more a captain whose fate it was to save himself while all his passengers perished. The advertisement runs as follows:—

"The public has generously contributed to a fund for the relief of the families of the Japanese who lost their lives in the *Normanton*. But on behalf of the Lascars, more than ten in number, who also perished with her, and whose bodies lie at the bottom of the sea thousands of miles from their homes, no one has yet been found to express pity. Surely this is a lamentable fact! We, the undersigned, invite the public to join us in subscribing a fund on behalf of these unfortunates. Further, with regard to the trial of Captain Drake, the barristers of Tōkyō, we learn, tearing lest the even course of justice may be disturbed by the warmth of international feeling, and foreseeing that such a misfortune could not but be hurtful to the friendly relations between the two countries, have held a meeting and resolved to offer their services gratis for the defence of Captain Drake. To provide funds for the purposes of this defence is another object which we venture to recommend to the philanthropy of our countrymen, whom we earnestly beg to aid either or both of the above purposes with contributions however small."

NAGATA KENSUKE.  
GOJO TATSUZŌ.  
SUZUKI TADAICHI.

The action of the Tōkyō lawyers, referred to in the above advertisement, was taken at a meeting of the Lawyers' Society specially convened on the 20th instant, in the Hall of the Tōkyō Merchants' and Manufacturers' Society, Kobikicho, at the request of a number of well known lawyers. Several gentlemen addressed the meeting, dwelling strongly on the necessity of taking steps to provide against the importation of international feeling into a question of simple justice, such as the trial of Captain Drake of the *Normanton*, and recommending that, with this object, the services of members of the Society should be offered gratis for the defence of Captain Drake. It was unanimously resolved that the willingness of the Society to undertake this duty should be intimated to Captain Drake, and his views on the subject ascertained without delay.

We cannot too strongly commend the spirit displayed by the Tōkyō lawyers as well as by the promoters of the movement described in the advertisement which we translate above. It was perfectly

natural that a strong sentiment of indignation should be stirred throughout the country by the intelligence of the *Normanton* catastrophe, and to expect that such a feeling would in no case assume an exaggerated character, or be utilized for special purposes, would have been to attribute to the Japanese public a degree of judgment and forbearance not yet possessed by any nation. The speediness as well as the nature of the reaction which has ensued are all the more welcome and creditable. The Japanese only needed time to recognise that Englishmen are just as anxious as they can be to see justice done in the matter of the *Normanton*, and that the unprejudiced co-operation of both is the best means to secure that end.

If it was natural that the Japanese should be somewhat carried away, the same may also be true of their critics. But one of the criticisms recently published is really too silly. It is gravely urged that the excitement shown by the nation with regard to the *Normanton* affair argues ill for the success of popular representation, and that parliamentary institutions may prove very inconvenient among a people so mercurial. And this criticism comes from an Englishman! In other words, it comes from one of a nation which is perpetually stirred to its lowest depths by political agitation; which finds a vent for its excitement in mass meetings, platform oratory, printed controversy of the most animated character, and demonstrations of every conceivable description! Oh for the Fay that Burns apostrophises! And it is we Englishmen, too, who have been hitherto complaining that the bulk of the Japanese nation is inanimate, and that the apathy of public opinion is a national defect. Poor Japan! Well may she wish to pitch the ass over the bridge in the face of such contradictory counsels.

The Japanese newspapers publish telegrams from Kobe to the effect that the *Normanton* trial is to take place there, and that the 26th instant is fixed as the opening day. We learn, however, that an application made by Mr. Litchfield, Crown Prosecutor, for a change of venue has been granted, and that the trial will take place in H.B.M.'s Court at Kanagawa, commencing December 6th. It is doubtful whether the lunacy inquiry which was to be held at Kobe will call the Judge away from Yokohama.

The *Hiogo News* says:—"There seems little doubt that the wreck of the *Normanton* has been discovered. It lies some ten miles north-easterly from Oshima, and was found by fishermen, who noticed oil coming floating up apparently from the bottom of the sea. We are told that a lot of straw braid—a commodity which formed part of the vessel's cargo—has been washed ashore near where the remains of the *Normanton* are supposed to lie. Anyhow, the matter will be finally set at rest within a few days."

Japanese papers publish the following telegrams:—

(*Nichi Nichi Shimbun*.)

Kobe, November 19th, 7.30 p.m.  
Mr. Lowder contends that the crime of Captain Drake is provided for in the second section of Art. 120 of the British Penal Code (manslaughter by mis-adventure).

(*Mainichi Shimbun*.)

Kobe, November 19th, 9.20 a.m.  
The *Original* of the *Normanton* states that the

death of the Japanese passengers was caused by the delay in lowering the boats.

Kobe, November 19th, 3.40 p.m.

A storm was experienced last night.

The *Tairiu Maru*, which has been chartered to investigate the condition of the *Normanton*, sails this evening for Kishiu.

The preliminary examination will probably be concluded to-day.

It is stated that the trial will take place at Yokohama.

(*Hochi Shimbun*).

Kobe, November 19th (Noon).

Mr. Kuroda, accompanied by Messrs. Matsumoto (Governor of Wakayama), Nishida, Ooka, Masuda (diver), several foreign employes of the Marine Bureau, and a Japanese editor leaves to-day for Kishiu in the *Tairiu Maru*.

(*Nichi Nichi Shimbun*).

Kobe, November 19th, 9.45 p.m.

Captain Drake has been liberated on bail of two securities of yen 2,000 each.

Mr. Lowder will return to Yokohama about Monday next.

Kobe, November 23rd, 3 p.m.

Captain Drake, of the *Normanton*, will leave here for Yokohama in a day or two.

(*Mainichi Shimbun*).

Kobe, November 19th, 9.10 p.m.

Captain Drake has been bailed by two sureties.

Kobe, November 20th, 11.20 p.m.

Messrs. Tsukuhara, chief commissioner of the Marine Bureau, and Lowder leave to-day for Yokohama in the *Omi Maru*.

Kobe, November 25th, 9.40 p.m.

The *Normanton* lies in 50 fathoms of water, and the divers cannot operate in consequence. The body of one passenger has been seen in the locality.

(*Jiji Shimpō*).

Kobe, November 20th (Forenoon).

Mr. Matsumoto, Governor of Wakayama, left last night for Wakayama.

THE Yokohama Art Exhibition was thrown open to the public the 25th instant, and has attracted a considerable number of visitors. No small exercise of patience and industry was required of the projectors to get things arranged in time, and the last of the exhibits was not placed on its stand until a late hour on the night of the 24th instant. Being the first enterprise of the kind ever undertaken in this Settlement, the exhibition disarms criticism. We shall therefore confine ourselves to recording one impression which is doubtless shared by many of our readers; namely, that Yokohama is scarcely yet large enough to warrant displays of this nature. We do not mean to suggest that the collections in private houses are inadequate to furnish a respectable number of interesting and valuable specimens. Many such were shown in the Public Hall on this occasion. The difficulty consists rather in selection. A committee nominally for the purpose of rejection were doubtless appointed in connection with the exhibition, but they certainly made no attempt to discharge their functions.

The plan pursued was to give people whatever space they wanted—within certain bounds of course—and the result was that, in some instances, whole stalls were devoted to the display of objects which possessed no claim to public admiration. It could not well be otherwise. What committee-man was prepared to discharge the dreadfully invidious task of condemning his friend's treasures, or deciding what articles a dealer might show and what he must withhold? There is a limit to the quality of Brutus, and the limit was evidently found so narrow in the case under consideration that the committee prudently avoided all possible risks of overstepping it. Everybody, therefore, was suffered to exhibit his geese or swans, as the case might be, and there is no reason to be surprised if quantity rather than quality was a feature of the general result. If the committee showed so much reluctance to be critical, we may be permitted to exercise a similar discretion. Instead of attempting to indulge in an detailed dissertation, we shall borrow the pithy phrase of a gentleman, one of the most active and indefatigable promoters of the affair, who, strolling into the dimly lighted hall at a late hour on the last evening of preparation, removed his cigar to pronounce this verdict:—"Well, I call it a very jolly show." A very jolly show it was, and those—by no means few—whose contributions deserve special mention will pardon us if we suppress applause which, if honest, might be too scanty to avoid offence.

THE rapid development of the sphere of female employment is one of the most prominent features of modern progress. Of the fifteen thousand clerks employed in Government Departments in Washington, we read that no less than four thousand are women. Among these are widows of well known generals, daughters of ex-Governors and ex-Congressmen, and so forth. The great majority are said to be educated and refined ladies. Their salaries vary from nine hundred dollars (Mexican) to two thousand three hundred, annually. Any one who has watched the Japanese girls in the *Insatsu-kyoku* counting sheafs of *Kinsatsu* will not be surprised to hear that in America also women are much more expert than men at this business, and that "the rapidity with which they can reckon thousands upon thousands of dollars without making a mistake makes your brain whirl as you watch them." The difference is that the American girls get \$80 a month for this work and the Japanese, seven or eight. "The money-counters," we read, "seldom make a mistake, and if they do so or pass a counterfeit without noting it, they must make the mistake good, and the amount is taken out of their salary. They can tell, however, a bad bill by simply feeling it, and a bank cashier will make a hundred mistakes where they make one. Both sexes of clerks at Washington work in the same department, and it is often the case that young men and young women have desks side by side. There is no restriction as to their social intercourse, and it is a matter of surprise to outsiders that so few marriages occur among the clerks." Another occupation which has been devised and seems likely to be monopolized by women is that of "lampers." Philadelphia is the headquarters of this work. Women there contract to call daily at each house, and to trim and keep in perfect order all the lamps in use. The metal, the chimneys, the shades and the

wicks are kept immaculate, and the oil fresh, and the relief to the average housekeeper more than compensates for the slight fee required." Again, on the Prussian State railways, women have for some time been employed as guards at crossings. "The work consists chiefly of the closing and opening of the bars and the lighting and sweeping of crossings, and the women in most cases are either the wives or widows of guards. Their daily wages are from 6d. to 9d."

\* \* \*  
Apropos the employment of women, it surprises us that no effort is made in this country to train female cooks. Other things, as to class and education, being equal, the Japanese women are fully as intelligent as the Japanese man, and has the advantage of him in point of cleanliness, quickness, and docility. It goes without saying that in a house where there is a lady the services of a female cook would be preferable in many respects to those of a man. Marketing would, of course, be a crux at first. A woman of the lower orders in Japan finds it difficult to discharge any function involving the expenditure of money without placing herself in a relation of more or less dependence upon some one of the strong sex. But this embarrassment would doubtless be gradually overcome by a proper system of pass-books, and by other means which need not be detailed here. If things go on in their present groove, not only will women be excluded from a source of suitable and remunerative employment, but Japanese households, desiring to establish a cuisine in foreign style, will be met by impediments which ought not to exist.

PRINCE BISMARCK, when recently questioned as to the prospects of peace in Europe, bade his enquirers read Goethe's "Faust." At least, he did not give that precise injunction, but he told an anxious Mayor who tried to question him on a railway platform that he, the Mayor, "would have time to read 'Faust' before there was a war." Good folks who count all the great Chancellor's utterances oracular have been busily conjecturing, ever since, what particular passage in Faust Bismarck had in his mind when he spoke. The *North German Gazette* authoritatively steps into the controversy and declares that had not Bismarck been interrupted by the cheers of the spectators, he would have quoted the following lines:—

On a saint's day, or a Sunday,  
When we have time for it, a tale of war  
And warlike doings far away in Turkey—  
How they are busy killing one another,  
'Tis pleasant to stand gazing from a window,  
Draining your glass at times, and looking on  
The painted barges calmly gliding down  
The easy river. Then the homeward walk  
In the cool evening hour; this makes the heart  
Glad, and at peace with all things and itself.  
Yes! give me peace at home, and peaceful times!

We believe that nothing could be more opposite. The Germans are ugly customers to tackle in fight, but they say of themselves, with apparent truth, that no people in the world are more desirous of peace, and that their one great aim isto let alone and belet alone.

We publish elsewhere an accurate translation of the Regulations for the conduct of Trade between China and Japan, as arranged by the existing treaty. This document has not, so far as we know, been previously rendered into English by any competent sinologue, and its provisions have special interest just now in view of the revision of Japan's treaties with Western

Original from

In the Ceylon Court at the Colonies Exhibition there stand nine cases of treasures taken from the palace of the King of Burmah at Mandalay. Among them are many richly jewelled specimens and other costly articles. But what interests us chiefly is to find that the traditional Mandarin drake is reproduced *ad libitum*. This bird, the *oshi-dori* of Japan, has furnished a favourite model to Japanese artists in pottery, wood, bronze, and ivory during the past three centuries. If we go back to the days when Nomura Ninsei and Wanjin were labouring to raise the faience of Kyôto from a condition of uninteresting mediocrity, we find the Mandarin drake seated on the lids of incense boxes and other ceramic utensils, in precisely the same brilliant plumage and pert attitude that modern artists love to reproduce. Faithful observers of nature, the Japanese have always regarded the *oshi-dori* as the type of conjugal fidelity, and the justness of the simile will be acknowledged by everyone, for where was a Mandarin drake ever found without his consort, whether in a quiet mountain tarn or under the willows at the bend of a secluded stream? But even this idea is now robbed of its originality, so far as Japan is concerned, for the Mandarin duck which appears on the covers of so many of the dishes in the Mandalay collection, is unmistakably the same bird, speaking artistically, as the *oshi-dori* of Japan. It goes without saying that an almost identical conception is to be found in Chinese objects of *virtu*, but then the affinity of the arts of China and Japan is no longer a matter of doubt. How far westward does the relationship extend? Burmah ought to owe as much to India as to China in the matter of art inspiration. We wonder how long it will be before antiquarian research brings the whole field of Egypt, India, China, and Japan within the field of the same art telescope.

In reference to the intimation that the English Under Secretary for Foreign Affairs has contradicted in the *Home of Commons* a report published by the *Pall Mall Gazette* in regard to the evacuation of Port Hamilton, the *Nichi Nichi Shimbun* calls anew the attention of our statesmen and politicians to the necessity of keeping close watch on the progress of events in this part of the world. "England's occupation of Port Hamilton made us feel," says our Tokyo contemporary, "as if we were struck by lightning; it was so sudden and decisive. Nothing in the shape of preliminary negotiations had taken place either with Korea or China." Men like Li Chung-tang and the Marquis Tsêng can never permit such conduct on the part of a foreign Power to go unnoticed. If they remain silent, that, argues the *Nichi Nichi*, points to the existence of some understanding between China and England as to the occupation of Port Hamilton. The *Nichi Nichi* briefly reviews the respective positions of these two countries towards Russia, and concludes that they ought naturally to feel just as men feel when in the same ship facing a violent gale. So complicated and untrustworthy, however, is the foreign policy of European Powers, that it is beyond the power of imagination to say exactly to what degree the relations between England and China have advanced, or to predict the turn of events in case of a rupture between Russia and either of the two allied countries. The *Nichi Nichi Shimbun* even doubts whether the statesmen

actually concerned in the maintenance of diplomatic relations between England and China are able to make any such prediction. For European States unite and separate according to the dictates of self-interest, and it is difficult to say which are friends and which enemies. The Tôkyô journal concludes its article with the following sentences:—"Port Hamilton is thus at present English territory, and it seems clear that, unless some extraordinary events happen, it will be a matter more easily projected than carried out, to restore the islands to Korea. With England's precedent before her, Russia will not fail sooner or later to put in execution some scheme of counterpoise in Korea. If she does so, most serious complications will arise in the foreign relations of Korea. It may at present appear as if these complications will involve only Russia, England, China, and Korea; but the time will certainly arrive when Japan too will be drawn into the strife, and when it may seem advantageous to her to enter it. Were nothing to be feared on the score of our interests and dignity by being neutral, it would be wisest to remain so. But if it is apparent from experience that it is at times necessary to act otherwise, our statesmen ought to calculate on such a contingency and be prepared beforehand to meet it. In view of those considerations, it is strange that our statesmen, but more particularly our political writers who suffer not the smallest political matter to pass unnoticed, are indifferent to the course of events in the Eastern Sea."

Each fresh batch of intelligence from England confirms the impression that Lord Randolph Churchill is the coming Conservative leader. His Dartford programme, every item of which is borrowed from the Radicals, seemed at first likely to create a split in his party. But the older Tories, to whom the unexpected platform was particularly distasteful, have gradually yielded a reluctant acquiescence, stipulating only for the abandonment of the proposal to reform Parliamentary procedure by giving a bare majority the power to close debate at will. The transfer of tithes from farmers to landlords, the scheme of freehold allotments for labourers, the reform of the method of transferring land, the equalization of railway rates, the extension of local government, the sale of the glebe lands, and further modification of the Irish land laws—all these items are now definitely accepted as immediate objects of Conservative statesmanship. It is probable that Lord Randolph himself did not attach much importance to the absolute closure plank in his platform, but added it to the structure chiefly with the idea of providing something which might be sacrificed without much effort on his part but with a great deal of effect so far as the bulk of the party was concerned. Absolute closure has always been obnoxious to steady-going Conservatives, who feel, and doubtless feel justly, that such a formidable weapon is capable of being used for evil, as well as for good, purposes. These prudent people are persuaded that, for all the legitimate ends of debate, sufficient protection is guaranteed by the power which the Speaker already possesses of effecting individual closure when a member palpably abuses the privileges of the House. All the principal Conservative debaters in the House of Commons have signified their adherence to the Dartford programme, and the consequence is that Lord Randolph has acquired an ascendancy which is said to be already greater than that of

any leader since Disraeli. On the other hand, while the Conservatives are affording such signal proofs of vigour and union, the Gladstonian Liberals appear to be in a state of hibernation. The Eighty Club is practically moribund; the annual Bristol dinner is abandoned; the tone of the Liberal press is apathetic, and prophecies as to the brevity of the Conservative Cabinet's life are no longer heard. When the details of the Liberal Conference at Leeds reach us, it will be possible to speak with more certainty upon this subject, but for the present everything points to a tolerably long lease of Conservative power. It will not, however, fail to strike observant persons that, to secure this end, the Conservatives, under Lord Randolph Churchill's guidance, are exchanging their old rôle at the drag of the political coach for a place in the traces. If it is to be a contest between them and the Radicals who shall pull hardest, the vehicle is not unlikely to be dragged over a precipice in the end.

THE gloomy predictions so freely uttered by the Parnellites with regard to winter prospects in Ireland do not seem likely to be fulfilled. It is plain that the landlords have come forward with the utmost generosity and loyalty to smooth the Government's path. The Marquis of Lansdowne has granted his tenants a reduction of from 25 to 30 per cent. on the rents fixed by the Land Court. Lord James Butler has followed suit with 37.5 per cent., and Lord Lismore with 25 per cent. The upshot of these and similar concessions by other landlords is that an average reduction of fully 25 per cent. has been effected throughout the eastern and central counties, tenants thus obtaining practically the terms which Mr. Parnell's bill was intended to secure. It is said that these magnanimous efforts have averted the danger of any widespread evictions. The trouble on Lord Clanricard's estate, as telegraphed this morning, will doubtless be overcome by a compromise. Meanwhile Lord Northbrook, who has just returned from a visit to the north of Ireland, reports that agricultural depression is not felt there to anything like the same extent as in England; that the harvest is excellent, and that in many of the towns evidences of a commercial and industrial revival are apparent. On the whole the impression is that the Conservatives will be relieved from the necessity of bringing forward any bill for local Irish government next session, and that the Unionists will support them in giving precedence to a measure which shall deal with the agrarian question upon the line of an extension of the Land Purchase Act, especially in regard of peasant proprietorship. Such a programme would be consistent with the theory maintained in so many quarters that the difficulties of Ireland are mainly agrarian, and that until the land question is finally settled, the self-governing aspirations of the people cannot be either soothed or satisfied successfully.

THE admission of Mr. Arthur Balfour to the Cabinet, as telegraphed by Reuter, is probably to be regarded as another evidence of Lord Randolph Churchill's growing ascendancy. It has been understood for some time that his lordship is manœuvring for a reconstruction of the Cabinet with the view of eliminating what he irreverently calls the "old gang." Political prophets foretold that the contemplated reform would include the step now telegraphed—namely, the admission of

the Secretary of State for Scotland to the Cabinet proper—as well as the retirement therefrom of Lord John Manners, Chancellor of the Duchy of Lancaster, and Lord Stanley, President of the Board of Trade. It was expected that these two Ministers would be succeeded by the Right Hon. C. T. Ritchie, now President of the Local Government Board, and the Right Hon. Mathew White Ridley. Perhaps, now that the first part of the programme has been accomplished, we shall soon have further evidence of the vigour of the Churchill broom.

WRITING on the subject of dress reform, the *Nichi Nichi Shimbun* says:—The reform in Japanese dress, which has for its object the abandonment of the native and the adoption of the Western costume throughout the country, is no new movement, but has been before the nation for some years. Happily it was not allowed to die out, for the example was set by His Imperial Majesty the Emperor and followed extensively by the official class, and it has become common to see ladies and gentlemen in the capital habited in foreign dress. But the wearing of the new costume has been confined almost entirely to the higher classes of society, nothing at all partaking of the nature of a general adoption of European dress having taken place. Under these circumstances it is that Mr. Irokawa Sei-ichi has laid before the public his *Fukusui Kaikaku Shigi*,—or private views on the dress reform,—and asked us to state our opinions as to his proposals. It is entirely, his argument agrees with the view that we have long entertained, and we are therefore pleased to publish his treatise and to call to it the attention of our readers. It is a matter of common knowledge, gained by experience, that the Japanese costume of the present day is suited only to persons of sedentary habits, and is correspondingly unfitted for people who require to move about and engage in physical exertion of any kind. As, however, Mr. Irokawa has set forth very fully the arguments for and against the native dress, it is unnecessary that we should here repeat our views, which, as we have said, coincide with his. But let us look into the origin of the present Japanese style of dress, which he calls *wafuku*. We learn that it was introduced (from China?) during the Tang dynasty, with the politics, laws, and ceremonials of that country. The new costume first ousted from the higher circles the simple Japanese dress then worn, and as a matter almost of course the *karakinu* soon gained favour among all classes of the people. In order to distinguish it from the style which it had replaced, the name *karakinu* was applied to it, just as now-a-days, the European costume is called *yōfuku* to avoid confusion with the present Japanese clothes, which are really the *karakinu* of old, though this term has been abandoned in favour of the present name, *wafuku*. It seems, then, that there should be no hesitation in throwing aside the present dress worn by the people of this country,—which so far from being the costume of the country is merely a modified form of the old Chinese fashion,—and in adopting Western clothing, which, after all, may bear a closer resemblance to our old national garments than is borne by the costume which it is now proposed to abandon. Mr. Irokawa admits the inadvisability of advocating the immediate adoption of Western dress, and his proposal is

that a notification should be issued, say in January of the 20th year of Meiji, intimating that on January 1st, 30th year of Meiji, the wearing of *yōfuku* shall become compulsory. We agree in the opinion that a period of at least ten years is necessary; indeed, in certain special cases it may be desirable to extend the time allowed, by four or five years. It is of the utmost importance that men of influence and culture in the country should discuss the subject in order that the Government may find itself in a position to ascertain the tendency of public opinion. Mr. Irokawa does not regard it as necessary that the lower classes should be required to adopt foreign clothing, believing that the *tsutsusode*, *juban*, and *momohiki* may, with certain trivial alterations, be left to suit the uses of poor people. The chief point to be kept in view is the removal of the present Japanese costume with its long, loose sleeves and wide skirt. This is a very reasonable and common-sense position to take up, for, remembering that differences in climate, and in the physical conditions of various parts of the country, as well as other considerations have to be reckoned with, it is plain that one unvarying style of dress cannot at once be declared suitable for the whole nation. Let the present dress be abolished and the after stages in the reform will be easy. It should be noted that the *momohiki* and *hanten* now worn by labourers are relics of the ancient costume which was ousted by the Chinese dress. It strikes us as singular, however, that Mr. Irokawa pays but scant attention to the question of altering the costume of Japanese women. For if he is to be taken as advocating reform in this direction also, he must set himself to the duty of proving with regard to women what he has proved in the case of the dress of our men. If, on the other hand, his arguments are designed to be applicable only to a proposed reform in the dress of the male sex, and no change in women's garments is suggested, then it must be pointed out that in the event of his ideas being adopted there is great reason to fear that the reform will be only partial, and that the anticipated improvement in houses, food, and in the mode of living generally, will be absent. He expresses the belief, however, that the Western style of dressing the hair (*Sokuhatsu*), although not yet generally received into favour, might be expected to become very popular if the dress of Japanese women can be done away with, and from this we gather that he includes female dress in his proposals. In any case, however, we imagine he will find, it advisable to demonstrate to the public the merits and demerits of Japanese female costume.

Every one will agree with Mr. Irokawa that the long-sleeved coat of the Japanese is an impediment to active exercise and to the free use of the limbs. The advantage is certainly on the side of European costume in this respect. But we should hope that there will not be found many thinking persons to advocate official interference in such matters. The same influence which in former times, as shown by Mr. Irokawa, brought about the universal adoption of what was really a foreign—i.e. a Chinese—style of dress, may be trusted to produce similar results in the case of European costume. The example set by the Imperial Court, by the highest dignitaries of the State and by many of the nobility, will inevitably be followed by all

classes of society with whatever speed is permitted by individual circumstances. More than this is not needed, and would, in our opinion, be highly inexpedient.

ACCORDING to the *Keizai Zasshi* of the 13th instant, the amount of taxes paid by the people under the Tōkyō City Government, in the form of local tax, is as follows, for the last eight fiscal years and the coming year—that is since the establishment of the Urban Assembly: 1879, yen 332,277.332; 1880, yen 384,844.105; 1881, yen 687,046.167; 1882, yen 730,639.741; 1883, yen 604,986.894; 1884, yen 655,536.814; 1885, yen 525,325.920; 1886, yen 817,960.188; 1887, yen 936,871.484. From these figures it is seen that the amount doubled in 1881 and has trebled in the present fiscal year. The increase of local taxes in 1881 was owing—according to the same journal—to the fact that the expenses of police and prisons were removed to the sphere of fiscal taxes; while the increase in 1882 and 1886 was attributable to the prevalence of cholera. But with regard to the increase in 1887, the *Keizai Zasshi* remarks that these are six causes to account for it; (1) the increase of the salaries of policemen and the establishment of a police training school, (2) the maintenance of disinfecting establishments, (3) the equipping of the students of the normal school with clothing and books, (4) the relevation of additional expenditure to the responsibility of local taxes, (5) the increase of prisoners and the construction of new prison buildings, and (6) the undertaking of new engineering works. Except, continues the *Economist*, the latter two circumstances, all the above mentioned causes of the increase of local taxes in Tōkyō originate in the changes established by Government Ordinances and Notifications. The journal complains that, such being the case, the Urban Assembly has little power to lighten the burdens of the citizens.

THE *Nichi Nichi Shimbun*, in its issues of the 11th and 12th, comments upon Mr. Yuen's memorial to the King of Korea. Our contemporary finds in what Mr. Yuen says nothing better than is usually to be expected from ordinary Chinese statesmen—broad assertions unaccompanied by any practical suggestions. In his memorial, Mr. Yuen speaks as if the past career of the Korean Government has been one continuous blunder, and tries to hold the young and progressive section of statesmen responsible for the present difficulties in the situation of their country, illustrating his meaning by a reference to Kim Yo-kun and others. The *Nichi Nichi Shimbun* remarks that, although the conduct of Korean statesmen has not been quite blameless, it would be gross injustice to speak as if the reins of power had always been in the hands of the so-called small-minded men, destitute of experience or moral scruples. The memorialist urges the necessity of thoroughly reforming the Government at Seoul and its policy, but in what direction is the reform to be effected? If Yuen leans to the side of progress, then his advice would mean the inauguration of a policy far more radical than the one he so bitterly condemns; while, on the other hand, if he wishes to have the old conservative policy once more adopted, what has thus far been done in the line of progress must become so much waste of time, effort, and money. From the nature and tenor of the advice he offers to the King on what he considers ten urgent measures of State, the

*Nichi Nichi Shimbun* is led to believe that the Chinese Representative's real idea is the restoration of a conservative policy, in striking contrast to the spirit of progress manifested by Li Hung-chang and Marquis Tseng. With regard to his allegation that Kim Yo-kun and his comrades intended to plunge their country in anarchy by inviting foreign aid, the *Nichi Nichi* asks what country is indicated by the words "foreign aid." There is no doubt that Japan is that country, and our contemporary wonders how such an absurd statement can be made by a man who was an eye-witness of, nay a participator in, the scenes he alludes to. The *Nichi Nichi* denies that Japan has ever committed any act, open or secret, justifying such a charge. From the treaty of Kokwa down to that of Tientsin, all documents extant bearing on the relations of this country to Korea plainly indicate that Japan has never entertained any thought of interfering in the affairs of the peninsular kingdom. In view of such plain facts, Mr. Yuen's motive in endeavouring to mix up the name of Japan with Kim's revolt seems to be to render the relations between Korea and this country cool and strained. The whole tone of the memorial becomes a resident rather than a foreign representative. Mr. Yuen speaks of the affair of August last as if he had nothing to do with it. And yet, asks the *Nichi Nichi Shimbun*, was not the whole trouble caused by his unauthorised telegram? It is no wonder that Korea is now in a helpless condition, when we remember that her national affairs are under the control of such an irresponsible foreign official. The *Nichi Nichi* then proceeds to consider what Mr. Yuen has to say on the ten urgent measures of State. With regard to his advice to appoint Ministers of State from among the members of the hereditary privileged families, it observes that, even Mr. Yuen must be aware that it is opposed to the interests of Eastern States in the 19th century to adopt such a policy of by-gone days. If he advises Korea to do so it is because it is among the hereditary families that the conservative class is found who wish to preserve their status by relying on China. Mr. Yuen's object is, therefore, not to look after the interest of Korea, but to seek that of his own country under a veil of kindness toward the peninsular kingdom. The seven clauses following the one just mentioned, the *Nichi Nichi* dismisses as unworthy of notice, being in fact no better than the exercises of a school-boy. In the 9th clause, Mr. Yuen advises Korea to cultivate the friendship of China, and contrives skilfully to conciliate the Independent party by using words which convey an idea of equality between the Middle Kingdom and Korea. Will Korea's compliance with his advice and her subsequent submission to the authority of China be conducive to her good? The *Nichi Nichi Shimbun* is disposed to doubt it. Has not China been unable to prevent England from occupying Port Hamilton, and is she not now incapable of ensuring the safety of Korea against threatened action on the part of Russia at Lazareff and other important points? The only clause which has any practical sense is the last one, in which the memorialist urges upon the King the importance of maintaining cordial and faithful relations with foreign Powers. But the *Nichi Nichi* questions whether Mr. Yuen has not in practice advised Korea to do just the reverse of what he now urges. Have not illustrations of diplomatic bad faith increased in

Korea's foreign relations since the appearance of Mr. Yuen in the arena of Korean politics? The *Nichi Nichi Shimbun* advises the King of Korea to use judgment in perusing the memorial. Lastly, referring the rumour that five hundred Chinese braves have been sent to Korea in plain clothes, our contemporary calls the attention of the public to the attitude Chinese statesmen seem to take with reference to Korean politics.

Referring generally to the Socialist ideas which appear to be working their way from the Continent into England, and specially to a speech delivered by Mr. Maddison, President of the Trades Union Congress, at the annual meeting of that body, the London *Economist* writes in the following pregnant strain:—

All this is most unsatisfactory, for it shows that the most dangerous, because the most practical, form of continental Socialism—collectivism—is attracting many minds among English workmen. Mr. Maddison regards the capitalist as, in some sense, an enemy, and wishes to supersede him by the co-operative society of labourers, or, if that is impossible, to restrain him by an elaborate and costly State-machinery; or even, if his capital is in land, by taking away his freedom of contract altogether. Reduced to practice, his idea would be that the State should watch over the workman and watch against the employer, a system which it would be impossible to carry out fully unless the State became itself the real employer. As Mr. Maddison, to do him justice, foresees, the employer, worried by responsibility, and by inspection, with his power over his workmen taken away, and his profits reduced to bare interest for his money, may decide to stop work, and carry his capital elsewhere. In that case, what is to be done? Clearly, either the trade must end, and the workmen go into the workhouse, or the State must advance money to carry the business on. Mr. Maddison does not draw that deduction, but, as the continental collectivists have seen, it is quite inevitable, and it will be drawn by the first speaker who realises the situation. Mr. Maddison will deny that he means this, but, then, what does he mean? The land cannot be nationalised except by the State with compensation from the taxes. Elaborate inspection can only be organised by the State. Only the State can permit boycotting. An eight hour day, unless sanctioned by the State, would only mean that those firms which worked ten hours should have a monopoly of custom. A "fair wage" in this sense must be a State-fixed wage, for otherwise it must be fixed by the haggling of the market, that is, by some workmen underselling others, which is exactly what he objects to. He is driving straight, though it may be unconsciously, towards collectivism, that is, towards the suppression of the small capitalist by a single great one, who, depending on taxation, can live almost without profit. That this is a system fatal to energy, because fatal to competition, has long since been demonstrated, but we do not desire to discuss that just now. All we want to show is, that the system is entering the workmen's heads, probably from their new and incessant contact with the theorising workmen of the Continent, among whom, indeed, just now collectivism is denounced as far too moderate a system, almost, in fact, a conservative one. We regret this change, for although the evil, owing to the individualism of our people, will probably not go far, still, so far as it goes, it will increase discontent, and divert the minds of the governing workmen from attainable reform. Such ideas operate like the cry for Home Rule in Ireland, they make all improvements seem small and unsatisfactory in the presence of the vast unattained and unattainable ideal good. They place the leadership of the workmen, which should belong to practical men, in the hands of mere idealogues, and they make all employers unwilling to grant even reasonable concessions, lest they should be used as instruments to secure revolutionary and unwise change. We saw the ill-effect of exaggeration in the discussion on Mr. Chamberlain's proposals as to the mercantile marine, and the effect of proposals like Mr. Maddison's will be precisely the same. Needed reforms in tenure will be withheld, because men are afraid that the real object sought is not reform, but that vast and unpracticable change known as the nationalisation of the land. The inspection in which the workmen believe will not be created, because capitalists, otherwise friendly or indifferent, will believe that the object of such inspection is not to protect their employees, but to restrict their own freedom of action, and, therefore, their own profits. The trades unionists have benefited hitherto by the strict limitation of their designs and plans, and may depend on it that they will gain nothing by adopting the broad generalisations of the Continent, which are as opposed to the national genius as to sober sense.

PROFESSOR HILTY, a Swiss *savant*, recently published some of his observations regard-

ing the character and influence of the daily press in his own country—observations which in their general character have wider bearings than those originally assigned them by the author. In the little Alpine Republic the press, of course, enjoys unfettered freedom and has thus been able to develop itself unhampered by restrictions which, in neighbouring countries, are employed to safeguard the interests alike of the government and the governed. Freedom, however, implies self-control, and rights imply duties. That Swiss journalism has not always been in unison with these thoroughly Republican principles lying at the basis of all self-government, Professor Hilty is thoroughly aware, and that public opinion has thereby been often misled is a matter of much regret. The evil, however, thus created, deplorable as it is, carries with it, to no small extent, its own *correctif*. "Artificial public opinion, created by excessive praise, or by groundless attacks and denunciations of men and institutions, has a momentary influence; deceives, however, in reality but few; creates by that over-doing and excess peculiar to itself, its own opposition, and under all circumstances by the mere process of time and in spite of all reiterations, dwindles finally into insignificance; while, on the contrary, true public opinion, creating itself, carries with it from the first some instinctive, some intuitive force that can neither be turned aside nor fail of recognition, that mistaken by, and regardless of, ephemeral opinion, continues to pursue its onward way like some great and quiet but inexorable process of nature. M. Tocqueville therefore makes the very appropriate remark that those newspapers which in expression and style are the most vehement, possess in reality also the least influence, and that the continually augmented violence of their language is itself sure proof of the proportionately increasing indifference of the public." This Swiss *savant*, however, thinks that artificially created public opinion is often taken for the true and fair expression of the popular mind, and journals and journalists themselves are in his opinion very likely to fall into the error of mistaking an artificial atmosphere of their own creation for a fair index of what is really thought and believed outside their own circles among the great mass of the people.

It may be presumed that the Japan Brewery, which has been so long talked about, will shortly become an actual fact, a tender for the erection of the necessary buildings having been accepted by the directors a few days ago. The machinery, which was made in Chemnitz, is expected to arrive here in January, and includes an ice-machine and cool air generator by means of which the temperature of the works can be so regulated that brewing operations can be carried on all the year round. The directors appear to understand that success can only be attained by the production of a really first-class article, and they have determined that no effort or expense shall be spared in order to present to the public a beer brewed on the best German principles, which shall establish for the Japan Brewery the highest possible reputation. The company's share list is now closed, the directors having made all the allotments intended. We understand that there are amongst the shareholders Japanese of such high standing and influence commercially that, assuming the productions of the company to be up to the

standard aimed at, the success of the undertaking is assured. It is stated that an influential gentleman, well known in Tōkyō, is to join the board of directors at the next general meeting.

A GOODLY number of people assembled in the Union Church on Thursday evening to hear the Rev. Mr. Müller's address on the "Power of Prayer," and not a few were very much impressed by the incidents he related concerning his own life. His five conditions of successful prayer were: 1. Asking what is in accordance with God's will; 2. In Christ's name; 3. Not doubting God's ability and willingness to grant the petition; 4. Freedom from a sinful life; 5. Perseverance in asking. On these conditions he asserts that prayer never fails of an answer, and claims to have had in the past 61 years over 30,000 immediate answers to prayer; and yet he has had to wait in some cases over forty-two years for an answer to the same petition persevered in daily. The subject of this evening's address will be "The Power of Faith." On this subject also large reference will be made to his own life. The address will be given in the Union Church at 5.30 o'clock, and a cordial invitation is extended to all.

The Rev. George Müller's address at the Union Church last evening on "The Power of Faith" drew together an attentive audience of residents of the Settlement and Bluff. A few from Tōkyō were also present. After describing what the Christian's faith is, Mr. Müller mentioned several means of increasing this faith, and encouraged his hearers by illustrations taken from his long and eventful life. His reference on this and previous occasions to the philanthropic institutions he has founded and conducted during the past three score years, have aroused in the minds of many people in Yokohama a desire to hear more particularly about his special lines of work. He has consented, therefore, to devote two evenings next week to a more detailed account of the events of his life, and especially of the work he has accomplished in connection with the famous Bristol Orphanage. The evenings thought to be most suitable for business men are Thursday and Friday. In the meantime, another opportunity is offered for hearing this venerable man, for it is understood that he will preach in the Union Church tomorrow at 11 a.m.

SPEAKING of German colonization, the *Speculator* says:—"Unfortunately, the whole scheme of German trans-oceanic expansion is based upon a radical misconception of things. Germans do not appear to understand that circumstances, not design, made the Saxon race a colonising race, and England the mother of prosperous settlements. They do not realise that there is no royal, no official road to successful colonisation. Individuals, not governments, found enduring settlements, and the emigratory movements of a people are successful in proportion to their freedom from official control and direction. That is the experience of the greatest colonising power the world has ever known. Somehow, too, it has yet to dawn upon the Teutonic consciousness that the tens of thousands who yearly flock from the Fatherland, do so precisely because they desire to throw off the yoke of bureaucratic Germanism that presses so heavily upon them at home. It

is, of course, anything but soothing to the national vanity to reflect that the shiploads of sturdy emigrants sailing week after week from German ports are destined to swell the ranks of Yankee farmers and Australian settlers. But those who complain of this are only in fact damning the order of things at home."

THE ducal house of Buccleuch, the wealthiest of the Scotch dukedoms, has been thrown into mourning by a tragical event. The Earl of Dalkeith, eldest son of the duke, and better known in Scotland by his previous title of Lord Eskdail, which he held until the recent death of his grandfather, went out deer-stalking with a party in the Achnacarry Forest on the 17th of September last. Achnacarry is the seat of Cameron of Lochiel, brother-in-law of the duke. After a day of unsuccessful stalking they succeeded towards evening in getting within 30 yards of three fine stags. His lordship aimed and fired at one, but the animal, though hit, made off and disappeared. An eager pursuit brought the earl to a steep slope where he unfortunately slipped. In his descent he came on a bare flat rock, where his gun exploded, inflicting a terrible wound on the left arm and shoulder. He survived only about an hour. The spot is in one of the wildest parts of the forest, and twenty hours elapsed before the party summoned from the castle could arrive. The Buccleuch family are highly esteemed in Scotland, and much sympathy is felt for them in their bereavement. The deceased Earl, who was in his 26th year, was a keen sportsman and cricketer, and had organized at Langholm, his native district, one of the best local cricketing clubs in Scotland.

Two houses, one in the Settlement and one on the Bluff, were subjected to the operations of burglars on Monday evening. In one case, that of the Brunswick Hotel, No. 52, Main Street, the thief gained entrance by climbing over a wall into a back lane, whence an imperfectly closed window permitted him by the mere breaking of a pane of glass, to get access to the interior. A clock, a set of rather valuable jewelry, and some other objects were taken, the burglar, evidently an epicure in his way, carrying off also several bottles of champagne and two or three champagne glasses. The burglary on the Bluff was similarly effected, the house (No. 52) being entered by a window, and ivories and other curios of considerable value being removed.

RECENT experiments at Otsugawa with a 7-ton 19 cent. calibre gun for coast defence, manufactured at the Osaka Arsenal, gave excellent results, which precisely corresponded with the data upon which the gun had been constructed. Everything in connection with this new pattern ordnance worked well, though heavily tested, the carriage, projectile, &c., giving the highest satisfaction to the authorities. This must be a source of considerable satisfaction to Major Grillo, under whose instruction and from whose designs the gun was constructed.

FROM a private letter we learn that the British ship *Wildwood* (Captain W. D. Saunders), which sailed hence the 3rd October for Calcutta, when in lat. 14 N., long. 103 E., fifteen days out, experienced a cyclone. One Japanese seaman, who was shipped in Yokohama, was drowned; fifteen sails were lost, and the ballast shifted,

the seas completely washing the decks. The glass went down to 28.15. The wind commenced from N.E., shifting to E., when it blew hardest, and becoming afterwards variable. The *Wildwood* arrived in the Straits on 30th Oct.

A MAN must have developed an extraordinary degree of affection for objects of *virtu* before he comes to pinching them as a farmer does a fat cow or a shepherd his Daphne. Brother virtuosi, animated by the proper spirit, will therefore appreciate the following outburst of advertising enthusiasm:—

DEAR SIRS,—I beg to intimate that the Exhibition will be opened the 17th instant to all this old curios which was lately arrived in large quantities and hope you may visit the premises to pinch them.

I am Dear sir your respectfully,

SANYODO.

11, Takekawacho Shinbashi, Tōkyō.

A CORRESPONDENT writes:—"Your remarks with regard to the forged \$5 notes of the Nippon Ginko may be supplemented. On the obverse, in addition to the slight difference in the "F." which you mention, the dots are wanting over the i's; and on the reverse the Daikokusama, notwithstanding his jovial smile, has a sad or 'shimpai' air which is easily noticeable by persons familiar with the deity as he appears upon genuine notes."

THE cholera returns for Tōkyō during last week were:—Friday, 19th November, new cases, 0; death, 1. Saturday and Sunday, new cases, 2; deaths, 2. Monday and Tuesday, new cases, 3; death, 1. Wednesday, new cases, 2; death, 1. Thursday, new case, 1; death, 1. Total new cases, 8; deaths, 6.

THE British steamer *Parthia*, from New York for China and Japan, put into Lisbon on October the 2nd for coals. It was reported that a survey would be held before proceeding, in consequence of the explosion of a package of cargo during the voyage.

DR. H. N. ALLEN, who is in charge of the Government Hospital in Korea, has been honoured by the King of Korea with the rank of a nobleman of the second class, which is the same as that held by Mr. Möllendorff, and is at present enjoyed by no other foreigner in the Kingdom.

ACCORDING to the *Keisai Zasshi*, bankers and business men show an extraordinary indifference to the Redemption Bonds now that the period of application is drawing near its termination, the 20th being the last day.

THEIR IMPERIAL MAJESTIES THE EMPEROR AND EMPRESS arrived in Yokohama yesterday morning on their way to Nagaura, to which place they will proceed in the *Fuso Kan*, returned same evening to the capital.

A MEETING of the members of the Yokohama Sailing Club has been called for Tuesday 30th instant to discuss the rules prepared by the Committee.

THE American ship *St. Nicholas*, Captain Crocker, has been chartered to load sulphur at Hakodate for San Francisco, and will shortly leave here for the north.

HONGKONG papers announce the death of M. Paul Bert, French Resident-General in Annam and Tonquin.

## SIGNS OF THE TIMES.

OBSERVANT persons cannot have failed to perceive that beneath the surface of the agitation caused throughout Japan by the *Normanton* catastrophe, there lies something which the mere circumstances of the event are wholly inadequate to explain. What the public knew with regard to the *Normanton* was that a British ship had struck a rock at night during tempestuous weather; that the European crew had escaped; that the Japanese passengers had perished; that the explanation offered with regard to their fate was practically unintelligible; and that a British Naval Court of Inquiry had founded on this curious explanation a verdict fully exonerating the master and officers. The story was ugly enough, it is true. Every Japanese must have felt that, had the ill-fated ship been manned by his own countrymen and had her passengers been Europeans, a bitter and uncompromising cry of indignation would have been raised by a large section, if not the whole, of the foreign community. But, on the other side of the account, there was a good deal to be entered. The *Normanton* was not a passenger ship, and, though well supplied with boats, it is easy to conceive that her crew were not carefully drilled in measures necessary for saving life at a crisis. Further, the circumstances under which she met her fate were of a nature to test strong nerves and good discipline—a dark night, a sudden crash, and tempestuous seas. It is true that the standard which British sailors by their own actions have set up, takes little account of these disturbing elements. The world has been taught to expect that an English seaman will exhibit heroism and intrepidity in the face of any difficulties. But to censure an occasional and most unusual failure of these high qualities, even more than we applaud their constant exercise, is neither just nor generous. Many a time, too, have Japanese castaways owed their lives to the courage and humanity of British mariners. Their gratitude for these numerous rescues ought to have materially mitigated their resentment in the solitary case of the *Normanton*. Evidently, then, there were not a few considerations which might have contributed to calm the agitation caused by the first news of the tragedy. But it seemed as though these considerations had no weight whatsoever. Among all classes of the people an excitement sprang up as strong as it was unprecedented. Newspaper articles, public speeches, letters, circulars, resolutions by legal, commercial, and scholastic bodies, religious protests, subscriptions, indignation meetings—in almost every conceivable direction popular agitation sought a vent. No convulsion of even approximate magnitude is included in our experiences of modern Japan. And what renders the thing still more conspicuous is

that causes of apparently much greater potency had previously failed to produce even comparable results. The Nagasaki outrage, three months ago, was such a cause. After several days of grossly insulting and lawless conduct, some hundreds of Chinese sailors engaged in a murderous combat with the police and citizens of Nagasaki. Had the nation taken fire then, no one could have said that the flame was extravagant. Yet the indignation which the public displayed was a mere cipher compared with its present mood. Unquestionably, therefore, we must look far beyond the *Normanton* affair if we seek to fathom the true source of this tumult. The scrutiny is easily made. Vehement and far-reaching as the commotion is, it does not take us at all by surprise. For years we ourselves have watched the sowing of the seeds of such outbursts. The process had its origin when Japanese statesmen first began to understand that their country was condemned to be the victim of the very prejudices which had once been its reproach. When the hearty welcome which Japan originally gave to foreign visitors had been converted into distrust and dislike by the turbulence, the intrigues, and the jealous self-accusations of the new-comers themselves, the duty of keeping the outer world at arm's length became an article of every Japanese patriot's creed. Thenceforth, during more than two centuries, Europe and America agreed to class this country among semi-barbarous states, which held themselves aloof from their fellow-men in obedience to the same instinct that impels undomesticated animals to haunt solitary fens and remote backwoods. At last the barrier was broken down, not without incidents which, being greatly misinterpreted, helped to confirm the evil impression created by the nation's previous isolation. Years passed, during which, with all the generous impulsiveness of an honest foe who has recognised the error of his old enmity, politicians and people devoted themselves to an ardent adoption of the laws, the science, the implements, the philosophy, and even the dress of their new friends. It seemed as though Japan would soon become completely Europeanized. Instead of angry looks and naked swords, a stranger learned to be certain that, into whatever remote district of the empire he might penetrate, only kindness, hospitality, and welcome would meet him everywhere. Yet this change, so radical and so remarkable, begot no corresponding mood on the other side. At every moment of her national existence Japan was treated by foreign Powers with arbitrary and disdainful rigour. Both by act and speech galling reminders of her inferiority were the sole answers that her patriotic aspirations elicited. In the days of her isolation she had been taunted with barbarity. The same reproach was now levelled at her because her liberal efforts, already strenuous enough to excite the

world's wonder, did not yet suffice to soften the national antipathies of her foreign teachers. By these she was still treated as a country unworthy to exercise the commonest rights jealously claimed by every sovereign State in the West. Looking back some twenty years, we can vividly recall the aspiration that was upon the lips of every educated Japanese, even at a time when the people's desire to enter the comity of nations was still doubted by the world. Soldier and student alike had but one thought—to hasten the day when their country might be admitted to equal intercourse with the civilized Powers of the West. This unique aim has inspired the nation's conduct ever since. Its influence has been manifested in an almost indiscriminate propensity to substitute what is Western for what is Japanese; in the admirable industry and perseverance of students who have freely sacrificed their health to recover the ground lost by their ancestors' conservatism; in the earnest writings of scholars and publicists; in the untiring labours and wonderful patience of statesmen; in the field of commerce, where such a mixture of trade and politics has been freely ridiculed by superficial critics; in the exercise of a munificent hospitality; in the maintenance of an invariably cordial attitude; in fine, in every sphere where such an aspiration could be directly or indirectly influential. How much has it availed? Is there any one who can truly say that Japan does not lie now, as she has lain for the past twenty-five years, at the feet of an omnipotent combination of Powers, in whose field of vision her rights and wrongs appear as an infinitesimal speck compared with the broad prospect of their own selfish interests? Even though prejudices of race were overcome; though we could persuade ourselves to lay aside the distrust and antipathy which we formerly condemned in the Japanese, and to extend to them the freedom of intercourse for refusing to grant which to strangers who had once abused it we were wont to call the nation barbarous—even though this might be, the insuperable difficulty would still remain that, unless her sixteen treaty friends happen to be simultaneously of one mind as to their home politics, they hesitate to put their hands to a common instrument for relieving Japan from her bonds, and so long as one stands aloof the whole are practically paralysed. It was never possible to deny that such a monstrous situation must ultimately become intolerable to men with any spark of patriotism, any rudiment of independent spirit or sense of justice. But it was the fashion to pretend that no perception of these cruel facts had permeated beyond the official classes. A civilized public was actually asked to believe that the claims of Japan might be disregarded because she had not become inconveniently conscious of them! To deny that this apathy existed was to be

charged with a mischievous attempt to disturb it. Meanwhile, the education of the people was progressing. Year by year saw a large addition to the number of students who had graduated at colleges abroad or in Japan, and who had learned from the writings or teachings of foreigners themselves what rights an independent country is entitled to claim and exercise. The ever-multiplying factors of discontent thus created were powerfully aided by journals which circulated by thousands and hundreds of thousands throughout the empire, proclaiming to every one who could read that Japan had wrongs to redress and that justice was contemptuously denied to her by aliens who set their own selfish interests far above the dictates of right. Could any one, however wilfully blind, deceive himself as to the issue of such a state of affairs? Public opinion gradually grew and became consolidated. It seldom, indeed, gave any striking evidences of its strength. The restraints placed upon its expression by a Government seeking always to conciliate justice by patience, were more or less efficacious. But this could not last for ever. The *Normanton* tragedy occurred. It found Japan very much in the condition of a man who, being sore from head to foot, winces at a touch. There is no reasonable ratio between the fever she displays on this occasion and the proximate cause of her moral disturbance. What we see is in reality an accidental ebullition of a feeling that becomes constantly more widespread and formidable as the situation of the country is more plainly defined and the capacity to understand its wrongs more generally developed. Perhaps the Government are still competent to control this feeling. We do not profess to gauge their strength. But how long will they retain ability which is necessarily weakened by every arbitrary exercise, and which is confronted by a steadily growing power that experience everywhere else proves to be invincible? The question deserves the closest attention of Western statesmen, and of English statesmen, especially. That the *Normanton* happened to be a British ship was a mere accident—a particularly cruel accident, because of all the seamen on the globe British seamen are ordinarily least open to the reproach which attaches to the story of the Oshima wreck. But England virtually represents the outer world so far as this empire is concerned. Her interests so largely overshadow those of any other Power, and her nationals so visibly out-number their fellow residents, that the mass of the Japanese people cannot choose but regard her as the very head and front of the Treaty Combination. In a word, her points of contact with the country being most numerous, she must necessarily be most sensible of any friction that is set up in its foreign relations. If the lesson now lying before her eyes, and before the eyes of the whole league of

Treaty Powers, be not read intelligently, the next turn of the page may show something which none of us will have much stomach to contemplate.

#### JAPANESE BOOKS IN THE BRITISH MUSEUM.

THE Trustees of the British Museum are about to publish a special catalogue of the Japanese works in their library. The catalogue has been compiled by Professor ROBERT K. DOUGLAS, the officer in charge of the Chinese Department, and has been the work of some years. Cataloguing in the British Museum has long been reduced to a science. Nearly 50 years ago, Mr. (afterwards Sir ANTONIO) PANIZZI, then the Principal Librarian, issued a code of fifty-one rules for cataloguing, which have now been adopted, with modifications, by every great library in the world. And as the British Museum catalogues are taken as models everywhere, the utmost care and pains are devoted to perfecting them. The slips are systematically examined and re-examined before being sent to the printer; the proofs are likewise subject to rigid scrutiny, and hence the work of printing a catalogue is long and slow. The difficulties of the process are immensely increased in the case of a Japanese catalogue, where Chinese characters, Japanese *kana*, and ordinary Latin letters occur. In the first place, there is the transfer of dates from the Japanese *nengo* into the Christian era,—a toilsome work, requiring much care in order to avoid error. Then there is the multiplication of examinations of the slips and proofs required where there are three different styles of writing, and practically three languages, instead of one. All these difficulties and drawbacks have, however, been now surmounted, and in a short time a goodly folio volume will be issued containing a list of all the Japanese books in the British Museum. Owing to the broad and fundamental distinction drawn in that institution between printed books and manuscripts, it is probable that the latter will not be included in the new catalogue, although in this, as in every other collection of Japanese books, there must be a considerable proportion in manuscript. As it is, the catalogue contains over 5,000 entries, which, making allowance for the cross entries necessary in all catalogues, and especially numerous in the scientific system employed at the British Museum, would mean about 4,000 entries; in other words, the collection catalogued embraces about 4,000 separate works. The number of volumes is of course enormously greater.

The history of the collection is not a very long one. From almost the beginning of the century, Japanese books found their way to the Museum. They were at first obtained as rarities, rather than because of any literary value attached to them. They were brought to Europe either direct from Nagasaki by the Dutch,

or filtered through the British factory at Canton. Later on, when the foreign settlements in China were increased after the war of 1842, they became more numerous, but still they were comparatively few. After the treaties of 1858, Japanese books, of course, became more familiar in Europe. Residents collected them, travellers took them home, and the Museum collection grew in consequence, although very little attention was paid to it. The books, as they were presented or otherwise acquired, were placed on the shelves and left there. The late Dr. BIRCH, who then had control of the department to which acquisitions of this kind belonged (the Chinese department not having been created until 1868), knew little Chinese and no Japanese, and there were few persons who could in those days help him to appreciate the propriety of having Japanese literature adequately represented in the National Library. The first step in this direction was taken when a new department devoted to the Far East was formed in the Museum in 1866, with Mr. DOUGLAS at its head, and attention was soon directed to the Japanese section by the purchase, in 1867, from the executors of Dr. VON SIEBOLD, of his collection of Japanese books. A catalogue of this collection which was drawn up at the time, apparently for the purpose of the sale, and which is now in the British Museum, shows it to have been a comprehensive and representative library. It included works on history, religion, poetry, encyclopaedias, botany, natural history, numismatics, philosophy, archæology, fortification, maps, *Mongatari*, tea-clubs, cookery, music, dancing, medicine, foreign countries, painting, &c., &c. The number of volumes is altogether about 3,000, and of works 1,200. The price was £1,200. As Japanese books go, this was an enormous price to pay, for it is not pretended that there are any rarities in the collection. The books are ordinary solid working books, such as any one might pick up then or now in Japan. But it must be remembered that 1867 and 1886 are separated by a long period; that communication with and knowledge of Japan were very different then from what they are now, and that a Japanese article of any kind was worth precisely what it would fetch. Besides, SIEBOLD'S reputation in Europe as a *savant*, especially in connection with Japan, was very high, and books collected by him would naturally fetch a higher price than others. But there cannot be a question that intrinsically the collection was not worth half what was given for it. Indeed £200 would be more than sufficient to make the collection over again, and it is doubtful if the original owner gave £100 for the whole. Still, it was unique in Europe when it was sold to the British Museum, and those who effected the sale judiciously made the most of the fact. The collection formed the nucleus of the Japanese library in the

British Museum; all the other books were arranged around it. Thenceforth the acquisition of Japanese works became a regular part of the routine work of the Museum. It was soon known to booksellers in England and the Continent that the officers of the Museum were ready to treat for the purchase of such works. From time to time, also, private collectors offered their treasures, either as a gift, or for sale, and hence the library has gone on steadily increasing in extent.

Two very important collections, which deserve special mention, have recently been acquired. The first of these is Dr. ANDERSON'S library of Japanese art works, including in the term books on art and books with artistic illustrations. It amounts to about one thousand volumes, and was included in the sale of the collection of pictures. The price given for the whole was £3,000, which was paid in three special annual grants by Parliament of £1,000 each. The second was a collection made by Mr. SATOW of Japanese and Korean typographical rarities, and is unquestionably the most valuable and interesting part of the Japanese library. A portion of these was purchased by the nation in 1883 for £300, and the remainder was subsequently presented by Mr. SATOW. The books are of a general kind, but are, as might be expected, chiefly *éditions de luxe* of the Chinese classics. There is one remarkably fine copy of Ma-twan-lin in several hundred volumes, printed in Korea about the commencement of the seventeenth century. The gem of the collection, however, is a set of Buddhist scrolls printed in Japan from blocks in the eighth century. These are not only the earliest specimens of Japanese printing, but also the oldest specimens of any kind printing in the museum. No older examples are known to exist in any European collection or museum, although, of course, there were printed books in China long before the date of these. These scrolls were presented by Mr. SATOW. The whole collection numbers about 1,500 volumes.

In describing the catalogue at the commencement of this article, it was said that the library contains altogether about 4,000 works. The number of volumes would convey no accurate idea of its extent, for a volume in the British museum is a very different matter from the *maki* of the Japanese printer or publisher. Every work in the library is strongly bound (the original covers being, according to the common practice of the Museum, allowed to remain and being bound up likewise) in boards and leather—"half-roan" as it is technically called—the most lasting and substantial ordinary binding that can be produced. The catalogue which is about to be published will show precisely the extent of the whole collection, but enough has been said to prove that it is no discredit even to an institution so comprehensive and rich as

the British Museum. Day by day additions to it are still being made. There is no finality in any Department of the Museum. As far as its liberal allowance permits, everything worthy of purchase is purchased; much is acquired by presentation; and it is not impossible that in a few years the British nation will possess in the Museum an unrivalled collection of Japanese books.

While on this subject, it may be mentioned that the University of Cambridge has lately acquired Sir THOMAS WADE'S vast collection of Chinese books, and that they are now being arranged in the University Library under the superintendence of Professor ROBERTSON SMITH. A few years ago Sir THOMAS offered his library to Cambridge on condition that a chair of Chinese, similar to that held by Professor LEGGE at Oxford, should be founded at that University. Sir THOMAS did not stipulate, we believe, that he was to be the first Professor, but this was generally understood. The offer was not accepted at the time, nor was it rejected. It stood over for the moment. The books have now become the property of the University. The remainder of the scheme has also been carried out and Sir THOMAS WADE is professor of Chinese at Cambridge. This is a post for which he is eminently fitted, not only by his knowledge of Chinese, but also by his tastes and instincts, which are and have ever been those of the scholar and student rather than of the man of affairs.

#### SHORTSIGHTED STATESMANSHIP.

IT has long been evident that the progress of the Nagasaki Conference was impeded by some obstacle. Nearly three months have elapsed since the occurrence of the street brawl, the circumstances of which the Conference was required to investigate, and yet no prospect of a conclusion is discernible. The public naturally begins to suspect that there is a deliberate purpose, on one side or the other, to burke the whole affair by protracting the negotiations to such an extent that any settlement, however trumpery, will be welcome. A note in the *Choya Shimbun* of the 17th instant confirms this suspicion, and indicates pretty clearly the source of the obstruction. We learn from the *Choya* that the examination of the Japanese witnesses was conducted by Mr. DRUMMOND with a minuteness which, in the eyes of outsiders, closely resembled frivolity. When, however, the Chinese witnesses began to be called, the Shanghai Counsel devoted his abilities to throwing as many obstacles as possible in the way of the examination, and his efforts were seconded by his Chinese colleagues, who took care that the utmost delay should intervene between the appearances of the witnesses. This policy became so marked that Prefect KU-

SAKA was compelled to remonstrate. But his protests failed to effect any improvement, and at last he submitted a species of ultimatum to the effect that, should this system of studied obstruction be pursued by the Chinese, and should they fail at the next Conference to produce any witnesses, there would be no resource but to suspend the sittings and to apply to the Cabinet in Tôkyô for further instructions. A time was fixed within which an answer to this ultimatum must be given, and as the Chinese failed to reply, the Conference was suspended on the 15th instant. This is the *Choya's* story. Seeing that, despite its evident importance, it did not appear in any other journal, we were inclined to doubt its accuracy. But the *Nichi Nichi Shimbun* now confirms it, in a somewhat round-about way certainly, but still with sufficient distinctness. The *Nichi Nichi*, having premised that the publication of a telegram received by itself from Nagasaki had been suspended by authority, proceeds to quote the *Chôya's* account, and then goes on to say:—"This information being of a serious nature, we made enquiries with regard to it, and have elicited an assurance that, although the Conference has not been broken off, it has been suspended pending the receipt of further instructions from the Governments of both sides." We have been constrained to say some hard things about the conduct of the Chinese with reference to this whole affair, and it is not our desire to add anything which might further embitter the feeling between the two countries. Besides, the story now before us speaks for itself. It admits of only one interpretation; namely, that the Chinese Commissioners have deliberately set themselves from the outset to throw so many obstacles in the way of the Conference that its proceedings shall become a mere mockery, and the Japanese Government will be compelled, for the sake of its credit at home and abroad, to renounce all participation in such a humiliating farce. We shall not fall into the common error of calling so tortuous a policy "Oriental," because there never yet was a manœuvre known or practised by Eastern officials which does not find a recognised place in the *répertoire* of Western diplomatic strategy. But we shall say, and all thinking persons must agree with us, that China's subterfuge in this case—assuming things to be as the *Chôya Shimbun* represents them—is the acme of shortsightedness. Her statesmen appear to be gravely bent upon magnifying into an international quarrel an incident which ought never to have emerged from the annals of a local police court. What has to be feared now is that, however the complication be ultimately arranged, a most injurious impression will have been produced upon the friendly relations of the neighbouring empires. The public would gladly assume that the Chinese commissioners, inspired and perhaps directed

by a foreign barrister who naturally takes little if any account of the political issues involved, have pursued a course which is not carefully supervised, and if closely observed would not be approved, by their Government. But it is too much to expect that any such hypothesis will be generally entertained. The Cabinet in Peking must ultimately accept the responsibility of their Commissioners' conduct, and therefore of the unfriendliness which, by bungling treatment and frivolous delay, has converted a trifling sore into a troublesome wound. After all, it looks as though we should be forced to conclude that the old-fashioned bayonet-and-bullet diplomacy practised by Western States in their intercourse with the Middle Kingdom was the soundest and most pacific in the end.

### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

### DOGMA AND MORALITY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Those whose duty, like mine, makes them wanderers for a large part of the year in the unbeat tracks of Japan, share, I doubt not, the gratitude which I feel as the punctual post brings the broad sheet of your journal with its thoughtful articles and accurate news and the welcome though all too scanty notices which the telegraph affords, of the contemporary life of the West.

Nor, I imagine, is our gratitude, as being most of us engaged in one occupation, less lively for the steady and efficient support which your advocacy affords to the great principles of Christian morality. The majority of us, too, see no reason for change of feeling, if at any time your criticism plays around mediaeval fancies, or stigmatizes the tradition of Geneva, or condemns antiquated methods of argument and illiberal estimates of the people among whom we work.

But the case is different, when, as occasionally happens in estimating the forces which make for the regeneration of Japan, you confine your advocacy to Christian morality, but suggest the irrelevancy or the indifference of the Church's creed.

Now, apart from the fact that the Christian Creed supplies, as we believe, the only answer to the greatest problems about which the thought of man can revolve—problems too which, as Origen said long ago, we cannot put on one side, for we are made to consider them—this estimate seems to us to conflict with the evidence alike of past history and present experience.

1. In matters religious the first appeal is necessarily to the accepted teaching of the Founder, and here it makes no difference whether, with the Church, the Synoptic Gospels are accepted throughout as authentic, or with some controversialists of our own day only those passages in which their record is identical. In either case the centre of their teaching is the significant question "Who do men say that I am?" but with the answer to that question the passage has been made from the sphere of morality to that of definitive dogma. The same conclusion would follow, if by one the controversies in which the Church has been engaged were passed under review. Their history is at fault who have recently maintained that dogmatic discussion succeeded to the simple acceptance of the ethical teaching of Christ. As a matter of fact, it has accompanied it from the very beginning. Nor is it unworthy of notice that into by far the greatest controversy in which Christianity

has been engaged, that with Arianism in the Fourth Century, in which, as Cardinal Newman has pointed out, the Church's victory was chiefly due, not to Councils and Prelates, but to the steadfastness of the Christian laity, moral questions scarcely entered directly at all. In other words, the Christian conscience has always instinctively felt, that the life of the Church depends on the security of her dogmatic heritage. Is it likely to have been mistaken?

2. No different result would I believe, be obtained from endeavouring to estimate the "moral dynamic" of our own day. The more terrible forms of suffering and sin are probably not more common than in former times, but their existence is more widely known. The ignorance and degradation of vast masses of our fellow-men has forced itself upon the attention of us all. From whence is the remedy coming? Chiefly from evangelization and philanthropy, which are avowedly based upon and inspired by Christian belief. Other agencies must not be ignored, but they are of small account as compared with the missions and charities of Christendom. Beyond doubt the philanthropists of our day, whether they compass their end by Words of Good Cheer or Works of Mercy, would in most cases be robbed of the force, which gives spring to all their endeavours, if once they had ceased to believe that the Faith of Christendom is the hope of the world.

Now, if as taught by its Founder, as hitherto understood by its adherents, as a beneficent working force in the world, Christianity has been inseparably associated with creed and dogma, it requires proof that its efficacy would remain unimpaired if it had been reduced to the imitation of a High Example and the practice of a moral code.

You will pardon, I trust, the boldness of my criticism; for, after all, it is you, Sir, and your "fellow-craftsmen" who to-day are "the Masters of the thirty Legions."

I am, your obedient Servant,

EDW. BICKERSTETH,

Bishop of the Church of England.

Matsuy, Idzumo, November 13th, 1886.

### THE "NORMANTON."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your translation of the letter of my friend, Mr. K. Nabeshima, in reference to the *Normanton* affair, which appeared in your issue of the 16th inst., there occurs the following passage:—"Either they were abandoned to their fate by the so-called 'civilized' Occidentals or . . . generously sacrificed themselves so as not to obstruct the safety of the Westerns . . ."

As it appears that this passage has called forth some criticism in certain quarters, I, being one of the gentlemen in whose behalf Mr. Nabeshima wrote the letter in question, deem it advisable to call your attention to the fact that the translation appears a little too free. It should be as follows:—"Either they were abandoned to their fate by the Western mariners on board, known as civilized, or, . . . the safety of the Western mariners on board . . ."

The original qualifies the Europeans as *Seiyo Norikumi-in* which may be translated as "the Western mariners on board." It does not simply say "the Occidental" or "the Western." Besides, the word "so-called" in your translation seems to be too sarcastic, compared to the original.

I am, Sir, yours obediently,

K. SUEMATSU.

Tsukiji, Tôkyô, November 19th, 1886.

### SPURIOUS COPYING PRESSES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I beg you will permit me to call the attention of foreign merchants in Yokohama

to the fact that there are a great many imitations of English copying presses already made, or about to be made, and offered for sale by Japanese. They are made, I think, from specimens of patented articles such as Charles Mordan's, Skipper and East's, &c. A Japanese this afternoon came into my office and I found him taking measurements and dimensions of a copying press without my leave. On asking him what his business was, he coolly requested me to allow him to take the dimensions, so that he could make presses like mine and sell them. I requested him to leave my office. He simply smiled at my remonstrance in reference to such a gross breach of the patent laws. There are several such imitations now in a shop on Hegi's Hill which are being finished and which the curious can see on their way to business. I enclose my card and remain,

Yours faithfully,

B. W.

Yokohama, 22nd November, 1886.

### REGULATIONS FOR THE CONDUCT OF TRADE BETWEEN JAPAN AND CHINA.

#### I.

The Treaty of Friendship states that the merchants of each country shall be at liberty to visit and trade at the open Ports of the other country. Accordingly the Ports thus fixed by the two contracting parties are as follows:—

#### PORTS IN JAPAN AT WHICH TRADE IS PERMITTED.

YOKOHAMA; in the Circuit of the Tokaido, in the Province of Musashi, in the jurisdiction of the Kanagawa Prefecture.

HAKODATE; in the Circuit of the Hokkaido, in the Province of Oshima, in the jurisdiction of the Colonization Department.

ÔZAKA; in the Gokinai, in the Province of Settsu, in the jurisdiction of the Ôzaka Prefecture.

KÔBE; in the Gokinai, in the Province of Settsu, in the jurisdiction of the Hyogo Prefecture.

NIIGATA; in the Circuit of the Hokurikudo, in the Province of Echigo, in the jurisdiction of the Niigata Prefecture.

YEBISU-MINATO; in the Circuit of the Hokurikudo, in the Province of Sado, in the jurisdiction of the Sado Prefecture. This Port is supplementary to Niigata.

NAGASAKI; in the Circuit of the Saikaido, in the Province in Hizen, in the jurisdiction of the Nagasaki Prefecture.

TSUKIJI; in the Circuit of the Tokaido, in the Province of Musashi, in the jurisdiction of the Tôkyô Prefecture. This is for the present called an open port.

#### PORTS IN CHINA AT WHICH TRADE IS PERMITTED.

SHANGHAI; in the Province of Kiang-su, in the Prefecture of Sung-kiang, in the district of Shanghai.

CHINKIANG; in the Province of Kiang-su, in the Prefecture of Chinkiang, in the district of Chang-tu.

NINGPO; in the Province of Chekiang, in the Prefecture of Ningpo, in the district of Yin.

KIUKIANG; in the Province of Kiang-si, in the Prefecture of Kiu-kiang, in the district of Tak-hwa.

HANKOW; in the Province of Hupeh, in the Prefecture of Han-yang, in the district of Han-yang.

TIENSIN; in the Province of Chih, in the Prefecture of Tientsin, in the district of Tientsin.

NEWCHWANG; in the Prefecture of Hongtien, in the district of Haiching.

CHEFOO; in the Province of Shantung in the Prefecture of Tang-chu, in the district of Fuh-shan.

CANTON; in the Province of Kwantung, in the Prefecture of Kwang-chu, in the district of Nantai.

SWATOW; in the Province of Kwang-ting, in the Prefecture of Huchsu, in the district of Hiyang.

Original from the Province of Kwang-lung,

in the Prefecture of Kiung-chow, in the district of Kiung-shan.

**FOOCHOW**; in the Province of Fuhkien, in the Prefecture of Foochow, in the district of Ming.

**AMOI**; in the Province of Fuhkien, in the Prefecture of Chwan-chan, in the district of Amoy.

**TAIWAN**; in the Province of Fuhkien, in the Prefecture of Taiwan, in the district of Taiwan.

**TAMSUI**; in the Province of Fuhkien, in the Prefecture of Taiwan, in the district of Tamsui.

## II.

The officials and people of each country shall be free to rent ground at the places which are fixed as open ports, but in every case the local regulations shall be complied with. Whenever ground is thus rented, the local authorities shall be careful to ascertain that no interference will be caused thereby to dwelling houses or graveyards, \* and that the owner of the ground consents to the lease.† A fair price shall then be fixed for the ground and copies of the deed of lease, to which the local authorities shall affix their official seal, shall be exchanged between the parties. The private renting of ground without the knowledge of the authorities and compulsory leases are alike forbidden. It is also forbidden to rent land and erect houses in the interior or in places which are not open ports. When, after land has been rented, dwelling houses, shops, or godowns are erected the local authorities shall be free to exercise supervision from time to time.

## III.

When a merchant vessel of either country visits an open port of the other country the Customs Authorities of the latter, or (in the absence of a Customs House) the local administrative office shall demand the ship's papers, which shall state the name of the ship and her tonnage, and the names, ages and residences of her captain and crew, and shall be duly sealed. The ship's papers shall be submitted to the inspection of the Consul or the Customs Authorities of the open port (in question). The visits of vessels unprovided with ship's papers are prohibited. In the event of a ship's papers being injured or lost, on application being made to the Customs, provisional papers will be issued, and application for fresh ship's papers will be made when the ship has returned to the country (where she is registered).

## IV.

On the arrival of a merchant vessel of either country at an open port of the other country, the Customs shall send off an inspecting officer, who shall be at liberty to remain at his discretion either on board of the merchant vessel in question or in the Customs boat. The expenses incurred by this proceeding shall be incurred by the Customs, and therefore the inspecting officer shall not from covetous motives receive any fees from the merchant vessel. In the event of this rule being violated the officer shall forfeit the sum so received and shall be punished according to the law.

## V.

On the arrival of a merchant vessel of either country at an open port of the other country the master of such vessel shall, within the period of one day, deposit with his Consul the ship's papers, and the manifest of the cargo. On the following day the Consul shall communicate with the Customs Authorities and furnish them, for their inspection, with a statement of the vessel's name, tonnage, and cargo. Should two days (twelve hours from the time of entry of a vessel are reckoned as one day, Sundays being excepted) elapse without the arrival of a vessel being reported to the Customs, the master of such vessel shall be fined, for every day after the expiration of such day while he shall fail to report his arrival, \$60 if the case occurs in Japan, and 50 Taels for every day after the expiration of such fixed day while he shall fail to report his arrival if the case occurs in China; the

total amount of the fines thus exacted shall not exceed 200 Taels. The manifest shall contain a detailed statement of all the cargo. Should the total amount of goods on board be concealed, or should any fraudulent mis-statement be made as to the nature of any such goods, if such cases occur in Japan, the person guilty of such concealment shall be sentenced to a fine equal in amount to the Customs duty on the goods thus concealed, and the person guilty of such mis-statement shall be sentenced to a fine of \$125; and if such cases occur in China the goods in question shall in each case be confiscated by the authorities, and the master of the vessel shall be sentenced to a fine of 500 Taels.

Should any error occur in the manifest it may be corrected without payment of any fee if such correction is made on the day on which the manifest is handed in to the Customs. If the error is not corrected within that time a fine of \$15 will be levied if the case occurs in Japan; and if the case occurs in China a fine of 20 Taels will be levied for every day which the error remains uncorrected, but, in no case shall the total amount of fine so levied exceed 100 Taels.

Should there be no consul of the vessel's nationality at the open port which she visits, the master of such vessel shall hand in to the Customs his ship's papers and manifest, when steps will be taken in accordance with the regulations governing such matters.

## VI.

When a merchant vessel of either country arrives at an open port of the other country she must, in addition to the manifest of her cargo which is handed in to the Customs, also furnish the latter with lists of the ship's stores, and of the duty-free goods (if any) which are on board, and demand a certificate of exemption from duty for the same. Should any such articles be sold duty must be paid upon them according to the Tariff. Should any dutiable goods be entered in the list of duty-free goods with the object of evading payment of duties, the articles in question shall be confiscated.

## VII.

As soon as the Consul has communicated with the Customs (as specified in Article V.) the Customs shall at once issue a landing permit. Should the master of a vessel arbitrarily land goods without applying for a landing permit, if the case occurs in Japan, the goods so landed shall be confiscated by the Authorities, and if the case occurs in China the goods so landed shall be confiscated and the master shall in addition pay a fine of 500 taels. Both in landing and in shipping goods the Customs permit shall be applied for; in cases where this rule is violated the goods in question shall be confiscated. The transhipment of goods also can only take place after a Customs permit has been issued. Any violation of the rule shall be punished in Japan by a fine of \$60, and in China by confiscation of the goods in question.

## VIII.†

With regard to the payment of Customs duties by merchant vessels of either country, in the case of imports these duties shall be paid when the goods are landed, and in the case of exports they shall be paid when the goods are shipped. When the duties have been paid the Customs shall issue a certificate to this effect. The Consul when he receives this shall return the ship's papers to the master of the vessel and permit the ship to leave the port.

## IX.

The merchants of either country shall be at liberty to hire at the open ports coolies or boats for the transportation of goods at prices to be arranged privately between the parties concerned; there shall be no official interference in such matters, nor shall any limitations be imposed as to the particular boats or particular persons who shall be hired for such purposes. Should any secret trading take place, or should there be any

attempt to evade payment of duties, the matter will be investigated by the Customs and dealt with according to the regulations governing such cases.

## X.

The merchants of either country shall pay duty on the full weight of goods (imported or exported), less the weight of the packing material. With regard to this latter weight the Customs shall ascertain, by weighing, the exact weight of the packing material of one or two packages of goods, and the result arrived at shall serve as a basis for calculating the weight of the packing material of the rest of the same goods. Goods on which, by reason of their being damaged, it is impossible to pay the fixed amount of duty shall be valued and a duty of 5 per cent. ad valorem shall be paid on them.

## XI.

When goods are imported in Japanese merchant vessels into an open Port in China duties shall be paid on them in accordance with the Chinese Customs Tariff. When goods are imported in a Chinese merchant vessel into an open port in Japan duties shall be paid upon them in accordance with the Japanese Customs Tariff. Each open Port in either country having its own fixed standards of weights and measures and of silver, the merchants of both countries shall be careful to observe without demur such local regulations.

## XII.

Should any production of either country be omitted from the Customs Tariff (on its importation into the other country) the Customs shall fix the value of such goods according to the actual market price, and a duty of 5 per cent. ad valorem shall be paid. And should the owner of the goods decline to sell them at the price fixed by the Customs, he shall be made to pay duty according to that price.

## XIII.

With regard to the anchorages and the places where goods are landed and shipped at the open ports of each country, suitable places shall be fixed by the Customs. Such arrangements being for the convenience of merchants, should dues be levied, no objection must be raised to their payment.

In the case of officials or merchants travelling for pleasure, each country shall deal with such matters in accordance with existing regulations. In China the Consul shall undertake the duty of applying for passports and he shall hand them to the applicants only after he has thoroughly satisfied himself of their identity. Care must be taken to avoid the giving rise to occurrence of difficulties through irregular proceedings.

## XIV.

When Japanese goods have been imported into an open Port of China and the duty leviable upon them has been paid, Chinese subjects shall be free to transport them into the interior and there sell them after payment of internal duties at the various Customs barriers. Japanese subjects shall not be allowed to transport such goods into the interior of China themselves. In the same way when Chinese goods have been imported into Japan and the duty leviable on them has been paid Chinese subjects shall not be at liberty to transport such goods into the interior of Japan themselves. Should this provision be violated the goods in question shall be confiscated by the authorities and the offender shall be handed over to his Consul for punishment.

## XV.

The merchants of either country may, at the open ports of the other country, purchase either goods of that country or goods of other countries, and may ship and export the same after payment of the Customs duties leviable on them. They shall not, however, be allowed to proceed into the interior and purchase goods there. Should any such merchant proceed into the interior and there purchase goods, the goods in question shall be confiscated by the authorities and the offender shall be handed over to his Consul for punishment.

\* The Chinese version says "and that the lessee is able to pay the taxes on the land."

† Modification introduced in November 1875.

With regard to this and the preceding article the open ports in each country having been already determined, the Treaty limits shall in each case be clearly defined.

## XVI.

In cases where imported goods on which duties have already been paid are taken to another open port for the purpose of being re-imported and sold there, the Customs, after satisfying themselves by inspection that the goods in question are in their original packages, that the latter have not been opened and that no substitution of goods has taken place, will issue a certificate stating that the duties have been paid. This certificate must be presented for examination to the Customs at the port of re-importation, and if an identity is clearly established between the goods and the certificate in question permission to sell the goods will be given, and the importer will not be required to pay duty over again. Should any fraud in the shape of changing whole or any part of the original goods contained in the packages be perpetrated under cover of the pretence that the goods in question are goods which have been examined and on which duty has been paid, such goods shall be confiscated by the authorities.

## XVII.

With regard to the tonnage dues to be paid by Japanese merchant vessels entering open ports in China, vessels of 150 tons burden or more shall pay dues at the rate of 4 *sen* per ton, and vessels of less than 150 tons burden shall pay dues at the rate of 1 *sen* per ton. The Customs shall, on receipt of such payment from any vessel, issue to such vessel a four months' certificate, and for the period in question such vessel may enter and clear from any open port in China without further payment of tonnage dues. On the expiration of the said period of 4 months a further payment of dues on the same scale shall be made.

No tonnage dues shall be levied on vessels which leave for some other place within 2 days after entry without having discharged any cargo; if, however, this period of 2 days be exceeded the full amount of tonnage dues fixed shall be levied.

No other charges except tonnage dues shall be levied upon merchant vessels.

When Chinese merchant vessels enter an open port of Japan they shall pay no tonnage dues, but an entrance of \$15 and a clearance fee of \$7 shall be levied.

## XVIII.

In the case of merchant vessels of either country which put into an open Port for a short time either to buy articles required for the use of the ship, or through stress of weather, and which do not engage in trade, a statement of the cargo need not be handed in to the Customs. If, however, any such vessel engages in trade, a statement of the cargo shall be furnished in the manner prescribed, and duties shall be paid. When it is desired to land and store cargo in order that a vessel may be repaired, application must be made to the Customs, and, upon the receipt of a permit for that purpose, such cargo may be landed. When the repairs to the vessel are completed and she reships this cargo and leaves the Port no dues shall be levied. Should any goods be sold after they have been landed and stored, duty shall be paid on them according to the Tariff.

## XIX.

Should a merchant vessel of either country bring (to the other country) prohibited goods, should the case occur in Japan, the goods in question shall be confiscated by the authorities, and should the case occur in China, the goods shall be confiscated by the authorities, and the vessel in question shall be expelled from the Port and shall be forbidden to trade in any open Port of China.

## XX.

When ships of war of either country enter and clear at any Port of the other they shall make no report to the Customs authorities, nor shall they

be examined by them. All articles required for the use of such ships shall be duty free. But should any articles belonging to any such ship be landed and sold duty must be paid on them according to the Tariff.

## XXI.

Should the Authorities at the open Ports of either country build warehouses for the storage of the goods of the merchants of the other country, the regulations respecting such warehouses shall be determined separately by each country. When goods are thus warehoused the payment of duty upon them will be postponed for a time; when they are sold, both duties and storage charges shall be paid. When such goods are transferred to another Port only the storage charges shall be paid; the Customs duties will not be levied.

## XXII.

The export from either country of rice, wheat, or other cereals used for food, except to another Port in the same country, is forbidden. With regard to such provisions as are required for the use of the sailors or passengers on board ship, an estimate of the quantity required shall be handed in to the Customs and, a permit having been received from them, the article in question may be purchased.

## XXIII.

Japanese merchant vessels are forbidden to ship from the two ports of Teng-chiu and Newchang the soy-bean or the oil extracted from it. Whatever quantities, however, of these articles which are bought at other open ports in China may be exported after payment of the duty as fixed by the Tariff.

## XXIV.

Saltpetre, sulphur, and white lead being all articles which are used for military purposes, the Chinese authorities will import them directly on their own order; Japanese merchants, however, who hold a genuine order of the Chinese authorities for such goods in writing, may import them at the open ports in China. Should such articles be sold secretly, the offender shall be arrested and shall be sentenced to punishment according to the law, the goods being confiscated.

Japanese merchants also shall not be permitted to buy secretly at the open ports in China Chinese saltpetre, sulphur, and white lead, and export the same. If this rule is violated the articles in question shall be confiscated by the authorities, and the offender shall be punished according to the law.

## XXV.

The merchants of each country are forbidden to buy or sell and to import or export all prohibited goods such as gunpowder, ammunition of all sizes, cannon, rifles, and all material of war of whatsoever kind, including supplies for the cavalry of the Northern districts of China. If this rule is violated the goods in question will be confiscated by the authorities, and the offenders will be punished according to the laws of their respective countries.

## XXVI.

The copper coins of each country shall not be exported, except to another Port in the same country in accordance with the Regulations on this subject. Should any merchant secretly trade in such copper money he shall be arrested and the coins in question shall be confiscated.

Japanese merchants are forbidden to export salt produced in the interior of China, and it is also forbidden to import and sell Japanese salt in China. Persons violating this rule shall be punished in each case according to the law.

## XXVII.

Should a vessel of either country visit and trade secretly at an unopened port in the other country, the vessel shall be detained by the local authorities, and, if the case occurs in Japan, the cargo of the vessel shall be confiscated and a fine of \$1,000 exacted; if the case takes place in China both the vessel and her cargo shall be confiscated by the authorities. In every case the matter shall be

reported to the Consul (of the country to which the vessel belongs) for his information.

## XXVIII.

Should there be in the Tariffs of either country any articles which are entered in the Import Tariff but do not appear in the Export Tariff, when such articles are exported they shall pay the duty specified in the Import Tariff; and should there be articles which are entered in the Export Tariff but do not appear in the Import Tariff, when such articles are imported they shall pay the duty specified in the Export Tariff.

## XXIX.

Should a merchant vessel of either country be shipwrecked on the coast of the other country, the local authorities shall take the necessary steps in the matter and shall forward the shipwrecked persons to their Consul at an open Port with a report of the case, and cause him to take charge of them.

Should a merchant vessel also be attacked by pirates at sea the local authorities shall take the necessary steps and shall, without fail, arrest the offenders, and having recovered the stolen goods, send them to the Consul with a report of the case, in order that they may be restored to the owners. Should the robbers be arrested but should it be impossible to recover the stolen property, the offenders shall be punished according to the law, but no compensation shall be made (by the authorities concerned) for the stolen property.

## XXX.

Should the Customs authorities at the open Ports of either country, having regard to the position of affairs, establish regulations for the punishment of secret trading and the evasion of Customs Duties, and put such regulation into force, the merchants of the other country shall comply with these regulations.

## XXXI.

Should at any future time a case arise which is not provided for in the Customs Regulations observed by the merchants of each country at the open ports of the other the Consul (at the open port of the country in which the case arises) shall report the fact to his Minister residing at the Capital of the country in question, and the said Minister shall settle the matter by communication and negotiation with the Government of the other country concerned.

## XXXII.

Should at any future time both contracting parties desire to revise the Regulations now agreed upon, the period of 10 years from the date of the exchange of ratified copies of this agreement is fixed as the limit of time (which must elapse before a revision can take place).

The details of such revision must be settled beforehand by means of communications and conferences (between the two parties).

## XXXIII.

The Trade Regulations and the Tariff now agreed upon by both countries shall be observed in the same way as the Treaty of Friendship, and no changes shall be made in them.

Accordingly, the Plenipotentiaries of both countries have now affixed their signatures and seals thereto, and do hereby cause them to come into force immediately.

Dated the 29th day of the 7th month of the 4th year of Meiji.

Dated the 29th day of the 7th month of the 10th year of Tung-chi.

(September 13th, 1871.)

Translated by JOHN H. GUBBINS, Acting Japanese Secretary, H.B.M. Legation.

Certain modifications were introduced into the Trade Regulations at a subsequent date by means of correspondence which passed between the Chi-

\* Modification introduced in November, 1875.  
† i.e. before that period has expired; in order that the revised regulations may go into operation the moment that the 10 years have elapsed.

nese Government and the Japanese Minister at Peking.

The first of these is recorded in a Note of the 26th November, 1875, addressed by the Chinese Government to the Japanese Minister at Peking in reply to a despatch received from him, and relates to the 28th Article of the Trade Regulations, by which it was agreed that any articles enumerated in the Import Tariff but not specified in the Export Tariff when exported from the open ports of either country should pay duty according to the Import Tariff, and similarly that articles enumerated in the Export Tariff but not specified in the Import Tariff, when imported into the open ports of either country should pay duty according to the Export Tariff.

In view of the representations made by the Japanese Minister on this point, the Chinese Government agreed to a modification of this article, by which it was arranged that such articles when imported into or exported from Japan should, in conformity with the provisions of the Treaties between Japan and western Powers bearing on this point, pay in each case a duty of 5 per cent. ad valorem; but that when imported into or exported from China the system laid down in Art. 28 of these Regulations should be adhered to.

The second modification is recorded in the same note and relates to the 8th article of the Trade Regulations, which regulates the procedure to be followed in the case of ships clearing from open ports in either country.

The Chinese Government agreed to a modification of this article by which it was arranged that when Chinese merchant vessels cleared from open ports in Japan 24 hours' notice of the intention to clear should be given to the Customs, but that in the case of Japanese vessels clearing from Chinese ports the procedure laid down in article 8 should be adhered to.

The third modification is recorded in the same note and relates to the omission from the Trade Regulations of the stipulations in respect to the landing of goods between the hours of sunset and sunrise, and the closing of ships' hatches by the Customs between the same hours.

The Chinese Government agreed to the enforcement of these stipulations in regard to Chinese vessels visiting the open ports of Japan, and added that the subject would be discussed further when the date for revision of the Trade Regulations arrived.

#### MR. YUEN'S MEMORIAL TO THE KING OF KOREA.

The *Nichi Nichi Shimbun* publishes the following document received from a correspondent in Korea:—

September, the Year of the Dog, 1886.

I, Yuen Shikai, with much respect, beg leave to present a memorial to Your Royal Majesty. My official stay in this country has already extended over a period of five years. As early as the autumn or winter of the year of the Horse (1881), I fully perceived that Your Majesty was industrious in the work of ruling your country, sparing no pains to promote the wealth and increase the strength of the people. But I now observe that the country is on the point of disorganization, the people weak and poor, and the whole situation as dangerous as that of an egg suspended by a slender thread. Is not the actual condition of the country very far from realizing Your Majesty's wishes? If Your Majesty lay the blame on yourself, the nation will feel uneasy; and yet it is not allowable to hold the Ministers answerable for it, as any such course would have the effect of punishing the innocent. The true cause lies in this circumstance, that, while the Government is really desirous of promoting the welfare of the nation, a certain class of narrow-minded persons prevent the wishes of the Government from being carried out. If it is desired to rule the country in a proper manner, the aimless policy of the past few years must be entirely abandoned. It will be impossible to secure good administration of the

national affairs if such a policy as that of the past be adhered to; nay more, disturbances and civil commotion will be sure to take place. Look at the affairs of the nation in the year of the Monkey (1884). Kim Yo-kun and others led Your Majesty astray by submitting to Your Majesty various selfish plans and schemes, and when at length they proceeded to slaughter with their own hands the Ministers of State, things had gone too far to be stopped before leading to serious consequences.

Consider their words and acts; there is a wide difference between the two. Your Majesty will see that these narrow-minded persons poisoned the mind of their Royal master by their pernicious eloquence. In their endeavours to obtain power, they professed to strengthen the country by inviting foreign help, while really plotting to plunge Korea into disorder. The baneful influence of such people does not pass away quickly. Had Your Majesty looked into the intentions and scrutinized the actions of Kim Yo-kun and others before the 17th October, and, suspecting them, taken steps to prevent their plot from being carried out, the affair would not have reached the dimensions it actually did assume. Had their long meditated scheme of wickedness been successfully carried out, and had the disastrous course of events reached its fatal consummation, Your Majesty's innocence would have remained obscured for hundreds and thousands of years without hope of being ever cleared. It was extremely fortunate that the traitors were speedily defeated, and tranquillity and order once more evolved from danger and chaos. I then thought that the plottings of malcontents would never again assume serious dimensions, an example having been set for future warning. I also thought that Your Majesty's country had then passed through a critical point in its history. Subsequently I went home on leave, and after spending there a few months, I again came here last winter to resume my official duties, when, to my extreme surprise, I discerned disquieting signs in the tendency of affairs. Accordingly, I warned Your Majesty's Ministers day and night until my tongue became distended and my lips parched, and hoped that Your Majesty would be pleased to maintain for ever the safety of the country and the welfare of the nation. In so doing, I for the time forgot that my influence was weak and my natural parts insignificant, and I failed to reflect that my empty words would be of no avail. Then the affair of July last made its appearance. Now, small-minded persons, who are without influence, and base in mind, generally seek to possess wealth and are envious of power. Being without influence, they attempt to arrest Your Majesty's attention by means of eloquence, and being base in mind, they do not think it shame to approach Your Majesty by means of flattery and adulation. After enjoying Your Majesty's intimacy and confidence for some time, they begin to present to Your Majesty various plans for making the country rich and strong and thus seek to delude Your Majesty with wild projects. Your Majesty ought of course to introduce reforms, so as to strengthen the position of the Government. But it must be remembered that the attempts of these worthless persons are intended to revolutionize the Government, and destroy the Ministers, in order to make themselves wealthy and influential, even at the expense of the country's independence and welfare. Illustration is not difficult to find; think of the case of Kim Yo-kun. But happily, the delusive advice and artful projects of such men can be easily detected. Your Majesty would do well to cause the preservation of the advice and counsels presented to Your Majesty by Kim Yo-kun and others, and, keeping the documents by you, to read and reflect upon them at leisure. If any persons offer to give Your Majesty counsels coinciding with those contained in such documents, Your Majesty ought to treat them as if they were Kim and others; and should Your Majesty please to compare what they say with what they do, Your Majesty will find the two at variance with each other. This is only a plain and easily comprehensible method of treating people; nevertheless it is the best method available for Your Majesty. Small-minded persons, who recommend themselves, are seldom without some scheme of making the country rich and strong. Let them for a moment assume control over the national affairs. If they do not plunge the Government into disorder and confusion, I, Shikai, will ask their forgiveness by forfeiting my eyes and cutting out my tongue. Having during my five years' residence here several times presented my views to Your Majesty, I cannot remain at the present critical moment indifferent to the danger of the situation, and neglect to think of some mode of remedy. I shall count it as my greatest happiness, should it please Your Majesty to reflect that effective medicines are bitter to the taste, and should Your Majesty spare me the regretful tears of Mei

Kankiu. I humbly accompany this document with my suggestions on ten urgent measures of State, which Your Majesty may be pleased to adopt.

#### TEN URGENT MEASURES OF STATE.

(1.) THE APPOINTMENT OF MINISTERS FROM HEREDITARY HOUSES.—Members of hereditary families are aware that their interests are indissolubly bound up with those of the country at large. Their rank being already distinguished and their pensions honorable, their thoughts are turned to the promotion and perpetuation of the safety of the country and the dynasty. By promoting the welfare of the country they secure that their rank and pensions will last for ages; and if the dynasty is maintained for ever, they know that their fame will be handed down to unknown generations. Moreover, among the members of hereditary families there are not wanting men of experience and righteousness, who, if incapable of striking achievements, will at least keep the Government from corruption. If Your Majesty should decide to put confidence in such men, the people will be contented and the country safe, and, once appointed, Your Majesty ought not to doubt them. If there is anything doubtful about them, Your Majesty had better not appoint them. Proceeding in this way, good administration will be secured.

(2.) THE TREATMENT OF MINOR OFFICIALS.—Minor officials are intent only on promoting their own self-interest and do not care about the peace or welfare of the country. When they once succeed in gaining power, they set themselves to win the confidence of men by trifling acts of loyalty and faith; they please people by measures of small benevolence and questionable ingenuity. They exhaust every term of flattery and every device of cunning, and in extreme cases, they will not scruple to sell their country. Intent upon gaining repute, one cannot tell what policy they may use. It is almost impossible to enumerate all the evils they are capable of doing. Small-minded people indeed are not without useful qualities, but they are only useful when employed in departmental work. They are not fit to be admitted into the Royal presence or to have a share in determining the national policies. Had Kim Yo-kun, Bok Eiko, Bok Eishok, and others been excluded from Your Majesty's confidence and employed simply in the management of the business of departmental offices, the country would have been spared the *coup d'état* of the year of the Monkey (1884).

(3.) THE DISTRIBUTION OF POWER.—The capacity of one man is decidedly unequal to the task of managing all the complex affairs of State. Even such sages as Gyô and Shun give illustration of the truth of this statement. When every affair, great and small, is decided by the Sovereign alone, various corruptions and evils must follow one after another, and small-minded persons will plot secretly to gain power. Though the reins of State appear to centre in the person of the ruler, yet in truth they are in the hands of inferior officials. This has been the case in every country in ancient and modern times. Therefore, let Your Majesty's competent officials be entrusted with the management of the business of administration, leaving in Your Majesty's hands only the supreme control over all. Your Majesty will then have to consider the general features of administration and to maintain discipline among the servants of the State. In this way, the work of administration will be effected without labour, and order maintained without confusion.

(4.) THE WINNING OF THE HEARTS OF THE PEOPLE.—At present the hearts of the people are wandering and they must be won back speedily. The hearts of the people are the foundation of a State. When the foundation is shaking, the superstructure can never be safe. In saying that the hearts of the people must be won, I do not mean to maintain that they are to be won by measures of petty benevolence. Of late years, climatic and epidemic calamities have reduced the people to the last degree of misery. Select one or two of the most urgent evils, and try to remedy them by every possible means; and then let your Majesty's Ministers appoint proper Governors of provinces, who will endeavour, in harmony with the wishes of the inhabitants, to remove evils and to develop the national industries. The people will then turn their affection to Your Majesty's Government as quickly as sound results from the striking of two objects, and as surely as shadows take the shape of the object by which are cast.

(5.) THE REMOVAL OF SUSPICION.—Hitherto superiors and inferiors have viewed each other with suspicion, and every one has looked after his own private interest. This the reason why the national welfare has daily declined. In order to restore the

administration to health and activity, suspicion must be removed from the minds both of Your Majesty and Your Majesty's servants. Remove from office those officials who cannot but be suspected, and employ those who can be trusted, so that every man will be able to serve Your Majesty to the utmost of his capacity. When suspicion is thus removed, Your Majesty's servants will gratefully endeavour to remedy the present evils in harmony with Your Majesty's wishes; and the aspect of political affairs will daily improve.

(6.) **ECONOMY.**—The received rule of economy in ancient as well as modern times has been to expend according to the amount of revenue. But of late years Your Majesty's treasury has been empty and the public debts have been increasing in amount, while, on the other hand, nothing has been done to show for the money spent. The truth is that money has been spent upon works which might as well have been deferred, but which have been undertaken by the small-minded of Your Majesty's servants, whose sole object is to promote their own private interest. Such works, for instance, as the erection of buildings for the Bureau of Archives, etc., and such matters as the purchase of steamers, etc., are no doubt good in themselves, but in the present state of affairs in this country, they are not of any urgent importance. What is now most pressing needed is to bring the administration of home affairs into order, to develop the resources of the country and to encourage habits of industry and economy. When the national treasury is full, and people enjoy competence and plenty, then and then only will it be time to carry out various public works by degrees. If, instead of proceeding in this manner, no attention is paid to the relative proportion of revenue and expenditure, and works for external show are executed, the finances of the country will daily become worse and the poverty of the people will be intensified. Unless measures are now taken to stop the present disastrous method of management, it will never be possible to remedy the evil.

(7.) **THE SELECTION OF ADVISERS.**—The sovereign is the head of the State; and whether officials are able or not depends upon the mode of their selection by the monarch. Unscrupulous, small-minded people always long for the occurrence of some extraordinary event, for to them calamity is a source of bliss, and misfortune a harbinger of joy. They guess at the intentions of their Royal master and delude him with suggestions favourable to his supposed interests; they enchant him with charming conversation, and move him with alarming reports. Such people, so far from being allowed to come near the person of Your Majesty, ought to be punished. In listening to advice, Your Majesty ought to consider first of all whether it is in harmony with reason and fact or not. If these are any falsification of truth in it, Your Majesty had better remove the adviser far away from court, so that room may be made for true advisers. When unfaithful advisers are suffered even a while, their number will increase daily, while that of righteous counsellors will daily decrease. This is by no means conducive to the welfare of the nation. The reason why King Chu of the Shu dynasty prospered, while King Chû of the Ketsu dynasty declined, was that, while the one listened only to the advice of good men, the other listened only to that of bad men. In the face of such a warning, judgment ought to be used in the selection of advisers.

(18.) **REWARD AND PUNISHMENT.**—Rewards and punishments are the foundation of a good administration, and the bond by which the hearts of the people are fastened to a Government. Reward punctually and punish impartially, and then it will be possible to govern a State. When any of Your Majesty's officials have rendered good service or have transgressed disciplinary rules, let the reward or punishment be just and rigorous, without in the last degree allowing private considerations to interfere on such occasions. Then the laws will be respected, and the people will put confidence in the Government.

(19.) **FRIENDSHIP TO A FRIENDLY COUNTRY.**—The Middle Kingdom and Your Majesty's country have been mutual friends for several centuries, and the people of the two countries have been intimate from remote ages. Starting in the morning, the people of either country can reach the soil of the other by the evening of the same day. The two nations are, therefore, eminently fitted to help each other. If they keep on intimate terms, no foreign nation will be able to interfere between them, groundless rumours will cease to be circulated, people will feel secure, and the country will be safe for ever. The friendship between them will then become deeper than mere intimacy on paper. If the people of both countries believe in each other, everything will go on very smoothly. If Your Majesty's people decide not to reject the

help of the Middle Kingdom, no foreign country can subject Korea to insulting treatment. Cause then the whole energies of your officials to be turned to the work of administration and to the development of the resources of wealth, and Your Majesty will have nothing to complain of.

(10.) **FOREIGN RELATIONS.**—The foreign relations of a country are watched by the whole world, and constitute one of the most important branches of its national affairs. When the management of foreign affairs is entrusted to a proper person, and when treaty powers are treated with courtesy and faith, a country will be sure to enjoy for ever the friendship of foreign States. But when its policy indicates no unity of purpose, it will not only be laughed at by foreign Powers but will also be viewed with feelings of suspicion. Especially is it ruinous to allow worthless officials to carry out selfish and artful policies by means of official position. If every affair of State, whether small or great, is controlled by the Ministers of State in council, no secret plot will be possible, much less will it be possible to originate such a disturbance as that of the year of Monkey (1884). What I have thus far set forth, I admit, very narrow in conception and unpractical in nature, but these ideas have long been present in my mind; and I think that Your Majesty's Ministers ought to have spoken about them. Having heard that Your Majesty is noted for wisdom and decision, I have dared to present some of my thoughts to Your Majesty. My nature is artless, and I am used to speak frankly and in a straight-forward manner. I therefore implore Your Majesty's benevolent indulgence.

#### CAUSES OF EARTHQUAKES.

Professor Milne, R.G.S., delivered a lecture on the above object, on Saturday, the 16th Oct., at 2 o'clock, under the auspices of the Rikaku Kyôkai (Science Society) at Kôdô-Chûgakkô (the old Tôkyô Daigaku), Hitotsubashi, Tôkyô. There was a good attendance of the members of the society and their friends. The subject of the lecture was illustrated by maps,—one showing the distribution of earthquakes and volcanoes throughout the world, and another exhibiting the thickness of the crust of the earth. Among those present were Their Excellencies Aninori Mori and Admiral Enomoto. Professor Fujikura briefly introduced the lecturer to the audience.

Professor MILNE said that during the time he had lived in this country he had been asked many questions concerning earthquakes, and one of the most common of these was: What is the cause of earthquakes? Because he felt that he could not in a short space of time tell any one anything that would either be satisfactory to his questioner or to himself, he had always, however, been very evasive in his answers. He remembered that on one occasion he was beguiled into giving an answer; and his reply was that anything which shook the ground produced an earthquake. If a heavy man jumps on soft ground he causes an earthquake,—if a heavy wagon is rolled along the ground or a gunpowder mill explodes then there also is produced an earthquake. In the latter case it may be comparable perhaps with some of the small shocks that are experienced in Tôkyô. Very many earthquakes may be felt at the Shinbashi Railway Station by steam condensing in cold water. This produces a jarring, causing the engine and consequently the ground, to vibrate. There are earthquakes on a greater scale caused by the bending and breakage of rocks during the process of mountain formation, to which he would refer later. Earthquakes occur at the time of volcanic eruptions caused by explosions of steam. Sometimes earthquakes are produced in one way and sometimes in another. Answers of this kind, however, are not satisfactory, because when stated in an off-hand manner they sound as if they were only matters of opinion.

To be systematic he would treat this subject under three heads; classing together first those theories as to the cause of earthquakes which he would call *unscientific*; secondly he would speak of those which he would call *quasi-scientific*; and thirdly he would speak of the modern, or *scientific* views.

The unscientific views were palpably absurd, but still he thought them interesting. While looking over the last American papers, in the long accounts given by the *San Francisco Chronicle* of the earthquake at Charleston, he found that the negro preachers told their congregations that the disturbance was in consequence of their wickedness; if they had been better there would have been no earthquake, and almost the same things were said by white preachers to their flocks. In the *Japan Mail* of

yesterday he found the same story echoed from Java, where the Mussulmen were praying to a mountain to cease its shakings, at the same time promising reformation in their mode of living. That earthquakes are the direct result of man's wickedness is an idea that has always been common, and was specially so in the middle ages. About 1750, very many earthquakes were felt in different parts of Europe,—England even, which is not subject to earthquakes, being considerably shaken. This gave rise to numerous sermons, all teaching the same lesson; namely, that if mankind would live a better life there would be no more earthquakes. He had collected a great number of such sermons and had them bound, and from them an idea could be obtained of the effect which earthquakes had produced on the minds of many people. In a pamphlet about an earthquake at Palermo in 1706 it was said that for several days after the shock the people seemed to be extremely humble and penitent, scourging themselves and doing penance, and in conclusion there was the remark that "it was generally apprehended that this was a mark of God's vengeance for the immorality of the inhabitants." The ideas then prevalent are summed up in a little poem called "The Earthquake" written in 1750. It runs as follows:—

What pow'ful hand with force unknown,  
Can these repeated tremblings make?  
Or do th' impious vapours groan?  
Or do the shores with fabled Tritons shake?

Ah no! the tread of impious feet,  
The conscious earth impatient bears;  
And shudd'ring with the guilty weight,  
One common grave for her bad race prepares.

From theories of this sort he passed on to deal with a set of myths attributing earthquakes to a kind of creature living underground. Some time ago we were introduced by Mr. Hattori to a creature called the "Jishin-mushi," which was said to be covered with scales and to have eight legs—an animal, he imagined, of the spider type—by means of which Japan was shaken. Later on in history this became a fish, and now, at a distance of 50 or 60 miles to the north-east of Tôkyô, at a place called Kashima, there is a rock called the Kanime rock, which, resting above the head of the fish, keeps it quiet. A legend, connected with the rock runs to the effect that so long as the deity of Kashima exists there will be no more earthquakes; and it was curious that although the surrounding districts were very much shaken, perhaps more so than any other part of Japan, it was really the case that, so far as his records showed, there were very few shocks near Kashima. Of course it was not difficult to account for this. One way was to conclude that his records were imperfect, which was not at all improbable. Another method was to imagine that there was at Kashima what the South Americans called an earthquake bridge—that was a set of strata which deflected earthquake motion coming from below just as a ray of light might be refracted. His reason for mentioning this myth was because the same story but in different shapes was common all over the world. It was of interest, not so much to seismologists as to people engaged in collecting folk-lore. In Mongolia the animal was said to be a frog; in India there was the world-bearing elephant; the Mussulmen had a world-bearing bull; in Celebes there was a world-supporting hog; and in North America there was a big tortoise, producing earthquakes. In Siberia there was a myth connected with the big bones that were discovered there—the bones of the mammoth, an animal as big as two of Chiari's elephants—and these were the remains of animals that lived underground, the trampling of which made the ground shake. The people of Kamchatka had a god called Tuil, who, like themselves, lived amongst the ice and snow, and when he wanted exercise went out with his dogs. These dogs were, it was supposed, infested by insects, and when they stopped now and then to scratch themselves, their movements produced the shakings called earthquakes. If one went to Europe there was a similar story. In Scandinavia, which was essentially the land of mythology, there was an evil genius, named Loki, who, having killed his brother Baldwin, was bound to a rock face upwards so that the poison of a serpent should drop on his face. Loki's wife, however, intercepted the poison in a vessel, and it is only when she has to go away to empty the dish that a few drops reach the prostrate deity and cause him to writhe in agony and shake the earth. The lecturer had had no means of collecting earthquake fables from the southern hemisphere, but those he had described showed a remarkable similarity of ideas among various peoples as to the origin of earthquakes. These, then, were the unscientific theories.

Next come the quasi-scientific theories or those in which there had been some endeavour to ac-

count for earthquakes as parts of the ordinary operations of nature. One common way of accounting for earthquakes was to suppose that they were produced by the action of wind compressed inside the earth. In two Chinese books that he had translated, it was said that Yang, the male element so often met with in Chinese philosophy, entered into the earth and caused the included air to increase in size, which in its endeavours to escape shook the ground. Its efforts would be more violent beneath the mountains than in the plains, and therefore the earthquakes in the north of China (which was mountainous) were said to be more violent than those in the south. And it was supposed that when the wind was blowing strongly on the surface of the earth there was a calm beneath, and *vice versa*. The same idea was present in the poem he had just read; and Aristotle, Pliny, and indeed most of the Greek writers, attributed earthquakes to wind in the earth. Shakespeare apparently held like opinions. In his Henry IV. we read:—

Diseased Nature oftentimes breaks forth  
In strange eruptions; and the teeming earth  
Is with a kind of cholick pinch'd and vex'd,  
By the imprisoning of unruly wind  
Within her womb; which for enlargement striv-  
ing,  
Shakes the old beldam earth, and topples down  
Steeple and moss-grown towers.

felt first near the seaboard and that they reach the volcanoes afterwards. Strange to say these volcanoes, instead of bending downwards, seem to be rising. All rising regions in the world are volcanic regions; take, for example, the South American coasts like that of Chili, where shells and sea beaches were found at high levels similar to those now existing at the water level.

The next theory he had to refer to was that earthquakes were caused by faulting, or the breakage of strata while mountains were being bent up. Every now and then a breakage takes place and one portion of the faulted stratum slips down. This could not be seen better than in the dockyard at Yokosuka, where there were some beautiful illustrations of small faults. Geologists, the professor went on to say, knew the ages of many of the mountain ranges in the world. Some of the small mountains were very old, for instance the Urales. These are low and could hardly be recognised as mountains, as you can drive over them in carriages quite easily. Coming, however, to the newer mountains, such as the Alps or the Himalayas, the wrinkling up of which may even yet be going on, it is probable that here we have faulting still taking place, and it is quite possible that many of the earthquakes recorded every year in Switzerland are due to this cause—viz breaking of strata during the process of mountain building. Now and again in India—in the northern part along the foot of the Himalayas—earthquakes occurred which might be due to some such cause as this. We may therefore conclude that in some countries this mountain formation, which was due to secular contraction of the earth's crust, gives rise to earthquakes. The next class of earthquakes were those that took place at the time of volcanic eruptions. When the volcanoes of this country burst into eruption, it is known that many of the eruptions have been preceded by earthquakes. Before Oshima erupted about nine years ago, some strong shocks were experienced, after which the mountain began to erupt. According to Professor Prestwich, of Oxford, we are asked to picture a state of things like the following. Rain which falls on a volcano soaks inwards. The mountain becomes more or less saturated by this water, which stands up at a certain level following the contour of the mountain. Deep down in the mountain this water may in a state of vapour and a balance is maintained between this vapour and the heated rocks or lava against which it may rest. Any movement of the earth's crust or of the lava in the volcano destroys this static balance, water rushes inwards, and explosions will take place, and perhaps the top of the mountain may be blown off, as was the case with Krakatoa. The lecturer mentioned, in passing, that there is at present a very interesting crack of unknown depth to be seen on Asama-yama, radiating from the crater. Violent explosions of steam might, he pointed out, occur before the lava reached the top of the mountain, and even when no lava was ejected. Directly the water was got rid of in the shape of steam the eruption would go on quietly, the explosions usually taking place at the beginning, and not at the end, of an eruption. Professor Milne went on to refer to the marked influence which the operations of a volcano might exercise on wells in its vicinity. They were told that the wells near Fuji-san have undergone changes in the volume of their water, and that might very well be

so. There was a very sensitive well at Naples, near Vesuvius, close to the foot of the mountain in fact, and at the time of eruptions it nearly always underwent a change. After the explosions, when all the water has been drained out of a mountain, sea water might enter the volcano, and then there would be steam produced by salt water, and a change in the chemical products. Sometimes diatoms have been found in the mud thrown from volcanoes. Now, let this theory, which the lecturer remarked had been sketched very imperfectly, be applied to the facts in connection with earthquakes in our neighbourhood. Professor Milne directed the attention of his audience to the long line of volcanic islands which ran from Tokyo 1,500 miles south in the Pacific, effecting a junction just in this district with the volcanic line that went north through Hokkaido and the Kuriles to Kamtschatka. He often said to his friends that it was a very good thing that the ground was not transparent like glass, for if people saw the condition of things under their feet here they would probably wish to remove to another place. He thought that, underneath the volcanic area he had indicated on the map, it was very hot indeed—he did not ask that the rocks should be fluid or even viscous—but still they must be very hot, and that being so, then the earthquakes would come from the side on which the water percolated down to the heated interior. After describing the process of capillary absorption, and showing that water could obtain access to the earth's crust against extraordinary pressure, Mr. Milne observed that the farther down they went it would become hotter—till a temperature of 212° would be reached. They might imagine, indeed, that at a certain depth a temperature would be reached where water would be split up into its components, hydrogen and oxygen. Also at a certain depth capillary action would be destroyed by heat, and evidently, therefore, there would be a limit to the depth to which it could descend. When it could go no farther there would be a balance established between the heated vapours, and the heated rocks—a balance, however, which would be very critical and would be disturbed by the entrance of more water or any movement underneath. Such a disturbance would be followed by an explosion, or explosions accompanied by a tearing action, and that seemed to him to be the way in which a great number of the earthquakes felt here in Tokyo were caused. The conditions, of course, would be altered after each explosion, so that the explosions would not follow one another at regular intervals, but there would be certain seasons when they ought to be more common than at others. Dr. Knott had pointed out to them what would be the effect during winter when they had a great difference in the barometrical pressure as compared with summer, and the earth's crust was in a weaker state. Attention was also called to the accumulation of snow in northern regions during winter as a cause producing a change in stress upon the earth's crust. Very many things might have an influence on the periodicity of earthquakes. A great number of people believed in the attractive influence of the moon; and about 1850 it was suggested—indeed it had been foreshadowed about 1703—that the moon produced tides in the crust of the earth. It was quite possible that there were tides in the crust of the earth which would at certain times rise up, and we might be lifted further from the centre of the earth than at other times. Therefore at high tide in the crust of the earth pendulums ought to swing more slowly than they would when the tide was past. The experiment had never been tried so far as he knew. Many people had applied this theory in a different way by supposing that tides were produced in the fluid magma inside the earth, and that there ought to be a greater pull exercised by the moon when in perigee than when in apogee. Perry prepared tables to show that there was a slight preponderance of earthquakes when the moon was in certain positions, for example, that there were more when the moon was in perigee than at other seasons. From 1843 to 1872, 20 years, there had been 3,200 earthquakes in perigee and 3,015 in apogee. The difference was a very small one, and from it he should argue that such tides did not exist,—the figures failing to show any decided law. This idea about internal tides had also been formulated by Faily, who believed that in the inside of the earth a great mass of liquid existed, in which tides were produced. From his theory Faily had endeavoured to prophesy the occurrence of earthquakes. His idea, however, appears to be merely a development of Perry's. M. Delauney, another Frenchman, said that earthquakes were caused by the passage of the earth through certain bands of meteors, and also by the passage of certain planets, Saturn and Jupiter, through these meteors. But M. Delauney did not make his theory clear; he simply said he found that the passage of these planets took place at times

when there had been big earthquakes. Therefore he said that the rule of the past might apply to the future and consequently 1886, 1891, &c., would be bad years for earthquakes. He simply said 1886 would be bad for the world generally, and it certainly had been a bad year; there had been the big earthquake at Charleston; there was the disturbance in New Zealand, where the house he stayed in and the people he lived with, were all blown up; and there was the earthquake in Greece where some 300 people were killed. Possibly earthquakes were noticed more now than they used to be. As to sudden changes in barometrical pressure being the cause of the frequency of earthquakes, he very much doubted it. There were just as many earthquakes with a high as

But these theories about wind, he thought, had almost ceased to be considered. The next were the electrical theories, which, though they were held very strongly by some people at the present day, he would classify among the quasi-scientific. This kind of theory was a very old one indeed. In 1760, Dr. Stukely, as well as Percival and Priestly, wrote advocating the theory that earthquakes were produced by electrical discharges. This was a common belief among certain people living in California, who pointed out that formerly earthquakes were very frequent whereas now they occur very seldom. That was quite possible; but the reason was said to be that railways had been laid all over the country, and the network of rails protected it against any dangerous accumulation of electricity. He was assured once by an old and much respected resident of Tokyo that when the rails were laid from Tokyo to Utsunomiya and Takasaki the earthquakes would cease. Well, the rails were now laid to those places; and the facts hardly seemed to bear out the theory. The following table shows the number of earthquakes in Tokyo since 1879:—

1879 .....	69	1883 .....	32
1880 .....	74	1884 .....	69
1881 .....	59	1885 .....	67
1882 .....	45		

From this we see that there have been as many latterly as in previous years, so that the laying of the rails does not seem to have done much towards stopping earthquakes in this part of the world. He did not deny that there were electrical phenomena accompanying earthquakes, but he thought they were the consequences and not the causes, of the earthquakes. Some years ago, Mr. Fujioka and the speaker experimented not far from this place with dynamite placed in a hole. An earth plate was located about 30 yards away from the dynamite, and a wire was led from the earth plate some distance over the moats to a second earth plate. When the dynamite charge was exploded there was certainly a current produced, as was indicated by the strong deflection of a galvanometer needle at the end of the wire. They attributed this to chemical action; when the ground was shaken there was always greater or less action by increase or decrease of pressure in connection with the earth plate. Professor Shida gave a number of instances some time ago in a paper read before the Seismological Society as to the effect of earthquakes on telegraph lines. In Mauritius some years ago earth currents preceded several earthquakes. That such currents accompany earthquakes he had no doubt; but they seemed to him, as he said before, to be more the consequence than the cause. The chemical theories were next among the quasi-scientific class. These were very strong in Europe during the 17th and 18th and up till the commencement of the 19th century. It was imagined that underground there were various substances, such as sulphur, nitre, vitriol, which, by their action on each other, resulted in violent changes, giving rise to vapour, the sudden production of which in certain cases would shake the ground. The first inkling as to the truth of the causes of earthquakes seemed to have come from Dr. Mitchell, who wrote a good deal on the subject of earthquakes about the year 1760, and whose original publication might be found in one of several volumes of literature relating to earthquakes that were handed round the audience. Mitchell noticed that earthquakes occurred chiefly in volcanic countries, and he thought that they might be in some way related to volcanoes. He observed that large quantities of steam were given off from volcanoes, and came to the conclusion that an earthquake was produced at the time that an attempt was made to form a volcano; that steam got in between certain strata and as it ran between them caused pulsations. Professor Rogers, about the same time, in North America showed or endeavoured to show that it was not steam but really lava that ran along underneath the ground, causing it to rise and fall, and produced an earthquake. On the whole, the speaker thought it hardly fair to classify these views among quasi-scientific theories,

for it was certainly the case that they led people to think in the right direction.

He came now to the modern views, based on investigations which had been made regarding the earth's crust. He should assume that his audience was acquainted with the different results that had been arrived at by astronomers, physicists, mathematicians, and geologists as to the earth's interior. There were a great many views held, and there was considerable antagonism between some of them,—as for instance, the physicists and geologists. The former held that the earth must be as rigid as a ball of glass or of steel; only a solid globe would satisfy the wants of these investigators. Others would have it that there was a hole in the inside containing a fluid, while many geologists believed that there was a solid nucleus and an outer crust, separated all round by a space containing a liquid or viscous magma. Sir William Thompson further proved Hopkins' conclusions, and that the crust of the earth must be exceedingly strong and rigid. Turning to the geologists' side, it was asked how was it possible to account for the form of mountains, which were wrinkled up on the surface, if the earth was solid. Many mountains, he pointed out, were folded up in the most wonderful manner; as, for instance in the case of the Sierras and the Himalayas, where parts of the earth's surface twenty miles in length were bent and folded till they did not reach more than six miles in the same direction,—the arch thus formed rising many thousand feet in height. These were not matters of opinion; they were facts, which could be verified by any one who would put himself to the trouble of examining such mountains. Such bending and folding, the geologists said, must plainly have taken place in a thin crust, which was capable of bending and moving over the fluid material underneath it. Besides this, there was the continual elevation and depression observable on volcanic coasts. Within quite recent times, within the historical period, elevations and depressions had gone on; the temple of Jupiter Serapis near Naples had been lowered under water, and reappeared covered with the borings of marine shells. These were facts, and not theories, and they went to show that the earth's crust must be flexible in some way. Not only was it flexible, but it must be very hot. If a boring were to be made right underneath the building in which they were met, they would find the heat increasing very considerably after a certain depth. The increase was about 1° in every 45 feet—though some places were different from others—and it would be evident that they would not have to go far before they came to a point where the temperature was 212°. Physicists agreed that the earth was hot, but that it was kept solid by pressure.

With these few remarks as to the condition of the interior of the earth he would now begin with those causes which in his opinion were least important, gradually coming up to those of greatest importance. In 1881 there was a very severe shock of earthquake in Italy, on the island of Ischia, at a small town called Casamicciola. Great damage was done, and the Italian Government appointed a commission to investigate and report on the causes of the disturbance. The view entertained by certain investigators was that the ground underneath had given way and shaken the buildings; that caves had been hollowed out—or in other words evaporation had taken place. However, nothing indicating an action of this kind was visible on the surface; everything remained at its original level. In addition, underneath the town there were many mines from which clay was dug, and no damage was caused to these. There no doubt had been small earthquakes produced by this hollowing out of the ground, as for instance in limestone districts. Limestone was exceedingly soluble, and for that reason there were always caverns in limestone districts, for example in Shikoku. It was possible these might reach such a size that some of them might give way, and anything above at the time would be shaken. But as far as experience went, this giving way usually took place gradually and slowly. In England there are many salt springs, and by pumping up the salt water the ground gets hollowed out, the result being a subsidence. This, however, is so slow, that people only become aware of it after a number of years by the walls of houses cracking. These observations led the lecturer to the opinion that it was only in very few cases that evaporation could produce earthquakes. Take for instance a volcano like Fuji-san. The whole of the material of which the mountain was composed had come up from below, and that being so it might be imagined that some hollow place must be left underneath. But so far as observations had gone in Japan, the earthquakes did not come from the volcanoes. Eighty per cent. of them came along the seaboard, and a great many of them from the

sea itself. If they came from a volcano they would be felt on all sides of the volcano instead of only on one side of it. Further, by timing the shocks at different places we know that they are with a low barometer, and when it was falling as when it was rising, according to the observations he had made within the last three years. As to winds, these depended on the barometer, and sometimes an earthquake might occur during a heavy wind, and sometimes during a calm. Many of the big earthquakes that were recorded had occurred when the atmosphere was in a peculiar state, but he did not think that the state of the atmosphere had anything to do with the occurrence of the earthquakes. The principal cause of earthquakes, specially the earthquakes in this district, is the explosion of steam; slight motions are possibly produced in the heated rocks beneath us during the process of elevation that is going on here which, destroying the statical balance between the heated vapours and the heated rocks allows water to rush inwards, which, flashing into steam, causes the explosions. After having had two or three big explosions there is a period of rest. If they wanted to know more about earthquakes, however, a great deal might be learned by observing the volcanoes. Certain volcanoes were used by fishermen to tell the state of the weather. Those mountains were, to his mind, very sensitive, and it would seem that the balance between plutonic and surface forces was in their case a very close one. The mountains and springs in New Zealand that had been blown up were very sensitive. From historical accounts he knew also that some of the mountains in Japan were very sensitive; Sakurajima was such a mountain, and no doubt there were many others. Another method would be to observe the changes of magnetism in the rocks of volcanoes. Professor Milne went on to advocate, as he has done on previous occasions, the erection of a magnetic observatory on O-hima. Heat, he pointed out, destroyed magnetism, and it should be possible to note in this way the time when the volcanic rocks became cooled, say by the entrance of a large body of water. He also referred to the possibility of magnetic changes taking place close to the vicinity of such places as O-hima. Another mode of observation, he said, would be the putting down of a bore hole, say 2,000 feet deep. He did not think anyone could tell what the result would be, though the geologists might tell them what strata would be met with. It might be possible to learn whether the quantity of water varied at the time of earthquakes. Artesian water might be got also, and if that should be the case much expense in waterworks might be spared to the city; or on the other hand a supply of hot water might be obtained, which could be used, as in the case of Buda-Pesth, to supply the wants of the people. Something of utilitarian as well as of scientific use might thus result. He felt certain that lignite would be found in boring down, which could be used, in manufactures as lignite taken from the same rocks is employed at the Silk Factory at Tomioka. The experiment might be an expensive one, but it would well repay those who undertook it. His conclusion generally was, then, that earthquakes are caused in very many ways, the two chief causes being faulting and explosions of steam taking place in volcanic regions. Professor Milne, who was closely listened to during his lecture, concluded by thanking those present for their attendance.

The proceedings then terminated.

### CRICKET.

#### YOKOHAMA CRICKET AND ATHLETIC CLUB V. TOKYO AND SERVICES.

The Cricket season was brought to a close on Saturday by a match between the Club and Tokyo and Services. The Club played with but seven men, and perhaps the absence of four had something to do with the poor display of cricket made. It may be remarked that in view of the fact that only seven of the Club men turned up, it was rather venturesome to undertake the match, and a scratch game might have been better under the circumstances. The wicket was pitched across the field.

Messrs. Dodds and Edwards were the first to bat, Sarraff and Macmillan bowling. In the former's first over Edwards was caught out, splendidly held by Macmillan (with the left hand) at slip. Mollison took his place, but Dodds, too, fell in the next over, held by Macmillan's first ball,—"a Yorker," Hearn followed; and he and Mollison made a stand, 26 being put together before the latter was caught by Griffiths at point off Macmillan. Mollison's 22 comprised several cuts for two and three, and one drive for three. Litchfield, who joined

Hearne, fell to his first ball from Macmillan, Barlow, the next to bat, faring no better, being caught by Griffiths off the next ball but one at the same over. Marshall, the last to go to the wicket, made two by a hit to square-leg off Macmillan, Hearn also cutting Sarraff for two. Marshall however, was caught by Griffiths at point in Macmillan's next over. The innings closed for 31.

Sarraff and Macmillan opened the innings for Tokyo and Services, Edwards and Hearn bowling. After sending Hearn to long-on for two and giving a chance thereby, Sarraff played a ball of Hearn's on to his wicket. Griffiths took his place, and, with Macmillan, made a long stand, both bats scoring freely and running the score beyond 30. They also succeeded in taking the sting off the bowling somewhat before Macmillan was disposed of by Mollison's second ball, Mollison having in the meantime gone on bowling in Hearn's place. Mitchell made but a single, though at the wickets some little time before a ball from Edwards took one of his bails. Duff joined Griffiths, and with the score at 54 the latter was caught and bowled by Mollison. Kenny followed, and made himself felt by some "slogging" straight across the wicket, Duff also punishing the bowling severely. One or two chance were given, however; chances which would probably have put a different complexion on the game had the holding been better. Kenny was eventually caught and bowled by Mollison—a very good catch. Larcom and Denning each added but two whilst backing up their partner, Duff, who was batting freely and well, before Hearn bowled them. Moss was the only other man to stand any time, and he and Duff made the most fruitful partnership of the afternoon. Both batsmen giving signs of being well set, and runs coming freely—especially, off Edwards, who for some reason or other tried a slow style, which will not improve his average—Mollison put Hearn on bowling again. With the score at 164 Edwards bowled Moss, and in his next over—Duff in the meanwhile hitting Hearn for another two—also bowled Pocklington, who was last to bat.

The fielding for the Club was decidedly poor, several catches having been badly missed; and the only redeeming feature was Dodds' good service as "long stop." We give below the full score and analysis:—

### LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, October 30th.  
Tuesday is election day, and for the nonce nothing is talked of but politics—such as they are. Everything is very much mixed. In Pennsylvania alone is the old issue between Democracy and Republicanism clean cut. In that State Blaine and Sherman are warning the miners and ironworkers that there is great danger of an impending crisis which will throw all workmen out of work if the present high protection duties are reduced. To this argument Governor Hill of New York replies by quoting a letter written by Blaine himself in 1883, in which the necessity for a reform of the tariff is clearly pointed out. The importance of the controversy in that State arises from the fact that it seems to indicate Republican fears that it is going Democratic; which, in view of Blaine's unprecedented majority of 81,000 in 1884, would be very surprising, and would imply a revolution in public opinion.

In the two other contests which arrest public attention the old party issues cut no figure. In New York there is a concentrated on the struggle for the Mayorality of the city. In my last letter, I mentioned that the fight was triangular—Abram S. Hewitt being the Democratic candidate, young Roosevelt the Republican candidate, and Henry George the laboring men's candidate. Roosevelt is falling into the background, and the contest seems to be between Hewitt and George. Both

are making speeches and writing letters against each other. George is a really talker, and a bright writer, as his books show; but on the issues involved in the present contest, he finds his match in Hewitt. I think I cannot do better than give your readers a few extracts from one of his letters. George had written a violent appeal to the working class to withhold their votes from Hewitt on the ground that he was a millionaire. Hewitt replies:—

HENRY GEORGE, Esq.,—Dear Sir—I fear that you have reached in the discussion between us that state of excitement which I have remarked in your books, in which passion usurps the place of reason. In the open letter addressed by you to me, in the morning newspapers, and personal remarks approach so nearly to vituperation that they must render disagreeable the further discussion which otherwise I would have been willing to hold with you in writing, but which I felt it necessary to decline on the platform—a decision in which I am confirmed by the objectionable language of your letter. In your first communication you charged me with the atrocious crime of being a rich man, and invited the support of your friends on this issue. I am poor, and in my reply I took no notice of this issue because I supposed that on reflection you would be ashamed of having thus resorted to the time-worn arts of a demagogue. But in your second letter you again state that the present contest is a struggle of the poor against the rich, and in a speech made last night you are reported to have said, "Hereafter in politics millions will be on one side and the working men on the other." This is an unmistakable effort to add the class struggle to the already long catalogue of which no man knows better than yourself. In your frantic desire for office you seem not to hesitate to wreck society and its foundation.

With respect I notice your expression that my residence is a luxurious mansion in Lexington Avenue, and that I am the fortunate owner of a comfortable home in the country. The house to which you refer was the last gift of my honored father to Mrs. Hewitt. Little did that pure and noble soul, out of whose name and character I should soon make capital for myself, suspect that the modest price on which he had made for his only daughter and her six children out of a large fortune gained by honest industry during a life prolonged to ninety-three years and consecrated to the public good, would be made the ground of attack upon any one connected with him by the ties of relationship. In like manner "the home of the country" has been gained by the savings of Mrs. Hewitt out of her inheritance, of which I am sure there is not a human being in this community so vile as to envy her the possession. If there be such a creature, let him vote for Mr. Fox. The use which you made of my supposed circumstances is an indication of the true spirit which underlies your teaching and doctrines and of the consequences which would flow from your success in any sphere in which you could put your views into practice. Unless your future career is to differ from that of other men who have taught similar doctrines, I would advise you to be more modest in your denunciations of those who live in what you term "luxurious mansions," lest when the new dispensation which you preach should reach its initial development and the redistribution of property which it involves should occur, you should and yourself accused of "luxury" by your own followers and be hoist with your own petard. The leaders of the socialists have often been known to inhabit the "mansions" of their victims, but never for a long time.

In my letter of acceptance I was innocent enough to state that personal considerations had no place in this election, but in both of your letters you have been pleased to refer to my riches, in regard to which and the use I make of what I possess you are evidently as ignorant as you are presumptuous. You insult the voters of the district which I have the honor to represent in Congress by the assertion that I have purchased a large tract of cattle. It is a district in which a voter's democratic nomination has heretofore been equivalent to an election. If the office were for sale, as you have charged, by the "politicians," whom you regard as so venal, money would have been required to get the nomination from them, and to get the vote of the people. I trust that you will be gratified by the assurance that I have never expended one dollar, directly or indirectly, in securing a nomination, and no human being ever approached me for money or influence as the price of his vote. So far as the expenses of the election are concerned, I have invariably paid the usual and necessary assessments, and no more than the amount which for many years has been paid by the regular candidates for Congress, many of whom, as you well know, have no superfluous riches, and most of whom can justly claim to be as "poor" and as honest as you profess to be.

If it will give any relief to your anxiety on the subject I may state that, while I shall doubtless be compelled to conform to the objectionable practice which levies assessments on candidates, I shall keep my contribution within such reasonable and moderate limits that I shall be able to purchase my supporters at the rate of \$5 per head, the price fixed in your letter.

I make this statement with a proper sense of humiliation that a man gifted as you are should have placed so low an estimate upon the voters and the support you ought to get, and I can promise you that neither the attractions of the "millionaire" nor the pecuniary necessities of suffering citizens will be used to deplete your forces, who, to judge by your own description of them, must be the order of men who marched on London with Jack Cade and followed Falstaff to the front.

While the old proletarian Lattin is thus being waged in New York, here, in California, the situation is confused by the appearance on the stage of the ghost of the old know-nothing party. When Frank Pixley, on 4th July, delivered his now famous Know-Nothing speech, he knew he could rally round him a few choice spirits who were incensed at the Irish and their servile obedience to their priesthood. But he did not dream that he was going to wake up a State. He seems to have done so. By common consent, the meeting held last night at the Pavilion to listen to Wigginton, the native American candidate, was the largest, and by far the most enthusiastic that has been held in this State this fall. The following extract from Pixley's speech last evening will show the purpose and scheme of his new organization:—

"This meeting to-night," he said, "is to decide whether Americans shall rule America and preserve it for theirs and their descendants forever and forever. It is certainly a great undertaking that this young Hercules of the continent should dare to take the phrygian of the greatest nation of the world, and to rule this country. It could not do this without principles that appeal to patriotic Americans. The flow of alien blood should be stopped, or at least retarded. It is for this new party to proclaim that no man can come to this country unless with the intention of becoming a true and loyal American. The moral heritage of an American liberty is threatened by aliens and alien churches. To this invading immigration we proclaim that our free schools shall be preserved, and that there shall be no interference in our school affairs by the priests of any church—either the church of

England, the church of Mormons, or the church of Rome. This is not a narrow-minded policy. It is as broad as the continent. We make no war on success and no religion, but we say to religion that it must not thrust its ecclesiastical nose into our political affairs, nor if it does we will pull it. We declare against union of church and state. We intend to keep the labor of America for the working men of America. Why do not the iron and potteries shut up their such devotion for the working men and let the sweat of the people labor of Europe that is flowing to this country?" Mr. Pixley went on to say that the tyranny of foreigners in this country could not be kept from a paper for an printer to work in his office, while it would not allow him to put his own son or the son of any respectable citizen there to learn a trade.

"Communists, anarchists, home rulers, boycotters, and everything that's cowardly," continued Mr. Pixley, "find their way to the United States, and overawe everybody else, and because they do come we demand an absolute repeal of our immigration laws. Though then riots and murder have taken place. In Chicago seven anarchists have been convicted, and, thank God, they are to be hanged for murder. We are told the time is not ripe for this party. It's always time to do the right thing. It's always time to defend your country, no matter whence those assailants may come. This conflict that is disturbing America is coming to us. We cannot avoid it. The boys we are raising now must be prepared to meet it, and must be prepared to defend respect for this country in every criminal, whether native or foreign-born. We say to Englishmen, Germans, all foreigners—even Irishmen—if you object at all to foreign powers and privileges, support the United States, then we will welcome you to this country, whether Catholic or Protestant, Orangemen or otherwise. But we say to you Irishmen, leave your thoughts of Ireland behind you and cease your home-rule meetings."

It is hardly expected that Wigginton can carry the State. He began work three weeks too late for that. But he will poll a vote which will stagger the two old parties, and will undoubtedly lead to the formation of a new one. In all probability the Democratic Party will disband, leaving the Democratic Party alone to fight the native Americans; and after a few years of native American success, the old principles on which the nation was founded, which devote American soil to the use of humanity at large, and hold out the hand of welcome to all, regardless of the accident of birth, will once more be triumphant. But in the meantime, the struggle will involve the extinction of Irish-Americanism. Never again, from this out, will English efforts to govern Ireland be disturbed by interference from this country.

## TYPHOON AT KOBE.

(FROM A CORRESPONDENT.)

Yesterday, the 18th instant, Kobe was visited by a terrible typhoon, the destructive effects of which were felt in all parts of both Kobe and Hyogo. Fortunately the wind was from south, which, owing to the shelter afforded by the hills, prevented the amount of damage which would have followed had the wind been from any other quarter. The harbour was thus, to a certain extent, sheltered by the town, but the sea must have been very high on the opposite shore of the bay. As it was, a Nippon Yusen Kaisha steamer was blown from her anchorage off Onohama Naval Yard and drifted a distance of three miles. The Naval Yard, too, suffered very much, and after the gale presented a scene of wreckage. The stem of one of the sailing training ships in course of construction was knocked down by a heavy piece of roofing which was carried from one of the building sheds, falling with great force against it. In its fall it twisted the keel to which it was attached as if it had been paper, and tore away bolts as easily as if they had been made of something much less tenacious than copper. Another of the training ships, across the keel of which about 20 frames were erected and shored, suffered even worse than that referred to above. The whole of the shed under which it was being built collapsed, and the force of the gust was such that it hurled the king-posts against the frames of the vessel with irresistible force, carrying away shores and breaking down and burying the whole of the frames under heaps of broken and splintered timber. This was at 8.30 p.m., and the gale continued to increase in violence till about 2 a.m. At about 12 p.m. the moulding loft and parts of other buildings in the Yard were blown down. In the town the principal damage is at the Kobe Club, the bowling alley of which fell at 9.30 with a crash that could be heard a long distance off. As viewed this morning, the only things unbroken are a large mirror and a board upon which one reads that Braess, Thornicroft, Green, &c., each succeeded in making 300.

On the Hill, a new house which was being built by Mr. Creagh, was blown completely down, as were two others a short distance from it. Fences are down in all directions, and the trees both on the Hill and in the Settlement are lying over at all angles.

As one meets his friends to-day, about the first question asked is as to the angle reached by the various houses in their rocking and rolling—for some of them actually rocked as during an earthquake.

Broken glass everywhere abounds, but, so far as I can hear, no broken heads or deaths have occurred. Had, however, the gale been from the direction of the Kii Channel, scarcely a house in Kobe would have stood, and the mortality must have been great.

## TYPHOONS.

The following interesting essay is extracted from a Government Notification containing a Report on the Typhoons of 1884 and 1885, by Mr. W. Doberck, Director of the Hongkong Observatory:—

Typhoons as a rule originate E. or S.E. of the Philippines in the trough of low pressure between the two high pressure areas in the North Pacific and in Australia, which region is characterised by high sea surface temperature.

Their origin is not quite understood, but appears to be connected with an abnormally high temperature and humidity in some place in comparison with the neighbourhood. The hot air expands and ascends over such a place, and the heat liberated by the consequent condensation of aqueous vapour enables it to rise still further. The air, rising to a higher level in the atmosphere, causes there an increase of pressure, in consequence of which the upper air is set in motion towards the circumference of the area in question. Thus a decrease of pressure near the surface of the earth in the hot and damp region, is effected, and the surrounding air is impelled towards it. This motion of the air at the earth's surface into the area is of course contemporaneous with the escape of the air above out of the same area, and is further increased by the greater pressure at the surface of the earth in the surrounding area caused by the outflow of air above. Thus it is seen that whenever a limited area is hotter and damper than the neighbourhood, the wind must commence to blow straight in towards its centre, or rather in each spot from high towards low pressure in a direction vertical towards the isobar. But air in motion in the northern hemisphere deflected towards the right owing to the rotation of the earth except when at or very near the equator, and in consequence we have not traced typhoons nearer to the equator than about nine degrees. It is, however, possible that they may originate nearer than that to the equator, as hurricanes have been encountered at a lower latitude. But at the equator, the surrounding air continuing to blow straight towards a barometric depression would soon fill it up. Owing to the deflection towards the right the wind is caused to move in a curved path in towards the centre, and the centrifugal force in consequence developed, still further deflects it from the centre of the low pressure. Also the friction between the wind and the surface of the earth or the more or less disturbed sea surface retards the entrance of air into the central depression, while the upper air, subject to less friction escapes from the upper high-pressure area. Thus we see that once a cyclonic motion is started it tends to increase and to spread outwards.

Of course it is not thereby implied that a typhoon may not originate within an extensive area of low pressure round which the air has already a gyratory motion inwards. But that such a condition is not sufficient to originate a typhoon is frequently instanced in the China Sea, when the wind along the southern coast of China is E., in Tonquin N., over the Philippines S., and lower down in the China Sea S.W., without being followed by a typhoon. That a typhoon may follow on similar circumstances when other additional conditions are fulfilled is instanced in case of Typhoon VI. of 1885.

But that a typhoon in the beginning of its existence rather spreads from the centre outwards, than the reverse, is made probable both by the similarity between a typhoon in a very low latitude and a huge waterspout (Comp. e.g. Typhoon IV. of 1885) and by the subsequent expansion of the typhoon in its progress. There is, however, the important difference between a typhoon and a tornado, that the latter is taller than it is broad, while the height of the former does certainly not reach four miles up, while its horizontal diameter may exceed a thousand miles. Moreover, there is nothing to show, and it is rather unlikely, that the centre with the lowest pressure at any level above the surface of the earth is situated vertically above the lowest pressure at the earth's surface or even in a straight line with the lowest pressure above and below its level, so that we are not entitled to speak of an axis in a typhoon.

The enormous energy exhibited by a typhoon must be traced to the radiation of the sun, which heats the central area and effects the evaporation of water, to which the great humidity is due. This energy is partly spent in overcoming friction between air and sea-surface and also between layers of air moving in different directions, but mainly in overcoming the former, and in raising quantities of air. The energy is partly recuperated by the heat generated through friction, by the condensation of aqueous vapour, and by the

descent of air in the surrounding area. Whether part of the energy is drawn from the momentum of the earth is not known for certain.

The high pressures surrounding the cyclone in a typhoon are plainly traced on our weather-maps, which although imperfect with regard to isobars, generally show the barometer to be rising from about 600 about 1,000 miles in front and to the right and left side of the cyclone, which rise is as a rule accompanied by clear and dry but hot weather and light winds of variable direction. It is much more difficult to trace the existence of a high pressure area (anti-cyclone) behind the cyclone, simply because the barometer is in any case rising there. But apart from the question of the high pressure that may be supposed to follow the cyclone, there does not generally exist a fine weather area behind it, as the S. and particularly S.W. winds blow there very fresh, accompanied by overcast, damp, and frequently wet weather. Thunderstorms likewise follow after a typhoon, especially along the coast of southern China. This is easily explained in close analogy with land and sea breezes, as, for instance when a typhoon has raged in the Formosa Channel and is followed there by overcast, wet, and in consequence cool weather, while the fine and hot weather area continues to prevail in Tonquin, Hainan, and some part of the southern coast of China: the hot air will naturally expand and overflow the cooler air, which will be drawn westward at the surface of the earth, thus generating a vortex motion round a horizontal axis, the recognized adjunct of a thunderstorm. The Easterly squalls occasionally felt here when a typhoon is passing northwards through the Formosa Channel are thus explained.

From observations made here it appears that within 150 miles of the centre of a typhoon the sky is densely overcast with nim. clouds, accompanied by heavy rain and within 300 miles on an average 90 per cent. of the sky is covered with cum., R-cum or nimbus clouds, above which the different upper clouds are visible. Within 60 miles of the centre the rain generally pours down in torrents. North-west of the centre, between 300 and 600 miles away, the percentage is 50, the lower clouds being generally cum. above which c-cum. predominate, and between 600 and 900 miles away it is 40, the lower clouds being generally cum., above which c-cum. are usually seen. South-west of the centre, between 300 and 600 miles away, the average percentage is 60, the lower clouds being cum. or nim. and the upper generally c-cum. or c-str., and between 600 and 900 miles away it is 50, the lower clouds being generally cum., cum-str. or nimbus (the latter predominate straight S. of the centre) and the upper, c., c-cum. or c-str. Cirrus clouds are found within 1,200 miles on all sides of the centre of a typhoon. Thunder and lightning are observed in the region covered by cum-str., but not elsewhere. In the small typhoons that pass South of Luzon lightning is seen nearer the centre.

The average temperature in Hongkong when a typhoon is more than 300 miles away is about 81° and it rises frequently much higher. Within 300 miles of the centre the temperature falls quickly owing to the great amount of heavy clouds. The difference between the temperature at the Peak and at the Observatory does not appear to be affected by the approach of a typhoon, but further observation is required to elucidate this point. The dimensions here given must as far as the inner area is concerned be much reduced in case of a typhoon in a low latitude, while above 30° latitude the circumstances appear to be more irregular than farther south. Very near the centre the temperature at sea is generally about 76° and on shore about 78°.

Rain fallen during a typhoon is not accurately measured in a well exposed gauge, as the strength of the wind to a great extent prevents its falling into the gauge. More rain falls in sheltered spots or where the force of the wind is broken by an obstacle.

The diameter of the bull's eye of a typhoon between 10° and 15° latitude is about 4 miles. In 25° latitude it appears to be occasionally as much as 30 miles in diameter, but bull's eyes of small diameter have been found in case of typhoons crossing Japan. This area is characterised by very light winds, or, perhaps, occasionally by perfect calms. Generally the sea is mountainous but occasionally it calms down to some extent together with the wind. A downrush of air in the bull's eye of a typhoon is out of the question as the sky there is covered with light clouds, but on the other hand it is evident from the clearing of the sky that the uprush of air has ceased or almost ceased.

That the centre of the bull's eye does not coincide with the centre of all the directions of the wind when projected on a diagram may to some extent be caused by the ellipticity and eccentricity of the isobars.

The gradient corresponding to a certain force

of wind is somewhat uncertain, particularly when the force of the wind exceeds a whole gale, but it does not seem to be perceptibly affected by the latitude. It should be remembered that the average temperature in the typhoon season does not change much with the latitude in the area here under discussion. On an average a gradient of 0.02 inches in 15 miles corresponds to a force of wind=6 on Beaufort's scale, 0.03 to 7, 0.04 to 8, 0.05 to 9, 0.07 to 10, 0.10 to 11 and where the gradient is above 0.10 it generally blows with full typhoon force. In low latitudes the gradient occasionally exceeds one inch in 15 miles.

The wind blows generally with the force of a strong breeze within 300 miles of the centre between 20° and 25° latitude, but in 12° latitude it appears that it does not attain this force till within about 100 miles of the centre. The force of the wind is, however, different in different azimuths. Near land it is frequently very irregularly distributed. The wind blows in gusts in a typhoon. More damage is, however, done to ships by the high cross seas always experienced near the centre. The swell is felt within from 300 to 500 miles of the centre but this depends of course upon the situation of the land.

The angle between the direction of the wind and the direction of the gradient is on an average 43° in front of the centre and 53° behind the centre between 10° and 25° latitude, 65° in front and 85° behind between 30° and 35° latitude, and 40° in front and 62° behind between 10° and 35° latitude. The angle appears to be smaller near the shore than on the open sea for offshore winds. And far out at sea, the difference between the angle in front and behind the centre appears to be small.

As the angle between the direction of the wind and the gradient does not change much while the wind is strong on approaching to or on receding from the centre, it follows that the air moves towards the centre in logarithmic spirals or rather (as it is at the same time ascending) in screws whose horizontal projections are such spirals. This is quite correct in case of a stationary typhoon, but while a typhoon changes its position, new portions of air are constantly set in motion while others are stopping behind, and an air particle describes therefore with variable speed a curve of double curvature, whose horizontal projection is a kind of curve of pursuit, its path being constantly directed towards a point about half a right angle distant from the centre of the typhoon, which may for a short period be supposed to move on a parabola.

As the deflection of the wind towards the right increases with the sine of the latitude, the wind south of the centre must *seleris paribus* blow more straight in towards the centre than north of it. The difference between the amount of inflow north and south of the centre is proportional to the cosine of the latitude of the centre, and is therefore largest in a low latitude, but it increases of course also together with the dimensions of the typhoon, and this is the reason why by far the greater number of typhoons move in a northerly direction and with increasing velocity on account of their expansion.

The path actually followed by a typhoon appears to depend upon the wind that prevails at the time. Typhoon XVIII. of 1884 was blown South-Westward by the N.E. monsoon, while in the summer of 1885 when the S.W. monsoon was strong, typhoons moved Northwards. Whence also typhoons depend upon the season of the year. This explanation likewise agrees with the fact that depressions in their motion onwards keep a permanent high pressure area on the right, with more or less steeper gradients and stronger wind on that side. Probably the wind is on the whole stronger behind than in front of the centre and it stretches farther away behind it. A typhoon moving South-Westward is generally followed by strong N.E. wind that keeps blowing some time, and when a typhoon has passed Northwards it is followed by strong and more or less persistent S.W. winds. Typhoons are likewise deflected from their previous course when exposed to strong winds blowing out of open channels in which case the speed of the progress is frequently abruptly increased.

Very low clouds in a typhoon move with the wind. When clouds are observed at a higher level in the anterior semicircle their direction forms generally an angle with the gradient, that is about two points larger than the angle between the wind and the gradient. But at some distance behind the typhoon they are frequently observed to move almost straight towards the centre.

It is probable, that the smaller angle which the wind forms with the gradient in front of the centre, does not altogether depend upon the increased friction in case of off-shore winds. The inertia of the air would account for it in case of a typhoon on the open sea. We have seen, that when the wind rises after a calm, such as precedes a typhoon, the air must in the first instance blow straight in

towards the centre while the wind behind moving with less accelerated speed would have the opposite tendency there. It would at first appear, that the wind in front, blowing more straight towards the centre, must cause the centre to be filled up in front and pushed backwards, but this would be compensated by the greater altitude of the disturbance behind the centre. If the vertical height of the typhoon behind the centre is to the height in front in inverse proportion to the cosines of the corresponding angles, no effect on the progressive motion of the typhoon would follow. But it reaches probably much higher up behind, so that the centre is filled up quicker there than in front and the centre is in consequence pushed forwards.

When the centre has entered on dry land it frequently moves faster owing to the disturbance in that case being much greater behind *i.e.* over the open sea. Owing to the rotation of the earth W. winds have a tendency to raise the air, especially in low latitudes, which would on the whole contribute to increase the disturbance behind the centre. The same tendency would cause the force of W. and S.W. winds to be smaller than the force of E. and N.E. winds for the same gradient.

That the principal part of the disturbance is situated high above the surface of the earth is proved by the fact that the centres of typhoons pass across mountains several thousand feet high, and also by the circumstance that the difference between the temperature at this Observatory and the Peak is not perceptibly affected by the approach of a typhoon, for we cannot well presume, that the average temperature of a vertical column of air is lower near the centre than outside the cyclone. That on the other hand the cyclone does not attain the height of the cirrus clouds is made probable by the observation of their direction, although unfortunately it is impossible to see upper clouds near the centre, and observations of the upper clouds in the eye of a typhoon are a desideratum. Over the beginning of the fine weather area the cirrus back towards N.E. and they then sensibly preserve this direction. But the amount of cirrus cloud preceding a typhoon shows that frozen water vapour is carried miles up in the air through the action of a typhoon.

The average rate of progress of the centre of a typhoon in 11° latitude is 5 miles an hour. In 13° it is 6½, in 15° it is 8, in 20° it is 9, in 25° it is 11, in 30° it is 14 and in 32½° latitude it is 17 miles an hour. The rate of progress does not vary perceptibly in case of typhoons south of 13° latitude, but is more variable the farther north we go. In 32½° latitude it varies from 6 to 46 miles an hour.

The typhoons while E. or S.E. of the Philippines are found to move towards a direction between W. and N.W. Subsequently they recurve, and pass away in a direction between N.N.E. and E.N.E. They do not all recurve, but about two-thirds of them are found to do so. They recurve between 20° and 40° latitude, and between 115° and 130° longitude. The average place of recurvature lies in 26° N., 121° E., about the position of the Middle Dog Light-house.

In *Observations and Researches made in 1884* (Appendix M.) I have suggested the division of typhoons into four classes, according to the paths which they usually follow. No doubt abnormal instances occasionally present themselves (Comp. Typhoon VI. of 1885), in China as well as in other countries, but they are of rare occurrence.

The first class of typhoons occur at the beginning and end of the typhoon season. They cross the China Sea, and pass either in a W.N.W. direction from the neighbourhood of Luzon towards Tonquin as Typhoon II. of 1884, or, if pressure is high over Siam and Annam, they pass first Westward and subsequently S.W., as Typhoon XVIII. of 1884. They can generally be followed between 5 and 6 days.

The second class of typhoons are the most frequently encountered, and their paths can be traced farthest. They generally move N.W. and either (a) strike the coast of China south of the Formosa Channel before recurving as Typhoon IX. of 1884, in which case they generally abruptly lose the character of tropical hurricanes, or (b) traverse the Formosa Channel as Typhoons I. of 1884 and VII. of 1885 or (c) they strike the coast of China north of Formosa as Typhoons IV. of 1884 and V. of 1885. After recurving they generally cross Japan or the Sea of Japan. They occur from June to September inclusive, but are most common in August and September. More than a third of the typhoons of 1884 and 1885 belonged to this class. They can be followed on an average 7 days, or rather between 5 and 12 days.

Typhoons of the third class are probably the most numerous of all, but they are not encountered quite so frequently as typhoons of the second class, and therefore their existence is sometimes unsuspected, although they no doubt influence the wea-

ther along the Eastern Coast of China through their high pressure area. They pass E. of Formosa, moving Northwards. After recurring they skirt the Southern Coast of Japan or cross Japan or traverse the Sea of Japan or enter Southern Siberia. They prevail at the same season as the typhoons of the second class and they may be traced on an average during 7 days, or more correctly between 3 and 12 days. A typhoon of the third class frequently follows after one of second class. When the latter has recurred, the former proceeds Northwards. This is explained by the circumstance that the effective low pressure area in Asia, the preceding typhoon, is then in fact considerably E. of its normal position. It is also well known that the depressions are attracted towards places which have just been traversed by a depression.

Typhoons of the fourth class pass S. of Luzon, moving Westward, or first in this direction and then S.W. They occur at the beginning and end of the typhoon season, namely in April and December, but they are very rare. I have not succeeded in following them for more than a day or two.

### LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL"]

London, November 20th.

#### SOCIALIST MASS MEETING IN LONDON.

Extraordinary precautionary measures have been taken by the authorities in reference to the great socialist meeting to be held to-morrow. Troops have been detailed for duty and artillery is kept in readiness.

London, November 21st.

#### THE SOCIALIST DEPUTATION.

The Marquis of Salisbury has declined to receive the deputation of socialists that proposed to wait upon him.

London, November 22nd.

#### THE CABINET.

Mr. Arthur Balfour has entered the Cabinet.

#### FIRE IN HAMPTON COURT PALACE.

A large fire has occurred at Hampton Court, and forty rooms have been damaged.

#### THE LAND QUESTION IN IRELAND.

Five hundred tenants on the Clanricard estate, on the advice of Dillon, have refused to pay their rent.

London, November 23rd.

#### THE SOCIALIST DEMONSTRATION.

The Socialist demonstration in Trafalgar-square passed off quietly.

#### THE NEW RESIDENT-GENERAL IN TONQUIN.

M. Rishourd, French Resident at Tunis, has been appointed Resident-General in Annam and Tonquin in place of Paul Bert, recently deceased.

#### KAULBARS AND BULGARIA.

General Kaulbars insists that the protection of Russian subjects in Bulgaria and Roumelia can only be entrusted to Russia.

#### THE PARIS EXHIBITION.

The French have decided not to hold the Exhibition in 1887, and the exhibits have been consequently dispersed.

[FROM "LE SAIGONNAIS."]

Paris, 29th October.

#### FRENCH DIPLOMATIC APPOINTMENTS.

Baron des Michels, Ambassador for France to Madrid, has been appointed Ambassador to St. Petersburg, replacing General Billot, appointed to other functions.

M. Cambon, Resident-General in Tunis, has been appointed Ambassador for France at Madrid.

#### THE BARTHOLDI STATUE.

The inaugural fêtes of the statue of Liberty lighting the World taken place at New York with great *féat*, notwithstanding the bad weather, which was unfavourable. The French sculptor Bartholdi received an enthusiastic ovation.

### IN THE U.S. CONSULAR-GENERAL COURT.

Before C. R. GREATHOUSE, Esq., Consul-General.  
THURSDAY, November 25th, 1886.

#### SUGIURA SHICHIZO AGAINST T. K. JAMES.

Judgment was given in this case to-day. His Honour, after reviewing at length the evidence that had been given, came to the conclusion that, having paid plaintiff his wages on the 2nd September, the defendant was estopped from now setting up anything as to what occurred in August. The evidence of both parties showed that the neglect complained of, if any existed, occurred during the defendant's absence in August, but the defendant, with full knowledge of all the facts, settled with and paid the plaintiff as already stated. Defendant must therefore pay for the keep of the horses during September. As to the buggy, the balance of proof certainly was that the plaintiff used the buggy during defendant's absence without his consent and that it was damaged by such use, necessitating repairs amounting to yen 11.40, which the defendant had paid. Judgment must be rendered for plaintiff for yen 17, being the amount of his claim less yen 11.40 damages to the buggy, together with plaintiff's costs, to be taxed by the clerk. The whip and blanket must be delivered to the defendant.

### TIME TABLES AND STEAMERS.

#### YOKOHAMA-TOKYO RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 7.00, 8.15, 9.30,\* 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00,\* 5.00, 6.15, 8.00, 9.15, and 11.00 p.m.

TRAINS LEAVE TOKYO (Shimbashi) at 7.00, 8.15, 9.30,\* 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00,\* 5.00, 6.15, 8.00, 9.15, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90.

Those marked with (\*) run through without stopping at Tsurumi, Kawasaki and Utsunomiya Stations. Those marked (†) are the same as above with the exception of stopping at Kawasaki Station.

#### TOKYO-MAYEBASHI RAILWAY.

TRAINS LEAVE TOKYO (Utsuno) at 6.00 and 10.00 a.m. and 1.00 and 4.15 p.m.; and MAYEBASHI at 6.00 a.m. and 1.00 and 4.15 p.m.

FARES—First-class (Separate Compartment), yen 3.80; Second-class, yen 2.28; Third-class, yen 1.14.

#### TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.15 and 11.30 a.m., and 2.25 and 5.50 p.m.

#### TOKYO-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYO (Utsuno) at 6.00 a.m., and 1.00 and 4.15 p.m.; and UTSUNOMIYA at 8.15 a.m. and 11.10 a.m., and 4.50 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10; Third-class, yen 1.05.

#### SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 9.19 a.m., and 12.34, 3.39, and 4.09 p.m.; and AKABANE at 10.33 a.m., and 1.34, 4.44, and 8.22 p.m.

FARES—First-class, yen 70; Second-class, yen 46; Third-class, yen 23.

#### YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 and 10.40 a.m., and 1.30 and 4.00 p.m.; and leave Yokosuka at 7.15 and 11.00 a.m., and 1.30, and 4.00 p.m.—Fare, yen 20.

### LATEST SHIPPING.

#### ARRIVALS.

*Thibet*, British steamer, 1,671, W. D. Mudie, 21st November,—Hongkong 19th November via Nagasaki and Kobe, General.—P. & O. S. N. Co.

*Annie Stafford*, British bark, 1,296, Peck, 22nd November,—New York 16th May, 57,425 cases Oil.—Smith, Baker & Co.

*Fuso Kan* (6), ironclad, Captain K. Ainoura, 23rd November,—Yokosuka 23rd November.

*Nemo*, British schooner, 146, Hastings, 2nd November,—Miyake 18th November, 700 Seals and 18 Otters.—H. J. Snow.

*Mensaleh*, French steamer, 1,276, C. Benois, 24th November,—Hongkong 19th and Kobe 23rd November, Mails and General.—Messageries Maritimes Co.

*Hiroshima Maru*, Japanese steamer, 1,862, G. S. Burdis, 25th November,—Yokkaichi 24th November, General.—Nippon Yusen Kaisha.

*Takasago Maru*, Japanese steamer, 1,230, Brown, 25th November,—Hakodate 23rd November, General.—Nippon Yusen Kaisha.

*Yokohama Maru*, Japanese steamer, 1,298, Haswell, 25th November,—Shanghai and ports, Mails and General.—Nippon Yusen Kaisha.

*Denbighshire*, British steamer, 1,662, Cumming, 26th November,—Hongkong 10th November, General.—Adamson, Bell & Co.

*Euphrates*, British steamer, 1,300, J. Edwards, 26th November,—Kobe 24th November, General.—Smith, Baker & Co.

*Niigata Maru*, Japanese steamer, 1,096, Drummond, 26th November,—Kobe 15th November, General.—Nippon Yusen Kaisha.

*Oni Maru*, Japanese steamer, 1,525, Swain, 26th November,—Yokosuka 26th November, General.—Nippon Yusen Kaisha.

*Suruga Maru*, Japanese steamer, 436, Kuga, 26th November,—Yokkaichi 25th November, General.—Nippon Yusen Kaisha.

#### DEPARTURES.

*Electra*, German steamer, 970, Madson, 20th November,—Kobe, General.—Simon, Evers & Co.

*City of Peking*, American steamer, 5,080, H. C. Dearborn, 23rd November,—Hongkong, Mails and General.—P. M. S.S. Co.

*Rapido* (5), Italian corvette, Captain F. Grevalt, 21st November,—Kobe.

*Tokio Maru*, Japanese steamer, 1,350, Wynn, 23rd November,—Shanghai and ports, Mails and General.—Nippon Yusen Kaisha.

*Elbe*, German steamer, 855, Sass, 24th November,—Kobe, General.—Japanese.

*Gaelic*, British steamer, 2,690, Pearne, 24th November,—San Francisco, Mails and General.—O. & O. S.S. Co.

*Moray*, British steamer, 1,421, Wm. Duncan, 24th November,—Kobe, General.—Adamson, Bell & Co.

*Niobe*, German steamer, 1,762, Pfaff, 25th November,—Kobe, General.—Simon, Evers & Co.

*Rose*, American schooner, 50, Brassey, 25th November,—Bonin Islands, Ballast.—Captain.

*Tokai Maru*, Japanese steamer, 634, Fukui, 25th November,—Yokkaichi, General.—Nippon Yusen Kaisha.

*Wakanoura Maru*, Japanese steamer, 1,342, A. F. Christensen, 25th November,—Kobe, Mails and General.—Nippon Yusen Kaisha.

*Chitose Maru*, Japanese steamer, 356, Kaya, 26th November,—Handa, General.—Nippon Yusen Kaisha.

*Hiroshima Maru*, Japanese steamer, 1,862, G. S. Burdis, 26th November,—Yokkaichi, General.—Nippon Yusen Kaisha.

*Takasago Maru*, Japanese steamer, 1,230, Brown, 26th November,—Kobe, Mails and General.—Nippon Yusen Kaisha.

#### PASSENGERS.

##### ARRIVED.

Per American steamer *City of Peking*, from San Francisco:—Admiral and Mrs. Chandler and 2 daughters, Lieutenant H. West, Rev. and Mrs. John MacNaught, Rev. M. B. Chapman, Rev. W. B. Palmore, Captain Geo. Kelly, Messrs. H. B. McDaniels, Charles H. Ripley, and Geo. H. W. For Hongkong:—Mrs. B. G.

Pier, Mrs. Geo. Armstrong, child and native servant, and Adolph Seibert in cabin.

Per British steamer *Gaelic*, from Hongkong:—Messrs. Geo. Armstrong and A. F. Alies in cabin. For San Francisco: Messrs. J. H. Whitehead, J. Craven, M. Mentander, and F. Donovan in cabin. Per British steamer *Thibet*, from Hongkong via Nagasaki and Kobe:—Mr. and Mrs. Trevethick, Mrs. Gray, Messrs. Cockredge, Prescott, Martin, Goddard, Murphy, Robertson, Collins, Wing Chang Wo, Cassambhoy, Aldrich, Pegott, and Young in cabin; Messrs. Yue Pai, and Campbell in second class; and 27 passengers in steerage.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—H.E. Takahira (H.I.J.M.'s Chargé d'Affaires in Korea), Messrs. Yoshida, Maruyae, Ohama, Willing, Oka, Muroyoe, Otsuka, Hasegawa, and Takamori in cabin; 7 Japanese in second class; and 128 Japanese in steerage.

Per British steamer *Denbighshire*, from Hongkong:—Major R. Hennell, Messrs. E. Fox, K. Takahashi, N. Tamura, and K. Matoki.

Per Japanese steamer *Nigata Maru*, from Kobe:—Messrs. Dove, Inada, and Murai in cabin; and 35 Japanese in steerage.

## DEPARTED.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Mr. and Mrs. Julian de Cordova, Mr. and Mrs. Tachibana and child, Mrs. E. Danna, Mrs. Hunt, Mrs. and Miss Knox, Mr. and Mrs. De Alberti, Mrs. Iwai and child, Master Dana de Cordova, Messrs. K. Arimura, M. Koiyumi, G. Wheeler, R. C. de Trafford, J. de Fonseca, M. Alves, C. Braaes, and Terada in cabin; Mr. and Mrs. Nakakume and child, Messrs. N. Takashi and T. Kawamura in second class; and 113 Japanese in steerage.

Per British steamer *Gaelic*, for San Francisco:—Admiral J. Lee Davis, U.S.N., Messrs. S. Marsh, G. Watson, J. Lindsley, E. H. Tuska, and S. Marsh in cabin.

## CARGOES.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—\$29,000.00.

Per British steamer *Gaelic*, for San Francisco:—

## REPORTS.

The American steamer *City of Peking*, Captain H. C. Dearborn, reports:—Left San Francisco the 30th October; had variable winds, smooth sea and fine weather up to 18th November; thence to port, heavy gales with high sea from S.S.W., S.W., N.W., and N.N.E.

The British steamer *Gaelic*, Captain W. G. Pearne, reports:—Left Hongkong the 13th November at 4.21 p.m.; had fresh monsoon and head sea to November 15th; thence to Kuroshima wind and sea increasing from N.E. by E., high barometer 30.11, and ending in a severe typhoon, lowest reading barometer 29.03; thence to port northerly winds and fine weather. Arrived at Yokohama the 21st November, at 10.55 a.m. Time, 7 days, 16 hours, and 52 minutes.

The Japanese steamer *Yokohama Maru*, reports:—Left Shanghai the 19th November, at 3.28 p.m.; had moderate N.E. and S. winds and fine weather. Arrived at Nagasaki the 21st, at 8 a.m. and left the 2nd, at 4.20 p.m.; had fresh N.W. winds with heavy squalls. Arrived at Shimonoseki the 23rd, at 5.30 a.m.; and left the same day, at 11 p.m.; had light N.W. winds and clear weather. Arrived at Kobe the 24th, at 7 a.m.; and left the same day, at 8.55 p.m.; had light N. winds and very fine weather. Arrived at Yokohama the 25th November, at 2 a.m.

The Japanese steamer *Nigata Maru* reports:—Left Kobe the 25th November, at noon, with cloudy weather and light variable winds which continued to Ooshima; thence gentle north-westerly breeze and drizzling rain, with frequent heavy rain showers. From Oonishi we encountered heavy rain accompanied with hail, lightning, and thunder. Rain continued to Sagami, with fresh south-westerly winds. Arrived at Yokohama the 26th November, at 6 p.m., with fine clear weather.

## LATEST COMMERCIAL.

## IMPORTS.

The Market is not quite so dull as it has been for some weeks past, and though still a long way from being active, there has been rather more doing, with a marked increase in the enquiry by dealers, but offers have generally been below the idens of sellers.

YARNS.—Sales for the week amount to about 200 bales English and 100 bales Bombay; prices for the latter show a further decline.

COTTON PIECE GOODS.—Sales comprise 1,500 pieces 8½ lbs. Shirtings, 2,500 pieces 9 lbs. ditto, 2,000 pieces Prints, 500 pieces Indigo Shirtings, 200 pieces Cotton Italians, 600 pieces Turkey Reds, 600 pieces Velvet, and 300 pieces White Shirtings.

WOOLLENS.—About 3,000 pieces Mousseline de Laine, 500 pieces Italian Cloth, 250 pieces Plain Velvets, 1,800 pairs Blankets, 210 pieces Cloth, and 140 pieces Silk Satins have been reported sold.

## METALS.

No change to advise; in fact November throughout has been one of the dullest months on record. The only thing moving in any quantity has been Wire Nails, and for all ordinary assortments prices are decidedly weak.

	PER PICUL.	PER PICUL.
Flat Bars, ½ inch	\$2.40	to 2.45
Flat Bars, ¾ inch	2.50	to 2.60
Round and square up to ½ inch	2.45	to 2.60
Nailrod, assorted	2.40	to 2.50
Nailrod, small size	2.50	to 2.60
Wire Nails, assorted	4.50	to 5.50
Tin Plates, per box	5.30	to 5.50
Pig iron, No. 3	1.20	to 1.22½

## KEROSENE.

No business to announce during the past week. Dealers are clearing their former purchases in good style, but do not wish to commit themselves further at present. The *Annie Stafford* has arrived with 50,000 cases "Stella" and as she met with bad weather it is thought she may have some damaged cargo for auction. Total stock sold and unsold is over 400,000 cases with prices unchanged but nominal.

	PER CARR.	PER CARR.
Devco	\$1.77	to 1.80
Comet	1.72	to 1.75
Stella	None	

## SUGAR.

Very little has been done in Sugar during the past seven days. Brown Takao has been sparingly dealt in, while White descriptions are neglected. Prices continue weak, and in absence of business no alteration in quotations can be made.

	PER PICUL.	PER PICUL.
White Refined	\$5.00	to 7.15
Manila	4.20	to 4.40
Dating and Swatow	3.30	to 3.75
Brown Takao	4.00	to 4.05

## EXPORTS.

## RAW SILK.

Our last issue was of the 19th instant; since which date we have to chronicle a heavy business in this article, the Settlements for seven days reaching 2,300 piculs, distributed thus:—*Hanks* 420 piculs, *Filatures* and *Re-reels* 1,740 piculs, *Kakeda* 90 piculs, *Oshu* 45 piculs, *Taysaam* sorts 5 piculs. Additional to these figures we have 400 piculs Direct Export; making a grand total for the week of 2,700 piculs.

The activity noted in our last has received a new impetus by the receipt of news reporting a very strong market in Lyons. This has caused a fresh demand for that quarter, and the Settlements in *Hanks* or *Filatures* suitable for Export thence have been large. As to New York, the position must of necessity be strengthened by the state of the European Markets, but the consumers there seem to grudge every small advance and are doing their best to drag prices backwards.

Of course, sellers are jubilant and all thought of weakness is now a thing of the past. Prices must be advanced to the quotations given below; and in some cases holders refuse to offer their Silk at all, believing that a better time still is awaiting them in the near future.

Stocks are somewhat reduced by the heavy sales of the week, arrivals falling a long way behind deliveries. We estimate the present total Stock at 10,200 piculs as per details at foot.

There have been two shipping opportunities since the 19th instant; the French mail (20th) and the American mail, 24th. The *Tanais* carried 938 bales for France (318 being on Japanese account) and the *Gaelic* had 1,134 bales for the U. S. Markets, of which quantity 126 bales were shipped by the *Doshinsha*. These departures bring the total Export from 1st July up to 11,181 piculs against 9,538 last year, and 11,355 at same date in 1884.

*Hanks*.—Quite a revival in this class of late, and 420 piculs have been settled at full rates. The business done has been at the following prices:—*Shimonita* \$0.80, *Chichibu* \$0.60, *Annaka* \$0.50, *Hachioji* \$0.20. *Shinshu Hanks* are largely held by one dealer who is able and willing to stand out for fancy prices.

*Filatures*.—Large daily trade for both hemispheres, and quotations must be advanced all round. In fine sizes *Taiyosha* \$8.10, *Inase* \$8.00, are among the top figures, while for the States we notice *Rokkusha* \$8.10, *Miyatagumi* \$8.00, *Tokushinsha* \$8.00, *Hasegawa* \$7.90, *Tajima* \$7.80, with a cloud of sundry chops and districts ranging from \$7.75 down to \$7.15. Holders of really crack Silks are retiring into their shell to await developments.

*Re-reels*.—Here again a large trade for both East and West; \$7.50 has been paid for good *Shinshu*, \$7.40 for *Koriyama*, \$7.30 for *Tortoise* and *Five Girl*; but these prices are not practicable now, the owners of the *Fushu* chops just mentioned requiring \$7.50 or more for further lots. A great deal has been done in medium and common *Bushu* kinds; in fact nothing decent can now be had at less than \$7.00. It would seem, at present comparative values, that good *Mino* and *Koshu* filatures are cheaper silks than *Re-reels*.

*Kakeda*.—Some transactions done (and more expected) on basis of \$8.00 for "Two flag" chop, with *Stork* at \$7.50. It is reported that prices up country are even higher than these figures would denote, and dealers want a corresponding advance here.

*Oshu*.—Business restricted to one large parcel *Hamatsuki* which has been scaled at about \$5.30 per picul.

## WASTE SILK.

Rather more doing in this branch, and the total business is reckoned at 850 piculs, of which about 70 has been for "Direct" Export to Marseilles. The settlements by foreigners are distributed thus:—Cocoons 15 piculs, Noshi 620 piculs, Kibiso 95 piculs, Neri 50 piculs.

Quotations generally must be left unchanged. At one time there was a disposition towards ease, but the rise in the sister market has lightened things up once more, and while sellers are not averse to moving some of their goods they require full rates. Arrivals have been pretty nearly equal to sales, and the present Stock is 10,800 piculs.

The French mail steamer *Tanais* (20th inst.) carried 130 bales for France and 2 bales for England. The Suez steamer *Moray* has 51 bales Cocoons for New York, bringing total Export from 1st July up to 11,663 piculs, against 5,489 piculs last year and 12,832 piculs at 26th November, 1884.

Cocoons.—"Pierced" are finished, the small purchases reported being in very medium quality at about \$100 per picul.

Noshi.—Much trade herein, principally *Feshu*, "Best" bringing \$155, Good Medium \$120, Ordinary \$117. *Oshu Tama-ito* has again been dealt in to a considerable extent at prices ranging from \$260 to \$270 per picul. A parcel of *Oshu Noshi* is noted at \$182, and really prime *Noshi* holds its own well.

Kibiso.—Some few small purchases in *Filature* (seconds) and *Feshu* (middling) at quotations.

Mawata.—Nothing. *Neri* about 50 piculs (uncleaned) at \$25 to \$30, and the quality nothing to boast of.

Total piculs .....	10,200	Total piculs .....	10,800

## TEA.

But few purchases have been made during the week, the aggregate being only 660 piculs, these making a total of 198,900 piculs for the current season, as compared with 167,735 piculs in 1885. The Chamber of Commerce circular quotes Full Medium and Good Medium sorts fully one dollar

higher than the market actually represents. However, the present market price for Good Medium is about 18½ cents, per pound laid down at New York, via Port Moody, at exchange, say 8½ for 4/m.s. draft, whereas they only fetch about 16½ to 17 cents, per pound in New York. No Tea shipments have been announced by the secretary of the Chamber of Commerce since our last report.

Common .....	\$12
Good Common .....	13 to 14

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 4TH, 1886.

### SUMMARY OF NEWS.

A NUMBER of merchants in the capital propose to establish a Banker's Technical School.

A RESOLUTION has been carried to raise yen 50,000 for the Osaka-Sakai railway extension.

PRINCE SANJO, Lord Keeper of the Privy Seal, will leave for Kyôto about the middle of next month.

THE total number of patients treated in the Dôaisha Hospital during last month was 361 of both sexes.

THE water of the Tamagawa will be conducted to the Artillery Barracks of the Tôkyô Garrison at Ichikawa.

A TELEGRAM received in the capital states that Count Kuroda Kiyotaka, arrived in Paris the 17th instant from Sweden.

VICE-ADMIRAL VISCOUNT NIREI proceeded to the Yokosuka Docks the 29th ultimo and inspected the works in the yard.

A NUMBER of cattle-dealers residing in Kyôbashi, Nihonbashi, and Kanda Divisions propose to establish a cattle market there.

COUNT ITO, Oyama, and Yamada, and Viscount Kabayama and other officials, left for Tsushima the 2nd instant in the *Naniwa Kan*.

MR. MATSUMOTO, of the Government Railways, left for Aichi the 29th ultimo to inspect the proposed route of the Tokaido line.

ACCORDING to enquiries made the 29th ultimo, the total number of bales of raw silk remaining in Yokohama was 17,068, of which 3,688 were Hanks, 8,993 Filature *Zaguri*, 2,955 Kakeda,

1,032 Oku Sen Hamatsuki, and 600 miscellaneous kinds.

THE Metropolitan Police Office contemplates purchasing a steam fire-engine at a cost of yen 4,000, including horses and equipment.

MR. TAKASAKI, Governor of Tôkyô, paid a visit the 26th ult. to Yoroibashi, Nihonbashi Division, and inspected the works there.

COUNT Kawamura, Court Councillor, will shortly leave for Kyôto and Osaka. His mission is said to relate to the Imperial visit in January next.

THE catch of salmon in Ishikari and neighbourhood has been large, the price being *sen* 13 and *sen* 7 each for large and small fish respectively.

THE powder magazines of the War Department having been filled with powder, a new Magazine will be constructed on one of the forts in Tôkyô Bay.

H.I.H. PRINCE FUSHIMI visited the Middle Normal School in Fukushima Prefecture the 27th ultimo, and afterwards attended the local assembly.

THE sums subscribed by Japanese for the relief of the families of the passengers in the *Normanton* aggregate about eight thousand dollars, to date.

H.I.H. PRINCE KITASHIRAKAWA, who went to Chiba the other day to attend the manoeuvres of the Tôkyô Garrison, returned to the capital the 29th ultimo.

MR. ASHIWARA KIYOKAZE, a retired assistant secretary of the Finance Department, was appointed the 26th ult. to be superintendent of Niigata Customs.

THE officials of the Cabinet Office are at present considering a revised draft of the Military and Naval Penal Codes, which was submitted to them lately.

THE construction of the new Japanese Legation in Peking has been almost completed, and Mr. Shioda, the Japanese Minister, removed to the new buildings the 5th ult.

H.I.H. PRINCE FUSHIMI left for Kanare, Shibaguri, the 26th ult., to attend the sham fight between the 5th and 17th Regiments which was to have taken place on that date.

MR. OKI, Governor of Kanagawa, will give an entertainment shortly to the police constables who rendered valuable services during the prevalence of cholera in Yokohama.

THE Hydrographical Bureau in the Naval Department proposes next spring to survey the sea between Kagoshima and Okinawa, as well as the various ports in the latter Prefecture.

THE Tôkyô Mechanics' School will be shortly placed under the control of the Educational Department, and a department of Fine Arts will, it is said, be established in that institution.

THE authorities are at present making enquiries

as to the convicts who were imprisoned with hard labour for complicity in the Satsuma rebellion, with a view to the reduction of their terms.

THE total amount received by the tramway company on the 21st ult., the festival day of the Owashi Jinja, was yen 1,800, the ordinary daily receipts for each car being only yen 30.

THE Tôkyô Commercial School is at present collecting trad. articles with the object of establishing a Bazaar for the instruction students in the institution, and for the inspection of the people.

A NUMBER of prominent Japanese gentlemen in Tôkyô have opened subscriptions to pay for masses for the souls of the Lascars who lost their life in the *Normanton*, and for the defence of Captain Drake.

MR. YAMAO, President of the Law Compilation Bureau, is at present examining a memorial lately submitted by Mr. Boissonade relating to the advisability of revising the present Criminal Codes.

NEW Regulations for the Naval College are at present being prepared by Count Oyama and other high officials of State. Two or three European instructors will be engaged for the institution.

THEIR IMPERIAL MAJESTIES THE EMPEROR AND EMPRESS proceeded to Nagaura the morning of the 26th instant, to witness experiments with torpedo-boats, and returned to the capital in the evening.

MR. HARAGUCHI, chief engineer in charge of the construction of the Tokaido line, who recently returned to Tôkyô from an inspection of the proposed route, will shortly commence laying the first section of the line.

TWO-THIRDS of the total estimates of yen 3,000,000 for the Kiushiu Railway will be easily raised in Kumamoto and Fukuoka Prefectures, yen 1,200,000 and yen 1,000,000 having been already raised in the former and latter Prefectures respectively.

A NAVAL COURT OF INQUIRY, under the presidency of Mr. J. C. Hall, H.B.M. Acting Consul at Kanagawa, has decided that over-loading was among the causes which contributed to the loss of the British steamer *Plainmiller*.

THE total number of milk dealers in the capital during October last was 133, and the total number of milch cows was 1,039, from which 618 *koku* 1 to 8 *sho* 2 *go* of milk was obtained. The total value of the milk was yen 13,356.80.

MR. YAMAGUCHI, a secretary of the Imperial Household, has returned from an official visit to Kyoto and other localities in connection with the proposed visit of the Emperor, and the date of his Majesty's departure will be notified shortly.

MR. TAKAHASHI, Chief Commissioner of the Patents Bureau in the Agricultural and Commercial Department, who has been four years

in the United States, France, Great Britain, and Germany to report on the conditions of patents in foreign countries, returned to the capital the afternoon of the 16th instant.

THE appeal of Morita Kôchi against the decision of the Yokohama Saibansho, in reference to the late silk fraud case, was dismissed the 30th ultimo in the Tôkyô Court of Appeal. Morita now proposes to bring the case before the Taishin-in.

A SPECIAL meeting was held the morning of the 25 ultimo in the Law Compilation Bureau to discuss a question from Count Ito relating to foreign settlements. Mr. Yamao, chief commissioner, and the counsellors of the Bureau were present.

THE fourteenth conference in connection with treaty revision was held the 29th instant at 2 p.m. in the Foreign Office and closed at 5 p.m. All the foreign representatives were present. The fifteenth conference is fixed for the 9th instant, at 2 p.m.

THE total amount of old and new notes destroyed in the Printing Bureau from the 24th to the 27th ult. was yen 3,639,647.10, of which yen 927,585 was destroyed the 24th, yen 954,195 the 25th, yen 881,935 the 26th, and yen 875,932.10 the 27th ult.

MR. YOSHIDA, Vice-Minister of State for the Agricultural and Commercial Department, arrived at Yokohama the morning of the 26th ult. in the *Yokohama Maru*, and proceeded immediately the capital. The chief commissioners of the various bureaux and private secretaries waited at Shimbashi to receive His Excellency.

MR. KAWASE HIDEHARU, of the Central Tea Association, attended a meeting of tea-merchants of Yokohama, Mie, and Shizuoka, which was held the 22nd ult. at the Manka Restaurant in Yokohama. He left the same day for Yokkaichi in the *Suruga Maru*, enroute for Mie, Shiga, and Kobe in order to report on the condition of the tea business.

THERE is but little to be said about Imports, and the total dealings in Yarns, Cotton Piece-goods, and Woollens amount to nothing worth placing on record, Metals and Kerosene being in much similar case. Some revival has taken place in Sugar, and white sorts, after long neglect, have had a turn at an advance. Of Exports, Raw Silk has again seen a large business, a good demand coming from both Europe and America, although at the close a quieter tone prevails. Arrivals, however, have equalled sales, and the stock is well maintained, while full prices have been generally paid, though a slightly easier feeling now reigns. A good business has also been done in Waste Silk, and prices have been well kept up. Stocks, however, have been reduced. Foreign Exchanges, in sympathy with a further fall in silver, have declined, and close weak.

#### NOTES.

It will have been gathered from the extracts and translations published in these columns during the past week, that the tone of the vernacular press has changed radically with regard to the *Normanton* affair. The *Hochi Shimbun*, indeed, may be said to have held

itself comparatively aloof throughout, though on one occasion its comments went more to the root of the matter than those of any of its contemporaries. That it maintains complete silence now is, therefore, nothing remarkable. The *Nichi Nichi*, however, and the *Fiji* evidently seek to allay the excitement, and they are assisted by the *Choya*, which recalls public attention to that far more important affair, the Nagasaki negotiations. The *Choya* remarks that, having regard to the various complications which have occurred between China and Japan, and to the ill-feeling which has been unavoidably engendered by such events, the Nagasaki trouble assumes grave importance, and ought to be carefully watched. The *Choya* expresses a wish that the liberty of discussion accorded to the press in respect of the *Normanton* catastrophe may be extended to the case of the Nagasaki complication also.

\* \* \*

The *Fiji Shimpô* of the 25th ultimo devotes an exceptionally large space in its leading columns to a refutation of the charges preferred against the Japanese public in connection with the *Normanton* affair. The *Fiji* makes no attempt to minimize the degree of excitement caused by the catastrophe. It admits that the pity and indignation of all classes of people throughout the empire were stirred by the news. But it denies that the nation displayed, in this instance, any qualities which indicate unfitness for self-government. The criticisms uttered, according to our contemporary, are that the excitement was instigated by Government officials; that the Japanese were ignorant enough to confound the action of a ship-master and his crew with the general conduct of the nation under whose flag the vessel sailed; that they knew so little of law as to believe the English Minister responsible for the judgment delivered by a Consular Court, and that they betrayed inability to distinguish the relative importance of international affairs. The *Fiji* retorts by assuring the authors of these criticisms that they only betray their own ignorance of Japan and the Japanese. It denies flatly that the authorities had any hand whatsoever in fomenting or initiating the excitement about the *Normanton* affair. The only possible foundation for such a rumour—namely, that the wives of several Ministers of State appeared among the first contributors to the relief fund—is ridiculed by the *Fiji*, which asserts that the subscription was not a means of stirring the feelings of the people but an evidence that their feelings were already stirred. The *Normanton* tragedy presented features which were in themselves quite striking enough to attract public attention. No official prompting was needed and none took place. As for the charge that some Japanese were ready to throw the blame of an apparent miscarriage of justice on diplomatic shoulders, the *Fiji* observes that, if such a disposition really existed, foreign diplomats must themselves be credited with educating it, since they have taught Japan to believe that scarcely any affair is beyond the legitimate sphere of their interference. Our contemporary is not disposed, apparently, to deny that some capital was made out of the event by the enemies of Christianity, but it inquires pertinently whether the peoples of the West are themselves free from prejudice against religions other than their own, and whether they are never ready to refer

Oriental shortcomings to what they call "paganism." Finally, it discusses the accusation that, while passing with little notice an affair of such grave importance as the Nagasaki outrage, the Japanese fell into a fever over the comparatively trivial catastrophe of the *Normanton*. The charge is pronounced to be strangely short-sighted. The difference was not one of feeling but of opportunity to show feeling. In all matters of considerable international importance, the privilege of free speech is denied to the people. The hands of journalists were restrained in the case of the Nagasaki outrage, and the sentiment of the nation was thus deprived of any vehicle to express itself. Outsiders had no means of judging of its depth or intensity. Had the *Normanton* tragedy been deemed of sufficient moment, similar restraints would have been imposed, and the indignation of the people would have been obliged to smoulder without bursting into a flame capable of betraying its strength. "The Japanese public," concludes the *Fiji Shimpô*, "clearly comprehended this distinction and were not slow to profit by the liberty accorded to them, for these islands are not inhabited by fools alone."

\* \* \*

The vernacular press devotes its leading columns almost entirely to the discussion of the Nagasaki affair. The *Fiji Shimpô* of the 27th ultimo draws a strong contrast between the conduct of the British residents in respect of the *Normanton* catastrophe and the attitude of the Chinese with regard to the Nagasaki imbroglio. Our Tôkyô contemporary says that the behaviour of the British residents in the case of the *Normanton*, their unanimous and candid acknowledgment of the discreditable aspects of the tragedy, and their sincere sympathy for the unfortunate Japanese passengers, offer an unequivocal evidence of adherence to the noble traditions of English seamanship, and show that the title of Queen of the Ocean has been justly earned by their country. On the other hand, although the culpability of the Chinese sailors who caused the riot in Nagasaki is far more certain than that of Captain Drake and his officers, while Englishmen show such a marked disposition to be frank and impartial, the Chinese pursue an exactly opposite course. The Tôkyô journal does not doubt that had English ships been concerned instead of Chinese in the Nagasaki affair, a satisfactory settlement would have been made long ago. The *Fiji*'s article concludes with a prediction that, while the honourable conduct of the British residents in regard to the *Normanton* trouble will not fail to earn the lasting gratitude of the Japanese, the obstructive and unfair attitude of China will assuredly bear its own fruits.

\* \* \*

The *Mainichi Shimbun*'s issues of the 27th and 28th ultimo are also taken up by the Nagasaki trouble. After recapitulating the incidents of the disturbance, the writer laments the long delay which has occurred in settling the affair and the fact that it threatens to assume the dimensions of an international complication. History shows, we are told, that countries can only maintain friendly relations with each other by obeying the principles of international morality. In illustration of this assertion the *Alabama* imbroglio between Great Britain and the United States, and the dispute between Spain and Germany about the Carolines are quoted. The former was happily brought to a peaceful conclusion

through the high moral sense of Mr. Gladstone and other English statesmen, and the settlement of the latter was due to the German Government's regard for international good faith. In respect of the Nagasaki complication, one of two modes of settlement alone is possible. Either recourse must be had to the arbitrament of the sword, or respect must be paid to international obligations. Whatever might have been true of China in former times, she must surely have learned ere now that a country cannot preserve its reputation unless it pays due deference to certain universally recognised codes. Rumour says that the Chinese desire to discontinue the use of English as the language of the Conference, on the ground that various misunderstandings have been caused by employing it, and that they propose to recommence the negotiations *de novo*. But it is impossible to believe that statesmen like the Viceroy Li and the Chinese Representative in Japan would approve such an evasive and unworthy course of procedure. The *Mainichi* concludes with a hope that the Chinese will see the wisdom of terminating such a discreditable incident with the least possible delay, and that the Japanese Government will keep the nation fully informed of the progress of the negotiations.

The *Choya Shimbun* has three articles, in its issues of the 24th, 25th, and 26th ultimo, on the same subject. The gist of its comments is that, from every point of view, political as well as commercial, it is wisest for Japan to be on friendly terms with China, but that to be friendly with a country like the Middle Kingdom nothing is more essential than a firm and decisive attitude.

The action of the Japanese Law Association in offering the services of its members gratis for the defence of Captain Drake of the *Normanton* is criticised in some quarters as a foolish excess of zeal. "A subscription for the Lascars who perished in the ship is reasonable enough," say these critics, "but that Japanese lawyers should offer to defend Captain Drake is just a trifle too romantic." We, however, fail to see the romance of the thing at all. On the contrary, it seems good, sound practical sense. For it is certain that if Captain Drake is acquitted of the charge now preferred against him, the feeling created in Japanese circles by the verdict of the Naval Court of Inquiry will be more or less vividly revived. But if Japanese lawyers are associated in his defence, a judgment in his favour would be robbed of nearly all its sting. From this obvious point of view we hope that the offer of the Japanese lawyers will be accepted, and we are disposed to think that, whether accepted or rejected, the fact that it has been made will not be without good effect.

Japanese papers publish the following telegrams:—

(*Mainichi Shimbun*.)

Kobe, November 26th.

Mr. Kuroda, counsellor, and party returned here last night in the *Tairin Maru* from Kishu. The locality where the *Normanton* was wrecked is in the sea of Katsura, Muragori.

(*Fiji Shimpō*.)

Osaka, November 26th (Afternoon).

The *Tairin Maru* arrived at Oshima in Kishu the 20th instant. The chief inspector of police in Wakayama and the headman of Nihi-Muragori stated that the body of a passenger had been found floating on the water. Search was made by diving operations the full wind day two of last Katsura (Nihi-Muragori) and the body of the

*Normanton* were observed in 50 fathoms of water. A quantity of waste thread was picked up on the 22nd instant. Twenty-four fishing junks were engaged the 23rd to assist in the diving operations. A buoy has been moored over the wreck.

(*Nichi Nichi Shimbun*.)

Kobe, November 30th, 5.50 p.m.

The chief mate of the *Normanton* and seven other persons received summonses last night. One leaves for Yokohama to-day in the *Oni Maru*, and the others will leave to-morrow in the *Satsuna Maru*.

We beg to acknowledge the receipt of the following contributions to the *Normanton* Fund, including sums collected and forwarded by the *Hyogo News*:—

	DOLLARS.

THE *Fiji Shimpō* of the 22nd ultimo has another leading article on the Nagasaki affair, and reproduces in full the two letters of indictment sent at the outset to the Chinese Consul by the Japanese judicial authorities at Nagasaki. It concludes the article in the following words:—"According to private letters received from Nagasaki and to stories told by eyewitnesses, the aspect of the brawl assumes a serious phase; but, fearing that these may be groundless rumours, we have confined ourselves to the reproduction of the letters of indictment. From these public documents alone, the guilt of the conduct of the Chinese sailors is proved indisputably. But, for some unknown reason, the negotiations respecting the affair took the form of a conference of commissioners of the two countries, and we now hear that the conference has been suspended. We can be confident, however, that whatever changes may have taken place in the conduct of the negotiations, the facts remain unaltered. The incidents that occurred on the 13th and 15th of August last are faithfully recorded in the documents above reproduced; and as there have not been discovered any contradictory proofs in any of the investigations hitherto made, no doubt remains as to the culpability of the Chinese men-of-war's men. We therefore believe that it will not be long before consolation can be given to the wronged souls of the departed Japanese and satisfaction to the survivors. From the outset, we have refrained from the free expression of our opinions as to the Nagasaki affair, lest our so doing might hinder the carrying out of the policy of our Government. We have confidence in our Government, and doubt not but that, whatever method may be adopted, the original spirit of the letters of indictment will at the last be acted upon. Let us keep watch over the progress of the negotiations, while at the same time attending to the *Normanton* affair.

THE Minister of State for Finance evidently knows his public well. The success that attends his operations—we say nothing as to the soundness or unsoundness of the operations themselves—is beyond anything that outsiders could reasonably expect. During the past three years there has been a succession of demands upon the people's purses. First we had the Nakasendo Railway Bonds, of which twenty millions' worth were issued and largely purchased. Almost simultaneously the Kinsatsu Exchange Bonds were offered, and capitalists took over six millions of them in less than a month. Then followed the Naval Bonds, which

a total issue of seventeen millions, the first instalment of which—five millions—brought applications that aggregated more than three times the amount required. Now, finally, we have the Redemption Bonds, incomparably the biggest scheme of the whole. One hundred and seventy-five millions' worth of these are to be issued, and for the first instalment of ten millions applications aggregating over sixteen millions have been received. Thus, since the autumn of 1883, capitalists have invested over forty million dollars in Government securities, and are apparently as anxious as ever to engage in such operations. The return which they obtain seems to be altogether a secondary consideration. During the first twelve months after the issue of the Nakasendo Bonds, capitalists were unwilling to pay more than 93 for 100 *yen* worth of these securities, carrying seven per cent. interest. Now, two years later, they gladly pay the full face value of Redemption Bonds bearing only five per cent. interest. Two things are quite plain; that money is far more plentiful in the country than observers were accustomed to suppose, and that opportunities to invest it profitably are very difficult to find. It is impossible, in the face of these repeated operations, to avoid an apprehension that the fixing of so much floating capital must ultimately prove a grave inconvenience. The condition under which the Redemption Bonds are issued divest them, it is true, of this dangerous character to a certain extent. The money paid to purchase them will be speedily restored to the people by the redemption of securities bearing higher rates of interest. Should the holders of the latter desire to reinvest their money in a similar manner, it is possible that the competition for Government securities may ultimately become keen enough to work its own remedy. In the meanwhile, we have only to hope that the prospects of industry and trade will brighten sufficiently to disclose investments more profitable than these five-per-cent. bonds which at present occupy nearly the whole field of Japanese capitalists' vision.

It would be impossible, we imagine, to traverse the arguments advanced by our correspondent "Fairplay," except on the broad free-trade principle that a country should never attempt to protect any industry under any circumstances. If Japan desires to secure her mercantile marine against foreign competition, there can be no manner of question that to do so is within her right as an independent Power. It happens, however, that she has surrendered this particular right by treaty, so far as concerns the open ports, and we may safely assume that to recover a free hand she would have to give a substantial *quid pro quo*. We do not say that this is as it should be. Quite the contrary, indeed. Things have to be dealt with, however, as they are, not as they ought to be. Before negotiating with a view to closing her cabotage against outsiders, Japan would have to appraise the loss she suffers, or is likely to suffer, from competition, so as to know how much she could afford to pay for altering the treaties. At present the loss, we are inclined to think, is trifling. The regular lines of foreign steamers which touch at Japanese ports on their inward and outward voyages, do not carry much cargo or many passengers between these ports. Their organization does not enable them to offer to a Japanese shipper the important

facilities which he commands in the case of a native company. Greater inconvenience is doubtless caused by occasional steamers. Cargo carried at half, or even one-third, of the usual charges pays such ships better than ballast, and they thus not only attract business but also disturb the rates. Still the inconvenience attributable to this cause is not very serious, and while we agree with the principle laid down by our correspondent—who, by the way, being himself a steamship owner, is presumably interested in keeping things as they are—we cannot but note that the grievance he exposes is not yet of paramount importance. What it might become, however, if the country were completely thrown open to foreign trade, is another question. In that event the number of foreign-owned steamers visiting the country might be so largely augmented as to constitute a formidable fleet of competitors working under conditions against which the regular coasting vessels could not possibly contend. It certainly behoves the Government to consider, and if possible to provide against, this contingency when revising the treaties.

ANOTHER line of railway is projected. It is to pass from Oyama, on the Ueno-Utsunomiya road, and Maebashi, on the Ueno-Maebashi road. The whole distance is fifty miles, and this is divided into two sections, the first extending from Oyama, *via* Tochigi, Sano and Ashikaga, to Kiriu—32 miles—and the second from Kiriu, *via* Omama and Isesaki, to Maebashi (18 miles). The principal projectors are Messrs. Taguchi, Ban, Kimura, and Komatsu. The statistics they have obtained show that, during the three years 1883-1885, the average value of the commodities which passed over the first section of the proposed route was thirty-four million *yen*, and the number of travellers was 938,910. The estimated receipts from these two sources were 225,614 *yen* and 143,975 *yen*, respectively. On the most moderate calculation, the prospect contemplated by the projectors is that the gross earnings of the line would be over 170,000 *yen* annually. They put the cost of construction at 841,700 *yen* in the case of the first section, which traverses level ground and has no large rivers to cross; and, allowing fifty per cent. for working expenses, they promise themselves a dividend of ten per cent., observing, at the same time, that this outlook is probably less favourable than the reality will prove, since the district intersected by the line is rich in products, such as silk, cotton, tobacco, copper, rice, barley, wheat, hemp, tea, linseed oil, and so forth. It must be confessed, however, that the estimated cost of construction—something over twenty thousand dollars a mile—is not warranted by any previous experience in Japan. Nevertheless, it appears to have been accepted by a meeting of intending shareholders held at the Tōkyō Chamber of Commerce, on the 17th instant. Thirty-nine gentlemen were represented at the meeting, and eight were chosen as a deputation to push the project in official quarters.

LAST Saturday, the friends of the Reverend Davidson Macdonald, M.D., of the Canadian Methodist Mission in Tōkyō, presented him with a handsome testimonial, consisting of a cheque for \$520 enclosed in a cloisonné box and accompanied by an address. Dr. Macdonald's services as a physician have been highly appre-

ciated during the past five years in which the Tōkyō community has been so fortunate as to enjoy them, and special mention was made in the address of the skill and devotion he had shown during the recent cholera epidemic in the capital. The gift is to be used in some personal way, as Dr. Macdonald may decide. We believe Dr. Macdonald leaves Japan on furlough next year, and it will be gratifying to him to know how much he has won the esteem and affection of the community.

THE Chevalier Vita Positano, whose lamented death at the early age of fifty-three took place the 26th instant, had earned much distinction before he came to Japan to discharge the functions of Italian Consul. His first public service was in the rank of Captain in Garibaldi's army, where he acquired the reputation of a brave soldier and skilful leader. The claims which he thus established on the gratitude of his country and his King were largely strengthened by his conspicuous gallantry and ability at Sophia, where his services on behalf of the citizens elicited the admiration of both the belligerents, and were permanently commemorated in the name given to one of the city Squares which has been known ever since as the "Place Positano." No one attached less value to these distinguished services than the Chevalier himself. His modesty endeared him to his friends as much as his other high qualities. During his residence in Japan he conceived a sincere affection for the country, and his warm sympathy with the patriotic aspirations of the people was worthy of the cause to the success of which he had himself so stoutly contributed in the past. It is scarcely necessary to add that he was interred with all the honours due to his official position and personal rank. The Italian Minister headed the cortège, followed by all his colleagues of the Corps Diplomatique, the staffs of the various Legations and the Consuls of all nationalities. The Imperial Japanese Government was represented by Mr. Aoki, Vice-Minister of State for Foreign Affairs, and the Local Government by His Excellency the Prefect of Yokohama. The bier was also followed by a crowd of friends, from both Tōkyō and Yokohama, as well as by the Sovereign and Brethren of the Chrysanthemum Chapter.

THE *Fiji Shimpō*, in an article headed "A Word to the People," remarks that no particular hazard is involved in the prophecy, based upon the present negotiations as to Treaty Revision, that at no distant period the Japanese nation will see their country opened mixed residence; indeed, one may reasonably assert that this important event will in all probability precede or very closely follow the establishment in the 23rd year of Meiji of the Japanese National Assembly. We have regretted, says the *Fiji Shimpō*, the tardy rate at which railway extension progressed for some time in this country, but within recent days there has been little cause for complaint on this score. In a few years Tōkyō and Kyōto will be united by railway lines; the Tōkyō-Aomori railway will also be completed soon, and branch lines will be laid throughout the country, so that the time is not far off when the mercantile and industrial classes will be able to avail themselves to the fullest extent of facilities of transportation the want of which has become so evident. Japan will certainly undergo in a few years a

great and important change in her political, financial, and social life, and it is the duty of all to prepare beforehand the appliances that will be called for in these altered circumstances. If, when the country is opened, foreigners are permitted to reside in the interior, the first course incumbent on the Government of Japan is to remodel the civil and commercial laws and to re-enact the statutes that are now in force—the criminal law, the law of criminal procedure, etc. These are urgent matters that fall to be dealt with by the Government. Looking, however, to the people's state of preparation for the new condition of affairs, it may be asked how many of our merchants are qualified to meet foreigners on equal terms and fight with them the battle of commerce? In view of the change we have referred to, the industries of the country first claim attention, and should receive it as early as possible.

THE total number of students in the educational institutions under the Department of State for Education at the end of June last was as follows:—1,256 in the Imperial University, 1,014 in the Higher Normal School, 995 in the First Higher Middle School, 309 in the Third Higher Middle School, 384 in the Tōkyō Commercial College, 87 in the Tōkyō Female High School, 39 in the Blind and Deaf Asylum, and 21 in the School of Music, making in all 4,105. The students of the University were distributed over the various departments as follows:—University Hall, 8 (governmental); College of Jurisprudence, 196 (94 governmental, 102 private); College of Medicine, regular course 238 (4 governmental, 234 private); Japanese course 365 (private); course of pharmacy 39 (private); College of Engineering, 91 (31 governmental, 60 private); College of Literature, regular course 29 (14 governmental, 15 private); Japanese course 99 (private); College of Science 38 (22 governmental, 16 private); and School of Technology 153 (6 governmental, 147 private).—*Official Gazette*.

WE find the following charming myth, as novel to Japanese as to foreigners, in the columns of the *Pottery Gazette*:—

In some districts of Japan the natives have a remarkable custom in connection with window-gardening. In houses wherein reside one or more daughters of a marriageable age, an empty flower-pot, of an ornamental character, is encircled by a ring, and suspended from the window or verandah by three light chains. The Julietts of Japan are, of course, attractive, and their Romeoas as anxious as those of other lands. But, instead of serenades by moonlight and other delicate ways of making an impression, it is etiquette for the Japanese lover to approach the dwelling of his lady bearing some choice plant in his hand, which he boldly, but, let us hope, reverently, proceeds to plant in the empty vase. This takes place at a time when he is fully assured that both mother and daughter are at home, neither of whom, of course, is at all conscious that the young man is taking such a liberty with the flower-pot outside their window. It is believed that a young lover so engaged has never been seen by his lady or by her mamma in this act of sacrilege. This act of placing a pretty plant in the empty flower-pot is equivalent to a formal proposal to the young lady who dwells within, and this Eastern fashion is a most delicate and harmless way of proposing to a lady. The youthful gardener, having settled his plant to his mind, retires, and the lady is free to act as she pleases. If he is the right man, she takes every care of his gift, waters it, and tends it carefully with her own hands, that all the world may see the donor is accepted as a suitor. But, if he is not a favourite, or if stern parents object, the poor plant is torn from the vase, and the next morning lies, limp and withered, on the verandah or on the path below.

PEOPLE who, happily for themselves, are sufficiently methodical to keep diaries, will be delighted with "The Imperial English and Chinese Almanac" published by

Messrs. Kelly and Walsh. The book opens with the Chinese Customs Regulations and Tariff, and these are supplemented by accurate information on postal and telegraphic matters as well as by an English and Chinese calendar. Then we have the diary itself, a most conveniently arranged affair, in which the dates according to both calendars are given, and the leaves are ruled vertically and horizontally. What we particularly like about this diary is the portliness of the volume. In general such books are more or less diminutive. Their dimensions rather help to encourage the notion that to keep a diary is a species of pastime, falling entirely outside the duties of every-day life. But the truth is that among all possible acts of submission to routine there is not one which repays a man more fully and contributes more materially to the dispatch of his business than the keeping of a diary. The volume before us inculcates this lesson by its size. A man need only place it on his desk and he will be pretty sure not to forget his daily contribution to its pages or to count it among things which possess no practical claim on his time. Yet in spite of this self-asserting portliness, it only costs one dollar.

It is a vital necessity to the telegraphic correspondents of the American press that they should have some sensational affair on the *tapis*. Ireland is a standing dish, but its flavour is becoming just a trifle stale. Strongly as nations are disposed to sympathise with wrongs which they are not themselves required to redress, they must grow weary at last of the complaints of a country whose deepest griefs are sentimental. Still the telegraphists cannot afford to abandon Ireland. They continue to wire all sorts of striking pictures across the water—shifting scenes in which nothing is permanent except the iron oppression of the British Government. To such diligent purveyors there can never be much lack of minor sensations. Scandal is particularly welcome. The *Stead* disclosures gave them an opportunity of representing the whole social fabric of England as honeycombed with vice, and the Crawford-Dilke case enabled them once more to exhibit panoramic glimpses of a British Sodom and Gomorrah. Now they are off to St. Petersburg for material. They will have the Czar mad. They began by whispering that the Ruler of all the Russias was a moody man, prone to unwholesome broodings, imbued with Muscovite fanaticism, and generally disposed to adopt violent rather than moderate courses. There were materials here for a very effective sketch. Wielding immense forces with perfect autocracy, surrounded by Generals who are soldiers first and statesmen afterwards, and harrassed at home by problems which can neither be solved nor neglected, a distraught monarch might well find comfort in deeds that would disturb the peace of the world. The world, however, did not show any disposition to be disturbed by anticipation. Perhaps people had begun to discount the large orders of the telegraphists. At all events, the latter advanced another step. They now recalled the fact that the Czar had gone through scenes and perils well fitted to unbinge the strongest mind, and added the phantasy that his had never been a particularly strong mind. Still, their news fell flat, and it became necessary that they should yet take the final step. This they have now done by announcing that the Czar is not only a

lunatic but a coward. Doubtless even such a large morsel of sensation will go the way of ninety-nine hundredths of its predecessors. But the telegraphists will continue as busily as ever tearing reputations to pieces and pursuing the unique aim of throwing the public into a ferment. Is there nothing to restrain these gentlemen of electric mendacity? We had hoped that when they began to sign their telegrams with their own names some bounds would be prescribed by a selfish regard for the reputation of their signatures. But Mr. T. P. O'Connor, who was about the first to sign, now enjoys the enviable eminence of first sensationalist. It looks as if journalism was destined to accomplish an unwholesome change in public morality.

At the meeting of the Yokohama Sailing Club held on Tuesday evening the following rules were adopted:—

1. That this Club is formed for the promotion of Sailing and Sailing Races only, and its name shall be the Yokohama Sailing Club.
2. That the annual subscription be \$2 payable in advance, and due on the 31st of March in each year.
3. That new members be admitted upon the written requisition of three members, and payment of the current year's subscription.
4. That the Committee of Management shall consist of five members, one of whom shall act as honorary secretary and treasurer.
5. That a general meeting of the members of the club shall be held in the month of March in each year for the purpose of electing the Committee, receiving a statement of accounts, and the transaction of general business.
6. That the Committee shall be elected by ballot and shall hold office until the next annual meeting. Vacancies occurring during the year shall be filled up by the Committee.
7. That the Committee may on ten days notice, convene extraordinary general meetings of the Club, specifying in the notice convening the meeting the object or objects for which the meeting is called, and to which the discussion must be strictly confined.
8. The Committee shall also call an extraordinary general meeting under the same conditions and restrictions, upon the written requisition of any ten members.
9. That any member allowing his subscription or entrance fees for sailing races to fall more than one month in arrear without excuse considered reasonable by the Committee shall be liable to have his name removed from the list of members, without notice given, or resolution carried to that effect, and such member shall not be eligible for re-election except upon payment of double the amount of his indebtedness to the Club.
10. That the Club shall have the power to expel a member by ballot at an extraordinary general meeting to be called for the purpose; ten days' notice of the meeting to be given to such member. It shall be competent for the votes of two-thirds of those voting to expel; provided that the member of members voting shall be not less than twenty-one. The Committee shall, however, have power, before calling such meeting, to recommend the member to resign. No member expelled or resigning under this rule shall be eligible for re-election within twelve months from the date of his expulsion or resignation.
11. That the Club Flag shall be a red pennant with a white bill.
12. That every member being the owner of a boat entered on the club register shall be entitled to fly the club flag.
13. That nothing in these rules contained shall be altered or varied except at an extraordinary general meeting composed of not less than twenty members, to be convened under Rule 7 or 8 specially for that purpose.

To Mr. W. DENISE's indefatigable industry Japanese students owe another valuable publication *Rompô Kôgi* (論法講義), or Lectures on Logic. The book forms the opening section of a long work on the same subject, which is to be founded on the teaching of Mill and Bain, with expositions of the views of their great antagonists. The prefatory portion now before us consists of material drawn from five lectures which were delivered by the author last winter to mixed audiences. The process followed in preparing them for publication has been to revise them generally and to re-arrange the matter they contain so as to make it serve the purpose of an introduction to the principal work. The result of

these operations is 144 pages of clearly constructed and well printed Japanese, divided into four chapters. The chief subjects treated are, Psychological Data of Logic; First Principles of Logic; the connection of Thought and Language; Names, their Kinds and Import; Aristotle's Classification of Things that can be named, and Mill's Classification. The illustrations of processes of reasoning are drawn from Japanese sources, and special prominence is given to the practical aspects of the science, all discussions of purely metaphysical questions being avoided. Book II., which, we understand, is now going through the press under the enterprising auspices of a prominent Tôkyô bookseller, is to be on Propositions; Book III. on Reasoning, and so on in the usual order of studying this great subject. The whole work is expected to be about 1,200 pages long, and, judging by the volume now before us, it will be a work of the greatest value to Japanese students.

THIS is a strange age in which we live. The British Government figures as an exhibitor at the "Colonies," its exhibits consisting of quantities of jewelry and other valuables looted last year from the royal palace in Mandalay. And in *The Times* of October 5th we read:—

The treasure taken by the French troops on the capture of Hué arrived at Marseilles from Annam on Sunday evening by the mail packet *Iraouaddy*, of the Messageries Maritimes. It consists of 192 cases of silver ingots and 14 cases of gold coins. The strong room of the steamer was not large enough to receive such a load of the precious metals, and the cases had to be placed at the bottom of the hold, where they are covered with 500 tons of merchandise. All the openings leading to be compartment were closed with care, and sealed. The cases were forwarded to Paris by railway to the Ministry of Finance, and this morning they were deposited safely in the cellars of the Bank of France.

On the arrival of the treasure at Marseilles great precautions were taken to insure its safety. Six of the crew, armed with cutlasses and revolvers, were stationed round the entrance to be held, and this guard was not dispensed with until the treasure had been removed from the ship. This treasure, valued at 9,000,000*f.*, is only a small part of the booty taken by the French troops after the capture of Hué. The remainder was restored to the King of Annam.

So we have two of the most civilized Powers in the world employing their armies in this nineteenth century for precisely the same purpose of wholesale robbery that inspired leaders like Aymerigot Marcel and the Capitaine de Buch five centuries ago.

ENGLISHMEN have hitherto flattered themselves that in point of official purity they have at least as good a record as any country in the world. But it seems that they are wholly mistaken. A former French naval officer, M. Le Baron de Mandat-Grancey, has conducted investigations *in loco* which enable him to enlighten the world in the following remarkable manner:—"In England everything is made a pretext for a *flee* (sic!). The word signifies both a salary and a *pourboire*. In France officials are absolutely forbidden to accept anything from the public. In England it is considered perfectly natural that they should accept fees besides their salaries, which, by the way, are superb. This special remuneration for service which, according to our ideas, ought to be gratuitous, is often sanctioned by law. This observation is applicable to naval and military men as well as others. Some years ago I saw an English captain come on board a French man-of-war, asking permission to correct his chronometer by ours. Our officer on guard hastened to render him this slight service. The Englishman solemnly handed a sovereign to him after he had made his observations, and was much astonished on seeing the Frenchman refuse a sovereign with a certain air of disdain. Original from

It appears that all English officers consider these extra means of increasing their income as perfectly legitimate. Another time, at Shanghai, an army of Taipings threatened the town. The bankers, fearing an attack, asked the French and English captains to allow them to put their cash on board, a request which was immediately granted. But when, after a few days, the danger was past, and the bankers asked that their money might be returned to them, those who had confided it to the English men-of-war were rather surprised to receive, at the same time, a neat little account. In all this there is nothing underhand. An officer acting in this way in France would be boycotted by every one of his comrades, and sent before a martial court by his superiors. I only cite these facts to show how greatly English ideas differ from ours on many points, and to explain that with so well established a system of *fleets* the slightest attention may become odious."

Mr. MÜLLER's meetings of last Sunday at the Union Church were of a very remarkable character, especially the evening meeting for Japanese Christians. The morning service was largely attended by English and American residents, who listened with rapt attention to a very suggestive and impressive discourse on Enoch's walk of 300 years with God, and as to whether it were possible now to walk habitually in fellowship with the Almighty. The evening meeting was at 6 p.m. and even at that early hour the house was full. The floors of the aisles when seats proved insufficient were converted into sitting places for the hearers. The rev. gentleman gave a succinct account of the Schools, Bible-work, and Missionary work of the institution with which he was connected. The orphanage work was but slightly introduced, as he announced his willingness to meet his Japanese Christian friends again on the next Sabbath evening at 5.30 p.m., when he would complete his account of the Orphanages and add a brief farewell. The address was listened to with the greatest attention, as it was rapidly interpreted sentence by sentence by Mr. Ishimoto Sanjiuro, of the Union College, Tôkyô. The services closed at 7 p.m., but the entire audience remained to a meeting of another hour's duration for prayer and praise. The latter was quite as impressive as the former. It is to be regretted that some larger and more convenient place could not be found for the accommodation of the audiences that would come together to hear the interesting story of Mr. Müller's life-work. An effort is being made to secure the Town Hall assembly room for the purpose, which it is to be hoped will prove successful. At Melbourne Mr. Müller addressed 5,000 persons for an hour and 20 minutes in the Town Hall.

Mr. Müller's address on Thursday evening, giving an account of his early life, his conversion, his entering on pastoral work in England and especially the work of the Scriptural Knowledge Institution, founded March 5th, 1834, was exceedingly interesting. The departments of work contemplated by that Institution at first were four. First, the establishment of Day Schools, Sunday Schools, and a full school for the very poorest of the people, and for whom no provision for education was then made by the Government. Secondly, The circulation of the Scriptures among the poorest

of the people. Third; The aid to missionary operations at home and abroad. Fourth; The circulation of religious books, pamphlets, and tracts for both Christians and unbelievers. A fifth department was afterwards added, which has outgrown all the rest, viz: the orphan work, which has grown to be the largest Orphanage in the world. A circular was put forth announcing the principles on which the institution was to be conducted. These were simply two:—1. No debts would ever be contracted. 2. Would not have any distinguished lord of the land as patron of the institution, but the Lord God should be the patron, so that He alone should have the honour of its success. This might be thought strange, but it was done in firm reliance on the promise: "Them that honour me I will honour." The beginnings in each of these departments were small, but the results attained marvelous, as the following figures will show. Of schools, there are now 39 day schools, 43 Sunday schools, 3 adult Schools, total 85, with 5,613 scholars. These are all distinct from the orphanages and do not include the latter. The total of scholars from the beginning is 102,000, and of funds expended \$530,514. Of the circulation of the scriptures in Great Britain, in Spain, Italy, China, and other parts of the world, 213,000 bibles, \$64,000 testaments, 20,562 psalms, and 207,000 portions have been circulated. This has been done at a cost of \$181,196. To aid missionary work in China, India, British Demerara \$1,272,000 have been expended. The circulation of religious books, tracts, &c., was only 19,000, the first year; soon it increased to 190,000; then to 500,000 in a year, and then to 1,000,000, then to 1½ millions, then to 2, 2½, 3 and now to between 3 and 4 millions yearly. Many of these are large bound volumes, and 86 millions of books and tracts have been thus circulated, or more than 400 horse loads, at a cost of \$220,356. These are facts and figures going to show what a man without a dollar of funds of his own, without salary, or any source of support but what he has received in answer to prayer to God, has been able to do. The account of the orphanage work is to be given to night at 5.30 o'clock at the Union Church.

\*\*\*

Mr. Müller's account of the Scriptural Knowledge Institution was concluded last evening by an account of the orphan work at Bristol, begun in 1835. He stated its object was not merely regard for the physical necessities of orphans bereaved of both parents, nor for their mental and spiritual necessities, weighty as these were, but chiefly to strengthen the faith of Christians and prove to an unbelieving and sceptical age that God was the Living God, and still willing to help all who put their trust in Him. For the greater evidence of this neither he nor his fellow-workers ever solicited any one for help, nor, beyond the annual report, made known the state of the funds. In forty-seven reports Mr. Müller had challenged any one to prove the incorrectness of his statement of not making a single individual application for help. The work commenced like that of the other departments on a small scale. First one house was rented for 30 girls over 8 years of age. Then a second for 30 boys under 8 years of age, then a third for girls over 8 years of age, and a fourth for girls under 8 years. Thus 112 orphans and 11 helpers were the results of the first year's work. The supply of the wants of these orphans and

helpers was only by prayer and waiting on God. An instance was given, showing the manner of meeting times of deficiency of food for their next meal. On one occasion, when breakfast was over and at 9 o'clock there was no means for providing the dinner at 1 p.m., a meeting of the helpess was held for prayer, and at 10, a bank note by post was received supplying the want. Often a second prayer-meeting would be held for the supper, and a third for the children's milk for breakfast. On one such occasion after prayer till 9 or 10 p.m. Mr. Müller returned to his house to see if anything had come in for their help, but found nothing had been received. The next morning he went early to the orphans to see if these had been supplies received, when the helper showed him three gold sovereigns just received. This instance, given in his yearly report brought the donor to see him and tell him the strange circumstances attending the gift. He was a merchant, in a large business, and was early that morning going to his counting-house to see important letters. On the way the thought entered his mind, "I ought to take something to the orphans. But this," thought he, "I can do to-night after seeing my letters." Still the impression of the duty of giving to the orphans so increased that he started back, but again the desire to see his correspondence so increased that he again set out for the counting-house, but the former impression now became so strong that he had to return to the orphan houses and leave the above amount. Mr. Müller related the circumstances that led to the building of the first Orphan house for 300 children at a cost of \$9,000, for which he had not \$9 in hand. He became so convinced of its being the Lord's will that for days he mingled praise with his prayers on the subject. On the 34th day, the first donation of \$1,000 came in, and not long after another, and then two donations of \$12,000 each, and within two years the building was completed and paid for. The contract was not signed till the money was in hand to pay for the building. The amount for furnishing was received while the building was being erected. Then a second house and a third were decided on, for 850 more orphans, at a cost of \$240,000; 900 orphans more were waiting and a fourth and fifth house were built at an expense of \$360,000. The total expenditure on the five buildings was \$690,000, while all the other departments of labour were being sustained and cared for. The contributions varied from one farthing to \$72,200. He had received 40 donations of \$6,000; 12 donations of \$12,000; 8 donations of \$18,000; 6 donations of \$30,000; 1 donation of \$42,000; 1 donation of \$48,600; 1 donation of \$54,560; and 1 donation of \$72,200. The yearly expenses range from \$200,000 to \$240,000. The total of all receipts have been \$6,600,000. The average number of orphans is 2,250, with 112 helpers. These helpers are mostly teachers trained up in the Institution; they also supply teachers for the Day Schools. The girls at the age of 17 are given an outfit, and secure positions in good families as domestics. The boys at 14-15 years of age are placed as indoor apprentices and are furnished with an outfit and £13 sterling as a premium. Orphans are taken as babes in arms and cared for. All the work of the Institution—an immense amount—is performed by the inmates themselves under experienced servants to direct. In closing his address Mr. Müller spoke of

the encouragement we thus had to wait patiently upon God. Not that all were called to build orphan-houses, but all, in the least as the greatest affair, should commit all to God and seek His glory. He spoke also of the encouragements to labour in Japan compared with other mission fields, and hoped for a thousand-fold more blessing upon missionary work than had yet been given. He announced his meeting for all Christian workers, native as well as European, this afternoon at 2 in the Union Church, also his consent to preach to-morrow at 11 a.m., and to give a farewell service on Monday 5.30 p.m., at the Union Church. As Mr. Müller goes to Tôkyô to labour next Tuesday, this will be the last opportunity for those desiring to hear him.

A CONTROVERSY is being carried on between the *Choya Shimbun*, the *Keizai Zasshi*, and the *Jiji Shimpô*, on one side, and the *Mainichi Shimbun* on the other with regard to the manner of making good the deficit in the accounts of the Japan Mail Steamship Company. The three former journals maintain that the Government are bound, by the terms of the charter which they gave the company, to find the whole amount of the deficiency, whereas the *Mainichi Shimbun* insists that the Treasury's responsibility does not extend beyond interest on the Company's capital. The Government, it would seem, are inclined to take the latter view of the case, for in the *Choya Shimbun* of the 26th ultimo we find the following:—"As the accounts of the Japan Mail S.S. Company for the past year show a deficiency of more than 2,200,000 yen, application was made to the Government for that amount, but, as more than once stated in these columns, the authorities are reported to take the ground that their liability is limited to the interest on the Company's capital, or 880,000 yen in all. With the object of making arrangements for the future, the principal officials of the Company are said to have been summoned several times by the Government, and the expectation is that changes of a more or less radical nature will be made in the organization of the concern. Rumour also says that Mr. Morioka, President of the Company, will send in his resignation in a few days."

HERE is an extract from the Report of Her Majesty's Acting Consul at Taiwan, which deserves a place in every paper published in the Orient:—"The whole of the Chinese people, wear native cloth, and wear nothing else. I have examined the clothes of labourers, who form the great majority of the people, in two-thirds of the 18 provinces of China, and the fact is as I say. Our shirtings and cotton piece-goods are only fit to be the under-garments of the rich, or the outer garments of the sedentary poor, linings, and grave-clothes. They are utterly unfit, whether in yarn, in make, in length, and in width, for the ordinary clothes of Li Chang, Wang, Lin, and Chiao, who, in millions, pursue their daily toil clothed in their own tough, rough, honest, untearable, and unwearoutable home-spun from Kwangtung to Kansuh, and from Szechuen to Chihli. So long therefore, as we with persistent conservatism, cater for the luxuries of the few and neglect the necessities of the many, so long will our export of piece-goods to China be inextensive, and, compared with the teeming millions of cotton-wearers which make up the population of China, be absurdly small. This is not a country where a

cotton handkerchief and a turban, the one made of Lancashire rubbish and the other of a light-weight shirting, suffice for clothing. From six to ten months every year, every Chinaman is comfortably clad in a jacket, trousers, and under-clothing, made of heavy cotton cloth, the product of Chinese fields, Chinese spindles, Chinese looms, and Chinese hands."

ON the 16th, 17th, and 18th of this month Bazaar is to be held at the Masonic Hall in aid of the Union Church; and we understand that there is every prospect of its being attended with the success it well deserves. For a considerable time past much desire has been evinced that the Church should be placed on a surer and stronger basis; and, as recently announced in these columns, an effort has already been made to obtain the services of Dr. Draper, a well-known figure in the Christian religious world, who is now in London. But the principal want at present is funds; and it is this want which it is hoped the Bazaar will materially help to meet. Not a little assistance has been rendered to the movement by one or two gentlemen at home who were formerly members of the Congregation, and who have selected and sent out on consignment small parcels of things suitable for the Bazaar. As may be supposed, however, the bulk has been got together here, and from what we have been given to understand we should say that the display will quite repay a visit. When we mention that the contributions comprise, amongst other things, a choice lot of those articles which are generally spoken of as curios, specially selected by a gentleman in the business; stationery; lace curtains; ladies' and other fancy articles and embroideries; Piesse and Lubin's perfumery; dolls in all sizes and variety of dresses; Christmas and New Year cards; books; knives; flower seeds; California beans; a few Korean articles, besides a large lot of miscellaneous toys and odd things expected in the *Benedict*, it will certainly be admitted that there is to be no barren display. We only trust that the Committee and others will be repaid for the trouble taken; although if what we hear is correct,—that anything like high prices out of proportion to cost and real values is being strictly guarded against,—we are inclined to think that the main income will be derived from the entrance money and the refreshments, etc. It was intended to have given an *Old Folks' Concert* in connection with the Bazaar, but unforeseen circumstances have unfortunately necessitated the abandonment of the plan.

JOSEPH PORTELL, the convict who escaped on Wednesday from the jail of the United States Consulates, was captured on Thursday in Tôkyô and brought back to Yokohama, where he was lodged in his old quarters last night. It appears that Portell, in common with other prisoners had been employed in various ways about the Consulate compound, but as he had once before shown a desire to get outside the precincts, a pretty careful eye was kept on him. On Wednesday he was set to mix paint, Mr. McCance, deputy marshal of the Consulate and keeper of the prison, being then occupied in the adjoining office whence, by means of an open door, he was able to watch the prisoner. Some one who entered the office, however, unthinkingly closed the door, and thus afforded Portell the opportunity he had evidently

been waiting for. He at once went upstairs to the deputy marshal's rooms, opened by means of a wire one of the drawers, and took therefrom a considerable sum of money—\$479. He then, after doffing his prison clothes, under which he was wearing an ordinary suit, left the compound unobserved. His absence was discovered immediately and a search was instituted, the *City of New York* which left yesterday morning being carefully examined. It now appears that the fugitive, after purchasing a new hat at a shop in the native town, hid himself about Noge till night time, when he started to walk to Tôkyô.

THE long continuance of the suspension of telegraphic communication with China is due to the fact that when the Nagasaki-Shanghai submarine cables gave way last Saturday morning the repairing steamer was absent in South China, where the Hongkong-Amoy and Hongkong-Foochow cables also were interrupted. As telegrams can be transmitted between Hongkong, Amoy, and Foochow by the Chinese Government land lines the repair of these latter mentioned cables was not so immediately urgent, and accordingly the steamer, as soon as information could be sent her, left for Shanghai to commence work on the Nagasaki line. It is hoped that communication will be restored by the beginning of next week. A mail for Shanghai closes in Nagasaki at four o'clock to-day, by which copies of telegrams may be sent.

THE *Alacrity* (4), dispatch-boat, Commander R. B. Maconochie, arrived here on Wednesday from Hongkong via Nagasaki and the Inland Sea. Commodore Morant, who is on a visit to Japan with his family, came up in the *Alacrity*. The following are the officers on board:—Commander R. B. Maconochie, Lieut. Alexander Meldrum, Lieut. J. I. Lory, Chief Engineer J. A. Smith, Sub-Lieut. A. R. C. Warren, Surgeon J. McC. Martin, Assist. Paymaster R. B. Rigby, Engineer J. G. Stevens, Gunner J. S. Clarke.

THE steamship *Iphigenia*, Captain Vulner, which arrived here on Saturday night, reports that in lat. 29° 30' N. long. 130° 30' E. she passed the British bark *Nanaimo*, Captain Dodd, from Victoria, British Columbia, with a cargo of timber for this port. The bark was in a crippled condition, having lost her jib-boom and fore top-gallant-mast, also her main and mizen top-masts.

JOSEPH PORTELL, who was sentenced to two years' imprisonment in April, 1885, for a robbery at the Seiyoken, escaped from the United States jail on Wednesday, and has not yet been found. Before leaving he paid a visit to the house of Mr. McCance, deputy marshal, and stole a sum of money close upon 500 dollars.

WE are informed that the trial of Captain Drake of the *Normanton*, which was fixed for Monday 6th instant, has been postponed till Tuesday 7th instant, when the Court will open at 9 a.m.

WE are informed that the P. & O. steamer *Thibet* left Nagasaki for Hongkong at 11.30 on the 1st instant, and *Tcheran* for Kobe and Yokohama on the 2nd at 3 p.m.

THE Nasu-Kuroiso Railway was opened on Wednesday. The time-table will be found in the usual column of this issue.

## JAPAN'S IMPORT TRADE.

MR. CONSUL LONGFORD'S Report on the Import Trade of Japan during the past five years departs largely from the groove to which the writers of such documents ordinarily confine themselves, and deals directly with questions that have been agitating the commercial world during the past twelve months. Mr. LONGFORD begins by showing statistically that the value of Great Britain's share in the import trade of this country has fallen nearly 24 per cent. since 1881. But he shows also that this decline does not affect all the staples sold by England to Japan. On the contrary, it is confined to cotton and woollen manufactures. In these two items alone a fall has occurred amounting to about 45 per cent. of the total value of the import trade. In other staples an increase has taken place sufficiently large to reduce the final loss to 24 per cent. It appears, therefore, that if Great Britain has been losing in some directions she has been gaining in others, though unfortunately the balance remains ultimately on the wrong side.

We may remark here, *en passant*, that Mr. LONGFORD'S figures convey only an approximate idea of the actual situation. He discusses values, not quantities, and his values are expressed in gold, not silver. In order, therefore, to draw a trustworthy comparison between the state of the trade at two different periods, corrections should be applied on account of the general fall in prices which has been going on since 1881, and also on account of the appreciation of gold. Were these corrections made, the volume of the import trade might be found to have suffered much less than the shrinkage of its value indicates. For the particular purpose of Mr. LONGFORD'S report, however, the statistics which he employs are sufficiently accurate.

That purpose, as we understand it, is to throw some light on the causes of the decline, rather than to record the fact that there has been a decline; and the field of enquiry being practically narrowed to cotton and woollen manufactures, Mr. LONGFORD is able to offer an explanation which appears satisfactory. The causes, as indicated by him, are two. Attention was strongly drawn to the first several years ago by Mr. HALL, who, in his Nagasaki Trade Report, pointed out that the constantly increasing inferiority of English cotton manufactures was rapidly bringing them into disfavour, and that unless some radical improvement were effected, they must soon be driven out of the field by goods of home production. Mr. LONGFORD repeats this statement with greater emphasis. He also—and this is his second cause—criticises severely the lack of enterprise shown by British manufacturers. Year in year out, things are suffered to go on in their old groove. The same stereotyped patterns are perennially offered to the Japa-

nese consumer, the only difference being that he gets a worse and worse article for his money all the time. Mr. LONGFORD thinks that the way to emerge from this slough of apathetic inferiority is to establish more intimate relations between producers and consumers. In other words, he would have the former send out experts whose business it should be to study the wants and tastes of the latter *in loco*, bringing to bear on the task knowledge and training which are not possessed by the merchants now residing at the open ports, and which, indeed, could only be possessed by persons specially educated. This suggestion practically represents the course advocated by the Honorable Sir FRANCIS PLUNKETT in a recent despatch, and is, after all, only an echo of what the whole civilized world says to-day. Germany has taken the lead in translating the theory into action. The shrewdness and proficiency of her travelling commercial experts are eulogised by every one who has occasion to write or speak on the subject. But in the branch of commerce which specially interests us here, not German, but Japanese, competition is to be apprehended. The Japanese with their cheap labour, remarkable manual dexterity, and well known artistic instincts, only need capital and organization to become most successful manufacturers. Until a revision of the Treaties establishes a *régime* under which these deficiencies can be supplied by foreign coöperation, the only resource plainly lies in the direction indicated by Sir FRANCIS PLUNKETT and Mr. LONGFORD. Being, however, a resource which involves an apparent reflection on the competency of the import merchants now carrying on business at the open ports, we cannot be surprised that its open advocacy should provoke a certain amount of hostile criticism. And indeed people conversant with the cruelly harrassing conditions under which the import trade is at present conducted, as well as with the results achieved by the ability and unwearyed industry of those conducting it, are naturally disposed to suspect anything rather than inefficiency on the part of such agents. Yet the simple fact is that things are running precisely in the old rut hollowed out for them twenty-five years ago, and that, meanwhile, the novelty of imported manufactures has worn off, their quality has steadily deteriorated, and the Japanese, wearying of this perpetual monotony and inferiority, have begun to produce for themselves. Unless, then, the rôle played by Englishmen in the business of supplying Japan's wants is to grow permanently more insignificant, one of two courses must be taken—either British capital and British enterprise must coöperate in the work of production in Japan; or British manufacturers must show greater flexibility in adapting themselves to the wants of Japanese consumers. The former is impossible without a revision of the Treaties;

the latter seems most likely to be accomplished by steps such as those recommended in the Report before us.

Mr. LONGFORD, it will be observed, does not attach much importance to the direct results of official interference on behalf of the commercial interests of particular nationals. We shall not pause to consider whether or not he unduly minimizes this part of his subject, since we entirely agree with his general forecast. In the case of a high-spirited, independent people like the Japanese, every advantage taken of their present hard position to exercise illegitimate pressure for selfish purposes, will be bitterly remembered and ultimately resented. Those who teach Japan that she must purchase what the most insignificant of them claims for himself gratis, will not be permanent gainers by their extortion. These things may be confidently left to adjust themselves. Much more important is the question forcibly discussed by Mr. LONGFORD; namely, the state of the relations between foreign and Japanese merchants. We have written upon this subject till we are weary, not because we pretend to preach to people who may be supposed to know their own business thoroughly, but simply because we have enjoyed exceptional opportunities of learning the sentiments of the Japanese themselves. Granting everything that can be urged with regard to the social status of the majority of the Japanese tradesmen who have hitherto frequented the open ports, and admitting fully the difficulties that lie in the way of equal association with them, the fact remains that British merchants have established an exceptional reputation for conservatism and insuavity. The effects of this may not be immediately traceable, and would never, perhaps, be serious were not the Japanese rapidly developing aspirations which are not the less powerful because they are in some degree sentimental. When trade is liberated from the antiquated restrictions which at present surround it, the persons most likely to profit by the change will naturally be those whose relations with the people of the country are closest. It is difficult to discuss the subject in terms which shall neither be too general to merit attention nor too particular to avoid offence. We are persuaded, however, that shrewd men of business, whose eyes are open to what is going on around them, will sooner or later appreciate the force of Mr. LONGFORD'S remarks.

## CURIOUS CRITICISM.

THE *Japan Gazette*, in its issue of last Saturday, contains an article which, though evidently intended to seem impartial, is quite remarkable for one-sidedness and superficiality. The writer's theme is the *Normanton* affair, and his

purpose is to show that the master of the ill-fated vessel could not hope for justice were he amenable to Japanese jurisdiction, inasmuch as public opinion has prematurely pronounced a verdict from which no judge could venture to differ. This means, in so many words, that Japan is not yet fit to exercise jurisdiction over foreigners residing within her territories. The charge is important, and the method of supporting it curious. What happened was this, in the words of the *Japan Gazette* itself:—"A British vessel sailed hence for Kobe with a score or more Japanese passengers; the vessel struck on a rock and subsequently foundered in deep water; her crew were saved under conditions open to the construction that all on board could have been similarly treated, but her helpless passengers were all lost—not one boy or woman, either of whom an ordinary man could, so far as common knowledge goes, have carried to a boat, being saved from a fate so cruel." Our contemporary does not pretend for a moment that these circumstances were insufficient to create general excitement. On the contrary, he declares that "no Japanese, whatever his experience of the world's ways or his love of courage, can have felt more deeply than Englishmen the stigma which seemed to attach to the name of British seamen" from the time the event was known. He even goes on to explain what course the press might properly have pursued under the circumstances. "The reports received here," he says, "were amply sufficient to warrant a demand for a full inquiry into the causes of the deplorable loss of life that ensued;" and he adds that, "in support of this demand it would have been fair enough to dwell upon the gravest aspect of the case; to lay stress upon this or that assertion, and to draw inferences unfavourable to the persons whose conduct was impugned." This is a broad programme. Without going farther we may ask at once: did the Japanese press travel beyond these limits? Could it indeed, have travelled beyond them? Could it have done more than "dwell upon the gravest aspect of the case, lay stress upon this or that assertion, and draw inferences unfavourable to the persons whose conduct was impugned?" The English language has no degree of comparison higher than the superlative. If the vernacular newspapers had the right to support their demand for a judicial enquiry by "dwelling on the gravest aspect of the case," it is plain that they had the right to set forth what they themselves deemed the gravest aspect of the case, and more than this they could not possibly do. Yet their solemnly silly critic in the *Japan Gazette* accuses them of "mad and indefensible violence." Nor does his partiality stop here. He actually ventures to describe how the English nation behaves when "an event occurs creating an outburst of popular feeling," and his description considerably exceeds

the reality which we have just witnessed in Japan. "Indignation," he says, "and the cry for vengeance gather as they roll," and "the walls of Parliament resound with burning questions re-echoed by the press." What a hubbub is here pictured! The "rolling," the "resonance" and the "re-echoing," almost recall VIRGIL'S ringing verse; "*exequitur stridorque virum clangorque tubarum.*" Did we have rolling, resonance, re-echoing and crying for vengeance in Japan? If so, we had nothing more than we should have had in England. Did the press call for justice and "support its demand by dwelling upon the gravest aspect of the case?" If so the press behaved "fairly enough," and just as the English press would have behaved under similar circumstances. What is the matter then? Where does the difference come in? How have the Japanese "inflicted an injury upon their national aspirations?" We obtain the answer to these questions by pursuing the contrast. In England, we are told, in the midst of all this rolling, resonance, re-echoing, and clamour, if "a simple announcement is made that a commission of enquiry has been appointed, suddenly, yet naturally and gently, the wild cries of wrath are hushed; the press entirely suspends its comments; Parliament is still." Here, then, we have the point of the accusation. Up to the moment when the master of the *Normanton* was committed for trial, the people of Japan would only have been following the example of the people of England had their "cries for vengeance gathered as they rolled;" had the newspapers "dwelt upon the gravest aspect of the case; laid stress upon this or that assertion; and drawn inferences unfavourable to the persons whose conduct was impugned." But so soon as the master of the *Normanton* was committed, there should have been "a sudden, yet natural and gentle"—our readers must exercise their own imaginations over this collection of adjectives—"a sudden, yet natural and gentle, hushing of the wild cries of wrath." Up to that moment there might have been cries of wrath; they might have been rolling cries; resounding cries; re-echoing cries; and even wild cries. Still, no one could have censured them if only they had consented to be "suddenly and gently hushed" at the proper juncture. Well, but the quaint part of the matter is that they were hushed precisely at the proper juncture. The hearing of evidence in support of the charge preferred against Captain DRAKE was commenced in the Kobe Consular Court on the 16th instant. The fact was announced telegraphically in Tōkyō the following morning, and *simultaneously* with its announcement the *Fiji Shimpō* published an article counselling the public to be calm, and reminding them that in the record of their relations with Great Britain a solitary incident like the *Normanton* catastrophe ought to be com-

pletely dwarfed by its fair context. Thenceforth, the tone of the whole vernacular press has been consistently quiet and kindly, and now, many days before the date fixed for the trial, we have the Japanese public subscribing to a fund for the relief of the families of the Lascars lost in the *Normanton* and for the defence of Captain DRAKE, and the Japanese Bar offering its services gratis to conduct his case. Under these circumstances, what in the name of all that is reasonable does the *Japan Gazette* mean by an article, published on the 27th instant, telling the Japanese "press and public" that they "should now for very shame, be silent?" We are aware that the paucity of our contemporary's literary resources precludes the publication of more than one leading article per week, and that, consequently, the article in question may have been written as long ago as the 20th instant. That may explain, but it certainly does not extenuate, such misleading utterances. For truly it is too grotesque to contrast this writer's utter contempt for fairness with his trumpet-like proclamations of English justice. "Englishmen are so constituted," he cries, "that a love of justice is inherent." Aye in truth, and like the lecturer on temperance who presented himself before his audience in a state of helpless inebriation in order to exhibit practically the awful effects of drunkenness, this full-mouthed herald of Englishmen's "inherent love of justice" offers, for Japanese inspection, a flagrant example of the very opposite quality. We could pardon the partiality of a man whose field of vision is entirely occupied by the ineffable excellence of his own nationals, but how are we to regard his direct perversions of the truth? "The *Normanton* case," he writes, "has been prejudged in this country by public opinion; and without hearing a word on the other side the verdict has been rendered." What, then, of the Naval Court of Inquiry at Kobe before which the master and officers of the *Normanton* told their own story, and by which, on the strength of palpably inadequate evidence, they were declared blameless? The writer in the *Japan Gazette* carefully ignores this, the most important feature of the affair. He carefully ignores the vital fact that what roused the indignation of the Japanese nation was the obvious partiality of that finding and that, so far from "prejudging the case without hearing a word of evidence on the other side," what the public really did was to cry out against a verdict flagrantly inconsistent with the evidence which the other side offered. It would be impossible to pervert the truth more thoroughly than the writer in the *Japan Gazette* has done. When he says that Englishmen's implicit confidence in their judiciary suffices to quiet all clamour so soon as judicial interference is assured, and when he reproaches the Japanese for

Original from

not exhibiting similar confidence, he forgets, or designedly ignores, not only that it is a foreign tribunal in which the Japanese are expected to trust, but also that this faith is required of them in the face of a manifest miscarriage of justice on the part of such a tribunal in the very case under consideration. Suppose that English passengers in a Japanese steamer had been lost under similar circumstances, and that a Japanese Naval Court of Inquiry had delivered a corresponding verdict. Suppose, further, that the "wild cries of wrath" which would be immediately raised by the foreign community, were sternly censured by a Japanese newspaper, and that Englishmen, protesting against the unjustifiable judgment, were charged with "rendering a verdict without hearing a word on the other side." But the trouble is that persons like the writer in the *Japan Gazette* are incapable of supposing such things. They can see only through the spectacles of their national prejudices. They decline flatly to trust any tribunals except those of their own country. Above all, they will not trust Japanese tribunals. Yet if a Japanese fails to exhibit the same serene confidence as an Englishman in British tribunals, even with the self-stultification of a British Naval Court staring him in the face, he is pronounced unfit to exercise the rights of a civilized being. When shall we have done with these humiliating displays of self-conceit and blind partiality?

#### DOMESTIC ECONOMY FOR JAPANESE LADIES.

IN a recent article, with reference to Japanese social problems, we dwelt upon a difficulty which opposes the introduction of foreign customs into the households of this nation; namely, the fact that among the inmates of the house the ladies, upon whom naturally devolves the management of domestic affairs, are generally least familiar with the details of the régime which it is proposed to adopt. Their husbands and brothers, by travelling abroad, by frequenting foreign circles, and by their wider education, may have some knowledge of such matters. But to the ladies everything is strange, and the proposed reform consequently condemns them to stand aside, temporarily at all events, from a sphere which they have been accustomed to consider essentially their own. Since writing on this subject, we have had an opportunity of obtaining information with regard to the Ladies' College (Kôto Jogakko) in the Imperial University, and we find, with great satisfaction, that a scheme has been there evolved, and is now on the eve of practical inception, which will materially contribute to remove the difficulty in question. The Ladies' College is located in the buildings of the former Gymnastic Institute, outside Hitotsubashi. Originally a branch of the Female Normal School, it was erected this year into an independent

college, and placed under the charge of Mr. K. MITSUKURI, one of the most distinguished Professors of the University. Although it has only been a few months in existence, the college is already attended by about 130 pupils, drawn almost entirely from the upper middle classes. We shall not dwell upon the curriculum further than to say that English is made one of the principal studies, and that instruction is given in Japanese, elementary mathematics, physiology and hygiene, chemistry, physics, botany, music, and drawing. The feature which interests specially is an arrangement, suggested by Mr. MITSUKURI, and approved by the Education Department, for imparting instruction in household economy. The pupils being all ladies of good family, it is taken for granted that they can learn at their own homes all that they require to know of housekeeping in Japanese style. Attention is therefore to be chiefly directed to teaching housekeeping in foreign style. In pursuance of this object, it is proposed to erect within the college grounds a house constructed after the model of an English or American middle-class family residence. In this dwelling some foreign ladies are to be invited to live and to keep house as nearly as possible after the methods they would pursue in their own country. There will thus be established an institution bearing the closest attainable resemblance to an English or American home. The pupils of the college will have an opportunity not only of learning cooking, sewing, and housekeeping in the most practical manner, but also of observing exactly how such a home is ordered, and even of acquiring some insight into the family life of people in the West. A few pupils will probably be admitted as boarders, but their number is not on any account to be so large as to disturb the family character of the institution. When they are sufficiently advanced, the idea is that they should give entertainments—all the details of which would be superintended by themselves,—to foreign and Japanese ladies and gentlemen. By these means the usages of society will become familiar. We learn that an appropriation has already been made by the Educational Department for the building, and that the plans are now in process of preparation. The selection of foreign ladies to preside over the "home" has, of course, been a task of some difficulty. His Excellency the Minister of State for Education is understood to have interested himself personally in this part of the scheme, and after much deliberation and many enquiries, the post has been offered to, and accepted by, the Misses PRINCE, of Maine, who are said to have had much experience in teaching domestic economy. The experiment is therefore in a fair way to be tried, and that it will be attended by successful results we entertain no manner of doubt. Our readers will perceive that the pro-

gramme of the "home" is practically that of the Ladies' Institute, which was described recently in these columns. Probably the two schemes had their origin in the same source, for we observe that Professor TOYAMA'S name is associated with the Ladies' Institute, and that gentleman, with his colleagues, Professors MITSUKURI, KIKUCHI, YATABE, and KANDA, represent one of the most active and highly gifted bands of reformers in Japan. When the Ladies' Institute and the "home" projected by Professor MITSUKURI are in working order, a want will be supplied which at present is greatly felt by the ladies of Japan.

#### KARUIZAWA AND ITS NEIGHBOURHOOD.

I.

THE district of country lying to the west of Takasaki and partially opened up by the branch railway having its terminus at the foot of the Usui Pass, is marked by a distinct individuality. The railway after leaving Takasaki runs 18 miles up a valley which is shut in on the right by the strangely fantastic Miogi range of mountains. These mountains are really unique in their formation. The visitor, after a day among their eccentricities, returns to his most incredible *kakemono* scenes with a comforted heart. Even the oldest hands at travelling and the most supercilious, find there a sight that they confess to be unrivalled. Towering precipices, deep gullies, jagged sierras, stone pinnacles as thickly scattered as pine trees, holes that seem to have been driven by supernatural cannon-balls through walls of rock; such are the beauties of Miogi-san. The Japanese of the neighbourhood are expert climbers, and have scaled the most precipitous of the cliffs. Years ago a foreigner residing in the neighbourhood, a well-known engineer, ventured upon these dizzy heights. Reaching in safety the top of the highest ridge, he sat in triumph astride of its knife-like edge, but the feat came near costing him his life. So perilous was the descent that his nerves received a lasting shock. He vowed he would never try a similar piece of dare-devilry again.

The village and temple of Miogi-san, formerly the residence of a lord abbot, are easily reached in an hour from Matsuida, the last station but one on the route. Annaka, a few miles further down the valley, is one of the richest silk centres in the Empire. Between Annaka and Matsuida, on the right bank of the river, is Isobe, now a flourishing watering place, patronized by some of the leading statesmen of the capital. Pretty two-storey villas in native style are springing up all around the private residences of these visitors. Too much enclosed to be cool or bracing in summer, Isobe possesses all the attractions necessary to make it a desirable haunt

in the late spring or early autumn. It stands well above the river, which, making a curve here, flows on its way under precipitous banks.

The line of railway, instead of going on to Sakamoto, a place of some importance, stops short at the small hamlet of Yokogawa, where have clustered the usual new restaurants and hotels which mark a railway terminus. The Nakasendo line as projected was to follow a route considerably to the south of the present highway. No less than four passes lead up to the high table-land of Shinshiu. To the right we have the old road of the Nakasendo, which leads by the *bunya*-haunted hamlet of Kuri-ga-hara up to the lofty shrine of Gongen-sama, more than 4,000 feet above sea-level. *Kago* can still be got for this route, and will be chosen by delicate ladies and invalids, who would find the long *Shindo* route in *basha* or *jirikisha* too tedious and hard. But travellers should not attempt it after dark. Though formerly it was kept in good repair, yet now, since the diversion of the traffic to the *Shindo* or new road, small landslips have made frequent encroachments, the rain has worn many deep channels in the surface of the road, and most of the bridges are crazy. The soil, a volcanic gravel, packs well and firmly and forms a good hard pathway, but yields too easily to the action of water.

The maples that cover the hillsides of the pass are noted for the splendour of their autumn colouring. About the end of October they are usually at their best. At the head of the pass, round Gongen-sama, a village nestles, half of which belongs to Gumma-ken and half to Nagano-ken. The inhabitants of the former half receive Tōkyō letters nearly a full day before their less fortunate neighbours are served. Close to the village is a well of the purest water, yielding many gallons per minute, certainly enough to supply with drinking water a good-sized town. Foreigners who have established themselves in the Toge-machi for the summer months speak well of it; the views of the plain and Miogi-san are superb. Perhaps, however, there is a little too much of mist for ordinary people. After leaving the village the road, now in a very broken state, descends 700 feet on Karuizawa, and joins the main highway about a mile further on at the hamlet of Nagakura. The distance from Sakamoto to Nagakura is about 9 miles by this route and 12 by the longer *Shindo*.

The *Shindo* leaves the old Nakasendo a short way out of Sakamoto, and follows a sinuous track up the left of the pass, winding in and out of innumerable gorges, whose rivulets feed the stream far below. So sinuous is the path, everything being sacrificed to an easy gradient, that sometimes pedestrians by taking a short cut will gain an advantage of eight to one. The road debouches immediately on the plain at the scattered hamlet of Shin-

Karuizawa. It is the great artery for the conveyance of the silks of Shinshiu to the *Joshiu* markets. The best silks in the empire, those from the Matsushiro district, 50 miles to the north, are conveyed in carts down this pass.

The most picturesque of the four routes is that of Iri-yama, which enters a valley to the south of the *Shindo*, and after traversing a mountain gorge climbs to a col forming the head of a small valley leading off the Shinshiu plain. Towards the end of July the precipitous sides of the gorge are redolent with the sweet odour of a large white lily (*Lilium auratum*, Lindley) the most splendid of the many wild flowers with which the neighbourhood abounds. The villagers in the neighbourhood cultivate it in their gardens. This plant is brought to great perfection in English gardens. By a recent mail we heard of one specimen, in the gardens of Pitlour, Fife, having forty-seven flowers growing from one root, thirty-five of which were on one stalk.

Few views even in this beautiful land, are finer than that from the top of the Iri-yama Pass. Looking westwards across the grassy plain, the traveller sees in the distance the snow-veined Hida mountains, the Alps of Japan; close at hand the great cone of Asama sends forth its gentle cloud of steam; and in the rear, with the quaint ridges of Miogi-san as a background, rises a huge rock in the form of a cathedral, with towers, nave, and apse complete. Seen in the lurid light of a thunderstorm, this view to the east cannot fail to make a lasting impression on the imagination; it is a real presentation of such a terrific scene as Mrs. RADCLIFFE fascinates the reader with in her romances.

The most southerly of the routes is that of the Wami Pass, chosen for the Nakasendo railway. This route enters the plain immediately from a narrow gorge about a mile to the north of Iri-yama. The engineer to whom the construction of the line would have been entrusted, had to face the very serious problem of a rise of over 3000 feet in 18 miles. In the circumstances, it is not surprising that the undertaking has for the present been abandoned.

## II.

THE village of Karuizawa is situated in the north-eastern corner of the plain which is reached by the four routes previously described. A by-path from the *Shindo* at Shin-Karuizawa, practicable for *jirikisha*, leads into the village, distant a little over a mile. The ancient glories of Karuizawa are departed. Formerly as the first halting-place for travellers arriving from *Joshiu*, it was busy with arrivals and departures, and its hotels welcomed a constant succession of guests. But now its long street is gloomy with the tattered paper of deserted houses. The swallows still flit unceasingly in and out of the caves, but the human population is steadily diminish-

ing. About 450 inhabitants remain, of whom a large proportion bear the name of SATO. The result is that this name is rarely used, being replaced by the personal name. Two mountain streams, flowing at the back of the houses on either side of the long street, supply the village with the purest of water.

In the days of the ASHIKAGA the place seems to have been of some military importance. The hill upon which the fort stood dominates the villages on the east. The lines of the fort, since the underwood was cleared off last summer, can be distinctly traced, as well as the moat, which was supplied by the more southerly of the streams. The TOKUGAWA Shoguns seem to have dismantled the fort, and it is certain that they took the village under their immediate government. Like all historical places, Karuizawa retains a certain charm. Its ancient groves are the favourite haunt in summer of the nightingale (*uguisu*). Its note, sounding like *hé-rokujū*, makes the woods vocal until the middle of August, when the bird flies to other haunts.

The neighbourhood abounds with deer, quail, snipe, pheasant, and hare, and there are one or two good trout-streams. We have already spoken of the luxuriance of the wild flowers. In the end of July the sweet-scented pink (*Dianthus superbus*) is found everywhere, and, most beautiful but most deadly, the pink-coral berries of the *coriaria japonica* attract the eye. This plant abounds in the valleys to the north of Karuizawa, and is called in Japanese *do-ku-utsugi*, i.e. poisonous shrub. Every year, over Japan, children fall victims to an incautious swallowing of its poisonous clusters. The poison, known as coriamyrtin, can even be communicated by snails who feed on the plant. Varieties of this plant are said to furnish the famous toot poison of the New Zealanders. A very small dose, acting either internally or hypodermatically, is fatal to human life. Somewhat later in the season the yellow lily (*Lilium Hemerocallis fulva*) decks the plain, and gives its petals thereafter to be dried and eaten by the villagers. Bluebells, and the Japanese scabiosa (*Scabiosa japonica*) called by the natives *matsu-mushiso* or cricket-flower, with here and there a bold tiger lily, add other bright colours to the earth's green covering.

On the *Shindo*, less than a mile from Shin-Karuizawa, the prefecture has established a farm, which supplies the neighbourhood with milk. Probably from the coarseness of the grass on which the cows, which look like good Ayrshires, are fed, their milk is of inferior quality. The establishment also boasts a well-trained veterinary surgeon and a shoeing-forge.

The hill of Hanari-yami, which rises abruptly from the plain where the new and old roads meet, is worthy of a visit on account of its cave, situated near the top of the precipitous southern slope. In all

of warfare as a point of vantage. Now it is the abode of innumerable bats. The ascent of the hill from the east is difficult and fatiguing, but an easy path leads up to the summit from the south-west. Just at the point where this pathway leaves the main road, a small dendrological bureau has been established by private enterprise. The projector intends to use a tract of land he has bought for purposes of afforestation, and has already planted part of the plain with the species of fir called *karamatsu* or *fujimatsu* by the Japanese (*Pen-dolaria Kaempferi*, Lindley.)

To the north and west of Karuisawa the well-wooded valleys are accessible by cart-roads, down which timber is brought from the hill sides. Various hot-springs are to be found in their recesses. About a mile from the village we have the hot-sulphur spring of Yunosawa,\* which registers a temperature of 90° F. when the air temperature stands at 68° F. Three miles further on, a bath-house has been erected at the hot spring of Kose, whose temperature is 91° F. when the air temperature stands at 72° F. The inhabitants of Kutsukakke frequent this bath, which discharges its surplus water into a stream that flows through the prettiest of scenery into the plain, at the east end of the village. The water of this spring contains a large quantity of hydrogen-sulphide and sodium-chloride, a very little potassium-chloride, much sodium-carbonate and calcium acid carbonate, a little magnesium acid carbonate and calcium sulphate, and traces of alumina and ferrous acid carbonate.

The road to Kusatsu, famous for its sulphur baths, is joined by the Kose path about a mile out of Kutsukakke. By taking this road the easiest ascent of Asama-yama is made. If we leave Karuisawa on horseback about three in the afternoon, keeping to the high-road until we find the Kusatsu path to the right about half-way up the village, a pleasant hour-and-half will bring us to the foot of Ko-Asama, the little cone at the eastern base of the great volcano. It is unnecessary to proceed as far as the Wakasare tea-house lying in a hollow, twenty minutes ahead, as a path leads on this side of Ko-Asama right up the ridge, and is joined two-thirds of the way up by the Wakasare path. We advise intending climbers to try an ascent by moonlight. The *Kago* men to be hired at Karuisawa are crafty and lazy, and will deposit their freight, unless a protest is made, at the side of the Kusatsu road, close to Ko-Asama. The proper halting place lies in the hollow between the lesser and the larger slope, at the foot of a steep gravel ascent. This gravel ascent is the most ticklish part of the climbing, and is worse still to descend. If the footing were lost, the climber would roll down to the bottom in no time.

About the middle of August the blackberry bushes a little higher up are covered with their sweet-tasting fruit. Shrubs and stunted trees have ceased before the post marking the junction of the two paths is reached. Thereafter a regular zig-zag path, presenting no sort of difficulty, leads up the shoulder of the mountain to the rim of an outer crater, whose sides still show some signs of activity. A slight descent, followed by the final pull, brings a good climber, in about two hours from the halting-place, to the great roaring mouth of Asama. Both the sight and the sound are more awful during the darkness of night. The sides of the crater are luminous on a clear night, and resemble on the west the interior of an amphitheatre, but to the east they are broken and shelving. Glowing masses of red-hot matter could be seen last August, under these circumstances, some hundreds of feet down. The distance across was actually measured two months ago by Professor MILNE, and is close on 350 yards. At the same time by means of a string stretched across, with another string and weight depending to it, the depth was approximately ascertained. The weight was burnt off at a depth of over 745 feet, allowance being made for the sagging of the upper string. Chemical tests proved the existence below of sulphuretted hydrogen, most unpleasant of the gases, but quite harmless so far down. The vapour, however, which steams off must be carefully avoided. In the summer this cloud blows off to the north, with rare exceptions. Only one fissure, which can be stepped over, breaks the circuit of the crater. Walls of lava rise on the south side above the descent on Oiwake.

The Oiwake path is wholly unsuited for ladies, and by no means agreeable for men. The loose broken gravel gives way, and as the slope is very steep, there is constant danger of tobogganing under most disagreeable conditions; indeed very little of one's garments would be left to cover the backbone. A short cut to the main road, it has nothing else to recommend it. It enters temple grounds on the east side of the village. The village itself bears a bad reputation as a centre of vice. The coaches from the foot of the pass stop here, and make it a natural halting-place for the night, but foreigners are unanimous in reporting extortionate hotel-keepers and rude *jinrikisha* men.

It was from Oiwake that the cholera of last summer spread eastwards. A hospital for patients was erected in the neighbourhood, but the mortality was great among the sick. Not one in thirty who were attacked are reported as having recovered. One Saturday about the beginning of August smoke might have been seen rising from a nook in the hills at the top of the Shindo. No one was allowed by the police to approach the spot, and the words "burnt a dead-body" were given in explanation.

It was freely stated and as freely denied that this dead tramp who had been burnt where he had crouched to die, was a victim of cholera. At any rate he had come from Oiwake. Soon after the villagers of Nagakura, situated at the junction of the roads, began to die off in twos and threes, until eight were cremated on the lower slope of Hanari-yama. Then, though this little village was isolated and traffic through it suspended, the malady crept into Karuisawa, probably direct from Oiwake. Of fifteen who were attacked out of a population of 451, one only seems to have recovered. The others were turned into ashes quite close to the village, their corpses being carried right up the whole length of the village street—a proceeding which elicited a strong protest from the resident foreigners. The police recommended the villagers not to drink of the stream water, until any ashes that might fall into it should have been carried away! By the second week of September the malady was stamped out. The poorly-fed, smoke-bleared inhabitants of these mountain villages have little strength to resist a deadly epidemic.

This brings to a close our description of Karuisawa and its neighbourhood. Pleasant, cool, invigorating air, a dry gravelly soil, fine prospects of plain, river, and mountain, wild flowers and singing birds and the sweet breath of cows; these are its recommendations. On the other hand, black flies swarm; the ordinary houses are smoke-blackened and wretched, and the deadly cholera, which attained a footing among the inhabitants last summer, may return another year.

#### BRITISH IMPORT TRADE TO JAPAN.

Nikko, July 26th, 1886.

MY LORD,—I have the honour to enclose herewith a Memorandum, drawn up by Mr. Vice-Consul Longford, on the Import Trade from Great Britain to Japan, and the dangers which threaten it.

I would beg to call Your Honour's earnest attention to what Mr. Longford states as to the necessity of British merchants and manufacturers cultivating friendly and intimate relations with their Japanese customers. At present too many of them take little trouble to enquire what are the requirements of the local buyers, but methodically deal year after year, through the same channels, in almost the same articles.

Your Honour can understand how Foreigners who take pains to learn and meet the tastes of the native market are supplanting British Manufacturers even in textile fabrics which could no doubt be produced better and cheaper in England if attention were properly called to the matter. I cannot too strongly recommend an attentive perusal of Mr. Longford's paper to those who appreciate the importance of maintaining our commercial superiority in these countries.

The state of things which will, I trust, be inaugurated under the new scheme of Treaty Revision will open up facilities for Trade in Japan by which I hope our countrymen will greatly profit; but to do this they must awaken to the fact that Englishmen are not alone in the field, and that if they are not up and stirring, the new opportunities will be utilized by more

active competitors from the Continent or from America.

I have the honour to be,  
with the highest respect, My Lord,

Your Lordship's most obedient, humble Servant,  
(Signed) F. R. PLUNKETT.

The Earl of ROSEBURY,  
&c., &c., &c.

According to the Return published by the Bureau of Customs of the Foreign Trade of the Empire of Japan for the year 1885, the value of the Imports from Great Britain, during the year, was £2,554,250; of those from Australia £14,709; and of those from the East Indies and Siam (between which no distinction is drawn in the Customs Return) £697,315.

It has been usual hitherto in the Annual Reports on the Foreign Trade of Japan, compiled in Her Majesty's Legation to take the total of the above three amounts as representing the value of all imports into Japan, which, as coming either from England or one of her colonies, might be termed "British," but some modifications should now be made before an accurate estimate can be formed of the value of the British import trade to Japan.

Of the entire imports from the East Indies and Siam, that of Cotton Yarn represented a value of £470,317, the whole of which was imported from Bombay. This leaves a balance of £226,998, and a careful examination of the list of articles whose values combined to make this balance, leads to the inference that at the least favorable estimate one-fifth of them were originally produced either in India or the British Straits Settlements. British interest in the Import Trade from the East Indies and Siam may therefore be stated as:—

Value of Cotton Yarn imported from Bombay .....	£470,317
Miscellaneous Imports .....	£ 45,399
Total .....	£515,716

Adding this total to the values previously mentioned of the Imports from Great Britain and Australia will give £3,084,675 as the value of the whole British Import Trade of 1885.

An important addition has, however, now to be made to this total. No distinction is drawn in the Customs Return between Japanese trade with China (the Empire of) and Hongkong, and all carried on with that colony has heretofore been included in the Legation Summaries in that with China. Until a recent period this error has not been of much practical importance, the value of the general productions of Hongkong that are imported into Japan being of a very insignificant nature. But, during the last few years, a large sugar refining industry has been established there, and the import into Japan of Hongkong refined sugar has been gradually increasing until it has now assumed considerable and steadily growing dimensions.

The whole import of white sugar into Japan during the year 1885 was cwt. 492,345, valued in the Custom Returns at £512,817. Of the whole quantity, that of Hongkong refined sugar was, I have ascertained, cwt. 479,813, the average value of which was about £1 1s. per cwt. Taking this estimate, the value of the import of this staple from Hongkong was £503,804, and when this is added to the value of the Imports from Great Britain, the East Indies and Australia, it makes the value of the whole British import trade into Japan during 1885 amount to £3,588,479.

The principal articles of merchandise in which Great Britain was interested were Cotton Manufactures, Woollen and Mixed Cotton and Woollen Manufactures, Metals, Sugar, and a large number of other articles which are classed under the heading of Miscellaneous Imports.

**COTTON MANUFACTURES.**—The whole value of these imported into Japan in 1886 was £1,652,655. Small quantities of nearly all the staples included in the class came from France or Germany, but their value as compared with that of the whole import is so infinitesimal, that the trade may practically be called a

purely British one. The principal items composing it were:—

Cotton Yarn, from England .....	£ 593,226
do. from Bombay .....	470,317
Shirtings .....	299,986
Turkey Reds .....	86,389
Velvets .....	69,404
Miscellaneous .....	122,865

Total .....

These figures cannot be called satisfactory. They show an increase over those of the year 1884, but fall below those of any preceding year since 1871, and below the average value of the import during the five years 1880-1884, by over half a million sterling; and they represent but a very small portion of the trade which might readily be accomplished by British manufacturers with a country containing thirty-six millions of inhabitants, among whom the custom of dressing in cotton is almost universal.

**WOOLLEN AND MIXED COTTON AND WOOLLEN MANUFACTURES.**—Great Britain's share in this trade amounted to £321,092; made up by

Blankets valued at .....	£ 41,320
Italian cloths .....	164,287
Woollen cloths .....	64,246
Miscellaneous .....	51,239

Total .....

This sum represents over fifty-three per cent. of the whole import of these goods into Japan, and assuming, as may safely be done, that the percentage of Great Britain's share in this trade was equally large in previous years, it shows a decline not proportionately as large as that which has taken place in the import of British Cotton manufactures, but still very serious.

During the five years including and preceding 1884, the value of the Woollen manufactures imported into Japan amounted to £4,205,600, this being an average annual import of the value of £841,120. In 1872, the value was over one and a half millions sterling, and taking the basis of the percentage already given, Great Britain's share in the trade averaged nearly four hundred and fifty thousand pounds sterling during the five years 1880-84; it was nearly eight hundred thousand pounds sterling in 1872; and from these amounts it has declined to little over three hundred and twenty thousand pounds sterling in 1885.

The production of wool in Japan is almost nil; the import of it is very trifling, and though a few manufactories of woollen piece goods have been established in Tokio, their output must in consequence be very small. The decline in the import of woollen manufactures cannot therefore be ascribed to any extensive production of them in the country, but rather to the resumption of the habit of wearing in winter thickly padded cotton garments instead of the more comfortable and healthy woollen ones, by such of the people as were able to afford indulging in the latter. The reasons which have brought about this change are probably much the same as those which have produced the decline in the import of cotton manufactures, which will be referred to further on.

**METALS.**—Of the whole import of metals (including manufactures) the value of these of British production was £435,583, against £363,833 in 1883, and £348,573 in 1884. The trade thus shows a decided increase, and as there is a growing demand for iron for use in house and ship-building, and for rail and tramways, which cannot be met in the country, it may be hoped that this increase will be permanent. The articles imported from Great Britain during the year consisted of

Bar and Rod Iron to a value of .....	£ 54,274
Rail Iron .....	74,077
Plate and Sheet Iron .....	31,129
Iron Nails .....	34,352
Other Iron Manufactures .....	85,387
Steel .....	44,917
Miscellaneous .....	111,437

Total .....

**SUGAR.**—There are no means at my disposal

for ascertaining the share which Hongkong had in the import of this staple prior to the year 1885, but, as has already been remarked, the trade is one of very recent growth, and its present rapid advancement can be seen by a comparison of the figures for the first five months of the present and past years.

Between January and May, 1885, the total import into Japan of Hongkong refined sugar was cwt. 149,878. In the same period in the present year, the import was cwt. 180,987. The average value of Hongkong refined sugar imported during 1885 was as before stated about £1 1s. per cwt. In the present year prices have ranged somewhat higher, and the average value may be stated at £1 2s. per cwt. The value of the import during the first five months of 1885 was therefore £157,371 and during the same period in 1886, £199,085—an increase of £41,714. Supposing the same rate of increase to be maintained till the close of the year, the trade of 1886 will show an advance of over one hundred thousand pounds sterling over that of 1885, and bring its total value above six hundred thousand pounds sterling.

There can be little doubt that this progressive increase will be maintained, if the import is not burthened by the imposition of excessive duties, and even in the latter case, the taste for sugar of this class is growing among the Japanese to such a degree that its import might possibly struggle successfully against duties that, in the case of any other staple, would be practically prohibitive. It is largely used by the makers of the finer kinds of confectionery, and though this trade was, during the first half of the year 1885, exempt from any special taxation, while since the commencement of the second half of the year, all members of the trade, whether makers, wholesale or retail dealers, have been obliged to pay not only an *ad valorem* duty of five per cent. on all confectionery made or sold by them, but in addition heavy annual license fees for themselves and their employees, the import of sugar from July to December 1885 exceeded that from January to June in the same year by fully cwt. 120,000, and as has been shown already, the increase in the early part of the present year is equally marked.

The following figures of the value of the import of white sugar since 1880 will show the steady development of this trade:—

1880—Value of Import .....	£213,826
1881—Value of Import .....	£291,083
1882—Value of Import .....	£316,767
1883—Value of Import .....	£368,783
1884—Value of Import .....	£499,269
1885—Value of Import .....	£514,319
1886 Estimated Value of Import over .....	£600,000

In the year first mentioned, the whole import was of Cantonese white sugar, a very inferior quality to that turned out by the Hongkong refineries. In the year 1885 the value of the Cantonese white sugar that is included in the above total was little over ten thousand pounds sterling, and the entire balance was of Hongkong production. The British trade in this staple has therefore in the space of six years grown from nil to a value of over half a million sterling, a sum which represents one-twelfth of the whole foreign import trade of Japan, and one-seventh of the British portion of it.

**MISCELLANEOUS.**—The principal miscellaneous imports from Great Britain during the year 1885 were:—

Machinery to a value of .....	£ 63,872
Drugs .....	60,643
Clothing .....	59,943
Textile fabrics, other than cotton and woollen .....	48,300
Locomotive engines, railway carriages, and steam boilers .....	34,291
Dyes .....	33,293
Arms and ammunition .....	28,676
Books and Stationery .....	25,122
Beer, wine, and spirits .....	20,653
Scientific instruments .....	19,084
Provisions .....	11,781
Steam vessels .....	130,509

Several of these items show an increase in value on the import of 1884, but no large permanent increase can under present circumstances be expected.

Original from

The greater part of the machinery imported during the year was for use in the newly established woollen spinning factories. As far as I am aware, no machinery has as yet been imported for use in the preparation of tea for export, though machinery of this kind is very largely and profitably used in the Indian plantations, and some English firms have devoted their attention specially to its production. If proper steps were taken for its introduction into Japan, a fair sale might soon be found for it, and, in addition, the tea industry of the country greatly benefited.

The same remark might be made with regard to agricultural machinery which is made in such abundance in England. All agricultural implements used in Japan are still of the most primitive nature, and the application of machinery to farming is as yet entirely unknown to the Japanese farmer.

Scarcely a single mail arrives in Japan that does not bring me a catalogue, elaborately prepared at evidently great expense, from some English firm of iron-workers or machinists; and the catalogues are occasionally accompanied by letters of inquiry as to whether the class of goods produced by the individual firm would meet with a market in Japan. It is, however, utterly beyond my power to afford information which would be of any real value in the majority of these cases, nor do I believe there are ten foreigners in Japan possessed of the practical knowledge which would alone enable them to guide English manufacturers in this respect. What the latter should do, if they want to find a market for their goods in Japan, is to send out their own skilled employés to investigate on the spot the nature of machinery which would be most useful in the country, and then they might feel sure that the Japanese are sufficiently shrewd and progressive to quickly avail themselves of any, the profit and economy of which were clearly demonstrated to them.

Excluding the value of imports from India and the Colonies, the following are the values of the British import trade into Japan during the past five years:—

In 1881 .....	£ 3,353,430
In 1882 .....	£ 2,850,846
In 1883 .....	£ 2,611,609
In 1884 .....	£ 2,608,576
In 1885 .....	£ 2,554,250

In 1885, the value of the cotton manufactures that were imported from Great Britain was alone little under three millions sterling. The British import trade to Japan has therefore, in the space of five years, declined by nearly eight hundred thousand pounds sterling, and in the space of six years, the entire value of all the British imports has fallen considerably below that previously shown in the case of one staple alone.

Much discussion has recently taken place in England as to official interference with trade, and the injury done to British commerce, especially with China and Japan, by the active interference on behalf of merchants of their own nationalities of the Diplomatic and Consular agents of certain European Continental powers. A great part, however, of what has been said and written has been founded on a misconception of actual facts. That some efforts have been made by European officials to secure the granting of contracts of various kinds to their own countrymen and that in several instances they have been attended with success there can be no doubt, but, whatever may be the case with regard to China, in Japan I am convinced that these efforts will not have the smallest effect on the permanent development of the legitimate trade of those countries, and that they have hitherto had just as little effect in producing the decline which the above figures show has taken place in British trade.

Such efforts as European Continental officials have made have been exercised principally on behalf of particular firms rather than the general body of their countrymen, and the success they have met with have been limited to the supply of articles required either by the Central Government of Japan, by local municipal authorities, or by one or two large commercial associa-

tions. In the sales made in each of these cases, British importers and producers have had a fair share, and no official pressure has, as yet, succeeded in entirely preventing the Japanese from buying in England what they can there obtain better and cheaper than in any other market. Two large and powerful armed cruisers, built and equipped at Newcastle-on-Tyne have arrived in Japan within the last few days, and all the numerous additions made during the last two years to the large fleet of the principal Japanese mercantile steamship company have without exception been also built in England. The value of the whole import of arms and ammunition during the year 1885 was £72,306, considerably more than a third of which was from England. Of railway material, the whole value imported was £117,936, out of which the proportion of English production was of the value of £108,368. Of machinery in general,—including spinning, mining, and all others except railway—all evidently either for the Government or for large companies, the value of the English import was £63,872 out of a total of £109,325, while of the entire import of metals (including manufactures) those from England represented a value of £435,583 out of a total of £536,776. In the long list of miscellaneous imports that are contained in the Customs Return, those of English production generally show a large preponderance, in many cases an increase on the figures of previous years, and where they do not, as in the case of drugs for instance, the reason is that the Japanese requirements, where not met by articles manufactured in the country, can be supplied more adequately and cheaply by continental than by English productions.

The whole import trade of Japan has declined from £6,359,168 in 1881 to £5,918,179 in 1885. The English portion of it (exclusive of Indian and Colonial trade) has in the same period declined from £3,353,430 to £2,554,250, and the value of the leading English staple (cotton manufactures) from £2,203,598 to £1,171,870. While, therefore, the whole import trade of Japan has in five years declined in value by over four hundred thousand pounds sterling, the English portion of it has alone declined by little less than double that amount, and the import trade of other foreign countries or of the English colonies must have increased by an amount almost equal to that of the English decline. In the case of the latter again the decline in the value of one staple in which England has almost a monopoly has amounted to over one million sterling, and it has already been shown that there has also been a large decline in the import of English woollen manufactures. It follows, therefore, that there has been a considerable increase in the import of other articles in which England is interested, and that the decline in the British import trade is wholly in cotton and woollen manufactures.

The causes of this decline are no doubt ascribable in a considerable degree to the general trade depression of the last few years, and more recently to the distress caused among the Japanese farming classes—the principal consumers of cotton goods—by the lowerings of price consequent on currency contraction. They are, however, also ascribable to the little effort which has been made by English manufactures to consult Japanese tastes and requirements, and the mode of conducting business, which circumstances have hitherto imposed on the English importers in Japan, has not been without effect.

The Japanese are, as has already been stated, almost universally clothed in cotton, and when English piece-goods were supplied to them at a cost much below that for which they could obtain the produce of their own hand-loom, they were not slow to take advantage of them, and had they continued to get the full value of their money they would probably still have continued to use English goods as extensively as they did five or six years ago. But while fully appreciating cheapness, the Japanese are also keenly alive to the quality of durability, in which English cotton manufactures have of late years lamentably failed. The consequence has been that the Japanese have learnt that it is better to

pay at the moment a higher price for a garment made of material woven in the country by hand, which will last almost a life-time, than purchase one of imported material, cheaper than the native production but without one-tenth of its wearing power. Proof of this is found in the fact that while the import of English piece-goods has so steadily declined, that of raw cotton has trebled within a few years, and to show that a continuing demand for native woven goods is anticipated by the Japanese themselves, I may mention that in the year 1885, cotton seeds were imported (principally from China) to the extent of nearly seven million pounds weight, an article of the appearance of which in the Customs Import Returns, I can recall no previous instance.

That this cause of the declining import can be remedied only by English manufacturers themselves is evident, and for the uphill struggle which will have to be made before they can win back the good name formerly enjoyed by their productions, they have only themselves to blame. Not only in the sense already stated have their goods failed, but in other respects they have entirely neglected to take means which lay at their own command for possibly rendering their goods more popular.

British importers here no doubt carefully watch any changes in the local markets, and so far as lies in their power, keep producers in England well informed of such articles as are likely to meet with popular approval in Japan. But such information as can be given by persons who have no practical training in manufacturing must, it is evident, be very inferior to that which could be supplied by a qualified expert, a man who was thoroughly versed in the whole process of the making of Cotton Piece-Goods. If men of this class were sent out to Japan by any large English manufacturers, they could study on the spot the wants of the people, could ascertain the dimensions, quality, and patterns of the goods most in vogue among the Japanese, and the information which they could supply to their principals in England would certainly go a long way further in enabling the latter to judge of what would meet with a sale in Japan, than what is furnished by importers here, every one of whom deals not in Cotton Goods alone but in almost every single article which appears in the Import Trade Returns. I believe that not a single expert of this class, whether a practical manufacturer or a designer of patterns, has ever yet been sent out to Japan by any individual British manufacturer, or combination of them, though it seems that the expense of such a course would have been amply justified by the prospect of retaining or extending an annual trade of over two millions sterling. No effort ever seems to have been made to send out articles made up ready for immediate use by the ultimate consumers in the innumerable shapes in which cotton piece goods are used by the Japanese, and not the slightest attempt to meet their tastes for changing and fanciful patterns. Each year's production of cotton goods in Japan brings forth a host of new and artistic designs, whereas those imported from England maintain, almost year after year as unchanging a uniformity of pattern as a steadily increasing deterioration of quality. The combined influence of all H.M.'s Diplomatic and Consular agents in Japan would not, I feel assured, effect the sale to the wholesale distributors of one single additional bale of imported cotton goods beyond that which can be ultimately disposed of to the individual consumer, and no increase of purchases by the latter need be hoped for till more effort is made by producers to satisfy his peculiar wishes and requirements.

The conditions which have hitherto been incidental to foreign residence in Japan and the system of business which those conditions have entailed have also tended to obstruct the development of the British import trade.

Foreign merchants have been forced to reside and carry on all their business within the narrow limits of small settlements situated at the few open ports in the country, where it has been

quite impossible for them to cultivate direct friendly relations with the principal Japanese merchants or themselves to study or inquire into the wants and tastes of the Japanese people at large. They have been obliged to conduct all business transactions with a class of brokers, men of no social standing in their own country, on whom a monopoly of foreign business has been conferred. It is on these men that foreign importers have been forced to rely for information as to the class of goods which will find a market here, and it is to them alone that all sales have had in the first instance to be made. Every imported article passes therefore through their hands before it reaches the wholesale Japanese dealers in Tokyo or elsewhere, and the price at which it can then be sold is of course enhanced by the heavy commission levied by them.

That in the early days of our intercourse with Japan these conditions were necessary there can be no doubt, but there is just as little doubt that they are now no longer so, and that the time has come for the entire abrogation of all restrictions which have hitherto operated to prevent the fullest freedom of communication between the foreign importer and the Japanese wholesale dealer.

The first of these restrictions is that on foreign residence, and when that is removed and foreign merchants become free to go and live where they will and as they will, it may be expected that the power of the class of brokers just referred to will, if not entirely broken, be largely curtailed, and that a complete revolution will be effected in the present system of conducting foreign business in Japan. Such a revolution cannot but prove largely to the benefit of foreign trade with Japan in general.

Instead of having to trust entirely to second-hand information, foreign importers will be able to ascertain by direct inquiry what the requirements of the large Japanese dealers are and they must, for that purpose, either have their own places of business in the central business quarter of Tokyo or other large city, or at least be represented there by their own foreign agent or employé. When no longer separated from the Japanese dealers as at present by a not inconsiderable journey, or shut out from intercourse with them by vexatious regulations which equally prevent the Japanese from establishing himself in Yokohama and the foreigner in Tokyo, it may be hoped that a degree of friendly and social relationship hitherto unknown will soon be created between them, and what is one of the surest passports to business success with the Japanese brought about.

Nearly thirty years have now elapsed since foreign merchants first began to reside in Japan, and, absurd as the statement may seem to those who are not conversant with the conditions attached to their residence, I believe I am not incorrect in stating that, taking them as a whole, they are not now one single step farther towards a knowledge of the *bona fide* Japanese commercial classes than they were one year after the country was first opened to them. They have had little or no opportunity of meeting any but the brokers, and with them they have conducted their dealings either through Chinese or native employés of the same class in life as the brokers, or if in person by means not of the Japanese language but of a vulgar and degraded *patois* bearing as much resemblance to Japanese as the gibberish of a West Indian negro does to the English spoken by a highly educated London merchant.

British merchants resident in Japan will, however, have to recognize, if they mean not only to develop but even to maintain their present trade, and faithfully represent the interests of producers at home, that a new order of affairs is rapidly rising in Japan, and that once the large Japanese dealer is in a position to make his purchases direct from importers, he will go to those who are nearest at hand to him, with whom he is able to converse freely in his own tongue, and by whom he is received courteously and on equal terms. The acquisition of the Japanese spoken language with the aid of the numerous able grammars and dictionaries that

now exist is by no means a task of insuperable difficulty, but so little encouragement has the system of business hitherto followed given towards undertaking its study, that of all the British merchants or merchant clerks who have resided in Japan, I cannot, in an experience of over seventeen years, during which I have had a large acquaintance among them, recall a dozen instances of those who have seriously attempted it. Two instances are present to my mind of those who have, and who by the aid of their knowledge of the language broke through the cordon of middlemen that was around them, and they have long since left Japan after most successful careers. A few others still remain in Yokohama whose attainments in Japanese are of a high order. They have, however, not as yet been able to reap that advantage from them which it may be hoped a new order of affairs will soon give them, when on the whole country being thrown open to foreigners the business office of the importer will stand side by side in Tokyo with that of the Japanese wholesale dealer and both will be daily brought into direct and friendly contact. What the importer will then from time to time be able to learn of the requirements of the Japanese people combined with attention to his information on the part of the producer in England will soon tend towards obtaining for British staples a demand surpassing any that has hitherto existed. If, on the other hand, importers in Japan and producers in England remain content to continue under changed circumstances in their present lines, they must be equally content to see their trade in time either disappear or pass wholly, as it has already done in part, into the hands of foreigners of other nationalities.

JOSEPH H. LONGFORD,

H.M.'s Vice-Consul.

Tokyo, July 20th, 1886.

#### CORRESPONDENCE.

##### TREATY REVISION AND THE COAST TRADE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the negotiations now supposed to be proceeding for new treaties between Japan and foreign nations, I trust that the subject of the coasting trade of this Empire will not be overlooked, but will be thoroughly considered in a just and reasonable spirit.

It appears to me that, while the Government and people of Japan are endeavouring, under many difficulties, to develop this trade, and to employ steamers in it, it is entirely unfair that their efforts should be impeded by foreign interlopers.

If I am correctly informed, not one of the Powers now negotiating with Japan, excepting England, allows foreign vessels to participate in its coast trade. And England only opened her coasts in 1850, when she was quite sure that foreign ships could not possibly compete with her own. Her apparent liberality in this matter was therefore rather illusive, and it affords her no fair ground for claiming similar legislation from Japan, which is quite differently situated. The other Powers have still less reason to make or to support such a claim. They jealously guard their coasting trade from foreign competition; and the United States even forbid foreign vessels to take cargoes from their Atlantic to their Pacific ports, though the voyage is one of the longest known to mariners.

Under these circumstances, it is but reasonable that Japan should desire similarly to protect her coasting trade, and it is but right that the Treaty Powers should thoroughly respect that desire. England more than any other should be so inclined, since it is chiefly from her that the Japanese have bought their ships. It cannot but seem to every thinking Japanese very unjust that, after such liberal purchases of British-built ships, British-owned ships should come to contend in Japanese waters, and with several special advantages, over Japanese vessels, for the very trade that these Japanese steamers were bought to subserve.

The question may, for ought I know, be already settled, and settled in favour of Japan; in which case both parties are to be congratulated. But, as it may be still in debate, I take the liberty to suggest that the present time is an appropriate occasion for considerate and friendly action on the

part of foreigners in this matter. For, to all appearances, the efforts of the Japanese Government to build up a creditable mercantile marine have saddled it with rather onerous obligations. I refer, of course, to its liabilities in connection with the Nippon Yusen Kaisha, the history of which company is too recent to need recapitulation here. It is well known that this company originated from the anxiety of the Government to facilitate trade by reducing freights; to employ on the coast first class steamers; and to possess in case of need a serviceable fleet of transports and light cruisers. These national objects were almost incompatible with profits in the face of competition. They involved the maintenance of costly ships, high speed, and constant efficiency. They involved also limits on rates of freight, large reserve funds for repairs and replacements, and various other conditions, which in the beginning at least precluded ordinary gain. As a natural consequence of such conditions the operations of the Company during the first year have not been prosperous. I read that to provide for the reserves required by the Company's charter, and to pay the moderate dividend guaranteed to private shareholders, the Government has now to pay some two millions of yen in addition to the net earnings of the Company. This result, however unwelcome, will no doubt be honorably met.

But the sum required is a very considerable sum, and it is required at a moment when the resources of the Treasury are said to be hardly equal to the demands upon it. If, at such a moment, foreign nations, who would themselves be unwilling to admit Japanese competition on their own coasts (or only willing because perfectly secure against it), are found haggling for the paltry privilege of having their own ships admitted to compete with Japanese ships in the Japanese coasting trade, we surely shall have little reason to plume ourselves on our magnanimity, or even on our fairness. I should feel much relieved to learn that my apprehensions on this point are groundless; but, in the mystery which is maintained respecting treaty revision, one can be sure of nothing, and I think it a duty to raise the question, and to declare that if the selfish interests of a few foreign shipowners are allowed to outweigh Japanese rights in this matter it will disappoint all who care to see justice done in this country, or to have foreign relations with it placed on that equitable basis which alone can render those relations thoroughly advantageous to either side.

I am, Sir, your obedient Servant,

FAIRPLAY.

November 13th, 1886.

##### THE LATE CAVALIERE VITO POSITANO.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you kindly insert this letter in emulation of the notices of the funeral of the late Cavaliere Vito Positano which appeared in your journal on the 29th and 30th ultimo.

Chevalier Positano was, during his residence in Japan, an active member of the "Dai Nippon" Chapter of Rose Croix Freemasons, a body which is under the Southern Jurisdiction of the U.S.S. The obsequies were therefore conducted by the "Dai Nippon" Chapter, of which Bro. S. Eldridge is the present chairman, and the burial service was read by our esteemed Brother Oscar Keil, who is Head of the American Order in Japan. A cordial invitation to assist in paying respect to the memory of our Brother was extended to the Chrysanthemum Chapter, which, in common with other members, I gladly responded to.

Believe me, Sir, yours truly,

E. CHAMPNEYS IRWINE,

M.W.S. "Chrysanthemum" Chapter.

Yokohama, 1st December, 1886.

#### KOREAN AFFAIRS.

(Translated from *Fiji Shimpō* Correspondence.)

Sōul, November 10th, 1886.

The district beyond the Tōmankō, and contiguous to the Shōkaiō, in reference to the ownership of which differences of opinion had arisen between Korea and China during the past year, has now been definitely declared Chinese territory. It is stated that the Korean Government has applied to the ministry at Peking to sanction the return to their own country of the Korean farmers who had settled in the disputed tract. It is noticeable that in this matter the Korean Government stood out for its rights with a firmness which

contrasts most strongly with its usual timidity. Its efforts, however, were unavailing.

The officials of the Korean Government, are in a sorry plight at present. Their salaries, which are paid in the form of rice, have been withheld during the whole of this year on account of the scarcity of grain at the disposal of the Treasury. Although doubtless complaining bitterly of their lot in secret, they still attend office, though they must ere this time have been reduced well-nigh to the point of starvation.

Mr. Yuen Shikai's penchant for interfering in the administration of the Kingdom is already well known. He recently presented a memorial to the King in which he is said to have advised His Majesty to abandon new works that have been entered into, to dismiss all Japanese in the service of Korea, and to discontinue the publication of the *Official Gazette*.

Mr. Inouye, director of the *Gazette* Office, immediately called on Mr. Yuen and asked the Chinese representative whether he had recommended the abolition of the journal. Mr. Yuen denied that he had made any reference to the *Gazette* in his memorial, and eventually the interview took a very friendly turn. Mr. Yuen has since called several times on Mr. Inouye at the *Gazette* Office.

On the north-west Korea is bounded by China, and on the north-east she was formerly separated from Russia only by the Tömanko. Since the delimitation of frontier this year, however, by China and Russia, Korea has ceased to have any point of contact with Russian territory. This change is said to entail considerable hardship on those Koreans who reside in the Russian possessions. An application was made, the 20th of October to the Korean Foreign Office by the Russian Minister, Mr. Weber, for the opening of a special trading depot for Russian subjects on the coast of the Kankyōdō, in the same way that Kamhoku and Wido are specially set apart for Chinese trade. The applications of the Russian representative, however, are so unexpected that outsiders are at a loss to comprehend its meaning. He now proposes that the depot should, after a careful survey both by Korean and Russian officials, be situated on the coast of the Kankyōdō. Mr. Yuen, the Chinese Minister, has, however, taken a hand in the game, and Mr. Weber is at present pretty well occupied in watching and combating his opposition.

The profits realized by the Treasury from the export of hides, of which the Korean Government holds the monopoly, amount to a very considerable sum. But by far the greater portion of these profits goes into the pockets of the officials occupied in the trade, their monthly salaries averaging about yen 200. Hides of the second grade generally fetch about 13 sen per *kin* of 160 *moume*.

## LETTER FROM LONDON.

(FROM OUR SPECIAL CORRESPONDENT.)

London, October 12th.

The political world in England is very quiet at present. Wearied legislators are away for their holidays and will not be disturbed. But Lord Randolph Churchill is not of this kind. Last week he made a speech to the Conservatives of Kent at Dartford in which he sketched out the future programme of the Conservative party. He made up his mind apparently to remove the taunt of being opposed to progress,—of being the ill-conditioned donkey who stops the road on the way to the Derby from his party. At any rate his programme was as advanced as any Radical could desire. A large measure of local government, three acres and a cow, the sale of glebe lands, and several other parts of the Radical programme are promised by the Chancellor of the Exchequer. Some of the papers are talking of the eclipse of Lord Salisbury by his subordinate. The latter set all Europe talking and telegraphing about him, by leaving London for Berlin immediately after he had announced in his Dartford speech that Bulgaria was not to be delivered over hand and foot to Russia. The German papers said he was going on a pilgrimage to Varzin; whether he did so or not does not appear, but he is at the present moment in Vienna. Meanwhile, the Radical papers are busily engaged in setting off prior utterances of Lord Randolph against those of the Dartford speech, in order to show that he is very inconsistent. People do not seem to take this very much to heart, for Lord Randolph has never pretended, like Mr. Gladstone, to be absolutely and perfectly consistent in every part of his career. Except in one or two instances speeches are soon forgotten; the recollection of them in the public mind is "like the remembrance of a guest which tarryeth but for a day." A few, very few, years ago Lord Randolph was the mark for the finger of scorn of the Liberal

party, and was regarded askance by his own people. He was delivering speeches four years ago which the newspapers were reporting merely on account of their violence and unbridled abuse of men like Gladstone and Bright. Most of the papers, even the *Standard* and other Conservative organs, abused him as the Caliban of the Tory party. Now he is the observed of all political observers, the leader of the House of Commons, and has attained a position scarcely, if at all, inferior to that of the Prime Minister himself. His own party newspapers praise his statesmanlike speeches; the opposite journals eagerly quote the speeches of a few years ago which they despised then, and when he goes on a little trip to Berlin and Vienna, all Europe waits breathless for the news of his movements, and anticipates great things from his meeting with Prince Bismarck and Count Kalnoky. How funny and topsyturvy it all looks! It reminds one of Mr. Skewton's famous saying in "Dombey and Son." "My dearest Edith, there is such an obvious destiny in it, that really one might almost be induced to cross one's arms upon one's flock, and say, like those wicked Turks, there is no what's-his-name but Thingummy, and what-you-may-call-it is his prophet!" Still Lord Randolph has shown undoubted capacity as leader of the House of Commons. He has been very patient and conciliatory, appearing to catch the passing temper of the House as it by instinct. Now and again, he has turned on refractory members with effects which they are not likely to forget. Two or three times that arch-bore Mr. Labouchere has had his jacket neatly dusted by his "friend Churchill." On the whole, I think the country is pretty well satisfied with Lord Randolph's management of public business. Matters look a little better in Ireland. General Buller, whether by luck or good management, has succeeded in breaking up several gangs of Moonlighters in Kerry and Limerick, and the Belfast riots have ceased for the present.

The seriousness which the Government attach to the state of affairs in Mauritius is shown by the fact that Sir Hercules Robinson, Governor of the Cape and High Commissioner in South Africa, has been appointed Special Commissioner, "and will shortly," the official announcement says, "proceed to Mauritius to inquire into the unfortunate state of affairs prevailing in that island." A clerk from the Colonial Office will accompany him as secretary. The despatch of a special commission to enquire into the conduct of a Governor is so very unusual that there must be something more in the matter than has appeared. Mr. Clifford Lloyd has not gone to the Seychelles, to which he was appointed after the quarrel, but is now on his way back to London. It is stated that he will receive high promotion at an early date, and both Barbadoes and Hongkong are mentioned as likely to benefit by his services in the exalted capacity of Governor. He is a sterling, upright, fearless man, who cannot fail to be useful wherever he goes.

The *Times* has lately published a very interesting series of articles on certain records of the East India Company which were recently found hidden away in disorder amongst lumber at the India Office, and which have now been carefully arranged and examined. They are full of amusing and interesting details, but I shall only refer to one here, viz: the manner in which letters between England and India were despatched. About the middle of the last century a postal service was organised via Aleppo and Bussorah to Bombay or Surat. An agent was appointed to Aleppo whose principal duty it was to keep special Tartar runners ready to journey at once either to Constantinople or to Bussorah, according to whether the letter was from India. Frequently the messenger was stripped of all by predatory Arabs. The runner was given at first eleven, and afterwards ten, days to go between Aleppo and Constantinople, for which he was paid £30, with an addition for each day he saved, and £60 if he covered the distance in seven days. This feat was frequently accomplished during the French occupation of Egypt. The packet was then forwarded to Vienna by courier, whence it was despatched by an English banking house to London. Letters sent by this route were usually despatched in triplicate. Up to 1774 no letter from India ever reached England under six months, but by the commencement of this century this was reduced to three months. An agent at Bussorah saw to the despatch of the letters between India and the Euphrates. It was easy enough to get a native boat in the Persian Gulf to go to Bombay, but exceedingly difficult to get one in Bombay to sail for the gulf, and in one case the Company paid £2,000 for a vessel to carry a single letter this stage of the journey. During the crisis of the Mahatta war every express between India and London cost £40, one-half of which was spent between Bussorah

or Bagdad and Constantinople. The average annual outlay of the agent at Aleppo alone on these expresses was £12,000. Needless to say no private letters were sent by these expresses, and none except communications of great political importance.

In the new number of the *Asiatic Quarterly Review* (which is maintaining a very high standard, and is really a most interesting periodical) Mr. Demetrius Boulger writes a paper on "England's two allies in Asia"—said allies being Turkey and China. With regard to the latter, the writer says that the mode of procedure common to our dealings with all Asiatics will not do if we expect to establish amicable relations with the Chinese. Excessive yielding will be as bad as rigid and unbending refusal to look at matters as the Chinese do. But he thinks the recent convention with regard to Burmah should go far to place great Britain as an Asiatic power and China in line. As to the value of such an alliance, and the price to be paid for it, he says the Chinese will drive a hard bargain. But in Manchuria and Korea China is strong, and her power to harass Russia great, while in Kashgaria and Mongolia she is weak. On the Amour therefore, an Anglo-Chinese alliance would lead to the discomfiture of Russia—an object as devoutly desired by the Chinese as any other. In conclusion, he thinks that only a Russian attempt in Korea would drive China into an English alliance. I must confess that all these vast projects,—these attacks in the Caucasus, on the Amour and the like,—these great combinations, appear to me very shadowy and unreal. They take us up into an atmosphere where one's fancy can roam at will, and where there is little of practical application to present-day needs. It appears to me that if we cannot defend our own interests with our own hands, and if we must depend on Turkey here and China there, and another Power somewhere else, we had better give up. It is well to have allies at a pinch, but this constant crying out for friends, this proclaiming from the house-tops that without friends we are undone, that they must help us in this or that way, and we pay them in such and such a way, is ridiculous. It appears, however, to be the constant occupation of some men, and Mr. Boulger is one of the most loud-mouthed and persistent of them.

The usual evidences of senility are beginning to appear in Messrs. Gilbert and Sullivan's *Mikado*. At first it stood alone, the sole attraction of the theatre. Lately a short preliminary farce was introduced. This is invariably done by Mr. D'Oyley Carte when public interest begins to flag and wants a little filip. Then, although the theatre is still well-filled, the gallery and pit goers are not forced to stand outside the doors in long rows marshalled in double file by the police. No doubt we shall shortly have a new play from the two collaborators. Meanwhile the *Mikado* is being acted on the Continent and in the provinces with great success. Mr. David Fisher, who was acting Ko-ko, the Lord High Executioner, in Vienna, was reported to have gone mad, and to fancy himself Ko-ko really. It turned out that he was in a weak state of health, and persisted in acting against medical advice, with the result that he was down next day with a high fever, in which no doubt he fancied himself Ko-ko and a good many other personages. The report having first stated that he was driven mad by the long run, and his 500 repetitions, the *Pall Mall Gazette* characteristically seized the incident and wrote to all the leading actors to ask their opinions on the effect of long runs on the actor's nerves. A considerable number of letters was received from Irving, David James, Grossmith, and many others on the subject, the general opinion being that they have no such effect as that ascribed to them in Mr. Fisher's case. Mr. Grossmith said that in 499 nights out of 500 he felt no effect at all; he did feel a strong effect on his nerves one night, but that was the first. Incidentally the report has led to a discussion of the merits and demerits of long runs, as against the old practice of acting in a dozen different parts in the course of a month. In these days of elaborate scenery, and carefully studied details, runs are essential, and frequent change an impossibility. The peal of bells in the Cathedral at Nuremberg in *Faust* at the Lyceum cost Mr. Irving £600,—£600 for a single trifling detail. It would take the best part of a week to pay for this alone.

Professor Goldwin Smith, who has been on a visit to England for the past six months, and who has been combatting Mr. Gladstone's Home Rule scheme with untiring energy in the press and on the platform (he had almost as much as the Duke of Westminster to do with carrying Chester against Mr. and Mrs. Gladstone), has written a deeply interesting article in the October number of *Macmillan's Magazine*, on the changes which he perceives to be coming over English life. Our life, he says, is quite as restless as that of the United Original from

States; our fathers knew what repose was, but it is now a lost art. Yet "life seems to be growing softer in England, and more refined. There is an increased love of art, of flowers, and of music." The passion for excitement seems "to threaten the sobriety and steadiness of English character as much as its fortitude is threatened by luxury. It is having a sinister effect on politics." But "whatever weakness there may be in politics, in all the ordinary walks of life there must still be plenty of worth, integrity, conscientious performance of duty, and submission to rational discipline," otherwise vast public services like railways and the post and telegraph departments could not be carried on as they are. In religious matters, the churches are well filled, by men as well as by women, and money is never lacking for these purposes. Ritualism is rapidly going ahead, and gaining enormous influence in towns; evangelicism is nearly dead. Yet the progress of scepticism is manifestly rapid in literature, in the scientific world and in intellectual society. "Between the subversion of religious beliefs, the startling discoveries of science, and the general whirl of progress, English Conservatism seems to have given way at last, and to have been succeeded not only by an openness to innovation but by a sort of fatalism of change which hastens to assent to every new scheme as destiny." On the other hand, "it is impossible to doubt that since my youth there has been an immense growth of the sense of social duty and of kindly feeling on the part of the rich towards the poor. I see it every time I come here," the old saying, too, that the rich grow richer, the poor poorer, is not only untrue, the direct reverse is the truth. In one respect he finds no falling off. The ability and power of English journalism are steadily on the increase, and more and more it draws away the real debate from Parliament itself. This increase of force is especially remarkable in the great provincial journals. The sum of "what I have long been saying about English politics is this. The old Constitution, with the Crown as the executive and the Houses of Lords and Commons as co-equal branches of the Legislature, has ceased to exist, though the illusory forms of it remain. It has not been in any way replaced, while the franchise has been blindly extended; and England is now without a Constitution or a Government. She must provide herself with both or in the end confusion will come." Mr. Goldwin Smith as Cassandra is a familiar person in England; nevertheless his warnings appear to me justifiable.

### LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, November 9th.

The result of the elections last Tuesday might be deceptive to a superficial observer. The only changes of moment are a gain of congressmen by the Republicans in Ohio, Republican gains in North Carolina and Virginia, and a Republican majority of 40,000 wiped out in Minnesota. But the two former may be accounted for by the dissatisfaction among the working Democrats at the President's civil service notions, while the latter marks an era in the disintegration of the Republican party. Two years hence, the Democracy will have ceased to sulk in their tents over the retention of Republican office-holders; but the disaffection of Republicans will probably have spread, for it rests on causes which are in constant operation, and which become every day more obvious. Republican newspapers console their readers by assuring them that losses in the north-west will be offset by gains in the south. But this theory rests on a misconception of southern political sentiment. Southern men are Democrats, because all gentlemen belong to that party in that section. To be a Republican in the great southern cities is to ostracise oneself socially. In the south, Republicans are still "black Republicans," low fellows, carpet-baggers, the offspring of abolitionists. No party whose members rest under such a social ban can hope to carry southern states; whereas a northern man doesn't hurt himself by avowing himself a Democrat—as he might have done twenty-two or three years ago. In Massachusetts it is the fashionable thing to turn Democrat. Professor Eliot, of Harvard leads the way, and the old families of the Hub-fellow suit.

What the election does not throw light upon is the probable future strength of the two new parties—the labour party and the native American party. The former polled nearly one-third of the entire vote cast for Mayor in New York, and exhibited strength in odd spots in Illinois and Wisconsin. But it did not show up in Pennsylvania or in Ohio, or in Missouri, or in California, in all of which

states the labour organizations are powerful. In 1888, it will undoubtedly run a candidate for the Presidency, unless by that time its leaders have been bought up by one of the other parties. People are already discussing the merits of rival candidates. Henry George, who ran for Mayor of New York, is disqualified by his foreign birth. But Powderly, of Pennsylvania, is frequently named, and so are O'Neill of Missouri, and Foran of Ohio, members who devoted their energies to the cause of labour. If it should be decided that American labour need not absolutely choose the son of an Irishman to represent it, old Ben Butler of Massachusetts, who carried the standard in 1884, will not deny to the many-handed son of toil the precious boon of his leadership. Possibly, by that time, the labour party may have framed an intelligible platform which shall show what the labouring class really wants—a matter which is now enveloped in some obscurity.

The native American party ran a ticket in California, and nowhere else. Its vote was so small that its candidate will be apt to forget that he ran. He happened unfortunately to have been a Copperhead during the war, and this evidence of his want of brains was even more fatal to him than any suspicions of disloyalty which may cling to his skirts. But it would be a profound mistake to suppose that the ignominious defeat of Wigginton implies a prenatal demise of the American party. If the American ticket had been launched a month sooner, it would have polled quite a respectable vote; as it was, it was thrust under people's noses after they had made up their minds how they would vote, and when it was too late for them to change. All indications point to a powerful native party movement in 1888. People are tired of supporting one party against another, when both might stand on the same platform. They want something real in politics. The reality they find in a party which proposes to shake off the Irish yoke which has so long oppressed this country, and to restrict the political privileges of foreigners. They say that the Republican party is a memory, the Democratic party a tradition, but the native American party a fact. Into the arms of this latter the young all over the country show a tendency to drift, and the tendency is as noticeable in the south as in the north, among Democrats as among Republicans. It is hardly likely that a native American party, based on the proscription of men by reason of their birthplace, could retain control of the government of the United States for any great length of time. But there might be a couple of Presidents in it. If the Democratic leaders, finding it impossible to reduce the labour party, should conclude to be swallowed up by it, the Republicans would naturally merge their identity in the native American organization, as the Whigs were fast doing when the Know-nothings disappeared nearly half a century ago. Such a transmutation would relegate all present political chiefs to private life. Mr. Blaine would probably claim that in his heart of hearts he had always been a Know-nothing; but he would find it as difficult to explain his combination with Patrick Ford or the Mulligan letters.

New York has had a famous gala over the erection of the Bartholdi statue of Liberty. This work of art, which casts into the shade the famous Bary-ra—the nose of Liberty is four feet long, and her torch can be seen for many miles—will probably take rank in some new list of wonders of the world with the Colossus of Rhodes. A pensive philosopher argues that its moral effects will be grand. It seems eternal peace between France and the United States, for, says he, very justly, what American fleet loaded with death-dealing weapons could sail under the shadow of that statue to assail the nation which gave it to the New World? Practical politicians may think that our relations with our French friends would be more effectively improved by a reduction of the present duties on American bread-stuffs and a repeal of the prohibitive tax on American pork; but the statue will make us feel kindly all the same.

The President has given evidence of the sincerity of his civil service reform principles by removing two district attorneys, one Republican and one Democrat, for "offensive partisanship" as evinced by stump speeches during the campaign. Senator Vest, of Missouri, has taken the war-path in consequence, and insists on the removal of the Postmaster-General, who also made campaign speeches. The County Democracy of New York, which has always commanded a free flow of language, berates the President, whom it calls a "huddled theorist." Mr. Cleveland bears up very well under these tirades—as becomes a public servant who has at any rate tried to do his duty, and who, if his political family give him trouble, has now a domestic family which consoles him for the trials of public life. It is common talk at Washington that Mr. and Mrs. Cleveland are like two

young lovers, and that he reads her his forthcoming message before he lays it before the Cabinet.

A rather sensational murder took place in this city on Sunday. At a Japanese boarding-house in Clay-street, kept by a Mrs. Okita, was a female cook named Mrs. Yanigisawa, thirty-five years old, and a grass widow. Her husband left her some two years ago to work in the country, and as she has claims to beauty, she had many admirers. Among these was a servant named Hayashi, who who was employed in an American family. Another, also a Japanese, was named Gen, and it seems that Gen won favour in her eyes. At any rate Hayashi became insanely jealous. About 6.30 p.m. he presented himself at the door of the boarding house, more than half drunk, and demanded to see Mrs. Yanigisawa. At his request she accompanied him into the yard "to talk on particular business." A few minutes afterward a pistol shot was heard, the inmates of the house rushed to the spot, and found the unfortunate woman lying on her back on the ground, with the blood pouring from a hole in her head just above the ear. The murderer dashed past them, ran to the police station, and gave himself up, declaring that he had murdered a woman. He said he had tried to kill himself, but the pistol would not go off. Mrs. Yanigisawa never spoke after she was shot; she died before morning. The murderer is held for trial, and his conviction is assured. Under the circumstances, he may escape a verdict of murder in the first degree.

A nice question of etiquette has been recently raised by a proceeding of Mr. Phelps, U.S. Minister to England. Mr. Allen Thorndike Rice, of New York, proprietor of the *North American Review*, and a gentleman who moves in the best society, happening to be in London, applied to the Minister to present him at Court. It chanced that a late number of the *North American* contained a severe article on Secretary of State Bayard, assailing him not only for his official acts, but for his conduct in private life. Mr. Phelps took the ground that he could not have any relations with one who had maligned his official superior, and so informed Mr. Rice, declining to present him to the Queen. Mr. Rice returned home in high dudgeon, and poured his sorrows into the bosom of the opposition newspapers, which took pleasure in castigating both Phelps and Bayard. It is said that the case will be brought up in Congress. Public opinion rather sides with Mr. Phelps. An editor cannot always be held responsible personally for the statements of contributors to his periodical. But there is hardly any country in the world where a foreign Minister would be expected to go out of his way to render a social civility to one who had just turned his chief into ridicule.

Chicago is again in arms. Under orders from the Knights of Labour, some 25,000 men have struck once more for eight hours work and ten hours pay. The strikers are in the meat and pork packing houses. This time the packers were prepared for them. Simultaneously with the strike, the sheriff notified the Governor that he could not keep the peace without assistance: the Governor called out two regiments of militia; these, with a battalion of Pinkerton's men, occupied packing town; notifications were placarded that all who chose to work could get employment and protection; anything that looked like violence was sternly repressed, and to cap the climax, the packers issued the following ultimatum to the Knights of Labour and kindred organizations:—

Whereas, It is evident that many men are willing to work, but are prevented by the action of labour organizations; and whereas, the packers are brought face to face with the fact that their men are absolutely controlled by such organizations; therefore, be it Resolved, that we will not employ any man who is a member of such labour organizations. ### THE "PLAINMELLER" NAVAL COURT OF INQUIRY.

A Naval Court of Inquiry, ordered by Captain L. C. Keppel, of H.M.S. *Cleopatra*, was held on Tuesday to enquire into the missing of the steamship *Plainmeller*, of London, official number 76,999.

The Court consisted of Mr. J. C. Hall, H.B.M. Acting-Consul, President; Lieutenant F. W. Barrett, R.N., H.M.S. *Cleopatra*; Lieutenant R. P. Cockburn, H.M.S. *Cleopatra*; Mr. William G. Bayne, Yokohama; and Captain James Edwards, steamship *Euphrates*.

The Acting Consul said this Court had been held on the requisition and by order of Captain Keppel of Her Majesty's ship *Cleopatra*, to enquire into the circumstances attending the missing ship

Original from

**Plainmeller.** The first witness to be examined would be Mr. G. S. Thomson, as representing Messrs. Adamson, Bell and Company.

Mr. Thomson said Mr. E. Wex, from the same firm, had kindly offered to appear. Mr. Wex was entirely responsible, and had had to do with this particular charter.

The Acting Consul said if Mr. Wex would undertake to give evidence as fully and unreservedly as Mr. Thomson, who as a British subject would be bound to give him, he could appear.

Mr. Thomson said Mr. Wex was prepared to do so.

Mr. Wex, sworn, deposed—I represent the house of Adamson & Bell, who are agents of the *Plainmeller*. (Letter produced.)—I think she started from Otaru on the 9th instant at 6 a.m. The letter shown me bears my signature. (The letter addressed to the Consul advised that the *Plainmeller* was then three days overdue from Otaru to Yokohama, having left the former port at 6 p.m. on the 9th. The agents consequently feared for her safety and asked whether the Consul would consult Admiral Hamilton as to whether it would be advisable to send to her assistance, as she might have broken down.) She left on the 9th. She was chartered for coal from Otaru to Yokohama. (Charter read between Messrs. Walsh, Hall & Co. and Messrs. Adamson, Bell & Co. as agents for the *Plainmeller* for three voyages with the option of a fourth.) The *Plainmeller* made one of the three voyages provided for. At the end of that voyage she delivered 2,449 tons of coal. The dead weight carrying capacity was estimated. It is arrived at usually by multiplying the register tonnage by two. I made that estimate in the charter that she was 2,500 tons or thereabouts. I based it on the register tonnage.

Q.—Have you any knowledge as to what quantity she carried when she left Otaru on the 9th instant? A.—Walsh, Hall & Co. sent me a bill to say that she carried 2,450 tons. I have no direct information as to that. Captain Rowe had to remain here, and appointed the chief officer as master—Mr. Roberts. I think a pilot named Davison went as chief officer. In the ordinary course we should have expected her to arrive about the 12th or 13th. On the previous voyage she took 3 days and 10 hours. I have no direct information, but I saw from the papers that she was seen about 100 miles out.

To Lieut. Barrett—According to her loading certificate she had 2,378 tons when she left Otaru on her previous voyage.

To the Court—The actual quantity of coal delivered here was 2,449 tons. Besides the 2,449 tons of cargo she carried 93 tons of bunker coal. I do not know whether she had any left when she arrived here; she took it in at Otaru. I have no direct information as to what amount of bunker coal she carried on her last voyage. I am not acquainted with the build of the ship.

To Lieut. Barrett—She had no cargo other than the coal.

James Rowe, master mariner, deposed—My certificate is, I think, No. 16,435, London. I was lately in command of the *Plainmeller*. I have been in command of her 3 years and 8 months. She has been mostly in the American trade. She arrived in these waters in August twelve months, from Hongkong. She has been since engaged principally in the coal trade; she was well adapted for carrying coals. She was flush-decked, with bulwarks of about 3 feet 6 inches. We never give a correct estimate of dead weight in the charter party. We always give it below; I consider she was adapted to carry more than set down in the charter party. I cannot base that estimate on anything, only by what I have always carried. That was the carrying capacity given to me by the owners—2,600 tons or thereabouts. That is what they tell me generally to carry. When we left home she came out in cargo. I do not remember its weight. She was down to the loadline mark. I gave her a freeboard of 4 feet 10 inches from the centre of the disk to the top of the main deck. She had two decks. On the occasion of her first voyage from Otaru her draught was 21 feet 10 inches aft and 21 feet 5 or 6 inches forward. She was 21 feet  $3\frac{1}{2}$  inches when we arrived here; that is her mean draught. On the first voyage from Otaru she delivered 2,499 tons. I do not at all think that was a very heavy weight for her to carry. It was a perfectly safe weight. With perfect safety she would carry 2,600 tons of coal dead weight. That is my opinion.

Q.—Irrespective of weather? A.—In bad weather she ought to be perfectly safe with 2,600 tons of coal in her. She was well adapted to meet bad weather when carrying full cargo. She was on the three-decked principle—with beams for a third deck, on which, however, no deck was laid. I cannot tell why it was not laid. I do not think the non-laying of it affected her carrying capacity. The

hold was 24 feet in height, the height of the 'tween decks 7 feet. She had 5 watertight bulk heads. The capacity of the first compartment between the bows and the first (collision) bulkhead would be about 20 or 30 tons. There was no coal put in there. I cannot tell you anything from memory about the second compartment or the others. On the voyage during which I commanded her, from Otaru, we had fine weather. I have only been up there once. The *Plainmeller* was not a well-decked ship.

To Lieut. Barrett—Her draught when she left England, taken in fresh water, was 21 feet 10 inches mean. I was instructed to have a free board of 4 feet 10 inches.

To the Acting Consul—I consider her to have been a very strongly built ship. She behaved very well at sea. Her speed from Otaru would be about 9 knots. She had topsail, foresail, two try-sails, two stay-sails and jib. She had two masts. In the event of her engines breaking down she would not work under sail, but if they were to lighten her up she might go along a knot or two. If the ship broke down they would have sense enough to jettison some cargo and she might crawl along a few knots then. The danger if she broke down would be in the ship getting into the trough of the sea. She would lie beam on to the sea. Her hatches were well secured with 3 tarpaulins on each. There were 28 hands on board:—O. Roberts, master, W. S. Davison, chief officer, F. Duncan, second officer, M. Carr, chief engineer, W. Clementsen, second engineer, James Hobson, third engineer, E. Rosenthal, donkey-man, W. Nicol, steward; Stephen Ray, second steward; G. Malkos, cook; O. Johansen, carpenter; A. Wiedman, boatswain. These are all the names I know; there were 8 more Europeans, firemen and sailors, and 7 Chinamen and one Japanese. I shipped 17 of the Europeans in Antwerp, two in Shanghai, and one here. I shipped the Chinamen at Hongkong on September 8th last. I think two of them were firemen and the rest able seamen. I shipped the Japanese on board at Nagasaki in the end of September; he acted as cook to the Chinese, who brought him aboard. Indeed, he was practically a stowaway. I put him on the articles myself. I have done so before. When I am in port I ship men before the Consul. I did not think it necessary to have him entered before the Consul here. There were in all 28 hands. The vessel is now about 17 days overdue. Taking into account the state in which she was loaded, she ought in my opinion to have lived in the weather that prevailed for 3 or 4 days after she left. I have been with as heavy a cargo before.

To Lieut. Cochran—I lay to then, and ran also on different occasions.

To the Acting Consul—In the event of her meeting rough weather her chances of safety would have been greater if she had been lighter. But she ought to have been perfectly seaworthy with that cargo in my opinion. If not I should not have stayed in her so long. She had four boats. We never had any regular boat drill, but we used to overhaul the boats and put them over the side occasionally. All four were perfectly seaworthy.

To Lieut. Barrett—The hatches were secured by battens, fastened by wedges on the combings. I think she had sufficient steam to run ahead of the waves. She had 20 water ports; 12 aft and 8 forward. They would be about 3 feet each way. I think she would free herself from a sea. I never took note of the length of time it would take her to free herself. Loaded as she then was, I think she would have been able to clear herself. Unless the hatches were burst in or something else gave way she would never go down, even though her deck were full of water. I have seen her deck full of water. On the last trip she had 5 feet 1 inch freeboard not counting the height of the bulwark. I have no idea of what the freeboard should be; the free board given to me was 5 feet 10 inches. I do not know how it is calculated.

To the Acting Consul—I have seen her free herself frequently after shipping a heavy sea. I have had 2,600 tons to New York, and she shipped many a sea.

To Lieut. Barrett—There was no loose material about the deck. There were only two old hen coops below the bridge, and nothing else could get adrift.

To Lieut. Cochran—She was last in dock about the middle of September last, when new plates were put on the rudder. She had hand steering gear on the bridge and also aft. The wheel was not exposed; it was on the lower bridge. There have been no repairs of any consequence to the engines, but there have been small repairs in each port. No heavy job was done, or requiring to be done.

To the Acting Consul—Her boilers and engines were last overhauled at Shanghai in September

last year and were said to be good for another twelve months. Before starting on this voyage the engines and boilers were not overhauled except by the engineers, who do so in every port. She had a survey in Hongkong. I do not think it was my duty to have the engines surveyed here, seeing that they had been pronounced in Shanghai good for another year.

Q.—It they were pronounced good for another year from September last year was, it not your duty having regard to the safety of the crew the ship and yourself to have had them again surveyed? A.—No, Sir. We do not do those things ourselves. We have the orders from our superintending engineer. His name is Twentyman, and he is at Hongkong.

Q.—You think it was not omission of duty on your part not to have them surveyed? A.—No, I think not, unless I got instructions. In fact, however, I do not know how long she was certified for; it might be one or it might be two years. I never saw the certificate.

Q.—Surely it was your duty to know as master? A.—No. Our superintendents take it into their hands and say nothing to us about it.

Q.—How much dead weight of cargo would you consider overloading? A.—About 2,700 tons. I think then she would be quite far enough. I think nothing less than that would be overloading.

To Lieut. Barrett—She would use about 60 tons on the passage from Otaru to Yokohama. When I left Otaru I had altogether on board 155 tons in the bunkers; 60 or 62 tons were on board and I took in 93 tons there. That was in addition to the 2,449 tons delivered.

To Captain Edwards—I had a verbal report from my chief engineer before leaving as to the state of the boilers.

The Acting Consul—Can you give us any information as to the rule or principle on which a vessel's carrying capacity should be calculated? Does it bear any ratio to her register? A.—I believe it does; say about double. I have been in vessels where it was different.

To Lieut. Barrett—I mean the net register tonnage. Her net tonnage is given as 1196, and 2,600 tons would be as much again as the register, and 200 tons over. If you take the majority of cargo boats I think you will find they carry the same. The boats were carried on skids about 8 feet above the deck. I think you would find it a very heavy job in bad weather to get them over the side. They would very probably be stove before they could be got out. In moderate weather it might be easy enough. Of course it is difficult in any ship to get a boat out in heavy weather.

To Lieut. Cochran—When I left with the 2,600 tons we had room for about 30 or 40 tons in the fore end of her.

To the Acting Consul—The collision compartment is away down below, and does not come up to the 'tween decks.

To Lieut. Barrett—I do not know the name of the coal. We cannot depend on their method of weighing the coal up there. It comes down in trucks and is put on any way. Some coal is heavier than other coal, and requires less room. This is a light kind and takes up more space than Welsh coal would do.

To the Acting Consul—The load line has never been submerged. I have always tried to allow her 3 inches below the load line.

To Lieut. Barrett—The load line is fixed by the owners' instructions. It has never been altered since we left England. I have no knowledge as to the rule on which it is fixed. I simply had instructions from the office to make the free board 4 feet 10 inches. The disk was painted white plainly, amidships. With 2,600 tons on board, 50 tons more would bring her down to the centre of the disk—about 3 inches, at the rate of 17 tons to the inch.

To the Acting Consul—If that 50 tons had been put in it must have been put in forward, and it would bring her about 3 or 4 inches by the head. But it would be no benefit for the captain to put in any more. He came up to the hospital to me and I told him not to alter the draught at all.

The Acting Consul remarked that under the charter party it was the interest of the owners and of the captain as their agent to carry as large a load as consistent with safety.

Witness—She was not down to the mark by 3 inches, and I knew he had no more than I had before. I have carried coal in her from Nagasaki to Hongkong. I think the navigation, from what I have seen of it, between Otaru and Yokohama is as safe as between Yokohama and Nagasaki.

Q.—Do you think navigation in the month of November is any more risky than in the summer months? A.—In the summer months you have the

typhoons. When I carried rice I took about 2,500 tons of it in the typhoon season.

To Lieut. Barrett—I have been once before in Otaru. From my experience of the coast, in the event of the *Plainmeller* breaking down I should think she would have driven out to sea. I experienced very little current either going up or coming down last time. She had not her full complement of men, two men having deserted. Her home complement is 26 men, but I was ordered to carry 4 extra hands, 2 firemen, and 3 sailors. The chief officer told me about an hour before he sailed that he had lost one man—a fireman; and I lost one at Nagasaki in September. I did not report the desertion at Nagasaki, for we were getting under weigh, but I entered it in the official log book. I did not think I was bound to report it to the Consulate. When I have been laying in port I have done so. These desertions left 6 firemen and a trimmer on board. I know no reason for the men leaving. On the occasion that I went to Otaru I was the sole and responsible agent for the taking of the cargo on board. Mr. Wex had no authority. The owners told me what I had to carry. I had no instructions from Adamson, Bell, as to the amount I was to carry. I did not see them at all before the charter was made. It was made while I was at Nagasaki. They received their instructions to act as agents from the owners. They are agents charged with the loading of the ship by the authority of the owners. I did not tally the coal at Otaru at all. I give receipts to a Japanese whose name I do not know, but who was manager of the railway. The coolies measured by trucks and to save time they asked me if I would take it over without re-weighing. I consented to do so on condition that I should not give them a receipt for a specific quantity. I have carried in the Mediterranean in the summer time 2,050 tons.

Captain Crocker Nye, of the *Higo Maru*, deposed—I have often made the voyage between Hakodate and Yokohama. I left here the 11th of November, at 12 o'clock for Hakodate, with a strong northerly breeze. I went down to Tateyama Bay, when it came out so bad that I had to go in there. The wind was about N.N.E., I put in there for shelter, and remained there till the morning of the 13th, the weather being very heavy. In the morning of the 12th I anchored a second time, giving her 45 fathoms on the starboard, and 45 on the port anchor. The weather was very bad, the wind being N.N.E., and from that to N. After leaving we had fine weather but a heavy sea, especially off Imaboye, which we passed at 3.20 p.m. on the 13th. The sea was running from N.E. The wind was light, northerly with fine weather to Hakodate, where I arrived at 6.30 on the 15th, having touched at Oginohama. The *Hakunoura Maru* was with me part of the time. I saw no other vessel on that voyage.

Q.—If a vessel loaded nearly to her dead weight capacity with coal had been any way along the coast when that gale was blowing, do you think she would have been in danger? A.—I do.

Q.—What would have been her danger? A.—Swamping. The sea was very bad, and she would get tide rips for a short time cause a very heavy sea all at once.

Q.—You think that such a vessel, so laden, would have been in serious danger of foundering? A.—She would, sir; in serious danger.

Q.—A vessel with 4 feet 10 inches of free board and 3 feet 6 inches height of bulwark? What is the height of the waves? A.—It is not exactly the height; it is the irregularity of them. I think boats would have been of use if she had shipped a heavy sea; if they had been readily available and were large boats. Off Kinkasan and Imaboye there are always heavy seas; between these points the sea is more regular. The *Higo Maru* is of 800 tons register; I have only been in her about 6 months. I have carried twice the register tonnage inclusive of bunker coal. In a vessel of about 550 tons I once went up to Petropaulovsky in that condition; but I should not like to encounter any such weather as that.

To Lieut. Barrett—When I say twice the register tonnage, I mean the net tonnage. From my experience I should consider the utmost limit of safety double the register tonnage inclusive of bunker coal. That is as much as ever I have ever carried in a vessel. I consider the voyage to Hakodate from Yokohama as ugly as anywhere. It is a bad coast unless one is well acquainted with it. Between Imaboye and Kinkasan here (pointing to the coast on the chart) there is no harbour of refuge, and between Sinosaki and Yumada also there is no shelter. That is a very exposed point of the coast, and the seas are bad there also.

To Lieut. Barrett—In the event of the *Plainmeller* breaking down, I think with the wind that have prevailed since the 11th she might make the land. I think with the leading winds since then she

would, if the casualty were a breakdown of her engines, have stood a good chance with foresail, fore-top-sail and two try-sails, or making the coast or of being picked up. I should not think there would be any chance of her going out of sea. We have had more northerly and easterly winds this season than I ever experienced before on the coast.

To the Acting Consul—In the Nippon Yusen Kaisha it depends on the ship how much you can take; you can load to a certain depth. I have experience of the trip to Otaru. The sea is more regular there than on this coast.

To Lieut. Barrett—I believe the engineer takes the temperature of the bunker coal. We never carry coal for cargo. In the *Tamarna Maru*, 558 tons register, I have taken 600 tons of coal and 250 tons other cargo to Petropaulovsky. That was as deep as that vessel should be. She was built in 1874.

To Captain Rowe—I have been in a steamer, the propeller of which was stopped, and she would not steer even in fine weather.

On resuming after tiffin,

Captain Rowe, recalled, deposed—The ship was no. A 1 at Lloyd's. I was instructed never to overload the ship; never down her free board. We have never loaded the ship down to the line. I was not to load so deep by 3 or 4 inches or 5 during the typhoon season. With Welsh coal there might have been 20 or 30 tons of space in the after hold. This coal is lighter, and if the space I said before was left forward had been filled it would have brought her an inch or two by the head. When I estimated double the register tonnage and 200 tons more that was inclusive of the bunker coal.

Osugi Koji, a Japanese official, cautioned, deposed—I belong to the Hokkaido Administration Board. The *Plainmeller* was hired for the service of my department. I received a telegram from Otaru relating to the finding of the *Plainmeller* and to her departure from Otaru. I produce copy of the telegram; the original I lent to Walsh Hall & Co. It is dated the tenth of this month. The purport of the telegram is that "the *Plainmeller* left yesterday laden with 2,483 tons of coal cargo and in addition took in 104 tons of coal for ship's use." My office is at Otaru, but I left there on the 7th of July and have not been there since. The coal at Otaru when I was there was weighed by an English weighing machine, generally; but some times the average weight was taken by measurement from a quantity of baskets. I think the same plan must have been continued—that no change in the method of weighing has since taken place. I do not know how much was delivered here on the first voyage. Besides the telegram referred to, the documents I have received regarding the *Plainmeller* were captain's receipt for the coal taken on board as cargo and another receipt for the coal received by the captain for ship's use. The three documents I have mentioned have been lent to Walsh Hall & Co. and are now in their possession. I have never seen the *Plainmeller*. The coal carried by the *Plainmeller* from Otaru was the property of the Hokkaido Administration Department. It was coal from the Poronai Mine, about 56 English miles distant from Otaru. I think the Poronai coal is lighter than the Karaisan.

By Captain Edwards—I think the difference between the weight shipped and that delivered on the previous voyage may probably be due to the fact that there is a desire or disposition on the part of the authorities to give liberal or good weight, and possibly the captain may have asked for good weight.

J. J. Efford, deposed—I am a master mariner, and at present Lloyd's surveyor at this port. I have seen the *Plainmeller*. I saw but did not notice her particularly when she arrived on the previous voyage. In the course of my duty I would not have to observe her draught of water on arrival. I think I noticed her once before; I think—but I am not certain—that she was from Nagasaki. It was in the middle of this year sometime, and she was laden with coal. I did not notice her draught particularly; only that she was a deeply loaded ship. I could not say she was deeper than she should be. I intended to have gone on board, but she was so surrounded by cargo lighters that I could not get up to her and could not see her hull. When she arrived from Otaru she was much surrounded by lighters. On both occasions she was deeply laden. There is a rule for determining the dead weight capacity of a ship from her register tonnage. That rule is guided by displacement. As a rule the dead weight capacity should be double the register tonnage; some ships are different. The ratio is about 2 to 1. It would depend on whether the ship is fine or full whether the bunker coal is included in that ratio. The present cargo boats, being full, may

carry double the register tonnage and the bunker coal also. I considered the *Plainmeller* one of those good carrying vessels; she had the appearance of being full bodied. I think 2,600 tons was a little too much to carry in these seas. With a register tonnage of 1,196 tons she should carry about 2,392 tons,—and then her bunkers. She should carry about 160 tons—about 8 days' coal—which would be a reasonable amount to carry on the voyage from Otaru here. She was a flush decked ship. There was nothing about her to indicate that she was less safe than the ordinary run of ships. She was an ordinary flush decked ship without any incumbrances. I know the government rule for measuring the register tonnage of steamers. For propelling power, exclusive of space for officers and crew, the deduction is  $\frac{33}{100}$ . She had full accommodation for officers and crew. To the rule, however, there are exceptions. Her gross tonnage being 1,831, the deduction for the *Plainmeller*, both propelling power and crew space is 635 tons—of which 600 is for propelling power. There was nothing about the *Plainmeller* that would justify her in carrying a specially large cargo. I have not examined her internally; I am going by Lloyd's register. I have had experience of this coast of Japan. In winter the trip between Otaru and Yokohama is pretty rough; about equal to the Western ocean. I consider that the winter season commences about the middle of October.

Lieut. Barrett—What free board would you consider a vessel of the *Plainmeller* class should have for the winter season? A.—Lloyd's rules say 5 feet 4 inches, and that was only determined after the *Plainmeller* left home. Her mark is Plimm-soll's.

Q.—What amount of tonnage would bring her down to a free board of 5 feet 4 inches? A.—In the circumstances the answer would be only approximate. She may be a finer vessel than I assume her to be. If I know her to be a full ship I could tell almost to a ton or two. I think she could carry 2,392 tons with a free board of 5 feet 4 inches. I should say that the ratio would be, in a full ship 12 breadths to one length, and in a fine ship 13 breadths.

To the Acting Consul—The *Plainmeller*, I find, is less than 12 breadths and is therefore a full ship. I have never noticed that overloading prevails here; it is not so among the Japanese coasting ships. That may be because they have not weight of cargoes on the coast to put them down. In fact I am certain that is the reason. As to the carriage of coal I should estimate Poronai at 48 cubic feet per ton, and that, according to her cubic capacity would leave 4 per cent. space unoccupied at the rate of 2 tons per 100 cubic feet. I notice from the book that this ship has a double bottom under the engines and boilers. If that bottom is secured by water tight doors it would give her extra buoyancy and put her in good trim with the cargo, 2,392 tons, that I have estimated, exclusive of her bunker coal. Still that would be no excuse for carrying extra cargo; the quantity I have stated would be quite sufficient.

Q.—Are we to understand that double the register is always a safe dead weight for a vessel to carry? A.—Yes, for steamers of the model we are now speaking of. A modern cargo boat would not be considered a good carrying vessel if she carried less. It all depends on the construction of the vessel. A yacht with a fine bottom will barely carry her net register tonnage. I am not speaking of free board; that is what they do carry. They may be very deep; indeed some of them are. The whole question of carrying capacity has been gone into by the commission of Lloyd's. The *Plainmeller* is a flush decked ship—not on the three decked principle. If she had been on the three decked principle she would have been of a different construction; she would have been deeper. It would be very hard for me to say what would have been her chance of safety on the east coast in the state in which I saw her come into the harbour. I think if she had met with no accident, to machinery, &c., and been properly handled she might have weathered the storm. She would certainly have had a better chance if she had been lighter. With 2,392 tons she should have weathered. I certainly say it is the duty of a master to look after the engines and boilers. Lloyd's call for an annual survey of engines, boilers, and hull. It is very likely the captain would be blamed if he had a survey in a port near the port where the superintendent engineer was stationed.

To Lieut. Barrett—With the prevailing winds, in the event of an accident happening, I think she might have possibly drifted to the S.E. If they had sufficient sail power, and an accident occurred she might go off the land on the port tack, out of the way of steamers. In such a case I should try to heave her to, if I could not do so with a sea anchor.

With topsails, and foresail and fore and aft sails, and her propeller fast, not revolving, she would make very little head way; would merely drift to leeward. There would very probably be great difficulty in getting the boats out, but if they could be got out a good life boat will ride out a heavy storm.

To the Acting Consul—I forgot to say that the figures 5 feet 4 inches that I gave for free board are for the winter months; for the summer months the deduction in this case would be  $3\frac{1}{2}$  inches which would make the summer free board 5 feet  $\frac{1}{2}$  inch; and then according to that rule she would have 29 $\frac{1}{2}$  inches of reserve surface of buoyancy. According to this table she would have 29 $\frac{1}{2}$  inches with 2,390 tons of cargo and 160 additional; and I should say 100 tons more would leave her about 10 inches reserve of buoyancy.

To Lieut. Barrett—If she were 5 inches by the stern, 50 tons more forward would put her certainly on an even keel, but if full forward she would of course be more difficult to put down. With the maximum dead weight of 2,312 tons, plus 160 tons bunker coal, and 5 feet 4 inches of free board, if she is what I suppose her to be by her dimensions she would have about 20 inches of reserve buoyancy.

To the Acting Consul—I could not say exactly whether that reserve of buoyancy would be safe to go to sea with. I would have to see a model of the vessel. With 20 inches of buoyancy after shipping a heavy sea, I think she would soon right herself, if she had good ports.

Witness corrected a former statement by saying that he should consider the ratio of fullness or fineness as: a fine ship 9 breadths to one, and a full ship 12 breadths to one length; he would consider 8 to 10 an ordinary full ship, and from 10 to 12 breadths a fine ship.

Mr. Bayne—I consider that 2,552 tons, inclusive of bunker coal, would be the utmost that she could safely carry for any voyage. If more bunker coal had to be taken the cargo would have to be reduced.

Yoshitake Sei-chiro deponed—I was in Otaru till the 9th of this month. I was agent of the Nippon Yusen Kaisha at Otaru, and am now acting agent at Yokohama. I had no concern with the *Plainmeller*. I saw her in the harbour on the morning of the 9th instant. When I saw her she was full of coal. She looked very deep; but I did not go on board—only saw her from the shore. I think I saw her on her first trip but I am not sure. It was not my duty to know about her cargo. I have heard no news about her since she left. I left Otaru for Hakodate in the *Taganawa Maru*. We had no rough weather and arrived at Hakodate on the 11th, having started on the 10th. At six next morning, on the 12th, I left Hakodate, and reached Oginohama about eleven on the 13th; leaving again about two the same day we arrived in Yokohama about 2 o'clock in the afternoon of the 14th. On the way from Hakodate to Oginohama we had very rough weather; and thence to Yokohama it was also rough, though not so bad. We saw nothing of the *Plainmeller* on the way down.

Captain Rowe, recalled, deponed—The double bottom under the engine room and boilers was secured by two water tight doors, and the after tank by four. Both are about 3 feet 6 in depth—in the centre above the keel; and hold 245 tons.

To the Acting Consul—It took 3 $\frac{1}{2}$  days to load the cargo when I was at Otaru. We consumed about 10 tons of coal, as steam was kept up the whole time. On that occasion I had about 60 tons in the bunkers and I took about 93 tons there. When I arrived here it was found that there was only about 4 days' coal. She consumed about 17 or 18 tons a day. A fair estimate for the voyage to Yokohama from Otaru would be 70 tons.

To Lieut. Barrett—The length of the double bottom was from the fore end engine room bulk head aft to the after collision bulk head. There was another tank under the boilers, which would contain about 100 tons of water.

This concluded the evidence.

Adjourned till ten next morning.

The Court of Inquiry into the disappearance of the steamship *Plainmeller* again sat on Wednesday forenoon. The Court was constituted as before.

Mr. John Walsh, sworn, deponed—I was agent for the *Plainmeller* during her last voyage, and I produce the captain's receipts for coal, received on board at Otaru—one dated the 8th for 161 tons of bunker coal, and one dated the 9th for 2,473. On the previous voyage she left Otaru with 2,378 tons and 93 tons in bunkers. On returning the cargo 2,449 tons were discharged, and the ship was paid freight on that quantity, a difference of 71 tons in excess of the quantity received at Otaru. I do not think the difference between the quantity received and that delivered would have been less on the second than on the first voyage; I think the

intention would be, as in all collieries, to give more than weight; there would probably be an excess—what would be called full weight. As to the method of weighing I cannot speak of my own knowledge, but I can say from hearsay that a few baskets are weighed occasionally, every fifteen minutes, half hour, or hour as the case may be, and then the baskets are tallied. I do not know that between the first and second voyage any difference occurred in the method of weighing. I do not think there would be any difference. I should not think it an unreasonable inference that the excess was as great on the second as on the first occasion.

Captain Rowe remarked that the *Plainmeller's* bunkers must have been empty when she reached Otaru as she had only four days' coal when she left Yokohama.

Witness, to Lieut. Barrett—I think the Ponoi coal is comparatively a gassy coal; it flames a good deal when burning. There have not to my knowledge been any accidents through the coal becoming wet in transit.

To the Acting Consul—I have had a good deal of experience in reference to coal cargo. I think it is not customary to take any precautions for ventilating coal cargo, in such short voyages. If the coal became wet it would increase in weight, but I do not think there would be any combustion or evolution of gases.

To Mr. Bayne—I think the increase, 3 per cent. on the first voyage, is not extraordinary. I do not think the excess is ever less. The system of weighing the coal here is much more loose than in England and Australia. (Witness produced two telegrams as to the loading and departure of the vessel). We have heard nothing of the *Plainmeller* since the date of these telegrams.

Lieut. T. H. James, Superintendent of Navigation, Nippon Yusen Kaisha, sworn, deponed—I produce a series of the weather charts published by the Imperial Meteorological Observatory. From these it appears that at 6 a.m. on the 10th, 12 hours after the *Plainmeller* started, when she would be nearing the entrance to Tsugaru Straits, the weather was fine. At 2 p.m. the same day, when the ship would be leaving the straits, the weather was still fine, with a light N.W. wind. Twenty-four hours later, at 2 p.m. on the 11th, the ship would be off Kinkasan. The wind was then from N.E. blowing with force 6, the barometer falling rapidly. I should call that force of wind a strong breeze. About 9 p.m. the same day the *Plainmeller* would be off Toyama—about half way between Kinkasan and Inuboyesaki, when the wind was N.N.E. with force 8. I should describe the storm, then, as beginning in the afternoon of the 11th. My next chart is for 6 a.m. on the 12th; the ship would then be in nearly the same position; perhaps a little farther south. The wind was at this time N.E. force 12—typhoon force. I think the full violence of the storm must have overtaken the steamer about midnight between the 11th and the 12th—or a little later. I do not think she would have run any further. The sea off Inuboyesaki is generally very heavy. I have here an abstract of the log of one of our ships, the *Fetchiu Maru*, which came through almost the same storm. The weather I think must have moderated about 7 a.m. on the 12th.

The Acting Consul—If an accident had occurred to a ship in that storm, and if she had drifted, in what direction would she have been likely to go? A.—That would depend on when she broke down. If she did so when the wind was at N.E. I think she would have come into the land. But if it was about the time when the wind changed to N.W. I think she would have gone to the north-eastward. After a few hours the wind changed to N., indeed, according to this log, after the storm moderated the wind changed to the N.W., in which case the steamer would have drifted to the N.E., and I think with considerable velocity. I believe that the surface water of the Kuro Siwo, after being pent up by the N.E. storm, and then suddenly released, would have gone off north ward at considerable speed. About 5 p.m. of the 12th the wind shifted northward.

The Acting Consul—We have had some difference of opinion as to the amount of cargo a steamship can carry with safety on the Japan coast. One expert gave us as his opinion that the limit of safety might be fixed at double the register. From your experience can you give us any information? A.—I do not think I can. I have not had enough of experience. With us there is no rule based on the register tonnage. Each ship has a certain draught, and the amount of cargo is based on the draught. We have had no tidings of the *Plainmeller*. Since the 9th instant I should say that about ten of our ships have passed along that coast. They usually keep close in. The *Plainmeller* might well have been within ten miles

of the track and still not be seen by any of our ships. The *Fetchiu Maru* was in the same gale, and about the same position that the *Plainmeller* would be in. The *Fetchiu Maru* left Oginohama at 1.45 p.m. on the 11th, bound for Yokohama. At 7 p.m. there was a high N.E. sea, the ship taking much water on deck. At midnight the wind increased to a strong gale, and at 4 a.m. on the 12th the gale increased to a storm. The *Fetchiu Maru* hove to and stood to the eastward, experiencing a heavy E. sea, and the deck being constantly full of water. At 9 a.m. the wind was blowing a hurricane, with tremendous, high confused sea; lost deck cargo. At 5 p.m. the wind shifted to N.W., with the same force. At midnight on the 12th the wind moderated a little; at 10 a.m. on the 13th the ship was kept away to S.S.W. both wind and weather moderating.

This concluded the evidence, and the Court was then cleared.

After an interval of half an hour the following finding was read by the President:—

#### FINDING.

The finding of this Court with respect to the circumstances attending the missing of the *Plainmeller* is as follows:—

The *Plainmeller* of London, official number 76,999, an iron screw steamship of 1,196 tons register, class A 100 at Lloyd's, left Otaru on the west coast of Yezo about 6 o'clock p.m. of the 9th November with twenty-eight hands on board all told, bound for Yokohama with a full cargo of coal. She had made the same trip a short time previously in three days and ten hours. She would therefore, had no casualty occurred, have arrived at Yokohama on the 13th ultimo. But a severe storm, which she must have encountered on the after part of her voyage, prevailed along the eastern and northern coast of Japan from early in the afternoon of the 11th ultimo till near noon of the 13th ultimo, the wind blowing mainly from the north and north-east, at times with hurricane force with tremendous high and confused sea running.

As regards the state of fitness of the *Plainmeller* to encounter such weather with safety, we find that her hull was staunch and strong, her hatches well secured, and her equipment and crew sufficient. There was no evidence that her machinery was defective. The feature in her condition most fraught with peril was the great weight of cargo she carried. The master had signed receipts before she sailed for 2,483 tons of cargo coal, and 161 tons of bunker coal, making together, 2,644 tons. But the evidence shows that the weighing of the coal at Otaru before putting it on board was only done loosely, not accurately; and the actual weight of the cargo she had carried on the preceding voyage under the same charter, shipped under the same conditions, proved when properly taken on delivery at Yokohama to be over 70 tons in excess of the weight for which the master had signed receipt on its shipment at Otaru. Indeed, it was given in evidence that this margin of excess, amounting to about 3 per cent., was customary in carrying coal cargoes in these waters. We have therefore no reason for supposing that the margin of difference between the real weight carried and the weight as estimated on shipment would be anything less on the occasion of the second voyage than on the preceding one. On this basis, and including the bunker coal we find that the *Plainmeller* left Otaru with over 2,700 tons on board.

In the course of the inquiry three different estimates were given by experts as to the maximum amount of cargo which the *Plainmeller* could carry with due regard to safety. The first, that of Captain Nye, fixed it at double the register tonnage, inclusive of the coal supply in bunkers for the steamer's own consumption, whatever might be the length of her voyage, that is at 2,392 tons. Another estimate, that of Captain Efford, Lloyd's surveyor, placed it at about 160 tons higher, say 2,552 tons. The third estimate, that of Captain Rowe lately master of the *Plainmeller*, placed it 100 tons higher still, that is at 2,650 tons. We find that the cargo actually carried by the *Plainmeller* on her last uncompleted voyage exceeded the highest of these estimates and that therefore, as a reasonable and probable inference from the evidence, overloading must be included amongst the causes which have contributed to her non-arrival.

As subsidiary to this issue and suggested by facts disclosed in the course of the inquiry, members of the Court desire to add a recommendation that in all cases where vessels are freighted with coals, compulsory provisions should be made for securing proper ventilation of the cargo.

J. CAREY HALL,

Acting Consul and President of the Court.

H.B.M.'s Consulate, Kanagawa, 1st December, 1886.

## LATE TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 25th.

## THE NEW RULER OF BULGARIA.

The Powers are exchanging views with Russia in regard to a proposal to appoint Prince of Mingrelia as the new ruler of Bulgaria.

[The Prince whom it is proposed to translate to Bulgaria is the ruler of a small territory in Asia, bounded on the West by the Black Sea, on the East by Imeritia, on the South by the river Phasis, and on the North by Georgia. He is a tributary of the Czar.—Ed. J. M.]

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Nagasaki, December 3rd.

Shanghai papers received by the mail steamer contain the following telegrams:—

London, November 26th.

## BIRTH OF A PRINCE.

The Princess Beatrice of Battenburg has been delivered of a son.

## THE THRONE OF BULGARIA.

All the Powers, with the exception of England, have acquiesced in the appointment of the Prince of Mingrelia to the vacant throne of Bulgaria.

November 27th.

The Bulgarians are greatly averse to the appointment of the Prince of Mingrelia as their ruler.

A plot has been discovered to assassinate the Regents.

[FROM "LE SUGONNIAS."]

Paris, November 2nd.

M. Baihaut, Minister of Public Works, has placed his resignation in the hands of the President of the Republic.

## THE FRENCH BUDGET.

The Chamber of Deputies has commenced the discussion of the budget for 1887. It is feared that the Government will be obliged to have recourse to the system of provisional twelfths.

## M. RAOUL DUVAL AND THE REPUBLIC.

In the course of a speech in the Chamber of Deputies, M. Raoul Duval declared that he gave his complete adhesion to the Republic on account of its conservative policy in home affairs.

Count Yamada, Minister of State for Justice, notified the 2nd instant that the following Peace Courts will control the registration offices in their districts:—Kyôbashi Peace Court, for Kyôbashi and Nihonbashi Divisions; Shiba Peace Court for Shiba, Azabu, and Akasaka Divisions; Kojimachi Peace Court for Kojimachi, Yotsuya, Hongô, Ushigome, and Kojikawa Divisions; Shitaya Peace Court for Kanda, Shitaya, and Asakusa Divisions; and Hongô Peace Court for Hongô and Fukagawa Divisions.—*Mainichi Shimbun*.

The 27th National Bank at Takasu, Mino, has reduced its capital from yen 140,000 to yen 100,000; and the Saitama Bank has also reduced its capital from yen 100,000 to yen 60,000.

The price of carbolic acid in Osaka has gradually increased owing to small stocks, and the crystallized article is quoted at yen 52 per 100 bottles.

The total value of articles imported to Fusan from Japan during October last was yen 41,136, of which yen 14,850 were for salt, and yen 570 for sake, the remainder being for miscellaneous articles. Mr. Shibusawa Eiichi left the capital the 2nd instant for Kyôto and Osaka.

The total number of junks loaded with salt which arrived in Tôkyô from various localities during November last was 35, of which 8 were loaded with Akao, 1 with Oshio, 15 with Shinsai, and 11 with Hensai, salt.—*Fukko Shimbun*.

## MAIL STEAMERS.

## THE NEXT MAIL IS DUE

From Hongkong, per P. & O. Co. Monday, Dec. 6th.\*  
From America, per P. M. Co. Friday, Dec. 10th.†  
From Shanghai, Nagasaki, & Kobe, per N. Y. K. Friday, December 10th.

\* *Tokoro* left Nagasaki on December 2nd. † *City of Sydney* left San Francisco on November 20th.

## THE NEXT MAIL LEAVES

For Kobe, per N. Y. K. Saturday, Dec. 4th.  
For Shanghai, Kobe, and Nagasaki, per N. Y. K. Tuesday, Dec. 7th.  
For Europe, via Hongkong, per P. & O. Co. Saturday, Dec. 11th.  
For America, per O. & O. Co. Saturday, Dec. 11th.

## TIME TABLES AND STEAMERS.

## YOKOHAMA-TÔKYÔ RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 7.00, 8.15, 9.30,\* 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00,\* 5.00, 6.15, 8.00, 9.15, and 11.00 p.m.

TRAINS LEAVE TÔKYÔ (Shimbashi) at 7.00, 8.15, 9.30,\* 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00,\* 5.00, 6.15, 8.00, 9.15, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90.

Those marked with \* run through without stopping at Tsurumi, Kawasaki, and Utsunomiya Stations. Those marked † are the same as above with the exception of stopping at Kawasaki Station.

## TÔKYÔ-MAYEBASHI RAILWAY.

TRAINS LEAVE TÔKYÔ (Uyeno) at 6.00 and 10.00 a.m. and 1.00 and 4.15 p.m.; and MAYEBASHI at 6.00 a.m. and 1.00 and 4.15 p.m.

FARES—First class (Separate Compartment), yen 1.80; Second class, yen 2.28; Third class, yen 1.14.

## TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.15 and 11.30 a.m., and 2.25 and 5.50 p.m.

## TÔKYÔ-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TÔKYÔ (Uyeno) at 6.00 a.m. and 1.00 and 4.15 p.m.; and UTSUNOMIYA at 8.15 a.m. and 11.10 a.m., and 4.50 p.m.

FARES—First class, yen 3.50; Second class, yen 2.10; Third class, yen 1.05.

## UTSUNOMIYA-NASU RAILWAY.

TRAINS LEAVE UTSUNOMIYA at 10.25 a.m. and 4.57 p.m.; and NASU at 6.40 a.m. and 3.15 p.m.

FARES—First class, yen 1.10; Second class, yen 74; Third class, yen 37.

## NASU-KUROISO RAILWAY.

TRAINS LEAVE NASU at 12.04 and 6.36 p.m.; and KUROISO at 6.15 a.m. and 2.50 p.m.

FARES—First class, yen 30; Second class, yen 20; Third class, yen 10.

## SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 9.19 a.m., and 12.34, 3.39, and 4.09 p.m.; and AKABANE at 10.33 a.m., and 1.34, 4.44, and 8.22 p.m.

FARES—First class, yen 70; Second class, yen 46; Third class, yen 23.

## KÔBE-OTSU RAILWAY.

TRAINS LEAVE KÔBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE ÔSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYÔTO (up) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE ÔTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYÔTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE ÔSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 and 10.40 a.m., and 1.30 and 4.00 p.m.; and leave Yokosuka at 7.15 and 11.00 a.m., and 1.30 and 4.00 p.m.—Fare, yen 20.

## LATEST SHIPPING.

## ARRIVALS.

*Iphigenia*, German steamer, 1,050, L. Vullner, 27th November.—Hongkong 21st November, General.—Simon, Evers & Co.

*Sagami Maru*, Japanese steamer, 1,182, Kenderdine, 28th November.—Kobe 27th November, General.—Nippon Yusen Kaisha.

*Shidzuoka Maru*, Japanese steamer, 334, Nakasato, 29th November.—Shimizu 28th November, General.—Seiryusha.

*City of New York*, American steamer, 3,020, R. R. Searle, 30th November.—Hongkong 23rd November, General.—P. M. S.S. Co.

*San Pablo*, American steamer, 2,113, E. C. Reed, 30th November.—San Francisco 9th November, Mails and General.—O. & O. S.S. Co.

*Elbe*, German steamer, 855, Sass, 30th November.—Kobe 29th November, General.—Japanese.

*Alacrity* (4), despatch vessel, Commander Macnochie, 1st December.—Hongkong, via Kobe 30th November.

*Kongo Kan* (13), corvette, Captain Y. Inouye, 2nd December.—Yokosuka 2nd December.

*Satsuma Maru*, Japanese steamer, 1,160, G. W. Conner, 2nd December.—Shanghai and ports, Mails and General.—Nippon Yusen Kaisha.

*Wakanoura Maru*, Japanese steamer, 1,342, A. Christensen, 2nd December.—Hakodate 30th November, General.—Nippon Yusen Kaisha.

*Chitose Maru*, Japanese steamer, 356, Kaya, 3rd December.—Handa 2nd December, General.—Nippon Yusen Kaisha.

*Harima Maru*, Japanese steamer, 436, Kobayashi, 3rd December.—Hakodate 1st December, General.—Nippon Yusen Kaisha.

*Hiroshima Maru*, Japanese steamer, 1,862, G. S. Burdis, 3rd December.—Yokkaichi 2nd December, General.—Nippon Yusen Kaisha.

*Kamichatka*, Russian steamer, 702, Ingram, 3rd December.—Otaru 30th November, Coal.—Walsh, Hall & Co.

*Nagato Maru*, Japanese steamer, 1,160, Young, 3rd December.—Kobe 2nd December, General.—Nippon Yusen Kaisha.

*Yamashiro Maru*, Japanese steamer, 1,512, Mahlmann, 4th December.—Yokosuka 3rd December, General.—Nippon Yusen Kaisha.

## DEPARTURES.

*Thibet*, British steamer, 1,671, W. D. Mudie, 27th November.—Hongkong via Kobe and Nagasaki, Mails and General.—P. & O. S. N. Co.

*Nitgata Maru*, Japanese steamer, 1,096, Drummond, 28th November.—Hakodate, General.—Nippon Yusen Kaisha.

*St. Nicholas*, American ship, 1,723, E. Crocker, 29th November.—Hakodate, Ballast.—American Trading Co.

*Frieda Grampp*, German bark, 499, Lindenberg, 29th November.—Port Moody, Tea.—Frazai & Co.

*Nagato Maru*, Japanese steamer, 1,160, Young, 29th November.—Hakodate, General.—Nippon Yusen Kaisha.

*Yokohama Maru*, Japanese steamer, 1,298, Haswell, 30th November.—Shanghai and ports, Mails and General.—Nippon Yusen Kaisha.

*Sagami Maru*, Japanese steamer, 1,182, Kenderdine, 1st December.—Kobe, Mails and General.—Nippon Yusen Kaisha.

## PASSENGERS.

## ARRIVED.

Per German steamer *Iphigenia*, from Hongkong:—Mr. Shedel.

Per Japanese steamer *Sagami Maru*, from Kobe:—Messrs. Ooka Ikuzo, Denys Larrieu, Kikuta Tsunahiko, Nishida Veitaro, J. W. Crowe, Matsumoto Hiyoza, A. G. Mosle and Hatano Denzaburo, Osaki Saburo, Osaki Omichi, and Kawata Nobuyoshi in cabin.

Per American steamer *City of New York*, from Hongkong:—Mr. C. E. Miller in cabin. For San Francisco: Mr. and Mrs. Chow Tie and woman servant in cabin; and 1 European and 76 Chinese in steerage.

Per American steamer *San Pablo*, from San Francisco:—Baron Menu de Menil, Messrs. L. Ussele, S. G. McKenzie, and Wm. Schmidt in cabin. For Hongkong: Colonel R. E. Withers in cabin; and 616 Chinese in steerage.

Per Japanese steamer *Satsuma Maru*, from Shanghai and ports:—Captain M. Squire, Captain J. W. Drake, Messrs. A. Robinson, Yamada, Hashiguchi, Yamashita, and Alfred Robinson in cabin; Messrs. John Reynolds, William Pottie, Thomas Curnow, P. C. Spencer, and Nagano in second class; and 173 Japanese in steerage.

Per Japanese steamer *Wakanoura Maru*, from Hakodate:—70 Japanese in steerage.

Per Japanese steamer *Nagato Maru*, from Kobe:—Messrs. M. Nagabuchi, T. Kosoegawa, in cabin; Messrs. K. Tawara, T. Matsuda, T. Osaka, S. Takata, K. Otomo, and C. Kojima in second class; and 111 Japanese in steerage.

## DEPARTED.

Per British steamer *Thibet*, for Hongkong via Kobe and Nagasaki:—Mrs. W. E. Knox, Miss Knox, Mrs. Gray, Mr. and Mrs. McCunday, Mr. and Mrs. Armstrong and child, Mrs. Pier, Mrs. S. Crowe, infant, and servant, Messrs. C. Kelly, E. Cassambhoy and servant, Aine Peon, Leong Hing, J. Hartings, S. Young, and A. S. Robinson in cabin; and 7 Chinese and 2 children in steerage.

Per Japanese steamer *Yokohama Maru*, for Shanghai and ports:—Mrs. Yamasaki, Messrs. Watanabe, S. Hirose, F. Wuriu, Hirakawa, M. Fukaza, C. D. Moss, G. R. Corner, T. Yamano-uchi, H. Orth, and Fukushima in cabin; Mrs. Tajiri, Miss Hirakawa, Messrs. Sano and Kameyama in second class; and 75 Japanese in steerage.

Per Japanese steamer *Sagami Maru*, for Kobe:—Countess Yamada, Messrs. K. Nishimura, K. Shimizu, M. B. Chapman, W. B. Palmer, M. C. Daniel, S. Arakawa, M. Okumiyu, S. Amamo, and G. Daito in cabin; and 120 Japanese in steerage.

Per American steamer *City of New York*, for San Francisco:—Mr. A. Murphy in cabin; and 10 passengers in steerage.

Per French steamer *Volga* for Hongkong via Kobe:—Messrs. A. Langfeldt and servant, C. Heymann, Jacob M. Duncan, Englabalt Casioner, Cham Kun, W. Kurokawa, Taisumi, Saba, Fukushima, Katano, John Willing, Toyoda, Kosaka, and Muller in cabin.

## CARGOES.

Per British steamer *Thibet*, for Hongkong via Kobe and Nagasaki:—Silk for France 519 bales.

Per American steamer *City of New York*, from Hongkong:—General cargo, 261 tons; through cargo, 1,422 tons.

Per American steamer *City of New York*, for San Francisco:—

## REPORTS.

The British bark *Annie Stafford* (Captain Peck) reports:—Left New York, May 16th, 1886. Had strong northerly and easterly winds to about lat. 10° N.; thence to the equator variable winds and rain squalls; crossed the line, 28th June, 12 days out, in long. 22° 30' W. and the S. E. Cape of

Good Hope had strong E. and N. winds and heavy squalls. Passed the Cape in lat. 40° 30' S. on August 3rd. Ran easting down in about lat. 43° 30'. Had strong N. and W. winds and heavy squalls and high sea, which continued until we passed St. Paul's, 95 days out. Had strong variable winds, thence to Ombi Passage, where arrived September 11th. Thence had light variable winds and calm weather until we sighted the Japanese coast. On November 2nd passed Oo-sima. November 3rd; strong N.E. winds and heavy head sea to Rock Island. Passed Rock Island November 9th, and wind continued until within 8 miles of Sagami when it increased to a fresh gale from N.N.E. with overcast sky. Shortened sail to lower top-sails at 4 p.m.; wind increased to terrific gale with heavy rain and a high cross sea. At 5 p.m. kept ship before the wind. At 7 p.m. the gale was blowing with typhoon force with heavy sea, ship taking whole water fore and aft, washing everything that was moveable on deck overboard. At 8 p.m. had to cut away fore lower top-sail for safety of ship and cargo. At 8.30 p.m. ship became unmanageable; had to cut away main lower top-sail. Brought ship to the wind under bare poles on starboard tack. The ship went on her beam ends and laboured heavily, shipping heavy seas, washing spare spars adrift and starting main deck bits and port stanchions and water ways. This weather continued until 2 a.m. November 12th, and at 5 a.m. ship righted; sounded pumps, found 6 feet of water in hold; at 6 a.m. wind calmed to westward; bent new top-sails and main sail. Ship's position at noon was 55 miles S.W. of Cape Setsu. Had moderate N. and N.E. winds until November 18th, when wind began to freshen from N.N.E.; shortened sail to lower top-sails; 4 a.m. sighted No-shima, bearing E. by S. distance about 15 miles; wore ship to westward; at 4 p.m. gale still increasing with heavy rain; furlled lower top-sails set, reefed main try-sail; at 9 p.m. blowing with typhoon force and heavy rain, attended with terrific squalls. Kept ship off before the wind, ran out clear of Rock Island and brought ship to wind on starboard tack under bare poles. Gale continued until November 19th at 3 p.m. when weather moderated, with a heavy cross sea from S.W., however, the ship rolled very heavily, shipping heavy seas fore and aft. Made sail, wind continued W. and N.W. with fine weather and clear sky. Ship's position at noon, 35 miles S.W. of Rock Island. Barometer lowest reading was 29.30. Thence to port light variable winds and fine weather. Arrived in Yokohama, Monday, 22nd.

The German steamer *Iphigenia*, Captain Vulner, from Hongkong, reports:—Left November 21st; had fresh North and N.E. winds and fine weather. When off Oolus passed P. & O. steamer *Teheran*; weather continued fine to Formosa; thence to port had fresh N.W. and W. winds and fine weather; arrived in Yokohama the 27th November, at 7.30 p.m.

The American steamer *San Pablo* reports:—Left San Francisco the 9th November; came the southern route, and, with the exception of one severe westerly gale, had moderate weather. Passage, 5,450 miles in 19 days and 12 hours.

The German steamer *Elbe*, Captain Sass, from Kobe, reports fine weather throughout the passage.

The Japanese steamer *Satsuma Maru*, Captain G. W. Conner, reports:—Left Shanghai the 27th November, at noon; had fresh N.W. winds and fine weather. Arrived at Nagasaki the 29th, at 6 a.m., and left the same day; had strong northerly winds and fine, clear weather. Arrived at Kobe the 1st December, at 5.30 a.m., and left the same day, at 6 p.m.; had strong N. and N.W. to W. winds and fine clear weather to port. Arrived at Yokohama the 2nd December, at midnight.

The Japanese steamer *Wakanoura Maru* reports:—Left Hakodate the 30th November, at 7 a.m.; had fresh W.S.W. breeze and clear weather to Oginohama, where arrived the 1st December, at 7 a.m., and left at 2 p.m.; had fresh N.W. winds, with heavy swell. Arrived at Yokohama the 2nd December, at 2 p.m.

The Russian steamer *Kametchatka*, Captain Ingman, reports:—Left Otaru the 30th December; had fresh northerly and N.E. winds to Kinkasan; thence strong N.W. gale to Inuboye; thence to port fresh North winds and fine clear weather. Arrived at Yokohama the 3rd December, at 11.30 a.m.

The Japanese steamer *Nagato Maru* reports:—Left Kobe the 2nd December, at noon; had cloudy weather with strong W.S.W. winds to Oshima, which we passed at 9 p.m.; thence to port strong N.W. winds and fine weather. Arrived at Yokohama the 3rd December, at 7 p.m. At 4 p.m. the 2nd December passed the Japanese man of war *Nanika Kan*, off Cape Hino, bound North, apparently for Kobe.

## LATEST COMMERCIAL.

## IMPORTS.

The Market still continues very slow and prices mostly in favour of buyers, owing mainly to the long period of inactivity and to a desire on the part of holders to be moving. Dealers, however, do not seem keen for business, which may be due to uncleared purchases still hanging on their hands; anyhow transactions for the week have again been on a small scale.

YARNS.—About 300 bales English Yarn have been sold at easier prices, and about 200 bales Bombays, chiefly 16's, at full rates.

COTTON PIECES GOOD.—1,000 pieces 7 lbs. T. Cloth, 500 pieces 8½ Shirts, and 1,000 pieces 9 lbs. ditto, 300 pieces Turkey Reds, 250 pieces Cotton Italians, and 360 pieces Velvet have been reported as the sales.

WOOLLENS.—Sales have been limited to 1,500 pieces Mousseline de Laine, 530 pieces Italian Cloth, and 1,500 pairs Blankets.

Cloths—Union, 54 @ 56 inches	0.40 to 0.60
Blankets—Scarlet and Green, 6 to 4 lb, per lb	0.37½ to 0.45

## METALS.

The same old tale—no movement, the market being flat, stale, and unprofitable. Meanwhile, stocks are heavy, and we could do without any further arrivals for six months to come. Quotations unchanged but nominal.

	PER PIECE.
Flat Bars, ½ inch	\$2.40 to 2.45
Flat Bars, ¾ inch	2.50 to 2.60
Round and square up to ½ inch	2.45 to 2.60
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.50 to 2.60
Wire Nails, assorted	4.50 to 5.50
Tin Plates, per box	5.30 to 5.50
Pig Iron, No. 3	1.20 to 1.22½

## KEROSENE.

Market unchanged, but weaker, as buyers hold aloof from fresh purchases. Holders try to make believe that they are strong, but dealers are busy clearing their former purchases and will not be charmed into fresh transactions. Our quotations are therefore more or less nominal; and it is doubtful whether the top figure for each brand could now be obtained.

	PER GALLON.
Devon	\$1.77 to 1.80
Comet	1.72 to 1.75
Stella	1.65 to 1.70

## SUGAR.

Trade in this staple is beginning to look up. Original from Brown Takao have been taken to the extent of 2,000 piculs. Prices for White descrip-

tion have recovered, and the quotation given below represents the price ruling. Fully 20 cents per picul more have to be paid for White Refined, and 10 cents more for Brown Takao than previous rates.

	PER PICUL.
White Refined .....	\$5.20 to 7.40
Mamila .....	4.20 to 4.40
Daitong and Swatow .....	3.30 to 3.75
Brown Takao .....	4.10 to 4.15

### EXPORTS. RAW SILK.

Our last issue was of the 26th ultimo, since which date we have had a good daily business in this staple, the week's Settlements reaching a total of 1,200 piculs, including 135 piculs by native shippers. The trade by foreign hongs is divided thus:—Hanks 180 piculs, Filatures and Re-reels 735 piculs, Kakeda 85 piculs, Oshu 65 piculs.

The demand has been for both continents, and all steamers (east and west) have taken considerable shipments. There is not so much life in the Market now that buyers have filled their present orders, but holders anticipate a fresh move ere long, and are not disposed to accept low prices although they will generally do business at a slight reduction upon the extreme rates asked a week ago. These concessions, coupled with a falling exchange, should be eminently agreeable to exporters.

There is no disguising the fact that present news from the other side is not so strong as it was a short time back, but all accounts agree in looking for a better market after New Year.

Arrivals during the week have just equalled sales, and the Stock remains at 10,200 piculs of all descriptions.

There have been two shipping opportunities during the week, English and American mails respectively. The P. and O. steamer *Thibet* (27th Nov.) carried 819 bales for France, and the *City of New York*, which left yesterday for San Francisco had 752 bales for the U. S. markets. Total Export from 1st July to date reaches 12,759 piculs, against 9,857 last year, and 12,235 at same date in 1884.

**Hanks.**—The business in this department has not been overwhelming in amount, but the prices paid have been full. Among the sales noted are *Shinshu* (ordinary *Mariposa* and *Puso*) at \$660, *Onama* \$660, *Joshu* \$640, *Hachioji* \$620. There is now a pause; buyers want a reduction but holders will not budge.

**Filatures.**—Good demand for European sorts, and prices for fine sizes have ruled about as follows:—*Taiyosha* \$810, *Inase* \$800, *Mino Gunzo*, \$780, *Koshu* \$750. In full-sized Silks the following have also been done:—*Shinyosha* \$780, *Toyosha* \$775, *Teishu* \$770, *Shunmeisha* \$755, *Tokosha* \$750. Some holders appear inclined to shade prices a little, while others are strong and will not listen to reason.

**Re-reels.**—A fair amount of business has been done in sorts below "Best." The crack chops of *Joshu* Silk are held for full rates, and nothing has been done in them. Among the settlements we find *Koriyama* \$730, *Maidash* \$720, *Hirose* and *Huyosha* \$710, with other grades at \$700, \$695, \$690, tailing off to \$680 for very ordinary quality.

**Kakeda.**—The small revival in this class has just about died out again, no business being done the last few days. In the early part of the week one extensive parcel was entered in the list at prices ranging from \$695 to \$780 for the various breaks.

**Oshu.**—A single transaction in common *Hamatsumiki* at \$555; in other kinds nothing.

Stock, 3rd December	10,200	7,650	7,900
Available supplies to date	25,900	20,350	20,750

### WASTE SILK.

Trade in this branch remains upon an even keel, and settlements for the week are 800 piculs, distributed thus:—*Noshi* 515 piculs, *Kibiso* 225 piculs, *Sundries* 60 piculs. The native *Kaisha* have not been active just recently.

Quotations must be left unchanged, although a more favourable foreign exchange helps buyers to fill their orders at limits. Holders make a show of great strength, arrivals have not been more than half the settlements, and Stock is accordingly down to 10,400 piculs.

The P. & O. steamer *Thibet* (27th November) had 130 bales (*Noshi*, *Kibiso*, and *Neri*) for Marseilles, and the Canal-boat *Moray* was credited with 51 bales *Cocoons* for New York. Present Export is therefore 12,063 piculs, against 6,567 piculs last year, and 13,760 piculs at same date in 1884.

**Cocoons.**—There are no "Pierced," and nothing has been done in other kinds. A quantity of *Tama Cocoons* has been withdrawn for home consumption, thus reducing the Stock here to 550 piculs.

**Noshi.**—This has been the favourite with buyers during the week—settlements amounting to fully 500 piculs on basis of the following prices:—*Oshu* \$177, *Bushu* \$160, *Joshu* \$126 to \$122, *Shinshu* \$152 1/2.

**Kibiso.**—A fair amount of business in *Filatures*, good cargo fetching \$153 uncleaned. In ordinary *Joshu* one parcel noted at \$73.

**Neri.**—A regular steady trade, \$30 being readily paid for uncleaned stock.

### QUOTATIONS.

Total piculs .....	10,200	Total piculs .....	10,200

### TEA.

About 740 piculs have changed hands since our last issue, at slightly lower prices, these purchases comprising a large proportion of low grades, and there being nearly 13,000 piculs of Tea in Stock, the largest quantity ever held at this period of the season. Total Settlements for both ports now

stand at 330,180 piculs against 283,405 piculs for the season 1885. The following are the Tea shipments made known since the 24th ultimo. The steamship *Reularig*, which sailed from Kobe on the 8th November last, took 70,704 pounds additional, making in all 282,854 pounds from that port. The steamship *Hampshire* took from Kobe on the 23rd ultimo 40,601 lbs. for New York and 41,362 lbs. for Canada, aggregating 81,963 lbs. The German bark *Freida Grampp* took 60,852 lbs. for New York, 11,923 lbs. for Chicago, and 163,273 lbs. for Canada, making 224,048 lbs. from Kobe. The *Gaelic*, which sailed on the 24th ultimo from here took 3,452 lbs. for New York, 5,600 lbs. for San Francisco, and 12,000 lbs. for Canada, amounting to 21,052 lbs. from Kobe. The same steamer took 161,096 lbs. from here divided thus, 22,112 lbs. for New York, 45,128 lbs. for Chicago, 77,373 lbs. for San Francisco, 14,400 lbs. for Portland (Oregon) and 5,083 lbs. for Canada. The steamship *Moray* took 1,716 lbs. for New York, and 164,262 lbs. for Canada, total, 165,978 lbs.

KEATING'S POWDER.  
KEATING'S POWDER.  
KEATING'S POWDER.  
KEATING'S POWDER.

KILLS BUGS,  
FLEAS,  
MOTHS,  
BEETLES,

THIS POWDER is quite HARMLESS

to ANIMAL LIFE, but is unrivalled in destroying FLEAS, BUGS, COCKROACHES, BEETLES, MOTHS IN FURS, and every other species of insect. Sportsmen will find this invaluable for destroying fleas in their dogs, as also ladies for their pet dogs.

THIS ARTICLE has found so GREAT

a SALE that it has tempted others to vend a so-called article in imitation. The PUBLIC are CAUTIONED that packages of the genuine powder bear the autograph of THOMAS KEATING. Sold in Bottles.

KEATING'S WORM TABLETS.  
KEATING'S WORM TABLETS.  
KEATING'S WORM TABLETS.  
KEATING'S WORM TABLETS.  
KEATING'S WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children. Sold in Bottles, by all Druggists.

Proprietor—THOMAS KEATING, London.  
October, 1886. 26 ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoon Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1876, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

"PAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 11TH, 1886.

### DEATH.

At 6.20 a.m., on the 10th instant, at No. 122-2, Bluff, of Diphtheria, BERTIE CORRIE, aged 4 years and 8 months.

### SUMMARY OF NEWS.

It is reported that Her Majesty the Empress will visit Kyōto early next year.

H.I.H. PRINCE HARYU paid a visit the 6th instant to the Gyoda Elementary School at Shiba.

THE Government has purchased 135,000 *tsuba* of land in Tsushima to be used for the erection of forts.

THE naval factory at Tsukiji is at present engaged in the manufacture of steel plates for two torpedo-boats.

THE total number of articles patented since the issue of the patents notification up to the 26th ultimo was 1,415.

PRINCE IWAKURA TOROSADA gave an entertainment the 3rd instant, in the Rokumei-kan, to a distinguished company.

A COMPETITIVE exhibition of cocoons, raw silk, and marine products will be opened in Fukuoka Prefecture in March next.

COUNT KURODA, who was expected to return from Europe before January next, will not arrive before the middle of February.

MR. MITSUKURI SUMIHI, who was widely known for his literary attainments, died the 3rd instant in the capital at the age of 62 years.

It is stated that Count Yamagata has been

appointed superintendent of the fortifications shortly to be constructed in Tsushima and elsewhere.

Mrs. TONO RYŌEN, a well-known painter, died in the capital the 30th ultimo at the age of 79 years, after a long illness.

AN earthquake was felt in the capital the 4th instant, at 2.00.39 p.m., the vibration being 2 m., and the duration 20 seconds.

A LINE of railway from Wakayama to Osaka is projected. The route has been nearly surveyed, and the line will cost a million dollars.

H.I.H. PRINCE FUSHIMI, who lately attended the manoeuvres of the troops of the Sendai Garrison, returned to the capital the 3rd instant.

THE authorities are at present discussing the advisability of introducing electric lights into the Light-houses in place of the existing oil lamps.

THE students in the Tōkyō Commercial School, who are already skilled in the practice of gymnastic exercises, will be trained with the Snider rifle.

THE Conference at Nagasaki has ceased its sittings, and the complication is now a matter of discussion between the Government in Tōkyō and Peking.

MR. SHIMAZU TADAYOSHI, late chief of the Satsuma clan, will shortly arrive in the capital along with Viscount Shimazu Tadaaki, late chief of the Sadowara clan.

MR. IWASE KOSHURO, of the Yokohama Specie Bank, residing at Koganecho, Ota, was attacked by cholera the 5th instant at noon, and died the following day at 5 a.m.

THE total number of cholera patients in Kyōto, from the first appearance of the disease to its disappearance, was 3,105, of whom 602 recovered and 2,403 died.

THREE hundred students of the First Higher Middle School, under the command of a gymnastic teacher, marched to Aoume in Kanagawa Prefecture the 4th instant.

AT the commencement of the New Year, the pupils of the Kyōto Female Normal School will wear clothing of foreign pattern, which will be supplied by the authorities.

THE consumption of beef in Japan has increased to such an extent that the authorities are practically taking up the subject of the best method of breeding, rearing, and feeding stock.

THE Naval Department has decided to establish a torpedo school at Nagama, Sagami, and to engage an instructor from England with the object of forming a torpedo corps.

JOHN WILLIAM DRAKE, the master of the *Normanton*, was tried at H.B.M. Court on Tuesday and Wednesday last, before Judge Hannen and a jury. He was found guilty of man-

slaughter through negligence and sentenced to three months' imprisonment.

THE total amount contributed by Prince Kujo and other peers and gentlemen towards the relief fund of the families who lost their houses during the late fire at Akasaka is *yen* 376.

THE 6th and 12th instant being respectively the anniversaries of the late Gomomozono Tennō and Kokaku Tennō, the usual ceremony will be observed in the Palace on those dates.

LIEUTENANT KANAGI, of the Hydrographical Bureau, who had been in Shikoku and Kishu surveying the coast, returned to the capital the 6th instant, his mission having been completed.

THE local Governors in Cities and Prefectures have hitherto paid visits to the localities in their jurisdiction at their discretion, but in future they will have to pay visits twice a year, in spring and autumn.

GENERALS NOGI AND KAWANAKI have been ordered to report on foreign military systems and weapons. They will leave Japan about the end of this month, and will be absent about eight months.

MR. MORI, Minister of State for the Educational Department, will proceed shortly to Kiushiu along with Mr. Kiba, his private secretary, in order to inspect the state of education in the south.

A COMET has recently appeared in the sky, and the Meteorological Observatory has surveyed its position, which was as follows:—On December 4th, at 5h. 35m. 2 sec. a.m., long. 15° 36' 6", lat. 18° 02' 5" N.

A DRAFT of the Press Laws, which has been under compilation by Messrs. Suematsu and Kiyoura, has been almost completed, and will be submitted shortly to the Cabinet Office through Count Yamada.

H.I.M. THE EMPEROR, accompanied by Marquis Tokudaiji, Grand Chamberlain, and attended by a number of secretaries of the Imperial Household and Court Physicians, visited the Naval College the 7th instant.

IT is announced that the visit of His majesty the Emperor to Kyōto will take place in January, and that an appropriation of one million *yen* has been made by the Treasury to defray the Imperial expenses.

THE total amount of convertible notes issued by the Nippon Ginko, in circulation up to the 30th ultimo, was *yen* 35,696,000, for which there was a reserve fund of *yen* 20,738,000 in gold and silver, and *yen* 13,958,000 in Bonds.

LIEUT.-GENERAL OZAWA, Vice-President of the General Staff Office, left Marugame the 5th instant for Kotobira to visit the neighbourhood of Takamatsu. Lieut.-General Ozawa ascended Mount Yashima and Yakuri the following day.

COUNTS ITO, YAMADA, AND OYAMA arrived at Tsushima the 7th instant. Their Excellencies

were to spend two days on the island to inspect the location of forts, and are expected to return to the capital about the 12th instant.

No cholera cases occurred in the capital from the 2nd to the 6th instant, and among the four patients who are receiving medical treatment at the hospital in Matsucho one recovered the 6th instant, and there is every chance of the recovery of the remainder.

A MOVEMENT has at length been made in the Import market, and sales of Yarns, Cotton Piece-goods, and Woollens have shown a considerable improvement. The Metal market is quiet, though there has been some demand for Pig Iron; the prices offered, however, have been unsatisfactory. A few sales of Kerosene have been effected, but dealers do not appear anxious for business, and holders are firm. Sugar of all kinds has been more or less enquired for, and several thousand piculs of the sorts in demand have changed hands, firmer quotations being the result. Raw Silk continues in good demand, and prices keep up, the same applying equally to Waste. There has been quite a spurt in Tea, news from the consuming markets having induced the purchase of several thousand piculs of leaf. Foreign Exchange had taken a turn again in sympathy with a rise in silver, and, went up steadily during the week, but the latest "wire" indicates a downward tendency, if not an absolute fall, in silver, and exchange closes weak.

#### NOTES.

THE Nagasaki negotiations have evidently entered a new phase. For the present the public must be content to remain ignorant of the exact train of events which led to the separation of the Commissioners, as reported some days ago by the vernacular press. Separated they have, however. Of that there can be no doubt, and the question now is—what is to be done next? Is this miserable street brawl to be magnified into the dimensions of an international complication? Count Inouye—according to the *Jiji Shimpō*, and we can readily credit our contemporary's assertion—is most unwilling to be a party, directly or indirectly, to such a bungling piece of statesmanship, and His Excellency's views are said to be shared by the Chinese Representative in Tōkyō, who, throughout the whole business, is credited with having maintained a moderate and prudent demeanour. At the same time, it is obvious that Japan cannot afford to leave things as they are. Such a device might suit China well enough in some respects, though we have too much faith in her good sense to suppose that she would be willing to contemplate the creation of an open sore in her relations with Japan. Prince Chun, the *Nichi Nichi Shimbun* tells us, is solicitous on account of the fair fame of his country's Navy, of which he is the head, and is consequently averse to admitting the truth of any charge preferred against Chinese men-of-war's men. It is even hinted that this reluctance on the Prince's part is largely responsible for the obstructions and procrastinations by which the course of the negotiations has hitherto been chequered. But from what we know of Prince Chun it is very difficult to imagine him capable of pushing his partiality to the verge of an international quarrel, or falling

into the error of imagining that he can clear the reputation of the Nagasaki brawlers by simple evasions. The affair must be cleared up somehow or other. A telegram lately received in Tōkyō represents the Viceroy Li as desirous of speedily arriving at a peaceful solution, and ascribes to him the intention of sending Wu Ta-ching to Japan as special commissioner for that purpose. We sincerely hope that such is the case. Rumour says that the negotiations will henceforth be conducted in Tōkyō, but we believe this statement to be premature. Meanwhile, the name of Mr. Mutsu Munemitsu is mentioned as a probable addition to the list of those charged with the management of the business.

THE conviction of the master of the *Normanton* has, to a certain extent, taken the public by surprise. Viewed by results, there could be very little doubt that either the captain or the officers of the ship had been guilty of culpable negligence in some form or other, and that to this negligence was attributable the death of the passengers. But it seemed scarcely probable that negligence of such a nature could be proved to the satisfaction of a jury, or, at any rate, could be proved so conclusively as to justify a verdict of manslaughter. Could the defence have shown, for example, that the orders given by the captain were generally sufficient, and that means of executing such orders were presumably at hand, then the jury would have been obliged to decide that he had discharged his duty to the extent required by law. Failure to execute orders on the part of the persons to whom they were addressed would not necessarily have been chargeable against the person issuing them. Now it was shown that, so soon as the dangerous condition of the vessel was ascertained, the captain did issue an order for the lowering of the boats and the passing of the passengers into them. But then came the question—had the captain any reasonable grounds for assuming that his orders would be efficiently carried out without further intervention on his own part. If he had not such grounds, and if, not having them, he did not further intervene, then he was obviously guilty of culpable negligence. Now, to be justifiably confident that his orders would be thoroughly obeyed, the captain ought to have known one of two things. He ought to have known by actual experience that the recipients of his commands were competent, and could be trusted, to execute them; or he ought to have known that every available method had been previously employed by himself to educate such competence. To state the case in a more concrete form—he ought to have been assured that his officers and crew were accustomed to saving life, especially Japanese life, in circumstances of grave danger; or he ought to have been in the habit of so exercising and organizing his men that their prompt and disciplined behaviour could be relied on. But, in point of fact, he had no means of estimating the probable conduct of his officers and men, nor had he ever made any attempt to prepare them for such emergencies. Nevertheless, under these circumstances, he confined himself so far as appeared from the evidence—to the mere issue of an order, and took no steps whatsoever to see it carried out. It certainly was not carried out. So little attempt was earnestly made to carry it out, that one of the two alley-ways

between which the passengers were distributed, was never visited from the time the vessel struck until the time she disappeared beneath the waves. Such was the broad aspect of the case upon which the jury had to decide, and, although juries are generally and properly averse to forming broad decisions, we do not see how a verdict of acquittal could possibly have been rendered in this instance. The Judge's charge was a model of impartiality, and the case was conducted throughout—excepting, perhaps, a few words in the opening speech of the Crown Prosecutor—with a degree of fairness and dispassion which reflects high credit on all concerned. We do not doubt that much sympathy will be felt for Captain Drake. After all, it may not unfairly be said that his chief fault was failure to exhibit qualities which, when they are exhibited, elicit emphatic praise. His sentence is not heavy. But to a man in his position, three months' imprisonment means as much as three years. It carries with it life-long degradation and the irrevocable blasting of all his prospects. On the other hand, if, from this point of view, the aspect of justice looks unusually stern, the fate of the twenty-five victims of Captain Drake's negligence makes a much stronger claim on our pity.

THE record of the *Normanton* case suggests an interesting reflection; namely, that, under existing circumstances, a British subject arraigned at the instance of the Japanese Government, is virtually deprived of the assistance of Counsel. Messrs. Lowder and Kirkwood, being both in Japanese service, would obviously be precluded from appearing to defend such a case, and Mr. Litchfield, as Crown Prosecutor, cannot take part in any trial out of which a prosecution on the part of the Queen might, in any conceivable contingency, arise. Captain Drake was obliged to procure legal assistance from Shanghai. Strictly speaking, Mr. Kirkwood might have conducted his defence, the Queen, not the Japanese Government, being prosecutrix. But, for obvious reasons, Mr. Kirkwood could not accept a brief in such a case. Captain Drake had, therefore, no alternative but to go undefended or summon a barrister from Shanghai. It is not every one who can afford to bring a barrister from Shanghai, and, on the other hand, the number of instances where such a necessity might arise, are evidently too few to constitute sufficient inducement to another barrister to settle in Yokohama. On the whole, the matter is perhaps more curious than important. It shows chiefly that the community is too small to be thoroughly equipped in a legal sense.

THERE is no doubt of the great efficiency of the Japanese police, but certainly their powers are ample enough. A good story illustrative of both these facts has just come to us: Last month a foreign resident of Tōkyō, who had carpenters about his house, missed a pocket case of surgical instruments. A few days afterwards a policeman waited upon him and asked him if he had lost anything from his house. Receiving an affirmative answer, the constable wished for a description of the missing article. When he had got this he left. In the evening the owner of the stolen goods was summoned to a police-station in the outskirts of the capital, and on arrival there received his case of instruments intact, along with another small belong-

Original from

ing which he had not missed. The story of their recovery was as follows:—A youthful carpenter, who had access to the gentleman's study, stole the articles, and thought that he would return to his native province and thus escape discovery. He was making his way, with the precious bundle of his worldly possessions on his back, past the police station we have already referred to, when the guardian of the public peace seemed to detect something suspicious in his gait. He beckoned the unwilling pedestrian, and made a thorough investigation into the contents of his bundle. Naturally he was not satisfied with the vague explanation that the case of instruments had been bought somewhere in Kio-bashi-ku. The man was forthwith put into one of the little cells of the station where he lost his stubbornness and made a full confession. He is now undergoing three weeks' imprisonment for the offence.

THE prospects of gold mining in Southern Africa appear to have turned people's heads. We read of crows flocking to the diggings, and of two hundred thousand pounds sterling already invested in plant. But surely it is somewhat incredible, this great gold find. South Africa is no longer a *terra incognita*. Above all, its auriferous properties are not suggested now for the first time. Ever since the Portuguese discovered the Cape of Good Hope route an insignificant trade in gold dust has been carried on with the Dark Continent. The business of seeking for the yellow dust has been engaged in by all the negro tribes for centuries, either on their own account or on that of European merchants. Yet, neither by these people, nor in the researches of Burton, Grant, Speke, Livingston, Drazza, or Stanley has a veritable gold mine been discovered. It is not so very long either, since the more enterprising section of the public squandered considerable sums of gold in a fruitless attempt to strike a deposit of the precious metal in the Transvaal. At the same time, we observe that the hopes now held out do not refer actually to any discovery of deposits, but rather to the employment of new chemical processes for detecting the presence of auriferous particles in certain mineral agglomerations, and also to the use of machines which render mining operations profitable even through the quantity of gold in the quartz is only one ounce per ton. Such a programme looks attractive to ignorant persons, and is also sufficiently vague to save the reputation of its formulators. We cannot help wondering, however, whether the gold-bearing strata already in process of exploitation have been so far exhausted that mineral agglomerations containing only one ounce of gold per ton are worth attacking. And if they have not been exhausted to this point, why penetrate to the wilds of Africa in search of less paying "gravel"? If chemical science advances so fast, it will ultimately be possible to find anything anywhere, and retorts and crushing mills will form a prominent feature of every landscape.

\* \* \*

It is amusing to find writers who have been careful hitherto to sit astride the bimetallic fence, now coming forward and asserting that the new discoveries of gold will remove one of the chief causes of the depreciation of silver as well as of the depression of trade.

These gentlemen do not say "the chief cause," but "one of the chief causes." They are still on the non-committal tack. None the less is their admission fatal to their previous contention. For they have hitherto stoutly denied that the currency question was responsible, to any serious extent, for the depression of trade, or that the fall in the gold-value of silver could be traced to anything but the abundance of the latter metal. They are behaving like a surgeon who, having amputated a man's leg, should say:—"It is folly to pretend that the loss of a limb impedes your gait, yet if you can come across a wooden or cork leg, I have no doubt that your inconvenience in walking will disappear." For our own part, we do not welcome new discoveries of gold, however rich, because we apprehend that their effect might be to encourage the demonetization of silver, or at all events to postpone the only radical remedy for existing evils; namely, the establishment of a fixed par of exchange between gold-using and silver-using countries.

CERTAINLY the railway staff of the Tōkyō-Yokohama line deserve great credit for their honesty. Repeated instances have come to our notice where articles left in the train—articles of such a nature that their irrevocable loss would have been almost certain in any other country—have been promptly restored to their negligent owners. A case occurred the other day. A gentleman went from Tōkyō to Yokohama, carrying with him a new and exceptionally natty umbrella. Three days after his return it dawned upon him that he had lost his umbrella. But where? He imagined that he had used it since his return from Yokohama. At all events, even if it were certain that such was not the case, he had visited so many places in Yokohama that it seemed hopeless to think of tracing the missing article. A few enquiries were fruitlessly made, and then he reconciled himself to his loss. Not so his servant. The latter went to the Shinbashi Terminus, described the umbrella, and was immediately informed that it had been handed over to the police, who had it carefully wrapped up waiting to be claimed. One would like to reward honesty of this kind, but to tip a policeman or a railway-porter in Japan is an experiment which nobody is likely to try twice.

MR. JAMES MAIR DIXON has added another to the useful publications for which Japanese students have to thank him. His "English Lessons for Japanese Students"—a compact yet comprehensive volume—is the outcome of seven years' experience of most successful teaching, and is presumably the best solution that the author can offer of the difficulties which present themselves in the more advanced study of English. Taking Morris, Abbott, Thring, and Fielder as authorities and guides, he has approached the different grammatical problems from the common-sense, or logical, stand-point, and has discarded what appear to be Latin elements in the ordinary English Grammar. The rules on the Articles, as well as those in other parts of the book, are illustrated by examples from contemporary writers. Thus, in the first chapter we recognise quotations from Cowper, Trollope, Miss Thackeray, Miss Austen, A. Helps, Goldsmith, Mrs. Henry Wood, Thackeray, Scott, Tennyson, de Quincey, and the *Japan Mail*. Mr. Dixon is particularly successful in the treatment of "shall" and "will."

His work in this section seems better than that of Rowe and Welt, and in Indirect Speech he certainly is much more detailed. In a separate chapter we find a number of valuable hints embodied. Here, *inter alia*, we observe that Mr. Dixon's dictum with regard to the use of "No," differs from that of Professor Nichol, who, in his "English Composition," makes "None" singular. Mr. Dixon says that it is plural, and supports his assertion by a quotation from Trollope. A special chapter is also devoted to the asking and answering of questions. It is noticeable that the Japanese negative attaches itself much more closely to the verb than the English "not," and indeed forms a part of the question. Errors of idiom are apt to arise from this cause, and Mr. Dixon has done well to guard against them. In the "propositions," too, his method of treatment is good. These, while their use is learned by English children in the nursery and the play-ground, require exceptionally full treatment in the case of grown up pupils in a foreign land. We have often thought, indeed, that, for the use of Japanese students, a handbook of propositions would be of immense assistance. Mr. Dixon has solved the difficulty as far as the limits of his work allow, and as usual he illustrates every thing by excellent examples. Accent and prosody also receive fresh and thorough treatment at his hands. Japanese using his book will readily become acquainted with the rhythmical structure of good English prose and poetry, a department which has its own laws well worthy of study and only too much neglected. The book concludes with an appendix containing the author's favourite ideas on the subject of tense simplification. These are offered tentatively: Mr. Dixon evidently feels that he treads disputed ground. We congratulate him on his book, and Japanese students on the possession of such a valuable aid.

AMONG the marvels which impertinent arithmetic discloses in the Old Testament few are more striking than the account of the accumulations of Solomon and David for building the temple at Jerusalem—accumulations which, when expressed in modern terms, amount to a thousand millions sterling, or ten thousand tons of gold. This fabulous treasure is said to have been brought from a district called Ophir by the united fleets of Tyre and Jerusalem, and the Ophir of those days is now identified as a part of Mysore where gold-fields are being worked with great and unlooked for success. We read in the *Statesman of India* that the Dewan of Mysore, in his recent budget speech before the Mysore representative assembly, reviewed the history of the new discoveries there in the following language:—"It is now beyond doubt that gold-bearing strata have been reached, and gold in considerable quantities is being brought to the surface day by day. Already have Rs. 33,368 been paid into his Highness' treasury by one Company alone (namely, the Mysore Company) as royalty for the gold extracted. But in forecasting the future of this industry, it is needless to say that it behoves us to speak with great caution, for in gold-mining everywhere, there is always an element of speculation and uncertainty. But there can be no harm in my referring to a fact of which you are so well aware, that history and tradition alike point to Mysore as a country which, in the past, produced large quantities of gold, and that there

are to be seen in the present day the remains of extensive ancient workings scattered all over the country. If the experience gained in the Kolar field can be accepted as a guide, there is little reason to doubt that the extraction of the precious metal in remunerative quantities in various parts of the province, awaits only the application of modern appliances on a suitable scale."

A TELEGRAM has been received in Tôkyô announcing the resignation of the French Ministry. Defeated on the Budget, M. de Freycinet has resigned. We have no intelligence indicating exactly what financial scheme failed to obtain the approval of the Deputies, but our latest detailed advices show that an apparently irreconcilable difference of opinion existed between the Minister of Finance and the Budget Committee. The latter had rejected the former's estimates, and presented to the Chamber a Budget of their own, providing for an increase of the spirit duties, the imposition of an income-tax, a reduction of the sinking fund, an augmentation of the succession duties as well as of the corn duties, and certain retrenchments, the net result of the whole project being an addition of 104 millions of francs to the revenue. M. Sadi Carnot was disposed to resent this rebuff by resigning immediately, and as others would have followed his example, a reconstruction of the Cabinet must have been made. The crisis was postponed, however, by a promise on the part of M. Carnot's colleagues that they should support his Budget against that of the Committee. It would appear that their ability was not equal to their good will, and that the Committee's scheme, or rather that of M. Wilson, has carried the day. Clever financiers as the French are, their Budget is beginning to present almost unmanageable difficulties. During the past fifteen years each Minister of Finance seems to have thought only of tiding over his own embarrassments, without much regard for those of his successor. The consequence has been a perpetual growth of "Extraordinary Budgets." There is an Extraordinary Budget for War; an Extraordinary Budget of Public Works; an Extraordinary Budget of Guaranteed Interest; an Extraordinary Budget of Schools; an Extraordinary Budget of Parochial Roads, and so on. It is a convenient device, excellently calculated to conceal ugly truths. But sooner or later facts have to be looked in the face, and the probability is that the Budget will prove a stumbling block to a good many Ministries besides that of M. de Freycinet.

THE ducal house of Buccleuch, the wealthiest of the Scotch dukedoms, has been thrown into mourning by a tragical event. The Earl of Dalkeith, eldest son of the duke, and better known in Scotland by his previous title of Lord Eskdail, which he held until the recent death of his grandfather, went out deer-stalking with a party in the Achnacarry Forest on the 17th of September last. Achnacarry is the seat of Cameron of Lochiel, brother-in-law of the duke. After a day of unsuccessful stalking they succeeded towards evening in getting within 30 yards of three fine stags. His lordship aimed and fired at one, but the animal, though hit, made off and disappeared. An eager pursuit brought the earl to a steep slope where he unfortunately slipped. In his descent he came on a bare flat rock, where his gun exploded,

inflicting a terrible wound on the left arm and shoulder. He survived only about an hour. The spot is in one of the wildest parts of the forest, and twenty hours elapsed before the party summoned from the castle could arrive. The Buccleuch family are highly esteemed in Scotland, and much sympathy is felt for them in their bereavement. The deceased Earl, who was in his 26th year, was a keen sportsman and cricketer, and had organized at Langholm, his native district, one of the best local cricketing clubs in Scotland.

"WHAT are you reading there, my man?" asked a foreigner in Tôkyô, addressing himself to a jinrikisha coolie, who, seated on the foot-board of his vehicle, was busily conning a book. It was a bitterly cold night, and between the difficulty of fully utilizing the feeble flame of his farthing dip, keeping his book in a legible position, and at the same time looking out for a fare, the man appeared to be about as uncomfortably situated as might be. "I am trying to learn English, Sir," was the reply, given with all the light-hearted courtesy of the genuine Japanese. It was quite true. This jinrikisha coolie, wrapped in his threadbare blanket, was poring over a First Reader; refreshing his mind with stories of little Annie and her lampkin, the dish that pursued the spoon, and the daisies that twinkled in the dew. So it works its way, this unmusical tongue of ours. "Syllables," said John Selden, "govern the world." He might have converted the aphorism into a prediction by saying "Anglo-Saxon syllables."

THE following note, which we take from the *St. James's Budget*, should be interesting in Japan where faith in the merits of vaccination has not yet had time to become universal:—"Some statistics were presented to the Metropolitan Asylums Board at its meeting on Saturday in reference to the small-pox hospital at Homerton; and the figures should not be without interest for the Anti-vaccinationists. In the course of 1885, 618 small-pox patients were admitted. Of these 425 were certainly and 91 doubtfully vaccinated; 102 were confessedly unvaccinated. Now, as the proportion of vaccinated to unvaccinated in the metropolis is certainly not less than ten to one, and probably a good deal higher, it is evident that the unvaccinated class furnishes twice as many cases of small-pox as it ought to furnish. But this is not all. The average mortality was 22 per cent. The patients were divided into four categories: those with the marks "good," "imperfect," "invisible, said to be vaccinated," "unvaccinated." Of the first class only 20 were admitted, one died; of the second, 405 were admitted, 48 died; of the third, 91 were admitted, 34 died; of the last class out of 102 admissions, 60 died. The percentage of deaths, therefore, gradually rises from 5 in the cases of persons properly vaccinated, through 11.82, and 37.36 in the intermediate classes, to the appalling mortality of 58.82 among the totally unprotected. So an unvaccinated person (as far as these figures go) is twice as likely to catch small-pox as one who has been vaccinated, and more than eleven times as likely to die of it if he does."

THE third annual report of the National Marine Insurance Association, Limited, of which Messrs. Adamson, Bell & Co. are agents in Yokohama, shows that, all the risks for the

year 1885 having run off or been re-insured, a careful estimate made of all known and unknown claims and liabilities, and provision having been made for all charges, including a proportion of the preliminary expenses, a balance remains from which the directors recommend the shareholders to declare a dividend for the year of 8 per cent., of which 3 per cent. has been paid as an interim dividend. The directors propose to make a payment to the contributing shareholders of 5 per cent. on the amount of premiums (£59,381 5s. 2d.) paid by them, and to carry a sum equal to half the amount so required to the credit of the reserve fund, in accordance with No. 111 of the articles of association. The final account for 1885 will be circulated among the shareholders, together with the accounts of the current year, in March next. The directors are pleased to be able to state that since the last general meeting applications have been received for the unallotted balance (3,195) of the 15,000 shares originally reserved for the Colonies, and thus the paid-up capital of the company, £100,000, is now fully subscribed. The accounts show that there was carried to the balance-sheet a reserve from the final account of 1884 of £1,657. On the underwriting account the total premiums to 31st December, less returns and reinsurances (£22,910), amounted to £116,447; the claims paid, less salvage and reinsurance recoveries, being £40,618, and office and other expenses bringing up the total on this side of the account to £55,395, which leaves a balance of £61,052. The balance-sheet at 31st December last showed that the paid up capital amounted to £93,610, which, combined with the balance from the underwriting account, the reserve from the final statement of the preceding year, and a number of small items, to form a total of £166,218. On the other side of the account, investments and fixed deposits are set down at £138,241; cash in bank and on deposit at £8,193; premiums due 8th January, 1886, at £8,731; preliminary expenses, £5,500, which, with other smaller sums, square the account.

A STRIKING fact showing how national tastes change has been brought to light by a recent writer. In the time of Mary Queen of Scots, the people of the south-west of Scotland salted and ate the eels which were caught in vast numbers in the lochs. This fish formed one of the staples of their food. But now, though eel remains a favourite dish in England, the people of Scotland would as soon eat a toad or a worm. The lower classes look upon it with repulsion. *De gustibus non est disputandum*, we know, but how can we account for this singular change in taste? Perhaps a few centuries will see cuttle-fish an object of repugnance in Japan.

THE official trial of another big gun, manufactured at the Osaka Arsenal, has just been concluded satisfactorily at Otsugawa. The piece is an eleven-ton gun of 28 centimetres calibre, and is intended for coast defence. The results obtained were excellent. A range of eight kilometres was attained with the service charge, and the precision of the shooting is said to have been remarkable. The appurtenances, too, worked without a hitch and were pronounced unexceptionable. Major Grillo, the foreign director of Ordnance in the Arsenal, has reason to be gratified with the work which has been accomplished during his régime.

Original from

SCIENCE is sometimes an exceedingly inconvenient thing. Witness the following story of a recent event:—In a large factory in which were employed several hundred persons, one of the workmen in wielding his hammer, carelessly allowed it to slip from his hand. It flew half-way across the room, and struck a fellow-workman in the left eye. The man averred that his eye was blinded by the blow, although a careful examination failed to reveal any injury, there being not a scratch visible. He brought a suit in the courts for compensation for the loss of half of his eyesight, and refused all offers of compromise. Under the law the owner of the factory was responsible for an injury resulting from an accident of this kind, and although he believed that the man was shamming, and that the whole case was an attempt at swindling, he had about made up his mind that he would be compelled to pay the claim. The day of the trial arrived, and in open court an eminent oculist retained by the defence examined the alleged injured member, and gave it as his opinion that it was as good as the right eye. Upon the plaintiff's loud protest of his inability to see with his left eye, the oculist proved him a perjurer, and satisfied the court and jury of the falsity of his claim. And how do you suppose he did it? Why, simply by knowing that the colours green and red combined made black. He prepared a black card on which a few words were written with green ink. Then the plaintiff was ordered to put on a pair of spectacles with two different glasses, the one for the right eye being red, and the one for the left eye consisting of ordinary glass. Then the card was handed him, and he was ordered to read the writing on it. This he did without hesitation, and the cheat was at once exposed. The sound right eye, fitted with the red glass, was unable to distinguish the green writing on the black surface of the card, while the left eye, which he pretended was sightless, was the one with which the reading had to be done.

*The Times* of October 13th devotes no less than five columns to a consideration of the trade reports of Her Majesty's Consuls in all parts of the world. The gist of these reports is set forth at great length by a correspondent in the form of an article, and *The Times* itself takes up the subject in its leading columns. The correspondent, after noting the fact that, during the first half of the present year, "the mercantile world was busily engaged in criticizing British Consuls," proceeds to collate the opinions expressed by the Consuls themselves with regard to mercantile matters, and shows that there is almost absolute unanimity among these officials as to the injurious conservatism of the British merchant. One and all they chaunt the same strain—the national inflexibility of the Englishman is enabling his rivals to oust him from markets where he once had an apparently indisputable monopoly. We cannot attempt to quote in detail the extracts given in *The Times* from the various Consular Reports, and to epitomise them would scarcely satisfy the merchants of this Settlement for whom they possess, or ought to possess, the greatest interest. Their burlen is invariably the same. "French, Germans, and Italians adapt themselves more easily to their foreign surroundings than Englishmen, who, as a rule, expect foreigners to submit to them, and be guided by their fixed methods of doing business,

without which no transactions are thought possible." This same unenterprising conservatism is precisely what Her Majesty's Minister and Her Majesty's Vice-Consul in Tokyo—from the recent Report of the latter of whom *The Times*' correspondent quotes largely—have been telling British merchants in Japan, very much to the umbrage of the merchants, who resent the idea that an official can know anything about their business, and who, staunchly fixed in their conservative grooves, refuse to admit for a moment that any methods save those they pursue, and have always pursued, can possibly be advantageous. The average British merchant, in fact, declines to have his portrait painted by any one but himself, and the natural consequence is that he fails to detect his own blemishes. *The Times* sums up the case succinctly and forcibly in its leader:—

The merchants are told plainly enough and from many quarters at once that for the loss of trade of which they complain they have in many cases only themselves to thank. They will not condescend to the methods adopted by their rivals. English trade has in times past had so little competition to fear that it seems to have run into fixed and invariable grooves. It has been conducted too much in the spirit of "Hobson's choice." If foreign traders did not like the goods which English traders offered them, they might go without. So long as they could get nothing better or nothing at all elsewhere, this "bump-tiousness," as one Consul bluntly called it, was tolerated. But times and circumstances have now changed. The foreign trader is now abroad and comes everywhere into rivalry with his British competitor. He knows that he must stoop to conquer. The British trader has not yet learnt to stoop, and therefore he has ceased to conquer. It is the old story over again of the old man beaten by the boy. If the Consuls are right, the old man must go to school again and humbly take lessons from his younger rival.

The conclusion is somewhat humiliating, but whether we like it or not, there can be little doubt that, in the main, the Consuls are right. They write independently from localities widely asunder, from Japan and Brazil, La Rochelle and the Pirzus, from Genoa and Oporto, and they are all in the same tone. The British merchant will not adapt his goods to the taste, fancy, or habits of the foreign customer, he does not open depôts for samples of his goods, he will not send out competent travellers who speak the language of the country in which they travel, he will not give foreign dealers the credit to which they are accustomed, and he will not quote prices and freights in the currency of the place at which the goods are required. This of course is a general and abstract statement, not to be taken with literal accuracy. It indicates the tendency and temper of British commerce as contrasted with those of its more pliant and enterprising rivals.

The superiority of English ways, of English patterns, of English goods, of everything English in short, is so incontestable, so self-evident to the unsophisticated Englishman, that it requires a strong effort of the imagination to understand that the foreigner may think differently—and imagination is not perhaps the strong point of the average British merchant. This sturdy self-assertion, however, and the qualities which lie behind it did much in former time to establish the supremacy of British commerce and to carry British manufactures to the uttermost parts of the earth. But other qualities and other methods are now needed. The English trader, if he is to hold his own in the future, must condescend to take a leaf out of the foreigner's book. He must not sit still and expect trade to come to him as it came to his forefathers. He must go out of his way to look for it, and when he has found it he must adapt himself to its new conditions. Monopoly has been superseded by competition, and Hobson's choice is obsolete. There is always another, and often a better, horse to be had nowadays over the way.

Nothing seems more singular in the recent history of England than the complete rebuilding of the Conservative platform. We have already described how Lord Randolph Churchill's opportunist policy took the public by surprise, and how it was generally supposed that he had altogether distanced his colleagues. Indeed, predictions were not wanting that the Cabinet in a body would decline to subscribe the new gospel. But a speech by Mr. W. H. Smith has dispelled these doubts. The Right Honorable gentleman declares that Lord Randolph's utterances had the full assent of his colleagues, and the Conservative Clubs and Associations throughout the

country have accepted this announcement as conclusive. The Bradford Conference, too, at which some symptoms of rebellion were expected to appear, ranged itself uncompromisingly in the opportunist ranks, and there can no longer be the least question that the passivity and inertia which formerly constituted the strength of Toryism are things of the past. Sir Edward Clarke has supplied two mottoes for the rejuvenated party. They are:—"Reform which serves to avoid revolution that destroys;" and, "A grievance admitted and unredressed is the most treasonable thing under heaven." There is something supremely audacious in the notion of a party which has been carried to power by an accident quite independent of general political principles, deliberately setting to work to secure its tenure by wholesale appropriation of the creed of its more popular rivals. The very boldness of the *coup* will contribute materially to its success. As for its morality, there is nothing to be said by the Liberals at all events. They may ridicule their opponents' mutability, but, like the angels who rejoice over the repentant sinner, they are bound in very decency to profess pleasure at the conversion of so many erring politicians. A question now arises as to whether the party should not change its name as well as its garments. To call it the Tory party or the Conservative party is an obvious and shocking paradox. This point is said to have been considered by the delegates at Bradford. Some were in favour of the term "National Party," but the inevitable abbreviation "Nationalists" suggested unpleasant inferences. The only good alternative seemed to be "Progressists," and this, rumour says, is likely to be finally adopted. Of course there is some discontent on the part of old Toryism. But outward expressions of such a feeling are either purposely restrained or lost in the general rejoicing over a reconstruction which brings the party into touch with the majority of the electors and thus secures a long lease of life. It is even asserted that this sudden activity on the part of the Conservative digestive organs extends to the assimilation of the cloture in its fullest sense, and that the first Government measure introduced when Parliament re-assembles will have reference to a radical change of procedure. Mr. Chaplin and a little band of staunch Tories still maintain an ostensible attitude of opposition, but their ultimate submission is scarcely open to question. Truly, it is a wonderful *volte-face*. Were Sir Leicester Dedlock living, he might well moralize over the opening of the flood-gates of anarchy and the demolition of the barriers of society.

\*\*\*

Meanwhile the Liberals, as may be supposed, appear to be prostrated by this daring *coup* of their adversaries. They taunt the Conservatives with incontinently changing their garments, but the Conservatives quietly reply that reforms are not the exclusive property of Liberals. There is nothing for it, therefore, but a new departure on the Liberal side also. What direction will it take? The prophets say that a radical reform of the House of Lords by abolishing hereditary peerages, the disestablishment of the Church, and extensive changes in the land laws are the planks which will be immediately nailed to the Liberal platform. On the other hand, it is understood that Mr. Gladstone opposes these measures, maintaining that the country is not yet prepared for them. A decision was ex-

pected to be taken at the Leeds Conference, but the Liberals were apparently unprepared to commit themselves finally to any definite line. They were willing to go as far as disestablishment in Wales, free schools and non-intervention in European affairs, but on the whole they may be said to have confined themselves to a general declaration of faith in Gladstonian principles and leadership. It does not appear that any opinion was pronounced by the conference with regard to the project which Mr. Gladstone is believed to have most at heart; namely, Irish local Government. Many persons predicted that the Conservatives' resolve to defer legislation on this subject until 1898 would be made the object of a special attack at the Conference, and that the Liberal delegates would be asked to declare urgency in regard to Irish affairs. Nothing of the kind, so far as the telegrams show, took place. And indeed it is easy to understand that the Liberals are disinclined to stake much upon the Irish game just yet. Without recovering some part, at any rate, of the strength which they lost by Lord Hartington's defection, they must know well that to insist upon anything whatever would be futile. But so far from seeking to restore the breach in the party, they appear disposed to widen it. Mr. Morley virtually told the conference that they must choose between Mr. Gladstone and Mr. Chamberlain, and the response of the delegates was unequivocal. The Government, therefore, may pursue its path undisturbed—a path the successive stages of which are expected to be, first, reform of procedure; second, legislation on the Irish land question, with recognition of the applicability of the same measures to England and Scotland; and finally, during the session of 1888, a sweeping local government bill for both Great Britain and Ireland. It looks very much as though the Leeds Conference, in obedience to Mr. Gladstone's behests, had refrained from any outspoken declaration of Radical principles; a degree of forbearance which does credit to the discipline of the Liberals, but which certainly will not conduce to the immediate resurgence of their party.

News of a strange disaster comes to us from Argyllshire in Scotland, a disaster singularly terrible, and, in these days of exact science, one that ought to have been foreseen and prevented. There are extensive granite quarries on the western shore of Loch Fyne, where blasting operations on a large scale are carried on. When what is known as a monster blast is to take place, the steamboat companies advertise the fact in Glasgow and Greenock, and usually carry a large company of excursionists to see so novel a sight as that of 80,000 tons of granite being hurled into the air by the action of several tons of gunpowder. On the last Saturday of September more than a thousand passengers stood on the deck of the *Lord of the Isles*, witnessing this spectacle. After the explosion the steamer touched at Crarae pier close to the Quarries, and over a hundred persons men, women, and children disembarked, the rest going on to Inverary. Those who landed at once made for the scene of the explosion, but no sooner had they reached the *débris* than one after another dropped down insensible, having succumbed to the sulphurous vapours which were now issuing from the crevices of the rock. Of nearly seventy who dropped, seven never rallied, among them several leading public men well

known in the West. Those who did recover were mostly brought round by the swallowing of water which induced vomiting and the ejection of the poison. It was a dog which succumbed first, from the fact that its head was nearest the ground, where the heavy and poisonous carbonic acid gas had gathered. The gases liberated after an explosion of gunpowder are 41 per cent. nitrogen, 52 per cent. carbonic acid, and 7 per cent. divided amongst carbonic oxide, sulphuretted hydrogen (rotten egg gas), marsh gas, oxygen and hydrogen. Half an hour more would have seen the harmless diffusion of these gases in the surrounding air.

LORD BRASSEY accounts for the failure of the *Galatea* to hold her own against the *Puritan* in the following exhaustive remarks published by *The Times*:—

The matches were sailed under conditions of weather freely admitted by the American yachtsmen themselves to be the most favourable that could be desired for the success of their champion vessel. The breezes were light, and the sea scarcely disturbed by a ripple. With stronger winds the *Galatea* might have done better, but there are essential points of difference which in all circumstances of weather should give an advantage to the American sloop over the English cutter of the latest type.

	DISTINCTIVE FEATURES COMPARED.	
	<i>GALATEA.</i>	<i>MAYFLOWER.</i>
Length over all	102.00	100.0
Length on water line	87.0	85.7
Extreme beam	16.0	23.5
Draught of water	13.50	9.0
	Tons.	Tons.
Ballast	81.50	48.0
Displacement	157.63	110.0
Tonnage, O. M.	171.74	171.74
Area of sail	Sq. feet.	Sq. feet.
Area of its vertical section	714.0	9,000.0
	147.0	85.0

The American sloop spreads 9,000 ft. of canvas, the *Galatea* has a sail area of 7,146 ft., while the ability of the *Galatea* to carry sail is conspicuously inferior: the displacement is 157.63 tons against the 110 tons of the *Mayflower*. The weight of ballast is 81.50 tons in the *Galatea* and 48.00 tons in the *Mayflower*. The reasons which have led to the introduction of the present type of English racing cutter are not far to seek. Our models have been designed under the baneful influence of an elaborate system of time allowance based upon tonnage, the measurement being determined by the length and breadth without reference to depth. Tonnage has been kept down by minimizing breadth, and the stability formerly derived from a wholesome proportion of breadth to length has been supplied by the less satisfactory expedient of a heavy weight of ballast carried at an increased depth below the centre of buoyancy. In racing yachts considerations of stowage and internal accommodation are subordinate to speed, but if a comparison be made under these heads, the broad hull of the *Mayflower* is better than the deep but contracted hull of the *Galatea*. The quality of sea-worthiness was not severely tested in the ordinary experiences of the summer season. The American yachtsmen, while satisfied with the type they have adopted for their own waters, do not consider the sloop as seaworthy as the cutter. On this important point of seaworthiness, and on the question of stability at considerable angles of heel, a serious trial at sea would probably show that the Americans have something to learn from their English brother-yachtsmen.

It is for the yacht club, and more particularly for the Yacht Racing Association, to consider whether the conditions have been calculated to secure the utmost perfection of form. If ample freedom to produce what is best be granted, we need not fear the result. Avoiding exaggerations on both sides, we may build up on the solid keel of an English cutter a hull not widely differing in form from that of the typical American sloop. It can be done, and pride and prejudice should not be suffered to bar the way to improvement.

JOSEPH PORTELL was brought up on Monday before C. R. Greathouse, Esq., Consul-General, in the United States Consular-General Court, charged with grand larceny and breaking out of jail. With the Consul-General there sat as assessors Messrs. R. C. Tilford and T. L. Brower. The Consul-General informed accused that he had been unable to obtain Counsel to undertake the defence. Accused, however, would have all the privilege of a lawyer on his own behalf. Portell, who requested proof of his citizenship and of the jurisdiction of the

Court, pleaded not guilty. R. McCance, deputy Marshall of the United States Consulate, gave evidence as to prisoner's flight from the jail. He missed Portell about a quarter past two, the 1st instant, and about ten minutes after it was discovered that the sum of \$479 had been taken from a drawer in witness's room. When brought back to jail prisoner had on a new overcoat, a muffler and hat, and told witness that he had paid \$15 for the coat, 50 cents for jinrikisha, \$1 for a hat, \$4.50 for an umbrella, \$2 for gloves, \$3 for a pocket-book, and \$10 for a watch and chain. Portell told witness he had picked the lock with a piece of wire. C. Lundberg swore to having arrested prisoner in Tôkyô on the 2nd instant, and to having handed over the money found on him to the Consulate. The prisoner made a sworn statement to the effect that he was born in Syracuse in August, 1856, of Italian parents. From Italy he went in 1878 to Cairo, thence he went to Athens and travelled in Greece and Turkey. He learned English in Malta in 1874 and 1878. He proceeded afterwards to India, going under his Italian name, and at Singapore was recognized as an Italian subject by the Italian Consul. He was eleven days at Hongkong, and then committed a theft for which he received six months' imprisonment from the English authorities. In Shanghai he stole £10 and some jewellery for which he was sentenced to six months' imprisonment by the Italian Consul. After he had served his term he was sent to Hongkong, whence he went to Kobe where he was put in jail for theft. The Court adjourned.

THE question of a Chinese labour invasion presents itself more and more vividly in Australasia. The *St. James's Budget* says:—The *Daily News* publishes a letter of painful interest on the Chinese labour question in North Australia. The writer is evidently not hostile to the emigrants from the Middle Kingdom. Only, he says, and most of us will agree with him, he wants to see the rich and promising country he inhabits an English settlement, and not "a mere Chinese colony under English supervision." The danger of this last undesirable consummation is, he declares, imminent. The supply of Chinamen is inexhaustible. Swarm after swarm visits the colony, makes its "pile," and returns to the "Flowery Land." And their presence is fatal to the white settler. They can "live and thrive" on a little rice and fish, they can lodge anywhere, they are exceedingly laborious and ingenious, and they never "strike." Trade after trade is passing into their hands, and they threaten to "live down" the white workman altogether. The writer took the chaplain's Chinese class one evening; and "their hunger and thirst after knowledge," he declares, "and the startling rapidity with which they get on is something fearful to contemplate." No joke, evidently.

HERE are some facts of a startling character:— "The Industrial Commission which is sitting in Belgium to inquire into the position of the working classes has found that among both masters and men there is practical unanimity upon one point. The working man wastes his substance in *cabarets*. Belgium is now the greatest beer-drinking country in Europe; the annual consumption per head of the population being twenty-five per cent. more than in Great Britain, and nearly 60 per cent. above the con-

sumption of Germany. Also it is third on the list of dram-drinking countries, 70 millions of litres of spirits being drunk every year. Twenty years ago there were 2,055 public-houses in Brussels; in 1881, when the last statistics were made up, there were (including the suburbs) 8,099. Since Belgium was separated from Holland in 1830, insanity has increased 104 per cent., crime 135 per cent., and the number of suicides 80 per cent. These increases are so utterly out of proportion to the growth of population, that the conclusion is irresistible that the drinking habits of the Belgians have a more than usually close connection with their morals and their sanity."

NEMIROVITCH, a fellow countryman of Skobelev, has published a biography of that remarkable soldier. The writer describes, among other things, the views held by Skobelev on financial subjects with regard to their bearing on the question of war or peace. They are curious views, not by any means calculated to support the general theory that Russia's indebtedness is a guarantee of good behaviour:—

"You ask me," said Skobelev to his future biographer, "how we could engage in a European war now that the rouble is worth only 62 copecks instead of a hundred? I reply that war is precisely the only business one can go into without capital. In 1793 the finances of France were in a worse state than ours. One franc in money was worth a hundred francs in paper. Did not this in itself help to make soldiers without shoes, without bread, and without pay, go and conquer from the enemy whatever they were in need of, and so to fill the State exchequer that the franc regained its normal value? Under Peter the Great we were very poor: after the Battle of Narva, to make cannon it was necessary to melt church-bells. One victory gained at Pultowa with these cannons sufficed to change the face of things and to make Russia a great Power. And the conquest of Russia by the Tartars? Do you think they undertook it because the exchange was in their favour? They were hungry, and had nothing to eat: that is why they came to us. For my part, if my opinion were asked, I should say that we ought to wait until the rouble has fallen lower still. We shall not have to wait long; for the German bankers, who lead us by the nose, will not lose much time in sending it down. Then the hour will have come. French and German bankers may look upon war as an economical heresy. They have weighty metallic reasons for so regarding it. Their money and their paper are exchangeable at par. They themselves are comfortable and fat. But when the Russian people has nothing but black bread to eat, when it is crushed by the weight of our debt, and is in danger every morning of dying of hunger, it will prefer death on the field of battle as less painful and more honourable."

THE vernacular press report that the Cabinet have decided to defer the settlement of the question relating to the Government's liabilities *vis-à-vis* the Japan Mail Steamship Company. The question is—Are the Government bound, by the terms of the charter, to disburse the whole difference between the Company's net earnings and the total sum required to make up its various reserve funds as well as the guaranteed interest of 8 per cent. on its shares; or is the Treasury's liability limited to the guaranteed interest? Nearly a million and a half of dollars depend upon the answer, and just at present the Cabinet apparently deem it more prudent to defer a decision. This involves the postponement of the annual meeting of shareholders; a postponement which will probably cause some discontent, and must, at any rate, have the effect of confirming the public's belief in the Treasury's liability.

SINCE General Boulanger began to occupy the field of public vision in France, it is said that *la revanche* is more talked about than it was at any previous period. Meanwhile, Germany is converting her rifles into repeaters; France is doing ditto, and the former is also renewing the experiment of utilizing dogs as means of com-

munication between the parts of an army in the field. *Apropos* the dog question, a correspondent of the *St. James's Budget* writes:—"The use of dogs in warfare, to which you referred yesterday, is no new thing. As long ago as 1476 the Battle of Grandson was fought and won largely by fighting-dogs. The Spaniards employed them extensively in their brutal work in South America. Vasco Nuñez took a regiment of dogs with him; and in one combat alone they are reported to have strangled more than 2,000 Indians. Pizarro, assuredly one of the most ruthless warriors who ever led even a Spanish army of the grim old type, naturally did not neglect such potent aid; and his dogs did much to win the Battle of Caxamalca. So valiantly, indeed, did they comport themselves, that it was ordered from Madrid that thenceforward the regiment of dogs should receive regular pay on the same footing as the human soldiers. History does not say who pocketed the money. Even our own "chivalrous" Henry VIII. joined a contingent of 400 fighting-dogs to the army he sent to aid Charles V. in his wars against Francis I. The nations of antiquity of course set us the example in this as in so many other things."

ON Thursday, the 2nd instant, at one p.m., as the *Sagami Maru*, Captain Kenderdine, was on the passage from this port to Kobe, a junk was sighted which showed signals of distress. The steamer steered for the junk, and on getting alongside found she was leaking badly. Captain Kenderdine took her in tow, with the intention of taking her towards Oshima, but at 4 o'clock she was found to be rapidly sinking, and, as the wind and sea were rising, it was found necessary to take the people—two men, one woman, and a boy—on board the steamer in order to save them, and they were then transferred to the *Sagami* and taken on to Kobe.

JAPANESE papers publish the following telegrams:—

(*Nichi Nichi Shimbun*.)

Nagasaki, December 8th, 5.25 p.m.

The sittings of the inquiry of Japanese and Chinese representatives, in connection with the Nagasaki affair, were suspended the day before yesterday.

(*Hochi Shimbun*.)

Nagasaki, December 8th, 5.50 p.m.

It is stated by the Chinese residents that Mr. Wu-ta-cheng will come from China in order to open a conference in Tokyo, and a number of Chinese vessels will shortly arrive at Nagasaki.

ASSUREDLY money is plentifully in England. Messrs. Guinness & Co. changed their brewing firm, the other day, into a joint stock company, and offered to the public stock amounting to six millions sterling. The public responded by applications which aggregated one hundred and twenty-seven millions. Fancy subscriptions to the extent of seven hundred and fifty millions of dollars in the course of a few weeks! The national faith in beer must be strong.

THE decoration of the Third Order of the Rising Sun has been bestowed on Dr. Edward Divers, F.R.S., a well-earned distinction, which will gratify his wide circle of friends. During the fourteen years of Dr. Divers' residence in the capital, he has devoted all the energies of an active physical frame and a singularly well-informed and acute mind to the furtherance of all that is best in science and scientific institutions in this land. Last April the professors

and students of the late Imperial College of Engineering presented him with a testimonial in recognition of his eminent services as their Principal, and the Government has now added its mark of high approval.

ABOUT six o'clock on Thursday morning a fire broke out in Akasaka, Omotecho Ichome, close to the Imperial Palace. A strong wind was blowing from the north, and in a short time a heavy column of smoke was rolling upwards. Happily, however, the fire burnt itself out on reaching the bluff, after destroying about two hundred houses. The quarter was a good one, inhabited by a well-to-do class of people.

WE understand that, in connection with an action which is pending against Captain J. W. Drake, of the *Normanton*, at the instance of relatives of Japanese passengers who were lost with the vessel, it has been decided to take the evidence of several of the witnesses who were examined in the criminal trial the other day, and who are about to leave the country.

WE beg to acknowledge the receipt of the following subscriptions to the *Normanton* fund, collected and forwarded by the *Hyogo News*:—

	DOLLARS.
Messrs. C. & J. Favre-Brandt .....	10.00
Messrs. E. H. Hunter & Co. ....	10.00
Two Friends .....	15.00
A Lost Wager (Yokohama) .....	10.00
Already acknowledged .....	975.00
Total to date .....	1,015.00

M. BERTIN, the distinguished French naval constructor, who is in the service of the Japanese Admiralty, has been decorated with the Third Class of the Rising Sun. M. Bertin was already in possession of the Fourth Class Order. It had been conferred on him for services in connection with Japanese students in France.

WE regret to learn that a casualty has occurred to the Messageries Maritimes steamer *Saghalien*. The particulars as reported in the Hongkong papers are to the effect that the French steamer has been run into by the *City of Peking*, the former vessel having been cut down to the water's edge, the latter sustaining no damage. The injured vessel has since been docked.

AS an instance of the erroneous statements sometimes made by vernacular journals, we have it on a high medical authority that a paragraph recently published by the *Mainichi Shimbun*, to the effect that small-pox is prevalent in Yokohama, is absolutely incorrect.

THE Bluff property No. 111-A, consisting of 341 *tsubo*, the ground-rent of which is \$40.92, was sold by auction on Saturday by Mr. F. A. Cope for the sum of \$2,000, the purchaser being Mr. H. J. Gorman on behalf of a client.

FIRE broke out in one of the workshops in Tobe Gaol shortly before six o'clock on Thursday morning. It got under in an hour, but not until after several buildings had been destroyed.

THE *George F. Manson*, with coals from Newport for Yokohama, is reported to have put into Falmouth October 19th with loss of sails, pumps damaged, and side ports leaking.

THE *Camelot*, before leaving for Kobe, went down to Yokosuka to discharge a 22-ton gun, which, we understand, is one of a number of pieces of ordnance of the same calibre now being manufactured for the Japanese Government.

## WOMAN-WORSHIP.

"Gross hearts and purblind eyes to make  
An idol of a soul so sweet."

TWO Yorkshire men, as they returned one evening from church service, were eagerly discussing a point in theology. The authority of ST. PAUL was brought forward with great force by one of them to clinch finally an argument favourable to his side of the question. His friend saw no escape from the logic, but, goaded into heterodoxy, denied the authority:—"I'm thinking PAUL was wrang there."

On no point would the modern religious world more readily admit that PAUL was mistaken than on his views regarding the relations of the sexes. Orthodox everywhere else along the line, ladies who come to mission work in the East are apt to be rebels here. ST. PAUL's teaching is too plain-spoken to be glossed over; he relegates woman to a wholly inferior sphere. The teaching of the New Testament on the subject is almost exactly in accordance with the views of a conservative Japanese; and it would take little skill in dialectics for the latter, using the Testament as his authority, to vanquish in argument a fair proselytizer. "Let the woman learn in silence with all subjection. But I suffer not a woman to teach," writes the Apostle of the Gentiles. The position woman has gained in modern Europe and America has been gained in the teeth of PAUL'S injunctions.

It is a difficult task to reckon up exactly the amount of debt we owe to the different institutions of the ancient world whose legatees we are. Greek culture, Roman law, Hebrew faith, and, Teutonic home life, all claim our gratitude. To ascribe all the blessings we enjoy, and—strange claim—all our material prosperity, to Christianity, a religion of enthusiasm, is mere ignorance and bigotry. The whole history of the world disproves such assertions. And among other claims, the claim that Christianity has given woman the proud position she now occupies in Western lands, can scarcely be decently maintained. The English or American Miss who holds her head so high, and exacts so much deference from all around her, is the direct heir, not of the humble and submissive MARIES of Scripture, but of the freeborn Teuton lady. The respect which she receives is the same respect which the Teutons of old paid to their women.

In ancient Greece women played a very subordinate rôle. Living within a strictly guarded interior, the best women of the Greeks were never heard of, but fulfilled in privacy and seclusion the duties of wife and house-mother. Those women who did come forth into the blaze of day either left names which are bye-words, like the shrewish XANTIPPE, or brought disaster on themselves and others, like SAPPHO and HELEN. We wonder, indeed, that so little bears the stamp of female intellect in

Grecian art and letters. And yet the Greeks had, among their divinities, a high place for women. When Christianity gave its Trinity to the Roman-Greek world, it furnished no successors to HERE or MINERVA.

Quite lately fault was found with words used by the representative of the munificent HOLLOWAY, whose pills have given a great institution to England, The Royal Holloway College for Women. Speaking of its aims, this gentleman dwelt almost wholly on the importance of having good mothers for the next generation, just as if the education of women were not an end in itself. The Roman world would have agreed with Mr. HOLLOWAY for there a woman was lost in her sons. MACBETH'S adjuration to his lady, "Bring forth men-children only," meant something in the land when it was uttered, but would it not have sounded a little flat in ancient Rome? Even at the close of the Roman Empire, when a Greek culture and a Hebrew faith had grafted themselves on the rude Latin stem, we find no clue to the subsequent remarkable elevation of woman in Europe. Perhaps in the fourth century the worship of the VIRGIN MARY begins to raise its head, no doubt a resuscitation of the APHRODITE or HERE worship of the heathen world. But this cult shows no development until the tenth century, when it blossomed forth in full luxuriance. And also in the tenth century rose the romance wherein, for the first time, woman occupied a cardinal instead of an incidental position; love was recognized for the first time as the prime influence over men's lives and destinies.

The crowning of a Northern Emperor at Rome in 800 A.D. was a significant event in many ways. We must recall what were the paternal relations of the mighty CHARLES, and perhaps through them we shall gain some insight into the question before us. CHARLES had a daughter who was wooed in secret by his secretary ENGELHARDT. One evening ENGELHARDT stayed late, and meanwhile a snowstorm took place. When he thought of returning, he found that his visit would certainly be discovered by the tracks he must make in the snow. The royal fair one solved the dilemma in a very clever way. She took her lover on her back and herself carried him through the snow to the main path. But CHARLES had been watching their little manœuvre from a window of the palace, and next day asked his lords what should be done with a man who made a princess carry him on her back through the snow. They recommended instant death for the culprit. CHARLEMAGNE, however, behaved just like a modern American papa; he pardoned the lovers, and wished them all happiness as man and wife.

Feudalism is the result of the presence in the same land of a superior and inferior race. In Europe feudalism was the military sway of the fair-haired Teutons, a

race noted for the high position it gave to its women. Under the new conditions the normal respect and consideration developed into something fantastic. Respect and affection became a kind of worship, and it was to win the capricious favour of noble dames that knights went forth in quest of adventures. AMADIS DE GAUL, when disdained by the Lady ORIANA, could think of nothing better than to retire to a sterile rock, accompanied by a hermit, and there weep abundantly until Heaven succoured him in his great sorrow. At tournaments

"She took her state  
On sumptuous throne amid applause  
Of all come there to celebrate  
Her queen's day."

Nor was it only a nominal rule which she exercised, for she inherited and bequeathed lands in her own right. One State only in feudal Europe never acknowledged a female ruler. In Aquitaine, in Brittany, in Burgundy, a woman carried the duchy with her as her marriage portion. Chivalry in the sense of a deference for women, is a product, not of simple feudalism, but of Frankish or Teutonic feudalism.

There is little cause for wonder if these new ideas of devotion to women were misinterpreted by the southern races, and after all influenced but slightly the actual domestic position of their women. Most of the current seems to have flowed in the channel of Mariolatry, which became in certain aspects a contradiction:—

"They seek to honour thee, who art  
Beyond all else a mother indeed,  
With hateful vows that blight the heart,  
With childless lives, and souls that bleed."

And in the fantastic woman-worship of the later days of chivalry something hollow may be detected. If, at the Court of King FRANCIS, the Knight DE LORGE did actually fight with a lion because his mistress flung her glove into the arena, and if afterwards he cast the glove in her face—and, true or false, the story is characteristic of the times,—we have an example of hollow woman-service. His devotion to his mistress was a mere fetish-worship.

With the reformation, and JOHN KNOX'S blast against the monstrous regimen of women, there is a return on the part of the Teutonic peoples to a more congenial faith. Woman became, as in the old days before conquest and feudalism, the centre of a normal home life. After the ruthless wars of the seventeenth century, the worn-out States of Europe settled down to the prosaic calm of the eighteenth century, and modern society assumed its final phase. Then the novel took its rise, the most significant literary feature of the past few generations. The only department of literature in which woman has gained honours of the first-class, it assigns the first place to woman's influence. RICHARDSON, its creator, was nothing if not a skillful analyst of woman's heart. Bred a bookseller, he became the confidant of the ladies of the neighbourhood, whose love

Original from

epistles he indited in his little back-room, an experience to which we owe CLARISSA HARLOWE. The novel is the mirror of modern life, and reflects the actual and reasonable queenship of woman.

We have tried to sketch the influences which have moulded the destiny of the modern lady. Christianity, in its sweetness and purity, has certainly come in as a powerful aid in building up the modern home, but it is as a subsidiary not as an initiative force. There is no finer combination than the grafting of Hebrew faith on Teutonic home life. The fantastic and frivolous elements which sometimes appear in her relations to the sterner sex seem rather reminiscences of the abnormal days of feudalism and knight-errantry.

#### THE AMERICAN MINISTER'S TRADE REPORT.

THE Report of the United States' Minister on the trade of Japan with the United States, which we reproduce elsewhere, is interesting from many points of view. Running through the whole document visibly enough, though carefully overshadowed by more practical considerations, is a romantic notion that the commerce between countries ought to be guided by the general friendliness of their relations. This idea is doubtless responsible for the fanfare that Mr. HUBBARD permits himself to blow with regard to "the just and generous treatment" which "the Japanese have always received at America's hands." Such a flourish, although it sounds a little discordant as the accompaniment of a trade report, is pardonable enough in respect of the events of the past decade. But Mr. HUBBARD is too fond of superlative adverbs. Before he decorates his despatches with words like "always" and "never," he should consult history. A very cursory course of reading will show him that the United States were not "always" conspicuous for conduct more righteous than that of their treaty associates. They have theoretically separated themselves of late years, it is true, from the net of nations which holds Japan helplessly in its meshes. But there was a time when they experienced no inconvenient pricks of conscience by following a different policy. Why, again, should Mr. HUBBARD go out of his way to proclaim that "we have never disturbed Japan's neighbours, India, China, Burmah, Korea, or the weaker divisions of Asia"? The statement is untrue with regard to Korea, since of the very few Western Powers that sent expeditions against the hermit kingdom, America was one. She did not interfere much with Korea's boundaries, indeed, but that can scarcely be placed to her credit. As for the merit of not disturbing India, we take it that America's forbearance in this respect establishes a claim upon British, rather than

upon Japanese, gratitude; and in respect of China, discretion ought to have counselled silence at least. We cannot suppose that Mr. HUBBARD in penning this report had any intention of drawing invidious contrasts between the policy of his country and that of Great Britain in the Orient. It is owing doubtless to unfortunate inadvertence that his despatch seems to imply some such purpose. The whole gist of the document is to urge American manufacturers to take steps for appropriating to themselves the share now enjoyed by England in Japan's import trade. They have, he thinks, "an honorable right" to do this, and the "supineness" which makes them hold aloof is as regrettable in his eyes as "the sad decadence of the American merchant marine" which impedes their enterprise. Very good advice this, and we hope that Mr. HUBBARD's countrymen will follow it vigorously. But, while offering England as a model, why speak of her "holding the balance of trade against Japan with iron hand?" There is no "iron hand" in the case at all, unless Mr. HUBBARD means to pun, which we question. Japan supplies her wants in whatever markets suit her best. She consults her own convenience entirely and is under no sort of pressure, so far, at any rate, as England is concerned. A similar criticism applies to the spurious enthusiasm which Mr. HUBBARD endeavours to excite in respect of imports. His remarks on this subject must have done violence to his own discrimination. "It will be noted with surprise," he says, "that while Great Britain boasts of being the birth-place of 'free-trade,' as recognised by political economists, it is a fact that the United States admits free of all duties more Japan exports through her ports than the entire sum total of both the exports and imports of Japan and England." Certainly that is a fact. But instead of showing, as Mr. HUBBARD evidently intends, that England is less liberal than the United States, it shows exactly the opposite. The United States levies no duties upon silks and teas simply because such imports do not compete with any articles of home production. There is not the least give and take about her policy of protection. Should it happen to-morrow that a prospect of profitable sericulture or tea-growing was discerned in some part of America, the tariff would be immediately altered so as to foster the home industry, without regard to the interest of Japan or any other Power. England's tariff, on the other hand, is purely for purposes of revenue. Her aim is to tax articles of luxury and admit articles of necessity duty free. Japan's principal staples of export happen to fall under the former category, but no honest political capital can be made out of such an accident. America purchases the lion's share of Japan's exports, and consequently enjoys in Japan something of the consider-

ation which a dealer always shows towards a good client. But surely the fact that the wealthy American people like Japanese teas and Japanese silks is not a reproach to other peoples whose tastes are different. Mr. HUBBARD seems to think that it is. "Other peoples," he writes, "sell largely to, but buy lightly and warily from, Japan." Does he mean to claim for his country the doubtful credit of buying recklessly? If not, why does he call the transactions of other nations "wary?" Divested of these frothy phrases, however, the Report contains advice worth noting. Mr. HUBBARD, in fact, tells American manufacturers precisely what British officials are telling British manufactures; a more earnest effort to consult the tastes and wants of Eastern consumers is the great desideratum. It will, perhaps, salve the wounded feelings of some of the English merchants in this settlement to learn that Mr. HUBBARD gives them credit for the very wakefulness and versatility in which their own officials find them deficient. But, after all, it is only a question of varying standards. To French merchants the British official is a model for their own officials. To American officials the British manufacturer is a pattern for his American competitor. By our officials the German merchant's enterprise is quoted as an incentive to their countrymen. To British traders the activity of nearly every foreign official seems preferable to the conservative prudence of their own. And so on through all the gamut. There is nothing new, however, in what Mr. HUBBARD says of his countrymen's indifference to Japanese markets. The same criticism has been written and spoken often before. We are only surprised to learn that American manufactures can be laid down in Japan as cheaply as the same class of English goods. This may be true of such things as machines, in which the American manufacturer especially excels. But if it be generally true, we should have to believe either that the whole profits of America's protective tariff go into the pockets of employers, or that the inferiority of English manufacturing processes is very great. If, as American economists themselves declare and as reason compels us to expect, the effect of a protective tariff is to raise wages—in other words, if the increase in the price of protected manufactures is not entirely absorbed by employers of labour but shared, in whatever proportion, between employers and employed—then it is hard to see how protected manufactures can be offered in foreign markets as cheaply as the manufactures of free-trade countries. In that direction, we suspect, is to be sought the real reason of America's comparative exclusion from Japanese markets. We have too much belief in the enterprise of her manufacturers to suppose that, though able to compete on equal terms with their German and British rivals, they have been waiting all these years to make the effort.

## THE "PLAINMELLER."

THE recent finding of a Naval Court on the supposed loss of the *Plainmeller* suggests the old question—Is it advisable to legislate for the amount of cargo that should be considered a maximum load for a vessel in terms of her displacement or net register tonnage? Experts are now pretty well agreed that the only way of estimating the tonnage which a vessel should carry, and at the same time of preventing ships specially constructed from carrying more cargo than the laws contemplate, would be to base the estimate on the displacement. This could be effected by rendering it compulsory on every vessel to be registered, surveyed, and measured, and further rendering it penal to load beyond maximum mean draught, which could always be easily checked by compelling the scale of feet to be painted at each side, as is the custom now. The probable consequence of such a measure from a commercial point of view, is another matter. Evidently the carrying capacity of British vessels would thus be limited to a fixed standard, and they would be placed at a certain disadvantage *vis-à-vis* ships of other nationalities. Their freight would be necessarily higher than it now is, and rivals would inevitably take advantage of this by reducing their rates so that the amount they carried in excess of British craft of the same tonnage would just allow them to run their vessels at a bare profit, and thus compel the British to run theirs at a loss or abandon competition. From this point of view it seems as though we must still continue to rely on the judgment of the masters of vessels. Further, the mere fact of a ship being liable to inspection and delay would act as a deterrent to merchants, and it is more than probable that a large portion of what is now carried by British vessels would be transferred to foreign bottoms, while the additional security provided by such a measure would be entirely lost sight of. It is only when some disaster, such as that which has presumably occurred to the *Plainmeller*, is fresh in people's minds that they are likely to recognise the necessity of any provision being made against it. As time removes the immediate sense of such necessity, so does the public become less tolerant of any restriction such as this limit of cargo-carrying capacity would impose.

A portion of the enquiry in the *Plainmeller's* case appears to have been directed towards some features with respect to carrying coal. These have probably escaped the attention of the public and of shippers. The evidence went to show that there exists an element of danger in the coal-carrying trade which has hitherto been but little considered. A vessel is liable to be damaged through the generation of gas from the coal she is carrying. Japanese coal is generally speaking

light and somewhat gassy, and this latter quality is exhibited by the Poronai coal to an exceptional degree. It is also very easily ignited. On board one of the vessels of war comprising the British Squadron lately in this Port, a slight explosion, attributed to coal gas, is reported to have taken place. In another vessel, during the operation of coaling, men were affected by the gas generated while trimming. A kind of stupor was produced. Several men complained, and one was so overcome that he had to be dragged out into the open air. It was subsequently found necessary to keep watch when anyone went inside the bunkers, and to ascertain, from time to time, that he was safe.

Apparently some ships carrying coal have not even ventilators to get rid of gases superficially generated. Generally, too, no tubes are fitted for taking temperatures, and no arrangements at all appear to be made for ventilating the lower surface of the coal. In the case of the *Plainmeller*, the coal was received on board wet, in which condition it would be more likely, especially if at the bottom, to become heated and to generate gas. Vessels engaged in the coal-carrying trade in British waters are compelled, in certain ports, to keep their hatches uncovered while in harbour so as to ensure good ventilation and a ready escape for any gas that may have been evolved. It is also compulsory that they should be fitted with ventilators. Further, the *Plainmeller's* coal, having been wet, may have contributed to the overloading of the vessel in a degree not easily estimated. This would be more especially the case if the coal was very small or dusty, such as a considerable portion of Japanese coal often is. In that event, estimates based on the displacement of the vessel, presuming the coal to be dry when weighed, would evidently be more or less misleading. In fact 13 tons were allowed by the Japanese officials on that account. Another noticeable point is that the enquiries made seem to have ignored the possibility of the cargo shifting, and thus causing a dangerous list. Probably the Naval Court believed the hold to have been completely filled with coals.

On the whole, the finding will doubtless have struck the mercantile community as somewhat bald. It was not proved that the unfortunate ship was actually overloaded; but only that there is strong presumptive evidence to that effect. Moreover, no opinion was given as to where she might be searched for with the most reasonable chance of success supposing her to be still afloat. Again, the questions asked with respect to the displacement of the vessel, and what should be considered a safe maximum cargo to carry for a given displacement, elicited very little information that could be considered trustworthy as a guide in loading, but tended rather to show that in practice the maximum load of a vessel differs with the master who commands her.

The estimates given varied from twice the register tonnage, inclusive of bunker coal and stores requisite for the voyage, to twice the register tonnage, plus bunker coal and plus a certain surplus, fixed, in the case of the *Plainmeller*, at 200 tons. In other words, while some persons held that 2,392 tons would be a sufficient load, others thought that 2,744 tons might be safely carried—a difference of 352 tons. In works on naval architecture, the maximum load is put at from one and a half to twice the register tonnage, inclusive of bunker coal. Again, referring to Tables for Freeboard by LLOYD'S Register, as quoted at the Inquiry, it appears that the *Plainmeller* should have had a freeboard of 5 ft. 4 in., giving as co-efficient of fineness .75, and as reserve of buoyancy 29.5 per cent. According to one witness, called as an expert, the reserve of buoyancy of the *Plainmeller* was 29½ "inches" when carrying 2,550 tons of cargo (inclusive of bunker coal). This, he said, would give her 5 feet and ½ an inch of freeboard, and an additional 100 tons of cargo (or a total of 2,650 tons) would have reduced her reserve of buoyancy to 10 "inches." The same witness, in a subsequent statement, spoke of the vessel as having 20 "inches" of reserve buoyancy, with a total cargo of 2,552 tons, and a freeboard of 5 feet 4 inches. The discrepancy is not surprising in view of the fact that mental calculations were involved. But the method of estimating the reserve of buoyancy by inches is perplexing. If the witness meant to speak of per centage, not of inches, the variation in his statements becomes very glaring. If, on the other hand, he really spoke of inches, an easy calculation shows that he placed the reserve of buoyancy at only 15 per cent. of the displacement, which is considerably below the lowest limit considered safe by competent authorities.

The teaching of experience is that three heavy seas generally follow each other in succession, after which there is a series of smaller waves, and then a repetition of three large ones. In considering the behaviour of a vessel laden, as the *Plainmeller* is almost proved to have been, to close on 2,700 tons, with a reserve of buoyancy probably less than 20 per cent., the crushing force of a heavy wave is easily conceived. And when three such waves struck her consecutively, as they certainly did during the storm, it is more than probable that the hatches were broken in or their wedges displaced, or that, the helmsman having been washed away, the ship became helpless, even if the super-added weight did not itself suffice to make her founder.

## CORRESPONDENCE.

## THE AMERICAN BOARD OF MISSIONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In view of a brief editorial in a late issue of your paper, concerning the annual meeting of the American Board of Missions recently held in the United States, and the theological question at that time discussed—a question which you say was discussed with much bitterness by the contending parties in a session that was stormy—I think it only right that I should send you the following for publication. The annual meeting of the American Board was held the present year in Des Moines, Iowa. The *Iowa State Register*, a daily paper of that city, gave full daily reports of the entire proceedings of the Board while in session. It also published two or three short editorials concerning the meetings. Its editorial of October 8th, 1886, is headed "The Board's Important Day" and reads as follows:—

"Yesterday was the important day of the session of the Board, as it brought up for discussion and practical settlement the question which has so gravely threatened the harmony and fellow-ship of the Church. It had about it all the dignity and greatness of a day that is to live in history. The discussion was one worthy, in intellectual strength and moral courage and courtesy, of any council of militant or political body in the world. It was approached with a noble spirit on both sides that gave from the first assurance of final harmony and good feeling. Never were brave hearts kinder or true hearts braver. The discussion, begun with this sort of benediction resting upon it, and with every speaker determined to cherish the Church and its harmony, could not fail in resulting as it did. The two opinions were maintained with equal fervour, grace, and power, and the speeches were, nearly all of them, of an oratory equal to the traditions of the Church and equal to the expectations of the audience. The live coal of inspiring, if not of inspired, eloquence seemed to touch the tongue of more than one of the speakers, while there was scarcely one among them all who did not honour the occasion. Agitation and discussion among such men can only result in helping any Church or ennobling any cause; for the eloquence and the powers of the speakers were not as impressive nor as great in the eyes of those who heard and saw, nor so controlling over those listening, as the Christian spirit and knightly tenderness and care with which all who spoke treated the others. It was a noble and a very beautiful example of brotherly love such as men are seldom given to show and people are seldom given to see. The outside world may see in a debate so serious and so exciting in fact, and yet so conducted that every speech had in it the beauty and supplication of a prayer, how Christian brethren may disagree in conscience and yet not in the least separate in love and good-will. Even unbelievers are made unconsciously and unwillingly to see and feel the divine power in Christian men which enables them to join in such a discussion as that of yesterday.

"The debate closed with a victory for the old faith, in the decision of the Board, that was inevitable from the first. But the advocates of the new belief have no reason to feel that their cause made a puny showing in any respect yesterday. The speeches in its favour were masterly and profound, and the sympathy and applause with which a large portion of the audience heartily responded showed a deep and very strong sentiment in its favour. It showed the popular strength of it to be surprising, and its advocates left with all who heard them an impression of their own sincerity and their unshaking loyalty to the Church.

"The day was great in other things also. Such days as this seldom come in any arena, however intellectual or exalted. It will leave its mark permanently, and the literature of the Church and the

history of the progress of the Christian religion will carry down to time more than one page in record of this memorable day at Des Moines."

How much storminess and bitterness there may have been in newspaper discussions of this question I do not know, but so far as the discussion at the annual meeting of "The Board" is concerned there seems to have been neither.

Respectfully yours,

J. L. A.

Kobe, November 23rd, 1886.

## HIGHER MIDDLE SCHOOLS.

## NOTIFICATION NO. 3 OF THE DEPARTMENT OF STATE FOR EDUCATION.

In accordance with Art. IV. of Imperial Ordinance No. XV., relating to the Middle School Regulations, the location and districts of Higher Middle Schools have been established as follows.

MORI ARISORI,

Minister of State for Education.

November 30th, 1886.

## THE LOCATION AND DISTRICTS OF HIGHER MIDDLE SCHOOLS.

Art. I.—The districts of Higher Middle Schools have been fixed as follows:—

1st Division:—City of Tokyo, Prefecture of Kanagawa, Prefecture of Saitama, Prefecture of Chiba, Prefecture of Ibaraki, Prefecture of Gumma, Prefecture of Tochigi, Prefecture of Aichi, Prefecture of Shizuoka, Prefecture of Yamaguchi, and Prefecture of Nagano.

2nd Division:—Prefecture of Miyagi, Prefecture of Fukushima, Prefecture of Iwate, Prefecture of Aomori, Prefecture of Yamagata, and Prefecture of Akita.

3rd Division:—City of Kyoto, City of Osaka, Prefecture of Hyogo, Prefecture of Mie, Prefecture of Shiga, Prefecture of Gifu, Prefecture of Furoi, Prefecture of Shimane, Prefecture of Okayama, Prefecture of Hiroshima, Prefecture of Yamaguchi, Prefecture of Wakayama, Prefecture of Tokushima, Prefecture of Ehime, and Prefecture of Kochi.

4th Division:—Prefecture of Niigata, Prefecture of Fukui, Prefecture of Ishikawa, and Prefecture of Toyama.

5th Division:—Prefecture of Nagasaki, Prefecture of Fukuoka, Prefecture of Oita, Prefecture of Saga, Prefecture of Kumamoto, Prefecture of Miyazaki, and Prefecture of Kagoshima.

Art. II.—The situation of Higher Middle Schools shall be in Tokyo for the 1st Division, in Kyoto for the 3rd Division, and in Kanazawa for the 4th Division. The situation of the schools for the 2nd and 5th Divisions will be hereafter fixed.

## TRANSLATIONS FROM NATIVE JOURNALS.

## THE "NORMANTON" AFFAIR.

(Translated from the *Nichi Nichi Shinbun*.)

As repeatedly mentioned in these columns, twenty-five of our countrymen and countrywomen perished at the time of the wreck of the steamship *Normanton*, while the captain and crew, who were under the obligation of rescuing the passengers, saved their own lives with one single exception, and moreover, were absolved of all blame by the Naval Court of Inquiry at Kobe. We have as frequently printed out that these are facts of a very suspicious nature. The unhappy fate of the twenty-five passengers could not but excite deep feelings of compassion. We have accordingly appealed to public sentiment by discussing this affair in our columns, and we are glad to state that our request for subscriptions has been responded to to the extent of several thousand yen. But, on the other hand, we regret to say that our original expectation has been disappointed by various acts of frivolity and ignorance on the part of a certain portion of the public. There are some who, in the

excess of their compassion for the dead, and dissatisfaction with Captain Drake's conduct towards them, regard the English in general with unfriendly feelings, and even attempt to retaliate on the captain personally, while certain other people propose to bind themselves not to have any business transactions with Englishmen; and there even are some who attempt or have attempted to apply to Her Britannic Majesty's Representative in Japan to revoke the judgment of the Naval Court of Inquiry instituted at Her Majesty's Consulate, and who, moreover, wish him to interfere with the criminal proceedings already instituted in the British Consulate at Kobe. The result of such actions cannot but be the creation of unpleasant feelings between the people of the two countries and of much friction in the relations now existing between the two Governments. In view of these circumstances, we almost regret that we have at all lent our columns for the discussion of the affair under consideration. That was not the end we ourselves or our readers looked forward to. What we expected of the public in general was that it should pity the fate of our unfortunate countrymen and countrywomen, and appeal to humanity and justice in reference to the inhuman treatment they underwent. Our original object was not by any means to stir up popular feelings of resentment, or to cause those feelings to be directed against Englishmen in general. We therefore, regret exceedingly that some persons have misunderstood our original intentions and are attempting, or have attempted, imprudent and ill-advised action.

In demanding redress of a wrong, one ought to be sure that his own conduct is free of blame. To return wrong for wrong is not the way in which a remedy ought to be obtained in civilized society. In the English law of equity, it is laid down as the first principle, that, in demanding justice one must come with clean and pure hands; or in other words, one must be upright before demanding other people to be so. In cases like the present steps must be taken to soothe the spirits of the departed and to assist their surviving relatives. We have not only expressed our approval of this but have not shrunk from offering our services for the furtherance of such an object. With regard to the legal side of the question, there are proper methods by which the business must be conducted; and those methods are: firstly, to bring a criminal accusation against Captain Drake in a British Consular Court, and, secondly, to institute actions for damages against the owner and master of the lost ship. The criminal case has been brought by the Japanese Government, and proceedings have already been opened; while steps are being taken by the relatives of the drowned to bring on private suits. Thus, while on one hand measures have been taken to render help to the suffering relatives of the dead, steps have been taken on the other hand to obtain justice. At this stage of the affair, we have simply to await the result of the trial. Should the judgment happen to be unsatisfactory, appeal can be made to the British Supreme Court, and in case justice is still unobtainable, the case may be brought before the House of Lords. The road for the obtaining of justice is thus open to us. We mean to avail ourselves of this road for the accomplishment of our object, and our efforts will not cease until full justice is obtained. But, on the other hand, we are extremely sorry to state that some people expect to demand diplomatic interference in judicial affairs, in which even Her Majesty the Queen cannot interfere, and that an arrogant address has even been presented for this purpose. With regard to the attempt contemplated by a certain class of people to resort to force instead of waiting for the conclusion of the criminal prosecution, we are determined to oppose such an attempt with all our might. Not only is it calculated to hinder the accomplishment of our object by legal means, but it will also serve to invite the ridicule of both the native and foreign public, and to purchase the indignation of foreigners. We shall, however, spare no trouble in order to give help to the relatives of the twenty-five wrecked passengers, and to obtain satisfaction in both the criminal and civil cases.

## THE SEARCH FOR THE "NORMANTON"

(Translated from Special Correspondence of the *Mainichi Shinbun*.)

At fifty minutes past four p.m. the 20th November, the steamer, *Tairu Maru*, which had been despatched to the scene of the wreck of the *Normanton* to conduct a search for the sunken vessel, arrived at Katsura, Kii, on the sea coast to the south of Nachisan. It was reported that oil had been observed floating on the surface of the sea in

the vicinity of an island named indifferently Tera-shima and Yamanarishima, one of a small group of islands off Komagasaki on the north and Misaki on the south. Preparations were made to commence operations as early as might be on the following day. Two residents of the locality, named Nitta Shōemon and Kanuji Toda were taken as guides, and others named Uchida Kumeichi and Seto Monzo were also requested to join the ship, in consequence of their acquaintance with the adjacent coast, and because of their knowledge of the spot where the oil was to be found. At 7 a.m. a start was made, the party consisting of Messrs. Kuroda, Counsellor; Iwasaki, Marine Bureau; Ichikawa, Mizuno, Konishi, Tahara, Matsumoto, local officials; with several representatives of the press. Messrs. M. Squire and Tanaka, of the Marine Bureau remained on shore and directed the movements of the steamer from a commanding position on the headland known as Nomitori. The place where the oil had been observed is about one and a fourth *ri* distant from Terashima, bearing a little to the south of east of that island, and is spread over an area of about two *cho*. By the inexperienced eye the presence of the oil could not be detected, but to persons of experience it was at once apparent, from the comparative calmness of the sea at this spot. Directed by signals from Nomitori, the steamer reached the spot in about half an hour, but at once proceeded to the reef of Shakushi in order to take off a party that had been sent to examine this place, where the *Normanton* is supposed to have struck. After about an hour's delay the vessel returned to the neighbourhood of the oil. Strong grounds existed for believing that this tract of oil really indicated the spot where the *Normanton* lay. In the first place, the fishermen of the locality who have been frequently in the vicinity of the place, never observed the oil before the 24th of October, when the *Normanton* was lost; the bottom is muddy not rocky at this particular point. In the second place, Tōmyōmisi, which bears a lighthouse, projects considerably into the sea, and two large rocks with the reef of Shakushi which extend outwards from the headland resemble very much Kashinozaki, Ōshima, where there are similarly two rocks and the reef of Kanse. Further, according to the statements of the crew of the *Normanton*, they were unable to see the light when about to leave the ship in the boats. Now the light on Misaki is invisible from a point one *cho* on the landward side of the oil tract, but becomes visible one *cho* on the seaward side of the field. It was determined therefore to examine the spot. The divers on board the *Tairiu Maru* were divided into three parties, the first of whom went down at 9 a.m. and remained below for 18 minutes, descending again at 9.30 a.m. and coming up at 9.40. The second party went down at 9 a.m. came up at 9.18, went down at 9.24 a.m. and came up at 9.37. The third party descended at 9.30 a.m. and reappeared at 9.47 a.m. One of the divers named Ikumatsu reported, when he came up at 4.42 a.m., that he had seen something which he thought to be the mast of a ship, but in the attempt to get nearer the object he hurt his arm and had to give up the endeavour. Immediately on this becoming known, the foreman, Masuda Mankichi, sent intelligence to the *Tairiu Maru*, and Counsellor Kuroda, Mr. Ariyoshi and your correspondent proceeded to the place where the divers were at work. On asking for further information, we were told by the diver that he had seen a white object which he believed to be a mast-head, though on the other hand it might possibly be a variety of medusa. Two other descents were afterwards made, two divers going down at 10.18 a.m. reappearing at 10.28 a.m.; descending again at 10.33 a.m. and coming up at 10.41, 10.44, 10.55, and 11.04 a.m. respectively. After coming up the last time a diver named Renoske said he had certainly seen the painted top of a mast. On learning this Counsellor Kuroda signalled the fact to the *Tairiu Maru*, and cheers were given. After a rest operations were resumed about half-past twelve, and it was found that the oil was certainly rising from the bottom, and by means of ropes it was determined that some obstruction lay below. Between 2 and 3 o'clock the *Tairiu Maru* steamed up to the spot and took soundings; seven casts of the lead showing the following depths:—40, 50, 54, 49, 48, 49, 49 *hiro* (one *hiro* is equal to about 5 English feet). It was intended to further examine the spot where the rope had become attached, but the sky became cloudy after about three o'clock and operations had to be suspended for the day, the place being marked by a buoy. It seems that the apparatus brought for diving purposes is servicable only to the depth of 30 *hiro*, and as the soundings indicate about 50 *hiro*, it was considered advisable to employ skilful divers and endeavour by means of ropes to determine the position of the ship.

## FINANCIAL ADMINISTRATION.

### A HISTORY OF THE CURRENCY.

(Continued from 20th November.)

Shortly afterwards (in June) the Counsellor Okuma returned to Tōkyō, but, although a scheme had been matured for dealing with spurious money, yet the Government still had not time to reply to the foreign Representatives. In July all officials above the fifth rank were summoned to Tōkyō and a conference was held. His Majesty attended in person and placed before the meeting a series of questions, and invited the opinion of the members of the Conference with regard to reforms in matters concerning finance and foreign intercourse. The measures to be adopted in the matter of counterfeit gold and silver, namely the steps to be taken to prohibit the private coining of money and to put a stop to the circulation of spurious coins constituted the first article in the Imperial list. The records of the Conference having been destroyed it is impossible to ascertain what answer it was finally decided to make to the questions put by the Mikado on the subject of the measures to be adopted in the matter of spurious coins. We are able, however, by studying the purport of a Government decree relating to this subject, which was issued after the Conference had terminated, and from a knowledge of the general state of affairs at that time, to form an idea as to the nature of the reply submitted by the Conference. Below we give the wording of the decree for purposes of reference. It is dated July the 7th, 1869:—

"Gold and silver coins form an important part of the wealth of a country, and it is by their aid that the four classes of the people are enabled to maintain a living. We have been informed that, of late, quantities of spurious money have been privately coined and have been circulated at home and abroad, and, what is still worse, that money-exchangers have privately fixed market rates of exchange at which transactions are carried on in this spurious money. These acts constitute a defiance of the laws of the country, and in future not only bankers but ordinary merchants, who carry on transactions in spurious coin, will be severely punished. Should such offenders be discovered in the act, they may be arrested at once by anybody, and information shall be given to the authorities."

By this time the Foreign Representatives were extremely annoyed at the delay that had taken place with regard to the measures to be adopted in the case of the inferior money, and expressed a desire to confer at once with the Prime Minister and the other Ministers of State and discuss the steps to be taken in this matter. They had submitted to the government previously, through Terajima Tōzō, the Vice-Minister for Foreign Affairs, a memorandum giving a general summary of the questions to be discussed. This document was as follows:—

"Memorandum giving a summary of the points to be discussed in dealing with the spurious coinage now in circulation in Japan (13th of August, 1869)."

"As commerce is considerably interfered with by the indiscriminate circulation in Japan of good and inferior gold coins, the Foreign Representatives request an interview with their Excellencies Sanjo, the Prime Minister; Iwakura, the Vice Prime Minister; and Sawa, the Minister for Foreign Affairs, in order that measures may be taken in regard to the following points.

"1. Hitherto the 1 *bu* silver and 2 *bu* gold prices coined by the Mikado's Government, by the Shogunate, and by the various clans have formed the currency of Japan. We request that the Mikado's Government should, until they have issued a new and suitable currency and have substituted it for the coins now in circulation, guarantee that the present coins shall circulate without hindrance throughout the Empire.

"2. We request that in the payments to the Government of land-tax and all other taxes, whether by foreigners or by Japanese, there should be no hindrance to the employment of the 1-*bu* silver and 2-*bu* gold pieces, and that the Government should undertake to receive them in such payments."

"3. We request that Your Excellencies should clearly state to the Foreign Representatives in the forthcoming conference details of the steps, &c., which the Mikado's Government has decided to take with regard to the coining of Japanese coins."

"The Minister for Foreign Affairs and the Finance Minister have promised to furnish the Foreign Representatives with explanations on the above points, but three months have already passed without their doing this. We therefore press the matter again on your attention."

On the receipt of this memorandum from the

British Minister, the Government fixed upon the 19th as the day for the conference. On that day Sanjo, Prime Minister; Iwakura, Counsellor of State; Sawa, Minister for Foreign Affairs; Terajima, Vice-Minister for Foreign Affairs; Okuma, Vice-Minister for Finance; and Ito, Secretary of the Finance Department; and the Plenipotentiaries of England, France, America, Germany, and Italy met in conference at Takanawa to consult upon the measures to be taken with regard to the spurious coins in this country. The general purport of the questions put by the Foreign Plenipotentiaries and of the answers given by the Japanese officials was as follows:—

QUESTION—"What final answer have you decided to give to the memorandum of points of discussion relating to the measures to be adopted in the matter of the counterfeit coins, which we lately submitted to you through His Excellency Terajima?"

ANSWER—"The circulation of spurious money is not a question that affects foreigners only. It is one that demands attention in the interests of the Japanese people also. It is an evil resulting from the corrupt Government of the Shogunate, and it is, therefore, unnecessary at the present time to offer any explanation of it beyond what is already known. The Government has already issued decrees all over the country strictly prohibiting the circulation of this money."

Q—"This is the first time that we have heard of the Japanese Government having prohibited the circulation of spurious coin."

A—"The circulation of counterfeit coin has always been prohibited in our country, but, as of late years such coin has circulated in several parts of the country, we have issued a decree to the effect that, in future, all who violate the decree of prohibition will be severely punished. The issue of this decree has not, however, been notified to Your Excellencies."

Q—"The coining of spurious money certainly took place when the Government of the Shogunate was in a declining state, but will your Government venture to assert that the coining of spurious money has not also taken place to a large extent even lately?"

A—"The origin of the evil is certainly to be found in the latter days of the Shogunate."

Q—"What is the purport of the decree strictly prohibiting the circulation of counterfeit coin?"

A—"It is a decree to the effect that the circulation of spurious coin is extremely harmful; that it is, therefore, strictly prohibited; and that for the future anyone who disobeys this prohibitive decree will be punished by the laws of the country."

Q—"How many kinds of these so-called counterfeit coins are there?"

A—"All the coins coined by the various clans are counterfeit."

Q—"In your reply of the other day it was stated that the only clans which coined counterfeit money were the two clans of Aizu and Sendai."

A—"Besides those the clans of Satsuma (Kagoshima), Chikuzen (Fukuoka), Aki (Hiroshima), &c., coined spurious money. There may have been others too, besides these, that secretly issued counterfeit coins. Moreover, as spurious coins from Osaka and the Western Provinces have also come into general circulation, we have issued strict injunctions (against this issue) in those localities. We have also made enquiries of the clan authorities in Satsuma, Chikuzen, and Aki, &c., and they all state in reply that there is no such thing now as the coining of spurious coins. The decay of Governmental power, consequent upon the unfortunately disturbed state of affairs existing in our country, has naturally furnished an opportunity for the circulation of spurious money in all the large towns."

Q—"Is this all you have to say in reply to our first question?"

A—"All that we can do is to issue henceforth the strictest injunctions."

Q—"Are there, or are there not, now, still in existence, counterfeit coins and debased money which have been privately coined by the various clans?"

A—"There are none certainly in existence now."

Q—"Are there any spurious coins still in circulation among the people?"

A—"Nearly all have been now withdrawn from circulation."

Q—"Will your Government give us a written guarantee that, for the future, no private coining of spurious gold and silver coins shall be carried on either by the clans or by other persons; or will your Government, in case such coining should take place, indemnify our countrymen for any losses they may sustain thereby?"

A—"If in the future such things do take place we shall make enquiries of the clan authorities

Original from

and afterwards take measures in accordance with the circumstances of the case."

Q.—"You will issue a decree strictly prohibiting, for the future, the circulation of spurious gold and silver coins, and everybody will be warned, but, if the clans secretly coin and circulate such spurious coins, will your Government indemnify foreigners for the losses sustained thereby, or will it cause the clans to indemnify them?"

A.—"In such cases it is not for our Government to assume the responsibility."

Q.—"For instance, if proof should be given of the coining, by the clans or by the people, of spurious gold and silver coins, will your Government undertake to exchange them or will it make the persons who have secretly coined them responsible for such exchange?"

A.—"Under such circumstances, of course, our Government will exchange them; but as Your Excellencies are thoroughly aware, the present state of affairs is, that only a very short time has elapsed since the troubles at Hakodate were quelled and that now for the first time the administration of the country is conducted from one common centre. His Majesty has determined to give leave of absence to all the *daimios* and to order their return to their respective provinces, but, as the question of dealing with the currency is one of the first importance, it is intended, before the retirement of the *daimios* to hold a general conference, and, until the conference has taken place, we cannot give a decided reply to your question."

Q.—"At our meeting last winter you informed us that Hakodate had then only just been tranquilized, and now again you tell us the same thing. The rebels who fled there did not exceed 2,000 men in number. Are the obstacles thus caused to your government so serious as you represent them to be?"

No reply.

Q.—"In June last, when you prohibited the circulation of spurious money, you communicated this fact only to your own countrymen and gave no notice whatever to foreigners on the subject. This gives us cause for uneasiness."

A.—"No fresh decree prohibiting the coinage and circulation of spurious money was ever issued. The circulation of spurious money has always been an unlawful proceeding. We heard that money-lenders were dealing in counterfeit coins at certain rates fixed by them, and, of course, as we considered that this was most improper conduct, we simply prohibited such dealings."

Q.—"There are foreigners who have already received several thousand yen worth of spurious coins, but would it not be a shame to cause them to suffer loss, without previously giving them notice of what might happen?"

A.—"The reason why we did not previously issue any notice was that we were informed that no *2 bu* gold coins had passed into the possession of foreigners."

Q.—"At the two ports of Hyogo and Nagasaki the *2 bu* gold piece is the chief medium of trade, and it is false to say that none of these coins have come into the possession of foreigners?"

A.—"We shall coin new coins very shortly and shall afterwards give them in exchange for the counterfeit coins."

Q.—"In that case will your Government take in exchange the spurious *2 bu* gold pieces which foreigners have already received?"

A.—"If amongst the *2 bu* gold pieces coined by our Government there are any spurious coins, we will exchange them (for good money)."

Q.—"How do you propose to act with regard to the spurious money coined by the clans?"

A.—"That is no business of our Government."

Q.—"Japanese people have used the spurious coins coined by the clans to purchase steamers, guns, and numerous other articles, and foreigners have received them without suspicion; how can your Government rightfully refuse to exchange them? Several hundred *riyo* worth of *2 bu* gold pieces coined by the clans, which are altogether debased coins, have been received. How is it that no previous notice of the fact that such coins were issued by the clans was given us?"

A.—"The first duty of merchants in conducting trade is to discriminate between good and bad gold and silver money."

Q.—"At the time when, in 1862, the Treaty of Friendship was concluded between England and Japan, it was decided that the *1 bu* silver coin should contain nine parts silver and one part alloy. In this matter, too, the Japanese Government has broken the Treaty."

A.—"The *1 bu* silver coin was coined by the Shogunate and our Government has not changed the weight of it in the least. The coins have been minted exactly in accordance with the weight formerly fixed."

A.—"If later on proofs are given of *1 bu* silver

pieces having been secretly coined by the clans, will your Government exchange them?"

A.—"If reliable proofs are given we will exchange them."

Q.—"Your Government will exchange the spurious *1 bu* silver coin, but will not exchange the spurious *2 bu* gold coin. Upon what principle does it act?"

A.—"The weight of the *1 bu* silver coin and that of the *2 bu* gold coin are very different; therefore we cannot exchange the *2 bu* gold piece."

Q.—"There is nothing stated in the Treaty about issuing paper money, yet, without consulting the Foreign Representatives, you have issued it. This again causes us dissatisfaction."

A.—"As we have frequently stated already in our Notifications, this was the result of the impossibility of taking proper measures at a time when we were engaged in reforming our system of Government."

Q.—"Are the *2 bu*, *1 bu*, and *2 shu* pieces coins issued by your Government?"

A.—"With the exception of the spurious money, it is, of course, an understood thing that they are all coins issued by our Government."

Q.—"Foreigners, from the time of the Shogunate down to the present time, have, without any suspicion, received the gold and silver money which has hitherto been in circulation. It is a real hardship for us that the Government will not exchange the spurious money which has been thus received in good faith. If you prohibit the circulation of inferior money you will interfere with trade; how would it be to fix a market rate of exchange for each of the inferior gold and silver coins, and allow them to circulate at the values so fixed?"

A.—"It is necessary that we should take decisive measures and put a stop to the circulation of debased coins. Even if a slight hindrance to commerce is caused for a short time, we shall shortly issue new coins at Osaka and shall exchange them for the coins and paper notes hitherto in use; when this has been done there will then be none of the evils that we see to-day resulting from the circulation of debased money."

Q.—"What steps are your Government going to take with regard to the spurious coins which have up to the present been received by foreigners?"

A.—"It is not probable that all the money they hold is debased; our merchants will accept any of these coins which are good money."

Q.—"What is the fineness of your so-called *2 bu* gold piece?"

A.—"This point has escaped our memory, but we will enquire and let you know afterwards. So far as we remember, in 1,000 parts there are something like 120 parts of gold, and the rest is silver."

Q.—"Your Government declines to exchange the debased coins, made by the clans, which foreigners have received. This being the case, may we apply to the clans for indemnification?"

A.—"There are objections to that course. In those clans where there are proofs of secret coining our Government will make the strictest enquiries, and, if the fact is established, we will not fail to take the necessary steps."

Q.—"Will the exchange-shops at Yokohama only exchange gold notes, and will they decline to exchange the spurious money?"

A.—"Yes; we have, however, taken strict measures for preventing the issue of spurious coins, and shall not allow the circulation of them to extend to the port of Yokohama. But we cannot exchange them."

Q.—"We cannot understand how you can make a distinction between coins publicly minted by your Government and these privately issued by the clans."

A.—"Terajima Tozo will make careful enquiries in the matter and will communicate with you later on."

Q.—"What sort of *2 bu* gold pieces may be correctly considered to be good coins and what sort of *2 bu* gold pieces may be correctly regarded as spurious?"

A.—"Only merchants who are thoroughly experienced in these matters can distinguish between good and bad gold and silver coins."

Q.—"Do the coins made by the Imperial Government in early times, before the Restoration, circulate as currency? Do the coins made by the Shogunate circulate as currency? Again, by what special marks is it possible to distinguish between money publicly coined by the government and that privately coined by the clans?"

A.—"Without making a careful investigation we cannot explain these points."

Q.—"In June last we drew up a list of important questions relating to spurious coin and paper money, and this document was presented in Osaka to H.E. Date, and in Tokyo to H.E. Higashikaze. The matter has, however, been delayed up to the present moment, and even now we have received no final reply. How is this?"

A.—"At our next meeting we will give you a decided answer."

The Foreign Representatives expressed the hope that the next meeting would not, like the present meeting, end in idle discussion, but that the negotiations would result in some conclusion being arrived at.

The Takanawa Conference on the subject of the measures to be adopted with regard to debased coins, of the proceedings of which the foregoing is a brief summary, was certainly the most troublesome affair of that time, and if the explanations given by the Japanese Delegates had not been satisfactory, the adroit Foreign Representatives would certainly have demanded an indemnity. That fortunately this result did not happen is due to the ability shown on that occasion by the Japanese negotiators, and we can imagine what an anxious task they must have had.

On the 21st of the same month (August) a despatch was sent to the Foreign Representatives, giving, in accordance with the promise made previously at the Takanawa Conference, the result of an assay of the *2 bu* gold piece.\*

On the 22nd the Government addressed enquiries to all the clans and instructed them to concert measures for strictly preventing the coining of spurious coins, and to report the result of their consultations.

On the 27th they gave effect to the conclusions arrived at the Takanawa Conference and drew up, and notified to the Foreign Representatives and Consuls, a set of Regulations, consisting of five articles, for making enquiries and exchanging the spurious *2 bu* gold pieces in the possession of foreigners residing in Japan. These Regulations were as follows:—

"Regulations for exchanging *2 bu* gold coins now in the possession of foreigners resident in Japan. August 27th, 1886.

I.—"This day, the 27th, the Foreign Representatives will issue notifications to the subjects of their respective nations and instruct them to send in to-morrow, the 28th instant, statements of the amount of *2 bu kin* held by them. On the ensuing 30th instant, the said coins in their possession must be handed in for examination to the Kanagawa Saibansho. Any person failing to produce the *2 bu kin* in his possession for examination on this day shall himself sustain whatever loss he may incur.

II.—Examining officers will be despatched to Hyogo, Osaka and Nagasaki by the *New York* when that vessel takes the next mails. The Foreign Representatives will communicate this fact to their Consuls residing at those ports. As soon as the *New York* arrives, notifications will at once be issued to the subjects of all nationalities, instructing them to furnish statements of the quantity of coin in their possession on the next day; after which a day will be fixed for the examination of the coins.

III.—Examining officers will be at once despatched by land to Niigata and Hakodate, and the Foreign Representatives will forward despatches to their Consuls and will make arrangements similar to those described above.

IV.—When the coins are being examined, or afterwards, should circumstances occur to give rise to a suspicion of fraud, the books of the persons making application for the exchange of coins shall be examined.

V.—Coins, in respect to which proof exists that they have not been coined by Japanese subjects, will not be exchanged."

On the same day that the Government issued the above Notification they instructed Kuze Jisaku, vice-Director of the Mint, to choose, from among the merchants who kept exchange shops in Tokyo, several who were most experienced in distinguishing spurious gold and silver coins from good money and to cause them to proceed the same evening to Yokohama and hold an inspection of all the *2 bu* gold pieces in the possession of foreigners residing in that place; and in four or five days the work of inspection was completed. There are no means now of ascertaining the number of debased *2 bu* pieces which were exchanged at the ports at that time in accordance with the five articles of the above-mentioned Notification as the papers have all been destroyed.

As stated above, the Government adopted energetic measures in dealing with debased gold and silver coins. First of all they took steps with regard to debased coins in the possession of foreigners resident in the ports, and afterwards they proceeded to take measures in regard to the debased money held by Japanese in the interior. They issued a new decree to all the *Fu*, *Han*, and *Ken* authorities, ordering them to make estimates of all the spurious money in the possession of Japanese in their respective jurisdictions,

\* 100 *ryo* worth of *2 bu* gold pieces weighed 160 *monme*, of which 55 *monme* *2 bu* were pure gold and 105 *monme* *2 bu* were silver.

† Decree of the 26th July, 1886.

and fixed November of the same year as the time for such estimates to be sent in to the Government. In the end, however, it was found to be impossible to carry out this decree, and accordingly, as every plan formed by the Government for dealing with the question failed, as a last resource, the Senate was again consulted by the Emperor, who elicited opinions as to the proper steps to be taken (6th of October, 1869). The Imperial address was as follows:—

"At present spurious money is in circulation in the Empire, and, though We have frequently issued decrees strictly prohibiting such circulation, an efficient method of dealing with the matter has not yet been found. If the Government gives genuine money in exchange for these spurious coins, it will only facilitate fraud and encourage evil. If it at once puts a stop to the circulation of these coins, it will shut out good as well as bad coins, for there are a great many kinds, and such a proceeding would be contrary to all right principles. If it has all the coins assayed and then buys them up at their respective market values, this would appear to be a just proceeding, but unless a satisfactory method of doing this is devised, such a measure would tend to create dissatisfaction. On the currency depends the welfare of the realm; and now that the evils caused by an inferior coinage are so great, not only is confusion created in Our foreign trade, but the national power is also seriously weakened thereby. By what expedient, then, can this state of things be remedied and public and private interests be reconciled? Deliberate on this subject, gentlemen, and furnish Us with your views."

The various opinions expressed in the reply to the Imperial address were as follows:—

- (1.) That those who made counterfeit coins should be punished.
- (2.) That the punishment should not be retrospective, but that those who in future made counterfeit coins should receive heavy punishment.
- (3.) That, without enquiring whether the coins were counterfeit or not, paper notes should be made and should be given in exchange for them.
- (4.) That new coins should be made at once and given in exchange for them.
- (5.) That the counterfeit coins in question should be assayed and should be redeemed with paper money in accordance with their intrinsic values.
- (6.) That the counterfeit coins should be assayed and should be exchanged for good money in accordance with their intrinsic values.
- (7.) That Mexican dollars should be borrowed and that all previous issues of gold and silver should be abolished.
- (8.) That for the present an official stamp should be placed on all counterfeit coins and their exact values fixed, and that they should be allowed thus to remain temporarily in circulation.
- (9.) That for the present, and for a certain time only, paper notes should be manufactured in all the *Fu, Han, and Ken*; and that these notes should be exchanged for the counterfeit coins, and should circulate until such time as good money was coined.
- (10.) That the 2-*bu* gold pieces should be called in by the Government and should be regarded as a National Debt; that a rate of interest should be determined and that a certain date should be fixed for their redemption.
- (11.) That the counterfeit money should be called in by the Government, who should lend good money in exchange, and that the latter should be paid back to the Government in yearly instalments.

These opinions were submitted to the Emperor on the 12th of October.

The opinions expressed by the Senate were all, as may be seen, of a different nature, but not a single plan among those proposed was either suitable or even practicable. The fourth proposal, namely, to at once coin new coins and exchange them for the old currency was in truth a very ordinary proposition, but there was no other way of meeting the difficulty. The other proposals were all either good for nothing, or mere private expressions of opinion, in which the real issue was mistaken, or, again, they were propositions which were not certainly without reason but could not possibly be carried out. The Government, therefore, decided to adopt the principle of the fourth proposal, and while putting an end to the evil on the one hand, by issuing the strictest injunctions against the further issue and circulation of counterfeit coin, and by instituting the most searching investigations into the amount and quality of such coins already in circulation, on the other hand to proceed energetically with the establishment of a mint and, by coining a new and reformed coinage, to sweep away entirely the accumulated evils caused by previous issues of debased money.

Accordingly, the Government, on the one hand, issued again and again the strictest injunctions to the local authorities of the *Fu, Han, and Ken*,

and adopted every precaution against the issue of spurious money and, on the other hand, proceeded energetically with the preparations for the working of the Mint. In the winter of the following year (1870) the mint buildings were nearly all finished and the time arrived when the new coins could be minted, and a plan for dealing with the previous issues of money could be carried out. Subsequently the Government gradually carried out the work of replacing the previous issues of coin by the new coinage, and then, at last, they were enabled to make a clean sweep of the whole accumulation of evils which had been caused by the circulation of counterfeit and debased coins.

## STORIES OF A TRAVELLER.—I.

### ON THE ROAD TO SAPPORO;

#### A STORY OF THE CREATION AND COLLAPSE OF AN AFFECTION.

The story that I am going to relate was told me by an old gentleman whom I once travelled with between Tomakomai and Sapporo. Tomakomai is the last station at which travellers bound overland to Sapporo usually sleep. The road, when I last saw it, was anything but good, and it was partly on account of its mud and inequalities that I made the acquaintance of the gentleman who told me what I am about to narrate. It came about in this way. Both of us had slept at Tomakomai, and next morning we were fellow-passengers on the coach which was to carry us to Sapporo. At the start everything except the scenery was tolerably pleasant. The scenery on the roads,—by which I mean the proper highways cut by the old Colonial Department—is for the most part, after the first half hour, extremely monotonous; in fact it is so monotonous that, at the end of a long day's journey, not only are you suffering from physical exhaustion, but you feel low-spirited. Everywhere you have a similar view. When the roads were made, the only idea which the engineers kept before them was that the shortest distance between two points is a straight line, so they staked out a few points and connected them by the straight lines which now form the highways. On either side of these straight lines there are high walls of green trees and shrubs. Enter them, and you are in what is in many places an impenetrable primeval forest. These walls, together with an interminable line of telegraph poles, are all you have to look at. If you look ahead or if you look behind, the view is all the same—a white punice road, interminable converging walls of green, and a line of telegraph poles disappearing in perspective. One coach-driver had succumbed to this eternal sameness, and is now in an asylum. His symptoms are peculiar, and easily traceable to their cause. When you speak to him, he usually says, "Do you think we shall ever get there? Long road. Ah!" And if you appear interested in the subject, he will pick up a stick or any long object, and, holding it up to his eye, remark, "How very like looking through the wrong end of a telescope."

The reason that the Tomakomai Sapporo highway was not made—like the St. Petersburg-Moscow railway—all in one piece, is that there are a few rivers to be crossed. At each of these the road bends, and descends to the river-bed, and it was in one of these descents that I made my companion's acquaintance. We were running rapidly, when the wheels on my side went suddenly with a bump into an unusually deep rut; then there was a crash, the coach heeled over, and my companion was precipitated into my arms. One of the wheels was smashed, and I at once saw that instead of being comfortably lodged in Sapporo, we should probably have to spend the night in the woods.

"It's lucky Old Kinodoku-san (Mr. Sorrowful one) lives just below," said the driver to my companion, who was wiping his forehead and apologising for having fallen so heavily upon me. "If you'll get out, we'll just walk the trap down to his place, and see if we can't repair it."

We soon came to Mr. Kinodoku's residence, which was a rough-looking ranch, roofed with bark; and when I saw Mr. Kinodoku, I thought he had been rightly named, for a sadder looking man I never met. From the time we arrived to the time when we left old Kinodoku never moved a muscle of his face. They say there is an exception to every rule, and a rule in Japan is that, old or young, man, woman, or boy, everybody is always smiling. Marriage or funeral, it doesn't matter which, you are sure to see a cheerful face. The driver and my companion, while assisting each other in tying up the broken spokes, were chattering and laughing over the accident as if they were at a pantomime. But the more they laughed and talked the sadder old Kinodoku seemed to

grow. His tangled hair, his stubby beard, and his generally unkempt appearance, all tended to make him look more woe-begone and careless of the world than perhaps he really was. The more I looked at his face, the longer and longer it seemed to grow. At one moment he had an expression like the proprietor of a hearse, while the next, his face was like that of a dead undertaker. Once he saw me looking in his room, which was covered with long strips of paper like bills; in fact from the receipts on them I concluded they were bills. Old Kinodoku, who was standing behind me, gave a long-drawn sigh and gently murmured "1,547 yen 43 sen go rin," and as I thought from the expression of his face that he was about to weep, I turned away. What he meant by 1,547 yen 43 sen go rin, I did not know. His house was odd, he was odd; I trusted that he was not mad.

When we got away, I asked my companion whether old Kinodoku was rich. "Was he grieving over our accident, or what is the matter with the old man?"

"No, he ain't rich. He was always so, or had been so for the last six years," was the reply.

"What has he papered his house with?" I asked. "It looks to me as if he had used up a lot of old bills." The only answer I got was a screech of laughter.

"Don't! don't! you'll kill us if you go on that way," said the driver.

"What's the matter, now?" I thought to myself. "When I ask a question of these people they begin to screw up their faces and squirm and laugh as if they were born idiots. Old Kinodoku may be suffering from melancholy, but these folks are suffering from some sort of lunacy." My curiosity, however, was too great for me to keep silent, so after the guff-hawing had ceased I gently asked whether Mr. Kinodoku lived alone.

"Yes, he lives alone," said the coachman, emphasizing *alone* and verging on a splutter.

"Ah! I see," said I. "I understand the sad, sheep-like look now. He is touched with melancholia. Anybody living alone in a Yezo forest would get the same way, I suppose."

Here the driver and my companion laughed more immediately than ever.

At length the driver said, "Tain't the woods that's done it, it's the women. The women have a lot to answer for in this world. Old Kinodoku has been trying to get married for the last thirty years, but somehow it has never come off. The last time he tried it was the worst though,—just broke him up entirely."

Here my companion rattled off with a long history of old Kinodoku, the driver occasionally interpolating little additions and corrections. I can't remember the details of the story, so I must tell it in my own words, and where there is a gap I will interpolate myself. My own interpolations will be easily recognised.

"Old Kinodoku was one of the earliest settlers in Yezo after the end of the Tokugawa war. At that time he was bright and cheerful, and always fooling round with the girls. Everybody thought he would soon get hitched. There was one girl in particular—Ohanasan—that he was especially sweet upon. Night after night he would go to her parents' house, where he was well received, and everyone thought the matter settled. Even old Kinodoku—he was younger then—used to talk about his wife, and hinted at inviting me to the ceremony. Something, however, turned up which prevented the marriage."

"It was that naval lieutenant, with his brass buttons," broke in the driver, "who came up from Tokyo, and knocked the shine out of old Kinodoku's cotton kimono. Don't you remember the fuss there was when Ohanasan was missing, and a letter came up from the south saying she had run off with the sailor?"

"Yes, yes," replied the narrator.

And then there was another guffaw. All the world is alike, I thought, as I listened to my friends; one and all are apt to laugh at each other's misfortunes.

"After a few months Kinodoku got better," continued my stout friend, "and went to Morio to construct a pier. Here he again fell in love, but because he did not happen to have enough money in his pocket to take his sweetheart and her friends to the theatre one evening, she flew into a rage, said she would not marry a beggar, and broke off the match. The next place where he had the matrimonial fever was at Mororan. All went on swimmingly until he asked the old man how about parting with his daughter. 'Oh, part with my daughter,' said the old gentleman; 'why, certainly,' but—here he looked hard at Kinodoku—'it will be for a consideration, you know. I'm building a new junk for the herring fishery, and if you will advance half the money you can have it.' 'Original from the greatest pleasure in the world.'"

Poor Kinodoku said he could give him 50 *yen*, but a junk would cost 350. Another young fellow who had been attracted by the smiles of Omasu, here stepped in, paid 150 *yen*, and carried off Kinodoku's sweetheart. This time we thought he would have gone mad, but in a year or so he got better and again began to smile. "If I only had brass buttons like a lieutenant, or a lot of money, I should be all right," said Kinodoku. "The old-fashioned way of working up a sentiment and falling in love doesn't do in these modern times. Getting married is a business, and married I'll be. First I'll get some money, and then I'll put on silk *hakama*. I can't get brass buttons unless I become a *Takunin*, but I'll make such a splash in the social world of the capital that the prettiest young woman in the Hokkaido will just jump at me."

And now comes the real part of the story.

"Kinodoku set up a house at Tomakomai, and as that is a place where travellers between Sapporo and Hakodate usually sleep, just as we did, he had lots of custom. In three or four years he had saved some 700 or 800 *yen*, and off he went to Sapporo, where, if there were any good-looking young ladies in Vezo, they might certainly be found. On his arrival he arrayed himself in *hakama* and the finest *haori* (silk cape) that money could purchase, and to prevent the purpose of his visit becoming known and to avoid being overwhelmed with young ladies, he betook himself to a quiet hotel in the suburbs of the city. In the evening, in order to learn something about the eligible young ladies of the capital, he inquired of the landlord to partake of a little refreshment. The landlord was a talkative old soul, and before Kinodoku could draw him out it was necessary to have several bottles of *sake*. At the end of the evening Kinodoku learnt that there was living very near to him a beauty whose hand was being sought by every unattached young man in town.

"Momo is her name," said the landlord. Then, wiping his mouth with the back of his hand, said, "pretty name,—eh?"

After this came Kinodoku's bill for finding out about the dear little Momo:—

Ten bottles of <i>sake</i> .....	Yen.
Little bits of cucumber, daikon, &c., as a <i>teishu</i> .....	1.25
Raw Fish and <i>Sake</i> .....	2.50
Little Fish and <i>Sake</i> .....	1.50
An extra bottle .....	1.00
Total .....	6.25

"Two *yen* and forty-five *sen*, and fifty-five *sen* change, which I gave to the servant just to make an impression," said Kinodoku to himself as he went to his bed. "Altogether three *yen* to find out the existence of the prettiest girl in Hokkaido. It is n't dear." And off he went to sleep, dreaming about little Momo.

Next day he had another conversation with the landlord, which involved more *sake*, little bits of cucumber, and the like, during which he hinted that he should like to see the beauty he talked about last night.

"Sly dog," said the landlord, poking Kinodoku in the ribs. "We'll see. My neighbour, the Doctor, knows her very well. I'll call him in and have a talk."

That night the Doctor came and partook freely of *sake* and relishes, and Kinodoku had a little bill of 6 *yen* 40 *sen* to pay. To gain the Doctor's affection, Kinodoku offered to take him and his family to see the wrestlers who were in town. Next day the Doctor came with his wife and his friends; they spent a very pleasant day at the wrestling show, and in the evening Kinodoku had a bill of 25 *yen* 36 *sen* to pay. This was rather a shock to Kinodoku, who for a moment thought that, if the preliminaries cost so much, what would it cost when he took Momo herself to see the wrestlers. He, however, looked in his bag, and, as there was lots of money yet remaining, he closed it with a snap and felt quite happy.

That evening the Doctor suggested to Kinodoku that the best way of seeing Momo would be for him to give an entertainment at his hotel, when he would bring Momo and her relatives.

"Splendid idea. Let us drink to it," said Kinodoku. And that night he told the landlord to prepare the best of everything for to-morrow afternoon. He should have a number of his friends coming," he said, "and he should like them to be entertained royally. Call the best dancing girls, the best singers, the best musicians." And then to himself he said, "If I don't make a sensation to-morrow I never shall."

When the morning came he did make a sensation. The guests, who, by the bye, were all the Doctor's friends, dropped in one by one; and by the way they smiled and complimented Kinodoku it was evident that they were highly pleased.

Momo looked lovely, and when Kinodoku gazed upon her his heart thumped, and he felt how lucky he had been to escape from his former sweethearts who by this time were probably old women.

Before the evening was concluded, when all were merry with the wine they had drunk, Momo was induced to discourse upon the samisen. Such music,—it penetrated Kinodoku's soul,—and he thought how such a mate might wipe away his cares on stormy winter nights at Tomakomai. Now and then she raised her eyes, and with a smile looked beneath her long eye-lashes at Kinodoku. Momo's looks completely bowled Kinodoku over. "Dear little electric lamps," said he referring to her eyes. "Has anything ever before been created which was so beautiful as little Momo?" Then she danced. As she turned from side to side and moved her fan, Kinodoku felt that once and only once had he seen the perfection of grace and the poetry of motion. At last they went, Kinodoku bowing them away from the front door of the hotel with complimentary expressions and a profusion of smiles. For a while he stood at the door looking at the lanterns disappearing down the dark road until the ripple of Momo's laughter had died away in the distance and all was still and dark. As he turned to his room he observed lying on the stairs a silken cord, at the end of which was a small golden buckle. He picked it up, and at once recognised it as belonging to Momo. "She has left this because she likes me," thought Kinodoku, "and with it as an excuse I may visit her house." "This little band has been round dear little Momo's waist," and he then folded it carefully in a sheet of paper so that it should not get soiled.

When he reached his room, there was the landlord on his knees waiting to present his little bill.

"How much was that bill?" said the narrator to the driver.

"Eighty-seven *yen* thirty-three *sen* *roku rin go mon*," replied the driver. "Sin it often—gee up."

For a moment Kinodoku was thunderstruck, but he quickly decided that he had better pay it without demur; for, if he did not work up to the level of the *hakama* and silk *haori* his chances of Momo might depreciate. Kinodoku was a careful man, so when he retired to bed he counted up what he had spent in getting an introduction to Momo. "One hundred and twenty-one *yen* sixty-nine *sen* *roku rin go mon*," he said. "Then, with my lodgings, I suppose it must at least be 150 *yen* that have gone. As I had in my bag 750 *yen*, I have now left 600 *yen*. Plenty, plenty," he thought. So he took another look at dear little Momo's girdle, blew out the candle, and went to sleep.

Next morning he was at Momo's house quite early, where after receiving thanks for his splendid entertainment, he presented the girdle. Momo's thanks were profuse, and from her manner it was evident that he was in high favour. Unfortunately, he was unable to talk to Momo alone, because her mother was there. When the mother went out a little sister came in, and when the little sister went out a young man came in, from the freedom of whose manners with Momo it was evident that he was no stranger; once he even took hold of her hand. Kinodoku's passion was now inflamed by jealousy, and although he was smiling when he said good-bye, he was really very angry. After this, from time to time, Kinodoku was to be found at Momo's house. Sometimes it was to invite her—which also meant her relations—to the theatre, sometimes to a fair, and to the horse races. All these little excursions told upon Kinodoku's purse, until after two weeks his 750 dollars had dwindled to 350.

When Kinodoku found that his funds were getting low he felt that something must be done quickly. In another two weeks, at the former rate, he would be bankrupt. He would go to her father and propose at once, gently hinting to the old man that if he liked to take over his property at Tomakomai he might have it willingly. This would prevent the old man from asking for money, and at the same time a voluntary offer would appear lordly and quite in accordance with the *hakama* and silk *haori*. To make it short, Momo's father jumped at Kinodoku's proposal, and suggested that Kinodoku should at once make out the transfer, which he did.

After a little blushing and giggling, Momo herself also consented, and Kinodoku, although he could not resist feeling that he was paying very dearly for his treasure, remembered that he had come for a purpose and that the purpose must be carried through. To spend 400 *yen* and then return without his bride would be folly.

All that now remained to be done was the marriage ceremony and the registration, and when that was done Kinodoku felt that the great object of his life would have been accomplished. In spite

of all that it had cost him, he was happy—very happy. A few more days, and Momo would be his, and he would return to Tomakomai, borrow a few hundred *yen*, and start a new life.

The marriage was fixed for the following week. A few days before this, Momo's father received a letter which compelled him to start at once for Hakodate, where some important business had to be transacted. He deeply regretted not being at his daughter's wedding, but as he passed through Tomakomai he would visit Kinodoku's property, and see that the house there was in proper order. The expressions of regret were on both sides abundant. He must go quickly, and would soon return. For the expenses of the marriage ceremony, which was to take place at a large restaurant, Kinodoku had advanced 150 dollars, leaving him exactly 100 in his purse.

The day at length arrived, and Kinodoku was at the *rendezvous* at an early hour. One by one the guests dropped in, and took their respective places along either side of the ceremonial chamber. The strange thing, however, was that none of Momo's household had come. They ought to have been there first. "Very odd," thought Kinodoku; and although he was a little troubled, he continued to chat pleasantly with his friends. After waiting patiently for three hours, some of the guests became a little restless, and Kinodoku observing this quietly slipped out of the room and went round to Momo's house to find out the cause of the delay.

Judge of Kinodoku's horror when he found that the *amado* (shutters) were closed. He shouted and he rapped, but the only replies were hollow echoes. It was clear that the house was empty. What was to be done. At that moment one of the neighbours came up to him and told him that the family had gone to Tomakomai, but, presenting a letter to Kinodoku, said, "Here is a letter which they wished me to give to you. The perspiration was dropping off Kinodoku's forehead when he tore open the letter. It read as follows:—

My Darling—We have just heard that my father has been suddenly taken ill at Tomakomai, and he is at your house, where we have gone to nurse him. We will be married there. Come quickly.

Your loving little Momo.

The following evening he reached Tomakomai, and hurried to his house, where he found a family of strangers refurbishing. They had bought the house about a week ago from an old gentleman who had an order from the owner empowering him to sell. All legal formalities having been complied with, the old gentleman had left, and was by this time probably on his way to Osaka.

Kinodoku was struck dumb. An old lady and her daughter had not arrived in Tomakomai during the past few days. A little later Kinodoku learnt that Momo and her mama had never gone in the direction of Tomakomai, but had sailed from Otaru, probably with the intention of joining papa down south.

For several days Kinodoku remained speechless, but gradually the story of the cruel manner in which he had been treated got noised abroad, and when the bill for the marriage feast—which had not been paid in Sapporo—came down to Tomakomai, Kinodoku threw down his purse, which contained nearly a hundred *yen*, and asked the policeman to take him to gaol. A good deal of sympathy was naturally created, and a subscription was got up to make up the 150 *yen* which was required to pay for the marriage feast. It was at this time that he was first addressed as Kinodokusan, and as so many people used the term when speaking about him, it eventually settled on him as a name. His real name was Monokichi. With a small balance that remained he wandered out from Tomakomai, and set up the shanty where we repaired the coach. The only relic of his experiences that he retained were his bills, and with these he papered his new home, and that is how we come to know how much Kinodoku's matrimonial adventure had cost him. Whenever a woman comes along the road, Kinodoku rushes in and closes his shutters, and if we had had a woman on board our coach we should have had to walk to Sapporo, for Kinodoku would never have lent us any assistance.

"Now, stranger," said the narrator, "you understand why Kinodoku don't smile. The *hakama* and silk *haori* plan of getting married may do for some, but the old-fashioned way is cheaper."

Just then the coach drew up in Sapporo, and I wished my friends good-bye.

BYWATER, TANQUERAY & Co. (late BYWATER, PERRY & Co.) are agents for Residents abroad. Missionaries, Chaplains, &c., in every part of the world. Goods and Outfits supplied at Wholesale prices. Shipping and passages arranged. Banking in all its branches. Full descriptive Catalogue post free. Offices:—79, Queen Victoria Street, London. 2,000 References.—*Advt.* Dec. 11.

## THE LESSONS OF THE NEW YORK ELECTION.

(FROM OUR SPECIAL CORRESPONDENT.)

New York, November 1st, 1886.

A New York city election, however full of sound and fury it may be, generally signifies nothing to observers at a distance. But there are exceptions. At intervals, depending partly upon the depths which official infamy has sounded, and partly upon the patience of the slow moving and much enduring public, spasmodic struggles for reform set in, and vigorous efforts are made to dislodge the professional mercenaries who habitually control the local government, and to replace them by honest men. These efforts are supposed to be successful, a brief term, but not one of them has ever been known to produce lasting results. After a few months of apparent political cleanliness, the régime of rascality comes to the front again, and the metropolis is once more subjected to the sway of wholesale swindlers and plunderers. Condolence with the populace of New York, upon their griefs and humiliations, would be utterly wasted. They have repeatedly shown themselves able to cast off the weight of abuse which oppresses them, and if they obtain no permanent relief, their own supineness and indifference are to blame. A community which enjoys the privilege of governing itself has no right to complain of prolonged defective administration. It is undoubtedly true that the population of New York contains many difficult elements to deal with, but they are probably no more unmanageable or numerous, proportionately, than similar elements in other places. It may be safely assumed that wherever the criminal classes find themselves free to exercise their vocation, without let or hindrance, they will do so with alacrity. Let the rogues of London, or Boston, once understand that their ways are also the ways of the office-holding fraternity; that encouragement and connivance, rather than punishment, will be systematically extended to them; and that the orderly and well disposed sections are too careless to guard their own interests or the public reputation;—then London, or Boston, will speedily occupy the position in which New York now stands, namely, that of a city where the laws are openly disregarded; where corruption is the prevailing rule, and purity is the rare and almost undiscoverable exception; where excessive taxation is exacted for the undisguised purpose of enriching organized bands of robbers who get themselves elected to posts which should invest their holder with dignity and honour, but which are here used only to facilitate gigantic schemes of fraud and rapine. That is the character to which the social and commercial capital of the United States has reduced itself, and it can be redeemed from degradation only by the masses who pass the greater part of their lives in quiet condonation of the vicious condition of affairs, and whose apathy is equivalent to coöperation with the iniquities which disgrace them. How soon, under such circumstances, it is likely to be redeemed, is a question in which hopeful calculation has little share.

It was about fifty years ago that the political vampires began to fasten their clutch upon New York. The rabble of the democratic party then discovered how easily the control of all the city offices could be obtained, by unscrupulous use of the elective methods then practised. The obstacles were so light that they could hardly be said to exist. If majorities were lacking in particular districts, there was no difficulty in supplying them. "Vote early and vote often" was a rallying cry no less truthful than jocose. Newly landed immigrants were naturalized, off hand, by hundreds and thousands, and sent without delay to regions "where they would do the most good." The ancient whig party was powerless against devices like these. In the first place, its leaders were hampered by bonds of traditional respectability, and in the next place they had not the facile instruments of their opponents to work with. Raw importations of humanity, chiefly from Ireland, could not be converted into "old line whigs," while their incorporation into the democratic ranks was instantaneous and complete. Thus, in a short time, most of the minor municipal offices, and not a few of the most prominent, were given into untrustworthy liberal hands. Against some of the more scandalous of these proceedings, the whigs attempted to take legal action; but as the judiciary of New York is elective, the army of murderers presently had all the counts under their command. At last, everything being snugly and comfortably prepared for pillage, the reputable citizens looking on meanwhile with tranquil unconcern, the transfer of treasure from the city's coffers to the pockets of the de-

predators began. For years it proceeded without interruption. Notorious gamblers, prize fighters, lottery dealers, and the like, filled the principal posts of local authority. Judges were directly ruled by bodies of whom thieves and murderers were shining representatives. Government, in those days, rapidly grew to be a by-word of mockery.

Under the reign of the late Fernando Wood, the distinguished head of a notorious family of law-breakers, the disorders reached a point which momentarily arrested the attention of the community. Decent men of all parties joined hands, and by their united strength overthrew the system of that period, clearing out the malefactors from the city hall, and substituting a reasonably honest set of functionaries. The ease with which this was done surprised everybody. Wood and his companions raged over their defeat, and did not hesitate to lament their want of foresight in failing to throw in the few thousand extra votes that would have kept them in power. There is no denying that they might have done this, as well as not. But they thought they had made everything secure, and did not care to waste good material. For a few months all worked well. Upright people could walk into the Mayor's office, or pass the precincts of the Common Council, without being morally stifled. Then, again, the respectable multitude dropped politics, and turned to other objects of consideration. The consequences were inevitable. In fact, the plunderers had never lost their real grip. By intrigue, by bribery, by intimidation, sometimes by deeds of violence, they gradually reasserted themselves, and in a year or two were more firmly in possession than ever. During the short era of partial integrity, the singular expedient was adopted of voluntarily surrendering a portion of the city's rights and privileges, and transferring them to the authority of the State. This device, a feeble one at the best, and attributable only to idleness and lack of spirit among the citizens at large, was far from successful. No self-respecting community, it should seem, would thus consent to shirk its proper responsibilities, and throw the burden of protecting it from robbery upon a legislative assemblage a hundred miles away. But it was done, and many of the powers belonging to the Mayor and other municipal officials were transferred to representatives of the Commonwealth, at Albany. As might have been predicted, the spoilers had only to recommence operations on the very lines laid down for them. Since the State Legislature was to participate largely in the management of city affairs, the one thing needful was to get control of the State Legislature. This having been accomplished by the usual means, in comparatively short order, the democratic mastery of the situation was absolute. All earlier depredations sunk into insignificance, compared with the stupendous ravages committed by Tweed and his clan. After these had continued perhaps a dozen years, another impulse of resistance manifested itself on the part of the people. This time, the dislodgment of the rogues was not so readily effected; but at least it was demonstrated that by combined action the political atmosphere could be purified whenever necessary. Once more the city had its face and hands washed, rivers of dirty water running, the while, through the streets of Manhattan, and congratulations alike premature and baseless filled the air. Of what avail was it all? Before the noise of the conflict was well over, the democratic machinery was in as good working condition as ever, and measures of rehabilitation were set in motion, with an energy and an ingenuity which the listless tax-payers made scarcely a pretence of opposing.

Until three or four months ago, the mercenaries were in virtually undisturbed possession of their accustomed strongholds, and it seems probable they might have so continued if they had been willing to cover their transactions with even the flimsiest veil of decency. But they had reached a point where they believed concealment to be a superfluous affectation. The great offices were openly bought and sold. Patronage was divided up at so much a job, and the millions annually extorted from the tax-payers were almost undisguisedly parcelled out among the manipulators of municipal politics. At this very moment, upwards of twenty Aldermen are under indictment for crimes of bribe-taking, peculation, conspiracy to defraud, and the like. Whether they will be brought to justice, is yet an open question. They would never have been arraigned, but for the barefaced flagrancy of their operations, at which even their high placed partners in guilt could not wink. Several of them have escaped to Canada, where they are safe from seizure, owing to the non-existence of a suitable extradition treaty. One of them, indeed, has been tried and sentenced to imprisonment for ten years; but this blundering idiot had been in

in the habit of going about, declaring his own offences, and daring the agents of the law to hold him to account. His comrades, such as have not already run away, are under bonds of fifty thousand dollars each; but this would be a trifling loss, supposing that they should forfeit bail, in comparison with the huge sums they have stolen. Some of them proclaim their immunity from any kind of penalty, owing to the fact that—by virtue of their beautiful coöperative system—the District Attorney upon whom falls the duty of prosecuting them received his office from their bounteous hands. Thus the whole city machinery is a network of corruption. Every man is more or less directly interested in hiding the misdeeds of his colleagues. The detected aldermen do not by any means hold a monopoly of villainy. Only the other day, the Commissioner of Public Works,—whose title is sufficient to indicate the enormous money power he must wield in a city like New York,—was expelled from his office in disgrace, not because he had grossly misused the public funds, but because, having quarrelled with some of his fellow knaves, he had not the wit to keep his misdemeanours secret. It was discovered that he had actually promised in writing, as the price of his appointment, that he would "run" the Department of Public Works in the interest and under the orders of a notorious contractor, who is also a potent democratic leader. Shocking as it is to relate, this Commissioner's removal by the Mayor, after the exposure, was far from an assured conclusion. Every one knew that, laden down with infamy as the culprit was, the chief magistrate would have sustained and protected him if he, the Commissioner, had consented to place his patronage at the Mayor's disposal. There is no conjecture about this. The community was almost surprised when the announcement came that the guilty man had been deposed. And even then, his actual displacement hung in doubt; for, owing to the successive limitations of the Mayor's authority, before referred to, that official cannot set aside any office holder, no matter how flagitious his crimes, without the consent of the Governor of the State. Well, the Governor is himself a democrat,—an integral part of the big machine which plays Juggernaut with the populace of the Commonwealth. Upon the good will of the chiefs in New York city he is largely dependent for the reelection to which he aspires, and without their countenance his hope of nomination for President, which is the ambition of his life, would rapidly vanish. However, he did approve the ejection of the Commissioner, but there is not a man bold enough to say that this was done with unqualified purity and integrity of motive. It was a question whether the politicians should be conciliated, or a wholesome effect produced upon the country at large by an act—not of lofty Spartan heroism, but of simple honesty and justice. On this occasion, the odds looted up in favor of honesty, especially as the factions in the city were fighting among themselves, and the estrangement of one section might ensure additional fidelity from the others. So the victim was sacrificed, and what was the result? A new Commissioner of Public Works was appointed by the Mayor,—an individual whose reputation had been flawless till that moment, but whose first act was universally recognized as an unconditional surrender of all the pecuniary interests of his Department into the hands which had given him the profitable position. It is needless to recite further details. These examples show the materials of which the city Government is composed, and illustrate the methods by which it is administered. One principle is supreme, and this is fitly represented by a single group of synonyms—plunder, robbery, pillage, rapine, and so following, throughout the family of obnoxious substantives.

Thus it happens that the long suffering people of the metropolis have once more shaken off their lethargy, and nerved themselves for another conflict with the evil-doers. The course they have this time adopted differs materially from that pursued in their former struggles. There has been no preconceived union of law-abiding men of all parties, but the opportunity for concentration of the respectable masses has been brought about in another way. A month ago, when the preparations for the municipal election began to resound, a suggestion was made—nobody now remembers by whom—that the working men, the trades unions, and kindred bodies, should nominate a candidate of their own for Mayor. Equally without responsibility or authority, the name of Henry George was suggested for the distinction. At the outset, the idea was not regarded very seriously. Mr. George himself viewed it with incredulity. Presently, however, he announced that if the labouring men would testify their sincerity by guaranteeing him thirty thousand votes, he would accept nomination. To the general asto-

nishment, and undoubtedly to his own, the required votes were pledged within a few days. Henry George was formally proclaimed an independent candidate for Mayor, and his pretensions were supported with an energy and enthusiasm totally unlooked for. We all know who and what Mr. George is. In a local election of this description the question of his economic or social theories has scarcely a place. Those who hastened to his support gave no consideration to his advocacy of this or that disputed theory of broad government. He was known to be an honest, an intelligent, and a capable man. That was sufficient. His name is now the rallying cry for a formidable host,—it may be forty thousand, or it may be a hundred thousand,—we shall not know how many until the election is over.

The nomination of Mr. George, and the ardour with which it was accepted, had a remarkable effect upon the democratic legions. Under ordinary circumstances, they would have set up some candidate of their favourite pattern, probably Mr. Grace, the present incumbent—who, while cowing he would never consent to a re-election, was working with all his might for the opportunity to consent—and would have gone rejoicing on their customary nefarious way. But they were quick to perceive the necessity of adopting unusual tactics, in this crisis. They hunted about for a reputable man, and finding one whose character was tolerably fair, though not as free from reproach as it ought to be, in the person of U.S. Congressman Hewitt, they persuaded him, without much difficulty, to stand as their present figure-head. They would have infinitely preferred one of the familiar stamp, but they scented danger in the atmosphere. Mr. Hewitt is a man whose political record is disgraced by some ugly incidents,—notably his endorsement and circulation of the memorable Morcy forgery, by which General Garfield was nearly defeated in the national campaign of 1880,—but financially his hands are believed to be clean. They ought to be, for, as a millionaire manufacturer, he should scarcely be subject to sordid temptations. Probably no one supposes that he, if elected, would personally touch a dishonest penny. That is absolutely all that can be said of him. He cannot restore integrity to the municipal government, and he will not try. He is perfectly aware that he has been selected solely to preserve the corrupt democratic organization from a passing peril. The individuals who are most interested in supporting him are thieves and vagabonds. It may be asked why he should take upon himself the labours of an office in which he will be powerless to stem the current of abuse and misrule. For the answer, we have to look to Washington. The Presidency of the Republic is the glittering goal of all political ambition. At this juncture there is no conspicuous democratic aspirant for that exalted post. The Mayoralty of New York is as likely to be the first stepping stone thereto as any other public station. Did not Mr. Cleveland rise to power first by his action as Mayor of an inland city, and afterward by his course as Governor of State? Is not Mr. Hill, the present Governor, striving to mount by the same pathway? Mr. Hewitt has convinced himself that during his short term at the City Hall, opportunities will arise for enabling him to pose as an effective reformer, without in any degree alienating the class by whose aid, if at all, he must eventually rise to greatness. He can act the part of sterling probity before the nation, while his immediate followers go on filling their pockets as before. He may even venture to threaten with deposition a few of the more audacious felons, but he has no power of absolute removal, and as his decrees require the confirmation of the Governor, who is himself playing precisely the same game, he can hope for no exclusive advantage from such extreme measures. The Governor will consent or refuse to sanction Mr. Hewitt's acts, according to the probable effect upon his own, not Mr. Hewitt's aspirations. Undoubtedly the duties of the mayoralty will be complicated and embarrassing, at times, but the term of occupancy is not long, and the incumbent can do a vast deal in the way of magnificent pretence, without seriously hurting or offending anybody of importance. Mr. Hewitt is a clever man,—no person disputes that,—and if so extraordinary a political phenomenon as that of Mr. Cleveland's elevation could be repeated, there is no perceptible reason why he should not profit by it as well as by any other adroit scheme.

In the face of two such powerful nominations as those of George and Hewitt, the Republicans of New York, who deferred their action till the last moment, were manifestly discouraged and downcast. But in time they buckled to their work, and, after a somewhat anxious search, lighted upon Mr. Roosevelt as the party candidate. Mr. Roosevelt is a gentleman against whom no-

body, not even his extremest antagonist, has anything to say, except that he is only twenty-eight years old. He happens to be as rich as Mr. Hewitt, having inherited about as much wealth as the democratic leader has accumulated by hard work. Both of them proclaim that they contribute nothing to the expenditures of the campaign, but declarations of this sort have necessarily to be strongly salted, before being swallowed. If a candidate has money, he cannot avoid spending some of it, in a city contest. Mr. George has none, so he can give none. The Republicans of the metropolis are pretty nearly as rapacious as their forerunners;—that is to say, the secret machinery by which votes are controlled among the lower classes is just as dishonest on one side as on the other. It was not always so, but the unprincipled devices of the democrats were easily learned by their adversaries, and they have not hesitated to "better the instruction," when in a position to do so. The republican middle class is free from corrupt influences, and a man like Mr. Roosevelt could never be entangled or tied down by such foul associations as those which inevitably attach themselves to every democratic candidate. Of course he could do very little toward purging the municipal system, no matter by what majority he might be elected. It is true that some few of the Mayor's lost privileges have been restored, in late years, but not enough to endow him with anything like the power which his title implies. Roosevelt's accession would be chiefly valuable as a rebuke and a protest; beyond that, it could not, in the existing state of affairs, be effective. George's accession would serve precisely the same end, though he would be rather less capable of executing reforms than Roosevelt, the latter, notwithstanding his youth, having spent several years in the Albany Legislature, where he gained experience, and distinguished himself by vigorous efforts to rescue both State and city politics from the wretched condition into which they have fallen.

The election takes place to-morrow and you will know the result long before this letter can reach you. With us, up to this moment, all is in the dark. Each faction assumes a confidence which in truth it is far from feeling. Looking at the field with the impartiality of a hardened cynic—a condition of mind which prolonged observation of New York politics is pretty certain to produce—I should say that the chances are in favour of Hewitt. He has the marvellous organization of the democracy, the co-operation of those now in power, the advantage of practically unlimited funds, and the strength which proceeds from perfect readiness, on the part of his supporters, to employ any means, however base or fraudulent, that may promote success. Henry George places his reliance upon the undoubted sincerity and the almost unexampled enthusiasm of his followers. Their zeal is not affected, like that of the democrats, and if his people had begun to prepare themselves for action six months, instead of four weeks, ago, they might have swept everything irresistibly before them. Mr. Roosevelt is, like Mr. Hewitt, sustained by a well conducted organization, but the republican forces are neither so well trained, nor so slavishly submissive to questionable influences as those of his partizan rival. Moreover, it does not appear that his disciples have thrown much energy into the canvas. Such hope as they have, is based mainly upon the possible disintegration of the democratic army through the secession of working men who are stung to irritation by the wantonness and insolence with which they are overtaxed, and who are possessed by the conviction that their burdens will be in some manner lightened by the change they are seeking to bring about. If these working men succeed in reducing the usually compact democratic vote in an appreciable degree, the republicans discern a possible triumph in store for them. Against the solid array of the democracy they would not have a single chance. Against the democracy reduced and enfeebled by desertions, their outlook is not so despairing. As I have said, the victory of Mr. Hewitt now appears a foregone conclusion; but it would be no matter for amazement if either of the other nominees should at the last moment develop an unanticipated strength, and distance his competitors by a small plurality. After all, the genuine interest of the election does not rest with the decision of to-morrow's poll. It will project itself into the future, and will extend far outside the limits of the locality nominally concerned. The choice of Mr. Hewitt would so consolidate and reinforce the democratic party of New York city as to secure for it a dominating force in the ensuing Presidential campaign, and perhaps enable Governor Hill or the incoming Mayor to grasp the highest prize of American public life. All the diplomacy of the next two years would be directed to this end. Mr. Cleveland's rising ambition to be his own successor would be severely checked, if not extinguished,

and the attention of the country would be centred, certainly for a considerable time, upon the chief magistrates of the commonwealth and the metropolis. The accession of Mr. Roosevelt or Mr. George would, by temporarily destroying the prestige of the democrats, inspire the republicans with hope of regaining their ascendancy in this all-powerful State, and would open prospects beside which the miserable machinations of the local politicians would be deemed insignificant. So far as personal results are concerned, only the two party candidates have any expectations beyond the immediate event. Mr. Hewitt might, with great good luck, mount from the mayoralty to the first office in the land. Mr. Roosevelt might, and doubtless would, be gradually lifted to important positions in the national legislature. Mr. George, however, would have to be content with his single conquest. The character of his writings, or I should perhaps say, their imagined or alleged character,—has rendered him an object of too much distrust and suspicion to warrant him in seeking a place in the great arena of national politics.

#### LETTER FROM LONDON.

[FROM OUR SPECIAL CORRESPONDENT.]

London, October 23rd.

The Chambers of Commerce and merchants having lately had their shy at the Consuls, the latter are now having a somewhat good innings. *The Times* has given four columns, under the caption "Consuls as Critics of Merchants," to an examination of the remarks of Consuls in their reports for the past year on what I may call the personal reasons (or reasons based on the personal deficiencies of merchants) for the decline of trade, and it has also bestowed a leader on the same subject. The merchants come out rather badly mauled. *The Times* says that it is quite right to criticize Consuls; if these officials exist at all they should be efficient, and merchants are the proper persons to point out their deficiencies as well the improvements which are required. But trade may exist with bad or useless Consuls, and indeed without Consuls at all; it cannot do so if the merchants have no enterprise. Then follow extracts from Consular reports all over the world, from Brazil to Greece, from Havre to Yokohama, from Réunion to San Francisco, pointing out the amazing obstinacy and ineptitude of British merchants. The reports contain some uncommonly plain speaking. One gentleman says the merchants are too bumptious, they are too good for their work, they expect people to buy what they, the merchants, sell not what they, the people want; they act in a take-it or leave-it spirit; in place of spending their holidays looking into trade questions on the spot, and making the personal acquaintance of their customers, they go about sight-seeing and purchasing spurious antiquities; they never send out travellers, and expect Consuls to do what they should do for themselves by means of travellers; they refuse to quote prices for ignorant local dealers in local currency, local weights, or for goods laid down at a local port. They will persist in quoting in English money for English weights and measures at their factory gates; they have no organization to enable them to ascertain when credit may safely be given, and accordingly they refuse it always; they have no pliancy, no capacity of adaptation to local circumstances and requirements. Nor are these mere general charges; they are every one amply supported by the Consuls by instances. *The Times* leader-writer says that these statements appear like caricatures of the spirit of British trade, but that they are abundantly supported. Our merchants, he concludes, enjoy the inestimable advantage of seeing themselves as others see them, and it must be acknowledged that the portrait, though not flattering, is at any rate highly instructive.

The late Consular Reports from Japan are referred to in the same article, especially the despatch from Sir Francis Plunkett enclosing the summary of trade to the Foreign Office. I have been much struck by a perusal of some of these reports to see Consuls proclaiming that trade could not improve under the present system in Japan. Fancy a British Consular officer in Japan ten or even five years ago denouncing the treaties as destructive of trade! A powerful imagination is necessary for the task, and if any Consul had been misguided enough (I never heard, or until now even dreamt of one) to send in such a report, it would probably have been returned for alteration or correction, and the unlucky wight would soon have felt the consequences of his audacity. "The old order changeth, yielding place to new," said King Arthur as he passed away "to the Original of Avilion"—I should think it

did indeed. The idea of a British Consular officer publicly stating that the treaties are not supreme and lasting efforts of human wisdom and justice, and are really no better than they should be, is enough to shake one's faith in the moral order of the universe, and to disturb the repose of every well regulated mind. But we live in revolutionary and dangerous days; what with atheism, socialism, and all the otherisms, one has almost given up being surprised by anything.

The present publishing season promises to be one of exceptional interest. Already Mr. Martin Tupper has published an exceedingly interesting autobiography, of the vain, garrulous, gossiping kind. His great popularity at one time has ever been a stumbling-block to the critics, but Mr. Tupper takes it all as a matter of right, and as a debt due to his genius. He gives a very amusing account of the reception he received many years ago in America, where he appears to have been almost worshipped. Sir Francis Hastings Doyle, also, has published his reminiscences. He was at Eton and Oxford with Mr. Gladstone and many others who have made great names in the world since then. His accounts of the Gladstone of sixty years ago, with whom he was then and for long after on terms of close intimacy and friendship, are especially interesting. Young Gladstone, as all the world knows, has travelled far in political paths since then; how far few knew until this book was published. To say he was an ardent, enthusiastic, and militant Tory is to put it very mildly. The Grand Old Gladstone talks of "dear old Scotland," and was born, apparently, in or near half the terms of that ancient Kingdom, while he has near relatives of his mother in the other half; young Gladstone said on one occasion (which old Gladstone has conveniently forgotten) that a Scotch Tory was worse than an English Whig, a Scotch Whig than an English Radical, and a Scotch Radical than the devil himself. Mr. Gladstone says he has forgotten this dreadful saying; Sir Francis Doyle replies "very possibly; the rifle forgets every bullet it has fired, the target that's hit does not forget so easily." The book has been largely quoted, of course; especially as Mr. Gladstone's old friend talks very plainly about him now, and says that he is untrustworthy as a politician, and, he fears as a man,—a polite way of saying that the Grand Old Man is a self-seeking schemer, who does not stick always because of the truth. This, it appears from a correspondence subsequently published, is precisely what Sir Francis Doyle does mean. Mr. Sala is getting his memoirs ready, and very entertaining they are sure to be. The letters of Delane, the last editor of *The Times* but one, unless they are very much expurgated, will also be interesting. I wonder if the book will contain any of those agonizing appeals which, according to Mr. Kinglake in one of the early chapters of his history of the Crimean war, the great editor was in the habit of receiving from fair visitants in corsetted carriages in the small hours of the morning. I always thought Mr. Kinglake drew a little on his imagination for his account of the work and life of Delane in the years 1853-7; his details no doubt are all correct, but the manner of arranging them so as to produce a vivid and striking picture is what makes me distrust him. However, the account of Delane about to be published will, it may be hoped, put us on the "inside track" of the life and habits of the greatest editor of modern times. A life of Darwin is also promised, which it is said, will refer specially to his religious opinions; and Mr. Wemyss Reid, a well-known provincial journalist, has in the press a life of the late Mr. Forster. A number of Carlyle's early letters, between 1814 and 1826, are also to appear. Books of travel without number are announced; but I hear of little relating specially to the Far East. This reminds me to mention a letter which appears in *The Times* of the 20th instant from a correspondent at Ikao, setting forth the charms of that delightful spot through two columns. I forget how many years ago it is since I first made the acquaintance of Ikao, on a tramp through the region between Takasaki and Nikko. But I am sure that half a dozen Europeans in all had not seen it at that date, and the advent of a solitary European was an historical event in the village. Now in place of a long and tedious journey to Takasaki, one is whisked along in a comfortable train in a few hours; remote Ikao is a popular watering-place, and it gets two columns of most happy description in *The Times*, so that the British citizen on his way to the city from the suburbs in his bus or train knows all about it. "The old order changeth"—but I fancy I have said this before. Old Japan, however, is as popular as ever in this country, as I am forcibly reminded by receiving a copy of Mitford's *Tales of Japan* just issued in a new edition by Messrs. Macmillan. What the number of this particular edition is I do

not know—possibly the twentieth,—but I observe that the new lord of Batsford Park, Moreton-in-the-Marsh, Gloucestershire, and goodness knows how many other manors, is still referred to on the title-page as "Second Secretary to the British Legation in Japan." The order has changed somewhat here too, as elsewhere in the world.

In a recent letter I mentioned that Sir Thomas Wade had presented his Chinese Library to the University of Cambridge. Sir Thomas's official letter making the offer to the Vice-Chancellor of the University has now been published. In it he describes the collection; it is deficient he says in books relating to Buddhism and Taoism; but in most other respects it is ample enough to satisfy the needs of an advanced student of the language. There are also some Manchu and Mongolian works. He promises to detail in a separate letter (how like Sir Thomas Wade!) the circumstances which induce him to offer the collection, "more especially at this juncture," to the University; but while making it a free gift he presses for one condition, viz.:—"That for the rest of my life, I be allowed free access to it, and that, so long as my powers of mind and body permit, I be constituted its special curator or guardian." In explanation of this request, he points out that there would be great difficulty in finding any one with the leisure or inclination to occupy himself with such a charge. He mentions also that, owing to the enormous destruction of book and libraries in China during the past thirty years, it would be a slow and troublesome task to restore many of the books in the collection; hence he will urge subsequently on the university authorities the prescription of very strict regulations in regard to the use of the collection. I have reason to believe that Sir Thomas will be appointed lecturer or professor of Chinese at Cambridge, where it is proposed to found a Chair as at Oxford. A gentleman who was once well known in Japan, and whose energy in matters of this nature has left permanent marks behind, is, I learn, interesting himself in this business, though why or in what capacity no one seems to know, and perhaps it does not greatly matter: I refer to Dr. Syle.

The new volume of Dr. Rein's book on Japan is at last announced. It deals specially with industry, trade, agriculture, and forests, and is to contain 24 partly coloured plates, 20 wood-cuts, and 3 maps. Dr. Rein's visit to Japan was in the years 1874 and 1875; his first volume did not appear until 1881, and now, five years after, and twelve years after his visit to the country, the second and concluding volume is announced. This hardly seems a prudent arrangement, bearing in mind that in no single respect has Japan stood still since 1874, and that in many most important matters,—and these included in the forthcoming volume,—her progress has been such as to amount to a revolution. However, Dr. Rein knows his own business best. The last volume was published in English a couple of years ago; but, although there can be doubt of its learning and thoroughness,—possibly on account of these very qualities,—I believe it has not been quite as successful here as its publishers could desire. Dr. Rein has been in London lately with a view to making arrangements for the translation and publication of the second volume,—with, I believe, but qualified success.

### AMERICAN TRADE WITH JAPAN.

#### REPORT OF MINISTER HUBBARD ON THE TRADE OF JAPAN WITH THE UNITED STATES.

The import and export trade amounts in the aggregate to \$61,837,456 annually.

Their trade with the United States reaches (\$15,573,510) fifteen millions annually.

Japan sells to the United States annually over one-third of her entire exports to all nations; yet she buys in return from the United States scarcely one-fifth as much of American products as she sells to our countrymen. Why is this so? It is not because of a want of appreciation of the great Republic, or of its people, for of all nations under the sun Japan probably likes and loves America and Americans as well if not better than all others. The Japanese have always received just and generous treatment at our hands; we have never menaced their peace or their boundaries, or disturbed their neighbours of the Orient—India, China, Borneo, Corea, or the weaker divisions of Asia. We have also always recognized the progress and wonderful recent achievements of Japan in the higher civilization, in education after western systems, in true state-manship and finance, and in the establishment of law and order and the protection of the rights of persons and property by just judicial tribunals (similar to the courts of England and America).

These advances our country has always not only recognized, but hailed with generous congratulations. The people and the rulers of Japan know this, and the title of "American citizen," like that of "Roman citizen" of old, is a moral passport through all these ancient islands. For all this, Japan buys five times more from England than she does from America, and sells to England five times less than she sells to America. Yet on \$14,000,000 worth of raw silks and teas sent to us from Japan no import duties are collected, while we pay tribute on all of our exports sent to Japan!

American manufactures, whether of cotton or of wool or of iron, or locomotives, or labor-saving machines, have never put themselves to much extra trouble to court or secure this trade of Japan.

To illustrate: These people (37,000,000 of them) are compelled to use thick woollen or cotton clothing in these cold winters. They have comparatively no woollen or cotton mills, and must look abroad for supplies.

The English manufacturers early recognized this fact. They also saw that the peculiar character of the Japanese native costumes required a cloth of certain width and shape (to prevent waste of goods in making their costumes for males and females), and hence the wide-awake English manufacturer changed his machinery and looms, adapting them to the exact sizes, patterns, widths, and textures of the woollen and cotton and linen goods demanded by the Japanese.

The consequences have been favorable to England, as their exports attest, and not from any tariff regulations, since Japan imposes no higher tariff on American than on English goods, but rather because England made the very goods which Japan wanted.

Our American mills, our Lowells and Fall Rivers and Providences and other great manufacturing centres, are probably afraid to make such changes in their machinery for this special Oriental market, and, relying on the vast proportions of the American home demand, let this game escape and fly into the British Possessions.

This need not always be so. We are nearest to Japan. An American steamship sails from San Francisco to Yokohama in eighteen days, and can cross the Pacific in fourteen days. It takes the same steamer from London to Yokohama thirty-five days.

In railroad iron and steel rails England can now undersell America, but in railroad fixtures, cars, and especially passenger and palace cars, in all locomotives and engine works and supplies, our iron men can and do successfully compete with the English in any other market of the world. We sell more of such goods to South America, as facts show, than any other nation, and to the British colonies of Australia and New Zealand, even, we annually send large shipments of engines and locomotives.

Why not then to Japan? Because our iron men have held back and never pushed themselves, as they have an honorable right to do, into this market.

Here the Government controls, and owns mostly, all railroads and transportation lines, by land and sea; if, therefore, Americans can (that is the question) sell railroad fixtures and locomotives and stationary engines and all that appertains thereto, as cheap or cheaper than manufacturers of other nations can or do, then and only then are we in position to take our just share of the supplying of Japan in such goods. We can demand nothing to swell the trade between the two nations, save what comes from fair dealing and better bargains secured to Japan.

It is well that our American people as a mass should know these facts as stated, to the end that they may send their own representatives to look after and to encourage trade relations with a country whose commerce is already worth to us many millions, but which might in the next decade be increased to as many more.

RICHARD B. HUBBARD.

United States Legation,  
Tokyo, Japan, November 23, 1885.

Minister Hubbard transmits, under date February 12, 1886, the following:—

The *Yiji Shimo*, returning to the subject of commercial relations between Japan and the United States, says:—

Having regard to the positions of the two countries geographically, and also to the nature of their products, it seems as if the trade between them ought to undergo a yearly increase. Whether it is that the Japanese are too short-sighted to grasp the situation, or that the people of the States are too busily engaged at home to look in this direction, it is not at present necessary to decide, but it is matter for grave regret that the negligence of the two nations has tended to retard the development of their commercial rela-

tions. According to the trade report of 1887, the trade between this country and England is represented by 4,834,000 yen in exports, and 12,744,044 yen in imports, while our commerce with the United States of America is shown by 13,247,840 yen in exports, and 3,187,114 yen in imports. There may be several circumstances to account for this difference, but the chief cause seems to be that the merchants of America do not pay so much attention to the trade with Japan as Englishmen do. If American merchants desire to improve their commercial relations with this country they can easily do so. They have the disposal of several commodities that can be profitably imported here, such for instance as cotton fabrics, woollen goods, and other articles of a miscellaneous nature. Nor is there any lack of articles here to be exported to their side. To mention an example, the large amount of sulphur used in American factories—at present supplied by Italy—might be imported from this country, as our article is better and cheaper than the Italian.

Apart from the negligence of the American merchants, however, there is another circumstance, and it is this: that American importers have not the advantage of a return freight. This, of course, arises from the negligence of our merchants to supply them with suitable articles to take home. It is, therefore, to be desired that Japanese merchants should strive to supply the demands of Americans, at the same time importing as much as possible from America, excepting rails and other iron wares, which are best made in England. It is not necessary that our railroads should be of elegant construction; practical utility alone should be made the aim. We ought, therefore, to consider it best not only to import American materials of construction, but also to hire American engineers. Both countries have natural products which can be profitably exchanged. Last year, while on his way to his post here, the American minister, Mr. Hubbard, made a speech at San Francisco, in which, we remember, he alluded to the want of interest taken by American merchants in the trade with Japan, and pointed out that the present volume of that trade might be easily increased two or three-fold. True, much is to be ascribed to the negligence of the Americans, but the indolence of the Japanese has been hardly less blame-worthy. We hope our merchants will endeavour to show the Americans that the Japanese trade is sufficiently promising to repay any attention they may bestow on it.

#### REPORT OF MINISTER HUBBARD ON THE FOREIGN TRADE OF JAPAN IN 1885.

I submit the following synopsis of Japan's export and import trade with the United States, Great Britain, Germany, and France for the year 1885:—

	UNITED STATES.	ENGLAND.	GERMANY.	FRANCE.
YEN.	YEN.	YEN.	YEN.	YEN.
Exported.....	15,613,868.87	2,401,978.61	463,933.35	6,135,411.88
Imported.....	9,720,184.78	13,415,441.53	1,605,952.72	1,329,566.27
Total.....	18,540,953.55	14,827,420.14	2,269,886.07	8,065,778.15
Excess of exports.....	12,887,684.19			5,460,945.61
Excess of imports.....		10,003,442.92	1,201,922.37	

The following table shows the value of commodities imported into Japan free, also under specific duty and *ad valorem* duty:—

	IMPORTS AND EXPORTS.	AMOUNT.
	UNITED STATES.	YEN.
Japan admitted free.....		180,000.00
Japan under specific duty.....		249,053.45
Japan under <i>ad valorem</i> 5 per cent.....		2,304,219.27
Japan under other duties not stated.....		35,925.32
Total imports.....		2,720,184.68
Exported from Japan to the United States.....		15,613,868.87
United States admitted free.....		14,827,420.14
United States imported <i>ad valorem</i> duty.....		192,074.16
United States duty not stated.....		165,778.88
Total exports to United States.....		15,613,868.87
	ENGLAND.	YEN.
Japan imported under specific duty.....		9,161,615.53
Japan imported free of duty.....		178,220.00
Japan imported <i>ad valorem</i> 5 per cent.....		3,075,778.00
Total imports.....		12,415,441.53
Japan imported under specific duty.....		652,881.00
Japan imported <i>ad valorem</i> 5 per cent.....		893,129.72
Japan admitted free.....		19,442.80
Total imports.....		1,605,652.72
	FRANCE.	YEN.
Japan imported under specific duty.....		884,760.00
Japan admitted free.....		4,612.00
Japan imported <i>ad valorem</i> 5 per cent.....		441,641.27
Total imports.....		1,329,566.27

From the foregoing tables, as well as from the annual report of 1884, it will be observed that the total exports and imports in value between Japan and the United States for 1884 exhibit:—

- (1) A remarkable increase over 1884 of 4,527,039 yen.
- (2) An increase of imports to the United States from Japan in 1885 over 1884 in value of 4,339,383 yen.
- (3) Also show an increase of exports from the United States to Japan in 1885 over 1884 of 192,657 yen.

The foregoing statement, while exhibiting a gratifying and healthful condition of our trade relations, also discloses the fact, not so healthful or gratifying, that the balance of trade in favour of the United States to the amount of 12,887,684 yen.

(4) The balance of trade against the United States for 1885 in excess of 1884 is 4,142,629.

It will be observed, therefore, that the United States, as attested by these official figures, is the most valuable customer which Japan has among all the

treaty powers, buying and consuming of Japanese products nearly one-half in value of all her exports to foreign nations, and that the total trade value of the imports and exports of the two nations is equal about one-fourth of Japan's commerce with all the other nations of the earth combined.

The desire to lessen this balance of trade does not involve the necessity of diminishing American imports from Japan, but it does involve the very natural wish and expectation that the imports of Japan from the United States should correspondingly increase with the value of our imports from Japan.

#### TRADE POLICY.

It is not my purpose in this connection to discuss why this trade has not been more evenly balanced heretofore, or how that result might be attended hereafter, as it could be beyond any doubt. The fault is not with our Government, whose liberal policy has been, and is now, to admit *duty free* through our custom-houses over fourteen millions of the fifteen millions imports to the United States from Japan. It is not chargeable to the want of good neighbourhood and the most cordial relations between our respective peoples. It cannot be chargeable to the Government of Japan certainly in any invidious desire to court the favours of European Powers for political reasons, by encouraging a larger import trade from some other nations than from the United States, which is notably the fact as to England, and relatively as to Germany and France. It is not with the Government that we find fault; rather, it is not attributable to the supineness of our American merchants and manufacturers, both of cotton and woollen and iron and steel, to the sad decadence of the American merchant marine, once the pride of the Republic, which leaves the ocean highways of commerce to the ships of other nations to bear products to the world's markets?

I am informed by American merchants and manufacturers, especially of iron and steel, locomotives, all railroad fixtures, stationary engines, and even iron rails, &c., that these goods can be delivered to day in China and Japan as cheap (and they declare cheaper) than the same class of goods can be delivered by British or German or any European manufacturers.

The best evidence of the good faith of the ability of our countrymen to do so is the fact that they are here now, by their agents, to offer to this Government, as they have done (who control the railways and telegraphs and all transportation systems), to enter into fair and open competitive bidding for such Government contracts.

This is, at last, a movement in the right direction, and will test certainly these propositions:

(1) Whether American manufacturers can succeed by such fair competition in Japan; and (2) whether the Government, in vindication of an impartial justice, will encourage a larger import trade by Japan from the United States, on condition of the offer of as good or better bargains as are offered by other people who sell largely to, but buy lightly and warily from, Japan.

#### JAPAN AND EUROPE.

The trade of Japan and England is a subject of interest to all Americans especially. It will be observed, as I once had the honour to indicate, that both the exports and imports of Great Britain and Japan have largely decreased in recent years.

Nevertheless, while the total exports and imports of 1885 amount to only 14,827,420 yen, the balance of trade is held with iron hand by England against Japan by an excess of her imports over exports from Japan of 10,003,442 yen.

The United States buys from Japan annually over fifteen millions, while England buys only a little over two millions.

It will be noted with surprise, too, that while Great Britain boasts of being the birthplace of "free trade," as recognized by political economists, it is a fact that the United States admits free of all duties more Japanese exports through her ports than the entire sum total of both the exports and imports of Japan and England.

France occupies a similar relation to the trade of Japan to that of our country. The balance of trade is against France by 5,460,945 yen, while Germany, though compared with the United States and Great Britain and France, holding a small and comparatively insignificant position in the trade of Japan, still maintains an excess of her imports to Japan over Japan's exports to Germany of 1,201,719 yen. She buys of Japan 463,933 yen, but sells to that country 1,605,652 yen.

Notwithstanding all this stern "logic of facts and figures," our American products of the field and loom, of our iron and cotton and woollen mills, &c., outside of petroleum oil (which could

not be had anywhere else on earth heretofore), has seen the gold and silver of Japan going to England and Germany principally for a market, and the patronage incident to great public works of internal improvements committed mostly to European manufacturers, iron men, and engineers.

The cause of all this want of reciprocity of trade has been found at the doors of our own people, who have never until recently scarcely made an endeavour to create an export trade to the East, and especially to Japan.

By such means as need not be told to the intelligent and enterprising merchants and manufacturers of the United States, such larger export trade can be attained.

In the light of present developments, and counting largely on the traditional pluck and energy of the American character, as well as for its courage and far-seeing sagacity when once aroused to action, I venture to predict a yet more healthful growth of the already valuable trade between Japan and the United States.

RICHARD B. HUBBARD, Minister.

United States Legation.

Tokio, Japan, April 22, 1886.

#### LIFE AT A JAPANESE SPA.

IKAO (Japan), Aug. 20.

Competition, allied with steam and steel, is fast operating to lessen the enormous distance which separates Japan from Europe. Already, with ordinary luck, the traveller who does not tarry may reach Tokio from London *via* North America in 30 days. Soon he will be able to do so in 24 or 26 days, by way of Montreal and Port Moody. Hitherto, the wonders and beauties of this pleasant land have been virtually monopolized, as far as foreigners are concerned, by a thin stream of travellers, mainly of the "globe-trotting" class. But the day cannot be far off when they will be brought fairly within the reach of any vacation tourist able to spare three or four months for exploring a country that offers attractions of the highest order as a holiday resort. Japan, indeed, has the enviable reputation of inspiring love at first sight in the heart of every comer. Nor is this a mere passing sentiment. It grows steadily as acquaintance ripens. As well with those who remain for years as with those whose stay lasts but for a month or two, there is something about the country and its people that never fails to win lasting and even affectionate regard.

Much has been written, in many books, concerning the characteristics of Japanese cities and life therein. Every one has read over and over again about the parks, gardens, and fortresses; the tea-houses and hotels; the jinnikisha-riding and river excursions; the sights and sounds of the streets; tempting curio-shops, with their wealth of art-products; the theatres, conjurers, tumblers, and wrestlers; the temples, all-glorious without and unspeakably glorious within; the national festivals and fairs; the dainty and exquisitely dressed little *geisha* who minister at dinners and suppers *à la Japonaise*; and the many other items which enter into the round of existence in Japan's capital and provincial towns. We have also heard a good deal of the ordinary features of travel along the main highways, and even along some of the "unbeaten tracks." But very little has yet been told about those delightful spas and highland health-resorts, long and well beloved by the Japanese, which are yearly becoming better known and better liked by foreign residents and travellers. The greater part of Japan's territory is essentially volcanic. Professor Milne counts up 129 mountains scattered over the empire, which are distinctly of volcanic origin, and 51 of which are still active and giving off steam. The same indefatigable authority has lately collected and published the records of as many as 233 eruptions. It is no wonder, then, that hot springs abound in several parts of the country. Some are found in the lowlands. But by far the greater number are in the mountains and hills. Now, as opium to a Chinese, or mint-juleps to a Virginian, so is hot-water bathing to a Japanese. The luxury of the daily hot bath is, indeed, almost as necessary to him as his dinner. And when the hot water is of Nature's best kind, when it rises peacefully and in goodly volume from the depths of the earth, in some cool, elevated region blessed with salubrious air and attractive scenery, and when, especially, it possesses valuable medicinal or healing properties—then you have the ideal conditions of a Japanese summer watering place. To such spots—and there are many of them—the better classes of Japanese swarm at this season, glad to escape from the trammels of town life, from the blazing heat of the plains, and from cities which, alas! are nowadays

only too often ravaged by cholera in its direst form.

Notable among these spots is Ikao. Any one in search of the novel and picturesque, of quiet seclusion from the world's worry and unrest, and of an almost Arcadian existence in a soft, balmy climate and amid enchanting scenery, would be very queerly constituted if he failed to find contentment at Ikao. Up in the highlands of the province of Joshu, a small, compact assemblage of long, low-roofed Japanese buildings, wide-eaved and wide-verandahed, clings to the abrupt face of a lovely nook in the north-east escarpment of the Haruna mountain group. A narrow picturesque street, or rather flight of rude steps, to be likened only for steepness to the most break-neck alleys of Malta or Hongkong, climbs directly up the acclivity, and ends at an unpretending temple dedicated to the Shintō god Onamiji-no-Mikoto. Provision and sweetmeat shops, tea-houses, public baths, and stalls for the sale of local curios line the little thoroughfare. At each stage of the ascent lanes lead off right and left to the dozen or two of large two-storied hotels which form the main feature of the place. These, built on artificial terraces, rise tier upon tier so quickly that the roof of one is barely higher than the ground floor of the next above it. Thus, from its upper story always, and often from its lower, each commands a goodly view of the fair landscape that is spread below. Behind rise bold, rounded masses of mountains, covered to their summits with the richest verdure. Far beneath on the right, in the depths of a precipitous and beautiful ravine, a noisy torrent, foaming over a rust-coloured bed, carries down to the plain the waters of the mineral spring which first sees the light a little behind and above the village. This—a mere handful of a place, yet capable at a pinch of accommodating between 2,000 and 3,000 guests in its short summer season—is Ikao, now fast becoming one of the most popular spas in Japan.

Until recently Ikao was but little known, and frequently only by the holiday folk of the neighbouring region. But the virtues of its water, both for drinking and bathing, and the advantages of its situation, were brought into prominent notice a few years ago by the distinguished German physician, Dr. E. Baelz, who fills the Chair of Medicine in the University of Japan; and, as three-fourths of the 70 miles which separate it from Tokio can now be traversed by rail, the whole journey thence is easily compassed in a day. To the hot-water loving and Nature-loving denizens of the vast capital a chance like this was welcome as showers in spring. Here the town-wearied official or citizen can taste for a while the sweets of the old easy-going life which preceded foreign intercourse, and which in the busier haunts is now slipping out of sight with dreamlike rapidity. Here, during the lazy warmth of the summer days, he can lounge through existence in all the happy luxury of airy rooms 2,700 feet above the sea, and yet airier costume, oft-repeated bathing and water-drinking, a good deal of eating and sleeping, and entire freedom from work, worry, and mosquitoes—and all this in a lovely retreat which still retains its old simplicity, with scarce a symptom of modern improvement. He can walk or romp with his children, gossip with his friends, and play "go" or Chinese chess with them to his heart's content. He can drink innumerable little cups of tea and *saké*, smoke untold pipes (three or four whiffs a piece) of the mildest of tobacco, and, if it please him, beguile the time with musical and dancing entertainments by infant prodigies, middle-aged experts whose only charm is in their skill, or the livelier and more enchanting *geisha*. There is no room on this crowded site for so much as the little patch of trimly-kept garden which is a stereotyped feature in the town home of a Japanese. But a garden of man's making would have no charm for him here. For is not the whole outlook one vast and exquisite garden of Nature's own handiwork, replete with those scenic features the faithful reproduction of which in miniature is at once the aim and delight of the artist gardener of Japan. From the verandah of his hotel in Ikao he can survey a glorious panorama of mountain and valley, hill and plain, the uplands clad with dense forest and open green expanses of waving grass, the low country richly cultivated, and dotted with copses, villages, and hamlets. Before him, the extinct volcano Akaigi-san and a host of other peaks tower to heights of 5,000 and 6,000 feet. Far below, in the plain, he can trace for many a mile the silver thread of the winding Tonegawa, on its way to the Gulf of Yeddo. Beyond, in the remoter distance loom the gigantic masses of the Nikko range, overhanging those solemn forest aisles where stately cryptomeria wave over the honoured shrines of the Shōguns Iyeyasu and Iyemitsu, of pious and immortal memory. And over the whole landscape

broods that delicate crystalline atmosphere which assuredly justifies Japan's title to be called the Land of the Rising Sun.

But if the Japanese thus well enjoys the *dolce far niente* at his inn, he at the same time shows a laudable keenness to explore the beauties which nature and art have furnished for his delectation, with no niggard hands, in the neighbourhood of Ikao. From the higher of the airy heights which rise behind the village he can be sure of a goodly prospect over a vast expanse of Central Japan, including the Kwarō, or great plain of Tokio. For more adventurous spirits, athirst to behold the wonders of a live volcano, the smoking crater of the mighty Asama-yama offers the temptation of a three or four days' excursion. Or, at Haruna and Midzunasawa, each within a moderate walk through the fairest of fair Japanese hill scenery, are to be seen rare examples of those ancient tree-embowered temples and shrines, always erected on the choicest natural sites, whose fine proportions, exquisite details, and lavish art decoration so surprise and delight the traveller in many parts of the empire. To the Japanese, on any of these excursions, there is real luxury in the wealth of foliage, the play of sunlight, and the splendid combinations of form and colour which meet him at every turn. He loves the music of the glad streams that rush down every ravine, the roar and thunder of the cascades which here and there dash over the cliffs to meet them, or the still beauty of some glassy lake half-hidden in the depths of the hills. He rejoices in the sweet, fresh country air, breathing, as it often does, the perfume of flowers, conspicuous among which at this season is the magnificent *lilium auratum*, that here almost whitens the surface of the grassy upland plains and slopes. And wherever he goes he may be pretty sure of finding, at spots which command the best views, cool, shady little tea-houses or kiosks, where he may rest and refresh himself with tea or *saké*, and be fanned and waited on by brisk, comely Japanese damsels. Groups of such happy tourists are daily to be seen tramping over the hills and glens around Ikao. Perhaps, if the excursion be a long one, one or two ladies of the party have indulged themselves with *togo*—a kind of bamboo tray, slung on a pole and carried by coolies—which, in a region that no wheeled vehicle can penetrate and where side-saddles are unknown, furnish their only possible, albeit most tiresome, means of conveyance. But the rest, men and women, boys and girls, lightly and always tastefully clad, tramp gaily along, their limbs well girt and nether limbs well gartered, staffs in their hands, and feet shod with the admirable Japanese rice-straw sandals, which are the best of all foot-gear for mountain work. If the day be bright, some of them will be shaded by orange-tinted paper parasols, which form delicious bits of colour in the landscape. Happiness, contentment, and good temper are stamped on every countenance—the impress of their sunshiny natures, and aptly harmonizing with the spirit of the place. Except at moments given to hushed admiration of some fresh beauty in the view or rare product of forest or field, they keep up a constant flow of chat and laughter. Towards night they return, tired it may be, but always cheery, laden with flowers and perhaps little purchased trifles for friends at home characteristic of the scenes they have visited, to enjoy with ever fresh delight the luxuries of hot water, cool bathing-robcs, and much gossip over the day's adventures.

Being charged with iron and sulphate of soda, and hence serving as a specific for some stomachic disorders that are common among the upper and middle classes in Japan, the water of Ikao is much prized for its medicinal properties, which are also efficacious in certain ailments of the daughters of Eve. But, after all, it is the bathing that chiefly attracts three-fourths of those who come here. If you explore the little town you find an all-pervading presence of hot water. Its steam is everywhere. Go where you will you hear its rush and trickle, and the splashing and chatter of happy bathers immersed to their chins in a rusty fluid at the high temperature—only pleasantly warm to a Japanese—of 117 deg. Fahrenheit. Wooden or bamboo pipes lead it all over the place, and supply a constant stream through every bath. Each large hotel has several such baths—roomy wooden tanks three or four feet deep. Here the sexes bathe separately. But in the public baths men and women of the lower orders often bathe together, in half-open sheds at the street side, yet with a degree of modesty and decorum, and a quiet unconcern about each other's presence or the stray glances of passers-by, which are absolutely incomprehensible to those who have not witnessed the habit as still practised in a few parts of Japan. "Cleanliness before all other things" seems, however, to be a cardinal maxim with the Japanese. You see this in the everlasting scrubbing, pumice-stoning, and tubbing in the bath-

houses, which from dawn till far into the night know hardly a moment's rest. You see it also in the scrupulous cleanliness of their houses, and in their careful provision for light and ventilation, all of which are so grievously wanting in the unsavoury dwellings of the Flowery Land. Here even the most crowded second-class inn, where the guests may sometimes be counted at literally one per mat of six feet by three feet, can show spotless—would that we could say *flealess*—floors and walls, while an abundance of air and light is obtained by the simple expedient of sliding back or removing the paper-glazed partitions at the front and rear.

Foreign visitors to Ikao may now count on finding fairly comfortable quarters in one or two clean and cheap hotels, with bedsteads and other furniture, foreign cooking, and a tolerable *menu*. With these accessories, with the luxurious baths which, when the water is a little cooled, Europeans soon learn to appreciate, with many attractions of scenery and climate, as well as a host of novelties that are to be seen nowhere but in Japan, and best of all at a Japanese spa—the man who fails to be pleased with life at Ikao can have no one but himself to blame. Something of its chief characteristics has been told above. But it would need columns to do more than mention the tea-houses, curio-shops, and kiosks; the story-tellers, strolling musicians, jugglers, mountebanks, and quacks; the clever old *moji-yaki*, who handles his hot liquid streams of sweetstuff with such persuasive skill that they are quickly fashioned, as by magic, into the most amazing baskets, tortoiseshells, and other quaint shapes, before the very eyes of the delighted children who are his patrons; of the archery-grounds, where you can indulge in target practice with the formidable bows and arrows of old Japanese warfare; and of other novelties and diversions—all as distinctively Japanese as is the landscape itself—in which the visitor, whatever his age or country, may find simple enjoyment without stint at Ikao.

To some foreigners, enfeebled by long residence in the East, the medicinal value of the water is a great attraction, and whether he drinks the water or no what new-comer ever tires of the short walk to the Yumoto, or hot-spring's source, in the glen behind the village? There is no "pump-room" here—only a dusky sylvan dell, a rustic bench or two, a square hole in the rock beneath which the steaming water flows, and a simple bamboo dipper for those who drink. But the morning or evening walk thither is delightful, in the cool shade of a lovely ravine, rich with greenery, enlivened by the murmur of falling water and the shrill whirr of cicadas, and brightened by the most picturesque and happy of human throngs. On this neutral ground you meet representatives of nearly all classes of Japanese society, from the plain shopkeeper or professional man of the capital to the blue-blooded scions of an aristocracy so ancient that no member of it begins to think his family worthy to be called an old one until he can trace a clear descent for six or seven hundred years. There are *Daimiyo* of the old régime, Ministers and Secretaries of the new—possibly, also, a Prince or Princess of the Imperial family. There are the greater and lesser nobles of the feudal era, most of them now enrolled in the lately-created peerage; and former *samurai*, of all degrees, who mainly compose the large official class of modern Japan. Many are accompanied by their wives—those gentle, devoted, well-bred, and essentially feminine women who brighten Japanese homes, and who, you rejoice to see, are no longer disfigured as of old by blackened teeth, but can, and do, smile on you in all their native comeliness. The prevailing dress of both sexes, if it be morning, is the *yukata*, or modest cotton bathing-robe, of all hues and patterns, bound at the waist by a girdle of silk, satin, or crape. Here, however, comes a Buddhist priest, all shaven and shorn, in his silk robe and cool mantle of delicate gauze, fanning himself with holy but needless fervour. Next, a high Foreign Office dignitary, looking, as he well may do, a good deal bewildered about the treaties, and clad in the quiet silk and crape garments of ordinary life, with the crest of his house woven in white on the back and sleeves of the uppermost one. Then, perhaps, you come upon a pair of young dandies, in all the pride of foreign clothes, stand-up collars, tight gloves, and dainty canes and shoes. But they are a mistake here, where, excepting themselves and the foreign-style socks, shoes, and straw hats, now pretty common among the men, you have little or nothing to remind you that you are not in old Japan. Next, oh happy contrast! a flutter of fans, a patchwork of vivid colours, a ripple of laughter, and you are face to face with a gay troop of Japanese *hōrōs*, rosy-lipped and dark-eyed, with beautiful teeth, clear complexions of all shades from ivory-white to nut brown, willow forms, finely-pencilled eyebrows, and rich masses of black hair, tastefully

braided and set off by some bright flower or coral ornament, with a neat binding of blue or crimson crape. Mirth, guilelessness, and—if there be anything in physiognomy—a large capacity for love, beam from the faces of those most killing Japanese belles. And their dresses are a study. While Japanese parents and adult folk generally content themselves with colours of almost Quaker-like sobriety, the nation seems to have lavished a world of artistic taste and skill on the dress of its girls and children. Be the colours bright or dull, the patterns bold or tame, the fabrics coarse or fine, the contrasts sharp or soft, you find that in artistic arrangement, grace, and beauty, the whole effect is always charming. As for the children, they swarm, they are delightful, and they present perfect nosogays of colour. If at first they look a little old-fashioned, in costumes which as to cut are merely reproductions in miniature of those of their parents, you soon find out that in reality they are very children. When you know them better you also find that, with all the attractions and virtues of children, they have very few of their faults. Long before Herbert Spencer taught the Western world how children should be reared, Japanese parents had of their own motion adopted most of the very principles of training which he inculcates. The result is the Japanese child of to-day. Great changes have passed over Japan during the last 30 years. Great changes still lie before her. But, come what may, let us at least hope that in disposition, manners, grace, and dress, Japanese children and young girls may remain, essentially, as they are.—*Times*.

## LATE TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

(Per Steamer to Nagasaki, December 9th.)

## ITALY AND THE POWERS.

The Italian Minister for Foreign Affairs has made a statement to the effect that Italy concurs in the peaceful aims of Austria and Germany, and favours a policy that would prevent an European war; at the same time Italy is determined to maintain the friendship of England.

London, December 9th.

## SALISBURY AND HARTINGTON.

The Marquis of Salisbury, speaking at a banquet, said he welcomed the coöperation of Lord Hartington.

## THE FRENCH MINISTRY.

The French Ministry has resigned in consequence of the rejection of the Budget.

Evening.

M. Goblet is forming a Ministry.

[FROM THE "HONGKONG DAILY PRESS."]

London, 15th November.

THE GOVERNOR OF HONGKONG MADE A PRIVY COUNCILLOR.

Sir George Bowen has been made a Privy Councillor.

London, 27th November.

## INCREASE OF THE GERMAN ARMY.

The German Army is to be increased by 41,000 men.

## ENGLAND AND CHINA.

Negotiations are proceeding between England and China for the cession of Port Hamilton to China, but it is urged that even if ceded England should still keep her hold upon the straits and should not allow any European Power to possess them.

## FRANCE AND EGYPT.

M. de Freycinet has declared that France cannot allow a foreign Power to be mistress of Egypt.

Mr. Nakagawa, a pawn-broker at Nakanogô, Honjô, has applied to the Government for permission to construct a wooden bridge of 120 *ken* between Kawara-machi and Mine-guri on the Sumida river at his own expense. The total cost of the bridge is estimated at *yen* 15,000.—*Hochi Shimshun*.

## MAIL STEAMERS.

For Shanghai, Kobe, and Nagasaki... per N. Y. K. Tuesday, Dec. 14th.  
For America... per P. M. Co. Wednesday, Dec. 22nd.

## TIME TABLES AND STEAMERS.

## YOKOHAMA-TÔKYÔ RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 7.00, 8.15, 9.30,\* 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00,\* 5.00, 6.15, 8.00, 9.15, and 11.00 p.m.

TRAINS LEAVE TÔKYÔ (Shinjûshi) at 7.00, 8.15, 9.30,\* 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00,\* 5.00, 6.15, 8.00, 9.15, and 11.00 p.m.

FARES—First Single, *yen* 1.00; Second do., *sen* 60; First Return, *yen* 1.50; Second do., *sen* 90.

Trains marked with \* run through without stopping at Tsumami-Kawasaki and Utsunomiya Stations. Those marked † are the same as above with the exception of stopping at Kawasaki Station.

## TÔKYÔ-MAYEBASHI RAILWAY.

TRAINS LEAVE TÔKYÔ (Uyeno) at 6.00 and 10.00 a.m. and 1.00 and 4.15 p.m.; and MAYEBASHI at 6.00 a.m. and 1.00 and 4.15 p.m.

FARES—First-class (Separate Compartment), *yen* 3.80; Second-class, *yen* 2.28; Third-class, *yen* 1.14.

## TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.15 and 11.30 a.m., and 2.25 and 5.50 p.m.

## TÔKYÔ-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TÔKYÔ (Uyeno) at 6.00 a.m., and 1.00 and 4.15 p.m.; and UTSUNOMIYA at 8.15 a.m. and 11.10 a.m., and 4.50 p.m.

FARES—First-class, *yen* 3.50; Second-class, *yen* 2.10; Third-class, *yen* 1.05.

## UTSUNOMIYA-NASU RAILWAY.

TRAINS LEAVE UTSUNOMIYA at 10.25 a.m. and 4.57 p.m.; and NASU at 6.40 a.m. and 3.15 p.m.

FARES—First-class, *yen* 1.10; Second-class, *sen* 74; Third-class, *sen* 37.

## NASU-KUROISO RAILWAY.

TRAINS LEAVE NASU at 12.04 and 6.36 p.m.; and KUROISO at 6.15 a.m. and 2.50 p.m.

FARES—First-class, *sen* 30; Second-class, *sen* 20; Third-class, *sen* 10.

## SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 9.19 a.m., and 12.34, 3.34, and 7.09 p.m.; and AKABANE at 10.33 a.m., and 1.34, 4.44, and 8.22 p.m.

FARES—First-class, *sen* 70; Second-class, *sen* 46; Third-class, *sen* 23.

## KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE ÔSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYÔTO (up) at 6.16, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

TRAINS LEAVE ÔTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYÔTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE ÔSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, *yen* 1.00; Second do., *sen* 60; First Return, *yen* 1.50; Second do., *sen* 90. Kobe to Kyoto: First Single, *yen* 2.25; Second do., *yen* 1.40; First Return, *yen* 3.55; Second do., *yen* 2.10. Kobe to Otsu: First Single, *yen* 2.85; Second do., *yen* 1.70; First Return, *yen* 4.30; Second do., *yen* 2.55.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 and 10.40 a.m., and 1.30 and 4.00 p.m.; and leave Yokosuka at 7.15 and 11.00 a.m., and 1.30 and 4.00 p.m.—*Fare, sen* 20.

## REPORTS.

The British steamer *Teheran*, Captain Seymour, reports:—Left Hongkong the 27th November, at 8.12 a.m.; had strong N. and N.E. winds, with heavy swell. Arrived at Nagasaki the 2nd December, at 3.54 a.m., and left the same day, at 3.47 p.m.; had light N. and N.E. winds and fine weather. Arrived at Kobe the 4th, at 1.31 a.m., and left the same day, at 6 p.m.; had light to fresh N. E. and N. winds with fine weather. Arrived at Yokohama the 5th December, at 11.35 p.m.

The British steamer *Belgie*, Captain Walker, from Hongkong, reports N.E. winds and heavy head sea to Turnabout; thence to port fresh winds and variable weather. On December 4th, at 9.30 a.m. passed P. & O. steamer *Thibet*, off Oaken, bound S.W. On December 7th, at 1.30 p.m. passed a junk broken up, in lat. 32.10 N., long. 134.12 E.

The German steamer *Stettin*, Captain Warnkers, reports:—Left Hongkong the 3rd December, at 6 p.m.; had generally fine weather, but strong north and north-westerly winds and rough sea; on the 6th wind was very strong with high northerly sea and swell in which the vessel rolled heavily. Passed Tado Island the 7th, at 11 p.m.; thence to port had fresh north-westerly winds with moderate sea. Arrived at Yokohama the 10th December, at noon.

The Japanese steamer *Niigata Maru*, reports:—Left Kobe the 9th December, at noon; had gentle north westerly breeze and blue clear weather, with smooth sea. The wind much freshened from outside of Owari Bay, and shifted to south-westerly from Rock Island; thence to port had fine weather with passing clouds. Arrived at Yokohama the 10th December, at 6 p.m.

## LATEST COMMERCIAL.

## IMPORTS.

A marked improvement has been apparent during the past week, and though English Yarns alone have obtained an advance, a good many articles have been dealt in to a fair extent, and thus a more cheerful tone has been imparted to the Market generally.

YARN.—Sales for the week amount to over 1,000 bales English, and 100 bales Bombay.

COTTON PIECE GOODS.—The record of sales is as follows:—1,550 pieces 81 lbs. Shirtings, 8,000 pieces 9 lbs. ditto, 3,000 pieces Prints, 3,500 pieces Turkey Reds, 250 pieces Cotton Italians, and 3,000 pieces Velvet.

WOOLLENS.—10,000 pieces Mousseline de Laine, 3,150 pieces Italian Cloth, 350 pieces Silk Satins, and 6,000 pairs Blankets have been reported as the sales for the week.

Nailrod, small size.....	2.50 to 2.60
Wire Nails, assorted.....	4.50 to 5.50
Tin Plates, per box.....	5.30 to 5.50
Pig Iron, No. 3.....	1.17 to 1.20

## KEROSENE.

Some few sales during the week, amounting to 15,000 cases in all on the basis of our quotations. Holders try for an advance, but buyers refuse to pay it, and anything above \$1.80 would be hard to get for any brand of oil. No fresh arrivals with the exception of 10,000 cases in the steamship *Parthia*. Stocks apparently ample for all requirements.

	PER POUND.
Devon.....	\$1.77 to 1.80
Colnet.....	1.74 to 1.75
Stella.....	1.65 to 1.70

## SUGAR.

A good business has been done in all sorts, particularly in Formosa kinds, which, including White descriptions, aggregate 4,000 piculs at the underbid quotations. The recent advance in value of Refined has been maintained, but other grades have suffered a decline, though prices are now stationary.

	PER POUND.
White Refined.....	\$5.20 to 7.15
Manila.....	3.80 to 4.00
Daitong and Swatow.....	3.20 to 3.50
Brown Takao.....	3.50 to 4.00

## EXPORTS.

## RAW SILK.

Our last issue was dated the 3rd instant, since when we have had a continued business in this article. The Settlements for a week (including about 20 piculs Direct shipments) have reached 1,300 piculs, divided thus:—Hanks 55 piculs, *Filatures* and *Re reels* 1,075 piculs, *Kakada* 95 piculs, *Oshu* 75 piculs.

The chief demand has again been for Europe, the Lyons Market being reported strong. This place seems to be holding all other markets at present, for New York cables announce quietude and dullness there. All through the season New York has very unwillingly followed prices in their upward path; buyers there have been steadily watching for a fall, and there is no doubt that, should Lyons once weaken (from any cause whatever), the United States trade will join in the attempt to reduce rates, and we may then see a smart reaction in values. In this connection it must not be forgotten that our available supplies to date are more than equal to the total Export for the whole of last season, and we have still one-half the present season to get through with several thousand native bales to come in from the interior.

At the same time shippers appear to anticipate better Markets abroad after the turn of the year; but it remains to be seen whether these anticipations are correct, and, if verified, whether they have not been fully discounted by the recent heavy shipments.

Arrivals this week have not equalled sales, and the stock is reduced to 9,900 piculs, as per details at foot. Direct Export has not been large (although some piculs have been reabsorbed by the interior for home consumption), but a fair shipment on native account will no doubt be sent on per *belgie* to-morrow.

During the week there has been but one shipping opportunity, the French mail of 4th instant. That vessel, the *Felga*, carried 1,106 bales for France, bringing the total Export from 1st July to date up to 13,842 piculs, against 10,676 last year and 12,404 at same date in 1884. The O. and O. steamer *Belgie* which leaves to-morrow for San Francisco has 610 bales engaged at the time of writing, and the P. and O. steamer *Teheran*, which goes south in the morning, is expected to take a fair quantity for Europe.

Hanks.—Not very much done by reason of the extreme firmness of holders. For crack *Shinshu*, about \$720 is asked without finding buyers. For ordinary *Annaka Takasaki*, \$660 has been paid, and ordinary 21 *Shinshu* is mentioned at \$685, but exporters generally fight shy of these figures.

Filatures.—Considerable business in fine sizes at higher prices:—*Utsunomiya*, \$805, *Kanagawa*, \$815, *Miyatogami*, \$800, *Hasegawa*, \$790, *Hida*, \$780. Coarse sizes are not so much sought after, but prices are well maintained on the basis of last week's list, one notable sale being *fil. Shinmushu* at \$755.

Re reels.—Plenty of trade herein, all sorts participating from extra down to ultra-common. *Katsuyama* is entered at \$810, with second quality at \$770. The bulk of the settlements, however, have been in *Yoshu*, *Bushu*, and *Oshu* sorts at prices ranging from \$760 for No. 2 *Maibashi*, down to \$670 for common *Sashu*.

Kakada.—Not much fresh business, the Settlements being chiefly confined to the delivery of a large parcel contracted for some time ago. Prices are unchanged, \$800 noted for *Flag chop*, with \$780 for *Black Unicorn*.

Oshu.—The Settlements here consist of common *Hamatsuki* (old Silk) at \$540 and thereby.

## WASTE SILK.

Again we have to report a fair amount of business in this branch of the trade, settlements for the week reaching a total of 800 piculs, distributed thus:—*Coccons* 40 piculs, *Noshi* 210 piculs, *Kibiso* 300 piculs, *Sunries* 50 piculs. No Direct Export since last advices.

All classes have shared in the demand except *Mawata*, for which article there has been no buyer for many weeks past. Prices are steady without being very strong, dealers asking long prices for such quality as buyers ask for, and offering to be easy on cargo that nobody wants. Arrivals have been quite moderate, and present stock is not over 10,000 piculs.

The M.M. steamship *Volga* on the 4th instant carried 250 bales *Waste* and *Coccons* for Marseilles, Milan, Trieste, etc., bringing the present season's Export up to 12,804 piculs, against 7,459 piculs last year and 14,280 piculs at same date in 1884.

*Coccons*.—Very little doing now, the transactions of the week not exceeding 40 piculs, a remnant of *Pierced*, ordinary quality, fetching \$120.

*Noshi*.—About half the business has been in this class, and among the records we find the following:—*Sunrie* \$155, *Toshi*, best, \$147½, 7½ in assorted, \$120 to \$125, *Mino Noshi* was done at \$170, and *Oshu Toshi* at the same price.

*Kibiso*.—Considerable trade in *Filature* sorts at and beyond \$155 for Best selected, and several parcels *Toshi* also noted at \$60. Stock in this department is very heavy, but holders hang on wonderfully well.

*Mawata*.—No sign of any move at present.

*Yeri*.—The usual steady buying goes on, some buyers paying up to \$30½ for uncleaned stock.

## QUOTATIONS.

Pierced Coccons—Good to Best .....	180 to 190
Noshi-to—Filature, Best .....	160 to 170

Total piculs .....	9,900	Total piculs .....	10,600

## TEA.

The market has been very animated during the interval, owing to telegraphic information from New York to the effect that heavy transactions in low grades were going on with a former tendency. Fully 3,400 piculs have been sold at slightly higher prices than reported the week previous. Receipts.

have been light. At the close the market is quiet. Nearly 1,000 piculs of the above business represents Common sorts. Total settlements for both ports are as follows:—Yokohama, 203,125 piculs, Kobe 131,750 piculs, aggregating 334,875 piculs, as compared with 205,530 piculs for the corresponding date last year. About 14,500 piculs more are expected to arrive before the end of the season 1886-87. The Pacific Mail steamer *City of New York* took 20,000 lbs. for New York, 1,650 lbs. for Chicago, 8,044 lbs. for Canada and 1,500 lbs. for San Francisco, amounting to 31,880 pounds from Kobe. The same steamer took on the 2nd instant 110,456 lbs. divided thus, 49,743 lbs. for Chicago, 68,265 lbs. for San Francisco and 1,448 lbs. for Canada. The steamship *Empire* took on the 4th instant 26,798 lbs. for New York and 2,500 lbs. for Canada, aggregating 22,798 lbs. The steamship *Mersey*, which sailed from here the 24th ultimo, took 74,600 lbs. for New York from Kobe.

KEATING'S WORM TABLETS.

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children. Sold in Bottles, by all Druggists.

Proprietor—THOMAS KEATING, London.  
October, 1886. 26 ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a two-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 18TH, 1886.

### DEATH.

At Toyonaka, Chofu, Yamaguchi Ken, on the 13th inst., after a protracted illness, Captain SENZO HATTORI, Imperial Japanese Navy (Retired), aged 35 years.

### SUMMARY OF NEWS.

COUNT OTAMA witnessed gunnery experiments, the 10th instant, at Okawa.

SEVERAL fires of insignificant dimensions occurred in Tōkyō during the week.

THE civil action against Captain Drake, late of the *Normanton*, has been abandoned.

A CONFERENCE of military field officers will be opened the 20th instant in the capital.

THE Conference on Treaty Revision still continues to meet weekly at the Foreign Office.

A HEAVY fall of snow took place at Sutsu in Shiraiheshi (Hokkaido) the 2nd and 3rd instant.

THE private law schools in Tōkyō have been raised to the status of officially supervised institutions.

ADMIRAL ENOMOTO, Minister of Communications, is about to recommend the issue of new postage stamps.

A VERNACULAR journal describes the increase in the export of Japanese matches to China as "enormous."

AN address of thanks has been presented by the foreign residents to Prefect Oki Morikata, in recognition of the excellence of his general

administration, and especially of his efficient measures to check the recent epidemic of cholera.

It is stated that Mr. Mutsu Munemitsu, who is at present a Minister in reserve, will shortly be appointed Minister to China.

H.I.H. PRINCE KITASHIRAKAWA gave a banquet, the 13th instant, at his residence to a distinguished company.

THE 12th instant being the anniversary of the late Kōkaku Tennō, the usual ceremony was observed in the Palace.

THE cost of the forts on Tsushima is estimated at 850,000 yen, and the time occupied in their construction six months.

THE President and Vice-President of the General Staff Office are at present investigating propositions for coast defence.

MAJOR MECKEL, of the Military University, whose term of service will expire in March next, has been re-engaged till March, 1888.

REAR-ADMIRAL MATSUMURA, who had been staying at Shiohara, Yashu, to recruit his health, returned to the capital the 11th instant.

COUNT MATSUKATA, who had been under medical treatment at this country residence at Tomioka, returned to the capital the 10th instant.

H.I.M. THE EMPEROR has intimated to the authorities that he will proceed by sea to Toyotake in the *Fuso Kun*, on his way to Kyōto.

OWING to the approaching departure of Prince Sanjo, Lord Keeper of the Privy Seals, a general meeting will be held the 23rd instant in the Peers' Club.

MAJOR-GENERALS NOBI and KAWAKAMI, who have been ordered to proceed to Europe on official business, will leave Japan about the end of January next.

IT is stated that the demand for cheap porcelain and lacquer ware for the American market is inducing the outturn of a vast quantity of very inferior kinds.

THE Government has purchased the compound occupied by Mr. Ran, late secretary of the Educational Department, at Mitosubashi-dōri, in order to erect thereon a Female School of Industry.

IN the Finance Department there are at present under investigation the estimates of expenditure for the 20th fiscal year which have been submitted from the various Departments.

THE Arima School authorities have lately leased 500 *Fubō* of reclaimed land at Nakazu on which to establish a Gymnastic School. The work of construction was commenced the 11th instant.

MR. BABA, a Bachelor of Law, who left Japan a few months ago for America, recently hired a theatre and delivered a lecture on "The Weapons used in Japan in Ancient Times." Mr. Baba, who is a very fluent speaker, gave

some practical illustrations of the use of weapons, and was loudly applauded by a large audience.

CAPTAIN Drake, of the *Normanton*, has written to the press, explaining that the lives of the 25 Japanese passengers were lost owing to the insubordination of the ship's crew.

OFFICIALS from the Geographical Bureau in the Home office will shortly leave for Oita, taking some instruments for the purpose of establishing a meteorological observatory on the coast of Bungo.

THE Government is said to be about establishing an office for the examination of articles made in foreign style, with the object of detecting fraudulent imitations of foreign manufactures.

THE Koreans, being convinced of the value of steamers since their acquisition of the *Shima Maru*, are said to be making arrangements for the purchase of several other vessels in this country.

A MEETING was held, the 10th instant, in the Senate to pass the second reading of the regulations for the catching of seals and otters. Count Oki, President, and all Senators were in attendance.

IT is stated that the present Governor of Hyōgo Ken will be promoted to a position in the Foreign Office, and that he will be succeeded by Mr. Komuro, who was formerly connected with the Mitsu Bishi Company.

STEAM machinery has been ordered in England by the Nippon Seifun Kaisha, whose business has increased so much lately that they intend to erect another powder-mill, probably in the neighbourhood of Nagasaki.

MR. IWANURA, Chief of the Hokkaido Administration Board, will leave for the capital before the end of this month on business relating to colonizing work and the encouragement of industries in his jurisdiction.

MR. SUZUKI, a naval surgeon, who went to London in May last, has just passed a most successful examination and obtained the distinctions of Member of the Royal College of Surgeons and Licentiate of the Royal College of Physicians.

IN accordance with a recent notification, troops will be stationed in Tsushima, Okinawa, and the Bonin Islands. These last being under the jurisdiction of the Tōkyō City Government, the barracks will be constructed under the superintendence of the First Division in the Engineering Bureau.

TWO mineral springs have been discovered at Muko-gori, in Settsu, and an analysis of the water discloses valuable medicinal qualities eminently suitable for baths. The scenery in the neighbourhood is exceedingly picturesque, and the place is, altogether capitally situated as a

summer health resort. The construction of accommodation for visitors has been decided upon, and building is to be commenced at once.

Mr. SUGIDA KOGORO, residing at Izumochō, Kyōbashi Division, accompanied by two officials, will leave for Europe the 23rd or 24th instant under private instructions from the Government to report on the decoration of prominent buildings in foreign countries. They will spend six months abroad.

THE opening ceremony of the Meiji Law School took place the 12th instant at 3 p.m. at Surugadai. Mr. Watanabe, President of the Imperial University, presided at the ceremony. Messrs. Saito, Fukuchi, and Mitsukuri, gave addresses, and Mr. Hiramatsu on behalf of the students delivered a speech, to which Mr. Kishimoto, one of the teachers, replied.

COUNT ITO, who returned to the capital, the 13th instant, from Tsushima, proceeded to the Palace, the 14th instant, and reported to H.I.M. the Emperor his observations during his tour in those localities. The Minister President afterwards attended the Cabinet Office, when the usual Tuesday meeting was held at the appointed hour and closed at 3.30 p.m.

THE 10th instant being the 3rd anniversary of the death of the son of Count Saigō, a ceremony was observed at the residence of the Count at Meguro. Rev. Mr. Nicolai, accompanied by his sixty pupils, visited the residence on that day. Count Kawamura, Court Councillor, Captain Kurokawa of the navy, Mr. Tokuno and a number of dignitaries and gentlemen were present.

MR. IWATA and four residents in Nihonbashi received permission from the Government, the 13th ultimo, to construct a tramway between Tōkyō and Hachijōji. Another application was made to the Government, the 13th instant, to change the proposal into one for a railway with the object of connecting this line with that of the Japan Railway Company at Naitō, Shinjuku.

AFTER a long period of depression in Yarns, Cotton Piece-goods, and Woollens, a revival took place a fortnight ago which was generally expected to last for some time. This, however, has not been the case, for the demand ceased as suddenly as it had sprung up, the consequence being that during the past week very little has been done, and this at a time of year when the trade is steady and fairly brisk. There is nothing doing in Metals, and the transactions that have taken place in Kerosene have been generally in favour of sellers. It is a long time since Sugar changed hands in any quantity, but one or two weak holders having come to buyers' terms, have been followed by others, with the result that fully 12,000 piculs—all kinds—have been sold. The business in Silk, compared with the transactions of the past few weeks, has been restricted, while that in Waste Silk has been unusually large, but there is little alteration in values to note in either commodity. Another spurt in Tea has to be recorded, and though there is no quotable alteration in the prices of such leaf as is now offered, rates rules firm. Foreign Exchange has been weak and unsteady, these conditions being somewhat accentuated by the small amount of business done.

### NOTES.

THE vernacular press exhibits great satisfaction in respect of the verdict in the *Normanton* case. The *Nichi Nichi Shimbun*, in an article headed "We sought for justice and justice has been obtained," having noted that Captain Drake is now regarded by every Japanese with sincere compassion, and having recapitulated the principal questions of law at issue and the details of the proceedings in Court, observes that "in the statements of the prosecuting counsel, in the charge of the judge, in the verdict of the jury, and in the sentence pronounced by the Court, it is manifest that the principal object kept in view by all parties was unbiassed justice. That such ought to have been the case," the *Nichi Nichi* continues, "goes without saying, but it is none the less impossible to refrain from an expression of admiration for the impartiality of the British judiciary. On the other hand, Captain Drake has no small claim upon our sympathy. If, at a critical moment, he hesitated to risk his life, how many of us are there who would have behaved differently? The natural instinct of human beings, in times of supreme peril, is to provide for their personal security even at the expense of the lives of others. In the case of the master of a vessel, however, a weighty responsibility devolves on him in connection with the lives of the passengers entrusted to his charge, and it is in consequence of this special circumstance that a heavy punishment has been meted out to Captain Drake in the case under consideration. Assuredly it was not of *malice prepense* that he contributed, by neglect, to the drowning of his passengers. Doubtless he was himself satisfied with the sufficiency of the steps which he took, and although he has only to thank his own sins of omission for the unhappy position which he now occupies, his fate is probably a complete surprise to him. The jury, therefore, had every reason to urge extenuating circumstances in mitigation of his fault, and we can heartily endorse the opinion recently expressed by Mr. Katsu Awa, who, observing that landsmen have very little notion of the state of affairs prevailing on board the sinking ship, expressed sincere commiseration for Captain Drake. In view of all these facts, three months' imprisonment seems an ample sentence. The emphatic expressions of public opinion evoked by the catastrophe were inspired partly by sympathy for the unfortunate victims of the shipwreck, and partly by the wish to secure justice. Her Britannic Majesty's Court, to which all eyes were turned as the only tribunal where justice could be obtained, has now, by its impartial decision, satisfied our aspirations. We therefore thank that Court for its even-handed administration, rejoice with our fellow-countrymen that their object has been attained, and desire to express our gratitude to the British Judge, the prosecutors, and to such of our own authorities as were concerned in the affair."

Writing on the same topic, the *Yiji Shimpō* shows similar satisfaction. "The *Normanton* affair," writes that journal, "has been one of the most noteworthy events of recent times in Japan. The main cause of the tremendous outburst of popular passion which the news of the accident elicited, was neither sympathy with the calamity that had overtaken twenty-five of our countrymen and countrywomen, nor a desire to

obtain justice against Captain Drake. The plain truth is that the indignation gradually engendered throughout the nation by the unjust treatment which it has received at foreign hands, found a vent in the *Normanton* catastrophe. It is unnecessary to dwell on the subject now. By public speeches, by resolutions, by subscriptions, and by legal proceedings, the people have declared their sentiments too plainly to admit of misinterpretation." The *Yiji* attaches comparatively small moment to the trial of the captain, but, at the same time, is by no means indifferent to the importance of the legal aspects of the question, and expresses heartfelt satisfaction at the impartiality of the verdict pronounced by Her Britannic Majesty's Court. Our contemporary concludes with these words:—"What gives us special satisfaction is the prompt conclusion of the trial. Had the *Normanton* been a Chinese ship, what would have been the sequel? Would a Chinese Consular Court have consented to commit the master at the instance of the Japanese authorities? And assuming that it did consent, would a verdict of 'guilty' have been pronounced by a Chinese tribunal within a few days of the committal? We should hesitate much before answering these questions in the affirmative. Most probably the affair would by this time have reached the stage of suspended conferences and hopeless prospects. Reflecting thus, we cannot but admire the procedure of the British Court. It has acquitted itself in a manner worthy of the tribunal of a civilized country."

\* \* \*

Both the *Mainichi Shimbun* and the *Choya Shimbun* discuss the finding and proceedings of the Court in a corresponding spirit. The former journal's article is interesting for the sake of an exposition,—adequate or inadequate our readers can judge for themselves—of the reasons which induced it to assume such a conspicuously uncompromising attitude in respect of the *Normanton* affair. It was the *Mainichi Shimbun*, our readers will remember, which published an inflammatory and highly exaggerated cartoon of the shipwreck, and the opinions ventilated in its columns were in general harmony with the spirit of the picture. The *Mainichi* now explains that, at this important stage of Japan's relations with foreign nations, when the feelings of prejudice against aliens from beyond the seas are fast disappearing, it would have been matter for deep regret had the action taken by the British authorities led to the rekindling of an anti-foreign spirit throughout the country. Therefore, we presume, the *Mainichi Shimbun* devoted all the ability of its highly accomplished staff and all the influence of its widely read columns to fan the indignation which, in reality, it sought to allay. "Methods differ," observed the surgeon, as he cut a man's jugular to remove an inconvenient fish bone. It is, at all events, pleasant to learn, on the authority of the *Mainichi Shimbun*, that its apprehensions of a *Joi* revival have been entirely allayed by the impartial judgment of the British Court at Kanagawa.

THE five principal private law schools in Tōkyō have been placed under the superintendence of the President of the Imperial University. These schools are, the Senshu Gakkō, the Meiji Hōritsu Gakkō, the Tōkyō Semmon Gakkō, the Tōkyō Hōgakkō, and the English Hōritsu Gakkō. It is asserted that this step has been

taken by the Government with the view of obtaining competent law officers in anticipation of the opening of the country for mixed residence. To each of the schools a Superintending Commissioner has been appointed from among the Professors of the University. Professor Hozumi is nominated Chairman of these Commissioners, as well as Commissioner for the Senshu Gakkō and English Hōritsu Gakkō. Professor Kinoshita is to be Commissioner for the Tōkyō Hōgakkō; Professor Tomii for the Meiji Hōritsu Gakkō, and Professor Iijikata for the Tōkyō Semmon Gakkō. The function of the President of the Imperial University is not to include any right of interfering with the management of the Schools. He is only to superintend the curriculum and the methods of instruction; with which object it is provided that the Commissioner appointed by him is to be present at the School examinations, and is also to inspect the classes at intervals. The results of each term examination are also to be submitted to the University within fourteen days of the completion of the examination. Such of the graduates of the schools as the President of the University may deem worthy, in respect of the progress they have displayed, are to be examined at the University in presence of officials of the Department of State for Justice, and the successful candidates will receive diplomas. The President of the University may, in accordance with the reports of the Commissioners, recommend alterations in the courses of instruction pursued at the schools.

THE proposal to remove the seat of government from Tōkyō to Kiyōto, seems to be discussed in quarters not altogether devoid of influence, for we find the subject noticed in the editorial columns of such journals as the *Fiji Shimpō* and *Nichi Nichi Shimbun*. The former, in its issue of the 19th ultimo, under the heading, "The removal of the capital is unnecessary," takes up a line of opposition to the project. Our contemporary points out that, if, as is rumoured, the chief reason brought forward for the removal of the capital is the exposure of Tōkyō to the attacks of war-ships, then it will be necessary to transport to a secure position inland all the large and prosperous cities that stud the seaboard of the empire. For, contends the *Fiji Shimpō*, it is not alone—not even principally—government buildings and property that demand protection from the guns of an enemy; it is very largely the valuable interests of private persons, which centre in such places as Tōkyō, Osaka, &c., that call for defensive measures. The *Nichi Nichi Shimbun*, in its issues of the 21st and 22nd, discusses the question at considerable length. The leading views of those who advocate the new scheme may, the *Nichi Nichi* thinks, be set forth as follows:—(1.) The situation of Tōkyō is, from a strategical point of view highly objectionable, as the city lies within easy reach of a hostile naval force; (2.) the present capital is built on a very unhealthy site, the ground which it occupies being reclaimed swamps and marshes; (3.) the work of improving the city of Tōkyō will require such an enormous outlay that it will be wiser to shift the seat of government to some other locality than to saddle the nation with a large expenditure; (4.) Tōkyō should be converted into a purely commercial city, such for example, as New York, Lyons, Hamburg, Antwerp, &c.; (5.) a new site should be chosen for the seat of

government, and for this purpose the plain at the foot of Akagisan in the province of Kadzuke, by reason of its extent and for sanitary considerations, would be highly suitable; while there are also easy means of communication both by rail and by the Tonegawa with the sea coast; the site further could be purchased for a few million yen; and (6.) the present is the time at which the scheme should be initiated, for the construction of the Imperial Palace has made but little progress, and important buildings such as the Houses of Parliament and the proposed departmental offices have not yet been begun. The *Nichi Nichi Shimbun*, commenting on these views, remarks, in the first place, that, with the construction of forts and the possession of war-vessels and torpedo boats, Tōkyō need not necessarily be at the mercy of a hostile navy; and further that in this—and more especially in the next—century, no particular attention need be given to the strategical position of the capital. As to the sanitary objection to Tōkyō the *Nichi Nichi* denies that the capital is relatively less healthy than other cities. If at present disease finds in some instances a ready foothold in the city, that is due to the defective drainage system as well as to the want of a good water supply; and improvement in these directions would certainly effect a great change in the health statistics. With regard to the next objection—the large outlay necessary for the improvement and remodelling of Tōkyō—the *Nichi Nichi* points out that the question whether the seat of government is to remain on the plain of Musashi or not does not affect the necessity of improving the capital. In any case large and important works must be undertaken, so that it is absurd to put forward this point as an argument in favour of the removal of the capital.

\* \* \*

In a brief sketch our contemporary describes the various removals of the seat of government, of which, since the selection of Kashiwabara in Yamato as capital in the 95th year of the Emperor Jimmu, there have been over forty. During the reigns of twelve Emperors following Jimmu, the Imperial residence was frequently moved about from place to place in Yamato, and at length in the first year of Seimu Tenno, it was shifted to Shiga in the province of Ōmi. In the 2nd year of Chūai Tenno it was removed to Toyoura in Nagato, whence it was again transferred to Yamato. Nintoku Tenno lived at Naniwa in the province of Settsu, but Richū Tenno, in the 2nd year of his reign, returned to Yamato. The province of Kawachi was, in the 1st year of Hansei Tenno, honoured by the Imperial residence, but from the 2nd year of Inkyō Tenno till the 5th year of Keitai Tenno, two different localities in Yamato were occupied, the seat of government being removed in the latter year to Yamashiro, and thence in the 1st year of Senka Tenno it was again transferred to Yamato. During the interval between the reigns of Kotoku Tenno and Genmai Tenno the seat of government was changed to the province of Settsu, and to Ōtsu in the province of Ōmi, reverting twice to Yamato. From Fujiwara in the latter province, where his immediate predecessors had settled, Gemmei Tenno removed to Nara, where his six successors continued to reside. In the 3rd year of the period of Enreki, in the reign of Kanmu Tenno, Nagaoka in Yamashiro was selected as the centre of administration, but seven years later the court

removed to Heian (the present Kiyōto). From that time till the final change to Tōkyō in 1869, Kiyōto continued to be the Imperial city—a period of more than ten centuries, during which eighty-one Emperors successively occupied the throne. Two occasions on which the court changed its locale have not been noticed in this sketch; the first, when Fukuwara in Settsu became the seat of the government in the 4th year of the period of Iishō, is omitted because of the shortness of the stay at Fukuwara; while the second, when the Court remained for fifty-seven years at Yoshino, in Yamato, during the reign of Godaigo Tenno, was a movement dictated by military reasons. Tōkyō has been, says our contemporary, for three centuries the political as well as the commercial centre of the country, and it is folly to propose without adequate reasons the removal of the seat of government. The agitation, the *Nichi Nichi* concludes, does not, as it is now presented, seem to be the outcome of any very earnest or profound thought.

WHAT a pity it is that, on the rare occasions when the foreign community do unanimously agree to put their signatures to a document, they cannot contrive to get it written in commonly decent English. A more execrable composition than the address to Prefect Ōki, it would be difficult to conceive. We say nothing of its uncouthness or of the spasmodic toil of its phraseology. Grace were, perhaps, too much to expect. But intelligible and grammatical English is surely within reach. Consider this elegant sentence:—"Whilst we know that to most public officers the consciousness of having done their duty,—and who have also, by so doing, been largely instrumental in saving the lives of their fellow citizens—is mostly enough," &c. It is not sufficiently eloquent for Mrs. Camp. Rather does it resemble the lecture of the rustic magistrate to a vagrant:—"God gave you health and strength, instead of which you go and steal geese on a common." Such English will furnish food for merriment to the students in Japanese schools. The community of Yokohama may be disposed to condone a good deal rather than take the trouble of revising what is put before them to sign, but truly they have carried their complaisance a little too far in this instance.

Owing to the growing suspicion of the peasantry and the increasing tendency to see spies in the most ordinary traveller, tourists in France have recently been more than usually exposed to annoyances on the part of provincial authorities. Englishmen on the northern coast, Italians in the Alps and on the Mediterranean sea-board, Spaniards along the Pyrenees, and, as a matter of course, German travellers in the western provinces of France, have all been watched with great apprehension, and, as a rule, the most innocent and *bona fide* sightseers have most frequently fallen victims to the vigilance and patriotism of excited peasants or misguided officials. Of course sober-minded Frenchmen have not been slow to express their regret at this tendency of the popular mind, and their voices have increased in firmness and vigour in proportion to the recent growth of the evil. M. Ranc, in the *République Française*, ridicules the tendency as a weakness, and deplores its effect upon the reputation of France abroad. "This morbid desire to hunt up spies, is," he writes,

"a most regrettable evil which certainly does not increase our reputation abroad for calmness and cool blood. All these episodes, all these arrests of supposed spies and all the sensational articles of the press become known abroad and are there, not without some reason, ridiculed. We are no longer living in the first days of the siege of Paris. To see spies everywhere, and especially where there are none, is a condition of mind involving no little practical inconvenience. During the war, the emissaries of the government at Tours and Bordeaux and the special agents of the ministry of war, when on their way to Paris, met at almost every step with delays and detentions, caused not by the Prussians but by the French authorities themselves. M. Freycinet must well remember those times. He cannot have forgotten how the supply and the transmission of intelligence was involuntary impeded by the very persons who ought to have given their heartiest cooperation." M. Ranc calls the general conception of a spy, as it exists in the popular mind, quite erroneous, and assures his readers that the nation and its authorities can be vigilant without sharing the ridiculous excitement that so often accompanies the arrest of so-called spies. He especially asks the press, from patriotic motives, not to encourage a tendency generally inconvenient and often injurious to the State.

HERE is the *Saturday Review's* ridiculously false version of the occupation of Port Hamilton, a version which, by iteration and re-iteration has probably come to be credited by many an honest Englishman:—"Some eighteen months have now elapsed since the acquirement by Great Britain from Korea of the three small islands within whose midst lies the sheet of water known as Port Hamilton. For twelve long years the late Sir Harry Parkes had urged upon his superiors at Whitehall the desirability of annexing the group, and he lived to see the advice so persistently tendered acted upon, almost the last official act of his career being the conclusion of an arrangement with the Korean Government, whereby, in consideration of a sum of money, Port Hamilton became the property of Great Britain."

WE take the following from the *Boston Evening Transcript*:—

About eight years ago Professor Ernst Fenollosa, a graduate of Harvard, was invited by the *Mombu-sho* (department of education) to occupy the chair of political philosophy in the Imperial College of Tokyo, which he accepted, and, with his charming wife, *née* Miss Millett of Salem, went to live in the Hongo Kaga Yashiki, in the heart of the capital of Japan.

Mr. Fenollosa, soon discovering that his class-room was not likely to be over-crowded with students, turned his attention to the study of the pictorial arts of the country, the records of which were legendary, confusing, and incomplete. Being well versed in Western art, having a well-balanced, analytical mind, excellent taste and scientific training, he gradually separated fiction from fact, and, to the amazement of the Japanese, not only classified the works of their artists, but traced the origin of their art to China, via Korea, and brought to our knowledge the fact that all we admire in Japanese art had its origin in popularly despised China.

With wonderful patience and untiring industry he collected the disconnected threads of art history in the shape of paintings, etc., in various private collections, gathered a mass of information as to the artists, their copyists, and the forgers of their works, and in five years was appealed to by the Government and the heads of the chief temples as the authority who could decide the genuineness or otherwise of their art treasures. He did not seek fame by sending his writings to the press and scientific societies; in fact, being of a most unassuming nature, he rather avoided publicity, and labored to perfect his work on the painters of Japan, which will cause his name to be honored all over the world, and be the standard upon the subject.

In addition to this study he, fully understanding the decadence into which the arts had fallen in Japan, began a movement to restore them by lecturing to artists and students and urging them to revive the high art of their country by studying the works of their great masters. This innovation, while gratefully received by the few creative artists, was bitterly opposed by the conservatives and the young men who had been but partially educated abroad and

whose judgment was formed upon standards with which they had become familiar, and who considered themselves connoisseurs of Western art. The conservatives resented the intrusion of a foreign expert into their sleepy circle, as did the radicals, who were full of conceit engendered by a few years' residence in this country or Europe, where their advance in our arts, etc., had been kindly assisted by admiring teachers. There is no question as to the earnestness and ability of the young men in question, but nearly all of them were abroad too brief a time and were too much engaged in other studies to learn much of art, yet these were the critics who opposed Mr. Fenollosa, and were the greatest obstacle in his path.

His ideas are sound and practicable, viz., to develop the art of Japan slowly and upon the solid teaching of the old masters until a school is formed that will be as famous as that of the Kano; in addition to which, knowing the value of the trained eye and delicate touch of the Japanese, he desires to turn the attention of a number of the younger students to these excellencies of European art most harmonious with Japanese quality. The Government has aided him directly and indirectly, and he has been accorded facilities in the matter of examining old collections in the treasure-houses of the temples in Nara, Kyoto, etc., such as few natives, and no foreigner, has ever enjoyed. Mr. Fenollosa believes that while it will be impossible for the Japanese to return to some of the methods of the old school, they must practise the more aesthetic teachings of their great masters and apply them to what is most admirable in western art—in other words, not altogether to renounce the old, while in a measure accepting the best of the new.

The Government fully examined the claims of the conservatives and listened patiently to the forcible denunciations of the radicals, and tested the merits of the teachings of Professor Fenollosa, which had already begun to show fruit in the production of those artists who looked to him as guide; the result being the severance of his connection with the Imperial University of Tokyo and his engagement for four years as Japanese Commissioner of Arts. He, with Messrs. Hamano and Okakura, two colleagues on the commission, is now on his way from San Francisco, and will arrive in Boston some time during this week. After studying our methods of art education and the management of our art museums, he, with his companions, will proceed to England, France, Germany, Holland, Belgium, Austria, and Spain, where they will make similar studies and purchase books and reproductions of art works for the Japanese Government.

The Japanese and the world of art owe much to this scholarly American, who has quietly and unostentatiously done a work that will benefit coming generations in all countries. We hope, now that his mission is known, he may receive the honors due to his personal worth and high ability.

EDWARD GREY.

Of course there are inaccuracies in this account—very noticeable inaccuracies. But they are scarcely the fault of the writer, and, at all events, we are glad to see that Mr. Fenollosa is receiving a hearty welcome.

In the course of the discussion which recently occurred with regard to the dress of Japanese ladies and the introduction of foreign costume, considerable impotance was attached to the expense of the latter. The Japanese were reminded that they were about to adopt a fashion which would cost the nation millions every year. The criticism is certainly true, but there are exceptions to the general rule. What, for example, would be said in Europe or America of a lady who paid seven hundred dollars for a collar? Doubtless there are ladies who have been guilty of such extravagance to procure a wonderful piece of lace, but are there many who would pay a like sum for a mediæval specimen of woven linen? During the Ming period, Chinese weavers manufactured a cotton stuff called *sarasa*, woven sometimes in minute, sometimes in bold, designs, the colours of which, partly from their original excellence and partly from the mellowing effects of age, are simply incomparable. For a little strip of this celebrated material large enough to pass round her neck and form a *han-yeri*, a Japanese belle has been known to pay anything from seven hundred to a thousand dollars.

\* \* \*

It has always been a trait of Japanese disposition to pay handsomely for their fancies. Our own experience furnishes illustrations, as in the cases of roses, rabbits, pigs, orchids, and so forth. Before the mediatization of the Government, connoisseurs willingly gave from five hundred to a thousand dollars for a good specimen of the celebrated *Sung Chien-yao*, and it is recorded that Iyeyasu did not hesitate to raise a sum equal to about thirty thousand dollars

on the security of a tiny piece of *mirtébani*. The author of the *Ching-te-chên Tuo-lo* asserts that at the beginning of this century a good vase of old Chinese *craguelé* sold readily in Japan for fifteen hundred or two thousand dollars, and we have ourselves seen pigmy tea-pots of *boccato*, cups of the most uninteresting Korean pottery, or vases of that essentially savage ware, *namban-yaki*, gravely purchased by dilettanti for sums varying from three to eight hundred dollars. Who was it that asserted lately, in a mercantile criticism, that the people of this country have "a natural craving for everything cheap and inferior?" Whoever he was, he showed only his own ignorance.

THE state of affairs in Europe is certainly as perplexing to statesmen as it appears to be to journalists. Alliances are made and unmade, combinations formed and dissolved, and every mail received here puts a somewhat different face upon the shifting scenes of diplomacy, thus faithfully reflecting the general uncertainty prevailing in all quarters. Now Egypt, then Central Asia, then again Bulgaria appears in the foreground; now peace is assured, then again war is imminent. It is a very unfortunate characteristic of the Eastern Question that a period of general uncertainty always precedes the crisis, a fact which is largely owing to the various and not always plainly indicated interests of the Great Powers. No state in Europe is really bound to pursue one single policy in order to further its interests. A majority of States are free to pursue alternative policies, or may remain in an "attitude of expectancy" until they deem it well to show their hand. Were it not for Egypt, Great Britain and France could, up to a certain point, look with equanimity upon a Russian descent upon Bulgaria. But the Egyptian question divides their policies and makes them antagonistic. By the occupation of the Nile Valley, England has anticipated her share in a possible division of Turkey, and by its retention she makes sure of a free road to the East. France, on the other hand, has never looked upon Tunis as her proper share of the Sick Man's estate; Tripoli cannot be taken except at the risk of definitely breaking with Italy, and Egypt is occupied by a *de facto* possessor. Any movement of Russia against Bulgaria and Constantinople will throw Turkey into alarm, and Egypt may become a rightful possession of Great Britain for consideration valuable alike to the Ottoman Empire and to the Queen's Government. The Sultan alone has a right to ask Lord Salisbury when Egypt will be evacuated, but he evidently feels little disposed to do France and Russia that favour. Prince Bismarck from the time of Lord Rosebery's accession to office has shown no disposition to extend to M. Freycinet the support he had given to M. Ferry's Egyptian policy. Indeed, his entire policy has since then exhibited no anti-English tendency, although Russia and France are said to have made strong and simultaneous efforts to produce such a complexion. The uncertainty of the situation is probably shown by nothing more conclusively than by the Sphinx-like silence at Varzin. Lord Salisbury, Lord Randolph Churchill, M. Freycinet, and M. Tisza have spoken, and English and Austrian statesmen certainly have given no uncertain sound. But the silence at Berlin remains unbroken. The official press has said much, but its voice has always been raised on behalf of the

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

*status quo* of the Triple Alliance as the sure basis of peace. It has been declared that Germany fears neither France nor Russia nor both combined; but that such a war would involve a European conflagration and constitute a serious danger to conservative interests throughout the world. Austria, Italy, Turkey and Great Britain would in such a case be inevitably drawn into the vortex of battle, and an ancient often quoted prophecy might then find abundant fulfilment:

By the Danube and the Dniéper  
Will the Cossack warrior sleep,  
By the Volga and the Don  
Will the Cossack mother weep,  
There'll be sobs, too, on the Severn  
And wailing on the Thames,  
And Europe will a picture be  
Of blood and tears and flames.

To prevent so great a calamity will form a noble task of true statesmanship. That Great Britain has declared herself, through her statesmen, willing and ready to support the Powers endeavouring to maintain peace, is as sincere a satisfaction to Englishmen as it is an assurance to Europe.

THE Protestant Missionaries in Syria and Palestine seem to be having a hard time of it. A memorial has been drawn up and signed by more than seventy of them, complaining of vexatious interference on the part of the Turkish Government. The missionaries are of various nationalities, British, German, American, and Swiss. Mr. Connor, of the Church Missionary Society, has been expelled from his house in Irbid, east of the Jordan, by orders from Damascus, has been personally insulted by the populace, and is now prevented from resuming his work. Again, an order from the Porte dated December 16th, 1885, instructs officials to search carefully and find out when evil designing persons are about to build schools, churches, or places of worship, since these "make wide divisions among our faithful subjects, and corrupt and injure them." A later order forbids entirely the building of new schools or places of worship, or the repair of those already in existence except under vexatious conditions. As a result Protestant schools and places of worship have been closed, the doors sealed, and the people forbidden even to meet in a private house for worship. Dr. Vartan's hospital work at Nazareth, carried on successfully for a long period in premises he bought from private owners, is threatened by the authorities. The land, which he made his own in due legal form, is now claimed as *miri*, or public land, and appraised at one-fifth of its real value. The right of petition is also virtually denied to sufferers.

ACCORDING to investigations made the 6th inst. the total number of cholera patients since the first appearance of the disease throughout the empire was as follows:—Tōkyō City, 12,034 patients, 8,259 deaths; fifteen Urban Divisions of Tōkyō, 10,530 patients, 7,439 deaths; Kyoto City, 3,205 patients, 2,481 deaths; Upper and Lower Urban Divisions of Kyoto, 1,893 patients, 2,481 deaths; Osaka, 20,533 patients, 15,821 deaths; four Urban Divisions and Nishinari-gori in Osaka, 11,943 patients, 9,349 deaths; Kanagawa Prefecture, 5,952 patients, 3,743 deaths; Yokohama, Urban Division, 3,074 patients, 2,014 deaths; Hyogo Prefecture 6,791 patients, 5,119 deaths; Kobe, Urban Division, 1,870 patients, 1,551 deaths; Nagasaki Prefecture, 2,383 patients, 1,518 deaths; Nagasaki, Urban Division,

974 patients, 635 deaths; Niigata Prefecture, 9,102 patients, 5,154 deaths; Niigata, Urban Division, 538 patients, 441 deaths; Saitama Prefecture, 961 patients, 528 deaths; Chiba Prefecture, 3,464 patients, 2,152 deaths; Ibaraki Prefecture, 868 patients, 539 deaths; Gumma Prefecture, 313 patients, 211 deaths; Tochigi Prefecture, 559 patients, 284 deaths; Mie Prefecture, 1,419 patients, 1,066 deaths; Aichi Prefecture 1,128 patients, 827 deaths; Shizuoka Prefecture, 629 patients, 184 deaths; Yamana-shi Prefecture, 1,156 patients, 489 deaths; Shiga Prefecture, 414 patients, 248 deaths; Gifu Prefecture, 338 patients, 202 deaths; Nagano Prefecture, 4,267 patients, 2,168 deaths; Miyagi Prefecture, 1,317 patients, 868 deaths; Fukushima Prefecture, 249 patients, 149 deaths; Iwate Prefecture, 482 patients, 312 deaths; Aomori Prefecture 5,778 patients, 2,655 deaths; Yamagata Prefecture, 2,225 patients, 1,441 deaths; Akita Prefecture, 4,917 patients, 2,461 deaths; Fukui Prefecture, 6,665 patients, 4,819 deaths; Ishikawa Prefecture, 4,214 patients, 3,094 deaths; Toyama Prefecture, 16,224 patients, 10,003 deaths; Tottori Prefecture, 790 patients, 488 deaths; Shimane Prefecture, 1,743 patients, 1,001 deaths; Okayama Prefecture, 2,705 patients, 1,702 deaths; Hiroshima Prefecture, 7,590 patients, 5,298 deaths; Yamaguchi Prefecture, 3,679 patients, 2,235 deaths; Wakayama Prefecture, 3,072 patients, 2,180 deaths; Tokushima Prefecture, 938 patients, 588 deaths; Ehime Prefecture, 5,311 patients, 3,183 deaths; Kochi Prefecture, 1,853 patients, 1,253 deaths; Fukuoka Prefecture, 1,646 patients, 1,045 deaths; Ōita Prefecture, 4,499 patients, 888 deaths; Saga Prefecture, 1,216 patients, 739 deaths; Kumamoto Prefecture, 571 patients, 272 deaths; Miyazaki Prefecture, 22 patients, 16 deaths; Kagoshima Prefecture, 38 patients, 16 deaths; Okinawa Prefecture, 926 patients, 662 deaths; Hokkaido Administration, 929 patients, 652 deaths; Hakodate Branch Administration, 1,894 patients, 1,347 deaths; Nemuro Branch Administration, 6 patients, 3 deaths; total, 153,930 patients and 100,492 deaths.—*Fiji Shimpō*.

SIR RUTHERFORD ALCOCK contributes an interesting article to the *Nineteenth Century* on the subject of "France, China, and the Vatican." The line he adopts is precisely that taken by ourselves some time ago when discussing the same matter. The details given by Sir Rutherford and the facts which he marshals can scarcely fail to produce an impression. The gist of his argument is this—that whereas France, on all occasions of trouble with China previous to the Tonquin imbroglio, laid much stress on the principle of "solidarity," and almost claimed the co-operation of England by pointing out that the only certain method of rendering and keeping China reasonable was a policy of unity on the part of the Treaty Powers, she deliberately and flagrantly departs from such a policy in matters of religious propagandism. It is instructive to review briefly the record of Roman Catholic Missionary enterprise in China. Most strikingly does the story resemble that of the same propagandists in Japan. Kanghsi, the greatest sovereign of the Tsing Dynasty, was the liberal patron of all Roman Missionaries. He employed them in scientific work, assigned to them choice places of worship, and assisted them in every way. Yet, before the close of his reign, their disputes and the disorders they

created had estranged his good will. In 1718 he issued an edict restricting their freedom, and subsequently took further steps against them. As in Japan, so also in China, their arrogance and intolerance were conspicuous. They "assumed the insignia and distinctive marks of office and Imperial authority," and insisted that their converts should be exempted from Chinese jurisdiction. Of course they fell finally into utter disfavour. But in 1849, the French, when making their treaty with China—who had suffered serious military disasters at England's hands a few years previously—succeeded in obtaining an Imperial decree tolerating Christianity and ordering the restitution of all the houses which had been built for the missionaries during Kanghsi's reign and subsequently taken from them. Another war was required to make this decree effective. In 1858, after China's signal defeat, the French inserted in their Convention an article confirming the above right to exact restitution. "To realise," writes Sir Rutherford, "the feelings of the people on learning that they were to be called upon by foreign missionaries to give up property which for a couple of centuries had passed into Chinese hands, and been inherited from generation to generation under the laws of the land, we must try to imagine what would follow in our own country in similar circumstances. We must suppose a French army could succeed in entering London and there dictating the conditions of peace, and among others one that all the Church property confiscated after the Reformation by Henry VIII. should forthwith be restored to the Roman Catholic Church by the present holders, however acquired, and without compensation, and that the French Government could be appealed to in order to enforce the rigorous execution of the stipulation. What would be the result? Would it be peace and harmony, or revolt and a general insurrection?" With regard to the methods adopted by the missionaries in procuring restitution of their so-called property, a memorandum of Prince Kung speaks thus:—

In the interest of peace it will not do for the missionaries to be demanding restitution of any chapel they may choose to indicate. During the last few years the restitution of chapels in every province has been insisted upon without any regard for the feeling of the masses, the missionaries obstinately persisting in their claims. They have also pointed out fine handsome houses (belonging to, or occupied by, the gentry or others) as buildings once used as churches, and these they have compelled the people to give up. Places even the surrender of which was a question of dignity improper (probably Yamens are meant) with meeting-houses, clubs, temples—all such places being held in high respect by the gentry and people of the whole neighbourhood—they have forced from them for the benefit of the Church in lieu of other lands or buildings. Buildings which were once used as chapels have been in some cases sold years ago by Christians; and, having been sold and resold by one of the people to another, have passed through the hands of several proprietors. There is also a large number of buildings which have been newly repaired at very considerable expense, of which the missionaries have insisted on the restitution, refusing at the same time to pay anything for them. On the other hand, there are some houses which have become dilapidated, and the missionaries put in a claim for the necessary repair. Their conduct excites the indignation of the people whenever they come in contact with each other, and it becomes impossible for them to live quietly together.

When we add to all this the fact that the French missionaries claim and exercise the right of exempting their native converts from Chinese authority and assuming a protectorate over them, it is easily seen how intolerable the whole proceeding must be to the people of the Middle Kingdom. Sir Rutherford justly points out that in this isolated policy of France, this assertion of unwarrantable pretensions on the part of

the priests and their official support by the Cabinet in Paris, "the *solidarité* of interests ceases, and is only exchanged for a community of danger." The mass of the people recognise no distinctions between foreign nationalities, and do not know that, according to the instructions of the British Government, conversion to Protestantism is not to be held as conferring any release from the general duties of a Chinese subject. If the nation's indignation passed beyond the control of the law, British subjects would suffer as well as French, and England's relations with the Middle Kingdom would be disturbed by a cause to which her action had in no way contributed. Considering that out of China's total foreign trade of 147 million Taels the share of the British dominions is 111 millions, while the share of the whole continent of Europe is only 11 millions, and considering that 80.46 of China's maritime carrying trade, in so far as it is performed by foreign ships, falls to the English flag, against a French figure of 3.33 per cent., it is obvious that the effects of France's mischievous policy may be incomparably less serious to herself than to Great Britain. It is a marvel to us that the impracticability of the policy of coöperation, whether in China or Japan, was not recognised long ago by Great Britain.

*The Times* has just had a most unusual experience. It has figured as defendant in a libel case. *The Pall Mall Budget* states the facts thus:—"The police authorities send to *The Times* a circular for publication warning the public against certain alleged swindlers; *The Times*, of course, prints it, naturally believing that it is thus serving the public and strengthening the hands of those charged with public order. One of the parties implicated brings an action for libel against *The Times*, and yesterday one farthing damages was awarded. This of course, leaves *The Times* to pay the very heavy legal fees of its own counsel, besides all the bother to which it has been put. Anything more preposterous cannot be imagined. Surely a newspaper should at least be protected by law in the publication of official notices."

*The Mainichi Shimbun*, in its issue of the 14th instant, has a powerful editorial entitled, "The boundaries between private and public affairs should not be confused." The purpose of the article is to deprecate official censorship of the press, and the gist of the arguments employed is that to interfere with journalistic liberty of speech entails upon the Government an embarrassing responsibility. It is pointed out that, with the exception of the acknowledged organs of the Government, the newspapers published in any country are themselves wholly responsible for the opinions they advance or the statements they make. The Government cannot be called to account for their sayings or doings. All that is required of the law is to maintain a general supervision in the interests of morality and order. Should the Chinese Government, for example, direct all the journals published in the Middle Kingdom to print nothing opposed to the views advanced in the *Official Gazette*, not only would a fatal blow be dealt to the prosperity of journalism throughout the empire, but the result would be highly inconvenient for the authorities themselves. So soon as the fact of such a rigid official censorship became known, every idea and

every suggestion ventilated by the newspapers would be attributed by outsiders to Governmental inspiration, though in truth nothing of the kind might be the case. Moreover, the *Mainichi* goes on, the nations of Europe and America would regard with contempt a people that submitted slavishly to such dictation, and with indignation the action of a Government that pursued such a despotic policy. In a word, every ultra-legal official interference with freedom of speech, entails as much embarrassment for those that interfere as injury to the happiness of those interfered with. "If then," our contemporary concludes, in the usual indirect phraseology of a supervised journal, "there be any officials who have fallen into such an error, we recommend them to define carefully the proper limits of public duties and private rights, and to contrive, if possible, that those limits shall not be overstepped by either party."

\* \* \*

*The Mainichi Shimbun* certainly puts its finger upon the weakest spot in the armour of a Government that resorts to press censorship. And the argument might have been strengthened by citing the recent example of the *Normanton* agitation, when many persons, without pausing to think deeply, were disposed to conclude that the authorities endorsed, because they did not restrain, every violent utterance published in the newspapers. Our contemporary, however, injures his excellent cause by exaggeration when he declares that the nations of Europe and America look with contempt on a people who submit to be deprived of liberty of speech, as well as with indignation on the action of the Government that deprives them of that liberty. There are, unfortunately, very few countries in Europe or America where full liberty of speech is permitted, and among those that enjoy the privilege there are some that grossly abuse it. Every one hopes that Japan will soon be fit to enjoy it without abusing it. The dissemination of journals like the *Mainichi Shimbun* cannot fail to promote that most desirable issue.

A GRADUATE of the Sapporo Agricultural College, Mr. Shiga Shigetaka, has just returned from a voyage, in the man-of-war *Tsukuba Kan*, to the South Pacific. He indicates, in the editorial columns of the *Jiji Shimpō*, certain conclusions founded upon his personal observations, the drift of his remarks being that Japanese traders should make a resolute effort to develop commerce between these islands and the fast growing colonies of Australasia. Mr. Shiga dwells much on the importance of studying the tastes and fashions of other nations, especially those within easy reach, with a view to extending the marketable sphere of Japanese products and manufactures. His observations on this score sound like an echo of what British Consuls, all the world over, have recently been telling us. He goes on to note the singular fact that, while his countrymen pay more or less attention to the markets of China and America, they seem to take little thought about the very promising field offered by Australia and New Zealand. The voyage between these colonies and Japan is described by him in some detail, and a graphic account is given of their prosperous condition. In Mr. Shiga's opinion, rice, porcelains, japanned wares, straw hats, silk fabrics, tea, and various kinds of fancy goods might be profitably exported to Australasia,

while in return coal, wool, &c., could be carried here. He observes incidentally that Newcastle coal can be purchased in Australia for 9s. 8d. per ton, so that, allowing \$1 for freight, it might be laid down here at less than \$4. He says also that the people of Australasia are beginning to turn their attention towards Japan, and that the time is ripe for an effort such as he suggests. There may be a great deal in what Mr. Shiga says, but the coal suggestion sounds doubtful, and we do not quite see what could be done with the wool, at present, if it came here.

A SMALL company of French operatic artists arrived here a few days ago from Hongkong, and gave a performance on Saturday evening in the Public Hall, selecting "*La Périochole*" in which to make a first appearance. The acting and singing of the principals were artistic, and elicited frequent applause, the entire cast working hard to obtain success. Mlle. Delaroche, in the title rôle, created a favourable impression, and will doubtless be still more successful in parts better suited to her style, such, for instance, as those made famous by Schneider and Julia Mathews. The other ladies of the cast were quite equal to the characters assigned to them. M. Henriot, as *Piquillo*, did fairly well. He has a voice of rather agreeable timbre, and is a tenor of the French school, of a somewhat conventional type. The part of *Panatellas*, undertaken by M. Legros, was well sustained, his organ being equal to the music which falls to his share. This can hardly be said of M. Batréau (*Don Andrei*), who may possibly be heard to greater advantage on a future occasion. The dialogue here and there dragged somewhat, on account of its length, and would have borne excision in places. We understand the company will give other performances, and that it will receive an important accession to its strength. The house was well filled in the back part, though there were many front seats vacant. M. Burgairolles was an efficient *accompagnateur*.

THE changes which all tend to concentrate the high officialdom of the capital within the district surrounding the Hibiya Parade Ground, are sending the garrison to the suburbs. Residents who, in riding or walking, have become familiar with the pleasant district of lanes and gardens, known as Sendagaya and situated behind the Imperial Palace, will have difficulty now in finding their way. All the old landmarks are gone,—swept away to make room for the new barracks and parade-ground, which we believe are to be formed here. The powder-magazine, an old feature of the district, still remains, having proved the nucleus of more extensive military premises.

A LETTER received by a gentleman in the capital from Mr. Inouye, in Berlin, dated the 26th October, states that Mr. Inouye left Berlin the preceding day for Vienna and met Lieut.-General Viscount Torio, with whom he attended the Oriental Literary Association. Mr. Hamano, Counsellor of the Educational Department, was then in France. Lieut.-General Viscount Tani, who proceeded lately to Paris, was to return to Japan before the end of this year. Viscount Tani, Minister of State for the Agricultural and Commercial Department, who was then staying in Vienna in order to investigate German law, was expected shortly to arrive in Berlin. Count Kuroda, who had spent some

Original from

time at St. Petersburg, was said to have left for Constantinople. The Count was also expected to arrive in Berlin before the end of November. Messrs. Komaki and Terada, who accompanied the Count, had arrived at Berlin. Mr. Komaki was to leave immediately for England, through the Netherlands, and Mr. Terada was to set out for the same destination. Judge Matsuoka was staying in Berlin.

POPE LEO XIII. presents in most respects a striking contrast to his predecessor in the Pontiff's chair. All his acts have been marked by a spirit of tolerance not unbecoming his great reputation as a wise and sagacious statesman. His moderate policy has been quite successful in many questions pending between the secular and ecclesiastical powers, and his chief endeavour seems to be to establish good relations, or where this is not possible, a *modus vivendi* between the State and the Church. By his conciliatory attitude in the Irish question and by creating Dr. Newman a Cardinal, he has shown his high esteem for the English character and his confidence in the British Government. His endeavours to effect a peace in Germany between the Imperial Government and the Ultramontanes, if not as yet fully successful, have at any rate evinced his desire to bring about the best possible understanding, difficult as the task is and agitated as men's minds still are. In Russia his policy has done much to secure greater freedom to the Catholic Poles, and in Spain his influence supports the monarchy against the assaults of the Carlists. It is in France chiefly that his efforts have been unsuccessful, although in that country he was most prepared to yield and make concessions. But in France the Republican movement has generally been anti-ecclesiastical, and since the days of Gambetta nothing will rally the Republican parties more speedily and effectually than anti-clerical legislation. It is believed that, if the Pope were altogether free to act without reference to powerful influences at the Vatican, religious peace would have been established in Germany before this, but it is evident that concessions are more easily made to Catholic countries than to States predominantly Protestant. Leo XIII. is not always in a position to modify the claims of the Church impartially, though such should be his desire. The greatest question to be solved, and one which calls for the most consummate ability is the problem of the temporal power of the Pontiff, and it is here precisely that Leo XIII. is, in principle at least, as unyielding as his predecessor. He cannot recognise from the stand-point of the Church the weakening of the Holy See, and without some temporal and truly sovereign power he claims to be unable independently to exercise his spiritual authority. It is here that the Papal and Italian policies are at a deadlock, and they are likely to continue thus, although the Pope is not understood to claim the full and uncurtailed restoration of the patrimony of St. Peter. On the contrary, he would seem to be satisfied with a temporal and limited power, and he is understood to believe that such power could be restored to him by Italy without force or foreign intervention. The principle itself, however, he is not prepared to yield; and hence the clerical party in Italy, at every parliamentary election, is careful to emphasize the famous "*ni eletti né elettori*," for any participation in national elections would involve a recognition

of the Kingdom of Italy in its present extent and would consequently imply the abandonment of an ecclesiastical principle which no Pope, while he is a Pope, can afford to ignore. How this feud between Italy and the Pope can ever be terminated is a matter concerning which few would venture to offer a prediction; but that the present deadlock is a most trying one alike to the Pope and to the kingdom, goes without saying. There have been patriotic Popes, and there are among the clerical party in Italy many who love their country as well as their Church. To such persons a way out of the present dilemma would be as welcome as to King Umberto and M. Deprévis.

WE take the following dreadful story from a home exchange:—"The Pioneer newspaper gives an account of a recent occurrence in Rajpootana which shows the hold that ancient superstitions still have among the natives. Some years ago the native States of Oodeypore and Tonk, with a view of simplifying their boundaries, exchanged certain villages near Neemuch. In this process a village inhabited entirely by Brahmins passed from Oodeypore to the Nawab of Tonk. This village had been granted in perpetuity to the Brahmins by a former Maharana of Oodeypore, subject only to the nominal annual fee of twelve rupees for protection. After the exchange, the Tonk authorities imposed a revenue assessment, which was raised from time to time till it reached 500 rupees annually. Successive deputations of the villagers proceeded to Tonk to lay the case before the Durbar, but without effect. Thereupon the Brahmins assembled and decided by the voices of all present, women as well as men, that nothing was left to move the Durbar except the human sacrifice known as "Johur." Four women presented themselves as victims, but at the last moment two became frightened and withdrew. No opposition being offered, the other two went bravely and willingly to meet death, and were burned alive in the presence of the assembled community, their charred hands being afterwards carried by the villagers to Oodeypore with a demand for redress. This occurred a few weeks ago, and at midday, no attempt at concealment being made."

THEIR Imperial Highnesses Prince and Princess Komatsu arrived at San Francisco the 20th October at 9 a.m., and left for Washington the 23rd. Three officials were appointed from the United States Government as a reception committee. Their Highnesses paid visits to Congress and the chief public buildings, under the guidance of the reception committee. President and Mrs. Cleveland invited their Highnesses to the White House the 11th November at 11.30 a.m. Prince and Princess Komatsu, accompanied by Mr. and Mrs. Sannomiya and others proceeded to the White House under the escort of Mr. Kuki, Japanese Minister at Washington. After staying a short time, their Highnesses had an audience of President and Mrs. Cleveland, and after inspecting the various apartments and the gardens, their Highnesses and suite returned to their hotel. The Imperial party left for New York the same day at 4 p.m., starting the 12th November for England. Their Highnesses and suite arrived in London the 20th November.

THE *Student* magazine, of which we have the last issue before us, has, with a new year, seem-

ingly entered upon a more extended field of usefulness. It is now published fortnightly, instead of monthly, and most of the papers and notes are excellent. We confess, however, to being somewhat tired of the long continued *Analysis of Bain's Mental Science*, which has the appearance of mere padding. The editors must also be more careful about their philology. The two derivations suggested for the word *pamphlet*, in answer to a query, are grotesque, and one is not surprised on consulting Skeat, to find that among his three probable derivations those given in the *Student* find no place.

COUNTS ITO, OYAMA, and suite, who visited Tsushima the other day, arrived at Yokohama the 13th instant at 8 a.m. in the *Naniwa Kan* from Yokkaichi, and returned to the capital by a train which arrived at Shimbashi at 9.30 a.m. Count Inouye, Minister of State for Foreign Affairs; Vice-Admiral Viscount Kabayama and Major-General Katsura, Vice-Ministers of State for the Navy and for War; and a number of officials from the various Departments, attended at the station to receive their Excellencies. Count Ito did not attend the Cabinet Office on Monday, transacting all urgent business at his residence. Count Yamagata and Admiral Enomoto visited the Minister at 10 p.m.—*Fiji Shimpō*.

JAPANESE papers publish the following telegrams:—

(*Nichi Nichi Shimbun*.)

Osaka, December 15th, 2.40 p.m.

Messrs. Hatoyama, Kusaka, and Drummond arrived at Kobe this morning from Nagasaki in the *Yokohama Maru*, and leave for Yokohama at 6 p.m.

Nagasaki, December 13th, 4 p.m.

Messrs. Kusaka, Hatoyama, and Drummond leave to day for the capital in the *Yokohama Maru*.

(*Mainichi Shimbun*.)

Kobe, December 15th, 5.05 p.m.

Messrs. Hatoyama, Kusaka, and Drummond who were to leave at 6 p.m., are staying to meet Mr. Hayashi, a Public Prosecutor, and leave at 12 o'clock in the *Yokohama Maru*.

AMONG the specimens of Shropshire folk-lore collected in Miss Charlotte Sophia Burne's recent publication, is the following delightful verse, singing of the Nemesis that overtook an over-canny farmer who had turned a bull loose to keep boys out of his fields:—

E got 'is wealth by fraud and stealth,  
As fast as 'e could scraup it;  
Theer com'd a bull, and cracked 'is skull,  
An' kiked 'im in a saw-pit.

A PIECE of high-lying ground situated between Shinagawa and Meguro stations has been bought by the Missions of the Presbyterian and Reformed Churches of America, as a site for their Union College, *Iichi Yei Wa Gakko*. Extensive school buildings will shortly be erected on the site, which covers about seven acres. The premises at Fujimicho, in which the School work is at present carried on, are inconvenient and merely temporary.

AT the instance of the Messageries Maritimes Company, a writ was issued in Hongkong on the 6th instant, and the *City of Peking* attached for \$300,000, pending proceedings arising out of that vessel's collision with the M.M. steamer *Saghalien*.

WE are informed that the Messageries Maritimes steamship *Volga*, bringing up the next French mail, with dates from Marseilles to the 7th November, left Hongkong on Wednesday at 10 a.m.

## BRITISH CONSULS AND BRITISH MERCHANTS.

## I.

PUBLIC attention has been keenly directed, of late, to the methods of conducting British trade abroad. When it began to be discovered that the monopoly hitherto enjoyed by our merchants was threatened by competition in unexpected quarters, the first impulse of Englishmen was to rail at their officials. That is generally their first impulse in all circumstances of difficulty. Theoretically any one who advocates the placing of trade affairs, however indirectly, under an official ægis is denounced as a mischievous heretic. But practically, the Government is everything to the average Englishman. He keeps on hand a perpetual stock of indignation ready to be freely ventilated whenever abuses that seem within reach of official remedy present themselves to his vision. Accordingly, when commerce showed symptoms of inconstancy—when it dawned upon him that a domain over which he had been wont to range in all the pride of undisputed possession, was actually invaded by obtrusive outsiders, he raised his voice at once and charged the Government with allowing alien hands to disturb the ancient land-marks. British Ministers and Consuls, he cried, were neglecting their duty. They were ignorant, or had forgotten, that their most important function was to foster British trade, and to push the interests of their country's merchants. Let them be up and doing, or their more active and less fastidious foreign colleagues would contrive that the current of trade should flow into other than British channels. Thus invoked, British Ministers and Consuls made answer on their own account. "The blame must not be laid at our threshold, they said. We have not failed to render what assistance we might within legitimate limits. The merchant himself is in fault. He is fixed in a conservative groove. He declines to adapt himself to the times. He fails to observe what his rivals are doing, or to see that his own immobility creates for them an unique opportunity. So long as he refuses to move, we cannot push him on. But since he asks for our assistance, thereby implying that he attaches some value to our counsel, we are only too willing to tell him what experience is teaching us more and more forcibly every day."

This was a very presumptuous line, no doubt, for Ministers and Consuls to take. Their more becoming course would have been to acknowledge their own delinquencies, and to promise humbly that their services should thenceforth be at the command of every British merchant who desired to employ them. But British Ministers and Consuls, being for the most part men of wide experience and tried ability, whose paramount aim is to promote their

country's prosperity and to develop the commerce which constitutes the very breath of her nostrils—British Ministers and Consuls, we say, being happily men of this stamp, were not likely to purchase temporary ease or even personal credit by superficial palliatives which left the real source of trouble untouched. They indicated, stoutly and frankly, the quarters from which danger was truly to be apprehended. Writing from every country in the world, they pointed, with extraordinary unanimity, to the same sick spot, and declared in an unvaried monotone that the British merchant had allowed the times to pass him by, and that, unless he exhibited some of the enterprise and energy which formerly enabled him to distance his rivals, he would find himself altogether out of the race.

Of course it was not pleasant for the British merchant to be told such things. His ears were accustomed to something quite different. The notion that Monsieur this, Herr that, or Señor the other could possibly exhibit business capacity shrewder than his own was shocking. But, after all, he possesses a large fund of practical common sense, does the British merchant, and he knows that the truth seldom sounds agreeable. If his plumage was at first a little ruffled by criticism which he had himself evoked, we may be sure that calm reflection soon took the place of umbrage, and that he is sincerely obliged for the advice he has received, fully sensible of its earnest motives, and resolutely resolved to profit by it as speedily as possible. Such, at any rate, is the mood attributed to him by the leading English journals, all of which endorse the opinions of the Ministers and Consuls, and urge the necessity of translating their counsel into action. At this end of the world, however, a different view of the case appears to prevail. The officials who have written the reports are criticized in a spirit as intolerant as it is unjust. It is admitted, indeed, that their convictions may be honest, but their competence to express an opinion is openly sneered at. The public is reminded that the Consuls were once "young men straight from school or college, who passed competitive examinations and got appointments as student interpreters in China or Japan, where for years their principal occupation was to master the language of the country in which they were stationed." After all, most persons do emerge from school or college at some period of their lives, and the only points in which the same description seems inapplicable to merchants themselves is that they did not commence their career by establishing their ability in a competitive examination, and that they certainly never devoted years to the acquisition of Chinese or Japanese. But much may be pardoned in a critic who is smarting under a sense of offended dignity. The gentleman who undertook to vindicate the infallibility of

British merchants in the columns of a local contemporary unwittingly offers an excellent illustration of the very failing indicated by the Consuls. He jeers at the audacious notion that anyone can give him advice. A Consul, forsooth! Why a Consul was once a student interpreter. Besides, "Consular officials, from their vocation, can know but little on the subject of trade." "It is surprising that they should have the assurance to offer their advice for mercantile guidance." Strange, is it not, that if a Consul's vocation necessarily precludes a knowledge of commercial affairs, his active coöperation should so recently have been considered essential to the prosperity of commerce! But the fact is that it was all a mistake on the part of the principal Chambers of Commerce and many of the principal merchants in England, to urge the value of Consular assistance. The Yokohama critic knows better. He knows that the "Consuls can do next to nothing to promote the extension of trade." He knows a great many other things, too, but what he doesn't know is why on earth Consuls should tender their counsel. No matter that they had been roundly charged by merchants with perfunctoriness and supineness. No matter that the decline of British trade had been attributed to their inactivity. No matter that the Head of their Department had ordered them to furnish reports on the subject. No matter that they did not offer any advice to merchants, but merely stated their own views for the information, and at the request, of their official Chief. Behind such flimsy explanations stands the stern fact that they were "once student interpreters," and that they studied Chinese and Japanese while the men they venture to write about were exploring the much profounder and more instructive depths of book-keeping. That such tyros should venture to advise the grey-bearded merchant is monstrous. Let no one venture to advise him. To his case alone is inapplicable the old apothegm that onlookers see most of the game. Nobody but himself sees anything of it. He has "spent his life in learning how to conduct business," and whoever thinks that he can get up early enough to teach him something new is a presumptuous puppy. In Japan, above all, "inexperienced and ignorant Consuls will show considerable discretion by refraining from lecturing persons much better informed in all that concerns the conduct of trade than themselves." The particular Consul to whom the epithets "ignorant and inexperienced" are applied—Mr. J. H. LONGFORD—happens to have served HER MAJESTY in various parts of Japan for seventeen years and to have acquired a knowledge of the country and the people which few, if any, of the merchants can boast. But if he had served for three times seventeen years, it would be equally

unbecoming on his part to express an opinion unfavourable to "the experience and acumen" of local merchants. "We air a great people, Sir, and we must be cracked up," observed Mr. HANNIBAL CHOLLOP. And while the Mutual Admiration Society are engaged introspecting their own merits, outsiders step in and carry off the prize.

Such is the aspect under which British merchants are presented to the public by the writer in the *Japan Herald*. That it is not a true aspect, we need scarcely observe. The British merchant is much too shrewd and large-minded to despise suggestions, from whatever quarter they may come. HER MAJESTY'S Consuls know that from him they can expect criticism very different from that of the writer in the *Herald*, and that, even if their labours in behalf of their country's commerce are not always unerringly directed, the spirit which inspires them and the zeal that impels them will be appreciated and gratefully acknowledged.

## II.

Turning from the general aspects of this controversy to the particular criticisms evoked by the publication of Mr. Consul LONGFORD'S Report, we observe much that is unjust and perverted.

It is suggested, in the first place, that some unwonted secrecy was observed with regard to the Report. Its critics speak, indeed, as though the merchants of Yokohama had grounds to complain that the Report "was not published here previously to its being forwarded to the Foreign Office." Even if such a course were pursued with ordinary Consular Reports—which is not the case, since they are never published in Yokohama until a month or six weeks after they have been sent to London—the rule would be inapplicable in the present instance. The Report in question was specially prepared under special instructions. It was written for the information, in the first place, of the Secretary of State for Foreign Affairs, and, in the second, of the merchants in Great Britain. As we understand the matter, HER MAJESTY'S Minister in Tôkyô could not have exercised any discretion with regard to its publication. That was for the Foreign Secretary to decide. He might have published it in full, suppressed it wholly, or allowed excerpts only to appear. But without his sanction the Report had to be treated as a confidential despatch.

A juster criticism is that the comparisons of trade for different periods are made on a sterling basis, and that, values alone being considered without reference to quantities, the results obtained are misleading to the extent of whatever variations prices showed at those periods. So far as the matter of sterling is concerned, Mr. LONGFORD, as his critics must know well, merely followed the directions of the

Foreign Office. Statements in sterling were desired for the convenience of home merchants, who might well have complained had they been offered statistics based upon a unit of value so variable as the Mexican dollar. For the rest, the purposes of the Report are adequately met by the method pursued. It was obviously imperative that the mode of calculation employed in this document should be uniform with the mode employed by the rest of HER MAJESTY'S Consuls in compiling their usual Trade Reports. Thus, in the case of Hong-kong sugar, which is specially selected for adverse criticism, had Mr. LONGFORD taken the sterling value of the dollar at 3s. 6d., it is plain that his totals would have flagrantly disagreed with those already placed on record by his colleagues, and by H.B.M.'s Minister in the Annual Summary of Trade. Apart from the confusion thus created, the question is of small moment. The object was to show the development of the trade in sugar, and to do this it would have been just as correct, mathematically speaking, to take the dollar at 10s. 8d. as at 3s. 8d. A common denominator was alone required, and a very uncommon denominator would have been obtained by following the fluctuating price of the dollar during the past five years. Mr. LONGFORD based all his figures, as he is careful to explain, on the Customs Returns, and therefore not only adopted the rate of exchange invariably taken in those Returns, but also omitted the question of freight and insurance, about which the Returns are silent, and which, for the rest, is entirely foreign to the purpose of his Report.

But the unique aim of the critics appears to be captiousness. The purpose of the Report is nothing to them if only they can traverse its details from any point of view. Thus, though the import of cotton manufactures into Japan is steadily declining, they bid the British merchant draw comfort from the fact that raw material, in the shape of Yarn, is coming into greater demand. This way of putting the case may be satisfactory enough to the local trader, who cares little what he sells provided that he makes his commission. But is it equally satisfactory to the weaver in Lancashire, whose mills are standing idle and whose store-houses are over-flowing? The yarns, it is true, are consumed in either case, whether in England or in Japan. But in the latter event all the trade of the English weaver with Japan is destroyed. It was precisely to indicate this danger that Mr. LONGFORD wrote. His critics surely cannot be as obtuse as they seek to prove themselves. And yet, who shall say? Consider this fashion of argument, for example:—"It stands to reason that with the cheap labour in Japan, and when so much of the yarn is worked up, not in large manufacturing establishments, but in country places by the various members of each household and their domestic servants and farm labourers in their spare

time, it should be more profitable to the Japanese to import and work up the raw material than to buy the product of Lancashire looms." Passing by the fact that the object of the Report is to discuss, not what is more profitable to Japan, but what is more profitable to England, it will be observed that the critic commits himself to a strange proposition. According to him, hand labour carried on in separate houses, can compete successfully with organised labour and machinery. Will any one credit this? So too, of the contention that the extreme mutability of Japanese tastes deters the importer from making any attempt to consult them. Was such a line of reasoning ever before adopted by practical men? It amounts to saying that, if the constancy of a customer's tastes could be relied on, then some effort might be profitably made to meet them; but that, if he is a person of varying fancy, the only way to treat him is to offer him the same stereotyped goods year after year. It may be observed, by the way, that the great fickleness of Japanese fashions in respect of foreign goods is a newly discovered national trait. Certainly the very opposite tendency must be ascribed to the costumes of the country. These, not for years, but for tens of years, have varied incomparably less than the corresponding costumes in the West. Fashion is not without influence here, but its influence is far less despotic than in Europe. Even if such were not the case, how can it be rationally pretended that an expert designer would not be more profitably engaged in studying the tastes of a large consuming centre, *in loco*, than in working in a producing one? What has he to do in a producing centre? He is designing not for the tastes of manufacturers, but for those of consumers. Yet we are gravely told that "an expert can generally only find sufficient employment in a large manufacturing centre." As well say that a confectioner can only find sufficient employment on a sugar growing estate. Mr. LONGFORD'S critics make him suggest that experts should be sent out to "collect patterns." In other words, an expert designer is to come to Japan, wait here until Japanese designers have hit upon something which suits the public fancy, and then send home a specimen of it to be copied in Lancashire. An intelligent pedlar could do that. The suggestion really made was that experts should study the tastes of the Japanese *in loco*, so as to anticipate the patterns of next season. Experts do this all over Europe and America. Why should they not do it in Japan? And it was precisely by doing it, fifteen years ago, that German and French manufacturers ousted their English rivals from the trade of Mouselaine de laines. Oh! but there is some peculiarity of Japanese disposition which renders it impossible to treat them

stance it is their extreme variability. The ladies of Paris are Median and Persian compared with them. So we come back to the inevitable excuse, the bigoted and barbarous pretence, that the Japanese are not as other mortals. To consult their fancies would be derogatory to their clients.

### III.

Looking back fourteen years; in other words, looking back to an era when the country was only beginning to be generally reconciled to foreign intercourse and when the fiat currency had not yet undergone any depreciation sufficient to encourage imports, Mr. LONGFORD shows that Great Britain sold to the Japanese a very much larger quantity of woollen manufactures than they buy from her now. True, say the critics, but the difference is owing to a special cause. In 1872, enormous quantities of woollens were imported in view of the re-organization of the Army and Navy. We are to conclude, then, that the clothing obtained for Japanese troops in one year suffices for several generations of conscripts; that the same garments are handed on from each soldier to his successor. Independently of the fact that the establishment of the Army and Navy has been largely increased since 1872, it must be remembered that some twenty-five thousand conscripts are called up every year for service. They are not dressed in the patched uniforms of their predecessors. Besides, trade should have grown, and would have grown had it been more judiciously encouraged. Of course the critics say that "the fault does not lie with the home manufacturer or merchant here, but with the Japanese craving taste for the cheapest of inferior goods." The Japanese are always to blame. There cannot possibly be any error on the other side. But how has this depraved taste been developed? It certainly did not exist originally. There never were people who set more store by the durability of an article, or who were more willing to give money for money's worth, than the Japanese. Yet their predilections have suddenly become so perverted that they insist upon having a mixture of "cotton warp and shoddy weft which the poorest man in England would look on with disdain." In short, Lancashire specially manufactures for sale in Japan an article so utterly bad that no huckster would venture to offer it to English consumers. Precisely. And it is by thrusting such wretched stuff down Japanese throats that English piece-goods have been brought into disrepute. We remember once going into a shop in Yokohama and observing a goodly row of wine-bottles, handsomely labelled, and conspicuously displayed. "How much per dozen?" "Oh, that wine was for the Japanese market": the store-man "could not think of selling it to his English customers." Of course the fault of delect-

ing such vile poison "did not lie with the home manufacturer or the merchant here, but with the Japanese craving taste for the cheapest of inferior goods." The case lies in a nutshell. The producer is reluctantly dragged down to the dreadfully low level of the consumer. The latter's taste, it is true, is of recent education. He had no preconceived estimate of imported goods. His ideas were formed by the nature of the articles offered to him. While he grimaces over sour claret and ruefully watches the rapid decay of shoddy "which the poorest man in England would look on with disdain," the only conclusion he can arrive at is that imported articles are such things as these. Yet it is not his reason, observe, which is at work, but his "craving taste for the cheapest of inferior goods." *Similia similibus*. He is an inferior order of being, and inferior things suit his mood best.

Turning to the interesting question of machinery, we are met at the outset by a singular distortion of the advice embodied in the Report. "As for steam ploughs, threshing machines" &c., says Mr. LONGFORD's critic, "heaven forbid that our merchants should ever be rash enough to invest one cent of their money in such property." And then he goes on to remark:—"It is evident that the writer's knowledge on the subject is of the most meagre description, for had he known the risk attending the importation of machines of any kind, unless specially ordered, he would not have ventured to declare that 'a fair sale might be found for them.'" All this would be very neat and very striking, if only it had a fragment of foundation to rest upon. But in the Report itself we fail to discover anything capable of being construed into a recommendation that machinery should be sent out here on speculation. On the contrary, Mr. LONGFORD frankly states that he is quite unable to give any conclusive information on the subject. What he does recommend, in the plainest and simplest terms, is that manufacturers should send out experts to investigate on the spot what machinery would meet the needs of the Japanese; and he adds that, were such machinery made and its advantages taught to the Japanese, "a fair sale might be found for it."

We are also told, by the critics, that elaborate machinery for the preparation of tea and the making of boxes and canisters has been erected or imported by several firms. We confess that the statement takes us by surprise. Our impression is that the use of elaborate machinery for such purposes is still an exceedingly limited affair in Japan. Illustrated catalogues with minute descriptions have doubtless been imported, as the critics affirm, but as to their being "brought to the notice of likely purchasers," one would be glad to hear something of the methods adopted. Japanese brokers in Yokohama

are not exactly the most appropriate media for advertising such innovations, and we do not hear that steps have ever been taken to make their value practically known to tea producers. The critics are evidently of opinion that Japan is not sufficiently civilized for machinery. Labour is so cheap here, they say, that the value of a machine is largely discounted. Absurd enough, as it stands, this reasoning is inexplicable in the face of the fact that foreign machinery has already been employed with excellent results in the silk business. And it becomes still more absurd when we observe that the "elaborate catalogues" which are "brought to the notice of likely purchasers," are catalogues of English machinery used in India—that is to say, of imported machinery used in a country where labour is cheaper and more plentiful than in Japan. Yet the critics affirm that labour is too cheap in Japan to permit the profit able employment of machinery. Does it not seem just possible that men who commit themselves to such palpable absurdities in one line of argument, may not be quite infallible in all others. Speculative importations into Japan of machines which Great Britain may happen to have on hand, whether suited to the needs of this country or not, could not be urged by any prudent person. They are not urged by Mr. LONGFORD. But there cannot be the smallest question that Japan's great wants are machinery and organization, and that enterprising men, whether they be English or not, will, one day or another, find a way to satisfy her wants.

Of a piece with the whole criticism are the remarks with reference to the acquisition of the Japanese language. "Heads of houses," it is objected "cannot afford to pay juniors handsome salaries while they acquire a knowledge of the vernacular." Nobody suggests that anything of the kind should be done. Let the salaries become handsome when a knowledge of the language is acquired. It is simply a question of common industry and perseverance, and of a sacrifice of present pleasure on the part of the clerk. After working in an office all day, "the average foreigner," we are told, "whether of Saxon or Latin race, does not care to sit down and burn the midnight oil while studying Japanese characters." Of course he "does not care." That is the whole trouble. And he is confirmed in his carelessness by the supremely silly assertion that "a knowledge of Japanese is, in business matters, rather a disadvantage than an advantage." It is truly surprising that such things can be written and said by sober men of mature years. At the root of it all is the old prejudice that the Japanese are not to be treated like any other nation. To nothing else can be ascribed the monstrous proposition that it is better not to know the language of the people with whom one deals.

Original from follow the critics into

any further details. Enough has been said to show that they have themselves offered a striking example of the very conservatism against which the Consuls seek to warn them. They will not condescend to adapt themselves to the conditions which they find in Japan. They will not take the trouble to learn the language. They will not import superior articles, because they are loftily persuaded that the people have a depraved taste for what is cheap and bad. Above all, they will not endure criticism. If any one ventures to suggest that the methods of twenty years ago are growing obsolete, he is forthwith dubbed "ignorant and inexperienced." HER MAJESTY'S Minister, in a recent despatch, expressed the opinion that British merchants would find it to their advantage to employ Japanese agents. The idea was roundly condemned as unpractical and unbecoming. But it so happens that three foreign firms—not British—do already employ Japanese agents, and the results are conspicuously encouraging. It is true that, under existing circumstances, such a method of securing custom may present features justly repugnant to British merchants. But they are not essential features. Moreover, existing circumstances, we are happy to think, have lost the element of permanency which once rendered them so hopeless. The only thing which refuses to be moved is the Englishman's rooted conviction that his methods are beyond the reach of reform. We are fully persuaded that the great factor in the development of Japanese commerce is to be coöperation between foreigners and Japanese. England's competitors see this and are hastening to utilize their foresight. But Englishmen themselves resent the notion that any part of their functions can be entrusted to Japanese. We should like to be able to share their assurance as firmly as we believe that they will sooner or later acknowledge their error.

#### THE EVACUATION OF PORT HAMILTON.

IT is evident that some arrangement has been made between Great Britain and China with regard to Port Hamilton. The telegraph says that the former has "ceded" the islands to the latter, but the term is presumably incorrect. An act of cession implies an original right of possession, whether by conquest or purchase, and England, as is well known, neither conquered nor purchased the Namhow group at the outset. She simply occupied the place under the pressure of circumstances which are considered practically imperative by every strong State. Care was taken at the time to disavow any intention of permanent annexation. The British flag was not hoisted until the arrival of a Russian vessel, some weeks after the occupation, necessitated an unequipped

monstration. Even after the hoisting of the flag, it was still resolutely maintained that a temporary necessity alone had been consulted, and that the disappearance of the necessity would be quickly followed by the lowering of the ensign. At the same time, no one could fail to foresee the great difficulties that lay in the way of fulfilling this promise. The occupation of Port Hamilton, for however brief a period, amounted to a public declaration on Great Britain's part that, in the event of war between herself and Russia, she should require another coaling station farther north than Hongkong, and that she was resolved to satisfy her requirements by every means open to a great Power. Of course there was no question that Russia also recognised, and in times of crisis would obey, the same dictates of self-interest. But Great Britain's overt act translated these sentiments and intentions into a tangible shape, and offered Russia an undeniable pretext for taking, at her leisure, a step which, under different circumstances, she might have been compelled to take in haste and not without peril. Who could have justly censured Russia had she entered into "temporary occupation" of Port Lazareff, or any other convenient place on Korea's coasts, alleging in defence of the proceeding that her hand was forced by an apparently pending struggle with Great Britain? That she did nothing of the sort is every much to her credit. We Englishmen are not prone to admit the hypothesis that international morality can have any influence on Russian statesmanship. Our habit is to suspect the Muscovite of the worst possible motives in all conjunctures. It may be a wholesome habit, on the whole, but it certainly is not a very becoming habit, especially on the part of a nation which insists so stoutly on the probity of its own policy. And it represents a mood which ought to be a good deal staggered by the event we are discussing. That Russia wanted a slice of Korea and only awaited a convenient opportunity to help herself, used to be an article of faith with every Englishman. Yet here, for nearly two years, she has had an opportunity virtually thrust upon her, and to this day it remains unutilized. Can it be possible that her lust for territory is not quite so feverish as her friends are wont to suppose? Answer the question how we may, there is no denying that the CZAR'S Government have shown remarkable forbearance in the face of strong provocation. Had the Russian flag been hoisted at Port Lazareff, or elsewhere in Korean territory, England's occupation of the Namhow group would necessarily have been converted into permanent annexation. We are by no means sure that to have such a necessity forced upon her would not have caused Great Britain more embarrassment than to be without another coaling station. Her ex-

capabilities of Port Hamilton, declaring unanimously that the cost of removing it from the category of "weak spots," and the strain of providing efficiently for its defence would have quite outweighed any advantages its possession might confer. To be compelled to hold it in perpetuity would, perhaps, have proved an unwelcome necessity. Be this as it may, it is certain that China and Japan had every reason to anticipate some such *coup* on Russia's part. They were thus brought within sight of a most disturbing prospect; namely, the transfer of the battle-ground of England and Russia to their very doors. Naturally they objected to be any party to such an arrangement. For both alike it implied the certainty of being involved, directly or indirectly, in a struggle of the most serious character. In China's case, however, there was a mitigating circumstance of great moment; namely, that Great Britain's presence at Port Hamilton virtually ranged her on the side of the Middle Kingdom against Russia. China and England are apparently resolved to regard themselves as foes in prospective of the great Northern Power, and are accordingly very willing to tighten every bond which draws them together without committing them to the embarrassments of an open declaration of alliance. But Japan's position is different. Her prudent aim is to maintain a strict neutrality, and her statesmen had therefore no choice but to protest against Great Britain's arbitrary occupation of Port Hamilton as strongly as they would have protested had Russia, not England, been the occupier. In this country, therefore, the news that Port Hamilton is no longer held by a Western Power will be received with a feeling of relief; while the fact that Great Britain has been true to a promise much easier to break than to keep, will go far to recover for her the reputation which she had nearly established in the East before the occupation of the Namhow group, and to which her recent policy in Japan certainly entitles her. But the method pursued in evacuating the place is a point of no little importance. If, after the departure of the British ships, the islands are to be left as defenceless as ever, with the added element of danger that their accessibility to seizure has been practically demonstrated, then indeed matters will not have been materially mended. Rumour has it that Great Britain and China have come to an arrangement by which the latter pledges herself to fortify Port Hamilton, to retain it as an integral part of the Chinese Empire, and to place it at the service of England in the event of an Anglo-Russian contest. This is incredible. If Port Hamilton is to become Chinese territory, to permit its employment by British vessels engaged in hostile operations against Russia, would be an act of war on China's part. It is not improbable, indeed, that

But if she does, not Port Hamilton alone, but every harbour in her empire would be available to English ships for belligerent purposes. Any proviso of the kind reported would, therefore, be quite superfluous. Further, China cannot undertake to fortify Port Hamilton, or to protect it actively against foreign aggression, without Japan's consent. That is perfectly clear. China has engaged by treaty not to send troops to any part of Korea unless Japan is an assenting party to the proceeding. The provision is just as binding with regard to Port Hamilton as with regard to Seoul. It is asserted, indeed, in some quarters, that the devil might be whipped round the Tientsin Convention by persuading Korea to cede the Namhow group to China. Such a manoeuvre would not bear a moment's inspection. If the Middle Kingdom, by threats or cajolery, were free to possess itself of a portion of Korean territory for the purpose of building forts and stationing troops there, the Tientsin Convention might be torn up at once. The Convention pledges China not to do a certain thing. It says nothing whatever about the manner of doing that thing. No arrangement between China and Korea to which Japan is not a party can absolve China from her written engagements towards Japan. That is as clear as sunlight. Another suggestion is that the Namhow Islands have become British territory and are consequently beyond the scope of the Tientsin Convention. But have they become British territory? That is just the question. We know, as an absolute fact, that Korea was not consulted about the original occupation, and that she protested against it vigorously. We also know, as an absolute fact, that Great Britain, both originally and subsequently, denied any intention of annexing Port Hamilton, and declared that she had only occupied it for a temporary purpose. How and when, under such circumstances, the islands can have become a portion of the British dominions, we are unable to conjecture. On the other hand, it cannot be supposed that England would put her hand to any agreement which involved a breach of faith on the part of the Middle Kingdom towards Japan. Thus the affair is at present inexplicable. If Port Hamilton is to be given up, some arrangement must be made to secure it against Western aggression in the future. Such an arrangement can only be made by China assuming an active responsibility in respect of the islands. But China is bound by treaty not to assume such a responsibility without Japan's consent. There is the position. Its perplexities are plain enough. So, too, is the way out of them. But China is not addicted to treading plain paths, and we shall not be surprised to find that in this instance also she stumbles into a complication which frank statesmanship would have easily avoided.

### THE MEMORIAL TO PREFECT OKI.

THE presentation of an address of thanks by the community of this Settlement to the Prefect of Kanagawa is a happy incident in the history of Yokohama. It shows that Mr. OKI has succeeded in doing what no other Prefect was able to accomplish—namely, in winning the respect and regard of all the foreign residents. Nothing is farther from our intention than to suggest any invidious comparison. Among Mr. OKI's predecessors there were perhaps men as able as he, and there certainly were men inspired by good-will not less earnest and active. But they were before their time. Yokohama was not in a mood to be pleased. The community's municipal vista was entirely occupied by ubiquitous puddles, incongruous heaps of gravel, or procrastinated repairs. To spy grievances, to print complaints, to discover evidences of incompetence or corruption at every turn—these were the applauded aims of our local champions. We cannot tell exactly when and how a healthier frame of mind began to supervene. We know only that it has supervened, and that the community are resolved to associate its inception and growth with Mr. OKI's *régime*. To us, however, looking at the matter from a broad stand-point, the fact that a practically unanimous vote of confidence and applause has been cast by the foreign residents in behalf of the chief of the Japanese Local Government, seems more deserving of comment and record than even the display of high qualities by which that vote was won. For it shows more conclusively than anything else could show, that, after all, a heterogeneous assemblage of aliens, by no means predisposed to be placated, can live comfortably and contentedly under Japanese municipal Government. On the other hand, there is no denying that the experiment has been conducted with exceptional skill. It would be difficult to find in any country an official more genial, urbane, and sensible than Prefect OKI. Besides, he not only represents the special selection of their Excellencies Counts ITO, YAMAGATA, and INOUE, but he has also enjoyed constantly the benefit of these statesmen's advice. His conduct, indeed, has reflected their policy and sentiments. The terrible epidemic, too, of last summer brought both foreigners and Japanese very close to the officials who risked their lives to check the ravages of the plague. That was a time when people saw each other in their genuine characters—a strong test, in truth, but a test which, if successfully endured, ought to establish abiding confidence. We are glad to learn from Mr. OKI's reply that the efforts of the sanitary officers—among whom ought to be specially mentioned Mr. N. MITSUHASHI—were fully seconded by the foreign residents

and that the rules which it was deemed necessary to enforce were not rendered inoperative by frivolous obstruction. When we recall the perpetual complaints evoked in various parts of Europe last year by the method of carrying out measures against cholera, we cannot but admire the smoothness and thoroughness of the system pursued by the Japanese in Yokohama throughout the summer. Prefect OKI has achieved a marked success, and we hope that the pleasant relations which his able and sympathetic administration has established between foreigners and the local officials, may prove an earnest of what is to prevail constantly and on a wider scale in the future.

### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

### A WORD ON THE "NORMANTON" CATASTROPHE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—We are sorry for Captain Drake, who acted so unlike an Englishman when the English spirit was essential; more sorry for the Naval Court of Inquiry which, influenced no doubt by the sad looks and words of the man, came unconsciously to an unfavourable conclusion; and still more sorry are we for the fate and conduct of those passengers who lost their lives in the sea. But we are indignant with some of the press which pretend to be "the ear and eye" of the nation always, but fail this time to be even its tongue.

What we now want is justice and not vengeance. If the captain did not try to save the Japanese, he certainly had no wish to kill them; and if the judge first made a mistake, he did not insist on his wrong views; and, moreover, all the Englishmen who live here in Japan, with their usual candour and uprightness, strongly sympathise with us—they are gentlemen, and our press must not play the part of a braggart.

As to the proceedings of the Naval Court of Inquiry, I decline to say here any more, but I must say that Captain Drake is wrong, very wrong indeed, in a moral point of view. Still his offence, is but a trifle in the light of our law. If judged by it alone, he is only liable to be fined a few dollars, that is all. What we are thinking of is not so much the legal, as the moral, aspect of the case. But even here he has some excuse, because even a brave man as we have little doubt he is, may temporarily lose his presence of mind, sometimes. The great Napoleon often did so. Besides, the captain must naturally have believed that the Orientals would be anxious to save themselves and try to do so as earnestly as their brothers of the Occident.

At any rate, as far as the evidence goes, a good deal of fault lies with those twenty-three who did not, or could not, try to help themselves at the crisis, and paid for it but too dearly.

Let us now echo here the voice of some of our countrymen in Tokio, and say "Arise" Young men of Japan: the nation is in danger of losing its self-helping spirit and indomitable courage."

Your obedient servant,

SHIMIDZU TOGOKUO,  
Osaka.

KARUZAWA AND ITS NEIGHBOURHOOD.

TO THE EDITOR OF THE "JAPAN MAIL."

Original from read, with much pleasure, the charming account of "Karuzawa and its neigh-

bourhood," which appeared in your issues of 2nd and 3rd instant, and regret, therefore, to have to find fault with any part of it. Why, however, did the writer, when touching on the botany of the district, attempt to give the scientific names of some of the flowers without at least getting them duly verified? *Dianthus superbus* is evidently intended for *Daianthus superbus*. These generic names are always spelt with a capital initial letter, and *coriaria japonica* should therefore be *Coriaria japonica*. The above may be mere printers' errors; but, shade of Linnaeus! what can be said of such an incongruity as the third name given, viz., "*Lilium Hemerocallis fulva*"? One can fancy this enough to make the immortal Swede turn in his grave! The genus *Lilium* is well represented in Japan, more than one-third of all the known species being found in the country, but no botanist, or perhaps even horticulturist, requires to be told that "*Lilium Hemerocallis fulva*" is quite unknown to, and never could be recognized by, science. The plant known to Japanese as *Yabukanao* is doubtless what is meant; the botanical name is simply *Hemerocallis fulva*, L. (without the "*Lilium*"), a name dating back to the days of Linnaeus himself. The genus *Hemerocallis* is also well represented here, all but one of the known species (5) being found in Japan. *Lilium Hemerocallis*, as a generic name, is simply meaningless to a naturalist.

When three out of five technical names given, for the instruction of ordinary readers, or for the more accurate identification desired by scientists, are thus open to criticism, I trust, Sir, you will consider this letter neither hypercritical, nor even altogether uncalled for, from

Yours faithfully,

PHYTOPHILIST.

4th December, 1886.

#### THE TRADE REPORT OF THE UNITED STATES MINISTER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In yesterday's issue of the *Japan Mail*, you treat your readers to some rather eccentric strictures on the Trade Report of the American Minister. They are so unfair and misleading that I feel constrained to offer a few remarks in reply, for which I beg to be favoured with a trifle of your space. The criticisms are uncourteous to say the least. They are misleading, inasmuch as it would appear from them that the report in question was indirectly antagonistic to English trade. No fair-minded reader can give it that construction. They are irrelevant, when the critic therein refers to statements made in a private letter months before the report was written, as part of the report. The writer asks "why, again, should Mr. Hubbard go out of his way to proclaim that 'we have never disturbed Japan's neighbours, India, China, Burmah, Korea,' etc." The fact is Mr. Hubbard did not go out of his way to "proclaim" this, for it has nothing whatever to do with the report. And though it had been part of that document, I fail to see anything in it that could provoke so vindictive a spirit as the critic displays. The statement in question appears in a private letter, which was published probably without the knowledge of its author, in a small American newspaper, sometime last January, when I happened to see it. It smacks not a little of "romantic notions" then to treat of it as part of the official report, and it would seem as if the critic's "discretion ought to have counselled silence at least."

In fact, the whole tenor of the critique inevitably forces the reader to the conclusion that on the subject of trade the writer's corns are abnormally sensitive, and that he imagines they are stepped on when it is simply his own boots which pinch. How else can one account for the application of such terms as "frothy phrases" and "spurious enthusiasm" to a brief and business-like report?

It is probable, however, that the critic will make "no honest political capital thereby."

Pursuing the subject further, the critic states that he is "only surprised to learn that American manufactures can be laid down in Japan as cheaply as the same class of English goods," and admits "that this may be true of such things as machines in which the American manufacturer especially excels." He should not be surprised at this. The chief raw materials (for instance cotton), which may be manufactured into articles suitable for export, are produced in the United States, and hence are obtained cheaper by the American manufacturer than by his English brother, who must first resort to importation. But, however this may be, the fact remains that English cotton goods are from three to four times dearer here in Japan than the same class of goods are in America. His argument then amounts simply to this, that the cost of sending American goods here will raise the price to 300 or 400 per cent. of the cost of production, which is a palpable fallacy.

Yours, &c.,

C. C. G.

Komaba, Tōkyō, December 11th, 1886.

(Our "eccentric, unfair, misleading, uncourteous, and irrelevant" criticism was based entirely on Mr. Hubbard's dispatches as published in the United States Trade Reports. We know nothing of any "private letter." Our correspondent is labouring under a strange delusion.—ED. J. M.)

#### THE MEMORIAL TO PREFECT OKI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a resident of some years' standing in this Settlement, I beg to enter my protest against the apparently "hole-and-corner" business in connection with the recent memorial to Mr. Oki Morikata. I do not remember that a document for public signature ever failed to reach my office before. That the memorial to Mr. Oki was never presented there is certain; and I have heard several complaints from persons who regret that the opportunity to testify to Mr. Oki's general good government, and especially in regard to cholera precautions, was not afforded them.

I am, Sir, yours, &c.

MAIN STREET.

Yokohama, December 16th, 1886.

#### PORT HAMILTON.

(Translated from the *Nichi Nichi Shimbun*.)

Negotiations are now proceeding between England and China for the cession of Port Hamilton to China, but it is urged that, even if it were ceded, England would still keep her hold upon the straits and would not allow any European Power to possess them. This is the text of the London telegram of the 27th ult. which we gave in our issue of yesterday. And as this intelligence completely coincides with what we have lately heard in regard to this matter, we are fully confident that it is no groundless rumour. It was just at the time when the Anglo-Russian controversy was at its height, that England resolved upon the bold coup of occupying Port Hamilton in order to command Vladivostok and all other Russian ports along the eastern coast, so that the principal object of the occupation was evidently based upon a military plan. As the controversy happily came to an amicable settlement, it might seem at first glance that England has at present no occasion to use the islands, and can restore them to Korea without causing any inconvenience to herself. But if we look more closely at the situation in which England is placed at present, we will be able to understand something of the tenacity with which she has been keeping her hold upon these islands. The present state of European affairs is quite different from what it once was, and the policy of Oriental nations is assuming an important bearing on the policy of all the more powerful nations of Europe. It is on account of this fact that England has thus far refused to abandon the islands from the fear that some other European Power might occupy them and command effectually the entrance to the straits.

But at the same time it is very irritating to other nations that England should occupy this advantageous location and thus command the straits.

Especially the Korean Government, which is the principal party interested in this affair, has been exceedingly uneasy, hoping vainly for the intercession of the Treaty Powers in this matter. The Chinese Government, too, on one occasion called upon the English Government to relinquish of the islands, but, as a matter of course, England could not be induced to yield so readily. The truth is, the Chinese Government, being really in secret sympathy with the original intention of the British occupation, which is, as they are well aware, anti-Russian, would not insist on the relinquishment of the place lest some other European power might occupy it. Thus the matter has been left to take its own course until the present time. But after all, England is not without good reasons to be very circumspect in this matter, as her occupation of the islands cannot fail to provoke a good deal of animosity on the part of Russia and other European Powers. Nay, it may possibly prove to be the very cause of provoking Russian ambition as to Korea. Moreover, in the present state of affairs, it seems as if the islands are quite an unnecessary appendage to England; for though they may become a position of great importance in time of emergency, yet in ordinary days they form anything but a favourable situation. They are entirely too small for permanent settlement; their ports are all unfavourably situated for planting batteries and making effectual defence; their distance from the continent not only precludes every prospect of commerce, but also makes them depend upon other places even for the most ordinary articles of life. Now, to occupy such a location permanently and make it a naval station would require a great sum of money both for defence and maintenance generally, a fact sufficient to explain why England has not yet taken any active measure towards making it a place for permanent habitation, though it is now two years since she first occupied it.

By what sort of negotiation England has decided to cede Port Hamilton to China instead of returning it to Korea, is a problem hard to solve. But it is to be presumed that, according to the English view of the case, the natural advantages of the islands should not be suffered to pass into the hands of any other European Power. At the same time, if England were to undertake to occupy them herself, she would not fail to provoke protests from other nations, besides taking a very heavy burden upon herself financially. Under these circumstances, the best course to be pursued was to cede them to China and let the latter bear the whole burden, to which arrangement no European Power could offer any objection. Moreover, as British interests are in perfect unison with Chinese so far as opposition to Russia is concerned, the defence of the vicinity of Korea should be entrusted to China, with the understanding that England will be ready to stand by her in any emergency, under the condition that Port Hamilton will be placed at the disposal of the English whenever it is needed. With some such secret understanding, it is barely possible that the negotiations for the cession may have been opened.

It is impossible to predict whether these negotiations will be consummated or not. But taking their consummation for granted, we wish to know by what means do the Chinese propose to keep the islands in a proper state of defence. If they want to station a garrison there, it will be necessary for them to give due notice to Japan and obtain her approval in the first instance. For according to the Tientsin Treaty it is stipulated that, if either of the two Powers desire to send soldiers to Korea, it must give previous notice thereof to the other, and withdraw them as soon as their mission is ended. So, as long as Port Hamilton is regarded as a part of the Korean dominions, the treaty alluded to stipulates that China must obtain the approval of Japan before she can occupy and garrison the islands. But it is argued by some that Port Hamilton was bought by England and cannot now be regarded as part of the Korean dominions; that if China choose to station her soldiers in a place which is no part of the Korean dominion and which she has bought from England, that is a matter entirely without the Tientsin Treaty, and needs no approval of Japan. But as long as there is no evidence that England has bought the islands with perfect willingness on the part of Korea, such arguments can never be admitted consistently with reason. If, however, it be China's intention to fortify the islands simply as a check against the Russians, without thereby affecting Japanese interests in the least, it may be possible that Japan may not be wholly unwilling to enter into negotiations, though as a matter of course, such a policy cannot be fore-shadowed definitely.

No matter who occupies Port Hamilton, it is a well known fact that Japan, now wide awake to the importance of strengthening the national defences, has been strenuously occupied in placing

But if she does, not Port Hamilton alone, but every harbour in her empire would be available to English ships for belligerent purposes. Any proviso of the kind reported would, therefore, be quite superfluous. Further, China cannot undertake to fortify Port Hamilton, or to protect it actively against foreign aggression, without Japan's consent. That is perfectly clear. China has engaged by treaty not to send troops to any part of Korea unless Japan is an assenting party to the proceeding. The provision is just as binding with regard to Port Hamilton as with regard to Sŏul. It is asserted, indeed, in some quarters, that the devil might be whipped round the Tientsin Convention by persuading Korea to cede the Namhow group to China. Such a manoeuvre would not bear a moment's inspection. If the Middle Kingdom, by threats or cajolery, were free to possess itself of a portion of Korean territory for the purpose of building forts and stationing troops there, the Tientsin Convention might be torn up at once. The Convention pledges China not to do a certain thing. It says nothing whatever about the manner of doing that thing. No arrangement between China and Korea to which Japan is not a party can absolve China from her written engagements towards Japan. That is as clear as sunlight. Another suggestion is that the Namhow Islands have become British territory and are consequently beyond the scope of the Tientsin Convention. But have they become British territory? That is just the question. We know, as an absolute fact, that Korea was not consulted about the original occupation, and that she protested against it vigorously. We also know, as an absolute fact, that Great Britain, both originally and subsequently, denied any intention of annexing Port Hamilton, and declared that she had only occupied it for a temporary purpose. How and when, under such circumstances, the islands can have become a portion of the British dominions, we are unable to conjecture. On the other hand, it cannot be supposed that England would put her hand to any agreement which involved a breach of faith on the part of the Middle Kingdom towards Japan. Thus the affair is at present inexplicable. If Port Hamilton is to be given up, some arrangement must be made to secure it against Western aggression in the future. Such an arrangement can only be made by China assuming an active responsibility in respect of the islands. But China is bound by treaty not to assume such a responsibility without Japan's consent. There is the position. Its perplexities are plain enough. So, too, is the way out of them. But China is not addicted to treading plain paths, and we shall not be surprised to find that in this instance also she stumbles into a complication which frank statesmanship would have easily avoided.

#### THE MEMORIAL TO PREFECT OKI.

THE presentation of an address of thanks by the community of this Settlement to the Prefect of Kanagawa is a happy incident in the history of Yokohama. It shows that Mr. OKI has succeeded in doing what no other Prefect was able to accomplish—namely, in winning the respect and regard of all the foreign residents. Nothing is farther from our intention than to suggest any invidious comparison. Among Mr. OKI's predecessors there were perhaps men as able as he, and there certainly were men inspired by good-will not less earnest and active. But they were before their time. Yokohama was not in a mood to be pleased. The community's municipal vista was entirely occupied by ubiquitous puddles, incongruous heaps of gravel, or procrustinated repairs. To spy grievances, to print complaints, to discover evidences of incompetence or corruption at every turn—these were the applauded aims of our local champions. We cannot tell exactly when and how a healthier frame of mind began to supervene. We know only that it has supervened, and that the community are resolved to associate its inception and growth with Mr. OKI's régime. To us, however, looking at the matter from a broad stand-point, the fact that a practically unanimous vote of confidence and applause has been cast by the foreign residents in behalf of the chief of the Japanese Local Government, seems more deserving of comment and record than even the display of high qualities by which that vote was won. For it shows more conclusively than anything else could show, that, after all, a heterogeneous assemblage of aliens, by no means predisposed to be placated, can live comfortably and contentedly under Japanese municipal Government. On the other hand, there is no denying that the experiment has been conducted with exceptional skill. It would be difficult to find in any country an official more genial, urbane, and sensible than Prefect OKI. Besides, he not only represents the special selection of their Excellencies Counts ITO, YAMAGATA, and INOUE, but he has also enjoyed constantly the benefit of these statesmen's advice. His conduct, indeed, has reflected their policy and sentiments. The terrible epidemic, too, of last summer brought both foreigners and Japanese very close to the officials who risked their lives to check the ravages of the plague. That was a time when people saw each other in their genuine characters—a strong test, in truth, but a test which, if successfully endured, ought to establish abiding confidence. We are glad to learn from Mr. OKI's reply that the efforts of the sanitary officers—among whom ought to be specially mentioned Mr. N. MITSCHASHI—were heartily seconded by the foreign residents

and that the rules which it was deemed necessary to enforce were not rendered inoperative by frivolous obstruction. When we recall the perpetual complaints evoked in various parts of Europe last year by the method of carrying out measures against cholera, we cannot but admire the smoothness and thoroughness of the system pursued by the Japanese in Yokohama throughout the summer. Prefect OKI has achieved a marked success, and we hope that the pleasant relations which his able and sympathetic administration has established between foreigners and the local officials, may prove an earnest of what is to prevail constantly and on a wider scale in the future.

#### A WORD ON THE "NORMANTON" CATASTROPHE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—We are sorry for Captain Drake, who acted so unlike an Englishman when the English spirit was essential; more sorry for the Naval Court of Inquiry which, influenced no doubt by the sad looks and words of the man, came unconsciously to an unfavourable conclusion; and still more sorry are we for the fate and conduct of those passengers who lost their lives in the sea. But we are indignant with some of the press which pretend to be "the ear and eye" of the nation always, but fail this time to be even its tongue.

What we now want is justice and not vengeance. If the captain did not try to save the Japanese, he certainly had no wish to kill them; and if the judge first made a mistake, he did not insist on his wrong views; and, moreover, all the Englishmen who live here in Japan, with their usual candour and uprightness, strongly sympathise with us—they are gentlemen, and our press must not play the part of a braggart.

As to the proceedings of the Naval Court of Inquiry, I decline to say here any more, but I must say that Captain Drake is wrong, very wrong indeed, in a moral point of view. Still his offence, is but a trifle in the light of our law. If judged by it alone, he is only liable to be fined a few dollars, that is all. What we are thinking of is not so much the legal, as the moral, aspect of the case. But even here he has some excuse, because even a brave man as we have little doubt he is, may temporarily lose his presence of mind, sometimes. The great Napoleon often did so. Besides, the captain must naturally have believed that the Orientals would be anxious to save themselves and try to do so as earnestly as their brothers of the Occident.

At any rate, as far as the evidence goes, a good deal of fault lies with those twenty-three who did not, or could not, try to help themselves at the crisis, and paid for it but too dearly.

Let us now echo here the voice of some of our countrymen in Tokio, and say "Arise" Young men of Japan: the nation is in danger of losing its self-helping spirit and indomitable courage."

Your obedient servant,

SHIMIDZU TOGOKUO,  
Osaka.

#### KARUIZAWA AND ITS NEIGHBOURHOOD.

TO THE EDITOR OF THE "JAPAN MAIL."

Original from  
I have read, with much pleasure, the charming account of Karuizawa and its neigh-

bourhood," which appeared in your issues of 2nd and 3rd instant, and regret, therefore, to have to find fault with any part of it. Why, however, did the writer, when touching on the botany of the district, attempt to give the scientific names of some of the flowers without at least getting them duly verified? *Dianthus superbus* is evidently intended for *Datanthus superbus*. These generic names are always spelt with a capital initial letter, and *coriaria japonica* should therefore be *Coriaria japonica*. The above may be mere printers' errors; but, shade of Linnaeus! what can be said of such an incongruity as the third name given, viz., "*Lilium Hemerocallis fulva*"? One can fancy this enough to make the immortal Swede turn in his grave! The genus *Lilium* is well represented in Japan, more than one-third of all the known species being found in the country, but no botanist, or perhaps even horticulturist, requires to be told that "*Lilium Hemerocallis fulva*" is quite unknown to, and never could be recognized by, science. The plant known to Japanese as *Yabukansô* is doubtless what is meant; the botanical name is simply *Hemerocallis fulva*, L. (without the "*Lilium*"), a name dating back to the days of Linnaeus himself. The genus *Hemerocallis* is also well represented here, all but one of the known species (5) being found in Japan. *Lilium Hemerocallis*, as a generic name, is simply meaningless to a naturalist.

When three out of five technical names given, for the instruction of ordinary readers, or for the more accurate identification desired by scientists, are thus open to criticism, I trust, Sir, you will consider this letter neither hypercritical, nor even altogether uncalled for, from

Yours faithfully,

PHYTOPHILIST.

4th December, 1886.

## THE TRADE REPORT OF THE UNITED STATES MINISTER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In yesterday's issue of the *Japan Mail*, you treat your readers to some rather eccentric strictures on the Trade Report of the American Minister. They are so unfair and misleading that I feel constrained to offer a few remarks in reply, for which I beg to be favoured with a trifle of your space. The criticisms are uncourteous to say the least. They are misleading, inasmuch as it would appear from them that the report in question was indirectly antagonistic to English trade. No fair-minded reader can give it that construction. They are irrelevant, when the critic therein refers to statements made in a private letter months before the report was written, as part of the report. The writer asks "why, again, should Mr. Hubbard go out of his way to proclaim that 'we have never disturbed Japan's neighbours, India, China, Burma, Korea,' etc. The fact is Mr. Hubbard did not go out of his way to "proclaim" this, for it has nothing whatever to do with the report. And though it had been part of that document, I fail to see anything in it that could provoke so vindictive a spirit as the critic displays. The statement in question appears in a private letter, which was published probably without the knowledge of its author, in a small American newspaper, sometime last January, when I happened to see it. It smacks not a little of "romantic notions" then to treat of it as part of the official report, and it would seem as if the critic's "discretion ought to have counselled silence at least."

In fact, the whole tenor of the critique inevitably forces the reader to the conclusion that on the subject of trade the writer's corns are abnormally sensitive, and that he imagines they are stepped on when it is simply his own boots which pinch. How else can one account for the application of such terms as "frothy phrases" and "spurious enthusiasm" to a brief and business-like exposé?

It is probable, however, that the critic will make "no honest political capital thereby."

Pursuing the subject further, the critic states that he is "only surprised to learn that American manufactures can be laid down in Japan as cheaply as the same class of English goods," and admits "that this may be true of such things as machines in which the American manufacturer especially excels." He should not be surprised at this. The chief raw materials (for instance cotton), which may be manufactured into articles suitable for export, are produced in the United States, and hence are obtained cheaper by the American manufacturer than by his English brother, who must first resort to importation. But, however this may be, the fact remains that English cotton goods are from three to four times dearer here in Japan than the same class of goods are in America. His argument then amounts simply to this, that the cost of sending American goods here will raise the price to 300 or 400 per cent. of the cost of production, which is a palpable fallacy.

Yours, &c.,

C. C. G.

Komaba, Tokyo, December 11th, 1886.

Our "eccentric, unfair, misleading, uncourteous, and irrelevant" criticisms were based entirely on Mr. Hubbard's despatches as published in the United States Trade Reports. We know nothing of any "private letter." Our correspondent is labouring under a strange delusion.—Ed. J.M.]

## THE MEMORIAL TO PREFECT OKI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a resident of some years' standing in this Settlement, I beg to enter my protest against the apparently "hole-and-corner" business in connection with the recent memorial to Mr. Oki Morikata. I do not remember that a document for public signature ever failed to reach my office before. That the memorial to Mr. Oki was never presented there is certain; and I have heard several complaints from persons who regret that the opportunity to testify to Mr. Oki's general good government, and especially in regard to cholera precautions, was not afforded them.

I am, Sir, yours, &c.

MAIN STREET.

Yokohama, December 16th, 1886.

## PORT HAMILTON.

(Translated from the *Nichi Nichi Shimbun*.)

Negotiations are now proceeding between England and China for the cession of Port Hamilton to China, but it is urged that, even if it were ceded, England would still keep her hold upon the straits and would not allow any European Power to possess them. This is the text of the London telegram of the 27th ult. which we gave in our issue of yesterday. And as this intelligence completely coincides with what we have lately heard in regard to this matter, we are fully confident that it is no groundless rumour. It was just at the time when the Anglo-Russian controversy was at its height, that England resolved upon the bold coup of occupying Port Hamilton in order to command Vladivostok and all other Russian ports along the eastern coast, so that the principal object of the occupation was evidently based upon a military plan. As the controversy happily came to an amicable settlement, it might seem at first glance that England has at present no occasion to use the islands, and can restore them to Korea without causing any inconvenience to herself. But if we look more closely at the situation in which England is placed at present, we will be able to understand something of the tenacity with which she has been keeping her hold upon these islands. The present state of European affairs is quite different from what it once was, and the policy of Oriental nations is assuming an important bearing on the policy of all the more powerful nations of Europe. It is on account of this fact that England has thus far refused to abandon the islands from the fear that some other European Power might occupy them and command effectually the entrance to the straits.

But at the same time it is very irritating to other nations that England should occupy this advantageous location and thus command the straits.

Especially the Korean Government, which is the principal party interested in this affair, has been exceedingly uneasy, hoping vainly for the intercession of the Treaty Powers in this matter. The Chinese Government, too, on one occasion called upon the English Government to relinquish of the islands, but, as a matter of course, England could not be induced to yield so readily. The truth is, the Chinese Government, being really in secret sympathy with the original intention of the British occupation, which is, as they are well aware, anti-Russian, would not insist on the relinquishment of the place lest some other European power might occupy it. Thus the matter has been left to take its own course until the present time. But after all, England is not without good reasons to be very circumspect in this matter, as her occupation of the islands cannot fail to provoke a good deal of animosity on the part of Russia and other European Powers. Nay, it may possibly prove to be the very cause of provoking Russian ambition as to Korea. Moreover, in the present state of affairs, it seems as if the islands are quite an unnecessary appendage to England; for though they may become a position of great importance in time of emergency, yet in ordinary days they form anything but a favourable situation. They are entirely too small for permanent settlement; their ports are all unfavourably situated for planting batteries and making effectual defence; their distance from the continent not only precludes every prospect of commerce, but also makes them depend upon other places even for the most ordinary articles of life. Now, to occupy such a location permanently and make it a naval station would require a great sum of money both for defence and maintenance generally, a fact sufficient to explain why England has not yet taken any active measure towards making it a place for permanent habitation, though it is now two years since she first occupied it.

By what sort of negotiation England has decided to cede Port Hamilton to China instead of returning it to Korea, is a problem hard to solve. But it is to be presumed that, according to the English view of the case, the natural advantages of the islands should not be suffered to pass into the hands of any other European Power. At the same time, if England were to undertake to occupy them herself, she would not fail to provoke protests from other nations, besides taking a very heavy burden upon herself financially. Under these circumstances, the best course to be pursued was to cede them to China and let the latter bear the whole burden, to which arrangement no European Power could offer any objection. Moreover, as British interests are in perfect unison with Chinese so far as opposition to Russia is concerned, the defence of the vicinity of Korea should be entrusted to China, with the understanding that England will be ready to stand by her in any emergency, under the condition that Port Hamilton will be placed at the disposal of the English whenever it is needed. With some such secret understanding, it is barely possible that the negotiations for the cession may have been opened.

It is impossible to predict whether these negotiations will be consummated or not. But taking their consummation for granted, we wish to know by what means do the Chinese propose to keep the islands in a proper state of defence. If they want to station a garrison there, it will be necessary for them to give due notice to Japan and obtain her approval in the first instance. For according to the Tientsin Treaty it is stipulated that, if either of the two Powers desire to send soldiers to Korea, it must give previous notice thereof to the other, and withdraw them as soon as their mission is ended. So, as long as Port Hamilton is regarded as a part of the Korean dominions, the treaty alluded to stipulates that China must obtain the approval of Japan before she can occupy and garrison the islands. But it is argued by some that Port Hamilton was bought by England and cannot now be regarded as part of the Korean dominions; that if China choose to station her soldiers in a place which is no part of the Korean dominion and which she has bought from England, that is a matter entirely without the Tientsin Treaty, and needs no approval of Japan. But as long as there is no evidence that England has bought the islands with perfect willingness on the part of Korea, such arguments can never be admitted consistently with reason. If, however, it be China's intention to fortify the islands simply as a check against the Russians, without thereby affecting Japanese interests in the least, it may be possible that Japan may not be wholly unwilling to enter into negotiations, though as a matter of course, such a policy cannot be fore-shadowed definitely.

No matter who occupies Port Hamilton, it is a well known fact that Japan, now wide awake to the importance of strengthening the national defences, has been strenuously occupied in placing

Democracy, and the Knights were invited to become members thereof. The party, thus far, has only made public two planks in its platform. The first denounces the ownership of land, on the lines traced thirty odd years ago by Proudhomme, and recently revamped by Henry George; the second insists on Government ownership of railroads and telegraphs. This latter plank has long been commended by persons who are not affiliated with any labour organization. The question, indeed, has now reached a stage at which it may be discussed from the standpoint of fact and not theory. Government ownership of railroads and telegraphs has long been a fact in Belgium, Germany, and Russia; it exists in many of the British colonies; in some countries, as in France and Spain, the ownership and operation of Government railroads can be usefully compared with the private ownership and operation of other roads in the same countries, and working under similar conditions. If Government ownership would be a boon to the working class, the experience of these foreign countries ought to show it. Thus the question narrows itself down to the inquiry: Are the working people better off in Germany and Belgium than they are in this country, and are they better off in those parts of France where the government owns and runs the lines, than they are in the departments which are served by railroads owned and run by private companies?

It might be worth while to obtain official information on these points through a Government commission. The inquiry—so far as this country is concerned—would only possess speculative interest. There is no sort of prospect that the United States Government will ever invest seven or eight thousand millions in buying up the railroads of this country. It may and probably will buy the telegraph lines. But to take the railroads off the hands of their owners, water and all, would be a scheme which no statesman would venture to propose to Congress.

Justice, with its lame foot, is overtaking the Boodle aldermen in New York. Jacline is in the penitentiary; McQuade is on trial. The prosecuting witness, Fulgata, was one of the billed aldermen who has turned State's evidence. He made a clean breast of the whole matter. Being asked if he had not sworn differently before the Senate Investigating Committee, he admitted that he had. Being asked if he had not committed perjury before the committee to avoid punishment, he said he supposed he had. Being asked why he now told the truth, he said it was all due to remorse. Being asked whether his remorse had induced him to return the bribe he got, he said it had not. His story was very clear and plausible; the chances are that the jury will believe it and will convict McQuade. It is not often that New York indulges in a spasm of virtuous indignation; but when it does, it gets very mad, and its wrath is slow to cool.

Ex-President Arthur died at his home at New York the 18th. He has been ill for many months. Indeed, his friends declare that he received a mortal wound when he failed to be renominated at Chicago. But it is hardly necessary to go far in search of a cause for his death. He had always been a high liver; his taste in wines was proverbial; his cock was an artist of repute. A complication of disorders overtook him last year, and it was only by the skill and unrelenting care of his physicians that his life was prolonged so long. He died of cerebral paralysis. The shock occurred in the night; he lived twenty-four hours afterwards, but he never spoke again, and was unconscious for hours before he breathed his last. The news of his death has roused all the kindly feelings which his manliness, his upright intentions, and his gentlemanly instincts had engendered. He has more friends now than he ever had while he was living. His administration was not a period of history which the patriotic citizen loves to recall. Its most notable event was the Star Route trials, and the utter failure of the Government to punish any of the scoundrels who had been robbing the country for years. It was the period of the Kellogg, and the Ellsies, and the Doreys, and the Bisses, and others who were reeking with corruption, and whose whole interest in politics grew out of the boodle the business promised. Mr. Arthur will be buried on Monday at Albany, and will be laid by the side of his mother, his wife, and one of his sons. The President and Cabinet, the Governor of New York, and a number of foreign ministers have agreed to be present. Mr. Blaine has graciously informed the family that he will honour the occasion by attending in person.

Congress will meet in less than three weeks; several chairmen of Committees are already on the ground, mapping out work. The session being the short one, it is hardly likely that any bills will pass except the appropriation bill. In some twenty States, more interest was felt in the election of senators than in the election of

congressional business. There is going to be a sharp contest in New York, where a successor to Warner Miller will have to be chosen; it looks now as if Levi P. Morton, ex-Minister to Paris, would be the man. In Indiana a Democrat will be chosen to succeed Harrison. In this State, it appears to be a foregone conclusion that the Democrats will choose George Hearst, a grossly unfit and ignorant person, but a millionaire, who defrayed the cost of the campaign out of his pocket, and who is thus regarded as having bought the place. In Nevada, William M. Stewart, one of the pioneers, seems likely to succeed Fair.

A rare dish of scandal is said to be cooking in connection with the Redwood Forests of Humboldt County in this State. Some years ago, a syndicate of Scotch capitalists, including, it is said, the Duke of Sutherland among them, employed a firm of the name of Russ & Co. to take up timber land in that county under the land-laws. These require that each entry shall be made by a different person. Russ & Co. made a bargain with a sailor's boarding-house keeper in this city to furnish them with applicants for timber lands; for a sum down, the boarding-house keeper supplied men who swore that they had been on the land, that they wanted it, and that they were ready to pay the fees required. Some 450 of these affidavits were made by as many individuals. Everything being apparently regular, and the Registrar of the Land-office being in the conspiracy, deeds were issued for the finest parts of Humboldt County, patents granted, and both deeds and patents assigned to Russ & Co. or their agents. In this way the Scotch syndicate is said to have secured a title to a tract as big as a small kingdom. The facts were unearthed by Land Commissioner Sparks, and the Secretary of the Interior now recommends suit to be brought to invalidate all these entries, on the ground of fraud. There is no doubt that this sort of thing has been going on for many years in various sections of the country, with the connivance of officials in the Land Department in Washington. It is quite possible that the amazing impudence of this grab in Humboldt county may bring the business to a full stop.

## STORIES OF A TRAVELLER.—II.

### THE HAUNTED HONJIN, A STORY OF HOROBETS.

Horobets is an Aino settlement on the East Coast of Yezo. The village, if I may so dignify it, consists of a score or so of straw huts and hovels which are tenanted by aborigines, and a large barn-like wooden building which at one time was a Government rest-house or *honjin*. On a bright summer day it is possible that Horobets may look cheerful, but when I last saw it, it was a picture of desolation. In some respects it resembled a Dutch landscape depicting stormy weather. The Aino huts looked like weather-beaten haystacks. The *honjin* looked like a weather-beaten barn. Here and there a weather-board was missing, whilst the thatch upon the roof, which was very ragged, had been bared through and through by rats. The black paint with which the Japanese often cover the exterior of their houses only remained in patches. The *amate* or rain doors which close in the verandahs were all in position, but like the rest of the building, they were cracked and dilapidated. It was clear that the *honjin* of Horobets had for some time past been untenanted. No doubt at one time it was as bright and cheerful as it was then dilapidated and forlorn.

In olden days the coast of Yezo was held by princes, each one having his section where certain of his retainers were employed in fishing. Whether the ancient lords had more money or more pride than their successors now possess, I do not know, but the houses which they constructed were certainly better than those of the present day. It has always appeared to me that in the building of *honjins*, where they entertained the passing traveller, they vied with each other, each one building himself on having something as good, or if possible, better than his neighbour. The result of this was that round the coast of Yezo, at intervals of 30 or 40 miles, numerous rest-houses or hotels were built. Some of these were even provided with a courtyard and a special entrance for the more distinguished visitors. That what I say is true may be verified by any one who visits the northern island, where, after a long day's travel through the woods or along a deserted shore, he will find a rest-house, certainly equal in size and often incomparably larger than anything he will meet with under similar circumstances when travelling in the southern island. The difference, however, between these rest-houses is that those of the southern island are almost invariably

filled with guests, while in the northern island you may only find a Japanese family tenantry which corresponds to a kitchen. The emptiness of a northern *honjin*, which you realize as you walk down the long, cold corridors and look into the empty rooms on either side, gives rise to a feeling of loneliness and depression. Many a time, after my host has conducted me to my room, which has usually been at the farther end of the building from where he lives, and has closed me in to await his return to prepare my dinner, I have listened to the sighing of the wind outside and thought of the brighter days that these antique tenements have passed through. I felt that I was in a deserted house, and the hollow echo of the footsteps of my host as he returned along the corridor towards the kitchen made me imagine that it might be haunted.

The incident that I am going to relate occurred in the fall of 1875. During the summer I had been engaged on behalf of the Government in making an inspection of some deposits of alluvial gold which had been discovered upon the east coast of the island. The last week of the work had been unusually severe. From morning till night I had been on the tramp, sometimes up to my waist in water, searching for and examining the alluvial deposits on the banks of streams in the vicinity of Urakawa. This, together with the want of sleep and food such as Europeans are accustomed to, had considerably reduced my condition. As may be expected, I hailed the completion of my work with much pleasure, and started ahead of my party in order to reach Hakodate as early as possible. With forced marches, I might make the journey in three days. On the first day, I left Urakawa on horseback at 5 a.m., but on account of heavy rain, which made the pathway extremely difficult for the horse, and the consequent flooded state of several of the rivers, I was only at Saru by the evening, instead of being at Tomakomai, a distance of about 50 miles from my starting point. It was dark; I was wet through, and my horse was tired. To travel at night upon a Yezo road, which in most places is only a narrow track partly through woods and partly on the sea-shore, was impossible. Next morning I drew on my wet clothing and started, though the weather was even worse than that which I had just experienced. At Noboribetsu, which I reached about 4 p.m., I heard that several of the rivers were in flood, that one of the bridges had been carried away, and the landlord at the *honjin* strongly advised me not to attempt going further that evening, but to wait until the morning. If I did go on I should be compelled to stay at Horobets, where there were only a few Ainos living. The *honjin* had been deserted, but if I was overtaken by night I might get admittance through an Aino named Chapiri.

The last ride was something not to be forgotten. I had been in the saddle nine hours, was wet through, and, in consequence of a bitter northerly wind, my hands and feet were numb. I sighted Horobets at dusk. There it was before me on an open plain, the old *honjin* looming up like a weather-beaten barn amongst the Aino huts which were dotted about like dilapidated hay-ricks. On the left was the ocean booming up with a hollow sound upon a sandy beach, while away upon the right were dark looking hills enveloped in mist. After a little enquiry I found Chapiri, who told me in Japanese that, as two bridges were washed away, I must either stop at Horobets or go back to Noboribetsu. Worn out as I was, it was as impossible to go on as it was to turn back, and much as I disliked taking up my quarters in a deserted house, almost isolated in the middle of a bleak moor, I had no alternative but to follow Chapiri to the *honjin*. After fumbling at a wooden latch, the door leading into the kitchen was opened, and in company with Chapiri and two other Ainos I groped my way into what appeared to be pitch darkness. My poor pony was simply unsaddled, set free to seek shelter for itself behind a building. In a short time a fire was kindled on a hearth in the middle of the room from which the smoke escaped upwards among the blackened rafters to find an exit as best it could. Luckily I had with me half a flask of whisky, but for which and the generous heat thrown out from the burning wood I believe I must have perished. In half an hour or so, Chapiri had boiled for me a pan of rice and some fern stems. The weather had been too bad for fishing, and this was all he had. Bad as it was, it was at least warm, and there was plenty of it. Whilst eating, I had time to examine my companions. All I can say is that they were ordinary Ainos, dressed in gowns of the sackcloth-like matting which Ainos usually wear. Chapiri, who in addition to his gown had a pair of well-worn blue cloth gaiters to hide his swarthy legs, was evidently the oldest. He had a tangled mass of hair upon his head, a long

arms. One of his companions had a cross-work pattern tattooed upon the arms and a blue patch tattooed around the mouth. This and the absence of a beard told me that she was a middle-aged woman. But for these characteristics, I should not have distinguished her from the men. All of them were generally grimy, dirty, and unkempt, but they were amiable, and evidently inclined to do for me what they were able. To produce a favourable impression, I took out my purse and gave the woman a dollar note. Chapiri told me there was only one room in which I could sleep, the mats and sliding doors of the others having been removed by the last tenant. This was at the end of a passage along which I counted seven rooms. Running at right angles with this there were two smaller passages each with three rooms on either side. The *honjin* alone had therefore 26 rooms in which it could accommodate guests. As I was ready for rest, Chapiri brought me three small padded quilts, or *futon*s, and a tallow candle. He then knelt on the ground, bid me good-night, and retired.

My room was an ordinary Japanese apartment, covered with mats. There was nothing in it to inspect, excepting the tattered paper of the sliding doors and a few cobbles. It did not take me long to spread out one of the quilts upon the floor, roll up another as a pillow, undress, lie down and draw the *futon* over me as a covering. After pulling a small knapsack and my saddle—which for some unknown reason Chapiri had carried into my room—close to my head, I blew out the light and closed my eyes.

At this moment I heard footsteps in the passage. It was Chapiri's companion, who felt it was her duty to bid me good-night. As she returned down the passage, I could hear her footsteps become gradually fainter until they reached the kitchen. Then I heard murmurs of a conversation. Possibly they were discussing the ownership of the money I had given. After this there was the bang of a closing door which came echoing down the passage, and I was alone. For a few moments I listened to the whistling of the gale, which seemed to have increased in fury, and the rattling of the numerous *amado* (shutters). At last I slept. How long I had been sleeping I cannot say, when suddenly I awoke distinctly feeling that someone had gently pushed me on the shoulder.

"What's that," I cried, and threw my hand over towards the side on which I had been pushed. It came in contact with the saddle. That I had been touched was evidently imagination. I must have rolled and come in contact with the saddle. Still I was not sure, and I listened attentively to hear if I could detect a sound. At one time I thought I heard someone breathing, and whilst listening for a repetition of the sound I distinctly heard a footstep retreating slowly down the passage. Each time it lifted there was a gentle creaking of the boards. Suddenly it flashed upon me that I had given the Aino woman money. They had seen my purse, and now there might be an attempt to rob me. To say that I felt uncomfortable would be but a poor expression to convey the state of my feelings. Here I was in a deserted building, without weapons, and surrounded by uncivilized Ainos. Whilst cold perspiration was gathering on my forehead, and I was deliberating on what course to take, there was a flash of light and a terrific peal of thunder. By the momentary illumination I saw that the sliding doors of my room were open. Chapiri had closed them, but it was possible that the woman who had come down the passage after I had put out my light had opened them. It was more probable, however, that the person who had just attempted to rob me had in his retreat left them open. Something must be done, and done quickly. To remain in an uninhabited house in company with an unknown thief and to be in continuous expectation of being robbed were conditions that I was not prepared to bear. After groping about on the floor I succeeded in finding the matches, but owing to the draft coming in at the open door it was some time before I could get a light. Shading the candle with my hand, I rose and looked out into the passage, and, excepting a few scraps of paper that were fluttering on the floor, it was empty. Still, it was better to be certain, and I started off along the corridors carefully looking into every room. All that I saw were fragments of tattered *shoji*, dust, and spiders. At length I reached the kitchen, where the embers of the fire were still aglow. A rat, which had found its way to the few grains of rice I had scattered, scampered away at my feet, but beyond this there was nothing. The door leading to the outside was closed. It must have been imagination I thought, and sat myself down near the embers to warm my feet which had again become numb. While I sat warming myself, I felt that my body had broken through the partition, and that I recognised that I was feverish. The

exertion and the exposure for the last two days had overtaxed my strength. I had better return to my *futon*s. Again carefully sheltering the candle with my hand from the gusts of wind which swept down the passage, I made my way slowly back to my room. As I went, the creaking of the boards gave me the idea that I was being followed, and I turned my head, but so far as I could penetrate into the darkness I was alone. This time I carefully drew the *shoji* of my room, and at once lay down. Just as I was about to extinguish the light, I heard a long-drawn breath, which was followed by a prolonged moan as of someone in distress. It came from the passage I had left. At that moment the thought struck me that I might be in a house that was haunted and a cold perspiration again broke out upon my forehead. I listened, but as the sound was not repeated I thought that all I had heard might be due to the wind and rain. I was feverish, and my imagination was excited. In my satchel I knew that I had some quinine in the form of pills. Since a fever which I contracted in the tropics, Quinine was a medicine that I invariably carry with me. With a dose of this my ideas of footsteps, sighs, and moans might vanish, and then, in spite of the howling of the gale, which seemed to be growing cyclonic in magnitude, I might sleep. To swallow three pills and again lie down did not take much time. My candle, which was a small one, had now burnt low. As I watched it flickering lower and lower, the fear that I should soon be in darkness increased my nervousness. But for the unlucky thought that the house might be haunted, I might have slept. As it was, I was on the *qui vive* for some thing supernatural. Every time there was an unusual sound I drew the coverlet closer over my head. Like a child, I hid securely in hiding beneath the clothes. At length my candle gave a final splutter, and all that remained of my light were the embers of a cotton wick and a smelt of smoky tallow. Not long after this I heard the pattering of the feet of some small animal, after which there was a sound of gnawing. It was evident that the place was infested by half-starved rats, and my room was gradually being invaded for the sake of the drippings from the candle. Suddenly I felt something creep across my bed, and I rose up and struck the clothes. This was followed by a clamped of rats, which from the noise of crumpled paper seemed to be scrambling through holes in the paper doors of my room. While sitting up and wondering how I could best rid myself of my unwelcome visitors, I distinctly heard something which sounded like the opening of a door. After a pause this was followed by a bang. I tried hard to persuade myself that it was only the wind causing the *shoji* to rattle. For some time after this all was quiet, and I believe that had I not been again disturbed I should soon have slept. But I was too excited, almost every gust of wind made me tremble. Suddenly I fancied I heard a muttering, as of someone speaking with himself. I listened carefully, and finally convinced myself that it was a human voice, and that I was not alone in the *honjin*. It was mysterious. A few minutes before, by inspecting all the rooms I had concluded that I was alone, and now I had distinctly heard a human voice. While wondering how the mystery might be solved, the muttering changed into a fierce altercation, and I heard the heavy thud of footsteps as of someone walking on an earthen floor.

The suspense was more than I could bear. Although I had no light, the mystery must be solved. On sliding back my door and looking down the passage leading towards the kitchen, to my astonishment it seemed as though there was a light or that the fire had burnt up. Cautiously creeping to the end of the cross passage, I could see that there was a small fire burning, and what was more, near to it were two figures. After looking for a short time, I recognised one as the Aino Chapiri, and the other as his wife. From the manner in which she gesticulated it was clear that they were engaged in a dispute. While wondering whether my senses were deceiving me, for I could not understand why there should be anyone in the house, I saw Chapiri suddenly lift an implement looking like a mallet, and strike the woman. All that I heard was a blow, a scream—which sounded throughout the house—and the heavy thud of a falling body. Almost instantly Chapiri sprang upon the fallen body, and drawing a short knife from his belt, struck it several severe blows. I was petrified. In less time than it takes me to relate it, I had been the spectator of a horrible murder. What I was to do I did not know. My senses seemed to have deserted me. My tongue clave to my mouth and my limbs trembled. Had there been a door behind me, I think I should have escaped. As it was I remained helplessly horror-stricken and frozen. The next thing I saw was Chapiri groping in the fold of his murdered wife's

dress, extract a piece of paper and transfer it to a pouch in his own girdle. Great god! The truth flashed on me. The money I had given to the Aino's wife had been the cause of strife and murder. It then occurred to me that the murderer might not be contented. He had seen the money which I had in my pocket, and my own life might be in danger. As the door was in the kitchen, it was impossible for me to escape without his seeing me.

While deliberating as to what I should do, I saw him wipe his knife upon his wife's gown and then rise up. He was coming in my direction. In one hand he carried the knife and in the other the mallet. I slunk back to the end of the passage beyond my room. He crept slowly down the passage with his body bent as if he wished to reach my room without making a noise. As step by step he stealthily came on I felt my heart was beating almost audibly. When in front of my door he paused and listened, then, reaching out his hand, he slowly drew back the sliding door and passed inside. I felt that this was my only chance of escape. With a rush I might pass my room, reach the kitchen, and gain the open. What happened after that I hardly know. As I passed the open *shoji* of my room I saw a Jack fern which dated after me. With half-a-dozen bounds I was in the kitchen, but the murderer was behind. I remember wildly tearing at the door, and then I felt a blow. I had been struck behind, and I fell down insensible.

A week after this I woke up to find myself in bed at the house of a friend in Hakodate, recovering from an attack of fever and a severe blow. My friend told me that Chapiri and I had been dug out of the ruins of the *honjin*, a portion of which during the gale had given way and fallen down upon us. The people who had dug us out were Chapiri's wife and other Ainos. It was therefore clear that Chapiri's wife had not been murdered. The Ainos said that after they had left me in the *honjin* they observed a moving light. Fearing that something was the matter, they had returned to the building where they found that I was wandering about gesticulating and talking to myself. As they were alarmed at my condition, Chapiri and another determined to remain in the kitchen, fearing that I might set fire to the building or do damage to myself. Early in the morning the gale had become so violent that Chapiri thought that the roof above my room might possibly give way. He had just come to warn me of the danger, when the roof did fall and he and I were buried. These were the facts. The other part of the story, relative to the moans, the footsteps, the screaming, and the murder, may be accounted for as a result of delirium and imagination excited by fever and strange surroundings.

It there does not happen to be a *honjin* at Horofetsu, or if there never was a *honjin* at Horofetsu, or if the people in that neighbourhood say the story is untrue, I must ask the reader to move the scenes referred to gradually along the coast, either to the north or south. In time he may meet with a set of places in the same relative positions as those I have mentioned which will fit the story.

## EDUCATION IN JAPAN.

The following is a leading article from *The Times* of October 4th:—

Japan, while copying many other European institutions, has assimilated in the most thorough manner the Western principle of national compulsory education. The Japanese Education Department has just published, in English as well as Japanese, its tenth annual report, which is as complete and elaborate in its statistics as if it had emanated from Whitehall. It may also be certified as no less free from all levity and frivolity. No official document could be more business-like and serious. None could exhibit more painstaking anxiety to be accurate and veracious. The Japanese Education Office does not attempt to prove that the education machinery is wholly successful in sweeping the collective youth of the Empire into school. More than 50 per cent. of the children of school age, it is acknowledged, evade the obligation. In poor and remote districts, female education, which is of recent introduction, continues to be grossly neglected. Only eight female children out of thirty-four thousand of school age receive instruction in the province of Okinawa. Education, both male and female, is acknowledged to be much less advanced than might have fairly been anticipated in some places. The great cities of Tokio, Kyoto, and Osaka show a smaller percentage at school than several small towns. The quality of instruction is often

below what it should be for the opportunities of the place. In one spot the local officer is energetic and sagacious, and the merit of the education rises. Elsewhere there is official apathy, and it declines. School expenditure is defrayed partly by endowments, partly by a State grant, and partly by local contributions. This last resource is capricious. The Government endeavours to stimulate the flow by bestowing distinctions, though not baronetries, on benefactors. The Minister of Education laments that some recent restrictions on the distribution of such rewards had injuriously checked the current of private generosity in the year 1882, to which the present report applies. Ward and village assemblies, it is alleged, are at times disposed to be niggardly in the dispensation of educational funds. In some regions of the Empire the instruction is not efficient, and its more important features are slurred over. For instance, the First Junior Secretary of Education grieves to announce that in the province of Shimane "the system of moral instruction is very unsatisfactory, the principles of fostering the moral sensibilities being scarcely understood." Worst of all is the constant and universal dearth of the teaching supply. For 29,081 public and private schools no more than 19,395 fully qualified teachers are available. The deficiency has to be made up by 1,722 assistant teachers and 63,648 pupil teachers. Even so, each school has an average of scarcely three teachers. The Minister of Education confesses himself in despair for the future of elementary education unless he can find means of multiplying normal school students.

The Japanese Education Department has its obstacles, like its pattern in this country. Like it, the Japanese Office exults in its skill in surmounting them. A school roll of 2,789,776 children is a grand achievement for ten years. In addition to the elementary schools, the Department can point to a regular hierarchy of scholastic institutions more methodically classified and marshalled than English schools. There are kindergartens. There are schools for the blind and dumb. There are, beside those of an elementary kind, high schools for girls. At these the doctrines of morality, the etiquette of sitting and standing, domestic economy, the management of children, sewing, and handicraft work are taught. In Japan the ideal female education is that which will "develop gentle and refined manners." There are Professional Schools, for instruction in medicine, law, agriculture, commerce, engineering, and languages. In the Foreign Language School at Tokio French, German, Russian, Chinese, and Korean are taught. The omission of any mention of English implies, it may be hoped, that English is not regarded as a foreign tongue, not that it is neglected. There is a Gymnastic Institution, which trains in morals as well as in physical exercises, because the pupils are to be teachers, and consequently should be "of dignified manners." It is noted with pride that in the Gymnastic Institutions the particularly high percentage of health testifies to the moderation and wise arrangement of the course. Peculiar stress is laid on the Normal Schools, which, though they may not be adequate to the educational needs of Japan, seem to be carefully superintended. Morality is the first in rank among the subjects of study, and etiquette stands next. Some Englishmen are of opinion that elementary education here might be improved if the teachers had been trained to regard good manners as vital in education, and to inculcate the practice of them upon their pupils. Among other subjects of education music is not forgotten. The Minister of Education has faith in the power of music to soften the manners, to mould the character, and even to contribute to health. An impediment to its introduction into education was that, "though Japanese music rests upon certain definite principles, at the present time few persons apply to the study of them." Apparently a compromise has been arrived at, and a musical system has been established on the basis of several, though whether or not the Japanese itself be included is not mentioned. An Institute of Music has been established to watch over the new creation. For the various branches of rudimentary learning which are taught a series of text-books is gradually being prepared, and is set forth by authority. Finally, at the head of the entire educational structure stands the University of Tokio, which confers degrees, and lectures on everything, from law to metallurgy. Among others a Chinese and Japanese classical course was, four years since, established in the Department of Literature. It is a curious illustration of the tendency of modern Japan to look abroad for its enlightenment that the number of students of Japanese literature appears to have threatened to dwindle to nothing. The authorities were alarmed that the native literature might become dead to natives themselves. They have tried to avert the danger by the endowment of this

chair. A more certain remedy is in operation in the form of public libraries. The first was instituted at Tokio, in 1872, and others are springing up in the provinces. Though the Minister of Education is not contented with their condition, he allows that they are improving. They appear to be well attended. They are managed more popularly than the Chinese. Japanese expect to be amused as well as instructed. From their public libraries novels are not excluded, as in China; and the experience of the Tokio librarians, as of his brethren in England, is that they are the most patronized of the volumes in his keeping.

The survey the report affords of the educational revolution through which the Japanese nation has been passing is full of significance. States sometimes make vast educational reforms on paper. Turkey more than once has put forth magnificent programmes of the sort. The scheme of national education in Japan is positively in action; and probably by this time fully three millions of children attend school under it. All classes and both sexes share its advantages, and have accepted without resistance the compulsory principle adopted for its extension. The initiative was due to the Central Government. The system is worked by the co-operation of the whole Japanese people. Local boards supervise the management, and in the twelvemonth covered by the present report 277,316 donations were received from individuals toward the expenses. That the Education Office thinks the offerings might have been more profuse, and that the district management is not always perfectly efficient, chiefly proves that its own standard is elevated. With variations suited to the national idiosyncrasies, the system follows European precedents. But it is no longer dependent on European control and personal intelligence. Japan felt originally the want of Western impulse. Having received it, the Empire can extract motive force from its own resources. The experiment is already fairly successful, and promises extraordinary results hereafter. It is entirely conceivable that the sages of the Educational Committee and rival leaders on the London School Board may at no long interval be looking for hints and illustrations to the Japanese developments of their model. The one grave defect in the Japanese educational scheme, as in Japanese life, is the same as that to which Mr. Matthew Arnold has pointed attention in modern French national education. Morality is provided for even in priority to the important matters of etiquette and deportment. There is no apparent place for religion. The doubt is how far it will prove permanently practicable to teach morality without the sanction religion furnishes. Perhaps, however, Japan, as it has borrowed other conceptions, very much to its profit, from abroad, may in time borrow in this direction too. In any case, it ought to be assured of the friendliest sympathy of Englishmen with its intellectual ambitions. Their only jealousy will be that its present tendency seems to be towards seeking light in Germany rather than in this island. They do not take umbrage, as Paris might, at the preference the Empress is rumoured to manifest for Berlin millinery. They are sorry that Japanese students bend their steps more to German than to English universities. Of the eighteen abroad at the period of the report but three were working in England to eleven in Germany. Englishmen should not be the less concerned that the excellence of German academic instruction and the variety, which caters for every phase of learning, from "Politics" to "Psychiatry," may not be the sole motives for the predilection exhibited for a German training. There can be no question that German universities are more hospitable than are, at any rate, Oxford and Cambridge. Foreigners naturally go where they find themselves speedily at home. Much as has been done of late years towards opening the doors of elder English universities, the process is not yet complete. When it is, and the British Empire at large is able to see in them its free and natural educational centres, students also from Japan, which is very nearly English in many of its most essential mental characteristics, will not be wanting.

BYWATER, TANQUERAY & Co. (late BYWATER, PERRY & Co.) are agents for Residents abroad, Missionaries, Chaplains, &c., in every part of the world. Goods and Outfits supplied at Wholesale prices. Shipping and passages arranged. Banking in all its branches. Full descriptive Catalogue post free. Offices—70, Queen Victoria Street, London. 2,000 References.—*Advt.* Dec. 18.

## ASAMAYAMA: A JAPANESE VOLCANO.

The following letter from *The Times's* Correspondent appeared in that journal on the 27th of October:—

Ikao, Japan, August 30th.

Of Japan's numerous volcanic peaks, some active, some inactive, others apparently extinct for ever, one of the greatest and most famous is Mount Asama, in the province of Shinshu. While in height, grandeur, and grace of outline, and in the veneration with which it is regarded by the Japanese people, the lordly Fuji-san stands a head and shoulders above every rival, there is a second order of eminences, comprising some half-dozen peaks of from 8,000 to 10,000 feet in altitude, among which Asamayama, though not the highest, holds perhaps the chief place, as being the loftiest of the 51 active volcanoes in the Empire. The fires of Fuji are, for the time at least, virtually dead. But in Asamayama's dark and cloud-capped ridge there is, as an old native account says, "a fire always burning;" and the records of its eruptions are among the most harrowing and terrible in the whole history of volcanoes. An opportunity which was lately afforded me of visiting this celebrated mountain in the company of a chosen friend, and of returning thither by way of Kusatsu—the most unique watering place in all Japan, if not in all the world—was too tempting to be thrown away. And certainly, among the varied experiences of a wandering life in many parts of the globe, I can recall no excursion that embraced so much of things wonderful, beautiful, and uncommon, within the short compass of four or five days' travel.

Our first afternoon's march lay over the lovely heights of Mount Haruna, and past the time-hallowed Shinto temple of the same name, which is situated in a sequestered and romantically beautiful glen on the southern slope of the mountain. Noon of the second day found us toiling up the weary zigzag of the Shizuma Pass, the summit of which, 4,800 feet above the sea, commands in clear weather a magnificent view of Asamayama, and of the wooded and grassy uplands that spread around its base. It had been dull since morning, with a steady drizzle, and long before reaching the top of the pass we had fairly entered the zone of cloud, and abandoned all hope of better weather. Suddenly, however, while we were yet resting on the summit, there was a play of light below. Then the fog began to lift, break, and roll away, and, one by one, the peaks, small and great, near and far, shed their garments of mist, until at length the whole glorious landscape of mountain and park-like dale, moor and forest, sharp-cut crags, and grassy plains bright with flowers lay before us, glowing in the brilliant light of the midday sun. Asamayama alone was denied to us. "We were dead to leeward." We could see far up his brown and naked shoulders; but the crater-peak remained doggedly hidden behind the vapour-cloud of its own creation. In front of us, five or six miles away, where the highest stretch of no-oland meets the foot of the volcano, could be just descried the spot at which we were to pass the night. A wretched place enough this afterwards proved to be—a mere barn, flea-ridden and smoke-begrimed, yet honoured by the high-sounding title of the Wakasare-no-chaya. But what more of comfort could be fairly expected in a wild region some 5,000 feet above the sea, and in the ticklish neighbourhood of a live volcano, ready at the shortest notice to belch forth overwhelming ruin and destruction upon everything, animate and inanimate, within a radius of miles? Growing, at any rate, was useless in such a place. Then at sundown came rain to reconcile us to our rude quarters. And while the Japanese "boy" who served in the triple capacity of dragoman, valet, and cook to the expedition was getting ready the supper we had brought with us we were glad to turn once more to the interesting details that Professor Milne has collated about the Big Mountain, as the country folks of the district call it, which towers 4,000 feet above the Wakasare-no-chaya.

"It is not known," say the Japanese, "when Asamayama began to burn." The earliest outburst mentioned in their annals took place just twelve centuries ago, since which date 21, or perhaps more correctly 20, eruptions have been recorded, down to the latest in 1870, which, however, was of trifling magnitude. Of the whole series, four or five stand out conspicuously in the narratives that have been preserved. The first of these, which is also the first of the series, happened in the year 683; and though the record is, as might be expected of that period, extremely bald, there is sufficient mention of its destructive effects to indicate an unusual degree of violence. In 1532 there was a fearful outburst, during which large

rocks and stones, one of the former having a diameter of 42 feet, were violently ejected to distances as great as five miles. Ashes fell in places distant more than 70 miles, and lava-streams, mingling with heavy rain and lava-melted snow which lay on the ground to a depth of six or seven feet, wrought havoc that it took years to efface. In 1708, and again in 1711, came eruptions of exceptional magnitude. Parts of the 16th, 17th, and 18th centuries were epochs of marked activity. Especially during the last 20 years of the 18th century abnormal volcanic energy was displayed in many districts of Japan, as well as in other countries. In 1783 occurred the remarkable lava-flow at Skaptar Yokul, in Iceland, and in the summer of the same year took place the last and most memorable of the great eruptions of Asamayama, than which there are few more terrible in seismological records. On that occasion, after a period of unusual tranquillity, active eruption began on the 25th of June, and only reached its climax during the first week in August, from which time it rapidly declined. When at its height, says a Japanese historian, "the noise it made was like that of a thousand thunders. To the very foot the whole mountain seemed to be on fire, and from the midst of the smoke lightning flashed in every direction. The scene was fearful. The burning was furious and shook the earth, and screams in houses 25 miles distant were shaken and slipped out of their grooves." Lava, stones, mud, and cinders devastated the surrounding region, covering the ground to a depth of from two to five feet. In Tokyo, 80 miles away, fire ashes fell to a depth of more than two inches. Whole valleys were filled with ejectamenta, rivers diverted, and villages to the number of 58 buried or burnt; and pitchy darkness, even at noonday, with lightning and frightful thunder, prevailed in the leeward districts, so that in places as many as 40 miles distant "night and day were equally dark, and no one knew when it was daybreak." Sudden and terrible death came to hundreds of the peasantry; and upon the ruined survivors fell soon afterwards the further horrors of starvation and riot. On the north side of the mountain a prodigious lava-stream descended for a distance of 38 miles, the first 30 of which were accomplished in 16 hours. Throes of earthquake constantly shook the land. Plights of huge stones, some of them from 50 ft. to more than 100 ft. in diameter, were shot into the air, and "dropped as abundantly as the leaves of trees." In Tokyo, besides great darkness, there were shaking and roaring, both of which were also experienced in provinces as many as 180 miles away. Half Japan, in short, was more or less agitated by this terrible convulsion; and, in the words of a Japanese narrator, "the various events which happened at this time could not be described by the pen, nor could they be told with the tongue." Smiling verdure now covers the erstwhile scorched and blackened landscape round Asamayama's base. But the still steaming crater, the old lava-stream, which looks for all the world like a "huge black serpent" on the bare face of the mountain, and the enormous blocks and masses of lava and other ejectamenta that cover the whole country side serve, amid countless lesser signs, to remind the traveller of those terrible summer days and nights of 1783. No one, indeed, can see the monster rocks, weighing tens of thousands of tons, which were ejected on that occasion and which now strew the plains on the southern slope, without a feeling of astonishment that Asamayama did not burst bodily and collapse in the mighty efforts that brought them forth.

We were up long before dawn next morning, as full of energy as could be expected of men who had passed a well-nigh sleepless night, tormented by legions of fleas, half suffocated by the smoke of a wood fire, and enlivened by the chatter of our host and hostess and certain pilgrims who had arrived late in the evening. Sleep with these good people can have been no object. For, after keeping up a brisk conversation till close on midnight, by 2 o'clock they were out of bed again and at it as hard as ever. To these lonely folk in volcano-land gossip apparently had as great a charm as that of hot-water bathing to the visitors at Ikao, where it is no uncommon experience to find a Japanese who awakes in the dead of night suddenly arise, step over his sleeping household, and take himself to the bath, to indulge for the next half-hour in a blissful slumber. With the first streak of daylight we were under way, headed by a guide from the tea-house, who had hard enough work at first to make out the narrow overgrown trail, through high grass and brushwood, lava blocks and fallen timber, that led for a mile or so to the immediate foot of the volcano. An hour's ascending carried us above the clouds and up to the uttermost limit of vegetation, just in time to see the sun's earliest rays salute the crown of Asama-

yama, faintly seen through light wisps of driving mist 3,000 feet above us. Henceforward, progress, though not difficult, was laborious to a degree—a naked brown saddle-back ridge, inclined at a slope which averages nearly one in two. The path, marked out by small cairns, climbed in short zigzags over gritty cinders, for the most part fairly well packed, but here and there loose enough to add sensibly to the fatigue of the ascent, and test severely the heart and lungs. At length, however, the summit was reached, two-and-a-half hours after leaving the tea-house, and we were free to enjoy the full fruits of our toil. For some time past a sharp struggle had been going on between sun and cloud, only to end—with nineteenth-century appropriateness—in a pretty equal compromise. For, while the earth beneath us was now wholly unmasked to the west of the meridian, and bathed in the golden glory of the morning sun, the rest of the circle was occupied by a billowy ocean of soft silver clouds of extraordinary beauty, 3,000 feet below our standpoint, out of whose dense masses the highest peaks alone stood up here and there, as if to assure us of the presence of *terra firma* beneath that glittering, ever-shifting sea. In the clear half, however, we looked down up a vast expanse of Central Japan, which, viewed from this airy height, seemed little else but a sea of mountains. Seventy miles off, in the south, rose the trifid peak of

"Great Fujiyama, tow'ring to the sky."

Northward, along the border of earth and cloud-land, the five volcano, Shirane-san, Asamayama's younger sister, a bare score of miles away, peered at us every now and then out of her veil of mist. On the west, the not very distant Sea of Japan was shut from view by the giant granite range of Shinano-Tsuda, the mightiest and wildest chain in the Empire. All this was grand enough. But do the Lid's-eye prospects from great mountain tops fully come up to the expectations of even those travellers to whom such things are new? This is very doubtful. You get distance and vastness. You get all the joyousness of spirits due to your lofty elevation. You see spread out below and around you the giant vertebrae, ribs, and arteries of the land, snow and glaciers, lakes and rivers, and a host of lesser peaks sitting humbly at the feet of the monarch you have mastered. Perhaps, also, you catch the glimmer of some far-off ocean. Yet you lose most of the beauties of form, contrast, colour, and height which a less exalted standpoint commands; and you miss the details of cultivation, hamlets, wealth of verdure, till, and waterfalls, which assuredly are needed to complete and gladden a landscape. So, at least, we thought as, from our perch on the summit of Asamayama, 8,500 ft. above the sea, we surveyed a group of the fairest provinces of this earthly Eden which is called Japan. And, after all, the crater, not the view, was what we had come for. So to the crater we very soon addressed ourselves.

While climbing the last steep cone of the ascent, we had heard, very faint at first, but gradually becoming more audible in the still morning air as we advanced, the roar or rumble of the volcano. Arrived at the crater's edge, it was vastly louder and angrier, and at times almost alarming, not unlike the noise produced by a train's passage over a bridge under which you are standing. There was none of the shaking, however, that some have spoken of; but loud hissing and bubbling constantly proceeded from numberless vapour-jets in the inner face of the crater-wall, from its rim downwards. The circumference of the crater, which is a rough oval in shape, was approximately estimated at 1,656 yards, by walking round the windward half of it—it was impossible to pass through the vapours on the lee side—which was accomplished in six minutes, at the rate of about three miles an hour. It is impossible, therefore to accept the estimate of a German explorer, who set down the diameter at 1,100 yards; or the yet wilder guess of the Japanese who pronounce the circumference to be nearly four miles; or, again, the under-estimate of the English mathematical professor who limited the diameter to 204 yards—divergencies that well illustrate the mental confusion to which some men are liable when in the presence of dread natural phenomena. Whether regarded in plan or elevation, the crater-rim is irregular. But it is everywhere well defined, the inner face breaking down sharply and with excessive steepness, particularly towards the north, where it is nearly vertical. Vast clouds of the most pungent sulphurous steam rise swiftly out of this dismal and mighty caldron. Its depth no man can tell. All estimates hitherto made are the merest guesswork. A recent visitor claims to have seen on a moonlight night to its bottom, which looked like "a furnace filled with glowing coals," and which he supposed to be only about 200 ft. below him. But, not to

speck of the extreme difficulty of accurate observation by night, or of the fact that neither this visitor nor any of his party were experts, other more skilled observers have declared to seeing down to considerably greater depths. By us, certainly, glimpses of the crater-wall were occasionally obtained at depths which a very moderate estimate would place at 300 ft. At the same time, the gradual convergence of the cavity which was there apparent would seem to forbid acceptance of the enormous profundity for which some visitors have contended, and to suggest that the depth can hardly much exceed 500 ft. Crawling to the edge of the hideous abyss, peering into its depths, and occasionally catching a blast of the volcano's stifling breath, there is brought home to you, in some degree at least, a conception of the tremendous and hellish energies which from time to time furnish such convincing yet terrifying and disastrous proofs that this Earth of ours is "still in its vigour." The clurning and groaning far below, the masses of fetid vapour ever being hurled up wrathfully from the gloomy and awful depths, and the risen, scorched, and honeycombed walls, exhaling clouds of suffocating steam from a thousand crevices and holes, readily suggest latent possibilities well calculated to appal the stoutest heart. Apparently the present crater is the youngest and innermost of three. Farther down on the south-west side are to be seen, along with numerous fissures of unfathomable depth, remains which point to the existence of two former craters, concentric and of large dimensions, and separated from one another by a considerable interval. Possibly the existing cone may have been formed during the great eruption in 1783.

Men who have reached the time of life which reminds them that knees have joints are little better able to run down a mountain than up it, especially when the slopes consist of cinders piled at angles of from 30 to 35 deg. above the horizon. Hence it happened that, though we had ascended to the crater in 150 minutes, we needed 100 minutes to accomplish our return to the Wakasare-no-chaya. Half an hour later we were in, or rather on, the saddle; for he who would travel on horseback in the wilds of Japan must at times submit for hours to the refined torture of being well-nigh split apart on the broad span of a Japanese pack-saddle. By nightfall we reached Kusatsu, some 17 miles to the northward. But a description of that extraordinary place must be reserved for another letter.

The Times of the same date comments as follows, in its leading columns, on the above letter as well as its Correspondent's letter on Ikao which we republished on the 10th instant:—

A correspondent in Japan, who last week described life at a Japanese watering-place among the Haruna Mountains, relates in the letter of to-day an expedition to the brink of a burning volcano. The labour of the journey up Mount Asamayama does not seem to be very great. It cannot compare with the fatigue of an ascent of Elma, or the dreary pilgrimage across the morasses in the neighbourhood of Hecla. For the main part of the march the passage is through romantic woods and lovely ravines, with the chance of a view of some tree-embowered shrine, in itself a *hic-a-brac* ideal. Gloomy and toilsome as is the final scramble over the used-up cinder heaps, two or three hours suffice for it. The only serious hardship is the necessity of a night's rest, or, unrest, in a septisyllabic hut infested by fleas and gossip. The accommodation and discomforts even there might probably be matched by mountaineering pleasure rambles anywhere in Europe, with the addition of a certainty of good tea in favour of Asamayama. On the other hand, it may be thought that the spectacle to be enjoyed on the summit, judged by our correspondent's account of his experiences, scarcely repays an excursion of several days, not to speak of a preliminary voyage half round the globe. Wide views, as our correspondent justly observes, fail in variety and curiousness of detail. One grand panorama is much too like another, and the effect becomes monotonous. A steaming and roaring crater confounds rather than captivates; and our readers are indebted to our correspondent for enabling them to share almost equally with him in the wonder without the trouble of a personal visit. The real interest of the scene consists in the vivid sense it produces of the machinery by which nature works openly in Japan, as darkly elsewhere. Nowhere so visibly as throughout the Japanese Empire can the operation of natural furnaces be perceived. A hundred and twenty-nine mountains of volcanic origin bear ubiquitous witness to the sovereignty of the subterranean fires. Fifty-one continue in active service, throbbing, roaring, and flaming. Of hardly 100 that pass without the pulsa-

tion of an earthquake. Once or twice in every century Asamayama itself bursts into fury, and ravages its territory far and wide. At the same time, the traveller who peers down into the unfathomed terrible abyss, and hears the tales of its frenzy, and sees traces of the ruin it has wrought, has only to gaze over Japan from the mountain's peak, and the beneficent influence of the furnace beneath should impress him more than its horrors. Japan owes its exquisite beauty to the close neighbourhood of earth's reserve of heat. Calamitous as often has been the excess of vivacity, the abounding charms of the fairyland in which our correspondent has been holiday-making must be put side by side with the suffocating fumes and desolation of the seared mountain top as twin illustrations of the acceptable truth that "this Earth of ours is still in its vigour."

A boiler-house is not as agreeable a sight as the adjacent conservatory with its wealth of blossoms, ferns, and fruit. Its activity is essential to their existence; and volcanic reservoirs which explode in occasional convulsions are as indispensable to the earth's health and riches. Iceland could not do without the underground furnaces which temper the Arctic rigours of its latitude. But their beautifying powers are limited there by counterbalancing atmospheric agencies. In Japan they show themselves in all their graciousness as in all their majesty. If a score of times in half as many centuries they sally forth to burn and slay, every year and all through it they lavish smiles and caresses. Our correspondent's picture of the perfumed slopes, the woods which are lordly ferneries, the crystalline atmosphere, and the entire paradise of dainty natural devices, does not outrun the testimony of the most prosaic tourists. The whole is the offspring of the mysterious stoves which nature tends beneath the flowery soil. To them are only less immediately due the happy dispositions, the courtesy, the fine taste of Japanese adults from Daimios to peasants, the attractions of its belles, which our correspondent finds as irresistible as if he were a Lord High Executioner himself, the perfections of its incomparable children. They are all emanations from the fiery sea beneath in its play, as are the baths in which thousands dream away their summer days at delightful Ikao. Japanese art, in its own way unapproachable, is the product of a land in which nature lets itself be seen actually at work, capricious and bountiful. Only the foundations of Japanese national character may claim a more independent origin. At the bottom of that, below the quaintness, and even the versatility which may possibly be volcanic like tree ferns and orchids, is a sturdiness of a different growth. Nothing is stranger than the contrast of the resolute manliness of the Japanese with the suppleness and sensitiveness to external impressions which are the features primarily most obvious to foreigners. The Japanese has defects, and of a grave order, though it has not been the duty of a vacation tourist to point them out. He has virtues and gifts also which are sufficiently legible in the history of the modern constitution of the revived Empire, in the steady energy of its diplomacy, in the unflinching courage of its soldiers, and, most of all, in the discriminating sagacity of its selection of the precise elements of alien civilization adapted to its own circumstances. An Englishman, as he traverses Japan, sojourning now at a spa in the midst of inimitable natural loveliness, amid a population for which life appears all a holiday, and now on the verge of a savage-seeming volcano, need find nothing contradictory in the superficial opposition. The true contrariety is not between a country which might have been dreamt of by Watteau and a realization of the scenery of the Inferno; it is between the two divisions of Japanese character, the iron hand and the silken glove.

Englishmen have long reckoned it a peculiar piece of good fortune that diplomacy should have permitted them to win and keep the friendship of Japan. At the root of the Japanese national character Englishmen are proud to think they can detect a close affinity to their own. Its graces, and the physical features of the country, are so particularly un-English as to possess for them in the highest degree the charm of variety. Japan is no longer inaccessible. A moderate extension of a Long Vacation brings it within reach of fairly enterprising tourists. Ordinary activity is enough for the conquest of all local difficulties and impediments, except, perhaps, the intrusions of one pre-eminently agile assailant. There is no race more instinctively hospitable, and none so pleasant to watch, or so little obnoxious to be watched by. The stranger has but to be on his guard against being too inextinguishably bewitched by the flatter of fans, and their owners, whom our correspondent sympathetically portrayed in his letter from the Baths of Ikao. The present is the exact stage in Japanese development at which the

expedition should be undertaken. The Japan of the Daimios may have been as delightful as now. But the Daimios, not the Japanese people, kept it for their own delectation. Under the sway of the Mikado, foreigners, and none more than Englishmen, know they are welcome. By the evidence of our correspondent, they can see Japan freely, and, what is more, "old Japan." Still, they must make haste. Young gentlemen have been seen at Ikao itself in "stand-up collars;" and the Empress has ordered twenty thousand pounds' worth of European millinery, chiefly of all places, at Berlin. Nevertheless, as yet, modern innovations have not deluged Japanese life. In one instance, our correspondent confesses they have been laudable; they have emancipated Japanese wives from the disfigurement of blackened teeth. Unfortunately, the spirit which begins with a refusal to spoil a pretty mouth ends with putting on a chignon. We will not forebode such a fall for the deys who beautify the Haruna groves. Only the Juggernaut car of feminine fashion, it must be admitted, has a fatal habit of rolling ponderously on. The one comfort for those who cannot take time by the forelock and set off for Ikao forthwith is that, when the old Japanese garb has faded off the face of new Japan, they and Japanese antiquarians visiting London are long likely to be able to see them surviving on the boards of the Savoy Theatre.

#### IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN, Esq., Judge,—MONDAY,  
December 13th 1886.

#### THE CLAIM FOR DAMAGES AGAINST CAPTAIN DRAKE.

This suit came up to day on a motion by Mr. Litchfield for leave to withdraw the case.

Mr. Litchfield said—May it please your Honour; in the matter of the suit, Takenouchi against John William Drake, I have to move for leave to abandon the proceedings and withdraw the petition. The plaintiffs, in instructing me to make the motion in question, have intimated to me that it is not from any doubt as to the ultimate result of the case, but entirely from the fact that they are moved by sympathy with the position in which the master has been placed, and also with sympathy for his wife and family, feeling also that however much the relatives of the deceased persons who met their death on board the ill-fated steamer *Normanton* may have suffered, Drake must have suffered equally with them, and that his wife and family will probably suffer more than he has done. They have no wish to add to the cup of sorrow—which is doubtless already full to overflowing—of the unfortunate family of the master. They wish me to express their views on the subject, and to move for leave to withdraw the action.

Mr. Lowder—I think in answer to what has fallen from my learned friend, perhaps the best course I can adopt is to read the correspondence which passed yesterday and to-day between Mr. Litchfield and myself, and which will make very clear the position that I am instructed to take up with reference to this application. Mr. Litchfield wrote to me yesterday in regard to this case:—

Sunday, 12th December, 1886.

TAKENOUCHI V. DRAKE.

DEAR SIR,—I have received an intimation from the plaintiffs in this case, whom for the purpose of taking evidence preparatory to the hearing I represent, that it is their intention to abandon these proceedings. At the same time the advisers of the relatives of the deceased persons lately passengers by the *Normanton* write to me that it is the intention to waive all civil claims which they might have had against the master. In coming to this decision the Japanese have been moved by the sympathy they feel for the master in his present position, and especially for his wife and family. It is not from any doubt as to the ultimate success of the present action that this decision has been come to, but from a natural feeling among the relatives of the deceased and their advisers that although they have suffered through the conduct of Captain Drake they should not further add to the misery of those akin to and dependent on him by taking further action against him.

I shall move to-morrow for leave to withdraw the suit, each party bearing his own costs, to which motion I trust under the circumstances that you will give your consent.

I am, yours truly, Hy. C. LITCHFIELD.  
F. Lowder, Esq.

I replied this morning after consultation with my client:—

Yokohama, 13th December, 1886.  
H. C. Litchfield, Esq.,

Dear Sir,

TAKENOUCHI V. DRAKE.

I am in receipt of your letter of yesterday's date informing me that you are instructed by the plaintiffs to withdraw the action they have commenced against my client; and that the relatives of those who lost their lives on board the *Normanton*, moved by the sympathy they feel for Captain Drake in his present position, and for his wife and family, have decided to waive the claims against him which they think they might have successfully established. And you express a hope that under these circumstances I will consent to the order you propose to move for to-day for leave to withdraw the action, each party bearing his own costs.

In reply I am instructed to say that, while my client is deeply sensible of the motives which have influenced this decision of the relatives of the deceased, and of their advisers, and whilst it will be a source of life-long grief to him that twenty-five subjects of this empire should have met their death on board a vessel under his command, nevertheless he owes it to himself to decline to be a consenting party to any step which will deprive him of the opportunity which he anxiously seeks of giving his own version of this deplorable occurrence, under the sanction of an oath, in a Court of Law, and of taking the opinion of a jury of his countrymen upon the evidence be himself is prepared to give.

Under these circumstances, though I cannot prevent the course you propose to adopt, I am unable to give my consent to the abandonment of the action.

Yours truly,

F. LOWDER,  
Counsel for the defendant.

The Judge—Well, Mr. Litchfield, I cannot, without the consent of the other side, allow you to withdraw it without costs. You have nothing to urge? I do not see how you can urge anything in favour of such a course.

Mr. Litchfield—There is no answer to the petition.

The Judge—I think that it will be well that I should fix the costs, and I shall do so at once. We know that Mr. Lowder was only instructed on Saturday, and I think it will be quite reasonable that I should say the costs would be only \$25. The motion is granted for the abandonment with costs, assessed by the Court at \$25. I do not think that it is my place to make any observations upon what has taken place beyond this; that I think a great deal of good feeling has been shown on the part of the plaintiffs, and that I can at the same time quite understand the feeling which dictates the refusal of Captain Drake to consent to anything which will shut his mouth in explaining the state of affairs which occurred on that night.

The Court then rose.

#### LATE TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, 11th December.

#### THE SUEZ CANAL.

England declines the French proposals for the neutralization of the Suez Canal, but accepts an arrangement of an international character on the basis of the free transit of commerce.

#### THE CESSION TO CHINA OF FORT HAMILTON.

England cedes Port Hamilton to China when that Power is prepared to take over the place, but China must engage that she will not allow any other Power to annex the islands.

London, December 13th.

#### THE FRENCH MINISTRY.

M. Goblet will, in the interim, take the portfolio of the Minister for Foreign Affairs, General Boulanger will be Minister of War, and Vice-Admiral Aube, Minister of Marine.

London, December 14th.

#### THE FRENCH MINISTRY.

M. Flourens, an official of the Foreign Office, has been appointed Minister of Foreign Affairs.

London, December 16th.

#### MR. DILLON AND DISORDER.

A Dublin Court has ordered Mr. Dillon to Original from

find securities for his good behaviour, in default of which he will have to undergo six months' imprisonment for inciting to disorder.

London, December 17th.

#### THE BRITISH FORCES IN EGYPT.

It has been decided to reduce the army of occupation in Egypt, five battalions south of Cairo being now considered sufficient.

[FROM THE "N.-C. DAILY NEWS."]

London, December 1st.

#### FRANCE AND THE BRITISH OCCUPATION IN EGYPT.

The French Ambassador in London is amicably urging Lord Iddesleigh to give definite pledges relative to the British occupation of Egypt and the internationalization of the Suez Canal.

#### CAPTURE OF THE COMMISSION IN TONGKING.

The Tongking Chinese frontier is infested with pirates, and the French agent has been attacked and the (Boundary) Commission captured.

#### THE STATE OF IRELAND.

The state of Ireland is much worse. *The Times* urges continued firmness and to enforce respect for the law so as to shorten the struggle.

London, 6th December.

#### ENGLAND, FRANCE AND EGYPT.

France has failed to induce the Powers to force England's hand with regard to Egypt.

London, December 7th.

#### THE FIRST IMPERIAL STEP TO COLONIAL FEDERATION.

A despatch from the Secretary of State for the Colonies to the Governors of Colonies, states that the Government has advised the Queen to summon a Conference in London during April for the discussion of urgent questions, especially the defences of the Empire, and an Imperial system of cable extension.

London, December 8th.

#### THE UNIONISTS TO CONTINUE SUPPORTING THE GOVERNMENT.

At a conference held by the Liberal Unionists it was determined to continue to support the Conservatives, and a resolution was carried to uphold the Union.

A number of Japanese men-of-war have lately arrived off Toda and the neighbourhood in order to make arrangements for the proposed manoeuvres in January next. It is stated that the demonstration will take place in presence of H.I.M. the Emperor whilst on his way to Kyoto.

Mr. Okii, Governor of Kanagawa, gave an entertainment the 16th instant at the Machigaisho to all police constables who rendered services during the prevalence of cholera this year.—*Nichi Nichi Shimbun*.

\* \* \*

The total amount of traffic receipts on the Tokyō-Yokohama line during October last was yen 43,506.55, of which yen 36,195.85 was for passengers and yen 7,309.70 for goods. The total amount of traffic receipts on the Yokokawa-Takasaki line during the same period was yen 4,383.45, of which yen 2,530.61 was for passengers and yen 1,852.83 for goods. The total amount of traffic receipts on the Naetsu-Sekiyama line was yen 2,777.69, of which yen 1,471.81 was for passengers, and yen 1,305.88 for goods. The total amount of receipts on the Kobe Otsu line was yen 47,886.08, of which yen 33,155.98 was for passengers and yen 14,730.10 for goods. The total amount of receipts on the Tsuruga-Ogaki line was yen 10,261.62, of which yen 4,593.15 was for passengers and yen 5,668.47 for goods. The total amount of receipts on the Toyotake-Kisogawa line was yen 2,687.34, of which yen 2,461.31 was for passengers and yen 226.03 for goods.—*Official Gazette*.

#### MAIL STEAMERS.

From Shanghai, Nagasaki, & Kobe, per N. Y. K.	Friday, December 24th.
From America, per P. M. Co.	Friday, Dec. 31st.¶

\* *Thibet* left Kobe on December 17th. † *City of Peking* left Hongkong on December 13th. ‡ *German* left San Francisco on December 1st. § *Polga* (with French mail) left Hongkong on December 15th. ¶ *City of Rio de Janeiro* left San Francisco on December 12th.

##### THE NEXT MAIL LEAVES

For Kobe, per N. Y. K.	Saturday, Dec. 18th.
For Hakodate, per N. Y. K.	Saturday, Dec. 18th.
For Shanghai, Kobe, and Nagasaki, per N. Y. K.	Tuesday, Dec. 21st.
For America, per P. M. Co.	Wednesday, Dec. 22nd.

#### TIME TABLES AND STEAMERS.

##### YOKOHAMA-TOKYŌ RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 7.00, 8.15, 9.30,\* 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00,\* 5.00, 6.15, 8.00, 9.15, and 11.00 p.m.

TRAINS LEAVE TOKYŌ (Shimbashi) at 7.00, 8.15, 9.30,\* 10.30, and 11.45 a.m.; and 1.00, 2.30, 4.00,\* 5.00, 6.15, 8.00, 9.15, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90. Those marked with (\*) run through without stopping at Tsurumi, Kawasaki and Onari Stations. Those marked (†) are the same as above with the exception of stopping at Kawasaki Station.

##### TOKYŌ-MAYEBASHI RAILWAY.

TRAINS LEAVE TOKYŌ (Uyeno) at 6.00 and 10.00 a.m. and 1.00 and 4.15 p.m.; and MAYEBASHI at 6.00 a.m. and 1.00 and 4.15 p.m.

FARES—First-class (Separate Compartment), yen 1.80; Second-class, yen 2.28; Third-class, yen 1.14.

##### TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.15 and 11.30 a.m., and 2.25 and 5.50 p.m.

##### TOKYŌ-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYŌ (Uyeno) at 6.00 a.m., and 1.00 and 4.15 p.m.; and UTSUNOMIYA at 8.15 a.m., and 11.10 a.m., and 4.50 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10. Third-class, yen 1.05.

##### UTSUNOMIYA-NASU RAILWAY.

TRAINS LEAVE UTSUNOMIYA at 10.25 a.m. and 4.57 p.m.; and NASU at 6.40 a.m. and 3.15 p.m.

FARES—First-class, yen 1.10; Second-class, yen 74; Third-class, yen 37.

##### NASU-KUROISO RAILWAY.

TRAINS LEAVE NASU at 12.04 and 6.36 p.m.; and KUROISO at 6.15 a.m. and 2.50 p.m.

FARES—First-class, yen 30; Second-class, yen 20; Third-class, yen 10.

##### SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 9.19 a.m., and 12.34; 3.34, and 7.09 p.m.; and AKABANE at 10.33 a.m., and 1.34, 4.44, and 8.22 p.m.

FARES—First-class, yen 70; Second-class, yen 46; Third-class, yen 23.

##### KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYŌTO (up) at 6.46, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

TRAINS LEAVE OTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYŌTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90. Kobe to Kyoto: First Single, yen 2.25; Second do., yen 1.40; First Return, yen 3.55; Second do., yen 2.10. Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

##### YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 and 10.40 a.m., and 1.30 and 4.00 p.m.; and leave Yokosuka at 7.15 and 11.00 a.m., and 1.30 and 4.00 p.m.—*Fare*, yen 20.

#### LATEST SHIPPING.

##### ARRIVALS.

## REPORTS.

The Japanese steamer *Tamashiro Maru*, Captain Mahlmann, reports:—Left Kobe the 11th December, at noon; had strong N.W. and Westerly winds, and fine weather to Rock Island; thence to port light Northernly and W. winds and fine weather. Arrived at Yokohama the 12th December, at 4 p.m.

The American steamer *City of Sydney*, Captain D. E. Fricke, from San Francisco, reports moderate and fresh westerly winds, with variable and squally weather.

The Japanese steamer *Takasago Maru*, Captain Brown, reports:—Left Kobe the 13th December, at noon; had calm fine weather to Onnaisaki; thence light N.E. and E. winds and overcast sky to Rock Island; thence to port strong S.E. and Southerly winds and cloudy weather. Arrived at the outer anchorage the 14th December, at 6.30 p.m.

The Japanese steamer *Elbe*, Captain Sass, reports:—Left Kobe the 14th December, at noon; had strong gale from N.W. to S. gale; thence to port light N.N.W. wind and clear weather. Arrived at Yokohama the 15th December, at midnight.

The Japanese steamer *Oni Maru*, reports:—Left Kobe the 14th December, at noon; had strong gales from N.W. Arrived at Yokohama the 15th December, at 5.30 p.m. At 7.30 passed the *Stettin* bound E.N.E.

The British steamer *Merionethshire*, Captain Dutton, reports:—Left Hongkong the 9th December, at 7 p.m.; had light N.E. to S.E. winds and fine weather to Kuroshima; thence to port strong N.W. gale and clear weather. Arrived at Yokohama the 16th December, at 9.30 a.m.

The Japanese steamer *Yokohama Maru* reports:—Left Shanghai the 11th December, at 10.46 a.m.; had moderate northerly breeze and cloudy weather. Arrived at Nagasaki the 13th, at 3.52 a.m. and left the same day, at 5.27 p.m.; had fine weather. Arrived at Shimomaki the 14th, at 5.40 a.m. and left the same day, at 8.4 a.m.; had fresh westerly gale. Arrived at Kobe the 15th, at 4.26 a.m. and left the 16th, at 12.17 a.m.; had fresh westerly breeze and fine clear weather. Arrived at Yokohama the 17th December, at 4.46 a.m.

The Japanese steamer *Nagato Maru*, Captain Young, reports:—Left Kobe the 16th December, at noon; had strong N.W. and Westerly winds and fine weather. Arrived at Yokohama the 17th December, at 5 p.m.

The Japanese steamer *Wakanoura Maru*, Captain Christensen reports:—Left Hakodate the 14th December, at 6.30 a.m.; had strong southerly winds and heavy head sea until 11 p.m.; thence moderate wind with fresh breeze and fine weather. Arrived at Yokohama the 15th, at 12.31, and left the 16th, at 6 a.m.; had strong westerly winds and fine weather. Arrived at Yokohama the 17th December, at 9.15 a.m.

## LATEST COMMERCIAL.

## IMPORTS.

The improvement of last week subsided very quickly and a comparatively quiet Market has existed since; it seems difficult to account for any such sudden changes within a limited period at this season of the year when a steady business is looked for.

YARN.—About 300 bales have been sold during the week, but hardly 50 bales are of English spinning, the remainder being all Bombay, at a decline on previous prices.

COTTON PIECE GOODS.—Sales consists of 3,500 pieces 9 lbs. Shittings, 1,000 pieces 7 lbs. T. Cloths, 350 pieces Turkey Reds, 1,000 pieces Cotton Italians, 600 pieces Velvet, and 2,000 dozen Handkerchiefs.

WOOLLENS.—2,000 pieces Mousseline de laine, 450 pieces Italian Cloth, 230 pieces Silk Satins, and 2,300 pairs Blankets comprise the sales of the week.

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THROAT WORKS. It is a perfectly safe and mild preparation, and is especially adapted for Children. Sold in Bottles, by all Druggists.

Proprietor:—THOMAS KEATING, London.  
October, 1886. 26 ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist at Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

**ATKINSON'S ENGLISH PERFUMERY.**

Prepared for nearly a century, and is the most famous and successful of all perfumery. It is the only one that is not only pleasant to the nose, but also beneficial to the skin. THE opening ceremony of the Shimada Bank, which has been re-established by the Shimada Company at Kyôto, took place the 12th instant.

MR. NARABARA, President of the Japan Railway Company, left the capital the 21st instant to visit the works on the Utsunomiya-Shirakawa line.

THE opening ceremony of the Numata School in Joshi, which was established lately by Mr. Toki and other gentlemen, took place the 17th instant.

MAJOR KUSUSE, an artillery officer, was ordered the 20th inst. to accompany Major-Generals Nogi and Kawakami to Europe on an official mission.

THE Naval College will close the 28th instant and re-open the 8th January. The Military College will close the 29th instant and re-open the 4th proximo.

AN earthquake was felt in the capital the 21st instant at 3h. 7m. 28. a.m.; the direction was South and North, the horizontal motion being very slight.

THE Stores Department of the Arsenal has recently disposed of a large number of snider rifles to a licensed dealer in fire-arms, who proposes to send them to Shanghai.

MAJORS KATO, MAYEDA, and SUZUKI, who had been in Tsushima on official business, arrived at Nagasaki the 20th instant and will take the first steamer for the capital.

MR. SAKURAI NÔKAN, Chief Secretary of the Imperial Household, was appointed, the 16th instant, Chief Accountant in connection with the Imperial visit to Kyôto next year.

A NUMBER of clerks of the various bureaux in the Home Office were presented with a sum of money the 21st instant in recognition of services rendered during the year.

MR. TANAKA TSURUKICHI arrived at Yokohama the 8th instant in the *Masashige Maru* from the

Bonin Islands on a visit to the capital, with reference to the salt industry in the islands.

THE Customs revenue collected at Nagasaki in the month of November last was yen 11,189.49, as compared with yen 12,813.79 during the same period last year.

PROFESSOR MATSUWARA, of the Imperial University, will leave the capital about the 25th instant for Boshu on a mission from the Agricultural and Commercial Department.

THE medical examination of those who are liable to conscription in the capital was completed the 18th instant, and the drawing will take place the 25th instant.

MR. MATSU SEIJIRO has consented to accept the post of President in the Tôkyô Law Association, to which he was elected at the meeting which took place the 9th instant for that purpose.

IT is stated that the Nippon Yusen Kaisha has had an intimation from the Government that the *Yokohama Maru* will be chartered in connection with the Imperial visit to Kyôto next spring.

ACCORDING to statistics compiled by the Home Department, the number of cholera cases throughout the country up to the 9th December was 154,373; and of these 101,695 terminated fatally.

PRINCE SANJO, Lord Keeper of the Privy Seal, will give an entertainment the 25th instant at the Rokumei Kan to members of the Imperial family as well as all Ministers of State and foreign representatives.

LIEUT.-GENERAL Count Yamagata, Superintendent of the Temporary Board for the Construction of Fortresses, had a conference the 21st instant with the committee and officers of the General Staff Office.

THE removal of the Naval College to Hiroshima Prefecture, which was fixed to take place about May or June next, will not now take place before December, owing to delay in the construction of the new buildings.

MR. YOSHIDA, Vice-Minister of State for the Agricultural and Commercial Department, has consented to accept the office of honorary member of the Agricultural Improvement Association of San Francisco.

THE Metropolitan Police Office presented sums varying from yen 1 to yen 100 the 18th inst. to all medical practitioners in the rural and urban divisions who rendered services during the prevalence of cholera this year.

MARQUIS TOKUDARJI, President of the Peerage Bureau, notified the 18th instant that all Peers and others who hold official rank will pay their respects to H.I.M. the Emperor in the Palace on the 29th, 30th, or 31st instant.

VICE-ADMIRAL VISCOUNT KABAYAMA, Vice-Minister of State for the Navy, visited the Com-

munications Department the 17th instant in order to make enquiries as to the construction of a telegraphic line between Nagasaki and the Admiralty Office at Saseho.

THE vessels cleared at Kuchinotsu in November, coal laden, were:—Japanese steamers, 5; British steamers, 3; Norwegian steamer, 1; and one Japanese and one British sailing vessel, the whole tonnage being 8,755.

NOTIFICATIONS under the Imperial Sign Manual relating to the Prescription Law, Disciplinary Regulations, Insular Militia, Temporary Fortification Board, and Insular Militia for Tsushima, have been promulgated.

MR. YAJIMA SAKURO, President of the Tôkyô Electric Company, accompanied by Mr. Fujioka Ichisuke, will leave Japan before the end of this month for Europe with the object of investigating electric lighting in foreign countries.

A SPECIAL meeting was held the 20th instant in the Law Compilation Bureau with reference to the proposed establishment of a Fine Art Bureau. Mr. Yamao, President, and a number of counsellors and secretaries were present.

THE *Tsukuba Kan*, which is at present undergoing repairs in the Yokosuka Dockyard, will be fitted as a surveying vessel in connection with the Hydrographical Bureau and as a training vessel for foreign waters.

THE scheme for the construction of a tramway from Tsunohazu station to Ome, in Kanagawa Prefecture, has been given up, and the residents in the latter district are making arrangements for the laying of a railway along the route selected for the tramway.

A MEMORIAL submitted some time ago to the Government, as to the defence of Tsushima, by Lieut.-Colonel Yabuki, Assistant Commissioner of the Engineering Bureau, has been adopted by the authorities consequent upon the recent visit of Counts Ito, Oyama, and Yamada, and investigations are at present being made as to the estimated expense of the works.

H.I.M. THE EMPEROR, accompanied by Marquis Tokudaiji, Grand Chamberlain of the Imperial Household, visited the Fujiage Park the 17th instant, and witnessed a display of horsemanship by students who have been instructed in the Japanese style of equitation by Mr. Maruoka, an *attaché* of the Imperial Household. The Emperor returned to the Palace at 4 p.m.

THE Import trade has not been brisk. Yarns have been quiet and not readily disposed of at late rates, while a better tone prevails in regard to Piece-goods, though prices have been mostly in favour of buyers, and Woollens have been in moderate request. The Metal trade continues in the feeble condition reported for some time past, and transactions are barely sufficient to make quotations reliable. There has been but little fresh business in Kerosene, and the market is firm; clearances have been good, but buyers do not appear anxious to deal at present, preferring to work off late purchases and await events. The Sugar trade has not been great, but several small parcels have changed hands aggregating 6,000 piculs—mostly Brown sorts—at late rates. Of Exports, Silk has only seen a dribbling daily business, and during the past week rejections have far exceeded purchases. Waste Silk

continues in good demand at full rates for best kinds, the transactions put through having been mostly for Europe. Favourable news from America have given a fillip to the Tea trade, but the stock of leaf is not great, and the higher grades are scarce. Foreign Exchange is declining and weak.

#### NOTES.

We are sorry that Captain Drake has undertaken his own defence in the columns of a local newspaper; sorry because, though his letter may help to exonerate himself, it represents the events of the shipwreck in a more discreditable light than ever. The story he tells may be compressed into half a dozen words—his crew refused to obey him. A number of the men took their departure in the port life-boat, in total disregard of the captain's remonstrances against their selfish behaviour. The majority of those who were still available seated themselves in the port pinnace and refused to leave her for the purpose of rescuing the passengers. The captain detained this boat as long as possible by holding the fall, and finally took his place in her when the ship was on the point of sinking. That is, in brief, what Captain Drake says. He tells us that, with the exception of the first second and third mates and the boat-swain, there was not a man in the *Normanton* sufficiently humane, or sufficiently obedient, to assist in saving the twenty-five passengers. It is a very ugly account, and we sincerely wish that Captain Drake could have advanced some plea less disgraceful to those who were serving under him. At the same time, we are bound to confess that we can detect no discrepancies between this story and the evidence adduced before the Court. On the contrary, a correspondent of the *Nichi Nichi Shimbun* pointed out, some time ago, that the facts as we then knew them, lent themselves readily to very nearly such a construction; namely, that the ship's peril had been at first under-estimated; that when the full extent of the danger became apparent, a species of panic ensued; that the master lost control of the crew, and that every one took care of himself. The captain's account, however, does not indicate the existence of any absorbing panic, but depicts rather a state of undisciplined selfishness which we would fain discredit. There is one discrepancy in the story. Captain Drake says that, when he was standing by the forward tackle of the port pinnace, he thought that the starboard life-boat had been lowered and gone. Yet, in endeavouring to explain the unwillingness of the passengers to enter the boats, he avers that "they must have known that one of them had already capsized." Why must the passengers have known what the Captain admits that he did not himself know? It would be unjust, however, to attach too much importance to a trifling incoherence of this nature.

Captain Drake's hypothesis that the Japanese passengers supposed the ship to be hard and fast on a rock, and did not imagine that she would be completely submerged, is not absolutely incredible, though we have never before heard of passengers unanimously undertaking to form conclusions for themselves, and to act upon them with obstinate resolution, in the face of the fact that the officers and crew of the ship were proceeding upon a wholly different assumption. If the

passengers knew that one of the boats had capsized, they must have known also that the other boats were leaving the vessel, and that everyone who might have been supposed to understand the situation was hastening to leave in them. Is it at all likely that twenty-five persons, the great majority of whom were not seafaring folks, would have thus deliberately preferred their own judgment to the active evidence of experts whose business it was to know all about the condition of the ship? Certainly the boisterous state of the sea may have made the boats seem untrustworthy, as Captain Drake suggests. But if the passengers were calm enough to reason that, the vessel being ashore, it was safer to remain by her than to trust themselves in the boats, they ought also to have observed that the risk from which they shrank was preferred by the officers and men, whose profession made them the better judges. We cannot think that Captain Drake's explanation of the behaviour of the Japanese passengers is by any means satisfactory. But that he himself was animated by the best possible intentions, and that they were frustrated by the disobedience and pusillanimity of his crew, is a version which we have no just grounds to discredit. None the less is it strange that this defence, instead of being set up in Court when its truth or untruth might have been established, was reserved until after a patient and perfectly dispassionate trial had resulted in a verdict of a very different nature. The jury agreed to lay the blame on Captain Drake. Captain Drake seeks to shift it to the shoulders of his crew. We wish there was some other way out of the miserable business.

WHATEVER opinions may be entertained regarding Mr. Mueller's theories and beliefs, he stands forth as one of the interesting figures of modern England. The home mission work which he has accomplished in Bristol merits warm eulogy from all who love their species. His name is indeed, a household word, wherever philanthropic efforts are known and appreciated. Piety and unbelief alike must join hands in paying respect to the man, even when the spirit of criticism is evoked by the explanation he himself gives of his system. To depend wholly on the efficacy of prayer, to trust entirely to the actual intervention of the Unseen, in maintaining an enterprise where bread and clothes and fuel are daily necessities, is a system which when promulgated does not commend itself to the ordinary mind. If any other premiss can satisfy the conclusion of successful results, it is certain that such a premiss will be preferred to the astonishing claim of Mr. Mueller. The sceptic desires to see the man, and to discover whether there is that in his personality which will help to a solution of the interesting question.

\* \* \*

Mr. Mueller is now an old man of eighty-one years, but hale and active still. When he ascends the platform it is noticeable that the hand of time, though it has dimmed his eye and hollowed his cheek, has not yet quite blanched his hair. His words have a foreign ring—the German sound of *th*, the German sound of *r*. But they come from the heart, and breathe such a spirit of sincerity and simple faith that the hearer is fascinated. For sixty-one years and one month, since the long distant 1825, he tells us he has been a converted man, and has been engaged in Christian work. Three years

and a half passed before he obtained a complete insight into the way of salvation, but since then, since the summer of 1829, he has, with a complete renunciation of his will to the Deity, worked wholly for God's glory. And certainly he has worked for the good of his species. The pleasures and vanities of the world are evidently nothing to the good man. He has his mind fixed on one object, and reminds us of the words of Burns:—

A correspondence fixed with Heaven  
Is sure a noble anchor.

Add to such singleness of mind and evident energy of frame a capacity for organization and an administrative faculty, and the problem of his success seems solved. Those who become acquainted with the man, his aims, and his work, must afterwards feel that in entrusting their alms to him, they are really giving to the poor and lending to the Lord. His prayers have certainly been answered by some means, but the humility of the man makes him oblivious to the abiding influence of his own personality in bringing about the results. What is obtained or wrought unconsciously has a peculiar flavour of excellence in it, impossible under the reverse conditions. Pleasure made into an end corrupts forthwith into ennui. The man who tries to please generally offends by patronising, and the lurking smile of self-satisfaction will destroy the effect of the most killing charms. "Not I did it, it was an answer to prayer," is a sentence which, when uttered sincerely, about worldly success, will win the respect and trust of the hearer. Its utterer is likely to be only one in ten thousand; such an one Mr. Mueller seems to be. What the complete Bible from Genesis to Exodus, and from Matthew to the Book of Revelation, is to him, what prayer is to him, they cannot well be to men of a different personality. The character of the man, the peculiar excellence of his work, and the rooted beliefs which are so dear to him, cannot be dis severed.

THE leading vernacular journals of Tōkyō unanimously publish a note with regard to the dissolution of the Nagasaki Conference. Judging from an obvious identity of language in certain parts of the announcement, and from its tone of assurance, we are disposed to think that it is entitled to exceptional credence. The following is its substance. The Conference had held thirty-nine meetings altogether up to November 13th, on which day the Japanese Commissioners proposed to produce witnesses rebutting the evidence of the Chinese in respect of the affair of August 13th. But the Chinese Commissioners refused to assent to this proposal, on the ground that the Japanese witnesses having been already examined, their re-examination would involve endless delay. At the same time the Chinese proposed that the number of witnesses to be called by both sides with reference to the fracas of the 15th August should be limited, and, further, that the time to be devoted to the investigation of the latter disturbance should be defined. The Japanese Commissioners, however, declined to agree to this, since it would, they maintained, be practically impossible to limit either the number of witnesses called or the number of days spent in examining them if the object of the investigation was really to elicit the truth. Thereupon both sides applied to their respective Governments for further instructions, and the Conference was temporarily suspended. Meanwhile, the

Minister of State for Foreign Affairs had several interviews with the Chinese Representative in Tōkyō, and a prospect of a satisfactory settlement had almost become discernible, when the Chinese Representative intimated the receipt of a request from his Government for the dissolution of the Conference, and announced that the further management of the affair had been entrusted to Li Chung-tang. The Conference was accordingly dissolved, and things reverted to their original position.

The *Nichi Nichi Shinbun* discusses this phase of the complication in a moderate and sensible strain. It approves the proposal of the Japanese Commissioners to call rebutting testimony with respect to the affair of August 13th, since the trouble on that day was the proximate cause of the more serious fracas of the 15th, and it condemns as quite inconsistent with the ends of justice the proposal of the Chinese to limit the number of witnesses and of days. Our contemporary compares the conference to a law court without a judge, and is not surprised that the Governments of the two countries have seen the advisability of settling the matter otherwise. The public is warned against supposing that the complication has assumed an international character. "We have entire confidence," says the *Nichi Nichi Shinbun*, "that the course adopted by our Government will be proper and prudent. But should China seek to magnify the complication, and to thrust it, in defiance of usage and precedent, into the field of international politics, Japan will know how to proceed. Among all Oriental statesmen, however, Li Chung-tang entertains the most liberal and enlightened views. He is not likely to be betrayed into any ill-considered line of conduct. Our readers had better patiently observe China's behaviour and suspend judgment until the negotiations are concluded. It will not do for the Japanese nation to incur the ridicule of the world by expressing giddy opinions or exhibiting precipitate behaviour on an occasion of this sort."

It seems to us—*Japan Mail*—that the dissolution of the Conference is very far from being a matter of regret. We never could discern any possible good which was likely to be evolved from the deliberations of a body so anomalous and so powerless for practical purposes. The evidence collected by the Commissioners might have helped to enlighten the two Governments as to their real positions, but must have been virtually useless so far as concerned the ends of justice. There is no concealing the fact that the Japanese Government made a mistake in consenting to China's proposal for the appointment of commissioners, and seeing that Japan had everything to gain, the former may congratulate herself that she is able to revert to the original position, especially on the motion of China. It is also a fair inference that the relegation of the negotiations to the Viceroy Li means at least a willingness on the part of the Middle Kingdom to come to an amicable settlement. Japan asks for nothing beyond the justice which she is herself prepared to execute against such of her own people as may be shown to have been in the wrong. It should not be difficult to satisfy her.

THE *Nichi Nichi Shinbun* of the 17th instant

considers with much careful detail the question of railway enterprise in this empire. Lines already constructed, or in process of construction, are reviewed before the case of those only projected is examined. In the first category we have the Tōkyō-Yokohama road, the Takasaki-Yokogawa, the Naoetsu-Seki-yama, the Kobe-Otsu, the Tsuruga-Ogaki, the Taketoyo-Kisogawa, the Ueno-Maebashi, the Omiya-Kuroiso, the Shinagawa-Akabane, and Osaka-Sakai; ten roads in all. In the category of lines now in process of construction, we have the Japan Railway Company's road from Kuroiso northward to Fukushima and Sendai; the extension of the Naoetsu-Seki-yama road towards Nago in Shinano, and thence eastward to the Usui Pass to connect at Yokogawa with the already completed portion of the original Nakasendo trunk-line. Among lines about to be undertaken we have the Ryōmō road, to connect Koyama on the Ueno-Utsunomiya line with Maebashi on the Ueno-Maebashi line; the Mito road, to bring the city of Mito in the province of Hitachi into communication with the Japan Railway Company's line at Koyama; the Hachijōji road, which is to connect Tōkyō with Hachijōji, and to form the basis of a road bringing the rich and populous province of Kōslu into railway contact with the capital; the Tōkaidō road, which is the only Governmental line in contemplation and, at the same time, the longest of all, covering a distance of about 209 miles along the general course of the present Tōkaidō; the Yokkaichi road, the prime purpose of which is to connect that port with Otsu in the province of Omi; the Nagahama-Otsu line, along the shores of Lake Biwa; an extension of the Osaka-Sakai road in the direction of Wakayama; the Yamato road, starting from Kyōto and running through the province of Yamato towards Wakayama; the Himeji line, between that place and Kobe; the Kiushu road, which is to start from Monji in Buzen and terminate at Kumamoto, via Hakata, with a branch via Saga to Nagasaki—or ten roads in all, nine of which owe their inception to private enterprise. The *Nichi Nichi Shinbun* justly infers from this record that public attention is actively turned in the direction of railway construction, and expresses a strong hope that a matter of such vital importance to the national prosperity will continue to occupy a large space in men's minds.

The *Fiji Shimpō* discusses the same topic, adopting, as is its wont, a resolute and vigorous tone, and addressing an emphatic warning to Japanese capitalists. The nature of this warning is conveyed very plainly in the title of the article:—"If no other course is feasible, the construction of Japanese railways must be entrusted to foreigners." The *Fiji* complains bitterly that capitalists have neither courage nor foresight. They obstinately continue to cling to public bonds as the safest and indeed the only form of investment. Another obstacle to railway construction, according to our contemporary, is the scarcity of engineers or men acquainted with work of that class, and it is suggested that the technical part of the task should be either left entirely to foreigners or undertaken by Japanese and foreigners in conjunction. By either method rapidity will be secured, and that is what Japan chiefly wants. In reply to the objection that it is extremely undesirable to let foreigners monopolise railway construction in Japan, it is pointed

out that, though foreigners be excluded from the work of construction they will inevitably acquire a large interest in the railways by purchasing shares, after mixed residence is allowed, should such investments look profitable. The *Yiji* therefore concludes that, if Japanese capitalists continue in their present mood, there should be no hesitation about enlisting foreign aid for this important purpose.

MANY of our readers are aware of the existence of certain charitable institutions maintained in Tōkyō by the priesthood for the benefit of poor children. The object of these establishments is to rescue from want and suffering the largest practicable number of destitute infants, and to carefully rear them until they reach an age when they may be adopted into respectable families. As a rule, the children thus brought up by the kindly priests are in constant demand, after they have reached the age of six or eight, by farmers and merchants of a humble class, who are without offspring of their own. It is to provide for their earlier and probably less attractive years that the self-constituted guardians apply themselves. With comparatively few resources, and, it must be admitted, without giving much time to economic calculations, the simple philanthropists throw open their doors as widely as they can, supply a home for as many as their dwellings can contain, and trust to bountiful chance for support in their undertakings. Their confidence does not often lead them into error. The citizens in their neighbourhood commonly take a warm interest in the establishments, and it happens not infrequently that signs of appreciation, together with evidences of a desire to coöperate in the generous work, are manifested in unexpectedly remote regions. It is the custom of one of the orphanages, the Fuku-den In, to place on record the names of persons who have materially aided its labours; and those who are curious in such matters might find subject for reflection in glancing over the list of foreigners who at various times have contributed to its revenues. The great globe seems to grow much smaller and more united, in a comfortable and friendly way, when it is seen that a modest charity in Tōkyō is recognized and encouraged by sympathizers beyond the seas, to whom this Eastern land might always have remained a strange unreality but for that genial touch of nature which makes the whole world kin.

CAPTAIN SENZO HATTORI, Imperial Japanese Navy (retired), whose death was recorded in our issue of the 17th instant, will be remembered by many Englishmen as an officer of singular promise. Belonging to an old *Shizoku* family in Chōfu, Yamaguchi Prefecture, he received his early education in Shimonoseki, applying himself from the first with remarkable diligence and aptitude to the study of English under the instruction of Mr. K. Endo, now Chief Commissioner of the Mint at Osaka. In the spring of 1867, he obtained permission to visit foreign countries, and was placed under the care of Captain J. M. James, who then commanded the *Varuna*, which had previously been a war-vessel of the Chief of Chōshū. The *Varuna* did not proceed farther than Hongkong. On board of her, however, Mr. Hattori had the fortune to make the acquaintance of Mr. T. B. Glover, then the leading merchant of Nagasaki. Mr. Glover, obeying one of those kindly instincts for which he is proverbial, offered to take

the bright, manly boy with him to England, and the generous proposal was gladly accepted. Soon after Mr. Hattori's arrival in London he was placed on board the *Worcester*, a training ship for the Mercantile Marine, where his sunny disposition and eager intelligence made him an universal favourite. In 1869, the exertions of several influential friends secured his admission to the British Navy as a cadet. He served in the *Defence*, and other English men-of-war, until 1873, by which time he had passed all the prescribed examinations and risen to the rank of sub-lieutenant. Towards the close of the same year, he accompanied Commander Douglas, R.N., the officer in charge of the Naval Mission, to Japan, and was subsequently attached for duty to the Imperial Naval College in Tōkyō. In 1874, he was appointed to the *Nisshin-Kan*, in which vessel he served during the Formosan campaign. In 1876, in the month of December, on a dark and boisterous night in the Kii Channel, while travelling as a passenger in the *Tsuruga Maru*, Mr. Hattori took charge of the life-boat, manned by a volunteer crew, and rescued five Japanese seamen from a sinking vessel. For this act of gallantry he received the public thanks of the Admiralty. In 1878, he was promoted to the rank of Commander, and served in that capacity in the *Hiei-Kan* during her cruise round the coasts of India and the Persian Gulf. It was on this occasion that he met with an accident which disabled him from further active service. A fall down the companion ladder injured his spine, and in spite of the most careful treatment, the lower part of his body became completely paralysed. Placed on the retired list with the rank of Captain, he returned to his native place, and there gradually succumbed to the effects of his injury. Had Captain Hattori's life been spared, he would, in all human probability, have earned high distinction, and his untimely death is not less a loss to his country than a source of lasting sorrow to his many friends.

It is a pleasure to find an honest traveller who can record his impressions of China and the Chinese without that bigoted bias which generally disfigures all Orientalists in the eyes of an Occidental. The *Morning Post* publishes the following account of "China as it is," by "one who has been there":—

From the moment you first put foot in China you feel that you must discard and forget all that you have read of the country before. No land has been so grossly misrepresented, no people been more hideously caricatured. People who have only seen the little pigtailed coolies who flock into America, Canada, and Australia imagine the Celestial as a race to be small, insignificant men, ignorant of the fact that while the inhabitants of such tropical climates as the south and south-west of China are undersized and almost pigmy in stature, the men of the north of the Empire are tall, broad-shouldered fellows, running, on an average, larger than Europeans. Not that in point of hardness and physical strength even the small Chinamen are to be despised, for they will carry loads and undergo fatigues that would very considerably distress the bigger white men; but that their appearance is not imposing, and that as they are most frequently to be found outside of their own country, it is they who have gained for the whole of their race the appellation of "little yellow men." So, too, in all the modes of life, in the appearance of their cities and villages, the peculiarities of the country they inhabit, the style of their agricultural labour, and their methods of locomotion the widest possible differences exist in this wide-spreading country. In the south you find a terrain plentifully exhibiting bamboo as a great feature of the landscape; three days' journey inland from Shanghai in the direction of Hangchow you see the country covered with mulberry trees, while at Hankow you are in the centre of the great tea-growing district. In the south a horse is seldom seen, and journeys are made in various kinds of palanquins; in Hongkong and Shanghai the Japanese jinrikisha is the favourite mode of conveyance; while in the north you cannot travel a mile without seeing mounted men, and many wheeled carriages of different kinds are passed. The very

graveyards are altogether different, for while the practice in the south is to build a large circular mound of brickwork in which to place the deceased, in the north the coffins are scattered all over the land, many of them quite uncovered, many only partially earthed over, and all the places of interment of a most slovenly description. While in matter of language a native of Canton can no more understand a Chinaman of Peking than an Englishman can comprehend a Malay; still all are Chinamen, all are under the same Government, and all owe the sway of the Throne, a very substantial sway, too, by-the-by. How strong is the control exercised by the Central Government, indeed, may be judged from the notices which from time to time appear in the *Peking Gazette*. There is no doubt whatever, therefore, that the central authority in China is very real and effective, and the discovery of this dissipated one error which before my visit to the country had occupied my mind—namely, that China was one vast incongruous mass of provinces held together by some merely nominal authority at Peking, but practically almost independent of it, something after the fashion of the old German Bund prior to 1886. I found China to be a fairly well-organised monarchy, held well in hand by a central government, which had power to punish or reward, order and compel obedience, dispossess, or give authority in any part of its widely-extended regions. Another fallacy which was exploded before I had been in China many weeks was that they were dependent upon foreigners for instruments of war. I did not go over the arsenal at Fouchow, nor did I give more than a glance at that at Tientsin, which is the most important one, but I spent several hours in Shanghai Arsenal and small arms factory, and was amazed at the work which was being turned out there. I do not pretend to say that either Woolwich or Enfield was outvalued, but this I will assert, that the machinery, of which there was abundance, was of the very best, and in good working order, that the men seemed to understand their work, and that first rate weapons were being turned out in large quantities. Indeed, the field-pieces and rifles that I saw were wonderfully well made, and some heavy guns which were being finished were excellent specimens of workmanship. Of course, one must always allow for some exaggeration on the part of officials on visiting such places, and I do not, therefore, put any faith in the figures submitted to me as the output of the various arsenals. But rifles were being turned out in large quantities, that I could see; while a very respectable number of field pieces were there, either completed or nearly so. Then another point upon which I received a good deal of enlightenment was the condition of the troops in China. It is true that I saw a large number of rough-looking hordes of armed men called soldiers, and that these had the old banners, old-fashioned guns, and gongs. And for a time I thought that these men were the best China could put in the field. But on the way up the river from Shanghai to Hangchow I chanced to see a large number of men gathered together to give a passing salute to some great mandarin, who was shortly expected; and to my surprise saw quite a regiment of very excellently drilled infantry in rear of the banner bearers and gong carriers. I inquired how they came there, and was told that they are part of the forces which had been drilled by Europeans; and presently, when they moved, I was much struck by the get up of the men and the dressing of the ranks. No European save myself was present, but the Chinamen in command evidently knew their drill well enough to keep the men in hand, and to move them with ease. There was no doubt that the regiment was fit for service anywhere. It was armed with breech-loading rifles, was composed of steady, big men and was fairly well provided with all that it needed in the shape of accoutrements and ammunition. Of commissariat and medical stores, of course, it had none; they were hardly to be looked for. But the needful supplies of small arm ammunition were there, and I think that the regiment could have gone anywhere it was wanted at an hour's notice. At Tientsin I afterwards found that there were some 150,000 men of all arms, equally good; and that these again were not half of the drilled and disciplined men whom China could on any emergency put into the field. More than that, I learnt that Chinamen were by no means ignorant of the use of western modern firearms, as is generally supposed to be the case, for I was informed in Hongkong, Canton, and Shanghai, as well as in other places, that thousands of breech-loading rifles were being bought by Chinamen, many of them from the far interior, and that they knew exactly the good and bad points of every weapon; so much so that muzzle-loading rifles would only sell in such places when it was difficult to get breech-loading ammunition. As a matter of fact, one day when I was out shooting on the river near Hangchow and my Winchester rifle got jammed owing to a defective cartridge, my Chinese boatman not only volunteered to set it right, but did so without any apparent difficulty, although he can only have seen such a weapon as a repeater once or twice in the course of his existence. And this kind of intelligence I found all over the country. Indeed, when one day I met a native near the Tientang river who was carrying a rifle, and asked to look at it with a view to seeing of what pattern it was, he laughingly said that it was rather old, for it had not a breech-loading arrangement nor a rebounding hammer. And he was several hundreds of miles from Shanghai, and said he had never yet seen the sea.

Mr. Gladstone is evidently biding his time. He has sufficient faith in his own popularity and in the natural cohesion of his party to believe that the recalcitrant Liberals will come back to the fold, uninvited, sooner or later. And yet it seems as though some of his lieutenants were working to widen the breach. The results of the Conference of the National Liberal Association at Leeds were at first made light of by Conservatives and Unionists alike. The resolutions passed by the Conference were declared to be merely a repetition of old-time shibboleths, overlaid by adulation of the Grand Old Man. But when the programme is examined more attentively, its tendency towards Radical supremacy over moderate Liberalism becomes very marked. The principle of church disestablishment is virtually affirmed by the demand of religious equality in relations between the State and all forms of belief. Further, the Conference decided that the Labourers' Allotment Bill must contain clauses empowering the compulsory purchase of land, and the creation of new county governments wholly by rate-paying electors. Then we have renewed pledges of adherence to Mr. Gladstone's Home Rule measures and a declaration against British intervention on the Continent. Such planks as these will not make the Radical platform easy of renewed access to Lord Hartington and his followers. If, as some assert, Mr. Morley was responsible for the new piece of political carpentering, there may be truth in the rumour that his purpose was to obtain from the Conference an admission of Radical supremacy in the Liberal Party. Many, indeed, go so far as to declare that Morley and Harcourt are manoeuvring for the continued secession of Hartington and Chamberlain, so that their own brilliancy may not suffer by association with these larger luminaries. The seceding Whigs are not averse, it is said, to remaining outside the fold, but the Radical Unionists grow more and more chagrined over their excommunication, and long to become orthodox again without having to surrender the first article of their apostate creed. Mr. Schnadhorst, the G.O.M.'s agent, has been approached, it is whispered, by several followers of Mr. Chamberlain, who want to know the best terms available to repentant exiles. But Mr. Chamberlain himself has not yet swallowed all his choler, and cannot persuade himself to forget the bitter things which he has said of his former leader. Mr. Gladstone forgets them, but there are not many men of Mr. Gladstone's magnanimity.

We referred in a recent issue to the immense advantage enjoyed by a London theatre in the fact that its audience is practically inexhaustible. As a corroboration of our statement, and for the sake of its general interest to the gentlemen who are now engaged in the work of stage reform in Japan, we reproduce from the *Pall Mall Budget* the following notes of an interview with Mr. Henry Irving:

"Faust," said Mr. Irving, "has been the greatest success we ever had at the Lyceum. Before we put this piece on the boards our greatest successes had been *Shakespeare*. 'Faust' is an exception to the rule. It has already run for a night, and all through the winter nights immediately before we closed the theatre, we could have filled the house twice every time we opened the doors. The anxiety on the part of the public to see the play has been immense, and there has been a constant stream of people some hundred deep."

"And your theatre holds, how many?"  
"Two thousand, so that at 1886, a person has already witnessed the performance. And, judging from the demand for places, there seems no cessation in its popularity; and there is no saying how long it will run. You see, when once a play makes a great hit, it can run for a year and

a-half before it exhausts the available theatre-going population of London. We arrive at this calculation in this fashion. In the metropolis it is calculated there are about eight hundred thousand men and women who go to the theatre more or less regularly. Supposing the theatre were filled to its utmost capacity every night, it would take a run of 400 consecutive performances before the London theatre-goers alone would be able to see the play without one of them witnessing the performance a second time. Add to this 200,000 which may be called the residential theatre-going population of London, the 20,000 persons who enter London every day with money in their pockets to see the sights of town and amuse themselves. A great number of these find their way to the theatre. Thus, if once a piece has established itself as one which every theatre-goer must see, there is no reason why it should be withdrawn for at least eighteen months. There is no place like London for continuous runs. This has its advantage in rendering it possible for the manager to recoup himself the expense necessary in mounting a play."

"Is that expense very heavy?"  
"It varies. But when a piece is invented as a work of art, complete in every detail—not in a showy or spectacular sense, but in a way fitted out so as to present the mind of the author as expressed in the play—the expense is necessarily heavy. 'Faust' is a case in point. Although there has not been a play in which the dresses are less expensive, for all the costumes are exceedingly simple and plain, the total expenditure over the play first and last will not fall much short of ten thousand pounds. Of that the dresses are a mere bagatelle, only some five or six hundred pounds—in fact, the whole of the costumes hardly cost as much as the peal of bells which ring in the belfry of Nuremberg cathedral."

"How long does it take to bring out a new play at the Lyceum Theatre?"

"That also varies. The shortest time in which a piece was ever produced was that of 'The Merchant of Venice,' which we brought out within four weeks after setting to work at it. 'Faust' took six months, that is to say, six months' preparation for its actual production. I had been discussing and thinking of it for many years before. Preparation is made for one piece while the other is running, and the whole of the work of arranging, planning, and carrying is going on in the daytime, independently of the action which goes on night after night."

"Do you concern yourself with all the details?"

"Certainly. In everything. We build up the whole play scene by scene, in order to produce a perfect work of art. We all help, and Miss Terry designs her own dresses. Each scene is like his picture to a painter. You have to consider the lines, group figures, and arrange the mounting. I am a general idea, I am by no means a fanatic of London life. I would prefer a beautiful anachronism to an ugly reproduction of original costume. The first duty of anyone who mounts a piece is to produce a beautiful and powerful effect. If he can do that with due regard to the practical conditions, well and good; if not, æsthetic logic must give place to beauty. No painter would disfigure his canvas by painting a bathos in a dress merely because he had seen such a costume. Neither would I introduce an ugly or ungraceful dress merely because the antiquarian would prove that such was the fashion in the year in which the action of the drama is supposed to take place. Better be out by a century in your dress than offend the eye of the spectator with a garish error out of harmony with its surroundings. But with that exception I endeavour to make everything as perfect and as lucid and real as possible."

"What share do you think upholstery has had in the runs of your pieces?"

"The finest upholstery will not run a piece for a week. It is the acting and the acting alone which enables the piece to occupy the boards. The accusation that my attempt to heighten the picturesque effect of the drama is contrary to the true spirit of our art is the familiar indictment which has been brought against every actor from Betterton to Garrick, and from Garrick down to our own day, who has endeavoured to make the illusion of the stage as complete as possible. But the only true principle in these matters is that the scenery and the properties should be strictly subordinated to the presentation of the drama. The moment the setting ceases to be the frame, and distracts attention from the picture it encloses, the limits passed within which the employment of painting, architecture, sculpture, &c., is legitimate."

REFERRING to the death of Madame Kusaka, which we briefly announced by telegraph last week, the *Nagasaki Express* of the 15th instant says:—"It is with sincere regret that we record the death of Madame Kusaka, the wife of the Governor of this *ken*, which occurred somewhat suddenly on Saturday morning last, after a short illness of about four days. Deceased was in apparent good health up to Tuesday, the 7th instant, on which day a large party of native and foreign friends were invited to the Governor's private residence, for the purpose of witnessing the *matsuri* processions, and during the course of the proceedings she was seized with sudden indisposition, from which she never recovered. The cause of her death is, we believe, attributed to heart disease. The funeral ceremony, which was of a very imposing nature, took place at the Katsji Temple, Teramachi, on the following afternoon, in the presence of a large concourse of foreign and native residents. At the conclusion of the religious ceremony, the body

was cremated, in order that the remains could be taken to Tokio for interment. During her short residence here, the deceased lady had made herself deservedly popular amongst all classes, and her loss is deeply deplored by all who knew her. Great sympathy is felt for H.E. Governor Kusaka in his sad bereavement."

THE late storm on the English coast, which was attended with great loss of shipping and of human life, furnished a case very unusual in the records of British seamanship. A steel-built vessel called the *Tevoldale*, outward bound from Cardiff with a cargo of coals for Bombay, went ashore on a sandbank in Caermarthen Bay. A portion of the crew, including the captain, two of the officers, thirteen men, and three boys, crowded into the lifeboat, three other boats having been smashed. The lifeboat, however, was unable to cope with the heavy breakers, and only two of her occupants got safely on shore. The remaining seventeen were drowned, evidently including the captain, as the names of the survivors are not mentioned. A happier fate befel those who stuck to the vessel. The Ferryside lifeboat, a splendid craft, maintained and manned by the Royal Institution, succeeded with great difficulty in rescuing all the survivors, ten in number, one of them a boy. The captain in this case was one of the first to leave the vessel, but those whom he abandoned were saved.

MR. DONALD SPENCE, in his speech at the Shanghai St. Andrew's dinner, inculcated a very sound doctrine in a very pretty fashion. The charm of his method was that, while he seemed to be sitting with all humility at the feet of the commercial Gamaliels to whom he addressed himself, he was in reality rapping them over the knuckles with the ferule of a mentor. "You all look jovial and rubicund," he said in effect, "but your appearance somewhat belies your prosperity. How is this to be mended? Your leading representatives at home have been charging a part of your ill-success upon the shoulders of us, Consuls; and accordingly I, for one, bestirred myself in a manner which, though it elicited the approval of the Board of Trade and the Foreign Office, was conclusively condemned by your local magnate, Mr. Peter Maclean. Of course Peter is right. Official interference can never make trade prosper permanently. The British Chambers of Commerce and other giddy bodies have been justly called over the coals by the critics of Shanghai, for entertaining the extravagant notion that you, you 'mercantile agents of the highest standing and capability with whom China swarms,' can possibly need assistance from anyone, above all from ignorant Consuls. You can judge what helpless, perfunctory people we Consuls are by this silly speech I am making, which you are nevertheless kind enough to cheer to the echo. Canny folks as you are, which of you would go to an undertaker for legal advice or to a barrister for a coffin? Then why do you come to Diplomats and Consuls for commercial aid? You don't come, you say. Of course you don't. It was only those aforesaid silly Chambers of Commerce and big firms in that benighted country, England, who dreamed that the observations and opinions of an ignorant Consul could be worth the paper they were written on. Out upon the inane documents! You won't have your revered grandmothers insulted by

upstarts who would instruct the sagacious dames in the art of sucking eggs, and you don't want any officials to come poking their clumsy, inexperienced fingers into your particular pies. Is that what you say, gentlemen? Chorus:—So say we all of us."

THE Pei-tang Cathedral, which has so long and so severely exercised the minds of Chinese officialdom, is to be at last removed. Certainly the decision has not come a minute too soon. It was simply an outrage that this Cathedral should remain within the Imperial precincts in despite of the repeatedly expressed wish of the Chinese Sovereign. Imagine a Buddhist temple planted beside the enclosure of Windsor Palace, and so constructed as to overlook the grounds of the Palace; and imagine the Chinese Government refusing to allow the Queen to remove the temple to a more convenient site at her own expense. Fancy refuses to be stretched so far. The patience of Orientals, however, is always assumed to be an illimitable quantity in their dealings with Occidentals. An Eastern monarch is far more despotic within his own dominions than a Western, and any direct defiance of his authority is a correspondingly greater humiliation to him. It would be difficult to conceive a more conspicuous defiance of the Chinese Emperor's authority than the case of the Pei-tang Cathedral, but no one appears to have taken the trouble of estimating the consequent humiliation. Of course the Christian character of the edifice was burlesqued by the contumacious obstinacy of its patrons, but there are many un-Christian sides to Christian propagandism in the Orient. We are sincerely glad that the French authorities have had the grace and sense to yield a point which could not be decently or safely maintained. Mr. G. Detring appears to have gained new laurels in connection with the negotiations. He is to have a Mandarin's button of the second rank, and we are persuaded that he fully deserves it. Mr. A. Michie, a gentleman well known in Japan, has also been instrumental in bringing about the happy solution, and he too is to be suitably rewarded. Père Favier and Mr. John Dunn are to have buttons and 2,000 taels each; which, in Père Favier's case, simply means that this high-minded and accomplished philanthropist will contribute two thousand taels to the mission which already owes him so much. It is a pity that the Chinese do not entrust the settlement of all their needless difficulties with Japan to some of these gentlemen who serve them so faithfully and so adroitly.

THE growing discontent of the agricultural classes has of late found frequent expression in the press and parliaments of Europe. In France the peasants are greatly dissatisfied, and petitions have been sent from the country districts to the metropolis, praying for a higher tariff on imported articles. The Freycinet Cabinet, divided within itself on the questions of free trade and protection, was able to avoid approaching the question practically, and at present the Chambers are too much occupied with the formation of another Government and pressing financial difficulties to give much time to a question which, more than any other, tends to exhibit the diverging views of the various Republican factions. In the meanwhile, the problem is being freely discussed, and many interesting facts are being brought to light. M. Grandeau, director of the agricultural station

of Eastern France, in a recent address before a scientific congress at Nancy, stated that, by a long series of painstaking inquiry and practical experiments, he had come to the conviction that the raising of cereals, despite falling prices and heavy competition from abroad, was still quite profitable, provided that old routine methods be abandoned and better methods more in harmony with the progress of science be substituted in their place. As an instance in point, he referred to an experiment of his own where, by the application of the proper fertilizers, six hectares of average soil had been made to yield 36-38 hectoliters of corn, instead of the usual 12-15 hectoliters, per hectare, and his neighbours, adopting the same methods, had also achieved the same success. M. Grandeau also cites the case of an Englishman, Mr. John Prout, in Swabridgeworth, who by the exclusive use of artificial fertilizers and by the general introduction of agricultural machines, was able to realize 3½ per cent. on the capital originally invested and 14 per cent on the capital annually employed, while the value of his estate, estimated at 500,000 francs in 1875, had, in 1884 risen to 780,000 francs. M. Grandeau refers also to similar instances in the south of France. Thus M. Grandeau, and with him many other Frenchmen, hold that the agricultural classes already possess the means of meeting the competition of American and Indian wheat, and, while he deprecates the raising of the French tariff on cereals, he claims that more rational methods in cultivating the soil will of themselves suffice to protect the peasants more effectually than the present duty of 3 francs. A general advance in the methods now employed and a progress of agriculture commensurate to what has been effected in other departments of human labour, appear to M. Grandeau the *conditio sine qua non* of a sound solution of the agrarian problem, satisfactory alike to producer and consumer.

THE writer, or writers, in the *Japan Herald* who so severely criticise the official documents on trade questions recently forwarded from Tôkyô to London, have thrown off the editorial disguise. They now speak as members of the mercantile body whose cause they profess to champion. "Solicitude for our welfare," they say, "is all very well, but a father would probably object strenuously if told by a small boy that he (the father) did not know how to conduct his business." The display of intolerance made by these critics seems more than ever surprising now that their identity is revealed. Upon that point, however, we have no desire to dwell. Neither shall we attempt to disturb their assertion that "not one of the facts stated" by them "has been controverted by the *Japan Mail*" although attention has been again and again called to them." Such a wholesale misrepresentation is too entertaining to be meddled with. As for the pretence that we are "fighting against the mercantile community and those who have endeavoured to defend the interests of trade against the animadversions of incapable critics," familiarity has blunted the sting of such rhetorical flights. No one is fighting against the mercantile community, nor is anyone attacking the interests of trade. We do not expect consistency from critics so very much piqued as the writers in the *Herald* seem to be, but it is really too much to ask us to follow an argument which declares

that the mercantile community and the interests of trade have to be defended against "the officials of the British Legation," and at the same time admits that "Ministers and Consuls are animated by a friendly desire to promote the merchant's prosperity." If Ministers and Consuls are animated by a friendly desire to promote the merchant's prosperity, neither the mercantile community nor the interests of trade require to be defended against them. That is pretty evident.

We are obliged to the critics, however, for so thoroughly justifying our remarks. It was precisely because they wrote as though every Minister or Consul who ventured to question the infallibility of their methods was an enemy in disguise, that we sought to recall attention to the real object of British officials; namely, to promote the prosperity of British trade. We should have hesitated long before directly attributing to the critics a delusion so foolish as that Ministers and Consuls are their enemies. Our comment went no farther than to point out that their methods exposed them to such an imputation. But they themselves are determined to put on the cap. Anyone, who "takes up the cudgels on behalf" of the Ministers and Consuls is "against the mercantile community," they assert, and "against those who have endeavoured to defend the interests of trade." If these gentlemen's mood is to be judged by their own description of it, their case is much worse than we had supposed.

"The lamentable gulf which separates British officials from British merchants is widening," it appears, and the "irritating and foolish strictures of the *Japan Mail*" have added to its width. No doubt the *Japan Mail* is gravely reprehensible. It was quite proper that the pretended champions of the mercantile community should level all sorts of insults at the heads of Ministers and Consuls; call them incompetent, ignorant, and inexperienced; bid them teach their grandams to suck eggs, and otherwise hold them up to public scorn. No "gulf" could have been dug by pleasantries of that sort, and if no one had ventured to say a word on the other side, the champions might have enjoyed a monopoly of raillery. In the plenitude of their satisfaction they might then have persuaded themselves to forgive the offending Ministers and Consuls, throw a bridge over the "gulf" and join hands all round. As for the feelings of the Ministers and Consuls, they were altogether secondary matters. The one vital point was that the "champions" should not be subjected to the impertinence of contradiction. The *Japan Mail* did very wrong in contradicting them. It dug a "lamentable gulf" by not adding its voice to the vote of censure.

Mr. Consul Spence is an enigma. He is one of that body of "ignorant and inexperienced" officials whose presumption in venturing to offer suggestions as to the conduct of trade has been so loudly condemned. In fact, he was one of the very first of the small boys who told their white-haired papas that they, the papas, did not know how to conduct their business. Yet the dictum of this same Mr. Consul Spence is accepted by the papas as conclusive, and paraded as a complete vindication of their contention, when that dictum happens to agree with their views. Can it be possible that Ministers and

Original from

Consuls are "ignorant and inexperienced" only so long as they do not consent to admit the infallibility of the British merchant? We shall have a curious caricature of the latter before his champions cease to misrepresent him.

SOME idea of the magnitude of the British Museum Library may be gathered from a description of the work of printing the catalogue. Up to 1839 the librarians appear to have been quite satisfied with a catalogue in manuscript. But when it came to recording some three million titles by means of pen and ink, one can readily conceive that the labour not only of compiling, but also of consulting, the list grew stupendous. The question of space, too, arose. A certain amount of room is allowed in the Museum for stowing the catalogue, and the manuscript volumes threatened to overflow their quarters. Accordingly, in 1839, a volume containing the letter A was printed. But the plan contemplated, as well as the means available, being found quite insufficient, the undertaking was abandoned, to be revived again some ten years ago. A determined effort was made in 1880, the Treasury granting a liberal sum annually for the purpose; and now, after six years, the printing has been partially accomplished. A is finished; B and C are approaching completion, from the middle of V with which U is amalgamated—to the end of the alphabet is done. Dr. Garnett, the principal librarian, calculates that some fifteen years more will be required to finish the catalogue. As regards space, the pages are printed only in the inner half, leaving the outer half for additions, which are also printed; but, with half of each leaf a blank, a volume of the printed catalogue contains as many titles as six of the manuscript volumes. Taking three millions as the number of titles in the volumes of the manuscript, it will be seen that a printed catalogue, with half the page blank, which occupies the same space as the manuscript one, would contain eighteen million titles, or, with both halves of the page printed, thirty-six millions. Before such a number of titles is required the authorities of the British Museum will be more troubled to find space for the books than for the catalogue. Thus the effect of printing has been to render manageable the catalogue, which previously threatened to swamp the whole library, to introduce uniformity into the system of cataloguing, and especially to bring the treasures of the Museum home, as it were, to the doors of every student who spends a shilling or two on the special monographs, the publication of which is alone rendered possible by the application of printing to the general catalogue.

In a series of no less than thirteen articles the *Hochi Shimbun* makes a powerful appeal to the patriotism of the Japanese nation in respect of the condition of this country's navy. Our contemporary would have the people of Japan set before their eyes, as the unique object of the time, the necessity of raising the country to the position of a first-class naval power. At present the interval between this hope and its accomplishment is very long. A dispassionate review of the state of the navy reveals a highly unsatisfactory state of affairs. The *Hochi* undertakes such a review, prefacing it by a general enquiry into the relative superiority of different kinds of war vessels and torpedoes.

In order to give the review greater effect, it is put into the form of a comparison between the strengths of the Chinese and Japanese navies. The result is in every particular—excepting, of course, the morale of the men, which is an undefinable quantity—unfavourable to Japan. In the first place, China has four times as many torpedo boats as Japan, the numbers being twenty and five respectively. Coming to men-of-war, the ratio is nearly two to one, China possessing sixty ships against Japan's thirty-four. These figures include vessels now under construction. Numbers, however, as the *Hochi Shimbun* justly observes, are by no means an infallible test of strength. To arrive at a true idea, it is necessary to compare, one by one, the principal ships of the two countries, paying attention to tonnage, horse-power, speed, armament, and other particulars. Our contemporary undertakes the comparison, and finds the issue extremely disappointing to the Japanese, whose custom is to regard the Middle Kingdom's effective strength with contempt. The *Hochi Shimbun*, however, declares itself by no means disheartened, having full confidence in the skill and courage of Japanese officers and men. At the same time, the wars of the present day are not so much between men as between instruments. Let the Japanese be as brave as they may, no great reliance can be placed on that quality. Valour cannot avail in the long run against heavy guns and powerful ships. The *Tokyo* journal accordingly urges, in language which bespeaks only too plainly its sincerity and earnestness, the vital importance of increasing the strength of the Japanese navy without loss of time. But how is this to be done? War vessels, especially if they be good ships up to the mark of modern improvements, take about two years to build, and before two years have passed the country may be called on to put forth its strength in a struggle for life. Therefore the *Hochi* recommends that wherever efficient ships can be procured ready made, they should be purchased. There need be no question of money. There is the naval loan of seventeen millions to begin with, and if that does not suffice, the *Hochi* would draw upon the reserve funds in the Treasury. Unwelcome as such a sacrifice may seem at first sight, it sinks into complete insignificance when compared with the sufferings which a protracted struggle with China would entail. Our contemporary's thirteen articles have by no means exhausted its zeal. The subject is to be taken up again in future issues.

PRINCE BISMARCK'S "strong advice" to the Bulgarians to accept the Prince of Mingrelia means, of course, that the Bulgarians are to consider that they have no alternative. Bismarck has many reasons for desiring to stave off war. Perhaps the most cogent of them is a financial reason. If Russia fights she must have money, and to get money the only evidently feasible device is to suspend gold payments of her national debt. She would thus economise 130 millions of dollars annually. The plan is delightfully simple, but it would involve a terrible crash in Berlin, where Russian bonds are very largely held. A rumour has been lately circulated of late that the Czar is prepared to provide from two to three hundred millions of dollars out of his private fortune for warlike purposes, but the story is not seriously credited. The one thing which seems to be cer-

tain is that Russia is determined not to be taken unawares. Her preparations for a conflict are described as most active. The mobilization of the Seventh and Eighth Army Corps, under the command of Generals Aller and Rorberg has been completed; numbers of transports are collected at Odessa, Sebastopol, and Nicolaïff, where also troops are being massed; the roads leading to Erzeroum are undergoing rapid repairs; the garrisons at Batoum and Kars have been reinforced; new fortifications have been erected at Soukgaum and Kale, and heavy reinforcements of cavalry have been sent to the Roumanian and Galician frontiers. Yet it is impossible to believe that Russia wants to push her troops into Bulgaria. Should she take such a step, "she will," to quote the words of a recent writer, "have given hostages to fortune, or, more strictly speaking, to Prince Bismarck and his Austrian allies, which she has never placed within their reach for many a long day. Russia at present is practically invulnerable. Russia on the other side of the Danube is invulnerable no longer. \* \* \* Nor is this the only advantage that would accrue to Germany and Germany's ally, Austria, by Russia's false step. Hitherto Austria has found it only too difficult to keep Serbia from breaking away from Viennese influence. A Russian occupation of Bulgaria would correct all that. Serbia would perforce cling to the only Power that could save her from the fate of Bulgaria, and thus at a stroke Russia become weaker and Austria stronger without any effort on the part of the German Chancellor." On the whole, then, the policy for Germany would appear to be one directed towards gradually but peacefully allowing Russia to advance into Bulgaria if she pleases. There has been much talk of an offensive and defensive league between Serbia and Bulgaria, and an agreement to support these two States against Russian aggression on the part of Austria, England, and Italy. The prospect of such a league being formed makes it more than ever essential to avoid any immediate source of friction. When Russia sees a Prince virtually of her own choosing on the Bulgarian throne, she may be temporarily content with the achievement, whatever responsibilities it ultimately involves.

THE correspondent of *The Times* at Rome writes an able and striking letter on the Eastern Question and the attitudes of the Great Powers of Europe towards it and one another. England, Germany, and Austria are all shrugging their shoulders and saying "it is none of my business," but unless this correspondent's diagnosis is very faulty, two of three are labouring under a strong delusion:—

Russia aims at, and will never be content without, the control of all the South Slav States, and this means the final dissolution of Austria. With Russia in firm military possession of the western shores of the Black Sea, and ethical possession of the sympathy of the Slavonic races of the Balkans, which she now has, there is nothing but a general European combination and good luck which can prevent her from obtaining control of the entire peninsula, and the downfall of the Austrian Empire is a question of orders from St. Petersburg. If Bismarck is sure of the sufficient prolongation of his days and of the ability of Germany to meet the inevitable struggle which will follow, then Austrian destinies are to him only the objects of his platonic consideration. It is absolute nonsense to talk of compensations by "moving Austria forward on a parallel line to the *Aegean*," because when Russia and Austria are face to face in the Balkans the latter must be prepared to contest the possession of Herzegovina, Bosnia, and the whole Serb country. And whether, when this question is settled, another may not be raised which shall compel Germany to take up the gauntlet time only can tell with certainty.

I am not prepared to say that Bismarck is not really disposed to the partitioning of Austria, and therefore indifferent to the possession of Constantinople; but if he really sets store by the solidity of the Austrian Empire he cannot be indifferent to the partition of the Balkans. To say that, owing to complications and difficulties ahead, he consents to postpone the day of meeting the trouble until some compensation for the increase of the dangers comes, in the acquisition of new power with which to meet it, is very far from admitting that it is no interest or danger to Germany, or that it does not interfere with his plans. That the day of settlement with Germany will come before long one hears continually from Russian officials, and it is easy to see the reason why in the continual friction between Teutonic and Slavonic interests along the frontier and the isolated populations of either nationality calling for rescue. Pan-Slavists on one side and Panteutons on the other will raise questions which may be more remote but will not be less difficult to settle than that of the Bosphorus, and the "German interests that will not be affected by any movements in Roumelia and on the Bosphorus" may be more intimately reached by some on the Danube. Wherever there is a Slav population Russia will have or find a mission and a grievance, and the standing rivalry of Germany and Russia must one day have such a solution as the contiguity with an aggressive Empire will require. If Bismarck, looking forward to the remoteness of this collision, says "after me the deluge," he is more ambitious than patriotic—if, seeing it, he underestimates it as either temporary or trivial, or because over-confident, he does not agree with many of those about him.

All those forms of the questions are of problematical statement and solutions, though inevitably to be raised some day and in some form, and the settlement of this Bulgarian question is a step towards the raising of them. But that is no reason why England should assume the responsibility of it. If the danger to Germany is remote, that to England is remoter still. Beyond what she now holds in uncontested possession, England, I suppose, neither covets nor would accept any part of the Turkish Empire. Those Powers which are eager to become its inheritors are the only ones concerned in the fate of Bulgaria. The curious contention that Russia will be "relatively weaker to Germany and Austria" when she is at Constantinople entrenched and holding all entry to the Black Sea is quite as wise (if honestly held) as that she would be relatively weaker to Germany if she had possession of Denmark, or that she is weaker to England when she has got possession of Afghanistan. Constantinople is not the key of the Mediterranean, but of the Black Sea and the Lower Danube States, and when Russia has had time to fortify the Bosphorus and complete her naval preparations in the Euxine, all the power of Germany and Austria could only drive her out at the cost of an exhaustive war; while to prevent her getting to Constantinople now is a comparatively easy matter. "Relatively weaker" when she has the whole Black Sea littoral to ship her troops and supplies from to keep up the struggle, with no possibility of any interference with its free navigation! I wish England could look with equal equanimity at Russia being in Turkestan.

But I do not see how England can suffer any injury by Russia being at Constantinople, and it is earnestly to be desired that those who do see this should show it. I have the advantage of having no prejudice against the Russians to cloud my vision. I rather like them personally, and find campaigning with them very agreeable. They are charming, obliging, affable, camp companions, and so far as Constantinople is concerned all civilization should rejoice at their being there. That Germany and Austria may not think it worth while to contest its possession by Russia I must admit if they permit it, but has England any other reason to do so than the inveterate habit of imagining that any possession of value to any other nation must be of more value to England?

THE death of Mr. A. W. Glennie, which took place at his residence, No. 30, the forenoon of the 21st instant, has excited a feeling of sincere sorrow throughout the Settlement. His illness had been very short—only three days—and is understood to have been caused by his own unfortunate imprudence in exposing himself, without any adequate protection, to the cold night air in an open boat, last Friday. A severe attack of rheumatism—an old enemy—supervened, and, extending to the heart, proved speedily fatal. Mr. Glennie was an universal favourite. A more loyal friend and genial companion did not exist, and under happier circumstances the success which his high qualities deserved would certainly have fallen to his lot. He will be remembered, even by those outside the large circle of his intimate acquaintances, as a prominent figure in the little band of "old

residents" who never failed to meet adversity with a brave front, or forgot, even when times were hardest, to be true to the liberal instincts of a kindly heart.

ACCORDING to statistics compiled in the Home Department, and published in the *Official Gazette*, the total number of cholera patients and deaths throughout the country, from the first appearance of the disease until the 9th instant, was as follows:—

LOCALITY.	CASES.	DEATHS.	LOCALITY.	CASES.	DEATHS.
Tokyo	10,531	8,259	Miyagi	1,310	875
Tokyo, 1st urban division	10,531	7,439	Fukushima	273	195
Kyoto	3,110	2,494	Iwate	472	312
Kyoto, 2nd urban division	1,722	1,443	Aomori	577	255
Osaka	20,538	15,741	Yamagata	2,415	2,414
Osaka, 1st urban division	11,043	9,340	Akita	4,017	2,411
Kansai	6,053	5,745	Fukui	6,065	4,801

THE *Fiji Shimo* publishes the following figures relating to the distribution of cholera cases in Tokyo, said to have been prepared by the authorities, on the 5th instant:—

LOCALITY.	CASES.	DEATHS.	LOCALITY.	CASES.	DEATHS.
Kojima	271	106	Shiga	503	310
Kanda	1,605	985	Utsunomiya	50	19
Nakano	2,318	1,606	Mitsunomori	90	40
Kojima	1,605	1,028	Kiyotsuma	255	121
Shiga	701	402	Mitsunomori	77	55
Azusa	147	141	Mitsunomori		
Akashi	68	45	Shiga	304	245
Yokohama	110	82			
Yokohama	100	68	Total	1,336	794
Kojima	107	115	Isikawa	82	10
Yokohama	457	314	Yokohama	10	10
Shiga	474	324	Koyama	83	15
Yokohama	643	977	Mitsunomori		
Yokohama	685	535	Total	105	26
Fukagawa	800	519			
			Grand total	12,034	8,259

THE *Tokyo Keizai Zasshi* has the following figures showing the quantity of tea exported, during the seven years from 1880 to 1886, from Yokohama to Europe and America:—

YEAR.	NEW YORK.	CHICAGO.	AND THE WEST.	CANADA.	EUROPE.	TOTAL.
	lbs.	lbs.	lbs.	lbs.	lbs.	lbs.
1880...	11,465,192	2,797,215	2,047,056	1,400,364	31,305	17,630,132
1881...	10,377,094	2,593,404	2,300,055	1,043,121	150,705	16,464,379
1882...	10,029,142	2,430,312	2,271,809	1,280,053	50,706	16,061,222
1883...	9,311,830	2,702,718	2,483,301	2,223,820	50,352	17,771,431
1884...	8,911,528	3,245,487	2,414,204	2,277,093	18,400	16,977,712
1885...	9,090,204	4,143,090	2,893,045	3,282,594	12,714	19,760,649
1886...	8,140,974	3,392,292	3,577,000	5,517,340	20,745	21,668,411

THE *Fiji Shimo* has the following remarks under the heading "Our relations with China:—Incomprehensible as the Chinese people are to the rest of mankind, their thoughts and sentiments acquire importance in the event of their entering into closer intimacy with the civilized nations of the world. If they choose to content themselves with a state of entire seclusion, remaining indifferent to outside affairs, their thoughts and actions can possess but little interest for us. If, on the other hand, they elect to seek admission to the society of civilized nations, it is certainly advisable that they should cultivate more enlightened ideas, and make themselves acquainted with the usages of international intercourse. Without some such preparation for the position they propose to assume, there can be no guarantee that our solicitude for peace and amity may not be the very cause of our sustaining injury at their hands. China has from very earliest times held herself to

be the most enlightened and advanced nation in the world, regarding all others as unworthy of her notice or society. When, too, it became apparent that the principles of modern civilization were antagonistic to the teachings of her so-called sages, her contempt deepened into real hatred of the new order of things. But the march of enlightenment could not be stayed by any such hostility, and China soon found herself in the position of a solitary garrison surrounded on all sides by beleaguering forces. Then there came the dispute with France as to Annam and Tongking. French vessels of war swept the Chinese waters, and ere long the flower of the Chinese fleet met destruction at the hand of the invader. After wasting much time in dilatory operations peace was concluded, France being satisfied with the sovereignty of Annam, and the general result of the affair was a very considerable enhancement of China's prestige. Since then the latter has grown perceptibly in importance in the eyes of the world, and not less so in her own conceit. Her attitude towards America, Russia, and England, has certainly undergone considerable change. But the most noticeable alteration is in her conduct towards Japan. Here all the stolid mildness of former times has suddenly been merged in aggressive insolence. Every act in her policy concerning Korea has been distasteful and irritating to the Japanese. One of the most remarkable of these acts is, perhaps, the fact that she appointed, as her minister plenipotentiary to Korea, Yuen Shi-kai, the man who played so prominent a part in the Seoul trouble of 1884. Not contented with this, the Chinese Commodore Tei Jo-sho, with his fleet dropped anchor in the Bay of Nagasaki in August last, and while there, some of his men, who were in the habit of daily coming ashore and wandering about the town, created a drunken row on the night of the 13th of that month. On the night of the 15th, hundreds of the sailors accompanied by their officers, made disturbances in the town, injuring the persons and property of the inhabitants, and it was at great risk that the policemen and the citizens were at last enabled to quell the fracas. Our correspondence from Nagasaki informs us now that the Chinese have claimed and demanded what they ought not to have claimed or demanded, in the conference of the two Powers, so that the conference has had to be suspended. Though we are not sure that the matter has come to such a strait, at all events we cannot understand why a question so clear in all its bearings should be suffered to drag on for so long a period. We may fairly conclude that this is due chiefly to the obstructive attitude of the Chinese representatives. It is impossible to say why the Chinese have behaved so badly to us recently. It is easy to conjecture, however, that, hostile as they are to the principles of civilization, they have been considerably piqued by the progress which Japan has made. The result of her hostilities with the French has been so far satisfactory that China readily persuades herself that her success was due to her own efforts rather than to a peculiar combination of circumstances. Supposing themselves adequate to the task of coping with France, the Chinese conclude that they can easily deal with others who are inferior to the French. In future, say they, "we will punish unmercifully all who dare to behave disrespectfully towards us. And, by the way, we see that Japan, in consequence of her position as an in-

significant nation, has had the assurance to adopt Western civilization, and has even dared to insult us by her conduct in reference to Formosa, the Riukiu Islands, and Korea. Happily we are not now embarrassed by any complications with Russia or France, while England is distinctly friendly towards us. Let us take the present opportunity then, and teach Japan a lesson or two as to her behaviour. It may possibly be owing to these ideas that China has treated us recently with so much hauteur and inconsiderateness. Of course this is mere conjecture, but, if there be any truth in it, then Japan is likely to have a busy and trying future. Judging from the past, we are hardly entitled to expect from China either reason or justice, and in the absence of any such qualities as these to regulate her conduct we cannot be sure about the future. If it contains such possibilities as a refusal to allow blame to rest on the authors of the drunken outrage at Nagasaki, and the vilification of those who acted in the interests of order; the ignoring of pledges, promises, and avowals, and the final rupture of intercourse, surely it behoves us to be vigilant and prudent in our relations with China.

THE telegram which we publish elsewhere with regard to Port Hamilton disposes, for the present at all events, of a question which has naturally excited no little interest in the Far East. The cession of the Namhow Group by Great Britain to China is not in contemplation at all. Where Reuter obtained the information which he sent across the wires, the other day, with such an air of assurance, it is difficult to say. One can scarcely believe that there has been so much smoke without any spark of fire. Perhaps Her Majesty's Government are thinking of bringing the "temporary occupation" to an end and restoring the islands to their rightful owners. But we doubt it. Nothing is easier for a strong Power than to take places; nothing more difficult than to give them up. If the object with which Port Hamilton was occupied had ceased entirely to be effective, the evacuation would be conceivable. But who can pretend to say that the contingencies which looked so imminent in the spring of 1884 may not be equally discernible in the spring of 1887?

H.I.H. PRINCE ARISUGAWA has been ordered to attend their Imperial Majesties the Emperor, Empress, and Empress-Dowager on their visit to Kyôto in January next. The following officers of the Imperial Household will form the suites of their Imperial Majesties:—Prince Sanjo, Lord Keeper of the Privy Seal; Marquis Tokudaiji, Grand Chamberlain; Mr. Sugi, High Chamberlain of H.I.M., the Empress Dowager; Mr. Kodama, High Chamberlain of H.I.M. the Empress; Viscounts Horikawa, Hôjô, and Tanuma, and Messrs. Yoneta, Kataoka, and Mori, Chamberlains; Mr. Hirohata, Assistant Chamberlain; Messrs. Sakurai and Yamaguchi, Secretaries of the Imperial Household; Drs. Ito, Takenouchi, and Oka, Court Physicians; Viscount Takeya and Mr. Iwakura, Rewards Office; Dr. Hirano Imperial Physician, and seventeen court ladies.—*Official Gazette.*

THE subject of corporal punishment in schools has been discussed with no little heat at the first general meeting of the German-Austrian Teachers' Union. This association, which has a membership of 10,000, may be considered representative. The Committee had passed the

following three resolutions on the subject, and asked the Union to adopt or reject them:—I. That the school cannot entirely dispense with the right of corporal punishment. II. That this right, the exercise of which must be strictly limited, be used as a last resort in cases of malicious wantonness, obstinate defiance, disobedience, falsehood, or dishonesty. III. That the decision of the legislative ordinance be carried out in accordance with the opinion of the medical authorities. The vote taken at the end of the discussion gave 187 for the resolution and 168 against. The Austrian press condemns the decision of the Union as reactionary. Some years back corporal punishment was simultaneously abolished in the schools and the army of the empire.

SOME anxiety is felt about the *Unebi Kan*. This vessel which, our readers are doubtless aware, is on her way to Japan from France, where she was built to the order of the Japanese Government, is now fully seven days over-due, having been twenty days out from Singapore. She is officered and manned entirely by Frenchmen, who have contracted to bring her out. Of course the strong winds generally prevailing at this season may be sufficient to account for the delay, but when we remember that the *Tokachiho Kan*, under the command of Captain J. M. James, made the voyage from Singapore in a little over ten days, and arrived in Yokohama punctually on the day and at the hour telegraphed by her commander, it is easy to understand that the very different performance of the *Unebi Kan* causes uneasiness.

ABOVE the joint signatures of Mr. Izawa Shûji, and Professors Sakurai, Yatabe, Toyama, Hozumi, Muraoka, Mitsukuri, and Kikuchi (Dairoku,) a memorial has been presented to Mr. Mori, Minister of State for Education, pointing out the necessity of establishing a musical school. The memorialists observe that true progress and civilization cannot be attained by a country when the nobler sentiments of its people are left uncultivated and inactive. The fine arts purify the taste and thus develop noble thought. The educational system of Japan which is nearly complete in other respects, is defective on this point. They therefore urge on the Minister the necessity of establishing at once a school of music in order to educate artists and to promote and disseminate musical culture.

THE competitive examination for judicial appointments lately held by the Department of Justice has resulted in the bestowal of certificates upon thirty-five successful candidates. The examination was conducted first in writing, and those who passed this stage satisfactorily were afterward examined orally. The successful candidates come in most cases from the five principal private law schools, which have recently been placed under the special superintendence of the President of the Imperial University.

WITH reference to a paragraph which we recently reproduced as a translation from the *Mainichi Shimbun*, which said that Mr. Drummond would not return to Shanghai till the Nagasaki affair is settled, we are requested to say that the statement is incorrect. Mr. Drummond is now on a visit to this part of the country for his own pleasure only, having ceased to have any connection with the Naga-

saki affair or with the interests of the Chinese Government in Japan.

ON Friday week, about six o'clock, Mr. E. A. Bird, No. 66, was robbed of his cash-box, which was taken away from his bedroom. The box contained some important papers, but only forty to fifty dollars. Mr. Bird's house-boy, who has been in his employment for over two years, had disappeared. The matter was placed in the hands of the police, who soon got on the young man's track, and following up the clue, laid the delinquent by the heels at the town of Shidzuoka, where he was found in the company of a young woman and in possession of the cash-box.

A LETTER, received in the capital from one of the suite of Count Saigo, states that his Excellency and party, who went to Europe some time ago to report on the military systems of foreign countries, are at present in France, and it is proposed to investigate the organization of the French naval system. His Excellency will return to Japan in March next, instead of May as previously arranged.—*Nichi Nichi Shimbun.*

THE Proceedings of the Educational Society of Japan for December, 1886, state that instructors of various kinds are now much in demand. Englishmen or Americans to teach English in Ordinary Middle Schools are required. Candidates are requested to make application to the Society, in accordance with the forms prescribed by it. The address of the Society is:—No. 21, Hitotsu-bashi-dôri-cho, Kanda Ku, Tôkyô.

THE dress reform is progressing rapidly. The *Nichi Nichi Shimbun* states that the demand for *yôfuku* has become so general in the provinces that the tailors of Tôkyô and Yokohama are very busy. Many of them have engaged Chinese from Shanghai, and thirty or forty hands arrived by the *Tôkyô Maru*.

THE survey of the main line of the Tokaido railway will be completed before the end of this month, and work will be commenced in February next. The whole line will be finished in January, 1889.—*Nichi Nichi Shimbun.*

THE Hon. Lady Plunkett, and the Misses Plunkett, accompanied by Mr. R. de B. Layard, left Tôkyô for Miyanoshta the morning of the 21st, and were followed on Thursday by the Hon. Sir Francis Plunkett. They are expected to return to the capital the 30th instant.

THE British bark *Anamba*, 1,109 tons, Captain Mezies, was loading lumber at Burrard Inlet on the 30th October, for Yokohama; the *Hygia* was loading for Shanghai at Blakely, and the *Carrie Delap* had found employment for Buenos Ayres.

THE Rev. George Müller will preach on Sunday next at the Tsukiji Church at 11 a.m. and 4 p.m., also at the same place at 4 p.m. on Monday.

THE American ship *Republic*, Captain Smith, has been chartered to load here and at Kobe for New York.

THE British ship *Ventura* arrived at Sourabaya on the 21st November last to load sugar on charterer's account.

“SAVE ME FROM MY FRIENDS.”

THE Consuls' mercantile critics are not pleased with the *Japan Mail* because it ventured to suggest that they are not infallible. In fact they appear to be very much displeased. Instead of attempting to controvert our views, they fall back upon the severe but somewhat hacknied device of telling us that we know nothing about the subjects we undertake to discuss. It has been taught by all experience that persons who possess fullest knowledge are most tolerant and least self-confident. Some philosophers even go so far as to assert that the converse is also true, and that the case of men wise in their own conceit is as hopeless as SOLOMON declares it to be in his celebrated simile. We should be sorry to suggest anything so discourteous or irreverent in the present instance. At the same time, the critics will do well to remember that, if they go on calling everyone who differs from them an ignoramus, they will surely end by establishing their title to the epithet of the Proverbs. For the rest, their manner of reasoning does not quite justify the claim they advance to a monopoly of knowledge. For example, what connection can possibly be shown to exist between the programme of a student-interpreter's entrance examination and the trade report of a Consul after fifteen or twenty years' service? The only initial difference between a student-interpreter and a merchant's clerk is that the former has afforded evidence of his abilities and education by a competitive test and that the latter has done nothing of the sort. The youthful merchant may be a genius *in petto*, but so far as ordinary attainments are concerned he is not obliged to give any such proofs as those required of the future Consul. Considering the subsequent careers of the two, the merchant can unquestionably claim an expert acquaintance with affairs of which the Consul has only a theoretical knowledge. But the Consul—and this is especially true of Japan under existing circumstances—has an immense advantage in the greater intimacy of his relations with the people of the country. A Consul in Tôkyô enjoys constant access, not only to the official classes, but also to the leading native merchants, bankers, and manufacturers of the capital. He need not be skilled in calculating the par of exchange, in drafting invoices, or in testing samples. It is enough that he should know the vernacular, possess common sense, and keep his ears open. He will then be able to write in his reports not the results of his own cogitations in the privacy of his Consular Office or of the Legation Chancellerie, but what the mercantile classes of the country say and think. Is this sort of information wholly useless to British merchants? And if, when collected and recorded, it differs somewhat from their preconceived ideas, or suggests the inference that their methods

are capable of improvement, why should they forthwith attack the Consul as though he had sought to do them a malicious injury, or as though he had compiled his report with the sole object of assailing their reputation? We, who endeavour to suggest that the Consul is working uniquely in the interests of his country's trade, and that his only aim is to promote the prosperity of British merchants, are charged with “bespattering everything and everybody indiscriminately with praise, always excepting, be it understood, the British merchant, against whom we take up our parable.” Is not this kind of writing very silly and very school-boyish? If it really represents the mood of the British merchant, then indeed he is in a much worse plight than his greatest detractor has ever suggested. To be so conservative that any hint of reform is presumption; so intolerant that every contrary opinion is the result of ignorance and inexperience; so thin-skinned that friendly advice assumes the complexion of impertinent abuse—that is decidedly an unwholesome frame of mind. Any one who knows what the British merchant really is, can only be amused by the extravagant caricature which his self-constituted champions present to the public as his true portrait. We, at any rate, are not a bit disturbed by the false position of enmity into which his champions seek to thrust us. Silence would be the line of genuine ill-will. We shall continue to write exactly what we think, indifferent whether it be twisted into “bespattering” adulation or “parabled” animosity. HER MAJESTY'S Consuls, we imagine, will follow a similar course. And as for the British merchant, what he will do, unless we greatly mistake him, will be to scrutinize, very quietly and dispassionately, whatever is submitted for his examination. If he finds there any suggestion which seems to be of a practical and useful nature, he will act upon it. If he finds anything which his experience plainly tells him is exaggerated or extravagant, he will simply put it aside. And if he finds anything which sounds captious, or even unfair, he will remember that Ministers, Consuls, and journalists are all animated by a friendly desire to promote his prosperity, in which the prosperity of their country is finally involved. The nature of their intention, at all events, cannot be questioned. That is how the English merchant will proceed; a much more English manner than to call advice abuse and to dub every formulator of fresh opinions an ignoramus.

One word more, before we dismiss this now threadbare subject. We stated that the Report of H.B.M.'s Consul in Tôkyô had been prepared under special instructions for special purposes. This fact, already known to everyone who had read the London journals and followed the course of the correspondence between the Foreign Office and the various Chambers of Commerce, was mentioned by us incidentally in order

to explain why the document had been treated in a manner somewhat different from that usually pursued with regard to Consular Reports. Observe what the critics say now:—“Perhaps the Editor of the *Mail*, who seems to be so strangely favored with the confidence of the British Legation, can tell the public whether a circular despatch has been sent out by the Foreign Office in London, asking to be furnished with such information as to merchants' doings, as would enable the officials of that department of the public service who have been put on their mettle by the complaints made of their inefficiency to promote trade abroad, to retort upon their accuser, that the languishing of trade is owing to the latter not pursuing the proper courses to maintain and extend it.” Is not this excellent? First, HER MAJESTY'S Minister in Tôkyô is vilipended for suggesting that trade might advantageously take a less stereotyped departure. Then HER MAJESTY'S Consul in Tôkyô is held up to public derision as an “ignorant, inexperienced” *quondam* student interpreter, because he ascribes a part of the decline of British commerce to the conservatism of British merchants. And now the Foreign Office is included in the conspiracy. It has sent out a circular despatch calling for such information as may enable its officials to prefer a charge of ineptitude against the British merchant. The fortunate merchant! He is the victim of a fell plot to slander his reputation; a plot in which the QUEEN'S Secretary of State for Foreign Affairs is the chief schemer, and the QUEEN'S Representatives and Consuls all over the world are active CATILINES. It is bad for the merchant. But what is worse, far worse, for him, is to be depicted in the intolerant, self-opiniated, and silly suspicious character which his champions falsely ascribe to him.

WOOLWICH AND ELSWICK.

SIR WILLIAM ARMSTRONG, speaking as chairman at the annual meeting of the great Elswick Company, has completely refuted the charges recently preferred against himself and other members of his firm. The gist of these charges, it will be remembered, was that venal collusion existed between the Woolwich authorities and the Elswick Firm, and that the latter had thus secured large orders which, were merit and economy alone consulted, would have gone elsewhere. Great excitement was caused by the so-called revelations. It had been a special boast of the British public that their administration was free from such venality, and to be assured, on apparently trustworthy authority, that they were living in a fool's paradise, was an exceedingly disagreeable shock. At this end of the world, too, the story could not pass unnoticed. The Japanese Government, though, on the

whole, firm in their allegiance to KRUPP as a manufacturer of ordnance, have gone to Elswick for guns occasionally, and for ships comparatively often. We believe we are justified in saying that they are satisfied with their bargains, though it is very doubtful whether the ARMSTRONG guns have ever been given a fair trial as against their Essen rivals. But anyone, whether he be an expert or not, who is acquainted with the great difficulty of conducting comparative tests so as to decide conclusively the relative merits of different weapons, will easily understand that a Power which imports its guns from Europe, instead of making them at home, must always be largely influenced in its choice by the official verdict of the country where it makes its purchases. If, for example, the ordnance manufactured at Essen ceased to be used in the German service, KRUPP'S reputation would immediately decline; and, similarly, if the Elswick works were not more or less patronized by the Woolwich authorities, the ARMSTRONG weapon would find much fewer patrons abroad. It becomes, therefore, a matter of no small importance to determine whether the connection between Elswick and Woolwich is based wholly on considerations of merits, since any suspicion to the contrary would virtually deprive the ARMSTRONG guns of the *cachet* of official approval. Sir WILLIAM ARMSTRONG has effectually settled the question. He adopts the most thorough and straightforward method by giving an accurate history of the relations that have existed between his firm and the British Government from the days when Elswick first became a manufactory of ordnance until the present time. We shall epitomise the story, not alone for the reasons just mentioned, but also because it sheds an interesting light on the whole history of artillery construction in England.

Breech-loading ordnance was not used by any Power in Europe until the gun designed by Sir WILLIAM—then Mr.—ARMSTRONG received the approval of British artillerymen in 1857. So great was the applause deservedly won by this weapon that HER MAJESTY'S Government asked the Elswick Company to enter into an agreement binding the former to manufacture exclusively for the British service. The Company consented, on condition that the Treasury provided money for the necessary extension of their plant, the plant so extended to be taken over by the Company at an arbitrated valuation in the event of the agreement being terminated. Under this arrangement the manufacture proceeded. Very soon, however, troubles arose. The Navy wanted a rifled gun, but did not want a breech-loader. There was no denying the immeasurable superiority of the wrought-iron rifled cannon over the old cast-iron smooth-bore. But the notion of employing a new-fangled mechanism which had not received the

approval of NELSON or any other naval hero, and which demanded an altogether new style of drill, shocked the conservatism of the British sailor. A decision, to be for ever regretted, was arrived at. Short rifled, muzzle-loading guns were adopted for the Navy, and England abandoned a system which, had she pursued it steadily, would have long ago given her a well tried breech-loading armament. Before this happened the agreement between the Government and Elswick had terminated. Under Sir WILLIAM ARMSTRONG'S personal superintendence Woolwich Arsenal had been put into a condition for the manufacture of rifled ordnance in general, and in 1863, the Elswick Company was obliged to take over the specially enlarged plant, as agreed, and endeavour to become an independent enterprise. What the Company had thenceforth to look for, almost wholly, was foreign custom. During the long space of fifteen years, 1863-78, they only received from the British Government orders for guns aggregating £24,804; or £1,654 per annum. They were the sole licensees of the PALISSER weapon, of which the Government bought £40,810 worth in the same time. But that was an exceptional matter, which does not effect the fact that the voluntary purchases of the authorities did not aggregate eight thousand dollars annually, and were chiefly purchases of guns of a special or experimental nature. Nevertheless, the genius of Sir WILLIAM ARMSTRONG carried the firm over all its difficulties and ultimately raised it to the position of one of the greatest establishments of the kind in the world. Meanwhile, all enterprise at Woolwich in the direction of breech-loading ceased, and a stereotyped pattern of muzzle-loading guns was persistently followed. "The prestige of the British Navy," says Sir WILLIAM ARMSTRONG, "throughout the world was then so great that the Governments of those countries with which Elswick had its principal dealings insisted upon an adherence to the established patterns of English naval guns, and for a time we were compelled to follow suit with Woolwich; but this preference for English muzzle-loading guns gradually diminished, and we found ourselves forced to strike out anew in the field of breech-loading. Taking the principle of the divided screw adopted by the French, we succeeded in placing ourselves in a position to supply our foreign customers with the breech-loading guns as well as muzzle-loaders. We also greatly increased the ballistic effects of both forms of guns by adaptations which enabled them to be used with charges previously deemed to be impracticable. In 1877, after incurring great cost in experiments, we had produced a 6-inch gun which was not only an efficient breech-loader, but which for its weight gave a far higher energy than had been obtained in any previously recorded

instance either in this country or abroad. We are now told by our critics that English guns have steadily dropped behind those of foreign countries; but I point to the production of this gun in 1877—perhaps the most important step since the introduction of rifled ordnance—as a proof of our superiority at that time, and I confidently assert that this superiority has been maintained. Elswick has produced the most powerful artillery in the world, and if the number of accidents with guns of Elswick pattern be taken in relation to the number made, the proportion is exceedingly small. The results obtained with this new 6-inch breech-loader were promptly communicated to the Government, and in May, 1878, we lent it to the War Department for trial; we also lent them, about the same time, an 8-inch gun, with which we had obtained equally remarkable results. The trial of these guns having verified our representations concerning them, the Government ordered, in October, 1879, three 6-inch breech-loading guns of the same pattern. These were placed in the hands of a committee for experiment, and all that has since been done at Woolwich in breech-loading construction and high velocity guns dates from that period, and is based upon the guns thus supplied by us."

We now arrive at the events which constituted the chief ground of the charges referred to above. In 1878 a new Ordnance Committee was appointed consisting of eminent scientists, both naval, military, and civil. With this Committee the Elswick firm had no connection at first. By and by, however, certain accidents having occurred to guns, the Secretary of State for War asked Sir WILLIAM ARMSTRONG, Captain NOBLE, and Mr. LEECE (of Sir JOSEPH WHITWORTH & Co.) to allow themselves to be temporarily associated with the Committee that the War Office might have the benefit of their experience. They consented, and the Committee was at the same time strengthened by the addition of Sir FRED. ABEL and Colonel MAITLAND. Within a few months the special purposes for which the services of these gentlemen had been enlisted were accomplished, and they ceased to belong to the Committee. "Our connexion with it," says Sir WILLIAM, "terminated with the presentation of its report, and was, I need scarcely add, for purely technical purposes, not having the remotest connexion with our obtaining Government contracts. The Committee, in fact, neither had nor has anything to do with the giving of orders; could not have exercised any influence in the matter, and would not if they could." The Government, being now sorely pressed for a supply of the new guns, was obliged to have recourse to the Elswick Firm and to that of Sir JOSEPH WHITWORTH. The former were then so much engaged on foreign contracts that they could not

undertake the order of the War Office without extending their plant; a risk which they incurred after much hesitation, foreseeing that when the urgent needs of the Government were satisfied, no more contracts for outsiders would be forthcoming. We speak, it will be understood, only of guns. In respect of hydraulic machinery for gun-carriages, the Elswick works have always showed the way to the manufacturers of the world, and for this class of material the War Office had no choice but to go to the Armstrong Company. Finally, with regard to the transfer of Mr. WHITE from Elswick to the Admiralty, Sir WILLIAM says:—"No one who is acquainted with Mr. WHITE's abilities will dispute that the transfer of his services from Elswick to the Admiralty was a great loss to us and a great gain to the country. All pecuniary relations between Mr. WHITE and ourselves ceased when he left us, even to his parting with his shares in the Company. We have been charged with corrupt motives for making this sacrifice; but you may be assured that had we taken the opposite and more selfish course, we should not have escaped equally virulent criticism from those who seek to disparage our Company." Having thus effectually disposed of the slanders circulated against the fair fame of his firm and that of the War Office, Sir WILLIAM adds the following interesting remarks on breech-loading systems of artillery:—"In its leading features the present English system agrees with that which the French have adopted; Italy also, the most enterprising State with regard to gunnery, has, after lengthened trials, adopted the same system for her navy. Scientific committees have sat in France and in Italy, just as they have done in England, and have come substantially to the same conclusions. Germany, Austria, and Russia have adopted the KRUPP system, but have not escaped accidents more than any other nation, and though KRUPP's breech-loading arrangement differs from that adopted in the other countries, his mode of gun construction is now practically the same. You will thus see that, as regards the main principles of construction, the whole of the Powers I have named are practically agreed, while, with respect to breech-loading, the judgment of the three greatest maritime Powers is in favour of our system, which, being thus accredited, ought not to be lightly rejected. But passing from the question of system to that of pattern, there may be much diversity of opinion upon points of detail. Though Elswick and Woolwich are pursuing the same system, the Elswick pattern has always differed from that of Woolwich, and even now is not identical with it; although the free interchange of opinion which has latterly taken place on the Technical Committee, which some of us have been abused for joining, has brought about to the advantage of the nation a

nearer approach to uniformity than formerly existed. As to the accidents which have occurred, they are due to perfectly remedial causes, such as are almost inseparable from early stages of production. But there is another source of accident which cannot be viewed with indifference. Mechanism formerly so distasteful to the navy is now acknowledged to be necessary, and the whole armament of a modern war-ship is a collection of machinery, requiring skilful handling. But the great body of our sailors have not yet had the opportunity of receiving the instruction required to enable them to conform to the altered conditions of modern warfare. Sails in warships are rapidly going out of use; yet sailing drill, which causes immensely more accidents to life and limb than arise from the practice of gunnery, is still treated as a thing of greater importance than mechanical training. Accidents have already occurred with the new weapons, and injuries have been done to them by mismanagement, arising from want of sufficient practice and instruction, and more may be expected to follow, until the training of sailors in a mechanical line has become more general."

#### JAPAN'S ARMAMENT.

WE are glad to see a paper of the *Hōchi Shimbun's* standing and influence take up with genuine earnestness the subject of Japan's naval strength. The days are past, we presume, when any section of the public could patiently listen to sententious preachers who deemed it a sin on Japan's part to buy an ironclad or a battery. Curious, indeed, is it to recall the homilies that used to be ventilated on this subject a few years ago in the columns of the local foreign press. Europe was then armed to the teeth and still arming. The panoply of mediæval times which weighed so much that if a man wearing it fell to the ground he was unable to rise without aid, looks like the toy-guns and tin swords of a child when compared with modern armaments which threaten to pull down whole nations by their burthen. The preachers did not tell Japan that the example of their own countries was evil and should not be followed. That would have been humiliating to themselves. But they did tell her that she had nothing to fear from those big Western Powers, bristling with steel to the teeth; and sometimes they added that, if cause for fear should haply arise, submission at discretion was the only way to safety. Perhaps among all the counsels ever tendered to Japan, this was the hardest to follow. It required too much faith in the forbearance of others and too little in her own capacity. To assure her that she could depend implicitly on the gentleness of big States which had hitherto thrust force into the forefront of their dealings with her, was very like a

cruel mockery. Fresh from the memory of Shimonoseki, of Kagoshima, of the fleet that went to Ilyōgo to negotiate a new tariff, of the perpetual *notes identiques* that softly recommended this or that extension of friendly commerce as the alternative of being hammered with iron and blackened with gunpowder—fresh from the memory of these episodes, was it not a little inept to assure Japan that henceforth to her the mailed hand should always be offered in a silken glove? Nations claiming to have climbed to the pinnacle of civilization, yet confessing in practice that to repel one another's violence they must stand perpetually sword in hand, might have appreciated the inconsistency of essaying to persuade a country which they called semi-barbarous that the duty of statesmen is to rely wholly on high dictates of international morality. Japan probably never believed in these professions. If she did, her credulity must have been gravely shaken when she found that one of her advisers had openly set about acquiring an estate for its posterity at the expense of Eastern territory, and that others had agreed to take the Orient as a safety valve for the discharge of their truculent propensities. And putting aside danger from the direction of Europe, there was China to be considered. It has been held that even to hint at the chance of an armed struggle between China and Japan is unwise and mischievous, since war is a catastrophe the approach of which may easily be hastened by admitting the possibility of its advent. Certainly the subject is one which all of us would gladly avoid. But it is not to be avoided. Whatever may be the disposition of Chinese and Japanese statesmen, there is perpetual danger in the fact that the civilizations of the two empires run in different grooves, and that their relations have many unavoidable points of contact. Imagine China located between the Pyrenees and the Seine. How long would her intercourse with England be of a peaceful character? And the hypothesis does not exceed the facts of the case, for in everything that could render such a proximity perilous the contrast between Great Britain's ways and China's ways would not be stronger than is the actual contrast between the aspirations and policies of the two neighbouring Oriental empires. They are like inhabitants of the same house who differ so radically in habits of mind and body that their constant aim is to avoid one another's society. China is jealous of Japan. It is not the jealousy that prompts imitation, but the jealousy that begets dislike. She feels towards her little neighbour much as a man might feel towards a relative who had left the family circle, apostasized from the family creed, spurned the family traditions, and by making wholesale adoption of material and moral furniture pertaining to a hereditarily hostile house, brought himself into temporary and un-

enviable notoriety. And Japan, believing firmly that she has chosen the better path, ridicules her neighbour's stolidity and underrates her capacity. These are dangerous moods, especially when events that tend to accentuate them are of frequent occurrence. It will assuredly be the constant and loyal endeavour of those that direct Japan's policy to exhaust every possible means of bringing about a sincere and lasting friendship between the two nations. But they cannot control accidents, and it is their duty, in the interests of peace as well as for the sake of their country's safety, to be fully prepared for every emergency. According to the *Hochi Shimbun's* estimate, they are not by any means fully prepared. Japan should be ready to muster at any point of her coasts a squadron of at least twenty ships, thoroughly equipped and well up to the standard of modern efficiency. Were she in a position to do that, she would have secured a powerful guarantee for the maintenance of tranquillity. The effort may involve some sacrifices, but we are firmly persuaded that only her enemies will counsel her to shrink from making them.

#### "WAYS THAT ARE DARK."

OVER the signature "O.," the following letter appears in *The Times* of October 18th:—

In an article in *The Times* of Tuesday upon the recently published consular reports, criticizing the system upon which our merchants carry on their trade in foreign parts, you point out certain particulars in which the methods of our merchants appear to be wanting; as, for instance, that they do not adapt their goods to the taste of the customer and do not send out competent travellers. No doubt there are real defects of method such as you enumerate, but I venture to think that these do not constitute all or, indeed, the principal obstacles to our success in competing with French, and especially German, merchants abroad. Speaking from such information as one may pick up in the course of a residence of some years in the Far East, I should be inclined to suggest that there are two circumstances which in China, at all events, handicap the British merchant more heavily than those which you mention—viz. (1) that they decline as a body to resort to the frauds which enter largely into German trade, and (2) that they will not avail themselves of the services of the class of low, unprincipled, dishonest go-betweens who are forcing themselves into the trade of the East and raising up a great impediment to honest dealing. I have heard British merchants repeatedly complain of the mischief which these two influences are working. There is hardly a single article in the range of English manufacture from soap to cotton, and from lucifer matches to Keating's lozenges, which is not promptly and cleverly counterfeited in Hamburg, and exported to China for sale by German merchants in any market in which they can get a footing by dogging our footsteps. On the other hand, there is the system of go-betweens. The European merchant and the Chinese merchant seem to find a difficulty in getting at each other direct. The Chinaman has great faith in occult influences and in diplomacy, particularly the diplomacy of amateurs, and he somehow generally seems to fall into the hands of the half-broker, half-blackleg, half-jockey, who is always roaming about in the ports and coasts of China seeking whom and what he may devour. The Chinese agent, or go-between, is sure to be a thief, who lives by squeezing his principal, and he requires a European agent who will connive at and assist his theft, and who must, therefore, also be a thief. And then comes the mischief, that this European thief can get business from Germans when English firms will not condescend to have anything to do with him. I have always been told, and I think I have seen some striking cases myself, showing that this is where

the shoe pinches, and that this is the kind of thing that is helping the Germans in their endeavour to beat us in at least one field of foreign trade.

We suspect that there is much truth in this letter, even as regards Japan. It would be mere affectation to pretend that the conduct of trade in this country is not disfigured by parasites such as the correspondent of *The Times* describes. We have never had much faith—and our scepticism is entirely supported by the experience of those who are in a position to know—in the theory so glibly advanced by many foreigners that every lock in Japan may be picked with a golden key. Money goes no farther here in occult directions than it goes in many of the most highly civilized parts of the world. There exists, indeed, from very ancient times, a system of gift-giving, which, like the tribute paid to the Middle Kingdom, nominally signifies nothing more than an interchange of neighbourly civilities, but in reality exercises a very sensible influence on the even course of business. A box of eggs or a roll of silk, though of little intrinsic value, may introduce a decidedly unwholesome element into the relations between employer and employed or workman and overseer. The custom is said to be going out of fashion and we are glad to hear it. Meanwhile, the restrictions imposed upon trade between foreigners and Japanese open a special door for such abuses. Take an easily conceivable case. A foreign firm desires to obtain Japanese orders—official orders or private orders, never mind which—but sees that the marked and natural inclination of the Japanese is to employ their own countrymen. Obviously, under such circumstances, the only route to success is to secure the coöperation of a native merchant. That, however, cannot be done openly. The Treaties do not allow it. What is to be done then? Simply to enlist the services of a Japanese, who, in return for a handsome monthly or yearly stipend and liberal commissions, will play the rôle of tout. So far there is nothing illegitimate. But the tout has to ingratiate himself in quarters whence custom is likely to come; and being unscrupulous—a hypothesis involved in the premisses—he is tolerably sure to pave his way with whatever promises to make the route most easy. There are a thousand devices at command for whipping the devil round the post, and the ultimate condition of the tout's pocket depends on his adroitness in making selections. If his principal is a bold player, a substantial stake can always be put up, and the game proceeds with the utmost smoothness and pleasantness. Sometimes the stake need not be enclosed in any envelope whatsoever. Then everything is the plainest sailing. But generally it is necessary to find an envelope which will practically conceal the real nature of its contents without destroying their efficacy. If A, for example, being a great fancier of horse-

flesh, received a handsome team from an open-handed acquaintance, the latter, without any flagrant appearance of impropriety, might fairly expect to see A's interest exerted on his behalf in connection with this or that contract. Which of us is without a fancy capable of being skilfully tickled? There is a story told about a Kyoto Judge in old times who, immediately after assuming office, was required to adjudicate between two persons claiming the same plot of land. Three days before the case came up for decision, the occupier of the land sent a quantity of its produce to the Judge, and being politely thanked, counted his cause secure. When the court was opened, the Judge publicly repeated his thanks for the handsome present, and then pronounced in favour of the other petitioner. How pleasant it would be for English firms if the liberality of their Continental competitors produced a similar result! But it doesn't: there's the trouble. We have heard the head of a leading firm in Yokohama declare that business on such terms would be impossible to him. Probably such terms enter more or less into the conduct of business everywhere, but it seems to us that so long as tradal associations between Japanese and foreigners are forbidden by law, special facilities will be offered for, and a special premium put upon, the practice of unscrupulous devices. Of course we do not pretend that to remove existing restrictions would raise everything to an honest level. What we believe is that, speaking broadly, secrecy encourages chicanery, and by secret routes only can a foreign merchant emerge from the narrow groove prescribed by the treaties. As for Continental counterfeits of British goods, or Continental substitutes, we should be disposed to give them full swing. Rope enough is all they need to hang themselves. Go into a mercer's shop in Tôkyô and ask him how he likes German flannel, for example. *Yasukarô warukaro* will be his inevitable answer. He will come back to the British stuff in the end, if the latter does but escape the contamination of competition.

#### CORRESPONDENCE.

##### TRADE WITH AUSTRALIA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to a notice in your issue of to-day of a Report by Mr. Shiga upon the opportunities for trade with Australia, and his observations regarding the price at which coal might be laid down in Japan, based, I observe, upon an allowance of one dollar (\$1) per ton for freight from Australia to Japan, I should like to ask him if he thinks it would be good for Japan to use imported coal instead of her own; and why he estimates \$1 per ton freight from Australia, whilst the Government supported Nippon Yusen Kaisha charges about \$3 per ton from Nagasaki to Yokohama?

The best advice Mr. Shiga can give is, to promote cheap transport for Japanese coal, and so exclude from Japan the Australian coal which

already comes here, although Mr. Shiga does not seem aware of it. Subsidizing a monopoly to maintain high rates of transport, and so permit the competition of foreign coal, is not the way to promote the mining industry of Japan.

I am Sir, your obedient Servant,

TSUJIN.

Yokohama, December 17th, 1886.

## NOTIFICATIONS.

### THE CONSCRIPTION LAW.

#### IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance relating to amendments of, and additions to, the Conscription Law, and order it to be promulgated.

[His Imperial Majesty's Sign-Manual.]

[Privy Seal.]

Dated the 30th day of the 11th month of the 19th year of Meiji.

(Countersigned) Count ITO HIROBUMI,

Minister President of State.

Count OYAMA IWAO,

Minister of State for War.

Count OYAMA IWAO,

Minister of State for the Navy.

#### IMPERIAL ORDINANCE NO. LXXXIII.

The following amendments and additions have been made in the Conscription Law set forth by Imperial Proclamation No. XLVI. of the 12th month of the 16th year of Meiji, and will come into operation on and after the 1st day of the 4th month of the 20th year of Meiji, with the exception of the additions in Art. VIII., which will at once come in force:—

To the second clause in Art. VIII., is added the following clause:—

"On islands where Insular Militia may be stationed, every young man of age shall enlist in such force and remain in active service for a period of not more than one year in any one locality."

To Art. XI., Art. XII., Art. XVIII. (second clause), Art. XIX. (following "except primary schools"), and Art. XX. (third clause and fifth clause, following "educational institutions") are added the following nineteen words:—"And those institutions which the Minister of State for Education recognizes to be of the same standing."

In Art. XXIII., "the 16th day of the 9th month" is changed to read "the 16th day of the 4th month."

In Art. XXIV., following the words "a division shall be established," are added these twenty words, "and on islands where Insular Militia may be stationed, a separate division shall be established in each and every case."

In Art. XXXIV., "the 1st day of the 9th month" is changed to read "the 1st day of the 4th month."

In Art. XXXV., "the 1st day of the 9th month" is changed to read "the 1st day of the 4th month."

In the same Article, "the 10th day of the 4th month of the following year" is changed to read "the 20th day of the 11th month."

In Art. XXXVI., "The 1st day of the 9th month of the same year" is changed to read "the 1st day of the 4th month of the same year; but in case such date shall fall between the 21st day of the 11th month and the 31st day of the 12th month, the 1st day of the 4th month of the following year."

In the same Article, "after the 16th day of the 9th month and before the 10th day of the 4th month of the following year" is changed to read "after the 16th day of the 4th month and before the 20th day of the 11th month."

In Art. XXXVII., "the 15th day of the 8th month" is changed to read "the 15th day of the 3rd month."

In Art. XL., "the 1st day of the 9th month of

the same year" is changed to read "the 1st day of the 4th month of the following year."

In Art. XLII., "the 20th day of the 4th month" is changed to read "the 1st day of the 12th month."

### THE DISCIPLINARY REGULATIONS.

#### IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance relating to additions to the Disciplinary Regulations, and order it to be promulgated.

[His Imperial Majesty's Sign-Manual.]

[Privy Seal.]

Dated the 30th day of the 11th month of the 19th year of Meiji.

(Countersigned) Count ITO HIROBUMI,

Minister President of State.

Count YAMAGATA ARITOMO,

Minister of State for Home Affairs.

Count OYAMA IWAO,

Minister of State for War.

Count OYAMA IWAO,

Minister of State for the Navy.

Count YAMADA AKIYOSHI,

Minister of State for Justice.

#### IMPERIAL ORDINANCE NO. LXXIV.

In Art. VI. of the Disciplinary Regulations set forth by Imperial Proclamation No. XXXVI., of the 8th month of the 15th year of Meiji, following the words, "the commanders of important fortresses," are added these words: "the commanders of Insular Militia or the captains of detached companies."

### INSULAR MILITIA.

#### IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance relating to the Insular Militia Regulations and order it to be promulgated.

[His Imperial Majesty's Sign-Manual.]

[Privy Seal.]

Dated the 30th day of the 11th month of the 19th year of Meiji.

(Countersigned) Count ITO HIROBUMI,

Minister President of State.

Count OYAMA IWAO,

Minister of State for War.

#### IMPERIAL ORDINANCE NO. LXXV.—INSULAR MILITIA REGULATIONS.

##### I.—GENERAL RULES.

Art. I.—In connection with the Detached Garrisons on the Islands of Ogasawara, Sado, Oki, Ōshima, Okinawa, and Tsushima, there shall be stationed Insular Militia.

Art. II.—Insular Militia will be under the control of the Commanders of Detached Garrisons (*Bun ei*), but in all matters relating to command, supply, etc., Commanders of Garrisons (*Chindai*) shall have immediate superintendence.

Art. III.—Insular Militia will be recruited from the young men of conscription age on each island, and will be enrolled on two occasions in each year, being divided into two equal contingents. After remaining in active service for a period of one year, they will be allowed to return home.

Those, however, who have attained proficiency in military work, and have a good moral record, may be permitted to return to their homes before the period of one year is completed.

Art. IV.—First-class soldiers of Insular Militia will, like ordinary soldiers, be permitted to return home after remaining in active service for a period of one year, but those who wish may be allowed to remain in active service for another year.

Art. V.—Subordinate officers of Insular Militia will be appointed from among the soldiers of the first class, selecting those who are most competent; but when necessary, they may be appointed from amongst subordinate officers of other forces.

##### II.—THE PROPER FUNCTIONS AND LIMITS OF THE POWERS OF COMMANDERS.

Art. VI.—Commanders of Insular Militia shall

have charge of the organization; discipline, conduct, education, and drill of the soldiers, and shall be held responsible for the safe guarding and protection of the locality under their control.

Art. VII.—Commanders of Insular Militia will have charge of all business connected with the enlistment of recruits, with reserve forces, and with the officers and men of the second reserve.

Art. VIII.—Should disturbances arise in the localities under their control, Commanders of Insular Militia will report the circumstances to Commanders of Garrisons (*Chindai*) and await their directions. But if the case be urgent and application is made by the chief of the local authorities for the mobilization of the forces, Commanders of Insular Militia will comply with such application and report at once the circumstances to Commanders of Garrisons (*Chindai*). When the affair is connected with a foreign country or countries, mobilization may take place, but a defensive attitude must be maintained.

Art. IX.—Should application be made by a chief local authority for the despatch of troops on account of ceremonies, occasions of rejoicing, or calamitous circumstances in any locality, for purposes of guarding and protection, accompanied by a statement of the reasons, the orders of the Commander of the Garrison should be applied for. When the case is urgent and there is not time to make such application, the application of such chief local authority should be complied with, and the circumstances afterwards reported.

Art. X.—In order that preparations for mobilization may be carried out in proper form and without miscalculation, proper arrangements ought always to be in train for the summoning of men and horses, and the purchase, transportation, etc., of articles. Arms, powder, clothing, camp equipments, tools, materials, etc., to be supplied to reserve forces should be provided; and special officers should be entrusted with the charge of their storage and preservation.

Art. XI.—With reference to the personal affairs of subordinate officers and soldiers in the locality under his control, each Commander of Insular Militia will receive information from the local authorities; and in matters for which there are definite provisions, these should be dealt with at once. When no such provisions exist, application should be made for the opinion of the Commander of the Garrison.

### TEMPORARY FORTIFICATION BOARD.

#### IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance relating to the Organization of the Temporary Board for the Construction of Fortresses, and order it to be promulgated.

[His Imperial Majesty's Sign-Manual.]

[Privy Seal.]

Dated the 30th day of the 11th month of the 19th year of Meiji.

(Countersigned) Count ITO HIROBUMI,

Minister President of State.

Count OYAMA IWAO,

Minister of State for War.

#### IMPERIAL ORDINANCE NO. LXXVI.

##### ORGANIZATION OF THE TEMPORARY BOARD FOR THE CONSTRUCTION OF FORTRESSES.

Art. I.—The Temporary Board for the Construction of Fortresses will be situated in Tōkyō, under the Department of State for War, and will have in charge the construction of fortresses at important places throughout the country.

Art. II.—The following officials will be appointed to the Temporary Board for the Construction of Fortresses:—

Director .....	1	Assistant Engineer ...	Several
Managers .....	Several	Clerks .....	Several
Engineers .....	Several		

Art. III.—The Director will be appointed from among military officers of the rank of General; Managers from among military commissioned

officers; and clerks from among military subordinate officers and clerks.

Art. IV.—The Director will have supreme control over the work of constructing fortresses.

Art. V.—Managers will discharge duties under the control of the Director; and Clerks will be engaged under the direction of the Managers.

Art. VI.—Engineers and Assistant Engineers will have charge of technical subjects, and will engage in engineering work in the various departments.

Art. VII.—The position of fortresses to be constructed, style of construction, important points of military defence, etc., will be determined by the Minister of State for War and the Chief of the General Staff Office, and will be transmitted to the Temporary Board for the Construction of Fortresses, in order to the execution of the engineering works.

Art. VIII.—Engineering corps will, in connection with the construction of fortresses, be attached to the Temporary Board for the Construction of Fortresses, and will be under the control of the Director.

Art. IX.—All correspondence addressed to Local Governments and others with reference to business connected with the construction of fortresses, will be in the name of the Director of the Temporary Board for the Construction of Fortresses.

#### INSULAR MILITIA FOR TSUSHIMA.

##### CABINET ORDINANCE No. XXXII.

It is hereby notified that Insular Militia will be stationed in the Province of Tsushima, according to Art. I. of the Insular Militia Regulations set forth by Imperial Ordinance No. LXXV.

(Signed) Count ITO HIROBUMI,  
Minister President of State.

Dated the 10th day of the 11th month of the 19th year of Meiji.

#### SEAL AND OTTER CATCHING.

We hereby give Our Sanction to the Regulations for catching Seals and Sea-otters and for the Sale and Importation of their Raw Skins, and order the same to be promulgated.

[His Imperial Majesty's Sign-Manual.]  
[Privy Seal.]

The 10th day of the 12th month, 19th year of Meiji.

Countersigned by Count ITO HIROBUMI,  
Minister President of the Cabinet.  
Count YAMAGATA ARITOMO,  
Minister of State for Home Affairs.  
Count MATSUKATA MASAYOSHI,  
Minister of State for Finance.  
Count YAMAGATA ARITOMO,  
Minister of State for Agriculture and Commerce.

##### IMPERIAL ORDINANCE No. 80, REGULATIONS FOR CATCHING SEALS AND SEA-OTTERS, AND FOR THE SALE AND IMPORTATION OF THEIR RAW SKINS.

Art. I.—Persons who have obtained the special permission of the Minister of State for Agriculture and Commerce, in accordance with the second paragraph of Decree No. 16 of the 17th year of Meiji, may engage in catching seals and sea-otters during the term, and within the limits of the places, specified for the purpose by the Hokkaido Local Government.

Every person catching seals and sea-otters shall at all times carry a certificate of such permission, and whenever, whether at sea or on shore, any officer supervising seal and sea-otter catching, or any police officer, demands to inspect the certificate, the same shall be immediately produced.

Art. II.—Any person engaging in catching seals and sea-otters shall, on arrival in Hokkaido, report the name and tonnage of the vessel and the names of her crew to an officer designated by the Hokkaido Local Government Office for that pur-

pose, and shall at all times exhibit, on the mast or in some other conspicuous position in the vessel, a signal specially adopted by the Hokkaido Local Government Office for vessels engaging in catching seals and sea-otters.

Art. III.—Any person desiring to sell the raw skins of seals and sea-otters shall produce the same to the officer mentioned in Article II. hereof, and shall have the seal (a brand may be used instead of a seal) of the said officer stamped thereon. No person shall be permitted to sell skins not bearing such stamp.

Art. IV.—Whenever it is found that any person is importing the skins of seals and sea-otters not stamped by the officer, as provided in the preceding Article, into any port of the Empire, or is staying in any port of the Empire with such skins laden on board a vessel, or is selling or attempting to sell such skins in the market, the Customs or Police Officers shall seize the same and shall immediately make complaint to the competent authorities.

But the raw skins of seals and sea-otters caught within the territory of Russia or of the United States of America with the permission of the Governments of those countries, respectively, may be imported into the Empire, provided the owner or master of the vessel first produces a certificate issued by a competent authority of Russia or the United States, or by a Russian or United States Consul residing in Japan.

#### ASIATIC SOCIETY OF JAPAN.

A General Meeting was held in the Library, No. 33, Tsukiji, Tôkyô, on Wednesday, December 15th, 1886, at 4 p.m., Dr. E. Divers, in the chair.

The minutes of the last meeting, having been published in the *Japan Mail*, were taken as read.

A paper "On the Connection of Japanese with the adjacent Continental Languages," by the Rev. Dr. Edkins, Peking, was, in the absence of the author, presented to the meeting by the Recording Secretary. The paper consisted of two parts, the first being a list of some forty Japanese words, philologically compared with Korean, Mongolian, and Chinese words, and the second a statement of some of the rules used in instituting this comparison. The author concluded that there is distinct affinity between Chinese and Japanese roots, pointing to a genetic connection in addition to the historical borrowing of the latter language from the former.

Two papers, by E. H. Parker, Esq., H.B.M. Vice-Consul, Chemulpo, Korea, on "The Manchus" and on "The Manchu Relations with Korea," were, in the absence of the author, read by the Corresponding Secretary. The first paper was a historical sketch of the rise of the Manchus up to their conquest of the Mings in 1644. Previous to the 16th century, when the Manchus first appear as an aggressive power, the region around Kirin and Ninguta was dominated by the Kitans, a race once powerful enough to be on a footing of equality with the Sung dynasty of China. The descendants of the Kitans ultimately broke up into rival groups of principalities, of which the Hurun group, embracing the tribes named after the rivers Ula and Khiuga (tributaries of the Sungari), Hata and Yehé (tributaries of the Liao), proved the most powerful. In 1593, the steady consolidation of the Manchus led to a hostile combination of the Hurun with certain neighbouring Mongol tribes. In the struggle which ensued, T'ai-tse, the Duke of Manchu, was victorious. Up to this point the Manchus had been regarded favourably by the Mings; but, getting involved in the disputes which sprang up amongst the Hurun tribes in 1599 and subsequently, the two powers soon came into rivalry. Accordingly in 1616, the Manchu Duke swore vengeance against China, and marched south to the attack of the Yehé and their Chinese allies. Having now accomplished the defeat

of all the four Hurun tribes, he resolved to attack the three Tungghai tribes near Korea and modern Vladivostok. The Manchus seem to have pursued a policy of conciliation with certain of the tribes, especially with those having the same language and customs; and, throughout their preparations for the conquest of China, their principle was, first to weld into one all those speaking the same tongue and having the same customs, and then to effect a union with those having similar customs but not speaking the same tongue. According to themselves, one Manchu was worth ten Mongols, and one Mongol worth ten Koreans. The paper ended with a brief description of the present condition of the inhabitants of Manchuria, including some glimpses at customs and trade. A list of proper names in character formed a valuable appendix.

The second paper was very brief. It gave first an account of the correspondence between the Manchu Duke and the King of Korea, after the defeat in 1619 of the latter's troops, which had been sent to the aid of the Mings. Notwithstanding his defeat, the King remained steadfast in his allegiance; so that in 1627 the Manchus, crossing the Yalu on the ice, marched into Korea and finally forced the King to take refuge with his family on the island of Kwang-hua near Chemulpo. From lack of boats the Manchus could not pursue their advantage, and the King, still refusing to fight against China, was able to conclude a treaty. In 1636, however, the Manchus, with the co-operation of the Mongols, again invaded Korea, captured the King, and compelled him to give up the insignia of office which he held from the Mings, re-instating him however on the same footing, and treating him generally with great magnanimity. In 1641 the Koreans were made to coöperate with the Manchus against China, more especially by supplying them with grain, which was brought by sea. Since 1644, the annual tribute paid by Korea has been gradually reduced, so that now it is only one-tenth of what was first ordained by treaty.

The Chairman expressed the thanks of the Society to the authors of the papers that had been presented.

The meeting then adjourned.

#### STAGE REFORM.

(Translated from the *Nichi Nichi Shimbun*.)

As our readers may remember, we have repeatedly pointed out in these columns the necessity of introducing reforms in the Japanese stage. We seem, however, to have been before the times, and our suggestions received little or no attention from the public. But popular feeling has now changed, and, simultaneously with the general prevalence of ideas on social reform, the question of stage reform has become a general topic of discussion. An association has recently been started by high officials of State, scholars, private gentlemen and others, and a step has thus been made towards the practical carrying out of the scheme of improvement. Especially of late, Professor Toyama's pamphlet on the question and Mr. Suematsu's speech have done much to draw the attention of the public to the new movement, and conversation in society is everywhere largely devoted to this one topic. If there is any failure to utilize such a splendid opportunity of accomplishing the object in view, we fear that the time will never again be so opportune.

The object of stage reform is to improve the character of our theatres so as to make them centres of literature and the arts, and it goes without saying that the reform consists in the improvement of dramatic pieces and the art of representing them. It is, however, a general rule that it is far more difficult to elevate the position of anything than to lower it, and it must, therefore,

be borne in mind, that no very radical improvement in the character of our actors can be expected at present. Of dramatic representations, there are two kinds in this country, namely *sarugaku* (*no*) and *kabuki* (ordinary theatrical representations). In point of quality, the *sarugaku* is far superior to the *kabuki*; for, while the former has been devoted to the amusement of the upper classes from the middle of the Ashikaga period down to the last days of the Tokugawa Shogunate, the latter has always conformed to the taste of the lower orders of society. Compare, for instance, the *utai* (explanatory songs) of the one with the dramatic pieces of the other, the stage business of the one with that of the other, or the character of the *no* actors with that of the *shibai* performers, and say which is the more refined and which the more vulgar. The public will require little reflection to decide this point. It might thus appear a more reasonable course of procedure to reform the *sarugaku* than to endeavour to elevate the character of the *shibai*. Indeed, some such opinion as this is sometimes expressed, and without saying that it is a mistaken one, we shall proceed to enquire how the *no* can be improved, and whether its improvement is likely or not to satisfy the object of dramatic reformers. We profess nothing more than the knowledge of a mere novice in regard to the *no*, and our views may, therefore, be superficial and incomplete. But this much we can safely assert that the *no* is a form of representation adapted to ancient, and not to modern, society; that the plot is always uniform and admits of little change; that the language uttered in representation is mostly poetry; that there is little or no attempt at scenic representation; and that the music is entirely out of harmony. It is owing to these circumstances that while the *no* affords much enjoyment to the few who are versed in poetry or in dancing, very little amusement is given to the public in general. Now, in order to improve it so as to give satisfaction, it is necessary in the first place to change entirely the unaccommodating character of the plan of the plays; secondly, to use entirely different kinds of music and language; and, thirdly, to introduce more vivacity and variety into the action of the actors, to improve the costumes used, and to resort to scenic representation. Proceeding in this way, plays of a very high order indeed will no doubt be produced. But this is no reform at all, but the creation of an entirely new kind of *no*, which may be compared to the representations of the kind presented some years ago by a certain personage, under the name of *asuna-kyogen*. The result will be far from consistent with the objects of stage reform. Moreover, it will probably be more difficult to make the *no* actors accommodate themselves to the requirements of the new order, than to make the *shibai* players do so. We must, therefore, put out of sight, in speaking of stage reform, all questions relating to the *no*, and restrict our view to what is commonly called *shibai*. The *no* may be either left to run its own course, or it may be made use of in originating opera. It is no doubt a difficult task to improve the present debased condition of our stage, but as there is no other method of effecting the reform, we must face the difficulties, of whatever magnitude, of reforming the ordinary theatre.

Of the various points of reform proposed by the Stage Reform Association, the one that is most important and requires most careful attention, is the reform of the plays. Unless these are improved, it will be of little value to erect fine buildings for new theatres. The reform of dramatic pieces may appear to be a very simple affair, but in practice it is exactly the opposite. As we once before remarked, those forms of amusement which go by the name of *joruri* and *kabuki* have been viewed with contempt since the middle of the regime of the Tokugawa Government, and the writers of plays have accordingly been assigned to the same disgraceful position as

players themselves. It is not surprising, therefore, that there has rarely been produced any dramatist of high order. Dramatic geniuses, however, have not been entirely wanting; witness for instance, Chikamatsu Monzaemon and Fukuuchi Kigai (properly Hiraga Gennai), among whose productions there are not a few pieces of high merit. But the works of these true geniuses are too elevated in character to find favour with the patrons of theatres in this country, and the consequence is that, out of the numerous pieces written by them, the only ones still produced on the stage are the "Kokuseiya," "Terjinki," and "Yamauba," of the former, and "Shinori Yaguchi Watashi" of the latter. From these circumstances, we may learn something of the effect of the corrupted taste of illiterate people upon the character of playwrights.

In order to improve the present degraded condition of our stage, it is necessary first of all to produce plays of a higher standard, and in effecting this improvement, the taste of the higher classes alone should be consulted, leaving entirely out of view all considerations as to the lower grades of society. At present it is the general rule to reproduce historical plays (*jidai mono*) in the first part of the performance, and to conclude the day with what are called *sewa-mono* (plays which may be tragedies or comedies but are not historical). The object aimed at by this arrangement of the programme is to attract spectators of the higher orders by the historical plays, and to bid for the lower classes by the *sewa-mono*. But the spectators are not in favour of this sort of arrangement, and moreover, it will become necessary, when the time of representation is shortened and confined to the evening, to diminish the number of acts and to abolish the present system of producing two kinds of plays in the course of the same day. Whether in writing historical or other pieces, the author must make it his object to adapt the character of his work to the taste of the upper classes.

In writing plays, it must be decided before every thing else, whether the present system of interrupting the action by *joruri* is to be continued, or whether it is to be done away with. Until this question is settled, play writers will be at a loss to know how to proceed. Our present *shibai* is a mixture of the puppet-show and *kyogen* (a kind of farce), constructed on the model of *sarugaku* (*no*). *Joruri* date from the time of an author named Ono-no Otsu, who composed a text-book of *joruri* under the title of "Genji Jūidan." *Joruri* were then sung separately, and had nothing to do with dramatic pieces. After passing through various stages, however, marked by the use of such new styles as *sekkei*, *saimon*, and *tosabushi*, *joruri* at last became developed with the rise of the style called *gidayū*. Even at that period, however, *joruri* were still distinct from the *shibai*, as is evident beyond question by several facts. About this time, a certain person first had the idea of working puppets to the singing of *joruri*. As this plan was very successful and received the applause of the spectators, *joruri* and *ningyō* (puppets) have since been looked upon as inseparable accompaniments of each other. On the other hand, *kabuki* or the ordinary drama, originated in the *kyogen* (farce), and after some time performances of this sort came to be associated with singing and music. But *kabuki* was very different from its present condition until about two hundred years ago, when some one first adopted the plan of introducing *joruri* into *shibai*, making the actors perform to the singing of *joruri*, or *gidayū katari* as they are popularly called. The introduction of this idea formed an epoch in the history of the drama in this country, and we are indebted to this change for the form of histrionic art we now possess. Such popular pieces as the "Chō-shin-gura," "Sembazakura," "Kawanaka-jimi," "Inoseyama," "Taikōki," "Futaba-gumki," "Nijushūko," "Goshogunma," etc., were originally intended for

the *joruri* alone, but have since been adapted to the stage, by making the players speak part or the whole of the dialogue contained in them, and singing the rest while the performance is going on. The ridiculous effect of the association of these two foreign elements is plainly observable, when every trifling action performed on the stage is explained at length by the singing of the *joruri*. But, ridiculous as this system appears to us, it has obtained such a powerful hold on our stage, that all subsequent plays have been expressly written for the purposes of this system. It is, therefore, an important question whether one ought to do away with the *joruri* or not. So far as we can see, it appears advisable to dispense with it, but whether it will have to be entirely abolished or not, is a point upon which we are not yet prepared to pronounce any decisive opinion.

As we have just remarked, the question whether the *joruri* system is to be retained or not, must be settled with caution and judgment. If it be not practicable to entirely abolish it at once, it will still be necessary to introduce as much change in the present system as will enable the stage to become the centre of literature and the fine arts. Whatever may be the case in future, it is to be apprehended at least for the present, that the entire abolition of the *joruri* might prove too radical a change for the taste of our countrymen. Besides, it is a fact that the interest of the performances is very much enhanced in certain cases by the singing of *joruri*. It may, therefore, be wiser to retain and use it as a means of reforming the stage.

In speaking of the improvement of plays, it is important to ask who are to write our new dramas. Having taken upon themselves the task of effecting the reform of our stage, the members of the Stage Reform Association are morally bound to produce plays of the standard they advocate. It may be maintained by some that the task should be assigned to the playwrights of the present day. But this is more easily said than carried out; for professional dramatists are as a rule ignorant and illiterate, with little originality of conception, so that they are not the sort of persons from whom anything like well conceived pieces on the new lines of reform can be expected. The utter poverty of their workmanship may be seen from what is produced on the stages of this city. It will not do to provide them with a good plot and sufficient materials to carry it out, for they will be unable to turn to good account the materials supplied them. To expect a good play from the professional play-writers of the present day, would be as reasonable as to expect an artistic building from the hands of ordinary carpenters or a fine dinner from a country cook. It goes without saying that the result in such a case would be highly disappointing. There are not wanting among the members of the Stage Reform Association, men who are celebrated for their proficiency in literary attainments; and it thus seems the best plan to induce such persons to write new plays. Indeed, we have been informed that Mr. Yoda Hyakusen has completed his new drama, and moreover that it has already been submitted to criticism. We cannot help admiring Mr. Yoda's conduct. That it is now a lingering feudal idea to suppose that novels and plays are unworthy of a great scholar, has fairly come to be understood by the public. Of late our authors have begun to write novels and romances, and why should they not try their hands on dramas? Mr. Yoda has courageously set an example, and we believe that it will be followed by other literary men.

As Professor Toyama has exhaustively shown in his late essay on this subject, our play writers do not fully understand the distinction between novels and dramas, and the effect of dramatic prices is in many cases marred by the employment of the principles of novel writing. It is impossible to produce a play of high merit by pursuing

any such method, and those who propose to try their hands in writing new plays must bear this circumstance in mind before everything else. It is next important for them to always keep in view the stage on which the piece is to be produced. If this point is not attended to, the play will be valueless. We remember a story told us once that a certain number of prominent scholars, lamenting the imperfections of our plays, set themselves to the work of writing new ones. But when these were finished it was observed by a critic, that in one of the pieces a messenger from some feudal lord, who had visited a family, did not either stir from his seat or attempt to leave the house until the scene was ended. In another piece, consisting of nine acts in all, female characters were introduced into only two of the acts, and then only in the persons of a lady and two attendants. In the third play, there was a scene in which five *samurai* sat down to hold a conference, but only two of them spoke, one for a space of more than 50 minutes and the other for 20 minutes, the remaining three characters uttering not a syllable during the whole scene. We do not vouch for the truth of this story, but it is highly probable that such errors will be made by play writers who do not keep in their minds the conditions under which their pieces are to be produced. We may, by the way, remark that the same is true of musical composers. Of late, we have had enough songs and poems composed by amateurs. They are excellent in conception, but we are told by professional musicians that these new productions do not in many cases harmonize with musical instruments, because their authors know little about music. Or look at the old songs that are most popular at present; they owe their popularity not to the merit of the ideas contained in them, but to the sweetness and rhythm. It is thus necessary for those engaged in the work of writing new plays to consult professional play writers and actors in matters relating to the technical branch of their art.

The difficulties of producing good plays have already been touched upon. There is another point calling for the attention of playwrights, and that is the difference in the tastes prevailing in the East and West. It appears that, among enthusiastic reformers of the stage, there are many who, as a consequence of indiscriminate bias towards the Western stage, desire to substitute translations of Western plays for our own. Those people have not seen much of our plays; but, having visited some of the theatres in Europe or America, they have come back with a strong prejudice against our drama and now zealously advocate the improvement of our stage. That European and American plays are incomparably superior in conception to, and richer in expression than, our own, we are fully aware. But considering the present condition of our society and customs, it does not appear possible to adopt on our stage all the plays of the West. We entirely agree with a certain distinguished personage (Count Ito), who cautioned stage reformers against precipitancy, by observing that, while at one time it was proposed to adopt Western styles of painting in the place of our own, it has now become the fashion to set high values on Japanese pictures. For example, such plays of Shakespeare, as "Hamlet," "Macbeth," "Julius Cæsar," "Romeo and Juliet," and the "Merchant of Venice" may be directly reproduced with success on our stage; but it is doubtful whether translations of such pieces as "Henry VII.," "Two Gentlemen of Verona," "The Tempest," etc., would succeed. As to those plays which are constructed on circumstances peculiar to Western life, it is certain that their reproduction on our stage would be an utter failure. Dramatists may be compared to painters. An artist looks about on the mountains, rivers, and seas of the world, and selecting such as suit his purpose, draws them as they stand in nature or weaves them into the threads of his own imagination. So a dramatist searches about in the history of

human experience to find out materials for his play. But if he adheres too closely to real history, he will be in danger of marring the artistic beauty of his production. Those who intend to write plays ought, therefore, to study thoroughly the dramatic literature of their country. The new plays or *daichô* are in eight to nine cases out of every ten miserable in conception; but out of them, even, some materials may be extracted. When we come to the *gidayû-bon* (old plays), there are plenty of pieces deserving of careful study. The total number of *gidayû-bon* exceeds a thousand, of which about five or six hundred are still extant. Of these, it is universally admitted that the productions of Chikamatsu Monzaemon are far above the rest, being in many respects like those of Shakespeare. Besides Chikamatsu Monzaemon, the most noted dramatic writers (or more properly writers of *jôkyû-bon*) have been Takeda Izumo, Miyoshi Shôroku, Tamenaga Tarobei, Namiki Shôzô, Ki Kai-on, Chikamatsu Kanzô, Chikamatsu Kohanji, and Fukunishi Kigai. Among their productions there are doubtless not a few pieces which may be too crude for reproduction in present times, but there are plenty the plan of which would be well worth adopting. In the next place, it will be important to study the most celebrated plays of the West. As already stated, these are the productions of renowned scholars, and are therefore excellent in conception as well as in language. It is evident that their study will furnish us with valuable material. If we keep before us the dramatic literature both of this country and of the West, in ancient and modern times, there will be no room for complaint as to the scarcity of materials.

There remains another point to which we wish to call the attention of our dramatic authors. While on one hand it will be possible to obtain very good plays by selecting suitable pieces from the old *gidayû-bon* and introducing necessary changes in them, it will, on the other hand, be advisable to translate foreign dramas and adapt them to our manners and customs. If the translation be executed with skill, there need be no difficulty in making foreign plays popular among our countrymen. It will be easier as well as nearer the accomplishment of the object of stage reform, to proceed by this method for the present than to attempt to produce original plays. It will of course be important to aim at original works, but that must necessarily be a slow process. Following this principle, it may be possible to see the histrionic art of Japan fully developed, with all its characteristic Oriental qualities.

#### YOKOHAMA PUBLIC HALL.

##### "LE JOUR ET LA NUIT."

Opéra Comique en trois actes, paroles de Leténier et Vanloo, musique de Ch. Lecocq.

Les artistes français nous ont donné Samedi soir, pour leur troisième représentation, *Le Jour et la Nuit*, encore une œuvre de Lecocq.

Voilà un charmant opéra-comique, (peut être conviendrait-il mieux de dire une charmante opérette-bouffe, car, comme libretto et comme musique, *Le Jour et la Nuit* appartiennent plutôt à ce dernier genre). Mais, opéra-comique ou opérette-bouffe, c'est gai et amusant au possible, et le succès, qui a été complet, a répondu pleinement à l'attente générale.

L'intrigue est originale et d'un plaisant achevé. Cette fois, ce ne sont pas les situations qui manquent; il y en a de bien drôles, parfois même un peu... corsées. Mais tout cela est plein d'esprit, et d'un esprit de bon aloi, en même temps que comique; rien de choquant ni d'inconvenant dans les scènes les plus osées. En fin de compte, on peut dire que la pièce n'est, d'un bout à l'autre,

qu'un long et franc éclat de rire. Essayons en l'analyse:

Dom Brasero, gouverneur d'une des provinces du Portugal, veut pour la deuxième ou troisième fois (nous ne nous rappelons plus au juste) vient de convoler de rechef. Mais, comme ses grandes occupations militaires, politiques, et administratives ne lui permettent pas de s'absenter, il a l'habitude de se marier par procuration. Son cousin Dégomez, qu'il a chargé comme d'ordinaire de cette mission, est attendu, amenant la nouvelle épouse que Braserio n'a jamais vue et ne connaît que de nom. Mais voici qu'arrive avant eux, fuyant les poursuites du premier ministre, Dom Calabazas, et venant se réfugier auprès de son fiancé, Miguel, secrétaire du gouverneur, une jeune et jolie fille, Manola, que la fougueuse Excellence a voulu enlever. Les deux amants très inquiets, ont l'idée d'une substitution qui doit, momentanément, sauver la situation. La nouvelle baronne n'est pas encore arrivée: Manola prendra sa place pour Braserio comme pour Calabazas, jusqu'au départ de ce dernier, qui vient de faire irruption chez le gouverneur, et a retrouvé dans la pseudo-baronne la jeune fille qui lui a échappé. Les convenances lui font un devoir de respecter la femme du gouverneur, ce dont il enrage, tout en s'y résignant. Braserio trouve sa femme charmante, et se félicite du choix de son cousin. Mais, pendant qu'il donne des ordres, survient ce dernier avec la vraie baronne, qui retrouve en Manola une compagne d'enfance. Manola et Miguel lui expliquent leur embarras, et implorent son aide. Mais que faire, et comment sortir de là? La nuit approche: l'impatient gouverneur, à qui l'on a présenté Béatrix, la nouvelle arrivée, comme la demoiselle de compagnie de sa femme, ne fait pas attention à elle. Il n'a d'yeux que pour Manola, et soupire après l'heure du berger. La situation devient critique. Les deux amants et Béatrix conviennent que Manola jouera son rôle jusqu'à l'entrée de Braserio dans la chambre nuptiale, où Manola pénétrera voilée, et où régnera l'obscurité la plus complète. Dès qu'il en aura franchi le seuil, la jeune fille s'échappera par un panneau mobile que masque un grand tableau de St. Michel, et la vraie baronne reprendra auprès de son époux la place qui lui appartient. Braserio a bien trouvé étranges de la part d'une veuve (car la baronne est veuve) cette réserve, cette pudeur insolites; mais il est amoureux, et accepte ces conditions. Tout marche à souhait, et le bouillant gouverneur passe la nuit auprès de Béatrix, sa vraie femme. Donc, *honi soit qui mal y pense!*

On voit d'ici la série de qui proquo auxquels va donner lieu l'aventure. Le lendemain, Braserio se retrouve avec Manola, qu'il continue naturellement à prendre pour sa femme, et auprès de qui il croit avoir passé des heures délicieuses. Manola, très naïve du reste, ne sait quelle contenance tenir quand il lui rappelle ces instants trop tôt écoulés. Il y a là une série de *Et après, Et après*, vraiment très plaisants. Mais, nous le répétons, rien de choquant, rien de malséant. La situation est drôle, mais les auteurs en ont sauvé avec beaucoup de tact et de bon goût le côté un peu gaulois.

Ma foi, pour résumer le reste de la pièce, cela nous demanderait encore beaucoup de place, et nous nous apercevons que nous avons déjà peut-être un peu abusé de l'hospitalité que nous accorde le *Japan Mail*. Au surplus, nous sommes convaincu que ce qui précède suffira à affriander les amateurs. Il va sans dire que tout s'explique à la fin; Braserio s'en tient à sa vraie femme, qu'il trouve charmante, (c'est son habitude) et il a d'ailleurs des raisons pour cela: Miguel épouse Manola, et Dom Calabazas est destitué pour avoir, en courant la prélatine, négligé les affaires de l'Etat.

Sur ces données fantaisistes et fantasques, Lecocq a écrit une musique vraiment ravissante, vive, gaie, pleine d'entrain et de verve. Ce n'est plus du tout celle du *Petit Duc*; mais sans rien enlever de son mérite à celle dernière, nous avouons pré-

férer de beaucoup *Le Jour et la Nuit*. Et le public a paru être entièrement de notre avis.

Si nous voulions citer tout ce qu'il y a de remarquable dans l'œuvre, il faudrait énumérer tous les morceaux les uns après les autres, car tout est charmant. Mais nous avons noté surtout : Au premier acte, la romance du ténor : *Sous le regard de deux grands yeux*; l'entrée de Manola : *Comme l'oiseau qui fuit effarouché*; l'air de Calabazas : *Les femmes, ne m'en parlez pas !* et le duo de Manola et de Miguel : *Tuons-nous, tuons-nous*; au deuxième acte, le rondone : *Y avait un fois un militaire* (Manola); le duo de la fauvette (Manola et Béatrix); l'air : *Les Portugais sont toujours gais* (Calabazas) et la chanson Indienne, un vrai bijou (Manola); au troisième acte, l'air de Brasseur : *Répétez-le, répétez-le*; le duo : *Nous sommes deux amoureux*, délicieusement chanté par Mlle. Ida Delaroché et Mr. Henriot; et enfin les couplets du *Jour et de la Nuit*.

L'interprétation a été excellente, comme nous nous y attendions. Mlle. Ida Delaroché, charmante déjà dans *la Pêcholine* et dans *Le Petit Duc*, a fait bien plus de plaisir encore dans *Le Jour et la Nuit*. C'est, du reste, à ce que l'on nous assure, un de ses meilleurs rôles. Nous venons de citer les morceaux où elle a été le plus applaudie; mais mieux vaut dire que d'un bout à l'autre elle a été parfaite; et ce n'est point seulement une chanteuse, c'est aussi une vraie comédienne.

Mr. Henriot (Miguel) a eu sa bonne part des bravos : lui aussi a plu bien davantage que dans *le Petit Duc*. Il a chanté avec un goût et un sentiment exquis la romance du premier acte dont nous avons parlé déjà : *Sous le regard de deux grands yeux*, et sa partie du duo : *Nous sommes deux amoureux*. Mr. Legros est toujours étourdissant de verve et de drôlerie, et il a dit son air : *Répétez-le de la façon la plus plaisante*. Quant à M. Batréau, il est tout simplement superbe de cocasserie dans le personnage de Calabazas. Mlle. Armandini et Esther ont joué et chanté très gentiment les rôles de la baronne et de Sanchette. — Mercredi prochain, *La Mascotte*. — (Communiqué.)

#### SOCIETY FOR THE PROMOTION OF LADIES' EDUCATION.

The following is the Prospectus of the Society whose aims were recently discussed in these columns:—

##### INTRODUCTORY REMARKS.

If we glance back on the past history of education in Japan, we cannot but be struck by the vast efforts that have been made, by the solid results that have been achieved, since the Revolution of 1868. And yet, on closer inspection, what flaws do we not discover even in the present state of affairs! Of these flaws, the backward state of female education is the chief.

Society is composed of the two sexes, of men and of women. Hence the true prosperity of any country is an unattainable desideratum, unless the two sexes unite their efforts and labour in common for the common weal. Now, woman has three chief positions to fill; and that she should know how to fill these positions with success, is of the last importance. These positions are, of course, the position of a wife, the position of the manager of a household, and the position of a mother. Each and all of these positions can be properly filled by her alone who has been well brought up; or, if there are any exceptions to the general rule, they are few and far between. To the woman on whom devolves the management of a household, a thorough acquaintance with the principles of such management, with those of economy, with those of hygiene is indispensable; and that this indispensable acquaintance can be acquired through education only, is an assertion which none surely will venture to dispute. But of all the positions in which the need of proper instruction makes itself felt, the chief one is when the woman becomes a mother. Her child's education does not wait to be begun until the boy or girl is old enough to go to school and obtain book learning. Far from that, it commences at the very moment when the little creature first breathes the air, first sees the light of day. But the point which calls for special notice from our point of view is that from that moment until

such time as it is to go to school, the entire training of its awakening faculties rests with its mother, on whose influence for good or for evil, more than on any other factor, depends the tenour of the child's conduct in after years, his choice of the right path or of the wrong. For, just as plants can be best trained into different shapes while young and tender, so is it with human beings. Childhood alone is pliable. Therefore, though nothing shall be further from our minds than the wish to underrate the importance of that portion of a human being's education which takes place at school and college, still it may be presumed that any child who has not begun by receiving lessons of virtue at its mother's knees, runs a sad risk, when suddenly removed to school, of exemplifying the proverb of the house which was built upon the sand. If, then, a child's school education is to be crowned with success, the child must have a mother capable of training it aright.

This is, so to say, an ulterior reason, for the higher education of women. But it is not the only one that presses itself on our consideration at the present day. There is a Japanese proverb which says: "Difference is the beginning of division." And it is certain that, in marriage, that thing to be chiefly sought after is compatibility of character and of intellect. In the absence of such compatibility, estrangement cannot but develop itself after a short time, and soon affection melts into thin air. Then, as an inevitable result there follows, not only the loss of that domestic bliss for which human beings are created, but many an obstacle to the proper training of the children, and hence many an obstacle to the progress and prosperity of the state.

A consideration of the conditions of society in Japan at the present day does actually (strange though it may seem) point to an ever-increasing widening of that lamentable breach between the male and the female halves of society, which it should be our desire to see filled up as speedily as possible. Why should matters stand thus? It is because the education of women remains, as heretofore, scarcely one whit improved since the old days of feudalism and darkness, whereas, in the case of the men, not a year, not a month has passed by without witnessing some educational reform. In such a state of things, the contrast between the ever rising intellectual standard of the men and the stagnation of the women tends more and more to estrange the sexes from each other. The proverbial "difference which is the beginning of division" makes itself more and more sharply felt, social intercourse between men and women becomes rarer, love between husbands and wives becomes more evanescent. If this is the state of society, with what assurance can we look forward to the prosperity of the country? Therefore, say we, let the women be educated, let their training be placed on a par with that of the men, let them share in that increase of knowledge and intellectuality which has fallen to the men's lot, let the balance, which has been so rudely disturbed, be restored!

Such are the considerations which lead us to consider female education the most urgent question of the day. Such are the motives which have induced us to found this Society, whose aim is the higher culture of women. Our hope now is that we may find many others, both Japanese and foreigners, of like mind with ourselves; that, by our joint efforts, the cause of the higher education of women may in effect be furthered; that we may thus accelerate the attainment both by women and by men of that happiness which is their birthright; and that so we may contribute our share towards the regeneration of society and the progress of the country at large. In conclusion, we venture to solicit the aid,—the active aid, as helpers and workers,—of all those to whose judgment our cause commends itself.

##### CONSTITUTION.

###### OBJECT.

I.—The object of the Society is to provide for Japanese ladies an education, culture, and home-training of equal excellence with that enjoyed by the ladies of Europe and America.

###### METHODS.

II.—The Society shall, with the view of carrying out the above object, establish in Tōkyō an Institute for the higher education of women; and encourage in every way the establishment of similar Institutes in other parts of the Empire.

###### FUNDS.

III.—The necessary funds for the purposes of the Society shall be raised by the issue of shares up to the required amount.

###### MEMBERSHIP.

IV.—The possession of a share shall constitute membership in the Society, but no share shall be

sold without permission in each case from the Council.

###### OFFICERS.

V.—The officers of the Society shall consist of a President, Vice-Presidents, Chairman of Council, Trustees, two or more Secretaries, a Treasurer, and fifteen ordinary Members of Council.

###### PRESIDENT.

VI.—The President shall be elected by the Council. He shall have the general control of the affairs of the Society.

###### VICE-PRESIDENTS.

VII.—Vice-Presidents shall be ladies of rank, and shall be elected by the Council. They shall assist the President in promoting the interests of the Society.

###### CHAIRMAN OF COUNCIL.

VIII.—The Chairman of Council is the chief executive officer of the Society, and shall be elected by the Members. He shall preside at meetings of Council, shall superintend its business, and shall see that the object of the Society is properly carried out.

###### TRUSTEES.

IX.—Trustees shall be elected by the members. They shall have charge of the funds and property of the Society. They are *ex officio* Members of Council.

###### SECRETARIES.

X.—The Secretaries shall be elected by the members. They shall have charge of the records and correspondence of the Society. They are *ex officio* Members of Council.

###### TREASURER.

XI.—The Treasurer shall be elected by the members. He shall have charge of the finances of the Society. He is *ex officio* a Member of Council.

###### MEMBERS OF COUNCIL.

XII.—The ordinary Members of Council shall be elected at a General Meeting of the Society. They shall hold their office for a term of one year. In cases where a vacancy occurs during their term of office, it shall be filled up by the Council. They shall assist the Chairman of Council, the Secretaries, the Treasurer, and the Trustees in managing the business of the Society, under the direction of the Chairman of Council.

###### PRIVILEGES OF MEMBERS.

XIII.—Members shall have the following privileges:—

- Use by the ladies of their families of the room and gardens of the Institutes of the Society.
- Admission to social gatherings connected with the Institutes.
- Prior right of admission for the ladies of their families to all the classes of the Institutes.
- Prior right of admission of the same as boarders at the Institutes.

NOTE.—In cases where the number of applicants for admission under (c) (d) exceeds the number of vacancies, the places shall be filled up by ballot, each member having a vote for each of the shares which he holds. Should he obtain the right to more places than he can use for his own family, he may transfer his right to another member.

###### TRANSFER OF SHARES.

XIV.—The shares of the Society shall not be transferred without previous consent of the Council.

###### VOTING.

XV.—At all general meetings of the Society each member shall have a single vote, irrespective of the number of shares which he holds.

###### GENERAL MEETING.

XVI.—A general meeting of the Society shall be held once a year. The Council shall have the right of calling special meetings when they shall deem it necessary. They shall also call special meetings when requested by fifteen or more members.

###### ALTERATION OF RULES.

XVII.—No alteration in the Constitution of the Society shall be made except by a majority of two-thirds of the members present at any general meeting, and notice of proposed amendments must be given in to the Secretaries at least one month previous to their discussion. It shall be the duty of the Secretaries to inform members of the proposed amendments at least one week before the General Meetings when such amendments shall be discussed and voted upon.

#### PROSPECTUS OF THE TŌKYŌ INSTITUTE OF THE SOCIETY FOR THE PROMOTION OF LADIES' EDUCATION.

##### OBJECT.

I.—The Institute shall have for its object to provide a centre of European life and culture in Tōkyō

for the ladies of Japan, where instruction shall be afforded in the subjects of a general education, in ethics, in manners, in dress, in housekeeping, and in nursing the sick.

#### USES.

II.—The Institute shall be used as a club or meeting place for ladies, and have grounds suitable for all kinds of out-door recreation.

#### BUILDINGS.

III.—An Institute building shall be constructed containing (1) a ground suite of rooms consisting of reading, recitation, dining, and reception rooms, and kitchen accommodation, and (2) an upper story or stories with accommodation for three resident lady teachers from abroad and twelve resident pupils.

#### LECTURES.

IV.—The assistance of University Professors shall be invited for the imparting of the higher learning.

#### LANGUAGE.

V.—The English language shall be used as the medium of instruction, and special importance shall be attached to the acquisition of that language.

#### FUNDS.

VI.—The funds necessary for founding the Tōkyō Institute shall be raised by the issue of 2,000 shares of 30 yen each.

#### MANAGEMENT.

VII.—The whole management shall in the first instance be vested in an Executive Committee elected by the original promoters. This Committee shall possess during the time of its existence all the powers to be exercised by the Council of the Society.

#### DURATION OF EXECUTIVE COMMITTEE.

VIII.—As soon as two-thirds of the shares have been subscribed, the Committee shall convene a meeting of the members for the election of Officers in accordance with the Constitution of the Society; and on the election of these the Committee shall cease to exist.

On behalf of the Original Promoters,

MANAKAZU TOYAMA, } Hon. Secretaries.  
JAMES MAIN DIXON, }

### LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, December 1st.

Congress meets next Monday, and the President is giving the finishing touches to his message. It is rumoured that he intends to take strong ground on the question of protection, and will indicate that as the distinguishing line between Democrat and Republican. There are those who doubt whether he has the courage to do so. But others again claim that he has realized that Pennsylvania and Ohio are lost to the democracy any way, and that he might just as well "give them something to cry for." Colonel Morrison will make a final effort to take the sense of the house on his tariff bill some time in the course of the winter; there is no reason to suppose that there has been any change since last June. Blaine and other Protectionists present the issue to workmen as a struggle between well paid American labour, and low-priced European labour, and assure them that a revenue tariff means reduced wages. This reasoning answers very well in communities where ignorance is the rule, and intelligence the exception. The boat will be found on the other leg when the curtailment of our export trade caused by the impossibility of our competing with Great Britain causes factories to be closed and workmen to be thrown out of employment.

The leading event of the week has been the award by the Navy Department of contracts for the construction of three steel cruisers and four gunboats. One of the cruisers is to be built here, at the Union Iron Works. That a San Francisco firm, operating in a State which does not produce a pound of iron, should compete successfully against the iron ship-builders of Pennsylvania, is a marvellous event; and that it should do so in spite of a difference of from 50 to 100 per cent. in wages, is still more marvellous. Irving M. Scott, of the Union Iron Works, accounts for his ability to compete by alleging that the equable climate of San Francisco enables him to get more work and better work out of his men than builders who have to

work through the heats of a torrid summer and the bitter cold of a frigid winter can get out of theirs. However this may be, his company have got their contract, and they are bound to fulfil it in 18 months. The three cruisers will make a respectable figure in foreign ports; you will probably see one of them at Yokohama sometime about 1889. Our American navy has been a long time coming, but it seems to be coming at last.

It may be needed. Matters at the Sandwich Islands are in parlous condition. The King is drinking himself to death. He has dismissed all his white ministers but one, and he is little better than Kanaka—if so good. His Parliament has first passed a statute authorizing the negotiation of a two millions dollars loan in London; he is informed that the money can be got. He has laid hands upon all the loose money in the islands. He has looted the Savings Bank. He has appropriated the \$4 head-money due to the Japanese Government for emigrants from that empire. He has spent the leper fund. Finding a trifle of \$15,000 in the Treasury, he laid hands on that. His habits require the expenditure of a great deal of money. He has just celebrated his 50th birthday with a grand jamboree; an American supercargo writes to his owners here that he had to stop unloading his vessel because every one on the islands was drunk. His Majesty assures visitors that with the first proceeds of the \$2,000,000 loan, he proposes to buy a steam yacht in England, in which he will visit his friend the Prince of Wales when he goes next year to Australia.

Of course all this may involve complications. If a simple revolution takes place, and King Kalakaua makes way for some other King, or for a Republic, outsiders would not interfere. But if the King negotiates a two million loan in England, and afterwards gets the money, repudiates the bonds, there might be trouble. The Government of the United States lets it be known that it will not use its navy to collect debts due to its citizens. But Great Britain pursues a different rôle. The Government has not infrequently taken up the cases of citizens who were being swindled by foreign governments; and has occupied territory by way of security. There is no piece of territory anywhere which England would more willingly occupy than the Sandwich Islands. They would constitute a remarkably convenient half-way house between British Columbia and Australia. If Samoa were added to the chain, it would be perfect. If any such game were started, it would hardly be possible for this country to abstain from interference, and then the new cruisers might have a chance to show their mettle. They are supposed to be able to sail round the heavy ironclads which constitute the flower of the British navy.

A phenomenal revival of speculation in mining shares has broken out in this city. It began about a month ago, when the leading shares, which have long been neglected and despised, began to creep slowly upward. The basis for the movement was the alleged discovery of a new mineral body in the Con-Virginia. The existence of this body has been known for a long time, but no one has been able to find out anything about its dimensions or its grade. It is now declared that enough ore is in sight to supply dividends for fifteen months. This declaration was no sooner made public than the mercantile population of San Francisco fell to stock gambling with all their old intensity. In one week, \$11,000,000 were taken out of the Savings Banks to be invested in wild-cat mining shares. Con-Virginia which sold at 82 few weeks ago is now selling at \$40, and the contagion has spread to the whole list. Whenever you go, there is nothing talked of but mines and stocks. Everything is kiting—good, bad, and indifferent together. There is one mine called the Alpha, on which work was suspended seven or eight years ago; the shaft house, ore bins, and even the upper timbers have been burned up for lumber; the stock of this mine jumped up to \$4 yesterday.

The Knights of Labour continue to work on behalf of the condemned anarchists at Chicago, thus encouraging capitalists in the belief that both bodies are at heart alike. A secret circular issued yesterday by Master Workman Powderly reveals the fact that few responses were made to the recent appeal to members of the Order for funds to relieve men out on strike. Twenty-five cents a head was all that was asked for; but it was not forthcoming. Powderly observes that the Order has reached the most critical period in its history.

BYWATER, TANQUERAY & Co. (late BYWATER, PERRY & Co.) are agents for Residents abroad, Missionaries, Chaplains, &c., in every part of the world. Goods and Outfits supplied at Wholesale prices. Shipping and passages arranged. Banking in all its branches. Full descriptive Catalogue post free. Offices:—79, Queen Victoria Street, London. 2,000 References.—Advt. Dec. 25.

### THE WOES OF A KOREAN POLITICIAN.

Popular outbreaks in the capital of Korea have been so numerous during the past five or six years that ordinary English readers can hardly be expected to distinguish one from the other. It may therefore be well to recall the facts of the latest of these. One night towards the end of December, 1884, a number of Korean high officials were assembled at a banquet in the new post-office building at Seoul, the capital, when a cry was raised that the house was about to be attacked. Those inside fled into the darkness, only to find themselves surrounded. Several were killed on the spot, others were severely wounded, and the mob and their leaders marched to the palace to secure the person of the King. Here they found themselves confronted by the guard of the Japanese Legation, who had come up at the King's special request. The building was besieged, but the pluck and discipline of the handful of Japanese kept the mob at bay. While the battle was going on around the palace, Chinese troops came up from the camp outside the city, in search of the King, and instantly took sides against the Japanese, who nevertheless successfully held their own all through the night. When day broke it was found that the King had disappeared, and the Japanese had to fight their way to the coast, where their war vessels lay. With the subsequent settlement of this question between the three Governments concerned we have nothing to do here. Japanese and Chinese statesmen settled their differences amicably, and the frank interchange of ideas which then took place between them appears to have led to a strict definition of the respective spheres of action of both nations within the peninsula. The Korean Government escaped with the payment of a small indemnity to the families of the Japanese killed and wounded, and there, with the exception of one point, the matter ended.

The principal actor in this furious outbreak, the instigator of all the assassinations, if not the actual perpetrator of some of them, was a certain Kim-yokun, who had held the highest offices in Korea, and was jealous of the preponderance in the King's councils of the members of the Bin family. He hoped, apparently, after murdering his leading rivals, to seize power for himself and his adherents, and to retain it by playing the Chinese and Japanese off against each other. But, failing to secure the person of the King, he fled with some of his fellow-conspirators to Nagasaki, in Japan. Thence he went to Tōkyō, and there he awaited the turn of events. He alleges himself that he was assisted in his flight by Mr. Takezōye, the Japanese Minister at Seoul, but this is strenuously denied, although, even if it be true, Mr. Takezōye is not the first humane diplomatist who has assisted unlucky politicians in their escape from destruction. Kim and his companions had not been long in the Japanese capital when their retreat became known to the Chinese and Koreans, and determined efforts were made by the Governments of both to secure their extradition. A Korean mission, composed of the famous Herr von Möllendorff (who, by the way, is now teaching in a military academy in Tientsin) and another Korean Minister, was despatched to Japan in a Chinese man-of-war on business connected with the outbreak, and one part of their task was to get the Japanese to give up Kim and his fellows. In this they were assisted by the Chinese representatives at Tōkyō, and, it is understood, by Li Hung-chang. The Korean Embassy spent a long time in Japan in the vain endeavour to get the Japanese Government to hand over the refugees to their tender mercies. Ultimately they were forced to return, and Kim lived in peace in Tōkyō. Three of his companions, perhaps, doubting the power of the Japanese to withstand the solicitations of their neighbours, fled to San Francisco, but the leader and four of his associates remained in Japan, and, had they respected their asylum, they might have remained there in tolerable safety for the term of their natural lives. But Kim appears to be a daring, restless, and designing politician, and when in the summer of last year the plot of a number of harchained young Japanese to proceed in disguise to Seoul and there excite a riot in order to bring about a change of Government, was detected and frustrated by the Japanese police, it was generally suspected that Kim was at the bottom of the mischief. His precise share in the plot is doubtless known to the Government at Tōkyō, but no public step was taken in reference to his conduct on this occasion. He had been for more than a year undisturbed; but now that his power to create a disturbance while in Japan became apparent, the Chinese and Koreans renewed

their request for his extradition. This was again refused by the Japanese, the refusal being accompanied by a hint that if Eastern nations desired to be treated as equals by those of the West, they must act on the same principles as the latter. Political criminals, it was explained, were never extradited in Europe; besides which, there was no extradition treaty between Japan and Korea. It was seen to be useless to attempt to move the Japanese from their resolution, and according to the exceedingly circumstantial story of Kim and his associates, another method was taken.

The story which follows is so extraordinary that it may be well to say it rests only on the testimony of the refugees themselves. This, perhaps, is in the nature of things; whether the documents to which we shall presently allude have been examined, or with what result, we are not informed, but it is beyond any doubt that the persons incriminated were in Japan; that one of them was instantly recalled by the Korean Government on the complaint of Kim to the Japanese; and that Kim himself in two letters, one addressed to the King of Korea, the other to Li Hung-chang, referred to the incidents as well known to both and beyond any question. The alleged facts, then, are these:—In June, 1885, after the second refusal of the Japanese to deliver up the refugees, a Korean named Cho, who had resided for some time at Kobe, in Japan, and who was the brother of the favourite mistress of the King, returned to Seoul, where he appears to have had the confidence of high officials. It was either proposed to him, or he offered to undertake, to assassinate Kim, and in August he reached Japan for this purpose, having with him a considerable sum of money. But whether his courage oozed away on reaching Japan, or whether he never intended to commit the murder, he quietly settled down again at Kobe, 300 miles away from Kim, and never went near his intended victim at all. He had the money, and quietly spent it in enjoyment at that charming spot on the Inland Sea. Kim accordingly had a rest for some time from trouble; but the Koreans soon found that Cho had cheated them, and they cast about for some one else to undertake the task of this recreant. A new instrument appeared in the person of Chi, an official in the Seoul War Department, who was at one time an ardent disciple of the advanced views of Kim in the latter's palmy days, but who now served a Government of a different way of thinking, which Kim had done his best to exterminate. On February 23rd this year he left the Korean port of Ninsen in a Japanese steamer for Kobe, and travelling quietly overland, possibly to avoid notice, he reached Tôkyô on May 1 and took lodgings in an ordinary inn. The following morning he wrote to Kim announcing his arrival, and requesting an interview, which was refused. It was a case of diamond cut diamond, and the old assassin was to prove too sharp for the young one. Kim directed his friends to worm themselves into Chi's confidence, and one of them did so with considerable skill. He represented to Chi that the exiles were tired of their present life; that they sorely regretted their folly, and longed to be back in Korea. Kim, he said, had misled them; he was the cause of their present evil plight; would Chi intercede for them with the King and the Government? As for Kim, the exiles would cheerfully seize and carry him off if they could. Nay, they were so incensed at his conduct that they would murder him if the shedding of his blood and ridding the country of him would be the means of making their peace with their Sovereign. Kim, he said, was a very wary person, but his companions could baffle his suspicions to sleep as no one else could, and they would readily kill him to manifest their repentance. To these things, as might be expected, Chi seriously inclined; confidence begat confidence, and he said he was sent over by the King for the express purpose of assassinating Kim, and that he would pay a sum equivalent to one thousand pounds sterling to any one who would give him effective assistance in carrying out his task, or who would take him off for him. His interlocutor said that he was ready to do the work, but, as the affair was a perilous one, it behoved every one connected with it to walk circumspectly, and to be sure of every step. Suppose, for instance, Chi had never got a commission from the King, then any one killing Kim would be seized by the Japanese and would be repudiated by the Koreans. Chi was ready for this objection; he produced, first, a large Korean dagger which he said was given him by the King for the purpose of slaying Kim, and he further exhibited the following note, dated, to which it is alleged the Royal Seal was affixed:

"We hereby commission you to cross the sea and apprehend the rebel, to accomplish which object you shall have full power to act according to circumstances, using due caution not to make fruitless attempts."

The *soi-disant* confederate furthermore requested the promise of a money reward to be put in writing, which was done by the misapprehending Chi. Armed with these documents, which Kim at once laid before the Japanese Government, he demanded protection. A demand for an explanation was immediately telegraphed to Seoul, where, naturally, the whole plot was denied, and Chi was ordered to return home instantly, which he did. We have already mentioned some facts which appear to corroborate the story. It would obviously be absurd to apply rules of morality which prevail in western countries to the conduct of the Korean Government, and to argue that the story is incredible on the face of it. Kim himself was a leading Korean statesman, and he did indisputably either assassinate with his own hands or cause the assassination of several of his rivals. There is therefore, nothing *prima facie* improbable in the story of his enemies endeavouring to remove him by a similar method—a method, it may be added, which has been employed elsewhere in the East within the memory of the present generation.

To return, however, to the fortunes of Kim. The Japanese appear to have made up their minds that he was a source of trouble and danger in the country. Their resolution not to hand him over to the Chinese or Koreans was unchanged, and, to the credit of the Japanese Press be it said, this course met with the warmest approval from journals of all shades of opinion. On June 12 an order was made by the Home Minister directing him to leave the country by the 27th of the same month, on the ground that his presence in it tended "to endanger the peace, tranquillity, and external safety of the Empire," and was, moreover, "prejudicial to the existing Government of Korea, with which His Imperial Japanese Majesty's Government are on terms of friendship and good relations." At his own request the date of his departure was further extended to July 13th. As he appeared to make no preparations for this event, it was assumed that he had resigned himself to his fate, and would simply remain passive in the hands of the Japanese authorities. But Kim thought he knew a trick worth two of that; he had heard something of the extra-territorial privileges of Europeans in Japan, and he knew enough to be aware that the Japanese police cannot enter the house of a foreigner within the foreign settlements in that country. When July 13th arrived, the interesting exile had fled to a French hotel in Yokohama, where for the moment he was safe from the Japanese. It is impossible to say what advantage he expected to derive from this; he may have heard of political refugees being received with open arms elsewhere, and he may have thought he could induce the French to take him under their wing. However this may be, after a little negotiation the Japanese police were able to obtain the French Consul's endorsement on their warrant, and Kim was conveyed to one of the suburbs of Yokohama, where a house was specially prepared for his reception, and there he was kept for a few weeks in a state of honourable captivity. The question now was, what was best to be done with him? He could not be sent to Shanghai for this would be certain death at the hands of the Chinese; Vladivostok was out of the question for the best of all political reasons. San Francisco was proposed, and it certainly appeared that he could do little harm there; but, on the other hand, as he had no means whatever, it was feared he would starve there even in the midst of plenty. Meantime, while his destination was still undecided, the exile addressed letters to the King of Korea and to the Viceroy, Li Hung-chang. In the first he chides his Sovereign gently for stooping to assassination, and points out that this is an undignified expedient for settling political differences. However, he says, probably the scheme to assassinate him "was that of your Majesty's ruthless servants" and not of the King himself. He then proceeds to give his Sovereign some political counsel, which is worth noticing, inasmuch as Kim's party is still a powerful one in the country, and in the whiffing of time, which brings its revenges to so many, the exile himself may be Prime Minister of Korea. After referring to the occupation of Port Hamilton by Great Britain as an example of the dangers to which the country is now liable, he asks what has China, which pretends to protect Korea, done to restore Port Hamilton. In fact China has done nothing except send an Envoy to Seoul who is an ignorant intriguer, and who has induced the Korean Government to soil its hands with assassination. Korea cannot rely on either China or Japan, for both have enough to do to maintain their own independence. What, then, is the true Korean policy? It is to be on friendly terms with all western countries, to introduce internal reforms, to educate the people, and to encourage trade and industry. England should be forced to quit Port

Hamilton, and other Powers should be induced to give up their designs on the peninsula. Mines should be worked, class privileges abolished, and finally, Kim himself and his friends now wandering in foreign countries should be recalled, for they are men of experience who have the true interests of the country at heart. To Li Hung-chang this tone is one of serious expostulation. He refuses, he says, to believe the statement, for which, however, he has some documentary evidence, that the Viceroy advised the Koreans to send some trusty person to assassinate him; the childish plot no doubt emanated from the Chinese Envoy at Seoul, against whom he appears to be particularly exasperated. If it really came from the Viceroy, "it is a disgrace to the whole of Eastern Asia." He defends himself from the charge of inciting the troubles in 1884; this sin he lays at the door of the Chinese Minister in Korea, and he hints broadly that Li's animosity against him is due to the favour which he showed the Japanese when in power. After representing the situation of Korea in a very dark light, comparing it to an egg suspended by a hair, he asks what the Viceroy is doing to remedy this. He urges that China should be the first to step out and give Korea complete independence. If Korea is allowed to walk alone, all will be well. "Being an uneducated wanderer in the world, I do not like to discuss political matters; but, reflecting on my original motives, I have been unconsciously led to write at this length."

After considerable deliberation, the Japanese Government decided that, for his own sake, it was undesirable to cast him loose on the world. He has no means whatever, and he would therefore probably starve abroad; to deport him to China would be equivalent to a sentence of death, and it was impossible to permit him to remain in Tokio, the centre of plots and intrigues against the Korean Government. Accordingly it was decided to send him to the Bonin Islands, a solitary group of islets far out in the Pacific, which was formally annexed a few years ago by Japan, and which up to that time was (as its name implies) uninhabited save by a few waifs and strays of the ocean—runaway sailors, retired pirates, and Kanakas thrown up by the sea. Here he will be supported at Japanese expense, and he will have a period of rest—long or short according to circumstances—in his strange and troubled career. In these sunny Pacific islands he will have time to meditate on political questions and on the mutability of fortune. The story of the last phase of his checkered life introduces us to the seamy side of Asiatic politics, where party manoeuvring, personal intrigues, and electioneering dodges are replaced by the primitive expedient of murder. Like others whose names are better known in contemporary history, Kim cries out in horror in the face of the whole world at the application to himself of the political methods which he brought into vogue, and used with considerable effect against his rivals. He protests with the lofty indignation of the good man struggling with adversity against the attempt to treat him as he has treated others. Human nature, even in politicians, is, one perceives, much the same all the world over.—*Times*.

Mr. Nakamura, an assistant teacher in the Imperial University, arrived at Yokohama the 22nd instant in the *Oceanic*, from San Francisco.

It is stated that Marquis Hachisuka, late Japanese Minister to France, will be appointed Chief Commissioner of a Bureau.

Count Yamada has intimated to the authorities that he will return to the capital the 26th instant.

All strategical officers in the various garrisons throughout the empire will meet in the capital in February next.—*Mainichi Shinbun*

Mr. Tanaka, Private Secretary of Prince Sanjô, has been ordered to accompany the Lord Keeper of the Privy Seal, during the Imperial visit to Kyôto.

The Agricultural and Commercial Department has presented a sum of yen 150 to the family of the late Mr. Inouye, superintendent of the Woollen Factory at Senju.

Mr. Kusino, Private Secretary of Admiral Enomoto, has been ordered to visit the Silk Rearing Establishment at Tomioka and the Spinning Factory at Shimizu, Jôshû.

Mr. Niino, Governor of Oshima, who lately arrived in the capital along with Mr. Watanabe, Governor of Kagoshima, was released from office the 21st instant, and degraded in rank the following day.

Mr. Taga, Yoshiyuki, Secretary of Kagoshima Prefecture, has received the additional appointment of Governor of Oshima.—*Official Gazette*.

After debate, the Chamber of Deputies has voted by 269 against 245 a credit of 30 millions demanded by the Budget Commission and the Government for Tonquin.

The credits for Tunis were granted.

M. Blancsubé made a speech in support of the credits, but criticising the details of their distribution.

## LATER.

The Chamber of Deputies has disallowed the credit for the salaries of the sub-prefects by 262 votes against 249. In consequence of this vote, the Ministers have placed their collective resignation in the hands of the President of the Republic.

## GENERAL PITTIE.

General Pittie is sick. His condition causes grave anxiety.

A United Chamber of Commerce is to be established in Shanghai, representatives being appointed from among the various foreign merchants.

The seventeenth (and last for this year) conference on treaty revision was held the 22nd instant in the Foreign Office. All the foreign representatives were present. The eighteenth conference is fixed for 8th January next.—*Nichi Nichi Shimbun*.

## MAIL STEAMERS.

## THE NEXT MAIL IS DUE

From Hongkong, per O. & O. Co. Tuesday, Dec. 28th.\*  
From America, per P. M. Co. Friday, Dec. 31st.†  
From Shanghai, }  
Nagasaki, } per N. Y. K. Friday, Dec. 31st.  
Kobe, }  
From Hongkong, per P. & O. Co. Sunday, Jan. 2nd.‡

\* *San Pablo* left Hongkong on December 21st. The *Revalier* (with English mail) left Hongkong on December 18th, and is due on Saturday, December 25th. † *City of Rio de Janeiro* left San Francisco on December 11th. ‡ *Tokoro* left Hongkong on December 24th.

## THE NEXT MAIL LEAVES

## REPORTS.

The American steamer *City of Peking*, Captain H. C. Dearborn, reports:—Left Hongkong the 14th December, at 6.24 a.m.; had fresh monsoon to lat. 20°; thence to port light south westerly winds, smooth sea, and fine weather. Passed the City of Sydney the 18th December, at 10 a.m.

The British steamer *Thibet*, Captain W. D. Modie, reports:—Left Hongkong the 10th December, at 6 a.m.; had moderate to fresh winds from E.N.E. and fine weather until the 14th, at midnight; thence freshened to E. and S.E., and blew heavy gale which varied to South with heavy rain and S.W. to West with heavy sea. Arrived at Nagasaki the 14th, at 8 a.m. and left the 15th, at 4 p.m.; had strong N.W. winds and heavy passing squalls of wind and rain. Arrived at Kobe the 17th, at 6 a.m. and left at midnight; had moderate West and N.W. winds and fine weather. Arrived at Yokohama the 19th December, at 5 a.m.

The British steamer *Oceanic* reports pleasant weather and moderate winds throughout the passage.

The Japanese steamer *Satsuma Maru* reports:—Left Shanghai the 17th December, at 2.50 p.m.; had various light winds and fine weather to Nagasaki where arrived the 19th, at 7 a.m. and left the 20th, at 4.25 p.m.; thence moderate south-westerly breeze and fine weather to Suimonosaki where arrived the 21st, at 6.25 a.m. and left the same day, at 8.25 a.m.; had moderate south-westerly breeze and fine weather to Kobe where arrived the 22nd, at 5.42 a.m. and left the same day, at 6.17 p.m.; thence had fresh north-westerly wind and overcast sky. Arrived at Yokohama at midnight. On the 18th, passed the steamer *Store Nordiska*, carrying telegraph cable; two Russian men-of-war (the flagship and a small ram), and two Japanese men-of-war at Nagasaki; and one small British gunboat at Kobe.

## LATEST COMMERCIAL.

## IMPORTS.

The general tone of the Market has again improved, and a fairly large business has been done in Piece Goods, but prices have for the most part favoured buyers, whilst Yarns have remained quiet and rather difficult of sale at previous quotations.

YARNS.—About 250 bales English spinings have been sold during the week at former prices, and 150 bales Bombays at a further slight decline, but there is very little demand at present.

COTTON PIECE GOODS.—Sales comprise 1,500 pieces 7 lbs. T. Cloths, 5,000 pieces 9 lbs. Shirtings, 200 pieces White Shirtings, 200 pieces Turkey Reds, 2,000 pieces Prints, 1,500 pieces Velvets, and 400 pieces Victoria Lawns.

WOOLLENS.—10,000 pieces Mousseline de Laine, 2,300 pieces Italian Cloth, 100 pieces Figured Orleans, 150 pieces Silk Sains, and 2,400 Blankets have been reported as the sales.

## COTTON YARNS.

	PER PIECE.

Cloths—Union, 54 to 56 inches	0.40 to 0.60
Blankets—Scarlet and Green, 6 to 4 1/2 yds	0.37 1/2 to 0.44

## METALS.

The same dull Market which has ruled for so long, and it is useless to expect any revival till next month, if then. Quotations are nominally unchanged; but trade in Iron is miserably feeble. Some enquiry for Wire Nails, but nothing would command a decent price unless it were of some exceptional quality and assortment.

	PER 100 LB.
Flat Bars, 4 inch	\$2.40 to 2.45
Flat Bars, 6 inch	2.50 to 2.60
Round and square up to 4 inch	2.45 to 2.60
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.50 to 2.60
Wire Nails, assorted	4.80 to 5.50
Tin Plates, per box	5.30 to 5.50
Pig Iron, No. 3	1.17 1/2 to 1.20

## RIKORHNE.

Market firm but without much fresh business. Deliveries keep up well; at the same time buyers have plenty of uncleared purchases to work upon, and will not operate again till after New Year. They hope for further arrivals to weaken holders a bit. Only one vessel has arrived this week—the *Frank Stafford* with 43,000 cases from New York. Quotations unchanged.

	PER 100 LB.
Devon	\$1.80 to 1.85
Canal	1.75 to 1.78
Stella	1.70 to 1.74

## SUGAR.

Transactions in Sugar have not been so ex-

tensive during last week, but about 6,000 piculs, chiefly Brown descriptions, have been settled at unchanged prices. White sorts have been neglected.

	PER PICUL.
White Refined	\$5.10 to 7.00
Manila	3.60 to 3.80
Daitong and Swatow	3.40 to 3.50
Brown Takao	3.50 to 4.55

## EXPORTS.

## RAW SILK.

Our last issue was of the 17th instant, since which date there have been a few daily doings, but these have been outweighed by heavy rejections, and our statistics give the anomalous position of a minus quantity of 250 piculs. The net Settlements are recorded as follows:—Hanks 15 piculs, *Nagahama* 35 piculs; the net rejections are *Filatures* and *Re-reels* 250 piculs, *Kakada* 100 piculs. Direct shipments count for 50 piculs, and the net result of the week's work is a negative quantity of 250 piculs as noted above.

The intelligence received by cable from all foreign marts is not very encouraging; still there are a few buyers in the field who are on the look-out for any weak holder. A falling exchange also helps exporters, and with the retrograde movement of the past week our Settlements to date are not much above those of the same time last season. True, prices are very much higher this year; but these do not seem to frighten our Lyons friends; and better news from consumers will doubtless come to hand after stock-taking at the end of this month. Sellers generally are firm, but here and there we find some one anxious to turn his goods into money for the end of the year.

Supplies continue, and fresh arrivals have combined with the wholesale rejections, of some leading buyers, to increase the stock, which now stands at 11,700 piculs.

There have again been two mail departures with Raw Silk this week. The M. M. steamship *Menzel* on the 18th instant carried 337 bales for Marseilles and beyond, while the P. M. S. S. *City of Peking*, which left port on the morning of the 22nd had 575 bales for the New York trade. These shipments bring the present Export up to 15,923 piculs, against 14,064 piculs last year and 13,820 at same date in 1884.

Hanks.—Very small business; dealers profess their willingness to meet buyers, but they want buyers to come about nine-tenths of the distance between them. The only transaction of the week has been in *Takasaki* at \$5.55, a price which shows only a nominal reduction upon last quotations.

Filatures.—Nothing done for Europe, and only a few straggling parcels for the United States on the following lines:—*Hakura* \$795, *Kaimaisha* \$790, *Kanayama* and *Kaishinsha* \$760, *Shunmeisha* \$750, *Tokosha* \$745.

Re-reels.—Rejections have been very heavy here, entirely swamping the few insignificant purchases made. Among the transactions actually put through are mentioned *Shinshu* at \$760, *Koriyama* \$740, *Chichibu* \$720. There has been so much demand the last two months for *Jeshu Re-reels* that they have been pushed up above their relative value. *Tortoise* is now said to be held for \$770 (\$765 refused), and other good marks are in the same category.

Kakada.—Here all is reversed also, Silk travelling from the Settlement to the native town. Prices nominally strong, especially for high class fibre.

Nagahama continues in favour, but there is now very little stock.

## QUOTATIONS.

Available supplies to date .....			
	28,950	22,500	22,150

## WASTE SILK.

The demand for Europe continues, and the business of the week totals 1,000 piculs, divided thus:—Cocoons 200 piculs, *Noshi* 300 piculs, *Kibiso* 410 piculs, *Neri* 90 piculs. No Direct Export to be chronicled this week, although some is reported to be in preparation.

There has been a considerable daily trade at full rates. Some few sales of inferior or mixed quality are reported at a slight reduction, but prime quality is understood to be worth fully the prices in our quotations below. Supplies come freely, and the Stock in Yokohama cannot be less than 9,600 piculs.

No shipments per *City of Peking*, but the *Menzies* had 344 bales for Marseilles, Trieste, and Milan, bringing present Export up to 14,276 piculs against 9,147 piculs last year and 15,450 piculs in 1884.

*Cocoons*.—Again a fair business in *Tama* kinds, the few arrivals being immediately taken up at about \$67½ per picul.

*Noshi*.—Considerable business, principally *Foshu* "Assorted" at about \$120. A little *Mino* at \$162, and *Bushu* at \$157 complete the list.

*Kibiso*.—More done herein than for some time past. Medium *Filatures* and *Zaguri* have been first favourites at \$140 and below. *Foshu* sorts have also been dealt in to some extent at from \$80 to \$85.

*Mawata* a blank.

*Neri*.—About 100 piculs put through in the neighbourhood of \$30 uncleaned.

## QUOTATIONS.

Pierced Cocoons—Good to Best .....	—	—	—
<i>Noshi</i> — <i>Filature</i> , Best .....	\$180 to 190	160 to 170	140 to 150
<i>Noshi</i> — <i>Filature</i> , Good .....	140 to 150	120 to 130	100 to 110
<i>Noshi</i> — <i>Filature</i> , Medium .....	120 to 130	100 to 110	80 to 90
<i>Noshi</i> — <i>Oshu</i> , Good to Best .....	180 to 190	160 to 170	140 to 150
